luxury. It was used for basins (*Od.* i. 137, iv. 53), goblets (*Il.* xxiii. 741), baskets (*Od.* iv. 125), coffers (*Il.* xviii. 413), sword-hilts (*Il.* i. 219; *Od.* viii. 404), door-handles (*Od.* i. 442), and clasps for the greaves (*Il.* iii. 331). Door-posts (*Od.* vii. 89), and lintels (*Od.* vii. 90) glittered with silver ornaments; baths (*Od.* iv. 128), tables (*Od.* x. 555), bows (*Il.* i. 49, xxiv. 605), scabbards (*Il.* xi. 31), sword-belts (*Il.* xviii. 598), belts for the shield (*Il.* xviii. 480), chariot-poles (*Il.* v. 729) and the naves of wheels (*Il.* v. 729) were adorned with silver; women braided their hair with silver-thread (*Il.* xvii. 52), and cords appear to have been made of it (*Od.* x. 24); while we constantly find that swords (*Il.* ii. 45, xxiii. 807) and sword-belts (*Il.* xi. 237), thrones, or chairs of state (*Od.* viii. 65), and bedsteads (*Od.* xxiii. 200) were studded with silver. The tips of the silver feet was probably so called from the silver ornaments on her sandals (*Il.* i. 538). The practice of overlaying silver with gold, referred to in Homer (*Od.* vi. 232, xxiii. 159), is nowhere mentioned in the Bible, though inferior materials were covered with silver (Prov. xxvi. 23).

Silver was brought to Solomon from Arabia (2 Chr. ix. 14) and from Tarshish (2 Chr. ix. 21), which supplied the markets of Tyre (*Ez.* xxvii. 12). From Tarshish it came in the form of plates (*Jer.* x. 9), like those on which the sacred books of the Singhalese are written to this day (Tennent's *Ceylon*, ii. 102). The silver bowl given as a prize by Achilles was the work of Sidonian artists (*Il.* xxiii. 743; comp. *Od.* iv. 618). In Homer (*Il.* ii. 857), Alyce is called the birthplace of silver, and was probably celebrated for its mines. But Spain appears to have been the chief source whence silver was obtained by the ancients. [MINES, p. 369.] Possibly the hills of Palestine may have afforded some supply of this metal. "When Volney was among the Druses, it was mentioned to him that an ore affording silver and lead had been discovered on the declivity of a hill in Lebanon" (Elitz, *Phys. Hist. of Palestine*, p. 73).

For an account of the knowledge of obtaining and refining silver possessed by the ancient Hebrews see the articles LEAD and MINES. The whole operation of mining is vividly depicted in *Jeu xxviii. 1-11*; and the process of purifying metals is frequently alluded to (*Ps.* xii. 6; *Prov.* xxv. 4), while it is described with some minuteness in *Ez.* xxi. 20-22. Silver mixed with alloy is referred to in *Jer.* vi. 30, and a finer kind, either purer in itself, or more thoroughly purified, is mentioned in *Prov.* viii. 19.

[W. A. W.]

SILVERLINGS (ἄργυρος: *silveros*; *argentos*, *silveros* understood), a word used once only in the A. V. (*Is.* vii. 23), as a translation of the Hebrew word *ceseph*, elsewhere rendered "silver" or "money." [PIECE OF SILVER.] [R. S. P.]

SIMALCUE (Σιμαλκουή, Εἰμαλκουή: *Emalchuel*, *Malchus*; *Μάλαχος*, Joseph.), an Arabian chief who had charge of Antiochus, the young son of Alexander Balas before he was put forward by Tryphon as a claimant to the Syrian throne (1 Macc. xi. 39). [ANTIOCHUS VI., vol. i. p. 76.] According to Diodorus (*Ecl.* xxii. 1) the name of the chief was Diocles, though in another place (*Frag.* xxi. Müller) he calls him Jamblichus. The name evidently contains the element *Malak*, "king," but the original form is uncertain (comp. Grotius and Grimm on 1 Macc. i. 6.).

[B. F. W.]

SIMEON (שִׁמְעוֹן; Συμεών: *Simeon*). The second of Jacob's sons by Leah. His birth is recorded in Gen. xxix. 33, and in the explanation there given of the name, it is derived from the root *shama'*, to "hear"—"Jehovah hath heard (*shama'*) that I was hated." . . . and she called his name Shime'on." This metaphor is not carried on (as in the case of some of the other names) in Jacob's blessing; and in that of Moses all mention of Simeon is omitted.

The first group of Jacob's children consists, besides Simeon, of the three other sons of Leah—Reuben, Levi, Judah. With each of these Simeon is mentioned in some connexion. "As Reuben and Simeon are mine," says Jacob, "so shall Joseph's sons Ephraim and Manasseh be mine" (Gen. xlviii. 5). With Levi, Simeon was associated in the massacre of the Shechemites (xxxiv. 25)—a deed which drew on them the remonstrance of their father (ver. 30), and perhaps also his dying curse (xlix. 5-7). With Judah the connexion was drawn still closer. He and Simeon not only "went up" together, side by side, in the forefront of the nation, to the conquest of the south of the Holy Land (Judg. i. 3, 17), but their allotments lay together in a more special manner than those of the other tribes, something in the same manner as Benjamin and Ephraim. Besides the massacre of Shechem—a deed not to be judged of by the standards of a more civilised and less violent age, and, when fairly estimated, not altogether discreditable to its perpetrators—the only personal incident related of Simeon is the fact of his being selected by Joseph, without any reason given or implied, as the hostage for the appearance of Benjamin (Gen. xlii. 19, 24, 36; xliii. 23).

These slight traits are characteristically amplified in the Jewish traditions. In the Targum Pseudo-jonathan it is Simeon and Levi who are the enemies of the lad Joseph. It is they who counsel his being killed, and Simeon binds him before he is lowered into the well at Dothan. (See further details in Fabricius, *Cod. Pseud.* 535.) Hence Joseph's selection of him as the hostage, his binding and incarceration. In the Midrash the strength of Simeon is so prodigious that the Egyptians are unable to cope with him, and his binding is only accomplished at length by the intervention of Manasseh, who acts as the house steward and interpreter of Joseph. His powers are so great that at the mere roar of his voice 70 valiant Egyptians fall at his feet and break their teeth (Weil, *Bib. Leg.* 88). In the "Testament of Simeon" his fierceness and implacability are put prominently forward, and he dies warning his children against the indulgence of such passions (Fabricius, *Cod. Pseud.* 533-543).

The chief families of the tribe are mentioned in the lists of Gen. xlv. (10), in which one of them, bearing the name of Shaul (Saul), is specified as "the sons of the Canaanites"—Num. xxvi. (12-14),

* Filast (Händels. II. 472) inclines to the interpretation "famous" (*ruhmreicher*). Redalob (*Alttest. Namen*, 92).

on the other hand, adopting the Arabic root *shama'*, construes the name to mean "sons of bondage" or "bondsmen."

† The name is given in this its more correct form in the A.V. in connexion with a later Israelite in Ex. x. 31.

‡ It is by no means certain that Jacob's words allude to the transaction at Shechem. They appear rather to refer to some other act of the brothers which has escaped direct record.

and 1 Chr. iv. (24-43). In the latter passage (ver. 27) it is mentioned that the family of one of the heads of the tribe "had not many children, neither did they multiply like to the children of Judah." This appears to have been the case not only with one family but with the whole tribe. At the census at Sinai Simeon numbered 59,300 fighting men (Num. i. 23). It was then the most numerous but two, Judah and Dan alone exceeding it; but when the second census was taken, at Shittim, the numbers had fallen to 22,200, and it was the weakest of all the tribes. This was no doubt partly due to the recent mortality following the idolatry of Peor, in which the tribe of Simeon appears to have taken a prominent share, but there must have been other causes which have escaped mention.

The connexion between Simeon and Levi implied in the Blessing of Jacob (Gen. xlix. 5-7) has been already adverted to. The passage relating to them is thus rendered:—

Simeon and Levi are brethren,*

Instruments of violence are their machinations (or, their swords).

Into their secret council come not my soul! Unto their assembly join not mine honour!

For in their wrath they slew a man, And in their self-will they houghed an ox.

Cursed be their wrath, for it is fierce,

And their anger, for it is cruel! I will divide them in Jacob,

And scatter them in Israel.

The terms of this denunciation seem to imply a closer bond of union between Simeon and Levi, and more violent and continued exploits performed under that bond, than now remain on record. The expressions of the closing lines also seem to necessitate a more advanced condition of the nation of Israel than it could have attained at the time of the death of the father of the individual patriarchs. Taking it however to be what it purports, an actual prediction by the individual Jacob (and, in the present state of our knowledge, however doubtful this may be, no other conclusion can be safely arrived at), it has been often pointed out how differently the same sentence was accomplished in the cases of the two tribes. Both were "divided" and "scattered." But how differently! The dispersion of the Levites arose from their holding the post of honour in the nation, and being spread, for the purposes of education and worship, broadcast over the face of the country. In the case of Simeon the dispersion seems to have arisen from some corrupting element in the tribe itself, which first reduced its numbers, and at last drove it from its allotted seat in the country—not, as Dan, because it could not, but because it would not stay—and thus in the end caused it to dwindle and disappear entirely.

The non-appearance of Simeon's name in the Blessing of Moses (Deut. xxxiii. 6*) may be ex-

* The word is שְׁבִיטִים, meaning "brothers" in the fullest, strictest sense. In the Targ. Pseudojon. it is rendered *achin telamin*, "brothers of the womb."

† Identified by some (Jerome, Talmud, &c.) with the Greek μέγαρα. The "habitations" of the A.V. is derived from Kimchi, but is not countenanced by later scholars.

‡ A.V. "digged down a wall"; following Onkelos, who reads שָׁחַט = שָׁחַט, "a town, a wall."

§ The Alexandrine MS. of the LXX. adds Σιμεών's name in this passage—"Let Reuben live and not die, and let Simeon be few in number." In so doing it differs

plained in two ways. On the assumption that the Blessing was actually pronounced in its present form by Moses, the omission may be due to his displeasure at the misbehaviour of the tribe at Shittim. On the assumption that the Blessing, or this portion of it, is a composition of later date, then it may be due to the fact of the tribe having by that time vanished from the Holy Land. The latter of these is the explanation commonly adopted.

During the journey through the wilderness Simeon was a member of the camp which marched on the south side of the Sacred Tent. His associates were Reuben and Gad—not his whole brothers, but the sons of Zilpah, Leah's maid. The head of the tribe at the time of the Exodus was Shelumiel son of Zurishaddai (Num. i. 6), ancestor of its one heroine, the intrepid Judith. [SALASADAI.] Among the spies Simeon was represented by Shaphat son of Hori, i. e. Horite, a name which perhaps, like the "Canaanites" of the earlier list, reveals a trace of the lax tendencies which made the Simeonites an easy prey to the illicit rites of Peor, and ultimately destroyed the permanence of the tribe. At the division of the land his representative was Shemuel,¹ son of Ammihud.

The connexion between Judah and Simeon already mentioned seems to have begun with the Conquest. Judah and the two Joseph-brethren were first served with the lion's share of the land; and then, the Canaanites having been sufficiently subdued to allow the Sacred Tent to be established without risk in the heart of the country, the work of dividing the remainder amongst the seven inferior tribes was proceeded with (Josh. viii. 1-6). Benjamin had the first turn, then Simeon (xix. 1). By this time Judah had discovered that the tract allotted to him was too large (xix. 9), and also too much exposed on the west and south for even his great powers.² To Simeon accordingly was allotted a district out of the territory of his kinsman, on its southern frontier,³ which contained eighteen or nineteen cities, with their villages, spread round the venerable well of Beersheba (Josh. xix. 1-8; 1 Chr. iv. 28-33). Of these places, with the help of Judah, the Simeonites possessed themselves (Judg. i. 3, 17); and here they were found, doubtless by Joab, residing in the reign of David (1 Chr. iv. 31). During his wandering life David must have been much amongst the Simeonites. In fact three of his cities are named in the list of those to which he sent presents of the spoil of the Amalekites, and one (Ziklag) was his own private⁴ property. It is therefore remarkable that the numbers of Simeon and Judah who attended his installation as king at Hebron should have been so much below those of the other tribes (1 Chr. xii. 23-37). Possibly it is due to the fact that the event was taking place in the heart of their own territory, at Hebron. This, however, will not account for the curious fact that the warriors of Simeon (7100) were more numerous than those of Judah (8800). After David's removal

not only from the Vatican MS. but also from the Hebrew text, to which this MS. usually adheres more closely than the Vatican does. The insertion is adopted in the Complutensian and Aldine editions of the LXX., but does not appear in any of the other versions.

² It is a curious coincidence, though of course nothing more, that the scanty records of Simeon should disclose two names so illustrious in Israelite history as Saul and Samuel.

³ This is a different account to that supplied in Judg. i. The two are entirely distinct documents. That of Judges,

to Jerusalem, the head of the tribe was Ishphaliah son of Maachah (1 Chr. xxvii. 16).

What part Simeon took at the time of the division of the kingdom we are not told. The tribe was probably not in a sufficiently strong or compact condition to have shown any northern tendencies, even had it entertained them. The only thing which can be interpreted into a trace of its having taken any part with the northern kingdom are the two casual notices of 2 Chr. xv. 9 and xxiv. 6, which appear to imply the presence of Simeonites there in the reigns of Aas and Josiah. But this may have been merely a manifestation of that vagrant spirit which was a cause or a consequence of the prediction ascribed to Jacob. And on the other hand the definite statement of 1 Chr. iv. 41-43 (the date of which by Hezekiah's reign, seems to show conclusively its southern origin) proves that at that time there were still some of them remaining in the original seat of the tribe, and actuated by all the warlike lawless spirit of their progenitor. This fragment of ancient chronicle relates two expeditions in search of more eligible territory. The first, under thirteen chieftains, leading doubtless a large body of followers, was made against the Hamites and the Mehunim,⁵ a powerful tribe of Bedouins, "at the entrance of Gedor at the east side of the ravine." The second was smaller, but more adventurous. Under the guidance of four chiefs a band of 500 undertook an expedition against the remnant of Amalek, who had taken refuge from the attacks of Saul or David, or some later pursuers, in the distant fastnesses of Mount Seir. The expedition was successful. They smote the Amalekites and took possession of their quarters; and they were still living there after the return of the Jews from Captivity, or whenever the First Book of Chronicles was edited in its present form.

The audacity and intrepidity which seem to have characterized the founder of the tribe of Simeon are seen in their fullest force in the last of his descendants of whom there is any express mention in the Sacred Record. Whether the book which bears her name be a history or a historic romance, JUDITH will always remain one of the most prominent figures among the deliverers of her nation. Bethulia would almost seem to have been a Simeonite colony. Ozias, the chief man of the city, was a Simeonite (Jud. vi. 15), and so was Manasses the husband of Judith (viii. 2). She herself had the purest blood of the tribe in her veins. Her genealogy is traced up to Zurishaddai (in the Greek form of the present text Salasadai, viii. 1), the head of the Simeonites at the time of their greatest power. She nerves herself for her tremendous exploit by a prayer to "the Lord God of her father Simeon" and by recalling in the most characteristic manner and in all their details the incidents of the massacre of Shechem (ix. 2).

Simeon is named by Ezekiel (xlviii. 25, and the author of the Book of the Revelation (vii. 7) in their catalogues of the restoration of Israel. The former

from its fragmentary and abrupt character, has the appearance of being the more ancient of the two.

⁴ "The parts of Idumaea which border on Arabia and Egypt" (Joseph. Ant. v. 1, §22).

⁵ It had been first taken from Simeon by the Philistines (1 Sam. xxvii. 6), if indeed he ever got possession of it.

⁶ Possibly because the Simeonites were warriors and nothing else, instead of husbandmen, &c., like the men of Judah.

⁷ A. V. "habitations." See MANASSE

removes the tribe from Judah and places it by the side of Benjamin.

2. (*Simeon*: *Simeon*.) A priest of the family of Joarib—or in its full form JEHOIARIB—one of the ancestors of the Maccabees (1 Macc. ii. 1).

3. Son of Juda and father of Levi in the genealogy of our Lord (Luke iii. 30). The Vat. MS. gives the name *Simeon*.

4. That is, Simon Peter (Acts xv. 14). The use of the Hebrew form of the name in this place is very characteristic of the speaker in whose mouth it occurs. It is found once again (2 Pet. i. 1), though here there is not the same unanimity in the MSS. Lachmann, with B, here adopts "Simon." [G.]

5. A devout Jew, inspired by the Holy Ghost, who met the parents of our Lord in the Temple, took Him in his arms, and gave thanks for what he saw, and knew of Jesus (Luke ii. 25-35).

In the apocryphal Gospel of Nicodemus, Simeon is called a high-priest, and the narrative of our Lord's descent into Hell is put into the mouths of Channus and Lenthinus, who are described as two sons of Simeon, who rose from the grave after Christ's resurrection (Matt. xxvii. 53), and related their story to Annas, Caiaphas, Nicodemus, Joseph, and Gamaliel.

Rabban Simeon, whose grandmother was of the family of David, succeeded his father Hillel as president of the Sanhedrim about A.D. 13 (Otho, *Lexicon Rab.* p. 697), and his son Gamaliel was the Pharisee at whose feet St. Paul was brought up (Acts xxii. 3). A Jewish writer specially notes that no record of this Simeon is preserved in the Mishna (Lightfoot, *Horae Heb.* Luke ii. 25). It has been conjectured that he (Prideaux, *Connexion*, anno 37, Michaelis) or his grandson (Schöttgen, *Horae Heb.* Luke ii. 25) of the same name, may be the Simeon of St. Luke. In favour of the identity it is alleged that the name, residence, time of life, and general character are the same in both cases; that the remarkable silence of the Mishna, and the counsel given by Gamaliel (Acts v. 38) countenance a suspicion of an inclination on the part of the family of the Rabban towards Christianity. On the other hand, it is argued that these facts fall far short of historical proof; and that Simeon was a very common name among the Jews, that St. Luke would never have introduced so celebrated a character as the President of the Sanhedrim merely as "a man in Jerusalem," and that his son Gamaliel, after all, was educated as a Pharisee. The question is discussed in Witsius, *Miraculæ Sacra*, i. 21 §14-16. See also Wolf, *Curæ Philologicae*, Luke ii. 25, and *Bibl. Hebr.* ii. 682. [W. T. B.]

SIMEON NIGER. Acts xiii. 1. [NIGER.]

SIMON. A name of frequent occurrence in Jewish history in the post-Babylonian period. It is doubtful whether it was borrowed from the Greeks, with whom it was not uncommon, or whether it was a contraction of the Hebrew Shimeon. That the two names were regarded as identical appears from 1 Macc. ii. 65. Perhaps the Hebrew name was thus slightly altered in order to render it identical with the Greek.

1. Son of Mattathias. [MACCABEES, §4, p. 1666.]

2. Son of Onias the high-priest (*λεβὴς ὁ μέγας*), whose eulogy closes the "praise of famous men" in the Book of Ecclesiasticus (ch. iv.). [ECCLESIASTICUS, vol. i. p. 479.] Fritzsche, whose edition of

Ecclesiasticus (*Ereg. Handb.*) has appeared (1860) since the article referred to was written, maintains the common view that the reference is to Simon II., but without bringing forward any new arguments to support it, though he strangely underrates the importance of Simon I. (the Just). Without laying undue stress upon the traditions which attached to this name (Herzfeld, *Gesch. Isr.* i. 195), it is evident that Simon the Just was popularly regarded as closing a period in Jewish history, as the last teacher of "the Great Synagogue." Yet there is in fact a doubt to which Simon the title "the Just" was given. Herzfeld (i. 377, 378) has endeavoured to prove that it belongs to Simon II., and not to Simon I., and in this he is followed by Jost (*Gesch. d. Judenth.* i. 95). The later Hebrew authorities, by whose help the question should be settled, are extremely unsatisfactory and confused (Jost, 110, &c.); and it appears better to adhere to the express testimony of Josephus, who identifies Simon I. with Simon the Just (*Ant.* xii. 2, §4, &c.), than to follow the Talmudic traditions, which are notoriously untrustworthy in chronology. The legends are connected with the title, and Herzfeld and Jost both agree in supposing that the reference in Ecclesiasticus is to Simon, known as "the Just," though they believe this to be Simon II. (compare, for the Jewish anecdotes, Raphael's *Hist. of Jews*, i. 115-124; Prideaux, *Connexion*, ii. 1).

3. "A governor of the Temple" in the time of Seleucus Philopator, whose information as to the treasures of the Temple led to the sacrilegious attempt of Heliodorus (2 Macc. iii. 4 &c.). After this attempt failed, through the interference of the high-priest Onias, Simon accused Onias of conspiracy (iv. 1, 2), and a bloody feud arose between their two parties (iv. 3). Onias appealed to the king, but nothing is known as to the result or the later history of Simon. Considerable doubt exists as to the exact nature of the office which he held (*ὑποστράτης τοῦ ἱεροῦ*, 2 Macc. iii. 4). Various interpretations are given by Grimm (*Ereg. Handb.* ad loc.). The chief difficulty lies in the fact that Simon is said to have been of "the tribe of Benjamin" (2 Macc. iii. 3), while the earlier "ruler of the house of God" (*ὁ ὑποβύρωτος οἴκου τοῦ θεοῦ* (*κρυπτός*), 1 Chr. ix. 11; 2 Chr. xxxi. 13; Jer. xx. 1) seems to have been always a priest, and the "captain of the Temple" (*στρατηγὸς τοῦ ἱεροῦ*, Luke xxii. 4, with Lightfoot's note; Acts iv. 1, v. 24, 26) and the keeper of the treasures (1 Chr. xxvi. 24; 2 Chr. xxxi. 12) must have been at least Levites. Herzfeld (*Gesch. Isr.* i. 218) conjectures that *Benjamin* is an error for *Minjannin*, the head of a priestly house (Neh. xii. 5, 17). In support of this view it may be observed that Menelaus, the usurping high-priest, is said to have been a brother of Simon (2 Macc. iv. 23), and no intimation is anywhere given that he was not of priestly descent. At the same time the corruption (if it exist) dates from an earlier period than the present Greek text, for "tribe" (*φυλῆς*) could not be used for "family" (*οἶκος*). The various reading *ἀγορανομίας* ("regulation of the market") for *κατανομίας* ("disorder," 2 Macc. iii. 4), which seems to be certainly correct, points to some office in connexion with the supply of the sacrifices; and probably Simon was appointed to carry out the design of Seleucus, who (as is stated in the context) had undertaken to defray the cost of them (2 Macc. iii. 3). In this case there would be less difficulty in a Benjaminite acting as the agent of a foreign king

even in a matter which concerned the Temple-service. [B. F. W.]

4. **SIMON THE BROTHER OF JESUS.**—The only undoubted notice of this Simon occurs in Matt. xiii. 55, Mark vi. 3, where, in common with James, Joseph, and Judas, he is mentioned as one of the "brethren" of Jesus. He has been identified by some writers with Simon the Canaanite, and still more generally with Symeon who became bishop of Jerusalem after the death of James, A.D. 62 (Euseb. *H. E.* iii. 11, iv. 22), and who suffered martyrdom in the reign of Trajan at the extreme age of 120 years (Hegesippus, ap. Euseb. *H. E.* iii. 32), in the year 107, or according to Burton (*Lectures*, ii. 17, note) in 104. The former of these opinions rests on no evidence whatever, nor is the latter without its difficulties. For in whatever sense the term "brother" is accepted—a vexed question which has been already amply discussed under **BROTHER** and **JAMES**—it is clear that neither Eusebius nor the author of the so-called *Apostolical Constitutions* understood Symeon to be the brother of James, nor consequently the "brother" of the Lord. Eusebius invariably describes James as "the brother" of Jesus (*H. E.* i. 12, ii. 1, *al.*), but Symeon as the son of Clopas, and the cousin of Jesus (iii. 11, iv. 22), and the same distinction is made by the other author (*Const. Apost.* vii. 46).

5. **SIMON THE CANAANITE**, one of the Twelve Apostles (Matt. x. 4; Mark iii. 18), otherwise described as Simon Zelotes (Luke vi. 15; Acts i. 13). The latter term (ζηλωτής), which is peculiar to Luke, is the Greek equivalent for the Chaldee term preserved by Matthew and Mark (*ῥαββίς*), as in *text. recept.*, or *ῥαββίνας*, as in the Vulg., *Cana-naeus*, and in the best modern editions). Each of these equally points out Simon as belonging to the faction of the Zealots, who were conspicuous for their fierce advocacy of the Mosaic ritual. The supposed references to Canaan (A. V.) or to Cana (Luther's version) are equally erroneous. [CANAANITE.] The term *ῥαββίς* appears to have survived the other as the distinctive surname of Simon (*Const. Apost.* vi. 14, viii. 27). He has been frequently identified with Simon the brother of Jesus; but Eusebius (*H. E.* iii. 11) clearly distinguishes between the Apostles and the relations of Jesus. Still less likely is it that he was identical with Symeon, the second bishop of Jerusalem, as stated by Sophronius (*App. ad Hieron. Catal.*). Simon the Canaanite is reported, on the doubtful authority of the Pseudo-Dorotheus and of Nicephorus Callistus, to have preached in Egypt, Cyrene, and Mauritania (Burton's *Lectures*, i. 333, note), and, on the equally doubtful authority of an annotation preserved in an original copy of the *Apostolical Constitutions* (viii. 27), to have been crucified in Judaea in the reign of Domitian.

* [M.D.]

* Some doubt has been thrown on Justin's statement, from the fact that Josephus (*Ant.* xx. 7, §2) mentions a reputed magician of the same name and about the same date, who was born in Cyprus. It has been suggested that Justin borrowed his information from this source, and mistook Gittim, a town of Cyprus, for Gittion. If the writers had respectively used the gentile forms *Kirunís* and *Tarrunís*, the similarity would have favoured such an idea. But neither does Josephus mention Gittim, nor yet does Justin use the gentile form. It is far more probable that Josephus would be wrong than Justin, in any point respecting Samaria.

6. **SIMON OF CYRENE.**—A Hellenistic Jew born at Cyrene on the north coast of Africa, who was present at Jerusalem at the time of the crucifixion of Jesus, either as an attendant at the feast (Acts ii. 10), or as one of the numerous settlers at Jerusalem from that place (Acts vi. 9). Meeting the procession that conducted Jesus to Golgotha, as he was returning from the country, he was pressed into the service (*ἡγούμενος*, a military term) to bear the cross (Matt. xxvii. 32; Mark xv. 21; Luke xxiii. 26), when Jesus himself was unable to bear it any longer (comp. John xix. 17). Mark describes him as the father of Alexander and Rufus, perhaps because this was the Rufus known to the Roman Christians (Rom. xvi. 13), for whom he more especially wrote. The Basilidian Gnostics believed that Simon suffered in lieu of Jesus (Burton's *Lectures*, ii. 64).

7. **SIMON THE LEPER.**—A resident at Bethany, distinguished as "the leper," not from his having leprosy at the time when he is mentioned, but at some previous period. It is not improbable that he had been miraculously cured by Jesus. In his house Mary anointed Jesus preparatory to His death and burial (Matt. xxvi. 6 &c.; Mark xiv. 3 &c. John xii. 1 &c.). Lazarus was also present as one of the guests, while Martha served (John xii. 2); the presence of the brother and his two sisters, together with the active part the latter took in the proceedings, leads to the inference that Simon was related to them; but there is no evidence of this, and we can attach no credit to the statement that he was their father, as reported on apocryphal authority by Nicephorus, (*H. E.* i. 27), and still less to the idea that he was the husband of Mary. Simon the Leper must not be confounded with Simon the Pharisee mentioned in Luke vii. 40.

8. **SIMON MAGUS.**—A Samaritan living in the Apostolic age, distinguished as a sorcerer or "magician," from his practice of magical arts (*μαγείας*, Acts viii. 9). His history is a remarkable one: he was born at Gittion,^a a village of Samaria (Justin Mart. *Apol.* i. 26), identified with the modern *Kuryet Ill*, near *Nábulus* (Robinson's *Bib. Res.* ii. 308, note). He was probably educated at Alexandria (as stated in *Clement. Hom.* ii. 22), and there became acquainted with the eclectic tenets of the Gnostic school. Either then or subsequently he was a pupil of Dositheus, who preceded him as a teacher of Gnosticism in Samaria, and whom he supplanted with the aid of Cleobius (*Constit. Apostol.* vi. 8). He is first introduced to us in the Bible as practising magical arts in a city of Samaria, perhaps Sychar (Acts viii. 5; comp. John iv. 5) and with such success, that he was pronounced to be "the power of God which is called great" (Acts viii. 10). The preaching and miracles of Philip having excited his observation, he became one of his disciples, and received baptism at his

* The A. V. omits the word *καλούμενη*, and renders the words "the great power of God." But this is to lose the whole point of the designation. The Samaritans described the angels as *δυνάμεις*, *δυνάμεις*, i. e. uncreated influences proceeding from God (Gieseeler, *Eckl. Hist.* i. 48, note 6). They intended to distinguish Simon from such an order of beings by adding the words "which is called great," meaning thereby the source of all power, in other words, the Supreme Deity. Simon was recognized as the incarnation of this power. He announced himself as in a special sense "some great one" (Acts viii. 9); or to use his own words (as reported by Jerome, on Matt. xxiv. 8)

hands. Subsequently he witnessed the effect produced by the imposition of hands, as practised by the Apostles Peter and John, and, being desirous of acquiring a similar power for himself, he offered a sum of money for it. His object evidently was to apply the power to the prosecution of magical arts. The motive and the means were equally to be reprobated; and his proposition met with a severe denunciation from Peter, followed by a petition on the part of Simon, the tenor of which bespeaks terror but not penitence (Acts viii. 9-24). The memory of his peculiar guilt has been perpetuated in the word *simony*, as applied to all traffic in spiritual offices. Simon's history, subsequently to his meeting with Peter, is involved in difficulties. Early Church historians depict him as the pertinacious foe of the Apostle Peter, whose movements he followed for the purpose of seeking encounters, in which he was signally defeated. In his journeys he was accompanied by a female named Helena, who had previously been a prostitute at Tyre, but who was now elevated to the position of his *ἐννοια*⁴ or divine intelligence (Justin Mart. *Apol.* i. 26; Euseb. *H. E.* ii. 13). His first encounter with Peter took place at Caesarea Stratonis (according to the *Constitutiones Apostolicas*, vi. 8), whence he followed the Apostle to Rome. Eusebius makes no mention of this first encounter, but represents Simon's journey to Rome as following immediately after the interview recorded in Scripture (*H. E.* ii. 14); but his chronological statements are evidently confused; for in the very same chapter he states that the meeting between the two at Rome took place in the reign of Claudius, some ten years after the events in Samaria. Justin Martyr, with greater consistency, represents Simon as having visited Rome in the reign of Claudius, and omits all notice of an encounter with Peter. His success there was so great that he was deified, and a statue was erected in his honour, with the inscription "Simoni Deo Sancto"⁵ (*Apol.* i. 26, 56). The above statements can be reconciled only by assuming that Simon made two expeditions to Rome, the first in the reign of Claudius, the second, in which he encountered Peter, in the reign of Nero,⁶ about the year 68 (Burton's *Lectures*, i. 233, 318); and even this takes for granted the disputed fact of St. Peter's visit to Rome. [PETER.] His death is associated with the meeting in question: according to Hippolytus, the earliest authority on the subject, Simon was buried alive at his own request, in the confident assurance that he would

rise again on the third day (*Adv. Haer.* v. 20). According to another account, he attempted to fly in proof of his supernatural power; in answer to the prayers of Peter, he fell and sustained a fracture of his thigh- and ankle-bones (*Constitut. Apostol.* ii. 14, vi. 9); overcome with vexation, he committed suicide (*Arnob. Adv. Gent.* ii. 7). Whether this statement is confirmed, or, on the other hand, weakened, by the account of a similar attempt to fly recorded by heathen writers (Sueton. *Ner.* 12; *Juv. Sat.* iii. 79), is uncertain. Simon's attempt may have supplied the basis for this report, or this report may have been erroneously placed to his credit. Burton (*Lectures*, i. 295) rather favours the former alternative. Simon is generally pronounced by early writers to have been the founder of heresy. It is difficult to understand how he was guilty of heresy in the proper sense of the term, inasmuch as he was not a Christian; perhaps it refers to his attempt to combine Christianity with Gnosticism. He is also reported to have forged works professing to emanate from Christ and His disciples (*Constitut. Apostol.* vi. 16).

9. SIMON PETER. [PETER.]

10. SIMON, a Pharisee, in whose house a penitent woman anointed the head and feet of Jesus (Luke vii. 40).

11. SIMON THE TANNER.—A Christian convert living at Joppa, at whose house Peter lodged (Acts ix. 43). The profession of a tanner was regarded with considerable contempt, and even as approaching to uncleanness, by the rigid Jews. [TANNER.] That Peter selected such an abode, showed the diminished hold which Judaism had on him. The house was near the sea-side (Acts x. 6, 32), for the convenience of the water.

12. SIMON, the father of Judas Iscariot (John vi. 71, xiii. 2, 26). [W. L. B.]

SIMON CHOSAMAEUS (Σίμων Χοσαμαῖος: Simon). SHIMEON, and the three following names in Exr. x. 31, 32, are thus written in the LXX. (1 Esd. ix. 32). The Vulgate has correctly "Simon, Benjamin, et Malchus, et Marras." "Chosamaeus" is apparently formed by combining the last letter of Malluch with the first part of the following name, Shemariah.

SIM'RI (שִׁמְרִי: Σιμράσσορες: Semri). Properly "Shimri," son of Hoshai, a Merarite Levite in the reign of David, (1 Chr. xxvi. 10). Though not the first-born, his father made him the head

⁴ Ego sum sermo Dei, ego sum Speciosus, ego Paracletus, ego Omnipotens, ego omnia Dei.

⁵ In the *ἐννοια*, as embodied in Helena's person, we recognize the dualistic element of Gnosticism, derived from the Manichean system. The Gnostics appear to have recognized the *δύναμις* and the *ἐννοια*, as the two original principles from whose junction all beings emanated. Simon and Helena were the incarnations in which these principles resided.

⁶ Justin's authority has been impugned in respect to this statement, on the ground that a tablet was discovered in 1874 on the *Tiberina insula*, which answers to the locality described by Justin (ἐν τῇ Τίβερϊ ποταμῷ μετὰ τὴν ἑνὲς γέφυραν), and bearing an inscription, the first words of which are "Simoni sancto deo dño." This inscription, which really applies to the Sabine Hercules Sanctus Semo, is supposed to have been mistaken by Justin, in his ignorance of Latin, for one in honour of Simon. If the inscription had been confined to the words

quoted by Justin, such a mistake might have been conceivable; but it goes on to state the name of the giver and other particulars: "Simoni Sancto Deo Fidio sacrum Sex. Pompeius, Sp. F. Col. Musianus Quinquennalis decus Bidentalis donum dedit." That Justin, a man of literary acquirements, should be unable to translate such an inscription—that he should misquote it in an Apology duly prepared at Rome for the eye of a Roman emperor—and that the mistake should be repeated by other early writers whose knowledge of Latin is unquestioned (Irenaeus, *Adv. Haer.* i. 20; Tertullian, *Apol.* 13)—these assumptions form a series of improbabilities, amounting almost to an impossibility.

⁷ This later date is to a certain extent confirmed by the account of Simon's death preserved by Hippolytus (*Adv. Haer.* vi. 20); for the event is stated to have occurred while Peter and Paul (the term *ἀπὸ τῶν* evidently implying the presence of the latter) were together at Rome.

as the family. The LXX. read *ἡλικία*, *alhméré*, "guards."

SIN (𐤊𐤍: *Sîn*, *Σίνη*: *Pelusiûm*), a city of Egypt, mentioned only by Ezekiel (xxx. 15, 16). The name is Hebrew, or, at least, Shemitic. Gesenius supposes it to signify "clay" from the unused root 𐤊𐤍, probably "he or it was muddy, clayey." It is identified in the Vulg. with Pelusium, Πηλουσίον, or, "the clayey or muddy" town, from *πηλός*; and seems to be preserved in the Arabic Et-Teeneh,

الطينة, which forms part of the names of Fum et-Teeneh, the Mouth of Et-Teeneh, the supposed Pelusiac mouth of the Nile, and Burg or Kal'at et-Teeneh, the Tower or Castle of Et-Teeneh, in the immediate neighbourhood, "teen" signifying "mud," &c., in Arabic. This evidence is sufficient to show that Sin is Pelusium. The ancient Egyptian name is still to be sought for: it has been supposed that Pelusium preserves traces of it, but this is very improbable. Champollion identifies Pelusium with the Περελλοῦν, Περελλων (the second being a variation held by Quatremère to be incorrect), and Βαρελλοῦν, of the Copts,

El-Farmâ, القرماء, of the Arabs, which was in the time of the former a boundary-city, the limits of a governor's authority being stated to have extended from Alexandria to Filak-h, or Philae, and Peremoun (Acts of St. Saramon M.S. Copt. Vat. 67, fol. 90, ap. Quatremère, *Mémoires Géog. et Hist. sur l'Égypte*, i. 259). Champollion ingeniously derives this name from the article *ϕ*, *ερ*, "to be," and *Ορεῖ*, "mud" (*L'Égypte*, ii. 82-87; comp. Brugsch, *Geogr. Inschr.* i. p. 297). Brugsch compares the ancient Egyptian HA-REM, which he reads Per-remâ, on our system, PE-REM, "the abode of the tear," or "of the fish rem" (*Geogr. Inschr.* i. l. c., pl. iv. n°. 1679). Pelusium, he would make the city SAMHAT (or, as he reads it Sâmhud), remarking that "the nome of the city Sâmhud" is the only one which has the determinative of a city, and, comparing the evidence of the Roman nome-coins, on which the place is apparently treated as a nome; but this is not certain, for there may have been a Pelusiæc nome, and the etymology of the name SAMHAT is unknown (*Id.* p. 128; Pl. xxviii. 17).

The site of Pelusium is as yet undetermined. It has been thought to be marked by mounds near Burg et-Teeneh, now called El-Farmâ and not Et-Teeneh. This is disputed by Captain Spratt, who supposes that the mound of Abou-Kheeyâr indicates where it stood. This is further inland, and apparently on the west of the old Pelusiæc branch, as was Pelusium. It is situate between Farmâ and Tel-Defenneh.^a Whatever may have been its exact position, Pelusium must have owed its strength not to any great elevation, but to its being placed in the midst of a plain of marsh-land and mud, never easy to traverse. The ancient sites in such alluvial tracts of Egypt are in general only sufficiently raised above the level of the plain to preserve them from being injured by the inundation.

^a Capt. Spratt's reports have unfortunately been printed only in abstract ("Delta of the Nile," &c.; Return, House of Commons, 9th Feb 1880), with a very insufficient

The antiquity of the town of Sin may perhaps be inferred from the mention of "the wilderness of Sin" in the journeys of the Israelites (Ex. xvi. 1; Num. xxxiii. 11). It is remarkable, however, that the Israelites did not immediately enter this tract on leaving the cultivated part of Egypt, so that it is held to have been within the Sinitic peninsula, and therefore it may take its name from some other place or country than the Egyptian Sin. [SIN, WILDERNESS OF.]

Pelusium is mentioned by Ezekiel, in one of the prophecies relating to the invasion of Egypt by Nebuchadnezzar, as one of the cities which should then suffer calamities, with, probably, reference to their later history. The others spoken of are Noph (Memphis), Zoan (Tanis), No (Thebes), Aven (Heliopolis), Pi-bereh (Bubastis), and Tephnehes (Daphnæ). All these, excepting the two ancient capitals, Thebes and Memphis, lay on or near the eastern boundary; and, in the approach to Memphis, an invader could scarcely advance, after capturing Pelusium and Daphnæ, without taking Tanis, Bubastis, and Heliopolis. In the most ancient times Tanis, as afterwards Pelusium, seems to have been the key of Egypt on the east. Bubastis was an important position from its lofty mounds, and Heliopolis as securing the approach to Memphis. The prophet speaks of Sin as "Sin the stronghold of Egypt" (ver. 15). This place it held from that time until the period of the Romans. Herodotus relates that Sennacherib advanced against Pelusium, and that near Pelusium Cambyses defeated Psammetichus. In like manner the decisive battle in which Ochus defeated the last native king, Nectanebos, NEKHT-NEBF, was fought near this city. It is perhaps worthy of note that Ezekiel twice mentions Pelusium in the prophecy which contains the remarkable and signally-fulfilled sentence: "There shall be no more a prince of the land of Egypt" (ver. 13). As he saw the long train of calamities that were to fall upon the country, Pelusium may well have stood out as the chief place of her successive humiliations. Two Persian conquests, and two submissions to strangers, first to Alexander, and then to Augustus, may explain the especial misery foretold of this city:—"Sin shall suffer great anguish" (ver. 16).

We find in the Bible a geographical name, which has the form of a gent. noun derived from Sin, and is usually held to apply to two different nations, neither connected with the city Sin. In the list of the descendants of Noah, the Sinite, 𐤊𐤍, occurs among the sons of Canaan (Gen. x. 17. 1 Chr. i. 15). This people from its place between the Arkite and the Arvadite has been supposed to have settled in Syria north of Palestine, where similar names occur in classical geography and have been alleged in confirmation. This theory would not, however, necessarily imply that the whole tribe was there settled, and the supposed traces of the name are by no means conclusive. On the other hand, it must be observed that some of the eastern towns of Lower Egypt have Hebrew as well as Egyptian names, as Heliopolis and Tanis; that those very near the border seem to have borne only Hebrew names, as Migdol; so that we have an indication of a Shemitic influence in this part of Egypt, diminishing in degree according to the distance from

map. In M. Linant's map we cannot discover Abou Kheeyâr (*Perceement de l'Isthme de Suez, Atlas, carte Topographique*).

the border. It is difficult to account for this influence by any single circumstance of the Shepherd-invasion of Egypt, especially as it is shown yet more strikingly by the remarkably-strong characteristics which have distinguished the inhabitants of north-eastern Egypt from their fellow-countrymen from the days of Herodotus and Achilles Tatius to our own. And we must not pass by the statement of the former of these writers, that the Palestine Syrians dwelt westward of the Arabians to the eastern boundary of Egypt (iii. 5, and above p. 1047, note *). Therefore, it does not seem a violent hypothesis that the Sinites were connected with Pelusium, though their main body may perhaps have settled much further to the north. The distance is not greater than that between the Hittites of southern Palestine and those of the valley of the Orontes, although the separation of the less powerful Hivites into those dwelling beneath Mount Hermon and the inhabitants of the small confederacy of which Gibeon was apparently the head, is perhaps nearer to our supposed case. If the wilderness of Sin owed its name to Pelusium, this is an evidence of the very early importance of the town and its connection with Arabia, which would perhaps be strange in the case of a purely Egyptian town. The conjecture we have put forth suggests a recurrence to the old explanation of the famous mention of "the land of Sinim," *אֶרֶץ סִינִי*, in Isaiah (xlix. 12), supposed by some to refer to China. This would appear from the context to be a very remote region. It is mentioned after the north and the west, and would seem to be in a southern or eastern direction. Sin is certainly not remote, nor is the supposed place of the Sinites to the north of Palestine; but the expression may be proverbial. The people of Pelusium, if of Canaanite origin, were certainly remote compared to most of the other Canaanites, and were separated by alien peoples, and it is also noticeable that they were to the south-east of Palestine. As the sea bordering Palestine came to designate the west, as in this passage, so the land of Sinim may have passed into a proverbial expression for a distant and separated country. See, however, *SINITE, SINIM*. [R. S. P.]

SIN, WILDERNESS OF (*סִינַי*: *Ḥerap̄os Sin*: *desertum Sin*). The name of a tract of the wilderness which the Israelites reached after leaving the encampment by the Red Sea (Num. xxxiii. 11, 12). Their next halting-place (Ex. xvi. 1, xvii. 1) was Rephidim, probably the *Wady Feirda* [REPHIDIM]; on which supposition it would follow that Sin must lie between that wady and the coast of the Gulf of Suez, and of course west of Sinai. Since they were by this time gone more than a month from Egypt, the locality must be too far towards the S. E. to receive its name from the Egyptian Sin of Ex. xxx. 15, called *Edis* by the LXX., and identified with Pelusium (see previous Article). In the wilderness of Sin the manna was first gathered, and those who adopt the supposition that this was merely the natural product of the *tarfa* bush, find from the abundance of that shrub in *Wady es Sheikh*, S. E. of *W. Ghârundeh* a proof of local identity. [E. H. H.] At all events, that wady is as probable as any other. [H. H.]

SIN-OFFERING (*חַטָּאת*: *ḥatṭāṭ*, *τὸ ἁμαρτίας*

* Its technical use in Gen. iv. 7 is asserted, and supported by high authority. But the word here probably means (as in the Vulg. and A. V.) "sin." The fact that

ἁμαρτίας, *περὶ ἁμαρτίας*: *pro peccato*). The sin-offering among the Jews was the sacrifice, in which the ideas of propitiation and of atonement for sin were most distinctly marked. It is first directly enjoined in Lev. iv., whereas in chs. i.-iii. the burnt-offering, meat-offering, and peace-offering are taken for granted, and the object of the Law is to regulate, not to enjoin, the presentation of them to the Lord. Nor is the word *ḥatṭāṭ* applied to any sacrifice in ante-Mosaic times.* It is therefore peculiarly a sacrifice of the Law, agreeing with the clear definition of good and evil, and the stress laid on the "sinfulness of sin," which were the main objects of the Law in itself. The idea of propitiation was no doubt latent in earlier sacrifices, but it was taught clearly and distinctly in the Levitical sin-offering.

The ceremonial of the sin-offering is described in Lev. iv. and vi. The animal, a young bullock for the priest or the congregation, a male kid or lamb for a ruler, a female kid or lamb for a private person, in all cases without blemish, was brought by the sacrificer to the altar of sacrifice; his hand was laid upon its head (with, as we learn from later Jewish authorities, a confession of sin, and a prayer that the victim might be its expiation); of the blood of the slain victim, some was then sprinkled seven times before the veil of the sanctuary, some put on the horns of the altar of incense, and the rest poured at the foot of the altar of sacrifice; the fat (as the choicest part of the flesh) was then burnt on the altar as a burnt-offering; the remainder of the body, if the sin-offering were that of the priest himself or of the whole congregation, was carried out of the camp or city to a "clean place" and there burnt; but if the offering were that of an individual, the flesh might be eaten by the priests alone in the holy place, as being "most holy."

The **TRESPASS-OFFERING** (*זָכַת*: *πλημμελεια*, *τὸ τῆς πλημμελειᾶς*: *pro delicto*) is closely connected with the sin-offering in Leviticus, but at the same time clearly distinguished from it, being in some cases offered with it as a distinct part of the same sacrifice; as, for example, in the cleansing of the leper (Lev. xiv.). The victim was in each case to be a ram. At the time of offering, in all cases of damage done to any holy thing, or to any man, restitution was made with the addition of a fifth part to the principal; the blood was sprinkled round about upon the altar, as in the burnt-offering; the fat burnt, and flesh disposed of as in the sin-offering. The distinction of ceremonial clearly indicates a difference in the idea of the two sacrifices.

The nature of that difference is still a subject of great controversy. Looking first to the derivation of the two words, we find that *חַטָּאת* is derived from *חָטָא*, which is, properly, to "miss" a mark, or to "err" from a way, and secondarily to "sin," or to incur "penalty;" that *זָכַת* is derived from the root *זָכַח*, which is properly to "fail," having for its "primary idea negligence, especially in guilt" (Ges.). It is clear that, so far as derivation goes, there appears to be more of reference to general and actual sin in the former, to special cases of negligence in the latter.

Turning next to the description, in the Book of Leviticus, of the circumstances under which each

It is never used in application to any other sacrifice in Genesis or Exodus, alone makes the translation "sin-offering" here very improbable.

should be offered, we find one important passage (Lev. v. 1-13) in which the sacrifice is called first a "trespass-offering" (ver. 6), and then a "sin-offering" (ver. 7, 9, 11, 12). But the nature of the victims in ver. 6 agrees with the ceremonial of the latter, not of the former; the application of the latter name is more emphatic and reiterated; and there is at ver. 14 a formal introduction of the law of the trespass-offering, exactly as of the law of the sin-offering in iv. 1. It is therefore safe to conclude that the word *ḥṭṭ* is not here used in its technical sense, and that the passage is to be referred to the sin-offering only.

We find then that the sin-offerings were—

(A.) REGULAR.

(1.) *For the whole people*, at the New Moon, Passover, Pentecost, Feast of Trumpets, and Feast of Tabernacles (Num. xxviii. 15-xxix. 38); besides the solemn offering of the two goats on the Great Day of Atonement (Lev. xvi.).

(2.) *For the Priests and Levites* at their consecration (Ex. xxix. 10-14, 36); besides the yearly sin-offering (a bullock) for the high-priest on the Great Day of Atonement (Lev. xvi.).^b

(B.) SPECIAL.

(1.) *For any sin of "ignorance"* against the commandment of the Lord, on the part of priest, people, ruler, or private man (Lev. iv.).

(2.) *For refusal to bear witness* under adjuration (Lev. v. 1).

(3.) *For ceremonial defilement* not wilfully contracted (Lev. v. 2, 3), under which may be classed the offerings at the purification of women (xii. 6-8), at the cleansing of leprosy (xiv. 19, 31) or the uncleanness of men or women (xv. 15, 30), on the defilement of a Nazirite (Num. vi. 6-11) or the expiration of his vow (16).

(4.) *For the breach of a rash oath*, the keeping of which would involve sin (Lev. v. 4).

The trespass-offerings, on the other hand, were always special, as—

(1.) *For sacrilege* "in ignorance," with compensation for the harm done, and the gift of a fifth part of the value besides to the priest (Lev. v. 15, 16).

(2.) *For ignorant transgression* against some definite prohibition of the Law (v. 17-19).

(3.) *For fraud, suppression of the truth, or perjury* against man, with compensation, and with the addition of a fifth part of the value of the property in question to the person wronged (vi. 1-6).

(4.) *For rape of a betrothed slave* (Lev. xix. 20, 21).

(5.) *At the purification of the leper* (Lev. xiv. 12), and the *polluted Nazirite* (Num. vi. 12), offered with the sin-offering.

From this enumeration it will be clear that the two classes of sacrifices, although distinct, touch closely upon each other, as especially in B. (1) of the sin-offering, and (2) of the trespass-offering. It is also evident that the sin-offering was the only regular and general recognition of sin in the abstract, and accordingly was far more solemn and symbolical in its ceremonial; the trespass-offering was confined to special cases, most of which related to the doing of some material damage, either to the holier things or to man, except in (5), where the

trespass-offering is united with the sin-offering. Josephus (*Ant.* iii. 9, §8) declares that the sin-offering is presented by those "who fall into sin in ignorance" (*κατ' ἀγνοίας*), and the trespass-offering by "one who has sinned and is conscious of his sin, but has no one to convict him thereof." From this it may be inferred (as by Winier and others) that the former was used in cases of known sin against some definite law, the latter in the case of secret sin, unknown, or, if known, not liable to judicial cognizance. Other opinions have been entertained, widely different from, and even opposed to, one another. Many of them are given in Winier's *Realw.* "Schuldopfer." The opinions which suppose one offering due for sins of omission, and the other for sins of commission, have no foundation in the language of the Law. Others, with more plausibility, refer the sin-offering to sins of pure ignorance, the trespass-offering to those of a more sinful and deliberate character; but this does not agree with Lev. v. 17-19, and is contradicted by the solemn contrast between sins of ignorance, which might be atoned for, and "sins of presumption," against which death without mercy is denounced in Num. xv. 30. A third opinion supposes the sin-offering to refer to sins for which no material and earthly atonement could be made, the trespass-offering to those for which material compensation was possible. This theory has something to support it in the fact that in some cases (see Lev. v. 15, 16, vi. 1-6) compensation was prescribed as accessory to the sacrifice. Others seek more recondite distinctions, supposing (*e. g.*) that the sin-offering had for its object the cleansing of the sanctuary or the commonwealth, and the trespass-offering the cleansing of the individual; or that the former referred to the effect of sin upon the soul itself, the latter to the effect of sin as the breach of an external law. Without attempting to decide so difficult and so controverted a question, we may draw the following conclusions:—

First, that the sin-offering was far the more solemn and comprehensive of the two sacrifices.

Secondly, that the sin-offering looked more to the guilt of the sin done, irrespective of its consequences, while the trespass-offering looked to the evil consequences of sin, either against the service of God, or against man, and to the duty of atonement, as far as atonement was possible. Hence the two might with propriety be offered together.

Thirdly, that in the sin-offering especially we find symbolized the acknowledgment of sinfulness as inherent in man, and of the need of expiation by sacrifice to renew the broken covenant between man and God.

There is one other question of some interest, as to the nature of the sins for which either sacrifice could be offered. It is seen at once that in the Law of Leviticus, most of them, which are not purely ceremonial, are called sins of "ignorance" (see Heb. ix. 7); and in Num. xv. 30, it is expressly said that while such sins can be atoned for by offerings, "the soul that doeth aught *presumptuously*" (Heb. *with a high hand*) "shall be cut off from among his people." . . . "His iniquity shall be upon him" (comp. Heb. x. 26). But there are sufficient indications that the sins here called "of ignorance" are more strictly those of "negligence" or

^b To these may be added the sacrifice of the red heifer (conducted with the ceremonial of a sin-offering), from the ashes of which was made the "water of expia-

tion," used in certain cases of ceremonial pollution. See Num. xix.

"frailty," * repented of by the unpunished offender, as opposed to those of deliberate and unrepentant sin. The Hebrew word itself and its derivations are so used in Ps. xix. 67 (ἐπλημμέλησα, LXX.); 1 Sam. xxvi. 21 (ἡγνόηκα); Ps. xix. 13 (παρὰ τὸ ἁμαρτάνειν); Job xix. 4 (ἁλός). The words ἡγνόημα and ἡγνόω have a corresponding extent of meaning in the N. T.; as when in Acts iii. 17, the Jews, in their crucifixion of our Lord, are said to have acted (κατ' ἡγνόαν); and in Eph. iv. 18, 1 Pet. i. 14, the vices of heathenism, done against the light of conscience, are still referred to ἡγνόω. The use of the word (like that of ἀγνωμονεῖν in classical Greek) is found in all languages, and depends on the idea that goodness is man's true wisdom, and that sin is the failing to recognize this truth. If from the word we turn to the sins actually referred to in Lev. iv. v., we find some which certainly are not sins of pure ignorance; they are indeed few out of the whole range of sinfulness, but they are real sins. The later Jews (see Outram, *De Sacrificiis*) limited the application of the sin-offering to negative sins, sins in ignorance, and sins in action, not in thought, evidently conceiving it to apply to actual sins, but to sins of a secondary order.

In considering this subject, it must be remembered that the sacrifices of the Law had a temporal, as well as a spiritual, significance and effect. They restored an offender to his place in the commonwealth of Israel; they were therefore an atonement to the King of Israel for the infringement of His law. It is clear that this must have limited the extent of their legal application; for there are crimes, for which the interest and very existence of a society demand that there should be no pardon. But so far as the sacrifices had a spiritual and typical meaning, so far as they were sought by a repentant spirit as a sign and means of reconciliation with God, it can hardly be doubted that they had a wider scope and a real spiritual effect, so long as their typical character remained. [See SACRIFICE.]

For the more solemn sin-offerings, see DAY OF ATONEMENT; LEPROSY, &c. [A. B.]

SINA, MOUNT (τὸ ὄρος Σινᾶ: *mons Sina*). The Greek form of the well-known name which in the O. T. universally, and as often as not in the Apoc. and N. T., is given in the A. V. SINAI. Sina occurs Jud. v. 14; * Acts vii. 30, 38. [G.]

SINAI (סִינַי: *Sinā*: *Sinā*). Nearly in the centre of the peninsula which stretches between the horns of the Red Sea lies a wedge of granite, grüstein, and porphyry rocks, rising to between 8000 and 9000 feet above the sea. Its shape resembles scalene triangle, with a crescent cut from its southern or longer side, on which border Russegger's map gives a broad skirting tract of old red sandstone, reaching nearly from gulf to gulf, and tra-

versed by a few ridges, chiefly of a tertiary formation, running nearly N.W. and S.E. On the S.W. side of this triangle, a wide alluvial plain—narrowing, however, towards the N.—lines the coast of the Gulf of Suez, whilst that on the eastern or Akabah coast is so narrow as almost to disappear. Between these alluvial edges and the granitic mass a strip of the same sandstone is interposed, the two strips converging at *Rds Mohammed*, the southern promontory of the whole. This nucleus of plutonic rocks is said to bear no trace of volcanic action since the original upheaval of its masses (Stanley, 21, 22). Laborde (*Travels*, p. 105) thought he detected some, but does not affirm it. Its general configuration runs into neither ranges nor peaks, but is that of a plateau cut across with intersecting wadis,^b whence spring the cliffs and mountain peaks, beginning with a very gradual and terminating in a very steep ascent. It has been arranged (Stanley, *S. and P.* 11) in three chief masses as follows:—

1. The N.W. cluster above *Wady Feiran*; its greatest relief found in the five-peaked ridge of *Serbdl*, at a height of 6342 feet above the sea. (For an account of the singular natural basin into which the waters of this portion of the mountain mass are received, and its probable connexion with Scriptural topography, see REPHIDIM.)

2. The eastern and central one; its highest point the *Jebel Katherin*, at a height of 8063 (Rüppell) to 8168 (Russegger) feet, and including the *Jebel Musa*, the height of which is variously set (by Schubert, Rüppell, and Russegger) at 6796, 7033, and 7097 feet.

3. The S.E. one, closely connected, however, with 2; its highest point, *Um Shamer*, being that also of the whole.

The three last-named peaks all lie very nearly in a line of about 9 miles drawn from the most northerly of them, *Musa*, a little to the W. of S.; and a perpendicular to this line, traced on the map westwards for about 20 miles, nearly traverses the whole length of the range of *Serbdl*. These lines show the area of greatest relief for the peninsula,^c nearly equidistant from each of its embracing gulfs, and also from its northern base, the range of *El Tih*, and its southern apex, the *Rds Mohammed*.

Before considering the claims of the individual mountains to Scriptural notice, there occurs a question regarding the relation of the names Horeb and Sinai. The latter name first occurs as that of the limit on the further side from Egypt of the wilderness of Sin (Ex. xvi. 1), and again (xix. 1, 2) as the "wilderness" or "desert of Sinai," before *Mount Sinai* is actually spoken of, as in ver. 11 soon after we find it. But the name "Horeb" is, in the case of the rebuke of the people by God for their sin in making the golden calf, reintroduced into the Sinaitic narrative (xxiii. 6), having

* From the root סָנַע, or סָנַע, signifying to "err" or "wander out of the way;" cognate in sense to the root of the word *chastity* itself.

^a In this passage the present Greek text, of both MSS., reads *cis δέσος*, not *δὸς*, τοῦ Σινᾶ. But the note in the margin of the A. V. of 1811 is, notwithstanding, wrong—Greek, into the way of the wilderness of Sina; "that being nearer to the Vulg. *deserta Sina montis occupant*."

^b See Robinson's "Memoir on the Maps" (Vol. iii. Appendix 1, pp. 32-39), a most important comment on the different sources of authority for different portions of the

region, and the weight due to each, and containing a just caution regarding the indications of surface aspect given by Laborde.

^c Dr. Stanley (77) notices another "very high mountain S.W. of *Um-Sham'r*, apparently calculated by Rüppell to be the highest in the peninsula... possibly that called by Burckhardt *Thommar*, or *El Koly*." But this seems only to effect an extension of the area of the relief in the direction indicated.

^d Dr. Stanley has spoken of two of the three passages in Exodus in which Horeb occurs (iii. 1, xvi. 6) as "doubtful" and of the third (xxiii. 6) as "ambiguous;" but he does not say on what grounds (*S. & P.* 28, note).

been previously most recently used in the story of the murmuring at Rephidim (xvii. 6, "I will stand before thee there upon the rock in Horeb"), and earlier as the name of the scene of the appearance of God in the "burning bush" (iii. 1). Now, since Rephidim seems to be a desert stage apart from the place where Israel "camped before the mount" (Sinai, xix. 2), it is not easy to account for a Horeb at Rephidim, apparently as the specific spot of a particular transaction (so that the refuge of a "general" name Horeb, contrasted with Sinai as a special one, is cut off), and a Horeb in the Sinaitic region, apparently a synonym of the mountain which, since the scene of the narrative is fixed at it, had been called Sinai. Lepsius removes the difficulty by making *Serbâl* Sinai, but against this it will be seen that there are even stronger objections. But a proper name given from a natural feature may recur with that feature. Such is "Horeb," properly signifying "ground left dry by water draining off." Now both at Rephidim and at Kadesh Meribah, where was the "fountain of judgment" (Gen. xiv. 7), it is expressly mentioned that "there was no water;" and the inference is that some ordinary supply, expected to be found there, had failed, possibly owing to drought. "The rock in Horeb" was (Ex. xvii. 6) what Moses smote. It probably stood on the exact spot where the water was expected to be, but was not. Now Lepsius (*Tour*, April 22, transl. by Cottrell, p. 74) found in *Wady Feirân*, which he identifies with Rephidim, singular alluvial banks of earth which may have once formed the bottom of a lake since dried.* If this was the scene of the miracle [see REPHIDIM], the propriety of the name Horeb, as applied to it, becomes clear. Further, in all the places of Deut. where Horeb is found [see HOREB], it seems to be used in reference to the people as the place where they stood to receive, rather than whence God appeared to give the law, which is apparently in the same Book of Deut. indicated by Sinai (xxxiii. 2); and in the one remaining passage of Exod., where Horeb occurs in the narrative of the same events, it is used also in reference to the people (xxxiii. 6), and probably refers to what they had previously done in the matter of the golden calf (xxxii. 2, 3). If this be accepted, there remains in the Pentateuch only Ex. iii. 1, where Moses led the flocks of Jethro "to the mountain of God, to Horeb;" but this form of speech, which seems to identify two local names, is sometimes not a strict apposition, but denotes an extension, especially where the places are so close together that the writer tacitly recognizes them as one.[†] Thus Horeb, strictly taken, may probably be a dry plain, valley, or bed of a wady near the mountain; and yet *Mount Horeb*, on the "vast green plain" of which was doubtless excellent pasture, may mean the mountain viewed in reference thereto,[‡] or its

* "Alluvial mounds" are visible at the foot of the modern Horeb cliffs in the plain *Er Rahah*; just as Lepsius noticed others at the *Wady Feirân*. (Comp. Stanley, *S. & P.* 40, Lepsius, 64).

† So in Gen. xiii. 3, Abram goes "to Bethel, unto the place where his tent had been at the beginning, between Bethel and Hai;" i. e. really to Bethel, and somewhat further.

‡ It ought not to be left unnoticed that different tribes of the desert often seem to give different names to the same mountain, valley, &c., or the same names to different mountains, &c., because perhaps they judge of them by the way in which leading features group themselves to the

side abutting thereon. The mention of Horeb in later books (e. g. 1 K. viii. 9, xix. 8) seems to show that it had then become the designation of the mountain and region generally. The spot where the people themselves took part in the greatest event of their history would naturally become the popular name in later designations of that event. "Thou stoodest before the Lord thy God in Horeb" was a literal fact, and became the great basis of all traditions of it. By this they recognized that they had been brought into covenant with God. On the contrary, in Neh. ix. 13, we read, "Thou camest down upon *Mount Sinai*."

But beyond the question of the relation which these names mutually bear, there remains that of site. Sinai is clearly a summit distinctly marked. Where are we to look for it? There are three principal views in answer to this question:—

1. That of Lepsius, above mentioned, favoured also by Burckhardt (*Trav.* p. 609), that *Serbâl* is Sinai, some 30 miles distant westward from the *Jebel Mâsa*, but close to the *Wady Feirân* and *El Hassue*, which he identifies, as do most authorities, with Rephidim (Lepsius, 74), just a mile from the old convent of *Fardn*. On this view Israel would have reached Sinai the same day that they fought with Amalek: "the decampment occurred during the battle" (ib. 86)—an unlikely thing, since the contest was evidently fierce and close, and lasted till sunset. *Serbâl* is the most magnificent mountain of the peninsula, rising with a crown of five peaks from the maritime plain on one side, and from the *Wady Feirân* on the other, and showing its full height at once to the eye; and Ritter (*Geogr.* xiv. 734-6) has suggested[§] that it might have been, before the actual Exodus, known as "the mount of God" to the Amalekite Arabs, and even to the Egyptians.^{||} The earliest traditions are in its favour. "It is undoubtedly identified with Sinai by Eusebius, Jerome, and Cosmas, that is, by all known writers to the time of Justinian," as confirmed by the position "of the episcopal city of Paran at its foot" (Stanley, *S. and P.* 40).

But there are two main objections to this:—(1.) It is clear, from Ex. xix. 2 (comp. xvii. 1), that the interval between Rephidim and Sinai was that of a regular stage of the march. The expressions in the Hebrew are those constantly used for decamping and encamping in the Books of Ex., Num., and Deut.; and thus a Sinai within a mile of Rephidim is unsuitable. (2.) There is no plain or wady of any sufficient size near *Serbâl* to offer camping ground to so large a host, or perhaps the tenth part of them. Dr. Stewart (*The Tent and the Khaw*, p. 146) contends for *Serbâl* as the real Sinai, seeking to obviate objection (1), by making Rephidim "no higher up than *Heshudh*" [REPHIDIM], and (2), by regarding *Wady Alelat* and *Wady Rimn* as capacious enough for the

eye, and which varies with the habitual point of view (Lepsius, 64).

§ Robinson, on the other hand (l. 78-8), suggests that *Serbâl* of *Khadim* (or *Chadem*), lying north of *Serbâl* was a place of pilgrimage to the ancient Egyptians, and a supposable object of Moses' proposed "three days' journey into the wilderness." But that pilgrimage was an element in the religion of ancient Egypt seems at least doubtful.

|| So Dr. Stewart (*The Tent and the Khaw*, p. 147) says "that it was a place of idolatrous worship before the passage of the children of Israel is extremely probable." He renders the name by "Lord Real."

hart to camp in (ib. p. 145);—a very doubtful assertion.

II. The second is that of Ritter,¹ that, allowing Serbâl the reverence of an early sanctuary, the *Jebel Mûsa* is Sinai, and that the *Wady es Sebayeh*, which its S.E. or highest summit overhangs, is the spot where the people camped before the mount; but the second objection to Serbâl applies almost in equal force to this—the want of space below. The wady is “rough, uneven, and narrow” (Stanley, *S. and P.* 76); and there seems no possibility of the people’s “removing (Ex. xx. 18) and standing afar off,” and yet preserving any connexion with the scene. Further, this site offers no such feature as a “brook that descended out of the mount” (Deut. ix. 21).

III. The third is that of Robinson, that the modern Horeb of the monks—viz. the N.W. and lower face of the *Jebel Mûsa*, crowded with a range of magnificent cliffs, the highest point called *Ras Sasâfeh*, or *Sâsâfeh*, as spelt by Robinson—overlooking the plain *er Rahah*, is the scene of the giving of the Law, and that peak the mountain into which Moses ascended. In this view, also, Strauss appears to coincide (*Sinai and Golyotha*, p. 116). Lepsius objects, but without much force (since he himself climbed it), that the peak *Sasâfeh* is nearly inaccessible. It is more to the purpose to observe that the whole *Jebel Mûsa* is, comparatively with adjacent mountains, insignificant; “its prospect limited in the east, south, and west, by higher mountains” (Rüppell,² quoted by Robinson, i. 105, note; comp. Seetzen, *Reisen*, vol. ii. p. 93); that it is “remote and almost concealed.” But the high ground of *Serbâl* being rejected for the above reasons, and no voice having ever been raised in favour of the *Um Shauwer*,³ the highest point in the peninsula, lying S.W. of the *Mûsa*, some such secondary and overshadowed peak must be assumed. The conjunction of mountain with plain is the greatest feature of this site; in choosing it, we lose in the mountain, as compared with *Serbâl*, but we gain in the plain, of which *Serbâl* has nothing. Yet the view from the plain appears by no means wanting in features of majesty and awe (*S. and P.* 42-3). Dr. Stanley remarked (*S. and P.* 43) some alluvial mounds at the foot of the cliff “which exactly answered to the bounds” set to restrain the people. In this long retiring sweep of *er Rahah* the people could “remove and stand afar off;” for it “extends into the lateral valleys,” and so joins the *Wady es Shaykh* (ib. 74). Here too Moses, if he came down through one of the oblique gullies which flank the *Ras Sasâfeh* on the N. and S., might not see the camp, although he might catch its noise, till he emerged from the *Wady ed Deir*, or the *Wady Lejd*, on the plain itself. In the latter, also, is found a brook in close connexion with the mountain.

Still there is the name of the *Jebel Mûsa* belonging to the opposite or S.E. peak or precipice, overhanging *Es Sebayeh*. Lepsius treats this as a

monkish legend unknown before the convent; but there is the name *Wady Shouaib* (valley of Hobab or Jethro, *S. and P.* 32), the *Wady Lejd* and *Jebel Fureid* (perhaps from the forms in Arabic legend of the names of his two daughters *Liya* and *Safuria* = *Zipporah*), forming a group of Mosaisc addition. Is it not possible that the *Jebel Mûsa*, or loftiest south-eastern peak of that block of which the modern Horeb is the lower and opposite end, may have been the spot to which Moses retired, leaving the people encamped in *er Rahah* below, from which its distance is not above three miles? That the spot is out of sight from that plain is hardly a difficulty, for “the mountain burning with fire to the midst of heaven” was what the people saw (Deut. iv. 11); and this would give a reasonable distance for the spot, somewhere midway, whence the elders enjoyed a partial vision of God (Ex. xxiv. 9, 10).

Tradition, no doubt in this case purely monkish, has fixed on a spot for Elijah’s visit—“the cave” to which he repaired; but one at *Serbâl* would equally suit (*S. and P.* 49). That on the *Jebel Mûsa* is called the chapel of St. Elias. It has been thought possible that St. Paul may have visited Sinai (Gal. i. 17), and been familiar with the name

Hajar (ج) as given commonly to it, signifying “a rock.” (Ewald, *Sendeschreiben*, 493.)

It may be added that, supposing *Wady Tayibeh* to have been the encampment “by the sea,” as stated in Num. xxxiii. 10, three routes opened there before the Israelites: the most southerly one (taken by Shawe and Pococke) down the plain *el Kâa to Tûr*; the most northerly (Robinson’s) by the *Sarbât el Khadem* (either of which would have left *Serbâl* out of their line of march); and the middle one by *Wady Feirân*, by which they would pass the foot of *Serbâl*, which therefore in this case alone could possibly be Sinai (Stanley, *S. and P.* 38, 37). Just east of the *Jebel Mûsa*, across the narrow ravine named *Shouaib*, lies *ed-Deir*, or the convent mountain, called also, from a local legend (Stanley, 46; Robinson, i. 98), “the Mount of the Burning Bush.” Tradition has also fixed on a hollow rock in the plain of the *Wady es Shaykh*, on which the modern Horeb looks, as “the (mould of the) head of the cow,” i. e. in which the golden calf was shaped by Aaron. In the ravine called *Lejd*, parallel to *Shouaib* on the western side of the *Jebel Mûsa*, lies what is called the rock of Moses (see REPHIDIM); and a hole in the ground near, in the plain, is called, by manifest error, the “pit of Korah,” whose catastrophe took place far away (Robinson, i. 113; Lepsius, 19).

The middle route aforesaid from *W. Tayibeh* reaches the *W. Feirân* through what is called the *W. Mokattib*, or “written valley,” from the inscriptions on the rocks which line it,⁴ generally considered to have been the work of Christian hands, but whether those of a Christian people localised there at an unknown period, as Lep-

sius (from the *Rocks of Sinai*) to regard them as a contemporary record of the Exodus by the Israelites involves this anachronism: the events of the fortieth year—e. g. the plague of fiery serpents—are represented as recorded close on the same spot with what took place before the people reached Sinai; and although the route which they took cannot be traced in all its parts, yet all the evidence and all the probability of the question is clearly against their ever having returned from Kadesh and the Arabian to the valleys west of Sinai.

¹ *Geogr.* xiv. 593.

² It should be added that Rüppell (Lepsius, p. 12) took *Jebel Katherin* for Horeb, but that there are fewer features in its favour, as compared with the history, than almost any other site (Robinson, i. 110).

³ Though Dr. Stanley (*S. and P.* 39, note) states that it has been “explored by Mr. Hogg, who tells me that it meets none of the special requirements.”

⁴ See the work of Professor Beer of Leipzig on this curious question. Mr. Forster’s attempt (*Voice of Israel*

sius" (p. 90) thin's, or of passing pilgrims, as is the more general opinion, is likely to continue doubtful.

It is remarkable that the names of the chief peaks seem all borrowed from their peculiarities

of vegetation: thus *Um Shâm* (أم شمر) means

"mother of fennel;" *Rds Sasâfeh* (properly *Sâsâfeh*,

صافسفة) is "willow-head," a group of two or

three of which trees grow in the recesses of the

adjacent wady; so *Serbâl* is perhaps from سربال;

and, from analogy, the name "Sinai," now unknown amongst the Arabs (unless *Sena*, given to the point of the *Jebel Fureid*, opposite to the modern Horeb [Stanley, 42], contain a trace of it),

may be supposed derived from the سنا and سنا, the tree of the Burning Bush. The vegetation of the peninsula is most copious at *El Wady*, near *Tûr*, on the coast of the Gulf of Suez, in the *Wady Feirân* [see REPHIDIM], the two oases of its waste, and "in the nucleus of springs in the Gebel Mousa" (Stanley, 19). For a fuller account of its flora, see WILDERNESS OF THE WANDERING. As regards its fauna, Seetzen (iii. 20) mentions the following animals as found at *er Ramleh*, near Sinai:—the wild goat, the wubber, hyena, fox, hare, gazelle, panther (rare), field-mouse (*el Deschûdy*, like a jerboa), and a lizard called *el Drob*, which is eaten. [H. H.]

SINIM (סִינִים). A people noticed in Is. xlix. 12, as living at the extremity of the known world, either in the south or east. The majority of the early interpreters adopted the former view, but the LXX. in giving *Πέρας* favours the latter, and the weight of modern authority is thrown into the same scale, the name being identified by Gesenius, Hitzig, Knobel, and others, with the classical *Sinae*, the inhabitants of the southern part of China. No locality in the south equally commends itself to the judgment: Sin, the classical Pelusium, which Borchart (*Phileg*, iv. 27) suggests, is too near, and Syene (Michaelis, *Spicil.* ii. 32) would have been given in its well-known Hebrew form. There is no *a priori* improbability in the name of the Sinne being known to the inhabitants of Western Asia in the age of Isaiah; for though it is not mentioned by the Greek geographers until the age of Ptolemy, it is certain that an inland commercial route connected the extreme east with the west at a very early period, and that a traffic was maintained on the frontier of China between the Sinae and the Scythians, in the manner still followed by the Chinese and the Russians at *Kiachta*. If any name for these Chinese traders travelled westward, it would probably be that of the Sinae, whose town Thinae (another form of the Sinae) was one of the great emporiums in the western part of China, and is represented by the modern *Tsin* or *Tin*, in the province of *Schensi*. The Sinae attained an independent position in Western China as early as the 5th century B.C., and in the 3rd century B.C. established their sway under the dynasty of Tsin over the whole of the empire. The Rabbinical name of China, *Tsin*, as well as "China" itself, was derived from this dynasty (Gesen. *Thes.* s. v.). [W. L. B.]

* Arguing from the fact that these inscriptions occur not only on roads leading out of Egypt, but in the most secluded crevices, and on rocks lying quite out of the main

SINITE (סִיטִי: *Asservaios: Sinacus*). A tribe of Canaanites (Gen. x. 17; 1 Chr. i. 15), whose position is to be sought for in the northern part of the Lebanon district. Various localities in that district bear a certain amount of resemblance to the name, particularly *Sinna*, a mountain fortress mentioned by Strabo (xvi. p. 755); Sinum or Sini, the ruins of which existed in the time of Jerome (*Quaest. in Gen.* l. c.); *Syn*, a village mentioned in the 15th century as near the river Arca (Gesen. *Thes.* p. 948); and *Dunniyeh*, a district near *Tri poli* (Robinson's *Researches*, ii. 491). The Targums of Onkelos and Jonathan give *Othosia*, a town on the coast to the north-east of Tripolis. [W. L. B.]

SION, MOUNT. 1. (צִיּוֹן; *Sania*. צִיּוֹן; *τὸ ὄρος τοῦ Σιών: mons Sion*). One of the various names of Mount Hermon which are fortunately preserved, all not improbably more ancient than "Hermon" itself. It occurs in Deut. iv. 48 only, and is interpreted by the lexicographers to mean "lofty." First conjectures that these various appellations were the names of separate peaks or portions of the mountain. Some have supposed that Zion in Ps. cxxiii. 3 is a variation of this Sion; but there is no warrant for this beyond the fact that so doing overcomes a difficulty of interpretation in that passage.

2. (τὸ ὄρος Σιών; in Heb. *Σιών ὄρος: mons Sion*.) The Greek form of the Hebrew name ZION (Tsion), the famous Mount of the Temple (1 Macc. iv. 37, 60, v. 54, vi. 48, 62, vii. 33, x. 11, xiv. 27; Heb. xii. 22; Rev. xiv. 1). In the Books of Maccabees the expression is always Mount Sion. In the other Apocryphal Books the name SION is alone employed. Further, in the Maccabees the name unmistakably denotes the mount on which the Temple was built; on which the Mosque of the *Aksa*, with its attendant Mosques of Omar and the Mogrebins, now stands. The first of the passages just quoted is enough to decide this. If it can be established that Zion in the Old Testament means the same locality with Sion in the Books of Maccabees, one of the greatest puzzles of Jerusalem topography will be solved. This will be examined under ZION. [G.]

SIPH'MOTH (סִפְחֹמֶת: *Saphi*; Alex. *Σαφαμωτ: Sephamoth*). One of the places in the south of Judah which David frequented during his freebooting life, and to his friends in which he sent a portion of the spoil taken from the Amalekites. It is named only in 1 Sam. xxx. 28. It is not named by Eusebius or Jerome. No one appears yet to have discovered or even suggested an identification of it. [G.]

SIPPAT (סִפַּת: *Saphat*; Alex. *Σαφφ: Saphat*). One of the sons of the Rephaim, or "the giants," slain by Sibbechai the Hushathite at GERR (1 Chr. xi. 4). In 2 Sam. xxi. 18 he is called *SAPH*.

SIRACH (Σειράχ, *Sirach*; in Rabbinic writers, סִרְחָא), the father of Jesus (Joshua), the writer of the Hebrew original of the Book of Ecclesiastical. [ECCLESIASTICUS; JESUS THE SON OF SIRACH.] [B. F. W.]

SIRAH, THE WELL OF (בֵּית הַסִּרָּה: *τὸ φεῖμα τοῦ Σεειράμ*, in both MSS.: *cisterna Sira*),

roads.

* For a full account of the climate and vegetation of Sirah (Reinach ii. 351) may be consulted.

The spot from which Abner was recalled by Joab to his death at Hebron (2 Sam. iii. 26 only). It was apparently on the northern road from Hebron—that by which Abner would naturally return through Bahurim (ver. 14) to Mahanaim. There is a spring and reservoir on the western side of the ancient northern road, about one mile out of Hebron, which is called *Ain Sara*, and gives its name to the little valley in which it lies (see Dr. Rosen's paper on Hebron in the *Zeitschrift der D. M. G.* xii. 486, and the excellent map accompanying it). This may be a relic of the well of Sirah. It is mentioned as far back as the 12th century by Rahl. Petachia, but the correspondence of the name with that of Sirah seems to have escaped notice. [G.]

SIR'ION (שִׁירִיֹן, *i. e.* Siryon, in Deut., but in 1s. xix. שִׁירִיֹן, Shiryōn; Samar. שִׁירִיֹן; Sam. Vers. שִׁירִיֹן; *Sarion*). One of the various names of Mount Hermon, that by which it was known to the Zidonians (Deut. iii. 9). The word is almost identical with that (שִׁירִיֹן) which in Hebrew denotes a "breastplate" or "cuirass," and Gesenius therefore expresses his belief that it was applied in this sense to the mountain, just as the name Thorax (which has the same meaning) was given to a mountain in Magnesia. This is not supported by the Samaritan Version, the rendering in which—*Rabbas*—seems to be equivalent to *Jebel esh Sheykh*, the ordinary, though not the only modern name of the mountain.

The use of the name in Ps. xix. 6 (slightly altered in the original—Shirion instead of Sirion) is remarkable, though, bearing in mind the occurrence of Sheir in Solomon's Song, it can hardly be used as an argument for the antiquity of the Psalm. [G.]

SISAMATI (סִסְמָטִי; *Sisamat*; *Sisamat*). A descendant of Shehan in the line of Jerahmeel (1 Chr. ii. 40).

SIS'ERA (סִיסְרָא; *Sisra*, *Sisra*; Joseph. *Sisra*). Captain (שָׂר) of the army of Jabin king of Canaan who reigned in Hazor. He himself resided in Harosheth of the Gentiles. The particulars of the rout of Megiddo and of Sisera's flight and death are drawn out under the heads of BARAK, DEBORAH, JAIL, KENITES, KISHON, MANTLE, TENT. They have been recently elaborated, and combined into a living whole, with great attention to detail yet without any sacrifice of force, by Professor Stanley, in his *Lectures on the Hist. of the Jewish Church*, Lect. xiv. To that accurate and masterly picture we refer our readers.

The army was mustered at the Kishon on the plain at the foot of the slopes of *Lejjām*. Partly owing to the furious attack of Barak, partly to the impassable condition of the plain, and partly to the unwieldy nature of the host itself, which, amongst other impediments, contained 900^a iron chariots—a horrible confusion and rout took place. Sisera deserted his troops and fled off on foot. He took a north-east direction, possibly through Nazareth and Safed, or, if that direct road was closed to him, stole along by more circuitous routes till he found himself before the tents of Heber the Kenite, near Kedesh, on the high ground overlooking the upper basin of the Jordan valley. Here he met his death from the hands of Jael, Heber's wife, who, although "at peace" with him, was under a much more stringent relation with the house of Israel (Judg. iv. 2-22, v. 20, 26, 28, 30). [KENITES, p. 11 a.] His name long survived as a word of fear and of exultation in the mouths of prophets and psalmists (1 Sam. xii. 9; Ps. lxxlii. 9).

It is remarkable that from this enemy of the Jews should have sprung one of their most eminent characters. The great Rabbi Akiba, whose father was a Syrian proselyte of justice, was descended from Sisera of Harosheth (Bartolocci, iv. 272). The part which he took in the Jewish war of independence, when he was standard bearer to Barcocha (Otho, *Hist. doct. Miss.* 134 note), shows that the warlike force still remained in the blood of Sisera.

2. (*Sisra*, *Sisra*; Alex. *Sisra*, *Sisra*.) After a long interval the name re-appears in the lists of the Nethinim who returned from the Captivity with Zerubbabel (Ezr. ii. 53; Neh. vii. 55). The number of foreign, non-Israelitish names^a which occur in these invaluable lists has been already noticed under MEHUNIM [vol. ii. p. 313.] Sisera is another example, and doubtless tells of Canaanite captives devoted to the lowest offices of the Temple, even though the Sisera from whom the family derived its name were not actually the same person as the defeated general of Jabin. It is curious that it should occur in close companionship with the name Harsha (ver. 52) which irresistibly recalls Harosheth.

3. (*Sisra*, *Sisra*; Alex. *Sisra*, *Sisra*.) After a long interval the name re-appears in the lists of the Nethinim who returned from the Captivity with Zerubbabel (Ezr. ii. 53; Neh. vii. 55). The number of foreign, non-Israelitish names^a which occur in these invaluable lists has been already noticed under MEHUNIM [vol. ii. p. 313.] Sisera is another example, and doubtless tells of Canaanite captives devoted to the lowest offices of the Temple, even though the Sisera from whom the family derived its name were not actually the same person as the defeated general of Jabin. It is curious that it should occur in close companionship with the name Harsha (ver. 52) which irresistibly recalls Harosheth.

^a No variation from שִׁירִיֹן to שִׁירִיֹן, or the reverse, is noticed in Döderlein and Meisner, on either occurrence of the name.

^b Gesenius (*Lex. s. v.*), by comparison with the Syriac, interprets the name as "battle-array." First, on the other hand (*Handb.* ii. 279), gives as its equivalent *Vermittlung*, the nearest approach to which is perhaps "lieutenant." As a Canaanite word its real signification is probably equally wide of either.

^c The site of Harosheth has not yet been identified with certainty. But since the publication of vol. i. the writer observes that Dr. Thomson (*Land and Book*, ch. xxix.) has suggested a site which seems possible, and invites further examination. This is a tell or mound on the north side of the Kishon, in the S.E. corner of the plain of Akko, just behind the hills which separate it from the larger plain of Jezreel. The tell advances close to the foot of Carmel, and allows only room for the passage of the river between them. Its name is variously given as *Harosheth* (Thomson), *Harshith* (Schnitz), *Harshith* (Robinson), *Harsh* (Van de Velde), and *el Harshith*. The latter is the form given in the official list made for the writer in 1861 by Consul Rogers, and

is probably accurate. Dr. Thomson—apparently the only traveller who has examined the spot—speaks of the Tell as "covered with the remains of old walls and buildings," in which he sees the relics of the ancient castle of Sisera.

^d The number of Jabin's standing army is given by Josephus (*Ant.* v. 8, §1) as 300,000 footmen, 10,000 horse-men, and 3000 chariots. These numbers are large, but they are nothing to those of the Jewish legends. Sisera "had 40,000 generals, every one of whom had 100,000 men under him. He was thirty years old, and had conquered the whole world: and there was not a place the walls of which did not fall down at his voice. When he shouted the very beasts of the field were rivetted to their places. 900 horses went in his chariot" (*Joikut* ad loc.). "Thirty-one kings (comp. Josh. xii. 24) went with Sisera and were killed with him. They thrived after the waters of the land of Israel, and they asked and prayed Sisera to take them with him without further reward" (comp. Judg. v. 18). (*Jer. Rab.* ch. 23.) The writer is indebted to the kindness of Mr. Dentach for these extracts.

^e MEHUNIM, NETHINIM, HARSHA, KENITES.

In the parallel list of 1 Esd. v. 32 Sisera is given as ASERA. [G.]

SISINNES (Σισίννης: *Sisennes*). A governor of Syria and Phoenicia under Darius, and a contemporary of Zerubbabel (1 Esdr. vi. 3). He attempted to stop the rebuilding of the Temple, but was ordered by Darius, after consulting the archives of Cyrus's reign, to adopt the opposite course, and to forward the plans of Zerubbabel (Ibid. vi. 7, vii. 1). In Ezra he is called TATNAI.

SIT'NAH (סִיתְנָה: *Sithna*; Joseph. *Sithna*: *Inimicitiae*). The second of the two wells dug by Isaac in the valley of Gerar, and the possession of which the herdmen of the valley disputed with him (Gen. xxvi. 21). Like the first one, ESEK, it received its name from the disputes which took place over it, *Sithna* meaning, as is stated in the margin, "hatred," or more accurately "accusation," but the play of expression has not been in this instance preserved in the Hebrew.^a The LXX., however, have attempted it:—*ἐκδορία* . . . *ἐχθρα*. The root of the name is the same as that of Satan, and this has been taken advantage of by Aquila and Symmachus, who render it respectively *ἀντικείμενη* and *ἐναντία*. Of the situation of Esek and Sitnah nothing whatever is known. [G.]

SIVAN. [MOON.]

SLAVE. The institution of slavery was recognised, though not established, by the Mosaic Law with a view to mitigate its hardships and to secure to every man his ordinary rights. Repugnant as the notion of slavery is to our minds, it is difficult to see how it can be dispensed with in certain phases of society without, at all events, entailing severer evils than those which it produces. Exclusiveness of race is an instinct that gains strength in proportion as social order is weak, and the rights of citizenship are regarded with peculiar jealousy in communities which are exposed to contact with aliens. In the case of war, carried on for conquest or revenge, there were but two modes of dealing with the captives, viz. putting them to death or reducing them to slavery. The same may be said in regard to such acts and outrages as disqualified a person for the society of his fellow-citizens. Again, as citizenship involved the condition of freedom and independence, it was almost necessary to offer the alternative of disfranchisement to all who through poverty or any other contingency were unable to support themselves in independence. In all these cases slavery was the mildest of the alternatives that offered, and may hence be regarded as a blessing rather than a curse. It should further be noticed that a labouring class, in our sense of the term, was almost unknown to the nations of antiquity: hired service was regarded as incompatible with freedom; and hence the slave in many cases occupied the same social position as the servant or labourer of modern times, though differing from him in regard to political status. The Hebrew designation of the slave shows that service was the salient feature of his condition; for the term *ebed*,^b usually applied to him, is derived from a verb signifying "to work," and the very same term is used in reference to offices of high trust held by free men. In short, service and slavery would have

been to the ear of the Hebrew equivalent terms, though he fully recognised grades of servitude, according as the servant was a Hebrew or a non-Hebrew, and, if the latter, according as he was bought with money (Gen. xvii. 12; Ex. xli. 44) or born in the house (Gen. xiv. 14, xv. 3, xvi. 23). We shall proceed to describe the condition of these classes, as regards their original reduction to slavery, the methods by which it might be terminated, and their treatment while in that state.

1. Hebrew Slaves.

1. The circumstances under which a Hebrew might be reduced to servitude were—(1) poverty; (2) the commission of theft; and (3) the exercise of paternal authority. In the first case, a man who had mortgaged his property, and was unable to support his family, might sell himself to another Hebrew, with a view both to obtain maintenance, and perchance a surplus sufficient to redeem his property (Lev. xxv. 25, 39). It has been debated whether under this law a creditor could seize his debtor and sell him as a slave: "the words do not warrant such an inference, for the poor man is said in Lev. xxv. 39 to *sell himself* (not as in the A. V., "be sold;" see Gesen. *Thes.* p. 787), in other words, to enter into *voluntary* servitude, and this under the pressure not of debt, but of *poverty*. The instances of seizing the children of debtors in 2 K. iv. 1 and Neh. v. 3 were not warranted by law, and must be regarded as the outrages of lawless times, while the case depicted in the parable of the unmerciful servant is probably borrowed from Roman usages (Matt. xviii. 25). The words in Is. l. 1, "Which of my creditors is it to whom I have sold you?" have a *prima facie* bearing upon the question, but in reality apply to one already in the condition of slavery. (2) The commission of theft rendered a person liable to servitude, whenever restitution could not be made on the scale prescribed by the Law (Ex. xxi. 1, 3). The thief was bound to work out the value of his restitution money in the service of him on whom the theft had been committed (for, according to Josephus, *Ant.* xvi. 1, §1, there was no power of selling the person of a thief to a foreigner); when this had been effected he would be free, as implied in the expression "sold for his theft," i. e. *for the amount* of his theft. This law contrasts favourably with that of the Romans, under which a thief became the actual property of his master. (3) The exercise of paternal authority was limited to the sale of a daughter of tender age to be a maidservant, with the ulterior view of her becoming a concubine of the purchaser (Ex. xxi. 7). Such a case can perhaps hardly be regarded as implying servitude in the ordinary sense of the term.

2. The servitude of a Hebrew might be terminated in three ways:—(1) by the satisfaction or the remission of all claims against him; (2) by the recurrence of the year of Jubilee (Lev. xxv. 40), which might arrive at any period of his servitude; and (3), failing either of these, the expiration of six years from the time that his servitude commenced (Ex. xxi. 2; Deut. xv. 12). There can be no doubt that this last regulation applied equally to the cases of poverty and theft, though Rabbinical writers have endeavoured to restrict it to the former.

^a In the A. V. of vers. 20, 21, two entirely distinct Hebrew words are each rendered "strive."

^b עֶבֶד.

^c Michaelis (Comment. III. 9, §123) decides in the affirmative.

^d This is implied in the statement of the case which gave rise to the servitude. Indeed without such an assumption the words "for his theft" (Ex. xxi. 3) would be unmeaning. The Rabbins gave their sanction to such a view (Maimon. *Abod.* 2, §§9, 11).

The period of seven years has reference to the Sabbatical principle in general, but not to the Sabbatical year, for no regulation is laid down in reference to the manumission of servants in that year (Lev. xxv. 1 ff.; Deut. xv. 1 ff.). We have a single instance, indeed, of the Sabbatical year being celebrated by a general manumission of Hebrew slaves, but this was in consequence of the neglect of the law relating to such cases (Jer. xxxiv. 14*). (4) To the above modes of obtaining liberty the Rabbiniists added as a fourth, the death of the master without leaving a son, there being no power of claiming the slave on the part of any heir except a son (Maimon. *Abad.* 2, §12).

If a servant did not desire to avail himself of the opportunity of leaving his service, he was to signify his intention in a formal manner before the judges (or more exactly at the place of judgment¹), and then the master was to take him to the door-post, and to bore his ear through with an awl (Ex. xxi. 6), driving the awl into or "unto the door," as stated in Deut. xv. 17, and thus fixing the servant to it. Whether the door was that of the master's house, or the door of the sanctuary, as Ewald (*Altorth.* p. 245) infers from the expression *al hababaim*, to which attention is drawn above, is not stated; but the significance of the action is enhanced by the former view; for thus a connexion is established between the servant and the house in which he was to serve. The boring of the ear was probably a token of subjection, the ear being the organ through which commands were received (Ps. xl. 6). A similar custom prevailed among the Mesopotamians (Juv. i. 104), the Lydians (Xen. *Anab.* iii. 1, §31), and other ancient nations. A servant who had submitted to this operation remained, according to the words of the Law, a servant "for ever" (Ex. xxi. 6). These words are, however, interpreted by Josephus (*Ant.* iv. 8, §28) and by the Rabbiniists as meaning until the year of Jubilee, partly from the universality of the freedom that was then proclaimed, and partly perhaps because it was necessary for the servant then to resume the cultivation of his recovered inheritance. The latter point no doubt presents a difficulty, but the interpretation of the words "for ever" in any other than their obvious sense presents still greater difficulties.

3. The condition of a Hebrew servant was by no means intolerable. His master was admonished to treat him, not "as a bondservant, but as an hired servant and as a sojourner," and, again, "not to rule over him with rigour" (Lev. xxv. 39, 40, 43). The Rabbiniists specified a variety of duties as coming under these general precepts; for instance, compensation for personal injury, exemption from menial duties, such as unbinding the master's sandals or carrying him in a litter, the use of gentle language on the part of the master, and the maintenance of the servant's wife and children, though the master was not allowed to exact work from them (Mielziner, *Sklaven bei den Hebr.* p. 31). At the termination of his servitude the master was enjoined not to "let him go away empty," but to

reimburse him liberally out of his flock, his flock, and his winepress (Deut. xv. 13, 14). Such a custom would stimulate the servant to faithful service, inasmuch as the amount of the gift was left to the master's discretion; and it would also provide him with means wherewith to start in the world afresh.

In the event of a Hebrew becoming the servant of a "stranger," meaning a non-Hebrew, the servitude could be terminated only in two ways, viz. by the arrival of the year of Jubilee, or by the repayment to the master of the purchase-money paid for the servant, after deducting a sum for the value of his services proportioned to the length of his servitude (Lev. xxi. 47-55). The servant might be redeemed either by himself or by one of his relations, and the object of this regulation appears to have been to impose upon relations the obligation of effecting the redemption, and thus putting an end to a state which must have been peculiarly galling to the Hebrew.

A Hebrew woman might enter into voluntary servitude on the score of poverty, and in this case she was entitled to her freedom after six years' service, together with the usual gratuity at leaving, just as in the case of a man (Deut. xv. 12, 13). According to Rabbinical tradition a woman could not be condemned to servitude for theft; neither could she bind herself to perpetual servitude by having her ear bored (Mielziner, p. 43).

Thus far we have seen little that is objectionable in the condition of Hebrew servants. In respect to marriage there were some peculiarities which, to our ideas, would be regarded as hardships. A master might, for instance, give a wife to a Hebrew servant for the time of his servitude, the wife being in this case, it must be remarked, not only a slave but a non-Hebrew. Should he leave when his term has expired, his wife and children would remain the absolute property of the master (Ex. xxi. 4, 5). The reason for this regulation is, evidently, that the children of a female heathen slave were slaves; they inherited the mother's disqualification. Such a condition of marrying a slave would be regarded as an axiom by a Hebrew, and the case is only incidentally noticed. Again, a father might sell his young daughter to a Hebrew, with a view either of marrying her himself, or of giving her to his son (Ex. xxi. 7-9). It diminishes the apparent harshness of this proceeding if we look on the purchase-money as in the light of a dowry given, as was not unusual, to the parents of the bride; still more, if we accept the Rabbinical view (which, however, we consider very doubtful) that the consent of the maid was required before the marriage could take place. But even if this consent were not obtained, the paternal authority would not appear to be violently strained; for among ancient nations that authority was generally held to extend even to the life of a child, much more to the giving of a daughter in marriage. The position of a maiden thus sold by her father was subject to the following regulations:—(1) She could not "go out as the men servants do," i. e. she could not leave at the termi-

* The rendering of the A. V. "at the end of seven years" in this passage is not wholly correct. The meaning rather is "at the end of a Sabbatical period of years," the whole of the seventh year being regarded as the end of the period.

וְהָיָה כְּעֹבֵד חָפְזִי; *ephe rd eph'pazor*, LXX.

† In the A. V. the sense of obligation is not conveyed; instead of "may" in vers. 48, 49 *shall* ought to be substituted.

‡ The female slave was in this case termed פִּדְיוֹן, as distinct from פְּדוּתָא, applied to the ordinary household slave. The distinction is marked in regard to Hagar, who is described by the latter term before the birth of Ishmael, and by the former after that event (comp. Gen. xvi. 1, xxi. 10). The relative value of the terms is expressed in Abigail's address, "Let thine handmaid (*dm.jh*) (i. e. a servant (*shiphah*) to wash," &c. (1 Sam. xiv. 41).

nation of six years, or in the year of Jubilee, if (as the regulation assumes) her master was willing to fulfil the object for which he had purchased her; (2) Should he not wish to marry her, he should call upon her friends to procure her release by the repayment of the purchase-money (perhaps, as in other cases, with a deduction for the value of her services). (3) If he betrothed her to his son, he was bound to make such provision for her as he would for one of his own daughters. (4) If either he or his son, having married her, took a second wife, it should not be to the prejudice of the first. (5) If neither of the three first specified alternatives took place, the maid was entitled to immediate and gratuitous liberty (Ex. xxi. 7-11).

The custom of reducing Hebrews to servitude appears to have fallen into disuse subsequently to the Babylonian captivity. The attempt to enforce it in Nehemiah's time met with decided resistance (Neh. v. 5), and Herod's enactment that thieves should be sold to foreigners, roused the greatest animosity (Joseph. *Ant.* xvi. 1, §1). Vast numbers of Hebrews were reduced to slavery as war-captives at different periods by the Phoenicians (Joel iii. 6), the Philistines (Joel iii. 6; Am. i. 6), the Syrians (1 Macc. iii. 41; 2 Macc. viii. 11), the Egyptians (Joseph. *Ant.* xii. 2, §3), and, above all, by the Romans (Joseph. *B. J.* vi. 9, §3). We may form some idea of the numbers reduced to slavery by war from the single fact that Nicanor calculated on realising 2000 talents in one campaign, by the sale of captives at the rate of 90 for a talent (2 Macc. viii. 10, 11), the number required to fetch the sum being 180,000. The Phoenicians were the most active slave-dealers of ancient times, purchasing of the Philistines (Am. i. 9), of the Syrians (2 Macc. viii. 21), and even of the tribes on the shores of the Euxine Sea (Ex. xxvii. 13), and selling them wherever they could find a market about the shores of the Mediterranean, and particularly in Joel's time to the people of Javan (Joel iii. 6), it being uncertain whether that name represents a place in South Arabia or the Greeks of Asia Minor and the peninsula. It was probably through the Tyrians that Jews were transported in Obadiah's time to Sopherad or Sardis (Ob. 20). At Rome vast numbers of Jews emerged from the state of slavery and became freedmen. The price at which the slaves were offered by Nicanor was considerably below the ordinary value either in Palestine or Greece. In the former country it stood at 30 shekels (=about 3*l.* 8*s.*), as stated below, in the latter at about 1½ minus (=about 5*l.* 1*s.* 6*d.*), this being the mean between the extremes stated by Xenophon (*Mem.* ii. 5, §2) as the ordinary price at Athens. The price at which Nicanor offered them was only 2*l.* 15*s.* 2*d.* a head. Occasionally slaves were sold as high as a talent (243*l.* 15*s.*) each (Xen. *l. c.*; Joseph. *Ant.* xii. 4, §9).

11. Non-Hebrew Slaves.

1. The majority of non-Hebrew slaves were war-captives, either the Canaanites who had survived the general extermination of their race under Joshua, or such as were conquered from the other surrounding nations (Num. xxxi. 26 ff.). Besides these, many were obtained by purchase from foreign slave-dealers (Lev. xxv. 44, 45); and others may have been resident foreigners who were reduced to this state either by poverty or crime. The Rab-

binists further deemed that any person who performed the services of a slave became *ipso facto* a slave (Mishn. *Kedush.* 1, §3). The children of slaves remained slaves, being the class described as "born in the house" (Gen. xiv. 14, xvii. 12; Eccl. ii. 7), and hence the number was likely to increase as time went on. The only statement as to their number applies to the post-Babylonian period, when they amounted to 7,337, or about 1 to 6 of the free population (Ezr. ii. 65). We have reason to believe that the number diminished subsequently to this period, the Pharisees in particular being opposed to the system. The average value of a slave appears to have been thirty shekels (Ex. xxi. 32), varying of course according to age, sex, and capabilities. The estimation of persons given in Lev. xxvii. 2-8 probably applies to war-captives who had been dedicated to the Lord, and the price of their redemption would in this case represent the ordinary value of such slaves.

2. That the slave might be manumitted, appears from Ex. xxi. 26, 27; Lev. xix. 20. As to the methods by which this might be effected, we are told nothing in the Bible; but the Rabbins specify the following four methods:—(1) redemption by a money payment, (2) a bill or ticket of freedom, (3) testamentary disposition, or, (4) any act that implied manumission, such as making a slave one's heir (Mielziner, pp. 65, 66).

3. The slave is described as the "possession" of his master, apparently with a special reference to the power which the latter had of disposing of him to his heirs as he would any other article of personal property (Lev. xxv. 45, 46); the slave is also described as his master's "money" (Ex. xxi. 21, *i. e.* as representing a certain money value. Such expressions show that he was regarded very much in the light of a *mancipium* or chattel. But on the other hand provision was made for the protection of his person: wilful murder of a slave entailed the same punishment as in the case of a free man (Lev. xxiv. 17, 22). So again, if a master inflicted no severe a punishment as to cause the death of his servant, he was liable to a penalty, the amount of which probably depended on the circumstances of the case, for the Rabbinical view that the words "he shall be surely punished," or, more correctly, "it is to be avenged," imply a sentence of death, is wholly untenable (Ex. xxi. 20). No punishment at all was imposed if the slave survived the punishment by a day or two (Ex. xxi. 21); the loss of the slave¹ being regarded as a sufficient punishment in this case. A minor personal injury, such as the loss of an eye or a tooth was to be recompensed by giving the servant his liberty (Ex. xxi. 26, 27). The general treatment of slaves appears to have been gentle—occasionally too gentle, as we infer from Solomon's advice (Prov. xxix. 19, 21), nor do we hear more than twice of a slave running away from his master (1 Sam. xiv. 10; 1 K. ii. 39). The slave was considered by a conscientious master as entitled to justice (Job xxxi. 13-15) and honourable treatment (Prov. xxx. 10). A slave, according to the Rabbins, had no power of acquiring property for himself; whatever he might become entitled to, even by way of compensation for personal injury, reverted to his master (Mielziner, p. 55). On the other hand, the master might constitute him his heir either wholly (Gen. xv. 3), or jointly with his children (Prov. xvii. 2); or again,

¹ There is an apparent disproportion between this and the following regulation, arising probably out of the different circumstances under which the injury was inflicted.

In this case the law is speaking of legitimate punishment "with a rod;" in the next, of a violent assault.

he might give him his daughter in marriage (1 Chr. ii. 35).

The position of the slave in regard to religious privileges was favourable. He was to be circumcised (Gen. xvii. 12), and hence was entitled to partake of the Paschal sacrifice (Ex. xii. 44), as well as of the other religious festivals (Deut. xii. 12, 18, xvi. 11, 14). It is implied that every slave must have been previously brought to the knowledge of the true God, and to a willing acceptance of the tenets of Judaism. This would naturally be the case with regard to all who were "born in the house," and who were to be circumcised at the usual age of eight days; but it is difficult to understand how those who were "bought with money," as adults, could be always induced to change their creed, or how they could be circumcised without having changed it. The Mosaic Law certainly presupposes an universal acknowledgment of Jehovah within the limits of the Promised Land, and would therefore enforce the dismissal or extermination of slaves who persisted in heathenism.

The occupations of slaves were of a menial character, as implied in Lev. xiv. 39, consisting partly in the work of the house, and partly in personal attendance on the master. Female slaves, for instance, ground the corn in the handmill (Ex. xi. 5; Job xxii. 10; Is. xlvii. 2), or gleaned in the harvest field (Ruth ii. 8). They also baked, washed, cooked, and nursed the children (Mishn. *Cethub.* 5, §5). The occupations of the men are not specified; the most trustworthy held confidential posts, such as that of steward or major-domo (Gen. xv. 2, xiv. 2), of tutors to sons (Prov. xvii. 2), and of tenants to persons of large estate, for such appears to have been the position of Ziba (2 Sam. ix. 2, 10). [W. L. B.]

SLIME. The rendering in the A. V. of the

Heb. *חֵמָה*, *chémá*, the *חֵמָה* (*Hommar*) of the Arabs, translated *asphaltos* by the LXX, and *bitumen* in the Vulgate. That our translators understood by this word the substance now known as bitumen, is evident from the following passages in Holland's Phny (ed. 1634). "The very clammy *slime* Bitumen, which at certain times of the year floteth and swimmeth upon the lake of Sodom, called Asphaltites in Jury" (vii. 15, vol. i. p. 163). "The Bitumen whereof I speak, is in some places in manner of a muddy *slime*; in others, very earth or mineral" (xxv. 15, vol. ii. p. 557).

The three instances in which it is mentioned in the O. T. are abundantly illustrated by travellers and historians, ancient and modern. It is first spoken of as used for cement by the builders in the plain of Shinar, or Babylonia (Gen. xi. 3). The bitumen pits in the vale of Siddim are mentioned in the ancient fragment of Canaanitish history (Gen. xiv. 10); and the ark of papyrus in which Moses was placed was made impervious to water by a coating of bitumen and pitch (Ex. ii. 3).

Herodotus (i. 179) tells us of the bitumen found at Is, a town of Babylonia, eight days journey from Babylon. The captive Eretrians (Her. vi. 119) were sent by Darius to collect asphaltum, silt, and oil at Ardeicant, a place two hundred and ten stadia from Susa, in the district of Cissia. The town of Is was situated on a river, or small stream, of the same name which flowed into the Euphrates, and carried down with it the lumps of bitumen, which was used in the building of Babylon. It is probably the bitumen springs of Is which are described in

Strabo (xvi. 743). Eratosthenes, whom he quotes, says that the liquid bitumen, which is called naphtha, is found in Susiana, and the dry in Babylonia. Of the latter there is a spring near the Euphrates, and when the river is flooded by the melting of the snow, the spring also is filled and overflows into the river. The masses of bitumen thus produced are fit for buildings which are made of baked brick. Diodorus Siculus (ii. 12) speaks of the abundance of bitumen in Babylonia. It proceeds from a spring, and is gathered by the people of the country, not only for building, but when dry for fuel, instead of wood. Ammianus Marcellinus (xxiii. 8, §23) tells us that Babylon was built with bitumen by Semiramis (comp. Plin. xxv. 51; Berosus, quoted by Jos. Ant. x. 11, §1, c. Apion. i. 19; Arrian, *Exp. Al.* vii. 17, §1, &c.). The town of Is, mentioned by Herodotus, is without doubt the modern *Hit* or *Heet*, on the west or right bank of the Euphrates, and four days' journey, N.W., or rather W.N.W., of Bagdad (Sir R. Ker Porter's *Trav.* ii. 361, ed. 1822). The principal bitumen pit at Heet, says Mr. Rich (*Memoir on the Ruins of Babylon*, p. 83, ed. 1815), has two sources, and is divided by a wall in the centre, on one side of which the bitumen bubbles up, and on the other the oil of naphtha. Sir R. K. Porter (ii. 315) observed "that bitumen was chiefly confined by the Chaldean builders, to the foundations, and lower parts of their edifices; for the purpose of preventing the ill effects of water." "With regard to the use of bitumen," he adds, "I saw no vestige of it whatever on any remnant of building on the higher ascents, and therefore drier regions." This view is indirectly confirmed by Mr. Rich, who says that the tenacity of bitumen bears no proportion to that of mortar. The use of bitumen appears to have been confined to the Babylonians, for at Nineveh, Mr. Layard observes (*Nin.* ii. 278), "bitumen and reeds were not employed to cement the layers of bricks, as at Babylon; although both materials are to be found in abundance in the immediate vicinity of the city." At Nimroud bitumen was found under a pavement (*Nin.* i. 29), and "the sculpture rested simply upon the platform of sundried bricks without any other substructure, a mere layer of bitumen, about an inch thick, having been placed under the plinth" (*Nin. & Bab.* p. 208). In his description of the firing of the bitumen pits at Nimroud by his Arabs, Mr. Layard falls into the language of our translators. "Tongues of flame and jets of gas, driven from the burning pit, shot through the murky canopy. As the fire brightened, a thousand fantastic forms of light played amid the smoke. To break the cindered crust, and to bring fresh *slime* to the surface, the Arabs threw large stones into the spring. . . . In an hour the bitumen was exhausted for the time, the dense smoke gradually died away, and the pale light of the moon again shone over the black *slime pits*" (*Nin. & Bab.* 202).

The bitumen of the Dead Sea is described by Strabo, Josephus, and Pliny. Strabo (xvi. p. 763) gives an account of the volcanic action by which the bottom of the sea was disturbed, and the bitumen thrown to the surface. It was at first liquefied by the heat, and then changed into a thick viscous substance by the cold water of the sea, on the surface of which it floated in lumps (*βῆλαι*). These lumps are described by Josephus (*B. J.* iv. 8, §4) as of the size and shape of a head—a *cx* (comp. Plin. vii. 13). The semi-liquid kind of bitumen is

that which Pliny says is found in the Dead Sea, the earthy in Syria about Sidon. Liquid bitumen, such as the Zacynthian, the Babylonian, and the Apolloniatic, he adds, is known by the Greeks by the name of pis-asphaltum (comp. *Ex. ii. 3, LXX.*). He tells us moreover that it was used for cement, and that bronze vessels and statues and the heads of nails were covered with it (*Plin. xxv. 51*). The bitumen pits by the Dead Sea are described by the monk Brocardus (*Descr. Terr. Sanct. c. 7*, in Ugolini, vi. p. 1044). The Arabs of the neighbourhood have perpetuated the story of its formation as given by Strabo. "They say that it forms on the rocks in the depths of the sea, and by earthquakes or other submarine concussions is broken off in large masses, and rises to the surface" (Thomson, *The Land and the Book*, p. 225). They told Burckhardt a similar

tale. "The asphaltum (حجر), *Hammur*, which is collected by the Arabs of the western shore, is said to come from a mountain which blocks up the passage along the eastern *Ghor*, and which is situated at about two hours south of *Wady Mojeb*. The Arabs pretend that it oozes up from fissures in the cliff, and collects in large pieces on the rock below, where the mass gradually increases and hardens, until it is rent asunder by the heat of the sun, with a loud explosion, and, falling into the sea, is carried by the waves in considerable quantities to the opposite shores" (*Trav. in Syria*, p. 394). Dr. Thomson tells us that the Arabs still call these pits by the name *bīdrēt hammur*, which strikingly resembles the Heb. *be'érēt chēmdr* of Gen. xiv. 10 (*Land and Book*, p. 324).

Strabo says that in Babylonia boats were made of wicker-work, and then covered with bitumen to keep out the water (*xvi. p. 743*). In the same way the ark of rushes or papyrus in which Moses was placed was plastered over with a mixture of bitumen and pitch or tar. Dr. Thomson remarks (*p. 224*): "This is doubly interesting, as it reveals the process by which they prepared the bitumen. The mineral, as found in this country, melts readily enough by itself; but then, when cold, it is as brittle as glass. It must be mixed with tar while melting, and in that way forms a hard, glossy wax, perfectly impervious to water." We know from Strabo (*xvi. p. 764*) that the Egyptians used the bitumen of the Dead Sea in the process of embalming, and Pliny (*vi. 35*) mentions a spring of the same mineral at Corambis in Ethiopia. [W. A. W.]

SLING (עֲלֵף: σφενδαμή: *funda*). The sling has been in all ages the favourite weapon of the shepherds of Syria (*1 Sam. xvii. 40*; Burckhardt's *Notes*, i. 57), and hence was adopted by the Israelitish army, as the most effective weapon for light-armed troops. The Benjamites were particularly expert in their use of it: even the left-handed could "sling stones at an hair and not miss" (*Judg. x. 16*; comp. *1 Chr. xii. 2*). According to the Targum of Jonathan and the Syriac, it was the weapon of the Cherethites and Pelethites. It was advantageously used in attacking and defending towns (*2 K.*

iii. 25; *Joseph. B. J. iv. 1, §3*), and in skirmishing (*B. J. ii. 17, §5*). Other eastern nations availed themselves of it, as the Syrians (*1 Macc. ix. 11*), who also invented a kind of artificial sling (*1 Macc. vi. 51*); the Assyrians (*Jud. ix. 7*; Layard's *Nin. p. 344*); the Egyptians (*Wilkinson, i. 357*); and the Persians (*Xen. Anab. iii. 3, §18*). The construction of the weapon hardly needs description: it consisted of a couple of strings of sinew or some fibrous substance, attached to a leathern receptacle for the stone in the centre, which was termed the *caput*,^a i. e. pan (*1 Sam. xiv. 29*): the sling was swung once or twice round the head, and the stone was then discharged by letting go one of the strings. Sling-stones^b were selected for their smoothness (*1 Sam. xvii. 40*), and were recognised as one of the ordinary munitions of war (*2 Chr. xxvi. 14*). In action the stones were either carried in a bag round the neck (*1 Sam. xvii. 40*), or were heaped up at the feet of the combatant (*Layard's Nin. ii. 344*). The violence with which the stone was projected supplied a vivid image of sudden and forcible removal (*Jer. x. 18*). The rapidity of the whirling motion of the sling round the head, was emblematic of inquietude (*1 Sam. xiv. 29*, "the souls of thine enemies shall be whirled round in the midst of the pan of a sling"); while the sling-stones represented the enemies of God (*Zech. ix. 15*, "they shall tread under foot the sling-stones"). The term *margēmāh* in Prov. xvi. 8, is of doubtful meaning; Gesenius (*Thes. p. 1263*) explains of "a heap of stones," as in the margin of the A. V., the LXX.; Ewald, and Hitzig, of "a sling," as in the text. [W. A. W.]

Egyptian Slingers. (Wilkinson.)

SMITH.^a The work of the smith, together with an account of his tools, is explained in **HANDICRAFT**, vol. i. p. 749. A description of a smith's workshop is given in *Eccles. xxviii. 28*. [H. W. P.]

SMYRNA. The city to which allusion is made in Revelation ii. 8-11, was founded, or at least the design of founding it was entertained, by Alexander the Great soon after the battle of the Granicus, in consequence of a dream when he had lain down to sleep after the fatigue of hunting. A temple in which two goddesses were worshipped under the name of Nemesis stood on the hill, on the sides of

• פֶּה. • אֲרֵנִי-קֶלַע. • מַרְגָּמָה.

^a Other words besides those mentioned in vol. i. p. 749, are:—

1. מַרְגָּמָה; • סַנְיָלָה; • סַנְיָלָה (*2 K. xxiv. 14*), where *סַנְיָלָה* is also used, thus denoting a workman of an inferior kind.

2. לֹמֶשׁ; • σφραγιστής; malleator; a hammerer: a term applied to Tubal-Cain, Gen. iv. 22 (*Gen. p. 330, 386*; *Realchöte, Arch. Hebr. i. 143*). [TUBAL-CAIN.]

3. מַרְגָּמָה; • σφένδαμή; he that smites (the anvil, *מַרְגָּמָה*, *anvil*), *1 Sam. x. 17*.

which the new town was built under the auspices of Antigonus and Lysimachus, who carried out the design of the conqueror after his death. It was situated twenty stades from the city of the same name, which after a long series of wars with the Lydians had been finally taken and sacked by Halyattes. The rich lands in the neighbourhood were cultivated by the inhabitants, scattered in villages about the country (like the Jewish population between the times of Zedekiah and Ezra), for a period which Strabo, speaking roundly, calls 400 years. The descendants of this population were reunited in the new Smyrna, which soon became a wealthy and important city. Not only was the soil in the neighbourhood eminently productive—so that the vines were even said to have two crops of grapes—but its position was such as to render it the natural outlet for the produce of the whole valley of the Hermus. The Pramnean wine (which Nestor in the *Iliad*, and Circe in the *Odyssey*, are represented as mixing with honey, cheese, and meal, to make a kind of salad dressing) grew even down to the time of Pliny in the immediate neighbourhood of the temple of the Mother of the gods at Smyrna, and doubtless played its part in the orgiastic rites both of that deity and of Dionysus, each of whom in the times of Imperial Rome possessed a guild of worshippers frequently mentioned in the inscriptions as the *ἐκὰς σύνδοτος μυστῶν μητρὸς Ἰσχυλῆνης* and the *ἐκὰς σύνδοτος μυστῶν καὶ τεχνιτῶν Διονύσου*. One of the most remarkable of the *chefs d'oeuvre* of Myron which stood at Smyrna, representing an old woman intoxicated, illustrates the prevalent habits of the population.

The inhabitants of New Smyrna appear to have possessed the talent of successfully divining the course of events in the troublous times through which it was their destiny to pass, and of habitually securing for themselves the favour of the victor for the time being. Their adulation of Seleucus and his son Antiochus was excessive. The title *θεός καὶ σωτὴρ* is given to the latter in an extant inscription; and a temple dedicated to his mother Stratonice, under the title of *Ἀφροδίτη Στρατονική*, was not only constituted a sanctuary itself, but the same right was extended in virtue of it to the whole city. Yet when the tide turned, a temple was erected to the city Rome as a divinity, in time to save the credit of the Smyrnaeans as zealous friends of the Roman people. Indeed, though history is silent as to the particulars, the existence of a coin of Smyrna with the head of Mithridates upon it, indicates that this energetic prince also, for a time at least, must have included Smyrna within the circle of his dependencies. However, during the reign of Tiberius, the reputation of the Smyrnaeans for an ardent loyalty was so unshaken, that on this account alone they obtained permission to erect a temple, in behalf of all the Asiatic cities, to the emperor and senate, the question having been for some time doubtful as to whether their city or Sardis [SARDIS]—the two selected out of a crowd of competitors—should receive this distinction. The honour which had been obtained with such difficulty, was requited with a proportionate adulation. Nero appears in the inscriptions as *σωτὴρ τοῦ σύμπαντος ἀσπορταίου γένους*.

It seems not impossible, that just as St. Paul's

illustrations in the Epistle to the Corinthians are derived from the Isthmian games, so the message to the Church in Smyrna contains allusions to the ritual of the pagan mysteries which prevailed in that city. The story of the violent death and reviviscence of Dionysus entered into these to such an extent, that Origen, in his argument against Celsus, does not scruple to quote it as generally accepted by the Greeks, although by them interpreted metaphysically (iv. p. 171, ed. Spence). In this view, the words *ἀπὸ τοῦ καὶ ἰσχυρὸς, ὃς ἐγένετο νεκρὸς καὶ ἔζησεν* (Rev. ii. 8) would come with peculiar force to ears perhaps accustomed to hear them in a very different application.* The same may be said of *δοῦναι τοῖς τοῖς ἐκείνων τῆς (ἐκείνης)*, it having been a usual practice at Smyrna to present a crown to the priest who superintended the religious ceremonial, at the end of his year of office. Several persons of both sexes have the title of *εὐφροσύνη*. In the inscriptions; and the context shows that they possessed great social consideration.

In the time of Strabo the ruins of the Old Smyrna still existed, and were partially inhabited, but the new city was one of the most beautiful in all Asia. The streets were laid out as near as might be at right angles; but an unfortunate oversight of the architect, who forgot to make underground drains to carry off the storm rains, occasioned the flooding of the town with the filth and refuse of the streets. There was a large public library there, and also a handsome building surrounded with porticoes which served as a museum. It was consecrated as a herotum to Homer, whom the Smyrnaeans claimed as a countryman. There was also an Odeum, and a temple of the Olympian Zeus, with whose cult that of the Roman emperors was associated. Olympian games were celebrated here, and excited great interest. On one of these occasions (in the year A.D. 68) a Rhodian youth of the name of Artemidorus obtained greater distinctions than any on record, under peculiar circumstances which Pausanias relates. He was a pancratiast, and not long before had been beaten at Elis from deficiency in growth. But when the Smyrnaean Olympia next came round, his bodily strength had so developed that he was victor in three trials on the same day, the first against his former competitors at the Peloponnesian Olympia, the second with the youths, and the third with the men; the last contest having been provoked by a taunt (Pausanias, v. 14, §4). The extreme interest excited by the games at Smyrna, may perhaps account for the remarkable ferocity exhibited by the population against the aged bishop Polycarp. It was exactly on such occasions that what the pagans regarded as the unpatriotic and anti-social spirit of the early Christians became most apparent; and it was to the violent demands of the people assembled in the stadium that the Roman proconsul yielded up the martyr. The letter of the Smyrnaeans, in which the account of his martyrdom is contained, represents the Jews as taking part with the Gentiles in accusing him as an enemy to the state religion,—conduct which would be inconceivable in a sincere Jew, but which was quite natural in those which the sacred writer characterises as “a synagogue of Satan” (Rev. ii. 9).

Smyrna under the Romans was the seat of a *consuetudinis iudicium*, whither law cases were brought

* This is the more likely from the superstitious regard in which the Smyrnaeans held chance phrases (*καλέσεις*) as a material for augury. They had a *καλέσων ἱερεὺς*

just above the city outside the walls, in which this mode of divination was the ordinary one (Pausanias, ix. 11, §7).

from the citizens of Magnesia on the Sipylus, and also from a Macedonian colony settled in the same country under the name of Hyrcani. The last are probably the descendants of a military body in the service of Seleucus, to whom lands were given soon after the building of New Smyrna, and who, together with the Magnesians, seem to have had the Smyranean citizenship then bestowed upon them. The decree containing the particulars of this arrangement is among the marbles in the University of Oxford. The Romans continued the system which they found existing when the country passed over into their hands.

(Strabo, xiv. p. 183 seqq.; Herodotus, i. 16; Tacitus, *Annal.* lii. 63, iv. 56; Pliny, *N. H.* v. 29; Boeckh, *Inscript. Græc.* "Smyranean Inscriptions," especially Nos. 3163-3176; Pausanias, *loc. cit.*, and iv. 21, §5; Macrobius, *Saturnalia*, i. 18.) [J. W. B.]

SNAIL. The representative in the A. V. of the Hebrew words *shabîl* and *chômet*.

1. *Shabîl* (שָׁבִיל: *snôps*; *σπερον*, Aq.; *χόπιος*, Sym., *cera*) occurs only in Ps. lviii. 9 (8, A. V.): "As a *shabîl* which melteth let (the wicked) pass away." There are various opinions as to the meaning of this word, the most curious, perhaps, being that of Symmachus. The LXX. read "melted wax," similarly the Vulg. The rendering of the A. V. ("snail") is supported by the authority of many of the Jewish Doctors, and is probably correct. The Chaldee Paraphr. explains *shabîl* by *shabîla* (שָׁבִילָא), i. e. "a snail or a slug," which was supposed by the Jews to consume away and die by reason of its constantly emitting slime as it crawls along. See *Schol. ad Gem. Mo'el Katon*, 1 fol. 6 B, as quoted by Bochart (*Hieroz.* iii. 560) and Gesenius (*Thes.* p. 212). It is needless to observe that this is not a zoological fact, though perhaps generally believed by the Orientals. The term *Shabîl* would denote either a *Limax* or a *Helix*, which are particularly noticeable for the slimy track they leave behind them.

2. *Chômet* (חֹמֶת: *σαῦρα*: *lacerta*) occurs only as the name of some unclean animal in Lev. xi. 30. The LXX. and Vulg. understand some kind of *Lizard* by the term; the Arabic versions of Erpenius and Scudias give the *Chameleon* as the animal intended. The Veneto-Greek and the Rabbins, with whom agrees the A. V., render the Heb. term by "snail." Bochart (*Hieroz.* ii. 500) has endeavoured to show that a species of small sand lizard, called *Chulaca* by the Arabs, is denoted; but his argument rests entirely upon some supposed etymological foundation, and proves nothing at all. The truth of the matter is that there is no evidence to lead us to any conclusion; perhaps some kind of lizard may be intended, as the two most important old versions conjecture. [W. H.]

SNOW (שֶׁנֶה: *χιών*; *ᾠρός* in Prov. xvi. 10, *nix*). The historical books of the Bible contain only two notices of snow actually falling (2 Sam. xxii. 20; 1 Macc. xiii. 82), but the allusions in the poetical books are so numerous that there can be no doubt as to its being an ordinary occurrence in the winter months. Thus, for instance, the snow-storm is mentioned among the ordinary operations of nature which are illustrative of the Creator's power (Ps. cxlvii. 16, cxlviii. 8). We have, again, notice of the beneficial effect of snow on the soil (Is. lv. 10). Its colour is adduced as an image of brilliancy (Dan. vii. 9; Matt. xviii. 3; Rev. i. 14), of purity (Is. i. 18; Lam.

iv. 7, in reference to the white robes of the princes), and of the blanching effects of leprosy (Ex. iv. 6; Num. xii. 10; 2 K. v. 27). In the book of Job we have references to the supposed cleansing effects of snow-water (ix. 30), to the rapid melting of snow under the sun's rays (xxiv. 19), and the consequent flooding of the brooks (vi. 16). The thick falling of the flakes forms the point of comparison in the obscure passage in Ps. lxxiii. 14. The snow lies deep in the ravines of the highest ridge of Lebanon until the summer is far advanced, and indeed never wholly disappears (Robinson, iii. 531); the summit of Hermon also perpetually glistens with frozen snow (Robinson, ii. 437). From these sources probably the Jews obtained their supplies of ice for the purpose of cooling their beverages in summer (Prov. xiv. 13). The "snow of Lebanon" is also used as an expression for the refreshing coolness of spring water, probably in reference to the stream of Siloam (Jer. xviii. 14). Lastly, in Prov. xxi. 21, snow appears to be used as a synonym for winter or cold weather. The liability to snow must of course vary considerably in a country of such varying altitude as Palestine. Josephus notes it as a peculiarity of the low plain of Jericho that it was warm there even when snow was prevalent in the rest of the country (*B. J.* iv. 8, §3). At Jerusalem snow often falls to the depth of a foot or more in January and February, but it seldom lies (Robinson, i. 420). At Nazareth it falls more frequently and deeply, and it has been observed to fall even in the maritime plain at Joppa and about Carmel (Kitto, *Phys. Hist.* p. 310). A comparison of the notices of snow contained in Scripture and in the works of modern travellers would, however, lead to the conclusion that more fell in ancient times than at the present day. At Damascus, snow falls to the depth of nearly a foot, and lies at all events for a few days (Wortabet's *Syria*, i. 215, 236). At Aleppo it falls, but never lies for more than a day (Russell, i. 69). [W. L. B.]

SO (שֹׁ: *Σωτῆρ*: *Sua*). "So king of Egypt" is once mentioned in the Bible. Hoshai, the last king of Israel, evidently intending to become the vassal of Egypt, sent messengers to him and made no present, as had been the yearly custom, to the king of Assyria (2 Kings xvii. 4). The consequence of this step, which seems to have been forbidden by the prophets, who about this period are constantly warning the people against trusting in Egypt and Ethiopia, was the imprisonment of Hoshai, the taking of Samaria, and the carrying captive of the ten tribes.

So has been identified by different writers with the first and second kings of the Ethiopian XXVth dynasty, called by Manetho, Sabakôn, and Sebichôs. It will be necessary to examine the chronology of the period in order to ascertain which of these identifications is the more probable. We therefore give a table of the dynasty (see opposite page), including the third and last reign, that of Tirhakah, for the illustration of a later article. [TIRHAKAH.]

The accession of Teharka, the Tirhakah of Scripture, may be nearly fixed on the evidence of an Apis-tablet, which states that one of the bulls Apis was born in his 26th year, and died at the end of the 20th of Psammetichus I. This bull lived more than 20 years, and the longest age of any Apis stated is 26. Supposing the latter duration, which would allow a short interval between Teharka and Psammetichus II., as seems necessary, the accession of

TABLE OF DYNASTY XXV.

EGYPTIAN DATA.					HEBREW DATA.	
B.C.	Manetho.		Monuments.		Correct reigns?	Events
	Africana. Yrs.	Eusebina. Yrs.	Order.	Highest Yr.		
719	1. Sebakhôn 8	1. Sebakhôn 12	1. SHEBEK	XII.	12	chr. 723 or 703
707	2. Sebichôn 14	2. Sebichôn 12	2. SHEBETEK		12	
686	3. Tarakos 18	3. Tarakos 20	3. TEHARKA	XXVI.	26	chr. 703 or 683? War with Sennacherib

Teharka would be B. C. 695. If we assign 24 years to the two predecessors, the commencement of the dynasty would be B. C. 719. But it is not certain that their reigns were continuous. The account which Herodotus gives of the war of Sennacherib and Sesostris suggests that Tirhakah was not ruling in Egypt at the time of the destruction of the Assyrian army, so that we may either conjecture, as Dr. Hincks has done, that the reign of Sesostris followed that of Shebek and preceded that of Tirhakah over Egypt (*Journ. Sac. Lit.*, Jan. 1853), or else that Tirhakah was king of Ethiopia while Shebek, not the same as Sesostris, ruled in Egypt, the former hypothesis being far the more probable. It seems impossible to arrive at any positive conclusion as to the dates to which the mentions in the Bible of So and Tirhakah refer, but it must be remarked that it is difficult to overthrow the date of B. C. 721, for the taking of Samaria.

If we adopt the earlier dates So must correspond to Shebek, if the later, perhaps to Shebtek; but if it should be found that the reign of Tirhakah is dated too high, the former identification might still be held. The name Shebek is nearer to the Hebrew name than Shebtek, and if the Masoretic points do not faithfully represent the original pronunciation, as we might almost infer from the consonants, and the name was Sewa or Seva, it is not very remote from Shebek. We cannot account for the transcription of the LXX.

From Egyptian sources we know nothing more of Shebek than that he conquered and put to death Bocchoris, the sole king of the XXIVth dynasty, as we learn from Manetho's list, and that he continued the monumental works of the Egyptian kings. There is a long inscription at El-Karnak in which Shebek speaks of tributes from "the king of the land of KHALA (SHARA)," supposed to be Syria. (Brugsch, *Histoire d'Egypte*, i. p. 244.) This gives some slight confirmation to the identification of this king with So, and it is likely that the founder of a new dynasty would have endeavoured, like Shishak and Psammetichus I., the latter virtually the founder of the XXVIth, to restore the Egyptian supremacy in the neighbouring Asiatic countries.

The standard inscription of Sargon in his palace at Khorsabad states, according to M. Oppert, that after the capture of Samaria, Hezon king of Gazi, and Sebech sultan of Egypt, met the king of Assyria in battle at Raphia, Raphia, and were defeated. Sebech disappeared, but Hezon was captured. Pharaoh king of Egypt was then put to tribute. (*Les Inscriptions Assyriennes des Sargonides*, &c. p. 22.) This statement would appear to indicate that either Shebek or Shebtek, for we cannot lay great stress upon the seeming identity of name with the former,

advanced to the support of Hezon and his party, and being defeated fled into Ethiopia, leaving the kingdom of Egypt to a native prince. This evidence favours the idea that the Ethiopian kings were not successive. [R. S. P.]

SOAP (שֹׂפֶה, שֹׂפֶה: *arba*, *h. borith*). The Hebrew term *borith* does not in itself bear the specific sense of soap, but is a general term for any substance of cleansing qualities. As, however, it appears in Jer. ii. 22, in contradistinction to *nether*, which undoubtedly means "nitre," or mineral alkali, it is fair to infer that *borith* refers to vegetable alkali, or some kind of potash, which forms one of the usual ingredients in our soap. Numerous plants, capable of yielding alkalies, exist in Palestine and the surrounding countries; we may notice one named *Hu-beibeh* (the *salsola kali* of botanists), found near the Dead Sea, with glass-like leaves, the ashes of which are called *el-Audi* from their strong alkaline properties (Robinson, *Bib. Researches*, i. 505); the *Ajram*, found near Sini, which when pounded serves as a substitute for soap (Robinson, i. 84); the *gilloo*, or "soap plant" of Egypt (Wilkinson, ii. 106); and the heaths in the neighbourhood of Joppa (Kitto's *Phys. Hist.* p. 267). Modern travellers have also noticed the *Saponaria officinalis* and the *Meembryanthemum nodiflorum*, both possessing alkaline properties, as growing in Palestine. From these sources large quantities of alkali have been extracted in past ages, as the heaps of ashes outside Jerusalem and Nablus testify (Robinson, iii. 201, 299), and an active trade in the article is still prosecuted with Aleppo in one direction (Russell, i. 79), and Arabia in another (Burchardt, i. 66). We need not assume that the ashes were worked up in the form familiar to us; for no such article was known to the Egyptians (Wilkinson, i. 186). The uses of soap among the Hebrews were twofold:—(1) for cleansing either the person (Jer. ii. 22; Job ix. 30, where for "never so clean," read "with alkali") or the clothes; (2) for purifying metals (Is. i. 25, where for "purify," read "as through alkali"). Hitzig suggests that *borith* should be substituted for *berith*, "covenant," in Es. xx. 37, and Mal. iii. 1. [W. L. B.]

SO'CHO (שׁוֹכּוֹ: *Sochō*), 1 Chr. iv. 18. Probably the town of Socoh in Judah, though which of the two cannot be ascertained. It appears from its mention in this list, that it was colonized by a man or a place named Heber. The Targum playing on the passage after the custom of Hebrew writers, interprets it as referring to Moses, and takes the names Jered, Socō, Jekuthiel, as titles of him. He was "the Rabba of Socō, because he sheltered (שָׁכַח) the house of Israel with his virtue," [G.]

SO'CHOH (שֹׁחַה): *Alex. Σοχά: Soccho). Another form of the name which is more correctly given in the A. V. as SOCOH, but which appears therein under no less than six forms. The present one occurs in the list of King Solomon's commissariat districts (1 K. iv. 10), and is therefore probably, though not certainly, the town in the Shefelah, that being the great corn-growing district of the country. [SOCOH, 1.]

SO'COH (שֹׁכֹה). The name of two towns in the tribe of Judah.

1. (Σοχά; Alex. Σοχά: Soccho). In the district of the Shefelah (Josh. xv. 35). It is a member of the same group with Jarmuth, Azekah, Shaaraim, &c. The same relative situation is implied in the other passages in which the place (under slight variations of form) is mentioned. At Ephes-dammim, between Socoh and Azekah (1 Sam. xvii. 1), the Philistines took up their position for the memorable engagement in which their champion was slain, and the wounded fell down in the road to Shaaraim (ver. 54). Socoh, Adullam, Azekah, were among the cities in Judah which Rehoboam fortified after the revolt of the northern tribes (2 Chr. xi. 7), and it is mentioned with others of the original list as being taken by the Philistines in the reign of Ahaz (2 Chr. xxviii. 18).

In the time of Eusebius and Jerome (*Onomast.* "Soccho") it bore the name of Socchoth, and lay between 8 and 9 Roman miles from Eleutheropolis, on the road to Jerusalem. Pauls passed through it on her road from Bethlehém (?) to Egypt (Jerome, *Ep. Paulas*, §14). As is not unfrequently the case in this locality, there were then two villages, an upper and a lower (*Onomast.*). Dr. Robinson's identification of Socoh with *esh-Shuweikeh*^b in the western part of the mountains of Judah is very probable (*B. R.* ii. 21). It lies about 1 mile to the north of the track from *Beit Jibrin* to Jerusalem, between 7 and 8 English miles from the former. To the north of it within a couple of miles is *Yarmuk*, the ancient Jarmuth. *Dammim*, perhaps Ephes-dammim, is about the same distance to the east, and although Azekah and Shaaraim have not been identified, there is no doubt that they were in this neighbourhood. To complete the catalogue, the ruins—which must be those of the upper one of Eusebius's two villages—stand on the southern slope of the *Wady es-Simt*, which with great probability is the Valley of Elah, the scene of Goliath's death. (See Tobler, *31te Wanderung*, 122.)

No traveller appears to have actually visited the spot, but one of the few who have approached it describes it as "nearly half a mile above the bed of the Wady, a kind of natural terrace covered with green fields (in spring), and dotted with gray ruins" (Porter, *Handbk.* 248 a).

From this village probably came "Antigonus of Socco," who lived about the commencement of the 3rd century B.C. He was remarkable for being the earliest Jew who is known to have had a Greek name; for being the disciple of the great Simon, surnamed the Just, whom he succeeded as president of the Sanhedrin; for being the master of Sadok the reputed founder of the Sadducees; but most truly remarkable as the author of the follow-

^a The text of the Vat. MS. is so corrupt as to prevent any name being recognised.

^b *Shuweikeh* is a diminutive of *Shuekh*, as *Mureikeh* of *Murekh*, &c.

^c The *Keri* to this passage reads שֹׁכֹה i. e. Socco

ing saying which is given in the Mishna (*Pwae Aboth*, i. 3) as the substance of his teaching, "Be not ye like servants who serve their lord that they may receive a reward. But be ye like servants who serve their lord without hope of receiving a reward, but in the fear of Heaven."

Socoh appears to be mentioned, under the name of *Sochus* in the Acts of the Council of Nice, though its distance from Jerusalem as there given, is not sufficient for the identification proposed above (*Ireland, Pal.* 1019).

2. (Σοχά; Alex. Σοχά: Soccho). Also a town of Judah, but in the mountain district (Josh. xv. 48).^a It is one of the first group, and is named in company with Anab, Jattir, Kahtemoh, and others. It has been discovered by Dr. Robinson (*B. R.* i. 494) in the *Wady el-Khull*, about 10 miles S.W. of Helzon; bearing, like the other Socoh, the name of *esh Shuweikeh*, and with *Anab*, *Semoa*, *Jattir*, within easy distance of it. [G.]

SO'DI (סֹדִי; סודי: Sodi). The father of Gaddiel, the spy selected from the tribe of Zebulun (*Num.* xiii. 10).

SOD'OM (סֹדֹם; i. e. Sodom: [rā] Σόδομα; Joseph. ἡ πόλις Σοδομῶν: *Sodoma*). Jerome vacillates between singular and plural, noun and adjective. He employs all the following forms, *Sodomam*, in *Sodomis*, *Sodomorian*, *Sodomae*, *Sodomitas*). One of the most ancient cities of Syria, whose name is now a synonym for the most disgusting and opprobrious of vices. It is commonly mentioned in connexion with Gomorrah, but also with Admah and Zeboim, and on one occasion (*Gen.* xiv.) with Bela or Zoar. Sodom was evidently the chief town in the settlement. Its king takes the lead and the city is always named first in the list, and appears to be the most important. The four are first named in the ethnological records of *Gen.* x. 19, as belonging to the Canaanites: "The border of the Canaanite was from Zidon towards Gerar unto Azzah: towards Sedom and Amorah and Admah and Zeboim unto Lasha." The meaning of which appears to be that the district in the hands of the Canaanites formed a kind of triangle—the apex at Zidon, the south-west extremity at Gasa, the south-eastern at Lasha. Lasha, it may be remarked in passing, seems most probably located on the *Wady Zurka Main*, which enters the east side of the Dead Sea, about nine miles from its northern end.

The next mention of the name of Sodom (*Gen.* xiii. 10-13) gives more certain indication of the position of the city. Abram and Lot are standing together between Bethel and Ai (ver. 3), taking, as any spectator from that spot may still do, a survey of the land around and below them. Eastward of them, and absolutely at their feet, lay the "circle of Jordan." It was in all its verdant glory, that glory of which the traces are still to be seen, and which is so strangely and irresistibly attractive to a spectator from any of the heights in the neighbourhood of Bethel—watered by the copious supplies of the *Wady Kelt*, the *Ain Sukkán*, the *Ain Dák*, and the other springs which gush out from the foot of the mountains. These abundant waters even now support a mass of verdure before they are lost in the light, loamy soil of the region. But at the time when Abram and Lot beheld them, they were

^a It is perhaps doubtful whether the name had not also the form סֹדֹמָה *Sedómah*, which appears in *Gen.* x. 19. The suffix may in this case be only the *ḥ* of motion, but the forms adopted by LXX. and Vulg. favour the belief that it may be part of the name.

embanked and directed by irrigation, after the manner of Egypt, till the whole circle was one great oasis—a garden of Jehovah" (ver. 10). In the midst of the garden the four cities of Sodom, Gomorrah, Admah, and Zeboim appear to have been situated. To these cities Lot descended, and retaining his nomad habits amongst the more civilised manners of the Canaanite settlement "pitched his tent" by* the chief of the four. At a later period he seems to have been living within the walls of Sodom. It is necessary to notice how absolutely the cities are identified with the district. In the subsequent account of their destruction (Gen. xix.), the topographical terms are employed with all the precision which is characteristic of such early times. "The *Cicodr*," the "land of the *Cicodr*," "*Cicodr* of Jordan," recur again and again both in chap. xiii. and xix., and "the cities of the *Cicodr*" is the almost technical designation of the towns which were destroyed in the catastrophe related in the latter chapter. The mention of the Jordan is conclusive as to the situation of the district, for the Jordan ceases where it enters the Dead Sea, and can have no existence south of that point. But, in addition, there is the mention of the eastward direction from Bethel, and the fact of the perfect manner in which the district north of the Lake can be seen from the central highlands of the country on which Abram and Lot were standing. And there is still further corroboration in Deut. xxiv. 3, where "the *Cicodr*" is directly connected with Jericho and Zoar, coupled with the statement of Gen. x. already quoted, which appears to place Zoar to the north of Lasha. It may be well to remark here, with reference to what will be named further on, that the southern half of the Dead Sea is invisible from this point; not merely too distant, but shut out by intervening heights.

We have seen what evidence the earliest records afford of the situation of the five cities. Let us now see what they say of the nature of that catastrophe by which they are related to have been destroyed. It is described in Gen. xix. as a shower of brimstone and fire from Jehovah, from the skies—"The Lord rained upon Sodom, and upon Gomorrah, brimstone and fire from the Lord out of heaven; and he overthrew those cities, and all the plain, and all the inhabitants of the cities, and that which grew upon the ground" . . . "and lo! the smoke of the land went up like the smoke of a furnace." "It rained fire and brimstone from heaven" (Luke xvii. 29). However we may interpret the words of the earliest narrative one thing is certain, that the lake was not one of the agents in the catastrophe. Further, two words are used in Gen. xix. to describe what happened:—*לִשְׂרֹף*, to throw down, to destroy (vers. 13, 14), and *לְהַטֵּן*, to overturn (21, 25, 29). In neither of these is the presence of water—the submergence of the cities or of the district in which they stood—either mentioned, or implied. Nor is it implied in any of the later passages in which the destruction of the cities is referred to throughout the Scriptures. Quite the contrary. Those passages always speak of the dis-

trict on which the cities once stood, not as submerged, but, as still visible, though desolate and uninhabitable. "Brimstone, and salt, and burning . . . not sown, nor beareth, nor any grass groweth therein" (Deut. xxix. 22). "Never to be inhabited, nor dwelt in from generation to generation; where neither Arab should pitch tent nor shepherd make fold" (Is. xlii. 19). "No man abiding there, nor son of man dwelling in it" (Jer. xlix. 18; l. 40). "A fruitful land turned into saltness" (Ps. cvii. 34). "Overthrown and burnt" (Amos iv. 11). "The breeding of nettles, and saltpetre, and a perpetual desolation" (Zeph. ii. 9). "A waste land that smoketh, and plants bearing fruit which never cometh to ripeness" (Wisd. ix. 7). "Land lying in clods of pitch and heaps of ashes" (2 Esdr. ii. 9). "The cities turned into ashes" (2 Pet. ii. 6, where their destruction by fire is contrasted with the Deluge).

In agreement with this is the statement of Josephus (*B. J.* iv. 8, §4). After describing the lake, he proceeds:—"Adjoining it is Sodomitis, once a blessed region abounding in produce and in cities, but now entirely burnt up. They say that it was destroyed by lightning for the impiety of its inhabitants. And even to this day the relics of the Divine fire, and the traces of five cities are to be seen there, and moreover the ashes reappear even in the fruit." In another passage (*B. J.* v. 13, §6) he alludes incidentally to the destruction of Sodom, contrasting it, like St. Peter, with a destruction by water. By comparing these passages with *Ant.* i. 9, it appears that Josephus believed the vale of Siddim to have been submerged, and to have been a distinct district from that of Sodom in which the cities stood, which latter was still to be seen.

With this agree the accounts of heathen writers, as Strabo and Tacitus; who, however vague their statements, are evidently under the belief that the district was not under water, and that the remains of the towns were still to be seen.^a

From all these passages, though much is obscure, two things seem clear.

1. That Sodom and the rest of the cities of the plain of Jordan stood on the north of the Dead Sea.

2. That neither the cities nor the district were submerged by the lake, but that the cities were overthrown and the land spoiled, and that it may still be seen in its desolate condition.

When, however, we turn to more modern views, we discover a remarkable variance from these conclusions.

1. The opinion long current, that the five cities were submerged in the lake, and that their remains—walls, columns, and capitals—might be still discerned below the water, hardly needs refutation after the distinct statement and the constant implication of Scripture. Reland (*Pal.* 257) showed more than two centuries ago how baseless was such a hypothesis, and how completely it is contradicted by the terms of the original narrative. It has since been assailed with great energy by De Saulcy. Professor Stanley (*S. & P.* 289) has lent his powerful aid in the same direction,^b and the theory, which probably arose from a confusion between the

* The word is *לָעֵד*, "at," not "towards," as in the A.V. *Locatio, vicino a*; *LXX. ἐν τῷ οὐρανῷ*.

^a Josephus regarded this passage as his main statement of the event. See *Ant.* i. 11, §4.

^b These passages are given at length by De Saulcy (*Warr.* i. 448).

^c "The only expression which seems to imply that the site of the Dead Sea was within historical times, is that

contained in Gen. xiv. 3—"the vale of Siddim, which is the Salt Sea." But this phrase may merely mean that the region in question bore both names; as in the similar expressions (verses 7 and 17)—"En Mithpat, which is Kadesh;" "Shaveh, which is the King's Dale." It should, however, be observed that the word 'Emek,' translated 'vale,' is usually employed for a long broad valley, such as in this connection would naturally mean the whole length of the Dead Sea." (Stanley, *S. & P.* 290 note.)

Vale of Siddim and the plain of the Jordan, will doubtless never again be listened to. But

2. A more serious departure from the terms of the ancient history is exhibited in the prevalent opinion that the cities stood at the south end of the Lake. This appears to have been the belief of Josephus and Jerome (to judge by their statements on the subject of Zoar). It seems to have been universally held by the mediæval historians and pilgrims, and it is adopted by modern topographers, probably without exception. In the words of one of the most able and careful of modern travellers, Dr. Robinson, "The cities which were destroyed must have been situated on the south end of the lake as it then existed" (*B. R.* ii. 188). This is also the belief of M. De Saulcy, except with regard to Gomorrah; and, in fact, is generally accepted. There are several grounds for this belief; but the main point on which Dr. Robinson rests his argument is the situation of Zoar.

(a.) "Lot," says he, in continuing the passage just quoted, "fled to Zoar, which was near to Sodom; and Zoar lay almost at the southern end of the present sea, probably in the mouth of the *Wady Kerak*, where it opens upon the isthmus of the peninsula. The fertile plain, therefore, which Lot chose for himself, where Sodom was situated . . . lay also south of the lake 'as thou comest unto Zoar'" (*B. R.* *ibid.*).

Zoar is said by Jerome to have been "the key of Moab." It is certainly the key of the position which we are now examining. Its situation is more properly investigated under its own head. [ZOAR.] It will there be shewn that grounds exist for believing that the Zoar of Josephus, Jerome, and the Crusaders, which probably lay where Dr. Robinson places it, was not the Zoar of Lot. On such a point, however, where the evidence is so fragmentary and so obscure, it is impossible to speak otherwise than with extreme diffidence.

In the meantime, however, it may be observed that the statement of Gen. xix. hardly supports the inference relative to the position of these two places, which is attempted to be extorted from it. For, assuming that Sodom was where all topographers seem to concur in placing it, at the salt ridge of *Udum*, it will be found that the distance between that spot and the mouth of the *Wady Kerak*, where Dr. Robinson proposes to place Zoar, a distance which, according to the narrative, was traversed by Lot and his party in the short twilight of an Eastern morning (ver. 15 and 23), is no less than 16 miles.¹

Without questioning that the narrative of Gen. xix. is strictly historical throughout, we are not at present in possession of sufficient knowledge of the topography and of the names attached to the sites of this remarkable region, to enable any profitable conclusions to be arrived at on this and the other kindred questions connected with the destruction of the five cities.

(3.) Another consideration in favour of placing the cities at the southern end of the lake is the existence of similar names in that direction.

¹ M. De Saulcy has not overlooked this consideration (*Narrative*, i. 462). His own proposal to place Zoar at *Zamirah* is however inadmissible, for reasons stated under the head of Zoar. If *Udum* be Sodom, then the site which has most claim to be identified with the site of Zoar is the *Tell el-Zoghbi*, which stands between the mouth and of *Khashm Udum* and the Lake. But Zoar, the cradle of Moab and Ammon, must surely have been

Thus, the name *Udum*, attached to the remarkable ridge of salt which lies at the south-western corner of the lake, is usually accepted as the representative of Sodom (Robinson, Van de Velde, De Saulcy, &c. &c.). But there is a considerable dif-

ference between the two words *Udum* and *Amorah*, and at any rate the point deserves further investigation. The name '*Amorah*' (*עמרה*), which is attached to a valley among the mountains south of Masada (Van de Velde, ii. 99, and Map), is an almost exact equivalent to the Hebrew of Gomorrah ('*Amorah*). The name *Dra'a* (*درعا*), and much more strongly that of *Zoghbi* (*زغبی*), recall Zoar.

(c.) A third argument, and perhaps the weightiest of the three, is the existence of the salt mountain at the south of the lake, and its tendency to split off in columnar masses, presenting a rude resemblance to the human form. But with reference to this it may be remarked that it is by no means certain that salt does not exist at other spots round the lake. In fact, as we shall see under the head of Zoar, Thietmar (A.D. 1217) states that he saw the pillar of Lot's wife on the east of Jordan at about a mile from the ordinary ford: and wherever such salt exists, since it doubtless belongs to the same formation as the *Khashm Udum*, it will possess the habit of splitting into the same shapes as that does.

It thus appears that on the situation of Sodom no satisfactory conclusion can at present be come to. On the one hand the narrative of Genesis seems to state positively that it lay at the northern end of the Dead Sea. On the other hand the long-continued tradition and the names of existing spots seem to pronounce with almost equal positiveness that it was at its southern end. How the geological argument may affect either side of the proposition cannot be decided in the present condition of our knowledge.

Of the catastrophe which destroyed the city and the district of Sodom we can hardly hope ever to form a satisfactory conception. Some catastrophe there undoubtedly was. Not only does the narrative of Gen. xix. expressly state that the cities were miraculously destroyed, but all the references to the event in subsequent writers in the Old and New Testaments bear witness to the same fact. But what secondary agencies, besides fire, were employed in the accomplishment of the punishment cannot be safely determined in the almost total absence of exact scientific description of the natural features of the ground round the lake. It is possible that when the ground has been thoroughly examined by competent observers, something may be discovered which may throw light on the narrative. Until then, it is useless, however tempting, to speculate. But even this is almost too much to hope for; because, as we shall presently see, there is no warrant for imagining that the catastrophe was a geological one, and in any other case all traces of action must at this distance of time have vanished.

on the east side of the Lake.

² The G here is employed by the Greeks for the difficult guttural *gim* of the Hebrews, which they were unable to pronounce (comp. *Gothallah* for *Athallah*, &c.). This, however, would not be the case to Arabic where the *gim* is very common, and therefore De Saulcy's identification of *Gomoran* with Gomorrah falls to the ground as far, at least, as etymology is concerned.

It was formerly supposed that the overthrow of Sodom was caused by the convulsion which formed the Dead Sea. This theory is stated by Dean Milman in his *History of the Jews* (i. 15, 18) with great spirit and clearness.^a "The valley of the Jordan, in which the cities of Sodom, Gomorrah, Adma, and Zeboim were situated, was rich and highly cultivated. It is most probable that the river then flowed in a deep and uninterrupted channel down a regular descent, and discharged itself into the eastern gulf of the Red Sea. The cities stood on a soil broken and undermined with veins of bitumen and sulphur. These inflammable substances, set on fire by lightning, caused a tremendous convulsion; the water-courses, both the river and the canals by which the land was extensively irrigated, burst their banks; the cities, the walls of which were perhaps built from the combustible materials of the soil, were entirely swallowed up by the fiery inundation; and the whole valley, which had been compared to Paradise, and to the well-watered cornfields of the Nile, became a dead and fetid lake." But nothing was then known of the lake, and the recent discovery of the extraordinary depression of its surface below the ocean level, and its no less extraordinary depth, has rendered it impossible any longer to hold such a theory. The changes which occurred when the limestone strata of Syria were split by that vast fissure which forms the Jordan Valley and the basin of the Salt Lake, must not only have taken place at a time long anterior to the period of Abraham, but must have been of such a nature and on such a scale as to destroy all animal life far and near (Dr. Baist, in *Trans. of Bombay Geogr. Soc.* xii. p. xvi.).

Since the knowledge of these facts has rendered the old theory untenable, a new one has been broached by Dr. Robinson. He admits that "a lake must have existed where the Dead Sea now lies, into which the Jordan poured its waters long before the catastrophe of Sodom. The great depression of the whole broad Jordan valley and of the northern part of the *Arabah*, the direction of its lateral valleys, as well as the slope of the high western district towards the north, all go to show that the configuration of this region in its main features is coeval with the present condition of the surface of the earth in general, and not the effect of any local catastrophe at a subsequent period. . . . In view of the fact of the necessary existence of a lake before the catastrophe of Sodom; the well-watered plain toward the south, in which were the cities of Sodom and Gomorrah, and not far off the sources of bitumen; as also the peculiar character of this part of the lake, where alone asphaltum at the present day makes its appearance—I say, in view of all these facts, there is but a step to the obvious hypothesis, that the fertile plain is now in part occupied by the southern bay lying south of the peninsula; and that, by some convulsion or catastrophe of nature connected with the miraculous destruction of the cities, either the surface of this plain was scooped out, or the bottom of the lake heaved up so as to cause the waters to overflow and cover permanently a larger tract than formerly" (*B. R.* ii. 188, 9.).

To this very ingenious theory two objections may

be taken. (1.) The "plain of the Jordan," in which the cities stood (as has been stated, can hardly have been at the south end of the lake; and (2.) The geological portion of the theory does not appear to agree with the facts. The whole of the lower end of this lake, including the plain which borders it on the south, has every appearance not of having been lowered since the formation of the valley, but of undergoing a gradual process of filling up. This region is in fact the delta of the very large, though irregular, streams which drain the highlands on its east, west, and south, and have drained them ever since the valley was a valley. No report by any observer at all competent to read the geological features of the district will be found to give countenance to the notion that any disturbance has taken place within the historical period, or that anything occurred there since the country assumed its present general conformation beyond the quiet, gradual change due to the regular operation of the ordinary agents of nature, which is slowly filling up the chasm of the valley and the lake with the washings brought down by the torrents from the highlands on all sides. The volcanic appearances and marks of fire, so often mentioned, are, so far as we have any trustworthy means of judging, entirely illusory, and due to ordinary, natural, causes.

But in fact the narrative of Gen. xix. neither states nor implies that any convulsion of the earth occurred. The word *haphac*, rendered in the A. V. "overthrow," is the only expression which suggests such a thing. Considering the character of the whole passage, it may be inferred with almost absolute certainty that, had an earthquake or convulsion of a geological nature been a main agent in the destruction of the cities, it would have been far more clearly reflected in the narrative than it is. Compare it, for example, with the forcible language and the crowded images of Amos and the Psalmist in reference to such a visitation. If it were possible to speculate on materials at once so slender and so obscure as are furnished by that narrative, it would be more consistent to suppose that the actual agent in the ignition and destruction of the cities had been of the nature of a tremendous thunderstorm accompanied by a discharge of meteoric stones.^b

The name *Sodom* has been interpreted to mean "burning" (Gesenius, *Thes.* 939a). This is possible, though it is not at all certain, since Gesenius himself hesitates between that interpretation and one which identifies it with a similar Hebrew word meaning "vineyard," and Fürst (*Hexach.* ii. 72), with equal if not greater plausibility, connects it with a root meaning to enclose or fortify. Simonie again (*Onomast.* 363) renders it "abundance of dew, or water," Hiller (*Onomast.* 176) "fruitful land," and Chytraeus "mystery." In fact, like most archaic names, it may, by a little ingenuity, be made to mean almost anything. Professor Stanley (*S. and P.* 289) notices the first of these interpretations, and comparing it with the "Phlegrean fields" in the Campagna at Rome, says that "the name, if not derived from the subsequent catastrophe, shows that the marks of fire had already passed over the doomed valley." Apparent "marks of fire" there are all over the neighbourhood of the Dead Sea. They have misled many

^a This cannot be said of the account given by Fuller in his *Highways of Palestine* (Hk. 2, ch. 13), which seems to combine every possible mistake with an amount of bad taste and unbecomingly drollery quite astonishing even to Fuller.

^b This is the account of the Koran (xl. 84):—"We turned these cities upside down and we rained upon them stones of baked clay."

^c Taking שֹׁדֹם = שֹׁדֵם, and that so = שֹׁדֵם.

travellers into believing them to be the tokens of conflagration and volcanic action; and in the same manner it is quite possible that they originated the name *Soddm*, for they undoubtedly abounded on the shores of the lake long before even Sodom was founded. But there is no warrant for treating those appearances as the tokens of actual conflagration or volcanic action. They are produced by the gradual and ordinary action of the atmosphere on the rocks. They are familiar to geologists in many other places, and they are found in other parts of Palestine where no fire has ever been suspected.

The miserable fate of Sodom and Gomorrah is held up as a warning in numerous passages of the Old and New Testaments. By St. Peter and St. Jude it is made "an ensample to those that after should live ungodly," and to those "denying the only Lord God, and our Lord Jesus Christ" (2 Pet. ii. 6, Jude, 4-7). And our Lord Himself, when describing the fearful punishment that will befall those that reject His disciples, says that "it shall be more tolerable for Sodom and Gomorrah in the day of judgment than for that city" (Mark vi. 11; comp. Matt. x. 15).

The name of the Bishop of Sodom—"Severus Sodomorum"—appears amongst the Arabian prelates who signed the acts of the first Council of Nicaea. Reland remonstrates against the idea of the Sodom of the Bible being intended, and suggests that it is a mistake for Zusumoon or Zoraima, a see under the metropolitan of Bostira (*Pal.* 1020). This M. De Sauley (*Narr.* i. 454) refuses to admit. He explains it by the fact that many sees still bear the names of places which have vanished, and exist only in name and memory, such as Troy. The Coptic version to which he refers, in the edition of M. Lennormant, does not throw any light on the point. [G.]

SOD'OMA (Σδομα. *Sodoma*). Rom. ix. 29. In this place alone the Authorized Version has followed the Greek and Vulgate form of the well-known name *SONOM*, which forms the subject of the preceding article. The passage is a quotation from Is. i. 9. The form employed in the Pentateuch, and occasionally in the other books of the A. V. of 1611 is *Sodome*, but the name is now universally reduced to *Sodom*, except in the one passage quoted above. [G.]

SOD'OMITES (שְׂדֹמִי; שְׂדֹמִי: *sodōmī*, *effeminatus*). This word does not denote the inhabitants of Sodom (except only in 2 Esdr. vii. 36) nor their descendants; but is employed in the A. V. of the Old Testament for those who practised as a religious rite the abominable and unnatural vice from which the inhabitants of Sodom and Gomorrah have derived their lasting infamy. It occurs in Deut. xxiii. 17; 1 K. xiv. 24, xv. 12, xxii. 46; 2 K. xxiii. 7; and Job xxvi. 14 (margin). The Hebrew word *Kadesh* is said to be derived from a root *kadish*, which (strange as it may appear) means "pure," and thence "holy." The words *sacer* in Latin, and "devoted" in our own language, have also a double meaning, though the subordinate signification is not so absolutely contrary to the principal one as it is in the case of

* In 1 K. xxii. 38 the word *somah* is rendered "armour." It should be "harlots"—"and the harlots washed themselves there" (early in the morning, as was their custom, adds Procopius of Gaza). The LXX. have rendered this correctly.

kadesh. "This dreadful 'consecration,' or rather desecration, was spread in different forms over Phoenicia, Syria, Phrygia, Assyria, Babylonia. Ashtaroth, the Greek Astarte, was its chief object." It appears also to have been established at Rome where its victims were called Galli (not from Gallia, but from the river Gallus in Bithynia). There is an instructive note on the subject in Jerome's *Comm.* on Hos. iv. 14.

The translators of the Septuagint with that anxiety to soften and conceal obnoxious expressions, which has been often noticed as a characteristic of their version, have, in all cases but one, avoided rendering *Kadesh* by its ostensible meaning. In the first of the passages cited above they give a double translation, *καρπώδης* and *ταλαιανδμενος* (initiate). In the second *σύνθεσμος* (a conspiracy, perhaps reading *σύνθεσις*). In the third *τὰς τελεάς* (sacrifices). In the fourth the Vat. MS. omits it, and the Alex. has *τὸ ἐνδηλασγμένον*. In the fifth *καδῆσις*; and in the sixth *ἐπὶ ἀγγέλων*.

There is a feminine equivalent to *Kadesh*, viz. *Kadeshah*. This is found in Gen. xxviii. 21, 22; Dent. xxiii. 17, and Hos. iv. 14. In each of these cases it throws a new light on the passage to remember that these women were (if the expression may be allowed) the priestesses of a religion, not plying for hire, or merely instruments for gratifying passing lust. Such ordinary prostitutes are called by the name *zonah*.^a The "strange women" of Prov. ii. 16, &c., were foreigners, *zaroth*. [G.]

SODOMITISH SEA, THE (*Mare Sodomiticum*), 2 Esdr. v. 7; meaning the Dead Sea. It is the only instance in the Books of the Old Testament, New Testament, or Apocrypha, of an approach to the inaccurate modern opinion which connects the salt lake with the destruction of Sodom. The name may, however, arise here simply from Sodom having been situated near the lake. [G.]

SOL'OMON (שְׁלֹמֹה, *Shelomoh*; Σολομών, LXX.; Σολομών, N. T. and Joseph.: *Salomo*).

I. *Name*.—The changes of pronunciation are worth noticing. We lose something of the dignity of the name when it passes from the unusual stateliness of the Hebrew to the anapest of the N. T., or the tribach of our common speech. Such changes are perhaps inevitable wherever a name becomes a household word in successive generations, just as that of Friederich (identical in meaning with Solomon) passes into Frederick. The feminine form of the word (*Σολώμη*) retains the long vowel in the N. T. It appears, though with an altered sound, in the Arabic *Suleiman*.

II. *Materials*.—(1). The comparative scantiness of historical data for a life of Solomon is itself significant. While that of David occupies 1 Sam. xvi.-xxii., 2 Sam. i.-xxiv., 1 K. i. ii., 1 Chr. x.-xxix., that of Solomon fills only the eleven chapters 1 K. i.-xi., and the nine 2 Chr. i.-ix. The compilers of these books felt, as by a true inspiration, that the wanderings, wars, and sufferings of David were better fitted for the instruction of after ages than the magnificence of his son.^b They manifestly give extracts only from larger works which were before

^b The contrast presented by the Apocryphal literature of Jews, Christians, Mahometans, abounding in pseudonymous works and legends gathering round the name of Solomon (*infra*), but having hardly any connexion with David, is at once striking and instructive.

them; "The book of the Acts of Solomon" (1 K. xi. 41); "The book of Nathan the prophet, the book of Ahijah the Shilonite, the visions of Iddo the seer" (2 Chr. ix. 29). Those which they do give, bear, with what for the historian is a disproportionate fullness, on the early glories of his reign, and speak but little (those in 2 Chr. not at all) of its later sins and misfortunes, and we are consequently unable to follow the annals of Solomon step by step.

(2). Ewald, with his usual fondness for assigning different portions of each book of the O. T. to a series of successive editors, goes through the process here with much ingenuity, but without any very satisfactory result (*Geschichte*, iii. 259-263). A more interesting inquiry would be, to which of the books above named we may refer the sections which the compilers have put together. We shall probably not be far wrong in thinking of Nathan, far advanced in life at the commencement of the reign, David's chief adviser during the years in which he was absorbed in the details of the Temple and its ritual, himself a priest (1 K. iv. 5 in *Hob. comp.* Ewald iii. 116), as having written the account of the accession of Solomon and the dedication of the Temple (1 K. i.-viii. 66; 2 Chr. i.-viii. 15). The prayer of Solomon, so fully reproduced, and so obviously precomposed, may have been written under his guidance. To Ahijah the Shilonite, active at the close of the reign, alive some time after Jeroboam's accession, we may ascribe the short record of the sin of Solomon, and of the revolution to which he himself had so largely contributed (1 K. xi.). From the Book of the Acts of Solomon came probably the miscellaneous facts as to the commerce and splendour of his reign (1 K. ix. 10-x. 29).

(3). Besides the direct history of the O. T. we may find some materials for the life of Solomon in the books that bear his name, and in the Psalms which are referred, on good grounds, to his time, Ps. li., xiv., lxxii., cxxvii. Whatever doubts may hang over the date and authorship of Ecclesiastes and the Song of Songs, we may at least see in them the reflection of the thoughts and feelings of his reign. If we accept the latest date which recent criticism has assigned to them, they elaborately work up materials which were accessible to the writers, and are not accessible to us. If we refer them in their substance, following the judgment of the most advanced Shemitic scholars, to the Solomonic period itself, they then come before us with all the freshness and vividness of contemporary evidence (Renan, *Hist. des langues Sémit.* p. 131).*

(4). Other materials are but very scanty. The history of Josephus is, for the most part, only a loose and inaccurate paraphrase of the O. T. narrative. In him, and in the more erudite among early Christian writers, we find some fragments of older history not without their value, extracts from archives alleged to exist at Tyre in the first century of the Christian era, and from the Phœnician history of Menander and Dios (Jos. Ant. viii. 3, §6; 5, §8), from Eupolemus (Euseb. *Præp. Evang.* ix.

30), from Alexander Polyhistor, Menander, and Laitus (Clem. Al. *Strom.* i. 21). Writers such as these were of course only compilers at second-hand, but they probably had access to some earlier documents which have now perished.

(5.) The legends of later Oriental literature will claim a distinct notice. All that they contribute to history is the help they give us in realising the impression made by the colossal greatness of Solomon, as in earlier and later times by that of Nimrod and Alexander, on the minds of men of many countries and through many ages.

III. *Education.*—(1). The student of the life of Solomon must take as his starting-point the circumstances of his birth. He was the child of David's old age, the last-born of all his sons (1 Chr. iii. 5).⁴ His mother had grieved over David a twofold power; first, as the object of a passionate, though guilty love; and next, as the one person to whom, to his repentance, he could make something like retribution. The months that preceded his birth were for the conscience-stricken king a time of self-abasement. The birth itself of the child who was to replace the one that had been smitten must have been looked for as a pledge of pardon and a sign of hope. The feelings of the king and of his prophet-guide expressed themselves in the names with which they welcomed it. The yearnings of the "man of war," who "had shed much blood," for a time of peace—yearnings which had shown themselves before, when he gave to his third son the name of Ab-salom (= father of peace), now led him to give to the new-born infant the name of Solomon (Shālômôh = the peaceful one). Nathan, with a marked reference to the meaning of the king's own name (= the darling, the beloved one), takes another form of the same word, and joins it, after the growing custom of the time, with the name of Jehovah. David had been the darling of his people. Jedid-jah (the name was coined for the purpose) should be the darling of the Lord. (2 Sam. xii. 24, 5.* See JEDIDIAH; and Ewald, iii. 215).

(2). The influences to which the childhood of Solomon was thus exposed must have contributed largely to determine the character of his after years. The inquiry, what was the education which ended in such wonderful contrasts,—a wisdom then, and perhaps since, unparalleled,—a sensuality like that of Louis XV., cannot but be instructive. The three influences which must have entered most largely into that education were those of his father, his mother, and the teacher under whose charge he was placed from his earliest infancy (2 Sam. xii. 25).

(3). The fact just stated, that a prophet-priest was made the special instructor, indicates the king's earnest wish that this child at least should be protected against the evils which, then and afterwards, showed themselves in his elder sons, and be worthy of the name he bore. At first, apparently, there was no distinct purpose to make him his heir. Ab-

* The weight of Renan's judgment is however diminished by the fact that he had previously assigned Ecclesiastes to the time of Alexander the Great (*Cont. des Ant.* p. 102).

⁴ The narrative of 2 Sam. xii. leaves, it is true, a different impression. On the other hand, the order of the names in 1 Chr. iii. 5, is otherwise unaccountable. Josephus distinctly states it (*Ant.* vii. 14, §2).

* According to the received interpretation of Prov. xxxi. 1, his mother also contributed to his name. Lemuel

(= to God, Dedatus), the dedicated one (comp. Ewald, *Post. Bûch.* iv. 173). On this hypothesis the reproof was drawn forth by the king's intemperance and sensuality. In contrast to what his wives were, she drew the picture of what a pattern wife ought to be (*Prov.* i. 4).

⁵ Here also the epithet "le bien-aimé" reminds us, as less than Jedidiah, of the terrible irony of History for those who abuse gifts and forfeit a vocation.

solomon is still the king's favourite son (2 Sam. xii. 37, xviii. 33)—is looked on by the people as the destined successor (2 Sam. xiv. 13, xv. 1-6). The death of Absalom, when Solomon was about ten years old, left the place vacant, and David, passing over the claims of all his elder sons, those by Bathsheba included, guided by the influence of Nathan, or by his own discernment of the gifts and graces which were tokens of the love of Jehovah, pledged his word in secret to Bathsheba that he, and no other, should be the heir (1 K. i. 13). The words which were spoken somewhat later, express, doubtless, the purpose which guided him throughout (1 Chr. xxviii. 9, 30). His son's life should not be as his own had been, one of hardships and wars, dark crimes and passionate repentance, but, from first to last, be pure, blameless, peaceful, fulfilling the ideal of glory and of righteousness, after which he himself had vainly striven. The glorious visions of Ps. lxxii. may be looked on as the prophetic expansion of those hopes of his old age. So far, all was well. But we may not ignore the fact, that the later years of David's life presented a change for the worse, as well as for the better. His sin, though forgiven, left behind it the Nemesis of an enfeebled will and a less generous activity. The liturgical element of religion becomes, after the first passionate out-pouring of Ps. li., unduly predominant. He lives to amass treasures and materials for the Temple which he may not build (1 Chr. xii. 5, 14). He plans with his own hands all the details of its architecture (1 Chr. xxviii. 19). He organises on a scale of elaborate magnificence all the attendance of the priesthood and the choral services of the Levites (1 Chr. xxi. xxv.). But, meanwhile, his duties as a king are neglected. He no longer sits in the gate to do judgment (2 Sam. xv. 2, 4). He leaves the sin of Amnon unpunished, "because he loved him, for he was his first-born" (LXX. of 2 Sam. xiii. 21). The hearts of the people fall away from him. First Absalom, and then Sheba, become formidable rivals (2 Sam. xv. 6, xx. 2). The history of the numbering of the people (2 Sam. xxiv., 1 Chr. xxi.) implies the purpose of some act of despotism, a poll-tax, or a conscription (2 Sam. xxiv. 9 makes the latter the more probable), such as startled all his older and more experienced counsellors. If, in "the last words of David" belonging to this period, there is the old devotion, the old hungering after righteousness (2 Sam. xxiii. 2-5), there is also—first generally (ibid. 6, 7), and afterwards resting on individual offenders (1 K. ii. 5-8)—a more passionate desire to punish those who had wronged him, a painful recurrence of vindictive thoughts for offences which he had once freely forgiven, and which were not greater than his own. We cannot rest in the belief that his influence over his son's character was one exclusively for good.

(4). In Eastern countries, and under a system of polygamy, the son is more dependent, even than elsewhere, on the character of the mother. The history of the Jewish monarchy furnishes many instances of that dependence. It recognises it in the care with which it records the name of each monarch's mother. Nothing that we know of Bathsheba leads us to think of her as likely to mould her son's mind and heart to the higher forms

of goodness. She offers no resistance to the king's passion (Ewald, iii. 211). She makes it a stepping-stone to power. She is a ready accomplice in the scheme by which her shame was to have been concealed. Doubtless she too was sorrowful and penitent when the rebuke of Nathan was followed by her child's death (2 Sam. xii. 24), but the after-history shows that the grand-daughter of Ahithophel [BATHSHEBA] had inherited not a little of his character. A willing adulteress, who has become devout, but had not ceased to be ambitious, could hardly be more, at the best, than the Madame de Maintenon of a king, whose contrition and piety were rendering him, unlike his former self, unduly passive in the hands of others.

(5). What was likely to be the influence of the prophet to whose care the education of Solomon was confided? (*Heb.* of 2 Sam. xii. 25). We know, beyond all doubt, that he could speak bold and faithful words when they were needed (2 Sam. vii. 1-17, xii. 1-14). But this power, belonging to moments or messages of special inspiration, does not involve the permanent possession of a clear-sighted wisdom, or of aims uniformly high; and we in vain search the later years of David's reign for any proof of Nathan's activity for good. He gives himself to the work of writing the annals of David's reign (1 Chr. xxi. 29). He places his own sons in the way of being the companions and counsellors of the future king (1 K. iv. 5). The absence of his name from the history of the "numbering," and the fact that the census was followed early in the reign of Solomon by heavy burdens and a forced service, almost lead us to the conclusion that the prophet had acquiesced in a measure which had in view the magnificence of the Temple, and that it was left to David's own heart, returning to its better impulses (2 Sam. xxi. 10), and to an older and less courtly prophet, to protest against an act which began in pride and ended to oppression.^a

(6). Under these influences the boy grew up. At the age of ten or eleven he must have passed through the revolt of Absalom, and shared his father's exile (2 Sam. xv. 16). He would be taught all that priests, or Levites, or prophets had to teach; music and song; the Book of the Law of the Lord, in such portions and in such forms as were then current; the "proverbs of the ancients," which his father had been wont to quote (1 Sam. xxiv. 13); probably also a literature which has survived only in fragments; the Book of Jasher, the upright ones, the heroes of the people; the Book of the Wars of the Lord; the wisdom, oral or written, of the sages of his own tribe, Heman, and Ethan, and Calcol, and Darda (1 Chr. ii. 6), who contributed so largely to the noble hymns of this period (Ps. lxxviii., lxxix.), and were incorporated, probably, into the choir of the Tabernacle (Ewald, iii. 355). The growing intercourse of Israel with the Phœnicians would lead naturally to a wider knowledge of the outlying world and its wonders than had fallen to his father's lot. Admirable, however, as all this was, a shepherd-life, like his father's, furnished, we may believe, a better education for the kingly calling (Ps. lxxviii. 70, 71). Born to the purple, there was the inevitable risk of a selfish luxury. Cradled in liturgies, trained to

^a Josephus, with his usual inaccuracy, substitutes Nathan for Gad in his narrative (*Ant.* vii. 13, §2).

^b We regret to find ourselves unable to follow Ewald in

his high estimate of the old age of David, and, consequently, of Solomon's education.

think chiefly of the magnificent "palace" of Jehovah (1 Chr. xix. 19) of which he was to be the builder, there was the danger, first, of an aesthetic formalism, and then of ultimate indifference.

IV. *Accession*.—(1.) The feebleness of David's old age led to an attempt which might have deprived Solomon of the throne his father destined for him. Adonijah, next in order of birth to Absalom, like Absalom "was a goodly man" (1 K. i. 6), in full maturity of years, backed by the oldest of the king's friends and counsellors, Joab and Abiathar, and by all the sons of David, who looked with jealousy, the latter on the obvious though not as yet declared preference of the latest-born, and the former on the growing influence of the rival counsellors who were most in the king's favour, Nathan, Zadok, and Benaiah. Following in the steps of Absalom, he assumed the kingly state of a chariot and a bodyguard; and David, more passive than ever, looked on in silence. At last a time was chosen for openly proclaiming him as king. A solemn feast at EN-ROGEZ was to inaugurate the new reign. All were invited to it but those whom it was intended to displace. It was necessary for those whose interests were endangered, backed apparently by two of David's surviving elder brothers (Ewald, iii. 286; 1 Chr. ii. 13, 14), to take prompt measures. Bathsheba and Nathan took counsel together. The king was reminded of his oath. A virtual abdication was pressed upon him as the only means by which the succession of his favourite son could be secured. The whole thing was completed with wonderful rapidity. Riding on the mule, well-known as belonging to the king, attended by Nathan the prophet, and Zadok the priest, and more important still, by the king's special company of the thirty Gibborim, or mighty men (1 K. i. 10, 33), and the bodyguard of the Cherethites and Pelethites (mercenaries, and therefore not liable to the contagion of popular feeling) under the command of Benaiah (himself, like Nathan and Zadok, of the sons of Aaron), he went down to GICHON, and was proclaimed and anointed king.¹ The shouts of his followers fell on the startled ears of the guests at Adonijah's banquet. Happily they were as yet committed to no overt act, and they did not venture on one now. One by one they rose and departed. The plot had failed. The counter coup d'état of Nathan and Bathsheba had been successful. Such incidents are common enough in the history of Eastern monarchies. They are usually followed by a massacre of the defeated party. Adonijah expected such an issue, and took refuge at the horns of the altar. In this instance, however, the young conqueror used his triumph generously. The lives both of Adonijah and his partisans were spared, at least for a time. What had been done hurriedly

was done afterwards in more solemn form. Solomon was presented to a great gathering of all the notables of Israel, with a set speech, in which the old king announced what was, to his mind, the programme of the new reign, a time of peace and plenty, of a stately worship, of devotion to Jehovah. A few months more, and Solomon found himself, by his father's death, the sole occupant of the throne.

(2.) The position to which he succeeded was unique. Never before, and never after, did the kingdom of Israel take its place among the great monarchies of the East, able to ally itself, or to contend on equal terms with Egypt or Assyria, stretching from the River (Euphrates) to the border of Egypt, from the Mediterranean to the Gulf of Akaba, receiving annual tributes from many subject princes. Large treasures accumulated through many years were at his disposal.² The people, with the exception of the tolerated worship in high places, were true servants of Jehovah. Knowledge, art, music, poetry, had received a new impulse, and were moving on with rapid steps, to such perfection as the age and the race were capable of attaining. We may rightly ask—what manner of man he was, outwardly and inwardly, who at the age of nineteen or twenty, was called to this glorious sovereignty? We have, it is true, no direct description in this case as we have of the earlier kings. There are, however, materials for filling up the gap. The wonderful impression which Solomon made upon all who came near him may well lead us to believe that with him as with Saul and David, Absalom and Adonijah, as with most other favourite princes of Eastern peoples, there must have been the fascination and the grace of a noble presence. Whatever higher mystic meaning may be latent in Ps. xiv., or the Song of Songs, we are all but compelled to think of them as having had, at least, a historical starting-point. They tell us of one who was, in the eyes of the men of his own time, "fairer than the children of men," the face "bright and ruddy" as his father's (Cant. v. 10; 1 Sam. xvii. 42), bushy locks, dark as the raven's wing, yet not without a golden glow,³ the eyes soft as "the eyes of doves," the "countenance as Lebanon, excellent as the cedars," "the chiefest among ten thousand, the altogether lovely" (Cant. 9-16). Add to this all gifts of a noble, far-reaching intellect, large and ready sympathies, a playful and genial humour, the lips "full of grace," the soul "anointed" as "with the oil of gladness" (Ps. xiv.), and we may form some notion of what the king was like in that dawn of his golden prime.⁴

(3.) The historical starting-point of the Song of Songs just spoken of connects itself, in all proba-

¹ According to later Jewish teaching a king was not anointed when he succeeded his father, except in the case of a previous usurpation or a disputed succession (Otho, *Levic. Rabbin.* s. v. "Rex").

² The sums mentioned are (1) the public funds for building the Temple, 100,000 talents (kikarim) of gold and 1,000,000 of silver; (2) David's private offerings, 2000 talents of gold and 7000 of silver. Besides these, large sums of unknown amount were believed to have been stored up in the sepulchre of David, 2000 talents were taken from it by Hyrcanus (Jos. Ant. vii. 15, § 3; xiii. 8, § 4, xvi. 7, § 1).

³ Possibly sprinkled with gold dust, as was the hair of the youths who waited on him (Jos. Ant. viii. 7, 3), or dyed with henna (Michaëls, *Not. in Lowth.* *Psalm.* xxxi.).

VOL. III.

⁴ It will be seen that we adopt the scheme of the older literalist school, Rhesnet, Lowth, Michaëls, rather than that of the more recent critics, Ewald, Renan, Gieseburg. Ingeniously as the idea is worked out we cannot bring ourselves to believe that a drama, belonging to the literature of the northern kingdom, not to that of Judah, holding up Solomon to ridicule as at once licentious and unsuccessful, would have been treasured up by the Jews of the Captivity, and received by the Scribes of the Great Synagogue as by, or at least, in honour of Solomon (comp. Renan, *Le Cantique des Cantiques*, pp. 91, 95). We follow the Jesuit Pinada (*De rebus Salom.* iv. 3) in applying the language of the Shulamite to Solomon's personal appearance, but not in his extreme minuteness.

bility, with the earliest facts in the history of the new reign. The narrative, as told in 1 K. ii. is not a little perplexing. Bathsheba, who had before stirred up David against Adonijah, now appears as interceding for him, begging that Abishag the Shunammite, the virgin concubine of David, might be given him as a wife. Solomon, who till then had professed the profoundest reverence for his mother, his willingness to grant her anything, suddenly flashes into fiercest wrath at this. The petition is treated as part of a conspiracy in which Joab and Abiathar are sharers. Benaiah is once more called in. Adonijah is put to death at once. Joab is slain even within the precincts of the Tabernacle, to which he had fled as an asylum. Abiathar is deposed, and exiled, sent to a life of poverty and shame (1 K. ii. 31-36), and the high priesthood transferred to another family more ready than he had been to pass from the old order to the new, and to accept the voices of the prophets as greater than the oracles which had belonged exclusively to the priesthood [comp. URIM AND THUMMIM]. The facts have, however, an explanation. Mr. Grove's ingenious theory¹ identifying Abishag with the heroine of the Song of Songs [SHULAMITE], resting as it must do, on its own evidence, has this further merit, that it explains the phenomena here. The passionate love of Solomon for "the fairest among women," might well lead the queen-mother, hitherto supreme, to fear a rival influence, and to join in any scheme for its removal. The king's vehement abruptness is, in like manner, accounted for. He sees in the request at once an attempt to deprive him of the woman he loves, and a plot to keep him still in the tutelage of childhood, to entrap him into admitting his elder brother's right to the choicest treasure of his father's harem, and therefore virtually to the throne, or at least to a regency in which he would have his own partisans as counsellors. With a keen-sighted promptness he crushes the whole scheme. He gets rid of a rival, fulfils David's dying counsels as to Joab, and asserts his own independence. Soon afterwards an opportunity is thrown in his way of getting rid of one [SHIMEI], who had been troublesome before, and might be troublesome again. He presses the letter of a compact against a man who by his infatuated disregard of it seemed given over to destruction² (1 K. ii. 36-46). There is, however, no needless slaughter. The other "sons of David" are still spared, and one of them, Nathan, becomes the head of a distinct family (Zech. xii. 13), which ultimately fills up the failure of the direct succession (Luke iii. 31). As he punishes his father's enemies, he also shows kindness to the friends who had been faithful to him. Chimham, the son of Barzillai, apparently receives an inheritance near

¹ The hypothesis is, however, not altogether new. It was held by some of the literalist historical school of Theodore of Mopsuestia (not by Theodore himself; comp. his fragments in Migne, lxi. 698), and as such is anathematized by Theodore of Cyrus (*Proof. in Cont. Contic.*). The latter, believing the Song of Solomon to have been supernaturally dictated to Ezra, could admit no interpretation but the mystical (comp. Ginzburg, *Song of Sol.* p. 66).

² An elaborate vindication of Solomon's conduct in this matter may be found in Menhen's *Theodorus*, l. i; Süsser, *Dist. de Solom. processu contra Shimei*.

³ Josephus, again inaccurate, lengthens the reign to 80 years, and makes the age at accession 14 (*Ant.* viii. 7, §8).

⁴ This Pharaoh is identified by Ewald (iii. 378) with Sesacres, the last king of the 20th dynasty of Manetho, which had its seat in Lower Egypt at Tanis; but see

the city of David, and probably in the reign of Solomon, displays his inherited hospitality by building a caravansary for the strangers whom the fame and wealth of Solomon drew to Jerusalem (2 Sam. xix. 31-40; 1 K. ii. 7; Jer. xli. 17; Ewald, *Gench.* iii. 274; *Proph.* ii. 191).

V. *Foreign Policy.*—(1.) The want of sufficient data for a continuous history has been already noticed. All that we have are—(a.) The duration of the reign, 40 years¹ (1 K. xi. 42). (b.) The commencement of the Temple in the 4th, its completion in the 11th year of his reign (1 K. vi. 1, 37, 38). (c.) The commencement of his own palace in the 7th, its completion in the 20th year (1 K. vii. 1; 2 Chr. viii. 1). (d.) The conquest of Hamath-Zobah, and the consequent foundation of cities in the region North of Palestine after the 20th year (2 Chr. viii. 1-6). With materials so scanty as these, it will be better to group the chief facts in an order which will best enable us to appreciate their significance.

(2.) *Egypt.* The first act of the foreign policy of the new reign must have been to most Israelites a very startling one. He made affinity with Pharaoh, king of Egypt. He married Pharaoh's daughter (1 K. iii. 1).² Since the time of the Exodus there had been no intercourse between the two countries. David and his counsellors had taken no steps to promote it. Egypt had probably taken part in assisting Edom in its resistance to David (1 Chr. xi. 23; Ewald, iii. 182), and had received Hadad, the prince of Edom, with royal honours. The king had given him his wife's sister in marriage, and adopted his son into his own family (1 K. xi. 14-20). These steps indicated a purpose to support him at some future time more actively, and Solomon's proposal of marriage was probably intended to counteract it. It was at the time so far successful, that when Hadad, on hearing of the death of the dreaded leaders of the armies of Israel, David and Joab, wished to seize the opportunity of attacking the new king, the court of Egypt rendered him no assistance (1 K. xi. 21, 22). The disturbances thus caused, and not less those in the North, coming from the foundation of a new Syrian kingdom at Damascus by Rezon and other fugitives from Zobah (1 K. xi. 23-25), might well lead Solomon to look out for a powerful support,³ to obtain for a new dynasty and a new kingdom a recognition by one of older fame and greater power. The immediate results were probably favourable enough.⁴ The new queen brought with her as a dowry the frontier-city of Gezer, against which, as threatening the tranquillity of Israel, and as still possessed by a remnant of the old Canaanites,⁵ Pharaoh had led his armies.⁶ She was received with

PHARAOH, pp. 816, 817. Josephus (*Ant.* viii. 8, §2) only notes the fact that he was the last king of Egypt who was known simply by the title Pharaoh.

² Josephus (*Ant.* viii. 7, §8), misled by the position of these statements, refers the disturbances to the close of Solomon's reign, and is followed by most later writers. The dates given, however, in one case after the death of Joab, in the other after David's conquest of Zobah, show that we must think of them as continuing "all the days of Solomon," surmounted at the commencement of his reign, becoming more formidable at its conclusion.

³ Ewald sees in Ps. ii. a great hymn of thanksgiving for deliverance from these dangers. The evidence in favour of David's authorship seems, however, to preponderate.

⁴ Philistines, according to Josephus (*Ant.* viii. 6, §1).

⁵ If, with Ewald (iii. 271), we identify Gezer with

all honour, the queen-mother herself attending to place the diadem on her son's brow on the day of his espousals (Cant. iii. 11). Gifts from the nobles of Israel and from Tyre (the latter offered perhaps by a Tyrian princess), were lavished at her feet (Pa. xiv. 12). A separate and stately palace was built for her, before long, outside the city of David (2 Chr. viii. 11).^a She dwelt there apparently with attendants of her own race, "the virgins that be her fellows," probably conforming in some degree to the religion of her adopted country. According to a tradition which may have some foundation in spite of its exaggerated numbers, Pharaoh (Pausanias, or as in the story Vephres), sent with her workmen to help in building the Temple, to the number of 80,000 (Eupolemos, in Euseb. *Præp. Evang.* ii. 30-35). The "chariots of Pharaoh" at any rate, appeared in royal procession with a splendour hitherto unknown (Cant. i. 9).

(3.) The ultimate issue of the alliance showed that it was hollow and impolitic. There may have been a revolution in Egypt, changing the dynasty and transferring the seat of power to Bubastis (Ewald, iii. 389).^c There was at any rate a change of policy. The court of Egypt welcomes the fugitive Jeroboam when he is known to have aspirations after kingly power. There, we may believe, by some kind of compact, expressed or understood, was planned the scheme which led first to the rebellion of the Ten Tribes, and then to the attack of Shishak on the weakened and dismantled kingdom of the son of Solomon. Evils such as these were hardly counterbalanced by the trade opened by Solomon in the fine linen of Egypt, or the supply of chariots and horses which, as belonging to aggressive rather than defensive warfare, a wiser policy would have led him to avoid (1 K. x. 28, 29).

(4.) Tyre. The alliance with the Phœnician king rested on a somewhat different footing. It had been part of David's policy from the beginning of his reign. Hiram had been "ever a lover of David." He, or his grandfather,^d had helped him by supplying materials and workmen for his palace. As soon as he heard of Solomon's accession he sent ambassadors to salute him. A correspondence passed between the two kings, which ended in a treaty of commerce.^e Israel was to be supplied from Tyre with the materials which were wanted for the Temple that was to be the glory of the new reign. Gold from Ophir, cedar-wood from Lebanon, probably also copper from Cyprus, and tin from Spain or Cornwall (Niebuhr, *Lect. on Anc. Hist.* i. 79), for the brass which was so highly valued, purple from Tyre itself, workmen from among the Zidonians, all these were wanted and were given. The opening of Joppa as a port created a new coasting-trade,

and the materials from Tyre were conveyed to it on floats, and thence to Jerusalem (2 Chr. ii. 16). The chief architect of the Temple, though an Israelite on his mother's side, belonging to the tribe of Dan or Naphtali [HIRAM], was yet by birth a Tyrian, a namesake of the king. In return for these exports, the Phœnicians were only too glad to receive the corn and oil of Solomon's territory. Their narrow strip of coast did not produce enough for the population of their cities, and then, as at a later period, "their country was nourished" by the broad valleys and plains of Samaria and Galilee (Acts xii. 20).

(5.) The results of the alliance did not end here. New, for the first time in the history of Israel, they entered on a career as a commercial people. They joined the Phœnicians in their Mediterranean voyages to the coasts of Spain [TARSHISH].^b Solomon's possession of the Edomite coast enabled him to open to his ally a new world of commerce. The ports of Elath and Ezion-geber were filled with ships of Tarshish, merchant-ships, i. e. for the long voyages, manned chiefly by Phœnicians, but built at Solomon's expense, which sailed down the Aelanitic Gulf of the Red Sea, on to the Indian Ocean, to lands which had before been hardly known even by name, to OPHIR and SHEBA, to Arabia Felix, or India, or Ceylon, and brought back after an absence of nearly three years, treasures almost or altogether new, gold and silver, and precious stones, nard, aloes, sandal-wood, aimug-trees, and ivory; and last, but not least in the eyes of the historian, new forms of animal-life, on which the inhabitants of Palestine gazed with wondering eyes, "apes and peacocks." The interest of Solomon in these enterprises was shown by his leaving his palaces at Jerusalem and elsewhere and travelling to Elath and Ezion-geber to superintend the construction of the fleet (2 Chr. viii. 17), perhaps also to Sidon for a like purpose.^f To the knowledge thus gained, we may ascribe the wider thoughts which appear in the Psalms of this and the following periods, as of those who "see the wonders of the deep and occupy their business in great waters" (Ps. cvii. 23-30), perhaps also an experience of the more humiliating accidents of sea-travel (Prov. xlii. 34, 35).

(6.) According to the statement of the Phœnician writers quoted by Josephus (*Ant.* viii. 5, §3), the intercourse of the two kings had in it also something of the sportiveness and freedom of friends. They delighted to perplex each other with hard questions, and laid wagers as to their power of answering them. Hiram was at first the loser and paid his forfeits; but afterwards, through the help of a sharp-witted Tyrian boy, Abdemon, solved the hard problems and was in the end the winner.^g The

^a Ewald disputes this (iii. 345), but the statement in 2 Chr. ix. 21, is explicit enough, and there are no grounds for arbitrarily setting it aside as a blunder.

^b The statement of Justin Mart. (*Dial. c. Tryph.* c. 34), *ἡ Σιδὼν εὐδαίμωνος*, receives by the accompanying *καὶ γυναικὶ* the character of an extract from some history then extant. The marriage of Solomon with a daughter of the king of Tyre is mentioned by Eusebius (*Præp. Evang.* x. 11).

^c The narrative of Josephus implies the existence of some story, more or less humorous, in Tyrian literature, in which the wisest of the kings of earth was baffled by a boy's cleverness. A singular pendant to this is found in the popular mediæval story of Solomon and Morolf, in which the latter (an ugly, deformed dwarf) outwits the former. A modernised version of this work may be

^d We may see in this fact a sign of popular dissatisfaction at least on the part of the Priests and Levites represented by the compiler of 2 Chron.

^e The singular addition of the LXX. to the history of Jeroboam in 1 K. xi. makes this improbable. Jeroboam, as well as Haddad, is received into the king's family by marriage with his wife's sister, and, in each case, the wife's name is given as Thekoma.

^f Comp. the *data* given in 2 Sam. v. 11; Jon. *Ant.* vii. 3 §2, viii. 6, §3, c. Ap. i. 18, and Ewald, iii. 387.

^g The letters are given at length by Josephus (*Ant.* viii. 2 §4) and Eupolemos (Euseb. *Præp. Ev.* l. c.).

angular fragment of history inserted in 1 K. ix. 11-14, recording the cession by Solomon of sixteen cities, and Hiram's dissatisfaction with them, is perhaps connected with these imperial wagers. The king of Tyre revenges himself by a Phœnician bon-mot [CABUL]. He fulfils his part of the contract, and pays the stipulated price.

(7.) These were the two most important alliances. The absence of any reference to Babylon and Assyria, and the fact that the Euphrates was recognised as the boundary of Solomon's kingdom (2 Chr. ix. 26), suggest the inference that the Mesopotamian monarchies were, at this time, comparatively feeble. Other neighbouring nations were content to pay annual tribute in the form of gifts (2 Chr. ix. 24). The kings of the Hittites and of Syria welcomed the opening of a new line of commerce which enabled them to find in Jerusalem an emporium where they might get the chariots and horses of Egypt (1 K. x. 29). This, however, was obviously but a small part of the traffic: organised by Solomon. The foundation of cities like Tadmor in the wilderness, and Tiphmah (Thapaeus) on the Euphrates; of others on the route, each with its own special market for chariots, or horses, or stores (2 Chr. viii. 3-6); the erection of lofty towers on Lebanon (2 Chr. i. c.; Cant. vii. 4) pointed to a more distant commerce, opening out the resources of central Asia, reaching, as that of Tyre did afterwards, availing itself of this very route, to the Nomadic tribes of the Caspian and the Black Seas, to Togarmah and Meshech and Tubal (Ez. xxvii. 13, 14; comp. Milman, *Hist. of Jews*, i. 270).

(8.) The survey of the influence exercised by Solomon on surrounding nations would be incomplete if we were to pass over that which was more directly personal—the fame of his glory and his wisdom. The legends which pervade the East are probably not merely the expansion of the scanty notices of the O. T.; but (as suggested above), like those which gather round the names of Nimrod and Alexander, the result of the impression made by the personal presence of one of the mighty ones of the earth.* Wherever the ships of Tarshish went, they carried with them the report, losing nothing in its passage, of what their crews had seen and heard. The impression made on the Incas of Peru by the power and knowledge of the Spaniards, offers perhaps the nearest approach to what falls so little within the limits of our experience, though there was there no personal centre round which the admiration could gather itself. The journey of the queen of Sheba, though from its circumstances the most conspicuous, did not stand alone. The inhabitants of Jerusalem, of the whole line of country between it and the Gulf of Akaba, saw with amazement the "great train;" the men with their swarthy faces, the camels bearing spices and gold and gems, of a queen who had come from the far South,[†] because she had heard of the wisdom of Solomon, and connected with it "the name of Jehorah" (1 K. x. 1).

found in the Waltham (Leipzig, 1844). Older copies, in Latin and German, of the 15th century, are in the Brit. Mus. Library. The Anglo-Saxon Dialogue of Solomon and Saturn is a mere catechism of Scriptural knowledge.

* Cities like Tadmor and Tiphmah were not likely to have been founded by a king who had never seen and chosen the sites. 2 Chr. viii. 3, 4, implies the journey which Josephus speaks of (*Ant.* viii. 6, §1), and at Tadmor Solomon was within one day's journey of the Euphrates, and six of Babylon. (So Josephus, *l. c.*, but the day's journey must have been a long one.)

She came with hard questions to test that wisdom, and the words just quoted may throw light upon their nature. Not riddles and enigmas only, such as the sportive fancy of the East delights in, but the ever-old, ever-new problems of life, such as, even in that age and country, were vexing the hearts of the speakers in the Book of Job,[‡] were stirring in her mind when she communed with Solomon of "all that was in her heart" (2 Chr. x. 2). She meets us as the representative of a body whom the dedication-prayer shows to have been numerous, the strangers "coming from a far country" because of the "great name" of Jehorah (1 K. viii. 41), many of them princes themselves, or the messengers of kings (2 Chr. ix. 23). The historians of Israel delighted to dwell on her confession that the reality surpassed the fame, "the one-half of the greatness of thy wisdom was not told me" (2 Chr. ix. 6; Ewald, iii. 353).

VI. *Internal History.*—(1.) We can now enter upon the reign of Solomon, in its bearing upon the history of Israel, without the necessity of a digression. The first prominent scene is one which presents his character in its noblest aspect. There were two holy places which divided the reverence of the people, the ark and its provisional tabernacle at Jerusalem, and the original Tabernacle of the congregation, which, after many wanderings, was now pitched at Gibeon. It was thought right that the new king should offer solemn sacrifices at both. After those at Gibeon[§] there came that vision of the night which has in all ages borne its noble witness to the hearts of rulers. Not for riches, or long life, or victory over enemies, would the son of David, then at least true to his high calling, feeling himself as "a little child" in comparison with the vastness of his work, offer his supplications, but for a "wise and understanding heart," that he might judge the people. The "speech pleased the Lord." There came in answer the promise of a wisdom "like which there had been none before, like which there should be none after" (1 K. iii. 5-15). So far all was well. The prayer was a right and noble one. Yet there is also a contrast between it and the prayers of David which accounts for many other contrasts. The desire of David's heart is not chiefly for wisdom, but for holiness. He is conscious of an oppressing evil, and seeks to be delivered from it. He repents, and falls, and repents again. Solomon asks only for wisdom. He has a lofty ideal before him, and seeks to accomplish it, but he is as yet haunted by no deeper yearnings, and speaks as one who has "no need of repentance."

(2.) The wisdom asked for was given in large measure, and took a varied range. The wide world of nature, animate and inanimate, which the enterprises of his subjects were throwing open to him, the lives and characters of men, in all their surface-weaknesses, in all their inner depths, lay before him, and he took cognisance of all.^{||} But the highest

[†] Josephus, again careless about authorities, makes her a queen of Egypt (?) and Ethiopia (*Ant.* viii. 6, §6).

[‡] Is it possible that the Book itself came into the literature of Israel by the intercourse thus opened? Its Arabic character, both in language and thought, and the obvious traces of its influence in the Book of Proverbs, have been noticed by all critics worthy of the name (comp. Jos.).

[§] Hebron, in Josephus, once more blundering (*Ant.* viii. 2, §1).

^{||} Ewald sees in the words of 1 K. iv. 33, the record of books more or less descriptive of natural history, the

wisdom was that wanted for the highest work, for governing and guiding, and the historian hastens to give an illustration of it. The pattern-instance is, in all its circumstances, thoroughly Oriental. The king sits in the gate of the city, at the early dawn, to settle any disputes, however strange, between any litigants, however humble. In the rough and ready test which turns the scales of evidence, before so evenly balanced, there is a kind of rough humour as well as sagacity, specially attractive to the Eastern mind, than and at all times (1 K. iii. 16-28).

(3.) But the power to rule showed itself not in judging only, but in organising. The system of government which he inherited from David received a fuller expansion. Prominent among the "princes" of his kingdom, i. e. officers of his own appointment, were members of the priestly order: ² Azariah the son of Zadok, Zadok himself the high-priest, Benaiah the son of Jehoiada as captain of the host, another Azariah and Zabud, the sons of Nathan, one over the officers (*Nitadblm*) who acted as purveyors to the king's household (1 K. iv. 2-5), the other in the more confidential character of "king's friend." In addition to these there were the two scribes (*Sôphrîm*), the king's secretaries, drawing up his edicts and the like [SCRIBES], Elihoreph and Ahiah, the recorder or annalist of the king's reign (*Mascir*), the superintendent of the king's house, and household expenses (Is. xlii. 15), including probably the *harém*. The last in order, at once the most indispensable and the most hated, was Adoniram, who presided "over the tribute," that word including probably the personal service of forced labour (comp. Keil, *Comm.* in loc., and Ewald, *Gesch.* iii. 334).

(4.) The last name leads us to the king's finances. The first impression of the facts given us is that of abounding plenty. That all the drinking vessels of the two palaces should be of pure gold was a small thing, "nothing accounted of in the days of Solomon" (1 K. x. 21).² "Silver was in Jerusalem as stones, and cedars as the acorn-trees in the vale" (1 K. x. 27). The people were "eating and drinking and making merry" (1 K. iv. 20). The treasures left by David for building the Temple might well seem almost inexhaustible³ (1 Chr. xxix. 1-7). The large quantities of the precious metals imported

from Ophir and Tarshish would speak, to a people who had not learnt the lessons of a long experience, of a boundless source of wealth (1 K. ix. 28). All the kings and princes of the subject-provinces paid tribute in the form of gifts, in money and in kind, "at a fixed rate year by year" (1 K. x. 25). Monopolies of trade, then, as at all times in the East, contributed to the king's treasury, and the trade in the fine linen, and chariots, and horses of Egypt, must have brought in large profits (1 K. x. 28, 29). The king's domain-lands were apparently let out, as vineyards or for other purposes, at a fixed annual rental (Cant. viii. 11). Upon the Israelites (probably not till the later period of his reign) there was levied a tax of ten per cent. on their produce (1 Sam. viii. 15). All the provinces of his own kingdom, grouped apparently in a special order for this purpose, were bound each in turn to supply the king's enormous household with provisions (1 K. iv. 21-23). [Comp. TAXES.] The total amount thus brought into the treasury in gold, exclusive of all payments in kind, amounted to 666 talents (1 K. x. 14).⁴

(5.) It was hardly possible, however, that any financial system could bear the strain of the king's passion for magnificence. The cost of the Temple was, it is true, provided for by David's savings and the offerings of the people; but even while that was building, yet more when it was finished, one structure followed on another with ruinous rapidity. A palace for himself, grander than that which Hiram had built for his father, another for Pharaoh's daughter, the house of the forest of Lebanon, in which he sat in his court of judgment, the pillars all of cedar, seated on a throne of ivory and gold, in which six lions on either side, the symbols of the tribe of Judah, appeared (as in the thrones of Assyria, Layard's *Nineveh*, ii. 30) standing on the steps and supporting the arms of the chair (1 K. vii. 1-12, x. 18-20), ivory palaces and ivory towers, used apparently for the king's armoury (Pa. xiv. 8; Cant. iv. 4, vii. 4); the ascent from his own palace to the house or palace of Jehovah (1 K. x. 5), a summer palace in Lebanon (1 K. ix. 19; Cant. vii. 4), stately gardens at Etham, *paradises* like those of the great Eastern kings (Eccl. ii. 5, 6;

catalogue raisonné of the king's collections, botanic and zoological (iii. 288); to Renan, however (following Josephus), it seems more in harmony with the unscientific character of all Semitic minds, to think of them as looking to the moral side of nature, drawing parables or allegories from the things he saw (*Étude des langues Sémitiques*, p. 127). The multiplied allusions of this kind in Prov. xix., make that, perhaps, a fair representative of this form of Solomon's wisdom, though not by Solomon himself.

² We cannot bring ourselves, with Keil (*Comm.* in loc.) and others, to play fast and loose with the word *Cohen*, and to give it different meanings in alternate verses. [Comp. *PARCOUR*.]

³ A reminiscence of this form of splendour is seen in the fact that the mediæval goldsmiths described their earliest plate as "*œuvre de Salomon*." It was wrought in high relief, was Eastern in its origin, and was known also as *Saracenic* (*Liber Custumariorum*, l. 91, 789).

⁴ We labour, however, under a twofold uncertainty, (1) as to the accuracy of the numbers, (2) as to the value of the terms. Prédoux, followed by Lewis, estimates the amount at \$33,000,000, yet the savings of the later years of David's life, for one special purpose, could hardly have surpassed the national debt of England (comp. Millman's *History of Jews*, l. 267).

⁵ 666. There is something startling in this finding in a simple historical statement a number which has since become invested with such a mysterious and terrible

significance (Rev. xiii. 18). The coincidence can hardly, it is believed, be looked on as casual. "The Beer of the Apocalypse," it has been well said, "lives entirely in Holy Scripture. On this territory, therefore, is the solution of the sacred riddle to be sought" (Hengstenberg, *Comment. in Rev. in loc.*). If, therefore, we find the number occurring in the O. T., with any special significance, we may well think that that furnishes the starting point of the enigma. And there is such a significance here. (1.) As the glory and the wisdom of Solomon were the representatives of all earthly wisdom and glory, so the wealth of Solomon would be the representative of all earthly wealth. (2.) The purpose of the visions of St. John is to oppose the heavenly to the earthly Jerusalem; the true "offspring of David," "the lion of the tribe of Judah," as all counterfeits; the true riches to the false. (3.) The worship of the beast is the worship of the world's mammon. It may seem to reproduce the glory and the wealth of the old Jerusalem in its golden days, but it is of evil, not of God; a Babylon, not a Jerusalem. (4.) This reference does not of course exclude either the mystical meaning of the number six, so well brought out by Hengstenberg (*l. c.*) and Mr. Maurice (on the *Apocalypse*, p. 251), or even names like *Lafelnee* and *Nero Caesar*. The greater the variety of thoughts that could be connected with a single number, the more would it commend itself to one of all familiar with the method of the *chematria* of the Jewish cabbalists.

Joseph. *Ant.* vii. 7, §3; comp. PARADISE), the foundation of something like a stately school or college.† costly aqueducts bringing water, it may be, from the well of Bethlehem, dear to David's heart, to supply the king's palace in Jerusalem (Ewald, iii. 323), the fortifications of Jerusalem completed, those of other cities begun (1 K. ix. 15-19), and, above all, the harém, with all the expenditure which it involved on slaves and slave-dealers, on concubines and eunuchs (1 Sam. viii. 15; 1 Chr. xxviii. 1), on men-singers and women-singers (*Exod.* ii. 8)—these rose before the wondering eyes of his people and dazzled them with their magnificence. All the equipment of his court, the "apparel" of his servants, was on the same scale. If he went from his hall of judgment to the Temple he marched between two lines of soldiers, each with a burnished shield of gold (1 K. x. 16, 17; Ewald, iii. 320). If he went on a royal progress to his paradise at Etham, he went in snow-white raiment, riding in a stately chariot of cedar, decked with silver and gold and purple, carpeted with the costliest tapestry, worked by the daughters of Jerusalem (*Cant.* iii. 9, 10). A body-guard attended him, "threescore valiant men," tallest and handsomest of the sons of Israel, in the freshness of their youth, arrayed in Tyrian purple, their long black hair sprinkled freshly every day with gold-dust (*Ib.* iii. 7, 8; Joseph. *Ant.* viii. 7, §3). Forty thousand stalls of horses for his chariots, and twelve thousand horsemen, made up the measure of his magnificence (1 K. iv. 26). If some of the public works had the plea of utility, the fortification of some cities for purposes of defence—Millo (the suburb of Jerusalem), Hazor, Megiddo, the two Beth-horons, the foundation of others, Tadmor and Tiphmah, for purposes of commerce—these were simply the pomps of a selfish luxury, and the people, after the first dazzle was over, felt that they were so. As the treasury became empty, taxes multiplied and monopolies became more irksome. Even Israelites, besides the conscription which brought them into the king's armies (1 K. ix. 22), were subject, though for a part only of each year, to the *corvée* of compulsory labour (1 K. v. 13). The revolution that followed had, like most other revolutions, financial disorder as the chief among its causes. The people complained, not of the king's idolatry, but of their burdens, of his "grievous yoke" (1 K. xii. 4). Their hatred fell heaviest on Adoniram, who was over the tribute. If, on the one side, the division of the kingdom came as a penalty for Solomon's idolatrous apostasy from Jehovah, it was, on another, the Nemesis of a selfish passion for glory, itself the most terrible of all idolatries.

(6.) It remains for us to trace that other downfall, belonging more visibly, though not more really, to his religious life, from the loftiest height even to the lowest depth. The building and dedication of the Temple are obviously the representatives of the first. That was the special task which he inherited from his father, and to that he gave himself with all his heart and strength. He came to it with all the noble thoughts as to the meaning and grounds

of worship which his father and Nathan could instil into him. We have already seen, in speaking of his intercourse with Tyre, what measures he took for its completion. All that can be said as to its architecture, proportions, materials [TEMPLE], and the organisation of the ministering PRIESTS and LEVITES, will be found elsewhere. Here it will be enough to picture to ourselves the feelings of the men of Judah as they watched, during seven long years, the Cycloplan foundations of vast stones (still remaining when all else has perished, Ewald, iii. 297) gradually rising up and covering the area of the threshing-floor of Araunah, materials arriving continually from Joppa, cedar, and gold and silver, brass "without weight" from the foundries of Succoth and Zarethan, stones ready hewn and squared from the quarries. Far from colossal in its size, it was conspicuous chiefly by the lavish use, within and without, of the gold of Ophir and Parvaim. It glittered in the morning sun (it has been well said) like the sanctuary of an El Dorado (Milman, *Hist. of Jews*, i. 259). Throughout the whole work the tranquillity of the kingly city was unbroken by the sound of the workman's hammer:

* Like some tall palm, the noiseless fabric grew."

(7.) We cannot ignore the fact that even now there were some darker shades in the picture. Not reverence only for the Holy City, but the wish to shut out from sight the misery he had caused, to close his ears against cries which were rising daily to the ears of the Lord of Sabaoth, led him probably to place the works connected with the Temple at as great a distance as possible from the Temple itself. Forgetful of the lessons taught by the history of his own people, and of the precepts of the Law (*Ex.* xxii. 21, xxiii. 9 *et al.*), following the example of David's policy in its least noble aspect (1 Chr. xxi. 2), he reduced the "strangers" in the land, the remnant of the Canaanite races who had chosen the alternative of conformity to the religion of their conquerors, to the state of helots, and made their life "bitter with all hard bondage."‡ [PROSELYTES.] Copying the Pharaohs in their magnificence, he copied them also in their disregard of human suffering. Acting, probably, under the same counsels as had prompted that measure on the result of David's census, he seized on the "strangers" for the weary, servile toil against which the free spirit of Israel would have rebelled. One hundred and fifty-three thousand, with wives and children in proportion, were torn from their homes and sent off to the quarries and the forests of Lebanon (1 K. v. 15; 2 Chr. ii. 17, 18). Even the Israelites, though not reduced permanently to the helot state (2 Chr. viii. 9), were yet summoned to take their share, by rotation, in the same labour (1 K. v. 13, 14). One trace of the special servitude of "these hewers of stone" existed long afterwards in the existence of a body of men attached to the Temple, and known as SOLOMON'S SERVANTS.

(8.) After seven years and a half the work was completed, and the day came to which all Israelites looked back as the culminating glory of their nation.

presents a singular contrast to the free spirit which, for the most part, pervades his work. Throughout his history of David and Solomon, his sympathy for the father's heroism, his admiration for the son's magnificence, seem to keep his judgment under a fascination which it is difficult for his readers to escape from.

† Pineda's conjecture (*III.* 28) that "the house with seven pillars," "the highest place of the city," of *I*rov. ix. 1-3, had originally a local reference is, at least, plausible enough to be worth mentioning. It is curious to think that there may have been a historical "Solomon's house," like that of the *New Atlantis*.

‡ Ewald's apology for these acts of despotism (*III.* 292)

Their worship was now established on a scale as stately as that of other nations, while it yet retained its freedom from all worship that could possibly become idolatrous. Instead of two rival sanctuaries, as before, there was to be one only. The ark from Zion, the tabernacle from Gibeon, were both removed (2 Chr. v. 5) and brought to the new Temple. The choirs of the priests and Levites met in their fullest force, arrayed in white linen. Then, it may be for the first time, was heard the noble hymn, "Lift up your heads, O ye gates, and be ye lift up, ye everlasting doors, and the King of Glory shall come in" (Milman, *Hist. of Jews*, i. 263). The trumpeters and singers were "as one" in their mighty Hallelujah—"O praise the Lord, for He is good, for His mercy endureth for ever" (2 Chr. v. 13). The ark was solemnly placed in its golden sanctuary, and then "the cloud," the "glory of the Lord," filled the house of the Lord. The two tables of stone, associated with the first rude beginnings of the life of the wilderness, were still, they and they only, in the ark which had now so magnificent a shrine (2 Chr. v. 10). They bore their witness to the great laws of duty towards God and man, remaining unchangeable through all the changes and chances of national or individual life, from the beginning to the end of the growth of a national religion. And throughout the whole scene, the person of the king is the one central object, compared with whom even priests and prophets are for the time subordinate. Abstaining, doubtless, from distinctively priestly acts, such as slaying the victims and offering incense, he yet appears, even more than David did in the bringing up the ark, in a liturgical character. He, and not Zadok, blesses the congregation, offers up the solemn prayer, dedicates the Temple. He, and not any member of the prophetic order, is then, and probably at other times, the spokesman and "preacher" of the people (Ewald, iii. 220). He takes at least some steps towards that far-off (Ps. cx. 1) ideal of "a priest after the order of Melchizedek," which one of his descendants rashly sought to fulfil [UZZIAH], but which was to be fulfilled only in a Son of David, not the crowned leader of a mighty nation, but despised, rejected, crucified. From him came the lofty prayer, the noblest utterance of the creed of Israel, setting forth the distance and the nearness of the Eternal God, One, Incomprehensible, dwelling not in temples made with hands, yet ruling men, hearing their prayers, giving them all good things, wisdom, peace, righteousness.*

(9.) The solemn day was followed by a week of festival, synchronising with the Feast of Tabernacles, the time of the completed vintage. Representatives of all the tribes, elders, fathers, captains, proselytes, it may be, from the newly-acquired territories in Northern Syria (2 Chr. vi. 32, vii. 8).—all were assembled, rejoicing in the actual glory and the bright hopes of Israel. For the king himself then, or at a later period (the narrative of 1 K. ix. and 2 Chr. vii. leaves it doubtful), there was a strange contrast to the glory of that day. A criticism, misled by its own acuteness, may see in that warning prophecy of sin, punishment, desolation, only a *saturnium ex eventu*, added some cen-

turies afterwards (Ewald, iii. 404). It is open to us to maintain that, with a character such as Solomon's, with a religious ideal so far beyond his actual life, such thoughts were psychologically probable, that strange misgivings, suggested by the very words of the jubilant hymns of the day's solemnity, might well mingle with the shouts of the people and the hallelujahs of the Levites.[†] It is in harmony with all we know of the work of the Divine Teacher, that those misgivings should receive an interpretation, that the king should be taught that what he had done was indeed right and good, but that it was not all, and might not be permanent. Obedience was better than sacrifice. There was a danger near at hand.

(10.) The danger came, and in spite of the warning the king fell. Before long the priests and prophets had to grieve over rival temples to Moloch, Chemos, Ashtaroth, forms of ritual not idolatrous only, but cruel, dark, impure. This evil came, as the compiler of 1 K. xi. 1-8 records, as the penalty of another. Partly from policy, seeking fresh alliances, partly from the terrible satiety of lust seeking the stimulus of change, he gave himself to "strange women." He found himself involved in a fascination which led to the worship of strange gods. The starting-point and the goal are given us. We are left, from what we know otherwise, to trace the process. Something there was perhaps in his very "largeness of heart," so far in advance of the traditional knowledge of his age, rising to higher and wider thoughts of God, which predisposed him to it. His converse with men of other creeds and climes might lead him to anticipate, in this respect, one phase of modern thought, as the confessions of the Preacher in Koheleth anticipate another. In recognising what was true in other forms of faith, he might lose his horror at what was false, his sense of the pre-eminence of the truth revealed to him, of the historical continuity of the nation's religious life. His worship might go backward from Jehovah to Elohim,[‡] from Elohim to "the Gods: many and Lords many" of the nations round. Jehovah, Baal, Ashtaroth, Chemos, each form of nature-worship, might come to seem equally true, equally acceptable. The women whom he brought from other countries might well be allowed the luxury of their own superstitions. And, if permitted at all, the worship must be worthy or his fame and be part of his magnificence. With this there may, as Ewald suggests (iii. 380),[§] have mingled political motives. He may have hoped, by a policy of toleration, to conciliate neighbouring princes, to attract a larger traffic. But probably also there was another influence less commonly taken into account. The wide-spread belief of the East in the magic arts of Solomon is not, it is believed, without its foundation of truth. On the one hand, an ardent study of nature, in the period that precedes science, runs on inevitably into the pursuit of occult, mysterious properties. On the other, throughout the whole history of Judah, the element of idolatry which has the strongest hold on men's minds was the thaumaturgic, soothsaying, incarnations, divinations (2 K. i. 2; ii. ii. 6;

* Ewald, yielding to his one special weakness, sees in this prayer the rhetorical addition of the Deuteronomist editor (iii. 315).

† Ps. cxviii. belongs manifestly (comp. vv. 7, 8, 10, 18, with 2 Chr. vi. 41) to the day of dedication; and v. 12 contains the condition, of which the vision of the night presents the dark as the day had presented the bright side.

‡ It is noticeable that Elohim, and not Jehovah, is the Divine name used throughout Ecclesiastes.

§ To see, however, as Ewald does, in Solomon's policy nothing but a wise toleration like that of a modern statesman in regard to Christian sects, or of the English Government in India, is surely to read history through a refracting and distorting medium.

2 Chr. xviii. 6 *et al.*). The religion of Israel opposed a stern prohibition to all such perilous yet tempting arts (Deut. xviii. 10 *et al.*). The religions of the nations round fostered them. Was it strange that one who found his progress impeded in one path should turn into the other? So, at any rate, it was. The reign which began so gloriously was a step backwards into the gross darkness of fetish worship. As he left behind him the legacy of luxury, selfishness, oppression, more than counterbalancing all the good of higher art and wider knowledge, so he left this too as an ineradicable evil. Not less truly than the son of Nebat might his name have been written in history as Solomon the son of David who "made Israel to sin."

(11.) Disasters followed before long as the natural consequence of what was politically a blunder as well as religiously a sin. The strength of the nation rested on its unity, and its unity depended on its faith. Whatever attractions the sensuous ritual which he introduced may have had for the great body of the people, the priests and Levites must have looked on the rival worship with entire disfavour. The zeal of the prophetic order, dormant in the earlier part of the reign, and as it were, hindered from its usual utterances by the more dazzling wisdom of the king, was now kindled into active opposition. Ahijah of Shiloh, as if taught by the history of his native place, was sent to utter one of those predictions which help to work out their own fulfilment, fastening on thoughts before vague, pointing Jeroboam out to himself and to the people as the destined heir to the larger half of the kingdom, as truly called as David had been called, to be the anointed of the Lord (1 K. xi. 28-39). The king in vain tried to check the current that was setting strong against him. If Jeroboam was driven for a time into exile it was only as we have seen, to be united in marriage to the then reigning dynasty, and to come back with a daughter of the Pharaohs as his queen (LXX. *ut supra*). The old tribal jealousies gave signs of renewed vitality. Ephraim was prepared once more to dispute the supremacy of Judah, needing special control (1 K. xi. 28). And with this weakness within there came attacks from without. Hadad and Rezon, the one in Edom, the other in Syria, who had been foiled in the beginning of his reign, now found no effectual resistance. The king, prematurely old,^a must have foreseen the rapid breaking up of the great monarchy to which he had succeeded. Rehoboam, inheriting his faults without his

^a Solomon's age at his death could not have been much more than fifty-nine or sixty, yet it was not till he was "old" that his wives perverted him (1 K. xi. 4).

^b Hezekiah found, it was said, formulae for the cure of diseases engraved on the door-posts of the Temple, and destroyed them because they drew men away from the worship of Jehovah (Sukkas, s. v. *Ezekias*). Strange as the history is, it has a counterpart in the complaint of the writer of 2 Chr. xvi. 12, that Aha "sought not to the Lord but to the physicians." Was there a rivalry in the treatment of disease between the priests and prophets on the one side (comp. Is. xxxviii. 21), and idolatrous thaumaturgists on the other (comp. also 2 K. i. 2)?

^c The Song of Songs, however, was never read publicly, either in the Jewish or the Christian Church, nor in the former were young men allowed to read it at all (Theod. Cyr. *Præf. in Cant. Cant.*; Theod. Mops. p. 699 in *Migne*).

^d We rest on this as the necessary condition of all deeper interpretation. To argue, as many have done, that the mystical sense must be the only one because the literal

wisdom, haughty and indiscreet, was not likely to avert it.

(12.) Of the inner changes of mind and heart which ran parallel with this history Scripture is comparatively silent. Something may be learnt from the books that bear his name, which, whether written by him or not, stand in the Canon of the O. T. as representing, with profound, inspired insight the successive phases of his life; something also from the fact that so little remains out of as much, out of the songs, proverbs, treatises of which the historian speaks (1 K. iv. 32, 33). Legendary as may be the traditions which speak of Hezekiah as at one and the same time, preserving some portions of Solomon's writings (Prov. xxv. 1), and destroying others,^a a like process of selection must have been gone through by the unknown Rabbis of the GREAT SYNAGOGUE after the return from the exile. Slowly and hesitatingly they received into the Canon, as they went on with their unparalleled work of the expurgation by a people of its own literature, the two books which have been the stumbling-blocks of commentators, Ecclesiastes and the Song of Songs.^b (Ginsburg, *Kohelath*, pp. 13-15). They give *extracts* only from the 3000 Proverbs. Of the thousand and five Songs (the precise number indicates a known collection) we know absolutely nothing. They were willing, i. e. to admit *Kohelath* for the sake of its ethical conclusion, the Song of Songs, because at a very early period, possibly even then, it had received a mystical interpretation (Kell, *Eiselenit*, in *das Alt. Test.* §127), because it was, at any rate, the history of a love which if passionate, was also tender, and pure, and true.^c But it is easy to see that there are elements in that poem, the strong delight in visible outward beauty, the surrender of heart and will to one overpowering impulse, which might come to be divorced from truth and purity, and would then be perilous in proportion to their grace and charm. Such a divorce took place we know in the actual life of Solomon. It could not fail to leave its stamp upon the idyls in which feeling and fancy uttered themselves. The poems of the Son of David may have been like those of Hafiz. The Scribes who compiled the Canon of the O. T. may have acted wisely, rightly, charitably to his fame, in excluding them.

(13.) The books that remain meet us, as has been said, as at any rate representing the three stages of his life. The Song of Songs brings before us the brightness of his youth, the heart as yet untainted, human love passionate yet undefiled,^d and

would be insupportable, is simply to "bring a clean thing out of an unclean," to assert that the Divine Spirit would choose a love that was lustful and impure as the fitting parable of the holiest. Much rather may we say with Herder (*Geist der Ebr. Poes.*, Dial. vi.), that the poem, in its literal sense, is one which "might have been written in Paradise." The man and the woman are, as in their primeval innocence, loving and beloved, thinking no evil, "naked and not ashamed."

^b We adopt the older view of Louth (*Præf.* xxx., xxxi.) and others, rather than that of Rezan and Ewald, which almost brings down a noble poem to the level of an operatic ballet at a Parisian theatre. Theodore of Mopsuestia (l. c.) had, at least, placed it on a level with the Symposium of Plato. The theory of Michaelis (*Not. in Louth*, xxxi.) that it represents a young husband and his favourite bride hindered, by narrow jealousies or regulations, from free intercourse with each other, seems to us preferable, and connects itself with the identification of the Shulamite with Abisag, already noticed.

therefore becoming, under a higher inspiration, half-consciously it may be to itself, but, if not, then unconsciously for others, the parable of the soul's affections.³ Then comes in the Book of Proverbs, the stage of practical, prudential thought, searching into the recesses of man's heart, seeing duty in little things as well as great, resting all duty on the fear of God, gathering from the wide lessons of a king's experience, lessons which mankind could ill afford to lose.⁴ The poet has become the philosopher, the mystic has passed into the moralist. But the man passed through both stages without being permanently the better for either. They were to him but phases of his life which he had known and exhausted (Ecc. i., ii.). And therefore there came, as in the Confessions of the Preacher, the great retribution. The "sense that wore with time" avenged "the crime of sense." There fell on him, as on other crowned voluptuaries,⁵ the weariness which sees written on all things, Vanity of Vanities. Slowly only could he recover from that " vexation of spirit," and the recovery was incomplete. It was not as the strong burst of penitence that brought to his father David the assurance of forgiveness. He could not rise to the height from which he had fallen, or restore the freshness of his first love. The weary soul could only lay again, with slow and painful relapses, the foundations of a true morality [comp. ECCLESIASTES].

(14.) Here our survey must end. We may not enter into the things within the veil, or answer either way, the doubting question, Is there any hope? Others have not shrunk from debating that question, deciding, according to their formulae, that he did or did not fulfil the conditions of salvation so as to satisfy them, were they to be placed upon the judgment-seat. It would not be profitable to give references to the patristic and other writers who have dealt with this subject. They have been elaborately collected by Calmet (*Dictionn. s. v. Salomon, Nouvel. dissert. De la salut du Sal.*). It is noticeable and characteristic that Chrysostom and the theologians of the Greek Church are, for the most part, favourable, Augustine and those of the Latin, for the most part, adverse to his chances of salvation.⁶

VII. *Legends*.—(1.) The impression made by Solomon on the minds of later generations, is shown in its best form by the desire to claim the sanction of his name for even the noblest thoughts of other writers. Possibly in ECCLESIASTES, certainly in the *Book of Wisdom*, we have instances of this, free from the vicious element of an apocryphal literature. Before

long, however, it took other forms. Round the facts of the history, as a nucleus, there gathered a whole world of fantastic fables, Jewish, Christian, Mahometan, refractory, coloured and distorted, according to the media through which they pass, of a colossal form. Even in the Targum of Ecclesiastes we find strange stories of his character. He saw the Rabbis of the Sanhedrim eat and drank wine together in Jabne. His *paradise* was filled with costly trees which the evil spirits brought him from India. The canuistry of the Rabbis rested on his *dicta*. Ashmedai, the king of the demons, deprived him of his magic ring, and he wandered through the cities of Israel, weeping and saying, I, the preacher, was king over Israel in Jerusalem (Ginsburg, *Kohélet*, App. l. H.; Koran, *Sur.* 38). He left behind him spells and charms to cure diseases and cast out evil spirits; and for centuries, incantations bearing his name were the special boast of all the "vagabond Jew exorcists" who swarmed in the cities of the empire (Jos. Ant. viii. 2, §5; Just. Mart. *Respons. ad Orthod.* 55; Origen, *Comm. in Matt.* xvi. 3). His wisdom enabled him to interpret the speech of beasts and birds, a gift shared afterwards, it was said, by his descendant Hillel (Ewald, iii. 407; Koran, *Sur.* 37). He knew the secret virtues of gems and herbs⁷ (Fabricius, *Codex Pseudep. V. T.* 1042). He was the inventor of Syriac and Arabian alphabets (Ibid. 1014).

(2.) Arabic imagination took a yet wilder flight. After a long struggle with the rebellious Afreets and Jinnas, Solomon conquered them and cast them into the sea (Lane, *Arabian Nights*, i. p. 36). The remote pre-Adamite past was peopled with a succession of forty Solomons, ruling over different races, each with a shield and sword that gave them sovereignty over the *Jinnas*. To Solomon himself belonged the magic ring which revealed to him the past, the present, and the future. Because he stayed his march at the hour of prayer instead of riding on with his horsemen God gave him the winds as a chariot, and the birds flew over him, making a perpetual canopy. The demons in their spite wrote books of magic in his name, but he, being ware of it, seized them and placed them under his throne, where they remained till his death, and then the demons again got hold of them and scattered them abroad (L'Herbelot, s. v. "Soliman ben Daoud"; Koran, *Sur.* 21). The visit of the Queen of Sheba furnished some three or four romances. The Koran (*Sur.* 27) narrates her visit, her wonder, her conversion to the Islam, which Solomon professed. She appears under three dif-

³ "The final cause of Canticles," it has been well said, "was that it might be a field in which mysticism could disport itself" (Bishop Jebb, *Correspond. with Anon.* i. 306). The traces of the "great mystery" which thus connects divine and human love, are indeed to be found everywhere, in the Targums of Rabbis, in the writings of Fathers, Schoolmen, Puritans, in the poems of Mystics like Novalis, Jelaluddin Rumi, Saadi (comp. Tholuck, *Morgenländ. Mystik*, pp. 55, 227). It appears in its highest form in the *Vita Nuova* of Dante, purified by Christian feeling from the sensuous element which in Eastern writers too readily mingles with it. Of all strange assertions, that of Renan, that mysticism of this kind is foreign to the Semitic character, is perhaps about the strangest (*Cant. des Cant.* p. 119).

⁴ Both in Ecclesiastes (ii. 3-12) and yet more in Proverbs (i. 11-17, vii. 6-23) we may find traces of experiences gained in other ways. The graphic picture of the life of the robbers and the prostitutes of an Eastern city could hardly have been drawn but by one who, like Haroun

Alrahid and other Oriental kings, at times laid aside the trappings of royalty, and plunged into the other extreme of social life, that so he might gain the excitement of a fresh sensation.

⁵ "A taste for pleasure is extinguished in the King's heart (Louis XIV.). Age and devotion have taught him to make serious reflections on the vanity of everything he was formerly fond of" (Mme. de Maintenon's *Letters*, 306).

⁶ How deeply this question entered into the hearts of Mediaeval thinkers, and in what way the nobles of them all decided it, we read in the *Divina Commedia*—

"La quinta luce ch'è tra noi più bella
Spira di tal amor, che tutto il mondo
Laggiù ne gola di asper novella."

Paradiso, x. 106.

The "spira di tal amor" refers, of course, to the Song of Solomon.

⁷ The name of a well-known plant, Solomon's seal (*Consolida Ajacis*), perpetuates the old belief.

gent names, Nicaule (Calmet, *Diet. a. v.*), Dalkis (D'Herbelot, *a. v.*), Makeda (Pineda, v. 14). The Arabs claim her as belonging to Yemen, the Ethiopians as coming from Meroe. In each form of the story a son is born to her, which calls Solomon its father, in the Arab version Meilekh, in the Ethiopian David after his grandfather, the ancestor of a long line of Ethiopian kings (Ludolf, *Hist. Aethiop.* ii. 3, 4, 5). Twelve thousand Hebrews accompanied her on her return home, and from them were descended the Jews of Ethiopia, and the great Prester John (Presbyter Joannes) of mediæval travellers (D'Herbelot, *l. c.*; Pineda, *l. c.*; Corylus, *Diss. de regina Austr.* in Menthen's *Thesaurus*, *l. c.*). She brought to Solomon the self-same gifts which the Magi afterwards brought to Christ. [MAGI.] One at least of the hard questions with which she came was rescued from oblivion. Fair boys and sturdy girls were dressed up by her exactly alike so that no eye could distinguish them. The king placed water before them and bade them wash, and then when the boys scrubbed their faces and the girls stroked them softly, he made out which were which (Glycas, *Annal.* in Fabricius, *l. c.*). Versions of these and other legends are to be found also in Weil, *Bibl. Legenda*, p. 171; Fürst, *Perlenschnüre*, c. 36.

(3.) The fame of Solomon spread northward and eastward to Persia. At Shiraz they showed the *Meder-Suleiman*, or tomb of Bath-sheba, said that Persepolis had been built by the *Jems* at his command, and pointed to the Takht-i-Suleiman (Solomon's throne) in proof. Through their spells too he made his wonderful journey, breakfasting at Persepolis, dining at Baal-ber, supping at Jerusalem (Chardin, iii. 135, 143; Ouseley, ii. 41, 437). Persian literature, while it had no single life of David, boasted of countless histories of Solomon, one, the Suleiman-Nameh, in eighty books, ascribed to the poet Firdousi (D'Herbelot, *l. c.*; Chardin, iii. 198). In popular belief he was confounded with the great Persian hero, Djemachid (Ouseley, ii. 64).

(4.) As might be expected, the legends appeared in their coarsest and basest form in Europe, losing all their poetry, the mere appendages of the most detestable of Apocrypha, Books of Magic, a Hygro-manteia, a Contradictio Salomonis (whatever that may be) condemned by Gelasius, Incantationes, Clavicula, and the like.^a One pseudonymous work has a somewhat higher character, the *Psalterium Salomonis*, altogether without merit, a mere cento from the Psalms of David, but not otherwise offensive (Fabricius, *l. c.* 917; Tregelles, *Introd. to N. T.* p. 154), and therefore attached sometimes, as in the great Alexandrian Codex, to the sacred volume. One strange story meets us from the omnivorous Note-book of Bede. Solomon did repent, and in his contrition he offered himself to the Sanhedrim, doing penance, and they scourged him five times with rods, and then he travelled in sackcloth through the cities of Israel, saying as he went Give alms to Solomon (Bede, *de Salom.* ap. Pineda).

VIII. *New Testament*.—We pass from this wild

^a Two of these strange books have been reprinted in facsimile by Schæuble (*Kloster*, v.). The *Clavicula Salomonis*; *Necromantica* consists of incantations made up of Hebrew words; and the mightiest spell of the enchanter is the *Sigillum Salomonis*, engraved with Hebrew characters, such as might have been handed down through a long succession of Jewish exorcists. It is singular (unless this too was part of the imposture) that both the books profess to be published with the special licence of Popes Julius II and Alexander VI. Was this the form

farrago of Jewish and other fables, to that which presents the most entire contrast to them. The teaching of the N. T. adds nothing to the materials for a life of Solomon. It enables us to take the truest measure of it. The teaching of the Son of Man passes sentence on all that kingly pomp. It declares that in the humblest work of God, in the lilies of the field, there is a grace and beauty inexhaustible, so that even "Solomon in all his glory was not arrayed like one of these" (Matt. vi. 29).¹ It presents to us the perfect pattern of a growth in wisdom, like, and yet unlike his, taking, in the eyes of men, a less varied range; but deeper, truer, purer, because united with purity, victory over temptation, self-sacrifice, the true large-heartedness of sympathy with all men. On the lowest view which serious thinkers have ever taken of the life of Jesus of Nazareth, they have owned that there was in Him one "greater than Solomon" (Matt. xii. 42). The historical Son of David, ideally a type of the Christ that was to come, was in his actual life, the most strangely contrasted. It was reserved for the true, the later Son of David, to fulfil the prophetic yearnings which had gathered round the birth of the earlier. He was the true Shēlōmōh, the prince of peace, the true Jedid-jah, the well-beloved of the Father. [K. H. P.]

SOLOMON'S PORCH. [PALACE.]

SOLOMON'S SERVANTS (CHILDREN OF)

שִׁבְעִים עָבְדֵי שְׁלֹמֹה: *shiv'im 'Abdēshelomē*, Exr. ii. 58; *shiv'im 'Abdēshelomē*, Exr. ii. 55; Neh. vii. 57, 60: *shiv'im 'abdōn Salomonis*. The persons thus named appear in the lists of the exiles who returned from the Captivity. They occupy all but the lowest places in those lists, and their position indicates some connexion with the services of the Temple. First come the priests, then Levites, then Nethinim, then "the children of Solomon's servants." In the Greek of 1 Esdr. v. 33, 35, the order is the same, but instead of Nethinim we meet with *τεροβουλοι*, "servants" or "ministers" of the Temple. In the absence of any definite statement as to their office we are left to conjecture and inference. (1.) The name, as well as the order, implies inferiority even to the Nethinim. They are the descendants of the *slaves* of Solomon. The servitude of the Nethinim, "*given to the Lord*," was softened by the idea of dedication. [NETHINIM.] (2.) The starting point of their history is to be found probably in 1 K. v. 13, 14, ix. 20, 21; 2 Chr. vii. 7, 8. Canaanites, who had been living till then with a certain measure of freedom, were reduced by Solomon to the *helot* state, and compelled to labour in the king's stone-quarries, and in building his palaces and cities. To some extent, indeed, the change had been effected under David, but it appears to have been then consequent specially with the Temple, and the servitude under his successor was at once harder and more extended (1 Chr. xxii. 2). (3.) The last passage throws

of Hebrew literature which they were willing to encourage?

¹ A pleasant Persian apologue teaching a like lesson deserves to be rescued from the mass of fables. The king of Israel met one day the king of the ants, took the insect on his hand, and held converse with it, asking, *Oreosoma*, like, "Am not I the mightiest and most glorious of men?" "Not so," replied the ant-king. "Thou sittest on a dirt-ore of gold, but I make thy hand my throne, and thus am greater than thou" (Chardin, iii. p. 196).

same light on their special office. The Nethinim, as in the case of the Gibeonites, were appointed to be hewers of wood (Josh. ix. 23), and this was enough for the services of the Tabernacle. For the construction and repairs of the Temple another kind of labour was required, and the new slaves were set to the work of hewing and squaring stones (1 K. v. 17, 18). Their descendants appear to have formed a distinct order, inheriting probably the same functions and the same skill. The prominence which the erection of a new Temple on their return from Babylon would give to their work, accounts for the special mention of them in the lists of Ezra and Nehemiah. Like the Nethinim, they were in the position of proselytes, outwardly conforming to the Jewish ritual, though belonging to the hated race, and, even in their names, bearing traces of their origin (Esr. ii. 55-58). Like them, too, the great mass must either have perished, or given up their position, or remained at Babylon. The 392 of Esr. ii. 55 (Nethinim included) must have been but a small fragment of the descendants of the 150,000 employed by Solomon (1 K. v. 15). [E. H. P.]

SOLOMON'S SONG. [CANTICLES.]

SOLOMON, WISDOM OF. [WISDOM, BOOK OF.]

SON.^a The term "son" is used in Scripture language to imply almost any kind of descent or succession, as *ben shadai*, "son of a year," i. e. a year old, *ben keseth*, "son of a bow," i. e. an arrow. The word *bar* is often found in N. T. in composition, as Bar-timeus. [CHILDREN.] [H. W. P.]

SON OF GOD (*υἱος θεοῦ*),^b the Second Person of the Ever-blessed Trinity, who is coequal, co-eternal, and consubstantial with the Father; and who took the nature of man in the womb of the Blessed Virgin Mary, and as Man bears the name of JESUS, or Saviour, and who proved Himself to be the MESSIAH or CHRIST, the Prophet, Priest, and King of all true Israelites, the seed of faithful Abraham, the universal Church of God.

The title SON OF GOD was gradually revealed to the world in its full and highest significance. In the Book of Genesis the term occurs in the plural number, "Sons of God," *בְּנֵי הָאֱלֹהִים* (Gen. vi. 2, 4), and there the appellation is applied to the potentates of the earth, and to those who were set in authority over others (according to the exposition in Cyril Alex. *Adv. Julian*, p. 296, and *Adv. Anthropomorph.* c. 17), or (as some have held) the sons of the family of Seth—those who had been most distinguished by piety and virtue. In Job i. 6, and ii. 1, this title, "Sons of God," is used as a designation of the Angels. In Psalm lxxxii. 6, "I have said, ye are gods; and ye are all sons of the Highest" (*אֱלֹהִים יְהוָה*), the title is explained by Theodoret and others to signify those persons whom God invests with a portion of His own dignity and authority as rulers of His people, and who have clearer revelations of His will, as our Lord intimates (John x. 35); and

therefore the children of Israel, the favoured people of God, are specially called collectively, by God, His Son (Ex. iv. 22, 23; Hos. xi. 1).

But, in a still higher sense, that title is applied by God to His only Son, begotten by eternal generation (see Ps. ii. 7), as interpreted in the Epistle to the Hebrews (i. 5, v. 5); the word *בְּרִית*, "to-day," in that passage, being expressive of the act of God, with whom is no yesterday, nor to-morrow. "In aeterno nec praeteritum est, nec futurum, sed perpetuum hodie" (Luther). That text evidently refers to the Messiah, who is crowned and anointed as King by God (Ps. ii. 2, 6), although resisted by men, Ps. ii. 21, 23, compared with Acts iv. 25-27, where that text is applied by St. Peter to the crucifixion of Christ and His subsequent exaltation; and the same Psalm is also referred to Christ by St. Paul, when preaching in the Jewish synagogue at Antioch in Pisidia (Acts xiii. 33); whence it may be inferred that the Jews might have learnt from their own Scriptures that the Messiah is in a special sense the Son of God; and this is allowed by Maimonides in *Porta Moisi*, ed. Pococke, p. 160, 239. This truth might have been deduced by logical inference from the Old Testament, but in no passage of the Hebrew Scriptures is the Messiah clearly and explicitly designated by the title "Son of God." The words, "The form of the fourth is like the Son of God," are in the Chaldee portion of the Book of Daniel (Dan. iii. 25), and were uttered by a heathen and idolatrous king, Nebuchadnezzar, and cannot therefore be understood as expressing a clear appreciation, on the part of the speaker, of the divinity of the Messiah, although we may readily agree that, like Caiaphas and Pilate, the king of Babylon, especially as he was perhaps in habits of intercourse with Daniel, may have delivered a true prophecy concerning Christ.

We are now brought to the question, whether the Jews, in our Lord's age, generally believed that the Messiah, or Christ, was also the Son of God in the highest sense of the term, viz. as a Divine Person, coequal, co-eternal, and consubstantial with the Father?

That the Jews entertained the opinion that the Messiah would be the Son of God, in the subordinate senses of the term already specified (viz. as a holy person, and as invested with great power by God), cannot be doubted; but the point at issue is, whether they supposed that the Messiah would be what the Universal Church believes Jesus Christ to be? Did they believe (as some learned persons suppose they did) that the terms Messiah and Son of God are "equivalent and inseparable"?

It cannot be denied that the Jews ought to have deduced the doctrine of the Messiah's divinity from their own Scriptures, especially from such texts as Psalm alv. 6, 7, "Thy throne, O God, is for ever and ever; the sceptre of Thy kingdom is a right sceptre. Thou lovest righteousness and hatest wickedness; therefore God, Thy God, anointed Thee with the oil of gladness above Thy fellows;" a text to which the author of the Epistle to the Hebrews

^a 1. *בֶּן*: *videt*; *filius*; from *בָּנָה*, "build" (see Jer. xxxiii. 1).

2. *בֶּן*, from *בָּרָא*, "pure"; *videtur*; *dilectus* (Prov. xxii. 3).

3. *בֶּן*: *videt*; *puer*.

4. *בְּרִית*: *videtur*; *stirps*; *genus*.

5. *בְּרִית*: *videtur*; *posteri*.

6. *בְּרִית*, like a son, i. e. a successor.

^b The present article, in conjunction with that of SAVIOUR, forms the supplement to the life of our Lord [See JESUS CHRIST, vol. I. p. 1038.]

appeals (Heb. i. 8); and the doctrine of the Messiah's Godhead might also have been inferred from such texts as Isaiah ix. 6, "Unto us a Child is born, unto us a Son is given . . . and His name shall be called Wonderful, Counsellor, the *Mighty God*;" and vii. 14, "Behold a Virgin shall conceive and bear a Son, and shall call His name Immanuel" (with us, God); and from Jer. xxiii. 5, "Behold, the days come, saith the Lord, that I will raise unto *David* a righteous *Branch*, and a *King* shall reign and prosper . . . ; and this is the name whereby He shall be called, the LORD (Jehovah) our Righteousness;" and from Micah v. 2, "Out of thee (Bethlehem Ephratah) shall He come forth unto me that is to be Ruler in Israel, whose goings forth have been from of old, from everlasting;" and from Zech. xi. 13, "And the Lord said unto me, Cast it unto the potter: a goodly price that I was prized at of them."

But the question is not, whether the Jews *might* not and *ought* not to have inferred the Divine Sonship of the Messiah from their own Scriptures, but whether, for the most part, they really *did* deduce that doctrine from those Scriptures? They ought doubtless to have been prepared by those Scriptures for a *suffering* Messiah; but this we know was *not* the case, and the Cross of Christ was to them a stumbling-block (1 Cor. i. 23); and one of the strongest objections which they raised against the Christians was that they worshipped a man who died a death which is declared to be an accursed one in the Law of Moses, which was delivered by God Himself (Deut. xxi. 23).

May it not also be true, that the Jews of our Lord's age failed likewise of attaining to the true sense of their own Scriptures, in the opposite direction? May it not also be true, that they did not acknowledge the Divine Sonship of the Messiah, and that they were not prepared to admit the claims of one who asserted Himself to be the Christ, and also affirmed Himself to be the Son of God, coequal with the Father?

In looking at this question *a priori*, it must be remembered that the Hebrew Scriptures declare in the strongest and most explicit terms the Divine Unity. "Hear, O Israel, the Lord our God is *one* Lord" (Deut. vi. 4), this is the solemn declaration which the Jews recite daily, morning and evening (see Mishnah, *Barachoth*, chap. i.). They regarded themselves as set apart from all the nations of earth to be a witness of God's unity, and to protest against the polytheism of the rest of mankind. And having suffered severe chastisements in the Babylonish Captivity for their own idolatries, they shrank—and still shrink—with fear and abhorrence from everything that might seem in any degree to trench upon the doctrine of the unity of the Godhead.

To this consideration we must add, *a posteriori*, the eternal evidence derived from the testimony of ancient writers who lived near to our Lord's age.

Trypho, the learned Jew, who debated with Justin Martyr at Ephesus about A.D. 150, on the points of controversy between the Jews and Christians expressly states, "that it seems to him not only paradoxical but silly (*μωρὸν*), to say that the Messiah, or Christ, pre-existed from eternity as God, and that He condescended to be born as man, and"—Trypho explodes the notion—that Christ is "not a Son of man" (Justin M. *Dialog. a. Tryph.* vol. ii. p. 154, ed. Otto, Jen. 1842).

Such assertion on the part of the Jew

that the Messiah is merely man; and here also is a denial of the Christian doctrine, that He is God, pre-existing from eternity, and took the nature of man. In the same Dialogue the Jewish interlocutor, Trypho, approves the tenets of the Ebionite heretics, who asserted that the Christ was a mere man (*ψαλὸς ἄνθρωπος*), and adds this remarkable declaration: "all we (Jews) expect that the Messiah will come as a man from man (*i. e.* from human parents), and that Elias will anoint Him when He is come" (*πάντες ἡμεῖς τὸν χριστὸν ἀνθρώπου ἐξ ἀνθρώπων προσδοκῶμεν γενέσθαι, καὶ τὸν Ἠλίαν χρίσαι αὐτὸν ἐλθόντα*, Trypho Judeus ap. Justin M. *Dialog.* §49, p. 156). And in §54, St. Justin Martyr, speaking in the name of the Christian believers, combats that assertion, and affirms that the Hebrew prophecies themselves, to which he appeals, testify that the Messiah is *not* a man born of man, according to the ordinary manner of human generation, *ἀνθρώπου ἐξ ἀνθρώπου κατὰ τὸ κοινὸν τῶν ἀνθρώπων γενεῶν*. And there is a remarkable passage in a subsequent portion of the same dialogue, where Justin says, "If, O Trypho, ye understood who He is that is sometimes called the Messenger of mighty counsel, and a Man by Ezekiel, and designated as the Son of Man by Daniel, and as a Child by Isaiah, and the Messiah and God by Daniel, and a Stone by many, and Wisdom by Solomon, and a Star by Moses, and the Day-spring by Zechariah, and who is represented as suffering, by Isaiah, and is called by him a Rod, and a Flower and Corner Stone, and the Son of God, you would not have spoken blasphemy against Him, who is already come, and who has been born, and has suffered, and has ascended into heaven and will come again" (Justin M. *a. Tryphon.* §126, p. 409), and Justin affirms that he has proved, against the Jews, that "Christ, who is the Lord and God, and Son of God," appeared to their Fathers, the Patriarchs, in various forms, under the old dispensation (§128, p. 425). Compare the authorities in Dörner, *On the Person of Christ*, i. pp. 265-271, Engl. transl.

In the middle of the third century, Origen wrote his apologetic work in defence of Christianity against Celsus, the Epicurean, and in various places of that treatise he recites the allegations of the Jews against the Gospel. In one passage, when Celsus, speaking in the person of a Jew, had said that one of the Hebrew prophets had predicted that the Son of God would come to judge the righteous and to punish the wicked, Origen rejoins, that such a notion is most improperly ascribed to a Jew; inasmuch as the Jews did indeed look for a Messiah, but *not* as the Son of God. "No Jew," he says, "would allow that any prophet ever said that a Son of God would come; but what the Jews do say, is, that the Christ of God will come; and they often dispute with us Christians, as to this very question for instance, concerning the Son of God, on the plea that no such Person exists or was ever foretold" (Origen, *Adv. Cels.* i. §49, vol. i. p. 365, B., see p. 38 and p. 79; ed. Spencer and other places, *s. g.* pp. 22, 30, 51, 62, 71, 82, 110, 136).

In the 4th century Eusebius testified that the Jews of that age would not accept the title Son of God as applicable to the Messiah (Euseb. *Dem. Evang.* iv. 1), and in later days they charge Christians with impiety and blasphemy for designating Christ by that title (Leontius, *Conc. Nicom.* ii. Act. iv.).

Lastly, a learned Jew, Orobio, in the 17th

century, in his conference with Limborch, affirms that if a prophet, or even, if it were possible, the Messiah Himself, were to work miracles, and yet lay claim to divinity, he ought to be put to death by stoning, as one guilty of blasphemy (*Orobio* ap. Limborch, *Amica Collatio*, p. 295, ed. Goud, 1888).

Hence, therefore, on the whole, there seems to be sufficient reason for concluding (with Beza, *Histoire des Juifs*, iv. c. 24), that although the Jews of our Lord's age might have inferred, and ought to have inferred, from their own Scriptures, that the Messiah, or Christ, would be a Divine Person, and the Son of God in the highest sense of the term; and although some among them, who were more enlightened than the rest, entertained that opinion; yet it was not the popular and generally received doctrine among the Jews that the Messiah would be other than a man, born of human parents, and not a divine being, and Son of God.

This conclusion reflects much light upon certain important questions of the Gospel History, and clears up several difficulties with regard to the evidences of Christianity.

1. It supplies an answer to the question, "Why was Jesus Christ put to death?" He was accused by the Jews before Pilate as guilty of sedition and rebellion against the power of Rome (Luke xlii. 1-5; cf. John xix. 12); but it is hardly necessary to observe that this was a mere pretext, to which the Jews resorted for the sake of exasperating the Roman governor against Him, and even of compelling Pilate, against his will, to condemn Him, in order that he might not lay himself open to the charge of "not being Caesar's friend" (John xix. 12); whereas, if our Lord had really announced an intention of emancipating the Jews from the Roman yoke, He would have procured for Himself the favour and support of the Jewish rulers and people.

Nor does it appear that Jesus Christ was put to death because He claimed to be the Christ. The Jews were at that time anxiously looking for the Messiah; the Pharisees asked the Baptist whether he was the Christ (John i. 20-25); "and all men mused in their hearts of John whether he were the Christ, or not" (Luke iii. 15).

On this it may be observed, in passing, that the people well knew that John the Baptist was the son of Zacharias and Elizabeth; they knew him to be a mere man, born after the ordinary manner of human generation; and yet they all thought it probable that he might be the Christ.

This circumstance proves, that, according to their notions, the Christ was not to be a divine person; certainly not the Son of God, in the Christian sense of the term. The same conclusion may be deduced from the circumstance that the Jews of that age eagerly welcomed the appearance of those false Christs (Matt. xxiv. 24), who promised to deliver them from the Roman yoke, and whom they knew to be mere men, and who did not claim divine origin, which they certainly would have done, if the Christ was generally expected to be the Son of God.

We see also that after the miraculous feeding, the people were desirous of "making Jesus a King" (John vi. 15); and after the raising of Lazarus at Bethany they met Him with enthusiastic acclamations, "Hosanna to the Son of David; blessed is He that cometh in the name of the Lord" (Matt. xxi. 9; Mark xi. 9; John xii. 13). And the eager and restless facility with which the Jews admitted the pretensions of almost every fanatical adven-

turer who professed to be the Messiah at that period, seems to show that they would have willingly allowed the claims of one who "wrought many miracles," as, even by the confession of the chief priests and Pharisees, Jesus of Nazareth did (John xi. 47), if He had been content with such a title as the Jews assigned to their expected Messiah, namely that of a great Prophet, distinguished by mighty works.

We find that when our Lord put to the Pharisees this question, "What think ye of Christ, whose Son is He?" their answer was not, "He is the Son of God," but "He is the Son of David;" and they could not answer the second question which He next propounded to them, "How then doth David, speaking in the Spirit, call Him Lord?" The reason was, because the Pharisees did not expect the Messiah to be the Son of God; and when He, who is the Messiah, claimed to be God, they rejected His claim to be the Christ.

The reason, therefore, of His condemnation by the Jewish Sanhedrim, and of His delivery to Pilate for crucifixion, was not that He claimed to be the Messiah or Christ, but because He asserted Himself to be much more than that: in a word, because He claimed to be the Son of God, and to be God.

This is further evident from the words of the Jews to Pilate, "We have a law, and by our law he ought to die, because he made himself the Son of God" (John xix. 7); and from the previous resolution of the Jewish Sanhedrim, "Then said they all, Art thou then the Son of God? And he said unto them, Ye say that I am. And they said, What need we any further witness? for we ourselves have heard of his own mouth. And the whole multitude of them arose and led him unto Pilate" (Luke xlii. 70, 71, xliii. 1).

In St. Matthew's Gospel the question of the High Priest is as follows:—"I adjure thee by the living God, that thou tell us whether thou be the Christ, the Son of God" (Matt. xxvi. 63). This question does not intimate that in the opinion of the High Priest the Christ was the Son of God, but it shows that Jesus claimed both titles, and in claiming them for Himself asserted that the Christ was the Son of God; but that this was not the popular opinion, is evident from the considerations above stated, and also from His words to St. Peter when the Apostle confessed Him to be the "Christ, the Son of the living God" (Matt. xvi. 16); He declared that Peter had received this truth, not from human testimony, but by extraordinary revelation: "Blessed art thou, Simon Bar-jona: for flesh and blood hath not revealed it unto thee, but My Father which is in heaven" (Matt. xvi. 17).

It was the claim which He put forth to be the Christ and Son of God, that led to our Lord's condemnation by the unanimous verdict of the Sanhedrim: "They all condemned Him to be guilty of death" (Mark xiv. 64; Matt. xxvi. 63-66); and the sense in which He claimed to be Son of God is clear from the narrative of John v. 15. The Jews sought the more to kill Him because He not only had broken the Sabbath, but said also that God was His own Father (*πατήρ ἰσὺς θεός*), making Himself "equal unto God;" and when He claimed Divine pre-existence, saying, "Before Abraham was (*ἔγενετο*), I am, then took they up stones to cast at him" (John viii. 58, 59); and when He asserted His own unity with God, "I and the Father are one"—one substance (*ἓς*), not one person (*εἷς*)—"Then the Jews

took up stones again to stone him" (John x. 30, 31); and this is evident again from their own words, "For a good work we stone thee not, but for blasphemy; and because that thou, being a man, makest thyself God" (John x. 33).

Accordingly we find that, after the Ascension, the Apostles laboured to bring the Jews to acknowledge that Jesus was not only the *Christ*, but was also a *Divine* Person, even the *Lord Jehovah*. Thus, for example, St. Peter, after the outpouring of the Holy Ghost on the Day of Pentecost by Christ, says, "Therefore let all the house of Israel know assuredly, that God hath made that same Jesus, whom ye have crucified, both *LORD* (*Κύριον*, *JEHOVAH*) and *Christ*" (Acts ii. 36).

2. This conclusion supplies a convincing proof of Christ's Godhead. If He is not the Son of God, equal with God, then there is no other alternative but that He was guilty of blasphemy; for He claimed "God as His own Father, making Himself equal with God," and by doing so He proposed Himself as an object of divine worship. And in that case He would have rightly been put to death; and the Jews in rejecting and killing Him would have been acting in obedience to the Law of God which commanded them to put to death any prophet, however distinguished he might be by the working of miracles, if he were guilty of blasphemy (Deut. xiii. 1-11); and the crucifixion of Jesus would have been an act of pious zeal on their part for the honour of God, and would have commended them to His favour and protection, whereas we know that it was that act which filled the cup of their national guilt and has made them outcasts from God to this day (Matt. xxiii. 32-38; Luke xiii. 33-35; 1 Thess. ii. 15, 16; James v. 6).

When they repent of this sin, and say, "Blessed (*εὐλογούμενος*) is he that cometh in the name of the Lord," and acknowledge Jesus to be Christ and the Son of God, coequal with God, then Israel shall be saved (Rom. xi. 26).

3. This conclusion also explains the fact—which might otherwise have perplexed and staggered us—that the miracles which Jesus wrought, and which the Jews and their rulers acknowledged to have been wrought by Him, did not have their due influence upon them; those mighty and merciful works did not produce the effect upon them which they ought to have produced, and which those works would have produced, if the Jews and their rulers had been prepared, as they ought to have been, by an intelligent study of their own Scriptures, to regard their expected Messiah as the Son of God, coequal with God.

Not being so prepared, they applied to those miracles the test applied by their own law, which enjoined that, if a prophet arose among them, and worked miracles, and endeavoured to draw them away from the worship of the true God, those miracles were to be regarded as trials of their own steadfastness, and were not to be accepted as proofs of a divine mission, "but the prophet himself was to be put to death" (Deut. xiii. 1-11). The Jews tried our Lord and His miracles by this law. Some of the Jews ventured to say that "Jesus of Nazareth was specially in the mind of the Divine Lawgiver when He framed that law" (see Fagius on the Chaldee Paraphrase of Deut. xiii., and his note on Deut. xviii. 15), and that it was provided expressly to meet His case. Indeed they do not hesitate to say that, in the words of the law, "if

thy brother, the son of thy mother, entice thee secretly" (Deut. xiii. 6), there was a prophetic reference to the case of Jesus, who "said that he had a human mother, but not a human father, but was the Son of God and was God" (see Fagius, l. c.).

Jesus claimed to be the Messiah; but according to the popular view and preconceived notions of the Jews, the Messiah was to be merely a human personage, and would not claim to be God and to be entitled to divine power. Therefore, though they admitted his miracles to be really wrought, yet they did not acknowledge the claim grounded on those miracles to be true, but rather regarded those miracles as trials of their loyalty to the One True God, whose prerogatives, they thought, were infringed and invaded by Him who wrought those miracles; and they even ascribed those miracles to the agency of the Prince of the Devils (Matt. xii. 24, 27; Mark iii. 22; Luke xi. 15), and said that He, who wrought those miracles, had a devil (John vii. 20, viii. 48), and they called Him Beelsebul (Matt. x. 25), because they thought that he was setting Himself in opposition to God.

4. "They all condemned Him to be guilty of death" (Mark xiv. 64). The Sanhedrim was unanimous in the sentence of condemnation. This is remarkable. We cannot suppose that there were not some conscientious persons in so numerous a body. Indeed, it may readily be allowed that many of the members of the Sanhedrim were actuated by an earnest zeal for the honour of God when they condemned Jesus to death, and that they did what they did with a view to God's glory, which they supposed to be disparaged by our Lord's pretensions; and that they were guided by a desire to comply with God's law, which required them to put to death every one who was guilty of blasphemy in arrogating to himself the power which belonged to God.

Hence we may explain our Lord's words on the cross, "Father, forgive them, for they know not what they do" (Luke xxiii. 34), "Father, they are not aware that He whom they are crucifying is Thy Son;" and St. Peter said at Jerusalem to the Jews after the crucifixion, "Now, brethren, I wot that through ignorance ye did it (i. e. rejected and crucified Christ), as did also your rulers" (Acts iii. 17); and St. Paul declared in the Jewish synagogue at Antioch in Pisidia, "they that dwell at Jerusalem, and their rulers, because they knew Him not, nor yet the voices of the prophets, which are read every Sabbath-day, have fulfilled them in condemning Him" (Acts xiii. 27).

Hence it is evident that the predictions of Holy Scripture may be accomplished before the eyes of men, while they are unconscious of that fulfilment; and that the prophecies may be even accomplished by persons who have the prophecies in their hands, and do not know that they are fulfilling them. Hence also it is clear that men may be guilty of enormous sins when they are acting according to their consciences and with a view to God's glory, and while they hold the Bible in their hands and hear its voice sounding in their ears (Acts xiii. 27); and that it is therefore of unspeakable importance not only to hear the words of the Scriptures, but to mark, learn, and inwardly digest them, with humility, docility, earnestness, and prayer, in order to understand their true meaning.

Therefore the Christian student has great reason

to thank God that He has given in the *New Testament* a divinely-inspired interpretation of the *Old Testament*, and also has sent the Holy Spirit to teach the Apostles all things (John xiv. 26), to abide for ever with His Church (John xiv. 16), the body of Christ (Col. i. 24), which He has made to be the pillar and ground of truth (1 Tim. iii. 15), and on whose interpretations, embodied in the creeds generally received among Christians, we may safely rely, as declaring the true sense of the Bible.

If the Jews and their rulers had not been swayed by prejudice, but in a careful, candid, and humble spirit had considered the evidence before them, they would have known that their promised Messiah was to be the Son of God, coequal with God, and that He was revealed as such in their own Scriptures, and thus His miracles would have had their due effect upon their minds.

5. Those persons who now deny Christ to be the Son of God, coequal and coeternal with the Father, are followers of the Jews, who, on the plea of zeal for the Divine Unity, rejected and crucified Jesus, who claimed to be God. Accordingly we find that the Ebionites, Cerinthians, Nazarenes, Photinians, and others who denied Christ's divinity, arose from the ranks of Judaism (cf. Waterland, *Works*, v. 240, ed. Oxf. 1823: on these heresies the writer of this article may perhaps be permitted to refer to his *Introduction to the First Epistle of St. John*, in his edition of the Greek Testament). It has been well remarked by the late Professor Blunt that the arguments by which the ancient Christian Apologists, such as Justin Martyr, Tertullian, and others, confuted the Jews, afford the strongest armour against the modern Socinians (see also the remark of St. Athanasius, *Orat. ii.*, adv. Arianos, pp. 377-383, where he compares the Arians to the Jews).

The Jews sinned against the comparatively dim light of the *Old Testament*: they who have fallen into their error reject the evidence of both Testaments.

6. Lastly, the conclusion stated in this article supplies a strong argument for the Divine origin and truth of Christianity. The doctrine of Christ, the Son of God as well as Son of Man, reaches from the highest pole of Divine glory to the lowest pole of human suffering. No human mind could ever have devised such a scheme as that: and when it was presented to the mind of the Jews, the favoured people of God, they could not reach to either of these two poles; they could not mount to the height of the Divine exaltation in Christ the Son of God, nor descend to the depth of human suffering in Christ the Son of Man. They invented the theory of two Messiahs, in order to escape from the imaginary contradiction between a suffering and triumphant Christ; and they rejected the doctrine of Christ's Godhead in order to cling to a defective and unscriptural Monotheism. They failed of grasping the true sense of their own Scriptures in both respects. But in the Gospel, Jesus Christ, Son of God and Son of Man, reaches from one pole to the other, and *fills all in all* (Eph. i. 23). The Gospel of Christ runs counter to the Jewish zeal for Monotheism, and incurred the charge of Polytheism, by preaching Christ the Son of God, coequal with the Father; and also contravened and challenged all the complex and dominant systems of Gentile Polytheism, by proclaiming the Divine

Unity. It boldly confronted the World, and it has conquered the World; because "the excellency of the power of the Gospel is not of man, but of God" (2 Cor. iv. 7).

The Author of the above article may refer for further confirmation of his statements, to an excellent work by the Rev. W. Wilson, B.D., and Fellow of St. John's College, Cambridge, entitled *An Illustration of the Method of explaining the New Testament by the early Opinions of Jews and Christians concerning Christ*, Cambridge, 1797; and to Dr. J. A. Dörner's *History of the Development of the Doctrine of the Person of Christ*, of which an English translation has been printed at Edinburgh, 1861, 2 vols.; and to Hagenbach, *Dogmen-Geschichte*, §42, §65, §66, 4te Auflage, Leipz. 1857. [C. W.]

SON OF MAN (בן־אדם), and in Chaldee

ܒܢ ܐܕܡ; *š ušr toū ādāmaw*, or *ušr ādāpaw*, the name of the Second Person of the Ever-blessed Trinity, the Eternal Word, the Everlasting Son, becoming Incarnate, and so made the Son of Man, the second Adam, the source of all grace to all men, united in His mystical body, the Christian Church.

1. In a general sense every descendant of Adam bears the name "Son of Man" in Holy Scripture, as in Job xxv. 6; Ps. cxliv. 3, cxlvi. 3; Is. li. 12, lvi. 2. But in a more restricted signification it is applied by way of distinction to particular persons. Thus the prophet Ezekiel is addressed by Almighty God as *Ben-Adam*, or "Son of Man," about eighty times in his prophecies. This title appears to be assigned to Ezekiel as a memento from God—(*μήνησο ἀνθρώπου εἶς*)—in order that the prophet, who had been permitted to behold the glorious manifestation of the Godhead, and to hold converse with the Almighty, and to see visions of futurity, should not be "exalted above measure by the abundance of his revelations," but should remember his own weakness and mortality, and not impute his prophetic knowledge to himself, but ascribe all the glory of it to God, and be ready to execute with meekness and alacrity the duties of his prophetic office and mission from God to his fellow-men.

2. In a still more emphatic and distinctive sense the title "Son of Man" is applied in the Old Testament to the Messiah. And, inasmuch as the Messiah is revealed in the Old Testament as a Divine Person and the Son of God (Ps. ii. 7, lxxix. 27; Is. vii. 14, ix. 6), it is a prophetic pre-announcement of His incarnation (compare Ps. viii. 4 with Heb. ii. 6, 7, 8, and 1 Cor. xv. 27).

In the Old Testament the Messiah is designated by this title, "Son of Man," in His royal and judicial character, particularly in the prophecy of Dan. vii. 13:—"Behold One like the Son of Man came with the clouds of heaven, and came to the Ancient of Days . . . and there was given Him dominion and glory . . . His dominion is an everlasting dominion." Here the title is not *Ben-ish*, or *Ben-Adam*, but *Bar-enosh*, which represents humanity in its greatest frailty and humility, and is a significant declaration that the exaltation of Christ in His kingly and judicial office is due to His previous condescension, obedience, self-humiliation, and suffering in His human nature (comp. Phil. ii. 5-11).

The title "Son of Man," derived from that passage of Daniel, is applied by St. Stephen to Christ in His heavenly exaltation and royal majesty:

"Behold I see the heavens opened, and the Son of Man standing on the right hand of God" (Acts vii. 56). This title is also applied to Christ by St. John in the Apocalypse, describing our Lord's priestly office, which He executes in heaven (Rev. i. 13): "In the midst of the seven golden candlesticks" (or golden lamps, which are the emblems of the churches, i. 20) "one like the Son of Man clothed with a garment down to the foot" (His priestly attire); "His head and His hairs were white like wool, as white as snow" (attributes of divinity; comp. Dan. vii. 9). St. John also in the Apocalypse (xiv. 14) ascribes the title "Son of Man" to Christ when He displays His kingly and judicial office: "I looked and beheld a white cloud, and upon the cloud one sat like unto the Son of Man, having on His head a golden crown, and in His hand a sharp sickle"—to reap the harvest of the earth.

3. It is observable that Ezekiel never *calls himself* "Son of Man;" and in the Gospels Christ is never called "Son of Man" by the Evangelists; but wherever that title is applied to Him there, it is *applied by Himself*.

The only passages in the New Testament where Christ is called "Son of Man" by anyone *except Himself*, are those just cited, and they relate to Him, not in His humiliation upon earth, but in His heavenly exaltation consequent upon that humiliation. The passage in John xii. 34, "Who is this Son of Man?" is an inquiry of the people concerning Him who applied this title to Himself.

The reason of what has been above remarked seems to be, that, as on the one hand it was expedient for Ezekiel to be reminded of his own humanity, in order that he should not be elated by his revelations; and in order that the readers of his prophecies might bear in mind that the revelations in them are not due to Ezekiel, but to God the Holy Ghost, who spake by him (see 2 Pet. i. 21); so, on the other hand, it was necessary that they who saw Christ's miracles, the evidences of His divinity, and they who read the evangelic histories of them, might indeed adore Him as God, but might never forget that He is Man.

4. The two titles "Son of God" and "Son of Man," declaring that in the one Person of Christ there are two natures, the nature of God and the nature of man, joined together, but not confused, are presented to us in two memorable passages of the Gospel, which declare the will of Christ that all men should confess Him to be God and man, and which proclaim the blessedness of this confession.

(1.) "Whom do men say that I, the Son of Man, am?" was our Lord's question to His Apostles; and "Whom say ye that I am?" Simon Peter answered and said, Thou art the Christ, the Son of the living God." Our Lord acknowledged this confession to be true, and to have been revealed from heaven, and He blessed him who uttered it: "Blessed art thou, Simon Bar-jona . . ."—"Thou art son of Jonas, Bar-jona (comp. John xxi. 15); and as truly as thou art Bar-jona, so truly am I Bar-enosh, Son of Man, and Ben-Elolihim, Son of God; and My Father, who is in heaven, hath revealed this truth unto thee. Blessed is every one that shall call this faith; for I Myself, Son of God and the living Rock on which the Church is built, and he who holds this faith is a solid stone, hewn out of Me the everlasting Rock, and built upon

Me" (see the authorities cited in the note on Matt. xvi. 18, in the present writer's edition).

(2.) The other passage, where the two titles (Son of God and Son of Man) are found in the Gospels, is no less significant. Our Lord, standing before Caiaphas and the chief priests, was interrogated by the high-priest, "Art thou the Christ, the Son of God?" (Matt. xxvi. 63; comp. Mark xiv. 61). "Art Thou, what Thou claimest to be, the Messiah? and art Thou, as Thou professest to be, a Divine Person, the Son of God, the Son of the Blessed?" "Jesus saith unto him, Thou sayest it; I am" (Matt. xxvi. 64; Mark xiv. 62).

But, in order that the high-priest and the council might not suppose Him to be a *Divine Person only*, and not to be also really and truly *Man*, our Lord added of His own accord, "Nevertheless" (παρὰ, besides, or, as St. Mark has it, *and, also*, in addition to the avowal of My Divinity) "I say unto you, Hereafter shall ye see the Son of Man sitting on the right hand of power, and coming in the clouds of heaven" (Matt. xxvi. 64; Mark xiv. 62). That is, "I am indeed the Son of God, but do not forget that I am also the Son of Man. Believe and confess the true faith, that I, who claim to be the Christ, am Very God and Very Man."

5. The Jews, in our Lord's age, were not disposed to receive either of the truths expressed in those words. They were so tenacious of the doctrine of the Divine Unity (as they understood it), that they were not willing to accept the assertion that Christ is the "Son of God;" Very God of Very God (see above, article SON OF GOD), and they were not disposed to admit that God could become incarnate, and that the Son of God could be also the Son of Man: (see the remarks on this subject by Dörner, *On the Person of Christ*, Introduction, throughout).

Hence we find that no sooner had our Lord asserted these truths, than "the high-priest rent his clothes, saying, He hath spoken blasphemy. What think ye? and they all condemned Him to be guilty of death" (Matt. xxvi. 65, 66; Mark xiv. 63, 64). And when St. Stephen had said, "Behold, I see the heavens opened, and the Son of Man standing on the right hand of God," then they "cried out with a loud voice, and stopped their ears, and ran upon him with one accord, and cast him out of the city, and stoned him" (Acts vii. 57, 58). They could no longer restrain their rage against him as guilty of blasphemy, because he asserted that Jesus, who had claimed to be the Son of God, and who had been put to death because He made this assertion, is also the Son of Man, and was then glorified; and that therefore they were mistaken in looking for another Christ, and that they had been guilty of putting to death the Messiah.

6. Here, then, we have a clear view of the difficulties which the Gospel had to overcome, in proclaiming Jesus to be the Christ, and to be the Son of God, and to be the Son of Man; and in the building up of the Christian Church on this foundation. It had to encounter the prejudices of the whole world, both Jewish and Gentile, in their work. It did encounter them, and has triumphed over them. Here is a proof of its divine origin.

7. If we proceed to analyze the various passages in the Gospel where Christ speaks of Himself as the Son of Man, we shall find that they not only teach the doctrine of the Incarnation of the Son of God (and thus afford a prophetic protest against the heresies which afterwards immured that doctrine

such as the heresy of the Docetæ, Valentines, and Marcion, who denied that *Jesus Christ* *was come in the flesh*, see on 1 John iv. 2, and 2 John 7; but they also declare the consequences of the Incarnation, both in regard to Christ, and in regard also to all mankind.

The consequences of Christ's Incarnation are described in the Gospels, as a capacity of being a perfect pattern and example of godly life to men (Phil. ii. 5; 1 Pet. ii. 21); and of suffering, of dying, of "giving His life as a ransom for all," of being "the propitiation for the sins of the whole world" (1 John ii. 2, iv. 10), of being the source of life and grace, of Divine Sonship (John i. 12), of Resurrection and Immortality to all the family of Mankind, as many as receive Him (John iii. 16, 36, xi. 25), and are engrafted into His body, and cleave to Him by faith and love, and participate in the Christian sacraments, which derive their virtue and efficacy from His Incarnation and Death, and which are the appointed instruments for conveying and imparting the benefits of His Incarnation and Death to us (comp. John iii. 5, vi. 53), who are "made partakers of the Divine nature" (2 Pet. i. 4), by virtue of our union with Him who is God and Man.

The infinite value and universal applicability of the benefits derivable from the Incarnation and sacrifice of the Son of God are described by our Lord, declaring the perfection of the union of the two natures, the human nature and the Divine, in His own person. "No man hath ascended up to heaven but He that came down from heaven, even the Son of Man which is in heaven; and as Moses lifted up the serpent in the wilderness, even so must the Son of Man be lifted up: that whosoever believeth in Him should not perish, but have eternal life; for God so loved the world, that He gave His only-begotten Son, that whosoever believeth in Him should not perish, but have everlasting life; for God sent not His Son into the world to condemn the world; but that the world through Him might be saved" (John iii. 13-17); and again, "What and if ye shall see the Son of Man ascend up where He was before?" (John vi. 62, compared with John i. 1-3).

8. By His perfect obedience in our nature, and by His voluntary submission to death in that nature, Christ acquired new dignity and glory, due to His obedience and sufferings. This is the dignity and glory of His mediatorial kingdom; that kingdom which He has as God-man, "the only Mediator between God and man"—(as partaking perfectly of the nature of both, and as making an *At-one-ment* between them), "the Man Christ Jesus" (1 Tim. ii. 5; Heb. ix. 15, xii. 24).

It was as Son of Man that He humbled Himself, it is as Son of Man that He is exalted; it was as Son of Man, born of a woman, that He was made under the Law (Gal. iv. 4), and as Son of Man He was Lord of the Sabbath-day (Matt. xii. 8); as Son of Man He suffered for sins (Matt. xvii. 12; Mark viii. 31), and as Son of Man He has authority on earth to forgive sins (Matt. ix. 6). It was as Son of Man that He had not where to lay His head (Matt. viii. 20; Luke ix. 58). It is as Son of Man that He wears on his head a golden crown (Rev. xiv. 14); it was as Son of Man that He was betrayed into the hands of sinful men, and suffered many things, and was rejected, and condemned and crucified (see Matt. xvii. 22, xx. 18, xxvi. 2, 24; Mark viii. 31, ix. 31, x. 33; Luke ix. 22, 44, xviii. 31, xxiv. 7). It is as Son of Man that He

now sits at the right hand of God, and as Son of Man He will come in the clouds of heaven, with power and great glory, in His own glory, and in the glory of His Father, and all His holy angels with Him, and it is as Son of Man that He will "sit on the throne of His glory," and "before Him will be gathered all nations" (Matt. xvi. 27, xxiv. 30, xxv. 31, 32; Mark xiv. 62; Luke xxi. 27); and He will send forth His angels to gather His elect from the four winds (Matt. xxiv. 31), and to root up the tares from out of His Field, which is the World (Matt. xiii. 38, 41); and to bind them in bundles to burn them, and to gather His wheat into His barn (Matt. xiii. 30). It is as Son of Man that He will call all from their graves, and summon them to His judgment-seat, and pronounce their sentence for everlasting bliss or woe; "for, the Father judgeth no man, but hath committed all judgment unto the Son; . . . and hath given Him authority to execute judgment also, because He is the Son of Man" (John v. 22, 27). Only "the pure in heart will see God" (Matt. v. 8; Heb. xii. 14); but the evil as well as the good will see their Judge: "every eye shall see Him" (Rev. i. 7). This is fit and equitable; and it is also fit and equitable that He, who as Son of Man, was judged by the world, should also judge the world; and that He who was rejected openly, and suffered death for all, should be openly glorified by all, and be exalted in the eyes of all, as King of kings, and Lord of lords.

9. Christ is represented in Scripture as the second Adam (1 Cor. xv. 45, 47; comp. Rom. v. 14), inasmuch as He is the *Father* of the new race of mankind; and, as we are all by nature in Adam, so are we by grace in Christ; and "as in Adam all die, even so in Christ all are made alive" (1 Cor. xv. 22); and "If any man be in Christ, he is a new creature" (2 Cor. v. 17; Eph. iv. 24); and He, who is the Son, is also in this respect a *Father*; and therefore Isaiah joins both titles in one, "To us a Son is given . . . and His name shall be called the Mighty God, the Everlasting Father" (Isa. ix. 6). Christ is the second Adam, as the Father of the new race; but in another respect He is unlike Adam, because Adam was formed in mature manhood from the earth; but Christ, the second Adam, is *Ben-Adam*, the Son of Adam; and therefore St. Luke, writing specially for the Gentiles, and desirous to show the universality of the redemption wrought by Christ, traces His genealogy to Adam (Luke iii. 23-38). He is Son of Man, inasmuch as he was the Promised Seed, and was conceived in the womb of the Virgin Mary, and took our nature, the nature of us all, and became "Emmanuel, God with us" (Matt. i. 23), "God manifested in the flesh" (1 Tim. iii. 16). Thus the new Creation sprung out of the old; and He made "all things new" (Rev. xxi. 5). The Son of God in Eternity became the Son of Man in Time. He turned back, as it were, the streams of pollution and of death, flowing in the innumerable channels of the human family, and introduced into them a new element, the element of life and health, of divine incorruption and immortality; which would not have been the case, if He had been merely like Adam, having an independent origin, springing by a separate efflux out of the earth, and had not been *Ben-Adam* as well as *Ben-Elohim*, the Son of Adam, as well as the Son of God. And this is what St. Paul observes in his comparison—and contrast—between Adam and Christ (Rom. v. 15-18), "*Not*, as was the transgression (in Adam) so likewise was

the free gift (in Christ). For if (as is the fact) the many (i. e. all) died by the transgression of the one (Adam), much more the grace of God, and the gift by the grace that is of the one Man Jesus Christ, overflowed to the many; and not, as by one who sinned, so is the gift; for the judgment came from one man to condemnation, but the free gift came forth from many transgressions to their state of justification. For if by the transgression of the one (Adam), Death reigned by means of the one, much more they who receive the abundance of grace and of the gift of righteousness will reign in life through the one, Jesus Christ . . . Thus, where Sin abounded, Grace did much more abound (Rom. v. 20); for, as, by the disobedience of the one man (Adam), the many were made sinners, so by the obedience of the one (Christ), the many were made righteous. . . ."

10. The benefits accruing to mankind from the incarnation of the Son of God are obvious from these considerations:—

We are not so to conceive of Christ as of a Deliverer *external* to humanity, but as incorporating humanity in Himself, and uniting it to God; as rescuing our nature from Sin, Satan, and Death; and as carrying us through the grave and gate of death to a glorious immortality; and bearing mankind, His lost sheep, on His shoulders; as bearing us and our sins in His own body on the tree (1 Pet. ii. 24); as bringing us through suffering to glory; as raising our nature to a dignity higher than that of angels; as exalting us by His Ascension into heaven; and as making us to "sit together with Himself in heavenly places" (Eph. ii. 6), even at the right hand of God. "To him that overcometh," He says, "will I grant to sit with Me on My throne, even as I also overcame and am set down with My Father on His throne" (Rev. iii. 21). These are the hopes and privileges which we derive from the Incarnation of Christ, who is the Life (John i. 4, xi. 25, xiv. 6; 1 John i. 2); from our filial adoption by God in Him (John i. 12; 1 John iii. 1, 2); and from our consequent capacity of receiving the Spirit of adoption in our hearts (Gal. iv. 6); and from our membership and indwelling in Him, who is the Son of God from all eternity, and who became, for our sakes, *our* Son for our salvation, the Son of Man, and submitted to the weakness of our humanity, in order that we might partake in the glory of His immortality.

11. These conclusions from Holy Scripture have been stated clearly by many of the ancient Fathers, among whom it may suffice to mention S. Irenaeus (*Adv. Haereseos*, iii. 20, p. 247, Grabe): *ἡρώσαν (Χριστός) ἀνθρώπου τῷ Θεῷ· εἰ γὰρ μὴ ἀνθρώπος ἐνίκησεν τὸν ἀντίπαλον τοῦ ἀνθρώπου, οὐκ ἂν δικαιώσῃ ἐνίκηθι δ' ἐχθρὸς· πάλιν τε εἰ μὴ ὁ Θεὸς ἰδρυέσθαι τὴν σωτηρίαν, οὐκ ἂν βαβαίως ἐσχομένη αὐτῇ καὶ εἰ μὴ ἐννηνέσθῃ ὁ ἀνθρώπος τῷ Θεῷ, οὐκ ἂν ἡδυνήθῃ μετασχεῖν τῆς ἀφθαρσίας· βεβαίως γὰρ τὸν μιστήριον Θεοῦ τε καὶ ἀνθρώπου, διὰ τῆς ἰδέας πρὸς ἑαυτοὺς ἐκπεύδοντες εἰς φιλίαν καὶ ἀδελφότητα ἐκπαιδεύονται.* And iii. 21, p. 250: "Hic igitur Filius Dei, existens Verbum Patris . . . quoniam ex Maria factus est Filius hominis . . . primitias resurrectionis hominis in Seipso faciens, ut quemadmodum

Caput resurrexit a mortuis, sic et reliquum corpus omnis hominis, qui invenitur in vita . . . resurgens per compages et conjunctiones coalescens, et confirmatum augmento Dei" (Eph. iv. 16). And S. Cyprian (*De Idololorum Vanitate*, p. 538, ed. Venet. 1758): "Ilujus gratiae disciplinaeque arbiter et magister Sermo (*Ab-yos*) et Filius Dei mittitur, qui per prophetas omnes retro Illuminator et Doctor humani generis praedicabatur. Hic est virtus Dei . . . carnem Spiritu Sancto cooperante induitur . . . Hic Deus noster, Hic Christus est, qui Mediator duorum hominem induit, quem perducet ad Patrem. Quod homo est, esse Christus voluit, ut et homo possit esse, quod Christus est." And S. Augustine (*Serm.* 121): "Filius Dei factus est Filius hominis, ut vos, qui eratis filii hominis, efficiemini filii Dei." (C. W.)

SOOTHSAYER. [DIVINATION.]

SOPATER (*Σόπατρος*: *Sopater*). Sopater the son of Pyrrhus of Berea was one of the companions of St. Paul on his return from Greece into Asia, as he came back from his third missionary journey (Acts xx. 4). Whether he is the same with Sosipater, mentioned in Rom. xvi. 21, cannot be positively determined. The name of his father, Pyrrhus, is omitted in the received text, though it has the authority of the oldest MSS., A, B, D, E, and the recently discovered Codex Sinaiticus, as well as of the Vulgate, Coptic, Sahidic, Philoxenian-Syriac, Armenian, and Slavonic versions. Mill condemns it, apparently without reason, as a traditional gloss. [W. A. W.]

SOPHERETH (*סופרת*: *Sopheret, Sophereth*; Alex. *ῥοσφρηθ, Σοφρηθ*: *Sopheret, Sophereth*). "The children of Sophereth" were a family who returned from Babylon with Zerubbabel among the descendants of Solomon's servants (Ezr. ii. 55, Neh. vii. 57). Called *AZAPHION* in 1 Esdr. v. 33.

SOPHONTAS (*Sophonias*). The Prophet ZEPHANIAH (2 Esd. i. 40).

SORCERER. [DIVINATION.]

SOREK, THE VALLEY OF (*נַחַל סֹרֶק*):

* *Ἀλσούρη*; *Al χεμαρούς Σούρη*: *Vallis Sorec*). A wady . . . use the modern Arabic term which precisely answers to the Hebrew *nachal*, in which lay the residence of Dalilah (Judg. xvi. 4). It appears to have been a Philistine place, and possibly was nearer Gaza than any other of the chief Philistine cities, since thither Samson was taken after his capture at Dalilah's house. Beyond this there are no indications of its position, nor is it mentioned again in the Bible. Eusebius and Jerome (*Onomast.* *Σούρη*) state that a village named Capharsorech was shown to their day "on the north of Eleutheropolis, near the town of Saar (or Sarna), i. e. Zorah, the native place of Samson." Zorah is now supposed to have been fully 10 miles N. of *Beit-Jibrin*, the modern representative of Eleutheropolis, though it is not impossible that there may have been a second further south. No trace of the name of Sorek has been yet discovered either in the one position or the other.^a But the district is comparatively unexplored, and doubtless it will ere long be discovered.

The word *Sorek* in Hebrew signifies a peca-

^a The *Al* is no doubt the last relic of *Nachal*: comp. *Urd-Jordan*; and *Kanan, River*.

^b M. Van de Velde (*Mém.* 360) proposes the Wady

Sinaiim, which runs from near *Beit-Jibrin* to *Ashdod* but this he adds to be mere conjecture.

Early cluster kind of vine, which is said to have derived its name from the dusky colour of its grapes, that perhaps being the meaning of the root (Gesenius, *Theo.* 1342). It occurs in three passages of the Old Test. (Is. v. 2; Jer. ii. 21; and, with a modification, in Gen. xlix. #11). It appears to be used in modern Arabic for a certain purple grape, grown in Syria, and highly esteemed; which is noted for its small raisins, and minute, soft pipe, and produces a red wine. This being the case, the valley of Sorek may have derived its name from the growth of such vines, though it is hardly safe to affirm the fact in the unquestioning manner in which Gesenius (*Theo.* ib.) does. Anacolon was celebrated among the ancients for its wine; and, though not in the neighbourhood of Zorah, was the natural port by which any of the productions of that district would be exported to the west. [G.]

SOSIPATER. (*Σωσιπάτρος*: *Sosipater*.) 1. A general of Judas Maccabaeus, who in conjunction with Dosithens defeated Timotheus and took him prisoner, c. B.C. 164 (2 Macc. xii. 19-24).

2. Kinsman or fellow tribesman of St. Paul, mentioned in the salutations at the end of the Epistle to the Romans (xvi. 21). He is probably the same person as SOPATER of Beroea. [B. F. W.]

SOSTHENES (*Σωσθένης*: *Sosthenes*) was a Jew at Corinth, who was seized and beaten in the presence of Gallio, on the refusal of the latter to entertain the charge of heresy which the Jews alleged against the Apostle Paul (see Acts xviii. 12-17). His precise connexion with that affair is left in some doubt. Some have thought that he was a Christian, and was maltreated thus by his own countrymen, because he was known as a special friend of Paul. But it is improbable if Sosthenes was a believer, that Luke would mention him merely as "the ruler of the synagogue" (*ἄρχισυνάγωγος*), without any allusion to his change of faith. A better view is, that Sosthenes was one of the bigoted Jews; and that "the crowd" (*οὗτος* simply, and not *οὗτος* of *ἑαυτοῦ*, is the true reading) were Greeks who, taking advantage of the indifference of Gallio, and ever ready to show their contempt of the Jews, turned their indignation against Sosthenes. In this case he must have been the s. of Crispus (Acts xviii. 8) as chief of the synagogue (possibly a colleague with him, in the looser sense of *ἄρχισυνάγωγος*, as in Mark v. 22), or, as Biscoe conjectures, may have belonged to the other synagogue at Corinth. Chrysostom's notion that Crispus and Sosthenes were names of the same person, is arbitrary and unsupported.

Paul wrote the First Epistle to the Corinthians jointly in his own name and that of a certain Sosthenes whom he terms "the brother" (1 Cor. i. 1). The mode of designation implies that he was well known to the Corinthians; and some have held that he was identical with the Sosthenes mentioned in the Acts. If this be so, he must have been converted at a later period (Wetstein, *N. Test.* vol. ii. p. 576), and have been at Ephesus and not at Corinth, when Paul wrote to the Corinthians. The name was a common one, and but little stress can be laid on that coincidence. Eusebius says (*H. E.* i. 12, §1) that this Sosthenes (1 Cor. i. 1) was one of the seventy disciples, and a later tradition adds that he became bishop of the church at Colophon in Ionia. [H. B. H.]

* The Arabic versions of this passage retain the term *brother* as a proper name.

SOSTRATUS (*Σωστράτος*: *Sostratus*), a commander of the Syrian garrison in the Acra at Jerusalem (*ὁ τῆς ἀκροπόλεως ἐπαρχός*) in the reign of Antiochus Epiphanes (c. B.C. 172: 2 Macc. iv. 27, 29). [B. F. W.]

SOTAI (סוֹטָאִי: *Sotai*, *Sotref*; Alex. *Σοταί* in Neh.: *Sotai*, *Sothai*). The children of Sotai were a family of the descendants of Solomon's servants who returned with Zerubbabel (Ezr. ii. 55; Neh. vii. 57).

SOUTH RAM'OTH (רָמֹת נָגֶב: *Ramoth ad meridiem*; Alex. *ἡ βόρεια* v.: *Ramoth ad meridiem*). One of the places frequented by David and his band of outlaws during the latter part of Saul's life, and to his friends in which he showed his gratitude when opportunity offered (1 Sam. xxx. 27). The towns mentioned with it show that Ramoth must have been on the southern confines of the country—the very border of the desert. Bethel, in ver. 27, is almost certainly not the well-known sanctuary, but a second of the same name, and Hebron was probably the most northern of all the places in the list. It is no doubt identical with **RAMATH OF THE SOUTH**, a name the same in every respect except that by a dialectical or other change it is made plural, *Ramoth* instead of *Ramath*. [G.]

SOW. [SWINE.]

SOWER, SOWING. The operation of sowing with the hand is one of so simple a character, as to need little description. The Egyptian paintings furnish many illustrations of the mode in which it was conducted. The sower held the vessel or basket containing the seed, in his left hand, while with his right he scattered the seed broadcast (Wilkinson's *Anc. Eg.* ii. 12, 18, 39; see **AGRICULTURE** for one of these paintings). The "drawing out" of the seed is noticed, as the most characteristic action of the sower, in Ps. cxvi. 6 (A. V. "precious") and Am. ix. 13: it is uncertain whether this expression refers to drawing out the handful of seed from the basket, or to the dispersion of the seed in regular rows over the ground (Gesen. *Theo.* p. 827). In some of the Egyptian paintings the sower is represented as preceding the plough: this may be simply the result of bad perspective, but we are told that such a practice actually prevails in the East in the case of sandy soils, the plough serving the purpose of the harrow for covering the seed (Russell's *Algeria*, i. 74). In wet soils the seed was trodden in by the feet of animals (Is. xxxii. 20), as represented in Wilkinson's *Anc. Eg.* ii. 12. The sowing season commenced in October and continued to the end of February, wheat being put in before, and barley after the beginning of January (Russell, i. 74). The Mosaic law prohibited the sowing of mixed seed (Lev. xix. 19; Deut. xxii. 9): Josephus (*Ant.* iv. 8, §20) supposes this prohibition to be based on the repugnancy of nature to intermixture, but there would appear to be a further object of a moral character, viz. to impress on man's minds the general lesson of purity. The regulation offered a favourable opportunity for Rabbinical refinement, the results of which are embodied in the treatise of the Mishna, entitled *K'la'im*, §§1-3. That the ancient Hebrews did not consider themselves prohibited from planting several kinds of seeds in the same field, appears from Is. xxviii. 25. A distinction is made in Lev. xi. 37, 38 between dry and wet seed, in respect to contact with a corpse; the latter, on being more susceptible

of contamination, would be rendered useless thereby, the former would not. The analogy between the germination of seed and the effects of a principle or a course of action on the human character for good or for evil is frequently noticed in Scripture (Prov. xi. 18; Matt. xiii. 19, 24; 2 Cor. ix. 6; Gal. vi. 7).

SPAIN (*Ἰσπανία*: *Hispania*). The Hebrews were acquainted with the position and the mineral wealth of Spain from the time of Solomon, whose alliance with the Phoenicians enlarged the circle of their geographical knowledge to a very great extent. [TARSHISH.] The local designation, Tarshish, representing the *Tartessus* of the Greeks, probably prevailed until the fame of the Roman wars in that country reached the East, when it was superseded by its classical name, which is traced back by Bochart to the Shemitic *tsáphán*, "rabbit," and by Humboldt to the Basque *Espana*, descriptive of its position on the edge of the continent of Europe (*Dict. of Geog.* i. 1074). The Latin form of this name is represented by the *Ἰσπανία* of 1 Macc. viii. 3 (where, however, some copies exhibit the Greek form), and the Greek by the *Ἰσπανία* of Rom. xv. 24, 28. The passages cited contain all the Biblical notices of Spain: in the former the conquests of the Romans are described in somewhat exaggerated terms; for though the Carthaginians were expelled as early as B.C. 206, the native tribes were not finally subdued until B.C. 25, and not until then could it be said with truth that "they had conquered all the place" (1 Macc. viii. 4). In the latter, St. Paul announces his intention of visiting Spain. Whether he carried out this intention is a disputed point connected with his personal history. [PAUL.] The mere intention, however, implies two interesting facts, viz. the establishment of a Christian community in that country, and this by means of Hellenistic Jews resident there. We have no direct testimony to either of these facts; but as the Jews had spread along the shores of the Mediterranean as far as Cyrene in Africa and Rome in Europe (Acts ii. 10), there would be no difficulty in assuming that they were also found in the commercial cities of the eastern coast of Spain. The early introduction of Christianity into that country is attested by Irenaeus (i. 3) and Tertullian (*ado. Jud.* 7). An inscription, purporting to record a persecution of the Spanish Christians in the reign of Nero, is probably a forgery (Gieseler's *Eccl. Hist.* i. 82, note 5). [W. L. B.]

SPARROW (ἰσπάρ, *trippór*: ὄρνις, *ornís*, *trépsidov*, *trépsidov*, *trépsidov*: χίμαρος in Neb. v. 18, where LXX. probably read ὄρνις: *avis*, *colucris*, *passer*). The above Heb. word occurs upwards of forty times in the O. T. In all passages excepting two it is rendered by A. V. indifferently "bird" or "fowl." In Ps. lxxiv. 3, and Ps. cii. 7, A. V. renders it "sparrow." The Greek *ἰσπάρ* ("sparrow," A. V.) occurs twice in N. T., Matt. x. 29, Luke xii. 6, 7, where the Vulg. has *passeres*. *Trippór* (ἰσπάρ), from a root signifying to "chirp" or "twitter," appears to be a phonetic representation of the call note of any passerine bird. Similarly the modern Arabs use the term زواش (*zawash*) for all small birds which chirp, and

زورور (*zorror*) not only for the starling, but for any other bird with a harsh, shrill twitter, both these being evidently phonetic names.

Trippór is therefore exactly translated by the LXX. *trépsidov*, explained by Moschopolus *τὴν μὲν τὴν ὀρνίθων*, although it may sometimes have been used in a more restricted sense. See Athen. *Deipn.* ix. 391, where two kinds of *trépsidov* in the more restricted signification are noted.

It was reserved for later naturalists to discriminate the immense variety of the smaller birds of the passerine order. Excepting in the cases of the thrushes and the larks, the natural history of Aristotle scarcely comprehends a longer catalogue than that of Moses.

Yet in few parts of the world are the species of passerine birds more numerous or more abundant than in Palestine. A very cursory survey has supplied a list of above 100 different species of this order. See *Ibis*, vol. i. p. 26 seq., and vol. iv. p. 277 seq.

But although so numerous, they are not generally noticeable for any peculiar brilliancy of plumage beyond the birds of our own climate. In fact, with the exception of the denizens of the mighty forests and fertile alluvial plains of the tropics, it is a popular error to suppose that the nearer we approach the equator, the more gorgeous necessarily is the coloration of the birds. There are certain tropical families with a brilliancy of plumage which is unrivalled elsewhere; but any outlying members of these groups, as for instance the kingfisher of Britain, or the bee-eater and roller of Europe, are not surpassed in brightness of dress by any of their southern relations. Ordinarily in the warmer temperate regions, especially in those which like Palestine possess neither dense forests nor morasses, there is nothing in the brilliancy of plumage which especially arrests the attention of the unobservant. It is therefore no matter for surprise if, in an unscientific age, the smaller birds were generally grouped indiscriminately under the term *trippór*, *trépsidov* or *passer*. The proportion of bright to obscure coloured birds is not greater in Palestine than in England; and this is especially true of the southern portion, Judaea, where the wilderness with its bare hills and arid ravines affords a home chiefly to those species which rely for safety and concealment on the modesty and inconspicuousness of their plumage.

Although the common sparrow of England (*Passer domesticus*, L.) does not occur in the Holy Land, its place is abundantly supplied by two very closely allied Southern species (*Passer salicicola*, Vieill., and *Passer cisalpinus*, Tem.). Our English Tree Sparrow (*Passer montanus*, L.) is also very common, and may be seen in numbers on Mount Olivet, and also about the sacred enclosure of the mosque of Omar. This is perhaps the exact species referred to in Ps. lxxiv. 3, "Yea, the sparrow hath found an house."

Though in Britain it seldom frequents houses, yet in China, to which country its eastward range extends, Mr. Swinhoe, in his 'Ornithology of Amoy,' informs us its habits are precisely those of our familiar house sparrow. Its shyness here may be the result of persecution; but in the East the Mussulmans hold in respect any bird which resorts to their houses, and in reverence such as build in or about the mosques, considering them to be under the Divine protection. This natural veneration has doubtless been inherited from antiquity. We learn from Aelian (*Var. Hist.* v. 17) that the Athenians

5 3 3

* Comp. the Arabic عصفور (*asfur*), "a sparrow."

condemned a man to death for molesting a sparrow in the temple of Aesculapius. The story of Aristæus of Cyme, who rebuked the cowardly advice of the oracle of Branchidas to surrender a suppliant, by his symbolical act of driving the sparrows out of the temple, illustrates the same sentiment (Herod. i. 159), which was probably shared by David and the Israelites, and is alluded to in the Psalm. There can be no difficulty in interpreting מִן־הַבְּרִיבִּים, not as the altar of sacrifice exclusively, but as the place of sacrifice, the sacred enclosure generally, *τὸ τέμενος*, "fanum." The interpretation of some commentators, who would explain מִן־הַבְּרִיבִּים in this passage of certain sacred birds, kept and preserved by the priests in the temple like the Sacred Ibis of the Egyptians, seems to be wholly without warrant. See Bochart, iii. 21, 22.

Most of our commoner small birds are found in Palestine. The starling, chaffinch, greenfinch, linnet, goldfinch, corn bunting, pipit, blackbird, song thrush, and the various species of wagtail abound. The woodlark (*Alauda arvensis*, L.), crested lark (*Galerida cristata*, Boie.), Calandra lark (*Melanocorypha calandra*, Bp.), short-toed lark (*Calandrella brachydactyla*, Kanp.), Isabel lark (*Alauda deserti*, Licht.), and various other desert species, which are snared in great numbers for the markets, are far more numerous on the southern plains than the skylark in England. In the olive-yards, and among the brushwood of the hills, the Ortolan bunting (*Emberiza hortulana*, L.), and especially Cretzschmaer's bunting (*Emberiza caesia*, Cretz.), take the place of our common yellow-hammer, an exclusively northern species. Indeed, the second is seldom out of the traveller's sight, hopping before him from bough to bough with its simple but not unpleasing note. As most of our warblers (*Sylviidae*) are summer migrants, and have a wide eastern range, it was to be expected that they should occur in Syria; and accordingly upwards of twenty of those on the British list have been noted there, including the robin, redstart, white-throat, blackcap, nightingale, willow-wren, Dartford warbler, whinchat, and stonechat. Besides these, the Palestine lists contain fourteen others, more southern species, of which the most interesting are perhaps the little fantail (*Cisticola schoenicola*, Bp.), the orphee (*Cirruca orpheus*, Boie.), and the Sardinian warbler (*Sylvia melanocephala*, Lath.).

The chats (*Saxicolae*), represented in Britain by the wheatear, whinchat, and stonechat, are very numerous in the southern parts of the country. At least nine species have been observed, and by their lively motions and the striking contrast of black and white in the plumage of most of them, they are the most attractive and conspicuous bird-inhabitants which catch the eye in the hill country of Judaea, the favourite resort of the genus. Yet they are not recognised among the Bedouin inhabitants by any name to distinguish them from the larks.

The rock sparrow (*Petronia stultia*, Strickl.) is a common bird in the barer portions of Palestine, eschewing woods, and generally to be seen perched alone on the top of a rock or on any large stone. From this habit it has been conjectured to be the bird alluded to in Ps. cii. 7, as "the sparrow that sitteth alone upon the housetop;" but as the rock sparrow, though found among ruins, never resorts to inhabited buildings, it seems more probable that the bird to which the psalmist alludes is

the blue thrush (*Petroscopsophus cyaneus*, Boie.), a bird so conspicuous that it cannot fail to attract attention by its dark-blue dress and its plaintive monotonous note; and which may frequently be observed perched on houses and especially on out-buildings in the villages of Judaea. It is a solitary bird, eschewing the society of its own species, and rarely more than a pair are seen together. Certainly the allusion of the psalmist will not apply to the sociable and garrulous house- or tree-sparrows.

Petroscopsophus cyaneus.

Among the most conspicuous of the small birds of Palestine are the shrikes (*Lanius*), of which the red-backed shrike (*Lanius collurio*, L.) is a familiar example in the south of England, but there represented by at least five species, all abundantly and generally distributed, viz., *Enneoctonus rufus*, Bp., the woodchat shrike, *Lanius meridionalis*, L.; *L. minor*, L.; *L. persimilis*, Tem.; and *Telephonus oculatus*, Gr.

There are but two allusions to the singing of birds in the Scriptures, Eccles. xii. 4 and Ps. civ. 12, "By them shall the fowls (חַיִּים) of the heaven have their habitation which sing among the branches." As the psalmist is here speaking of the sides of streams and rivers ("By them"), he probably had in his mind the bulbul (بُلْبُل) of the country, or Palestine nightingale (*Ixos xanthopygius*, Hempr.), a bird not very far removed from the thrush tribe, and a closely allied species of which is the true bulbul of Persia and India. This lovely songster, whose notes, for volume and variety, surpass those of the nightingale, wanting only the final cadence, abounds in all the wooded districts of Palestine, and especially by the banks of the Jordan, where in the early morning it fills the air with its music.

In one passage (Ex. xxxix. 4), *trippôr* is joined with the epithet מְרִיב (ravenous), which may very well describe the raven and the crow, both passerine birds, yet carrion feeders. Nor is it necessary to stretch the interpretation so as to include raptorial birds, which are distinguished in Hebrew and Arabic by so many specific appellations.

With the exception of the raven tribe, there is no prohibition in the Levitical law against any passerine birds being used for food; while the wanton destruction or extermination of any species was guarded

against by the humane provision in Deut. xxi. 6. Small birds were therefore probably as ordinary an article of consumption among the Israelites as they still are in the markets both of the Continent and of the East. The inquiry of our Lord, "Are not five sparrows sold for two farthings?" (Luke xii. 6), "Are not two sparrows sold for a farthing?" (Matt. x. 29), points to their ordinary exposure for sale in His time. At the present day the markets of Jerusalem and Jaffa are attended by many "fowlers" who offer for sale long strings of little birds of various species, chiefly sparrows, wagtails, and larks. These are also frequently sold ready plucked, trussed in rows of about a dozen on slender wooden skewers, and are cooked and eaten like kabobs.

It may well excite surprise how such vast numbers can be taken, and how they can be vended at a price too small to have purchased the powder required for shooting them. But the gun is never used in their pursuit. The ancient methods of fowling to which we find so many allusions in the Scriptures are still pursued, and, though simple, are none the less effective. The art of fowling is spoken of no less than seven times in connexion with חֶבֶץ, e. g. "a bird caught in the snare," "bird hasteth to the snare," "fall in a snare," "escaped out of the snare of the fowler." There is also one still more precise allusion, in Eccles. xi. 30, to the well-known practice of using decoy or call birds, *καὶ οἱ θηρευτῆς ἐν σαρδέλλῃ*. The reference in Jer. v. 27, "As a cage is full of birds" (חֶבֶץ), is probably to the same mode of snaring birds.

There are four or five simple methods of fowling practised at this day in Palestine which are probably identical with those alluded to in the O. T. The simplest, but by no means the least successful, among the dexterous Bedouins, is fowling with the throw-stick. The only weapon used is a short stick, about 18 inches long and half an inch in diameter, and the chase is conducted after the fashion in which, as we read, the Australian natives pursue the kangaroo with their boomerang. When the game has been discovered, which is generally the red-legged great partridge (*Caccabis saxatilis*, Mey.), the desert partridge (*Ammoperdix Heyi*, Gr.), or the little bustard (*Ovis tetrax*, L.), the stick is whirled with a revolving motion so as to strike the legs of the bird as it runs, or sometimes at a rather higher elevation, so that when the victim, alarmed by the approach of the weapon, begins to rise, its wings are struck and it is slightly disabled. The fleet pursuers soon come up, and, using their bur-nouses as a sort of net, catch and at once cut the throat of the game. The Mussulmans rigidly observe the Mosaic injunction (Lev. xvii. 13) to spill the blood of every slain animal on the ground. This primitive mode of fowling is confined to those birds which, like the red-legged partridges and bustards, rely for safety chiefly on their running powers, and are with difficulty induced to take flight. The writer once witnessed the capture of the little desert partridge (*Ammoperdix Heyi*) by this method in the wilderness near Hebron: an interesting illustration of the expression in 1 Sam. xxvi. 20, "as when one doth hunt a partridge in the mountains."

A more scientific method of fowling is that alluded to in Eccles. xi. 30, by the use of decoy-birds. The birds employed for this purpose are very carefully trained and perfectly tame, that they may

utter their natural call-note without any alarm from the neighbourhood of man. Partridges, quails, larks, and plovers are taken by this kind of fowling, especially the two former. The decoy-bird, in a cage, is placed in a concealed position, while the fowler is secreted in the neighbourhood, near enough to manage his gins and snares. For game birds a common method is to construct of brushwood a narrow run leading to the cage, sometimes using a sort of bag-net within the brushwood. This has a trap-door at the entrance, and when the dove has entered the run, the door is dropped. Great numbers of quail are taken in this manner in spring. Sometimes, instead of the more elaborate decoy of a run, a mere cage with an open door is placed in front of the decoy-bird, of course well concealed by grass and herbage, and the door is let fall by a string, as in the other method. For larks and other smaller birds the decoy is used in a somewhat different manner. The cage is placed without concealment on the ground, and springs, nets, or horse-hair nooses are laid round it to entangle the feet of those whom curiosity attracts to the stranger; or a net is so contrived as to be drawn over them, if the cage be placed in a thicket or among brushwood. Immense numbers can be taken by this means in a very short space of time. Traps, the door of which overbalances by the weight of the bird, exactly like the traps used by the shepherds on the Sussex downs to take wheatears and larks, are constructed by the Bedouin boys, and also the horse-hair springs so familiar to all English schoolboys, though these devices are not wholesale enough to repay the professional fowler. It is to the noose on the ground that reference is made in Ps. cxxiv. 7, "The snare is broken and we are escaped." In the towns and gardens great numbers of birds, starlings and others, are taken for the markets at night by means of a large loose net on two poles, and a lantern, which startles the birds from their perch, when they fall into the net.

At the season of migration immense numbers of birds, and especially quails, are taken by a yet more simple method. When notice has been given of the arrival of a flight of quails, the whole village turns out. The birds, fatigued by their long flight, generally descend to rest in some open space a few acres in extent. The fowlers, perhaps twenty or thirty in number, spread themselves in a circle round them, and, extending their loose large bur-nouses with both arms before them, gently advance towards the centre, or to some spot where they take care there shall be some low brushwood. The birds, not seeing their pursuers, and only slightly alarmed by the cloaks spread before them, begin to run together without taking flight, until they are hemmed into a very small space. At a given signal the whole of the pursuers make a din on all sides, and the flock, not seeing any mode of escape, rush huddled together into the bushes, when the bur-nouses are thrown over them, and the whole are easily captured by hand.

Although we have evidence that dogs were used by the ancient Egyptians, Assyrians, and Indians in the chase, yet there is no allusion in Scripture to their being so employed among the Jews, nor does it appear that any of the ancients employed the sagacity of the dog, as we do that of the pointer and setter, as an auxiliary in the chase of winged game. At the present day the Bedouins of Palestine employ, in the pursuit of larger game, a very valuable race of greyhounds, equalling the Scottish staghound in

succ and strength; but the inhabitants of the towns have a strong prejudice against the unclean animal, and never cultivate its instinct for any further purpose than that of protecting their houses and flocks (Is. lvi. 10; Job xxx. 1), and of removing the offal from their towns and villages. No wonder, then, that its use has been neglected for purposes which would have entailed the constant danger of defilement from an unclean animal, besides the risk of being compelled to reject as food game which might be torn by the dogs (cf. Ex. xxii. 31; Lev. xxii. 8, &c.).

Whether falconry was ever employed as a mode of fowling or not is by no means so clear. Its antiquity is certainly much greater than the introduction of dogs in the chase of birds; and from the statement of Aristotle (*Anim. Hist.* ix. 24), "In the city of Thrace formerly called Cedropolis, men hunt birds in the marshes with the help of hawks," and from the allusion to the use of falconry in India, according to Photius' abridgement of Ctesias, we may presume that the art was known to the neighbours of the ancient Israelites (see also Aelian, *Hist. An.* iv. 26, and Pliny, x. 8). Falconry, however, requires an open and not very rugged country for its successful pursuit, and Palestine west of the Jordan is in its whole extent ill adapted for this species of chase. At the present day falconry is practised with much care and skill by the Arab inhabitants of Syria, though not in Judaea proper. It is indeed the favourite amusement of all the Bedouins of Asia and Africa, and esteemed an exclusively noble sport, only to be indulged in by wealthy sheiks. The rarest and most valuable species of hunting falcon (*Falco Lanarius*, L.), the Lanner, is a native of the Lebanon and of the northern hills of Palestine. It is highly prized by the inhabitants, and the young are taken from the nest and sold for a considerable price to the chieftains of the Hauran. Forty pounds sterling is no uncommon price for a well-trained falcon. A description of falconry as now practised among the Arabs would be out of place here, as there is no direct allusion to the subject in the O. T. or N. T.

[H. B. T.]

SPARTA (Σπάρτη, 1 Macc. xiv. 16; Λακεδαιμόνιοι, 2 Macc. v. 9; A. V. "Lacedaemonians"). In the history of the Maccabees mention is made of a remarkable correspondence between the Jews and the Spartans, which has been the subject of much discussion. The alleged facts are briefly these. When Jonathan endeavoured to strengthen his government by foreign alliances (c. B.C. 144), he sent to Sparta to renew a friendly intercourse which had been begun at an earlier time between Areus and Onias (AREUS; ONIAS), on the ground of their common descent from Abraham (1 Macc. xii. 5-23). The embassy was favourably received, and after the death of Jonathan "the friendship and league" was renewed with Simon (1 Macc. xiv. 16-23). No results are deduced from this correspondence, which is recorded in the narrative without comment; and imperfect copies of the official documents are given as in the case of similar negotiations with the Romans. Several questions arise out of these statements as to (1) the people described under the name Spartans, (2) the relationship of the Jews and Spartans, (3) the historic character of the events, and (4) the persons referred to under the names Onias and Areus.

1. The whole context of the passage, as well as the independent reference to the connexion of the

"Lacedaemonians" and Jews in 2 Macc. v. 9, seems to prove clearly that the reference is to the Spartans, properly so called; Josephus evidently understood the records in this sense, and the other interpretations which have been advanced are merely conjectures to avoid the supposed difficulties of the literal interpretation. Thus Michaelis conjectured that the words in the original text were Σπάρτες, Σπάρ (Obad. ver. 20; Ges. *Thes.* s. v.), which the translators read erroneously as Σπάρ, Σπάρ, Σπάρ, and thus substituted Sparta for Sapharad [SEPHARAD]. And Frankel, again (*Monatschrift*, 1853, p. 456), endeavours to show that the name Spartans may have been given to the Jewish settlement at Nisibis, the chief centre of the Armenian Dispersion. But against these hypotheses it may be urged conclusively that it is incredible that a Jewish colony should have been so completely separated from the mother state as to need to be reminded of its kindred, and also that the vicissitudes of the government of this strange city (1 Macc. xii. 20, Βασιλεύς; xiv. 20, ἀρχοῦντες καὶ ἡ πόλις) should have corresponded with those of Sparta itself.

2. The actual relationship of the Jews and Spartans (2 Macc. v. 9, συγγένεια) is an ethnological error, which it is difficult to trace to its origin. It is possible that the Jews regarded the Spartans as the representatives of the Pelasgi, the supposed descendants of Peleg the son of Eber (Stillingfleet, *Origines Sacrae*, iii. 4, 15; Ewald, *Gesch.* iv. 277, note), just as in another place the Pergamenes trace back their friendship with the Jews to a connexion in the time of Abraham (Jos. *Ant.* xiv. 10, §22); if this were so, they might easily spread their opinion. It is certain, from an independent passage, that a Jewish colony existed at Sparta at an early time (1 Macc. xv. 23); and the important settlement of the Jews in Cyrene may have contributed to favour the notion of some intimate connexion between the two races. The belief in this relationship appears to have continued to later times (Jos. *B. J.* i. 26, §1), and, however mistaken, may be paralleled by other popular legends of the eastern origin of Greek states. The various hypotheses proposed to support the truth of the statement are examined by Wernsdorff (*De fide Lib. Macc.* §94), but probably no one now would maintain it.

3. The incorrectness of the opinion on which the intercourse was based is obviously no objection to the fact of the intercourse itself; and the very obscurity of Sparta at the time makes it extremely unlikely that any forger would invent such an incident. But it is urged that the letters said to have been exchanged are evidently not genuine, since they betray their fictitious origin negatively by the absence of characteristic forms of expression, and positively by actual inaccuracies. To this it may be replied that the Spartan letters (1 Macc. xii. 20-23, xiv. 20-23) are extremely brief, and exist only in a translation of a translation, so that it is unreasonable to expect that any Doric peculiarities should have been preserved. The Hellenistic translator of the Hebrew original would naturally render the text before him without any regard to what might have been its original form (xii. 22-25, ἐλθέτω, ἀρχή; xiv. 20, ἀδελφοί). On the other hand the absence of the name of the second king of Sparta in the first letter (1 Macc. xii. 20), and of both kings in the second (1 Macc. xiv. 20), is probably to be explained by the political circumstances under

which the letters were written. The text of the first letter, as given by Josephus (*Ant.* xii. 4, §10), contains some variations, and a very remarkable additional clause at the end. The second letter is apparently only a fragment.

4. The difficulty of fixing the date of the first correspondence is increased by the recurrence of the names involved. Two kings bore the name Areus, one of whom reigned B.C. 309-265, and the other, his grandson, died B.C. 257, being only eight years old. The same name was also borne by an adventurer, who occupied a prominent position at Sparta, c. B.C. 184 (Polyb. xliii. 11, 12). In Judaea, again, three high priests bore the name Onias, the first of whom held office B.C. 330-309 (or 300); the second B.C. 240-226; and the third c. B.C. 198-171. Thus Onias I. was for a short time contemporary with Areus I., and the correspondence has been commonly assigned to them (Palmer, *De Epist.*, etc., Darmst. 1828; Grimm, on 1 Macc. xii.). But the position of Judaea at that time was not such as to make the contraction of foreign alliances a likely occurrence; and the special circumstances which are said to have directed the attention of the Spartan king to the Jews as likely to effect a diversion against Demetrius Poliorcetes when he was engaged in the war with Cassander, B.C. 302 (Palmer, quoted by Grimm, *l. c.*), are not completely satisfactory, even if the priesthood of Onias can be extended to the later date.* This being so, Josephus is probably correct in fixing the event in the time of Onias III. (*Ant.* xii. 4, §10). The last-named Areus may have assumed the royal title, if that is not due to an exaggerated translation, and the absence of the name of a second king is at once explained (Usher, *Annales*, A.C. 183; Herzfeld, *Gesch. d. V. Isr.* i. 215-218). At the time when Jonathan and Simon made negotiations with Sparta, the succession of kings had ceased. The last absolute ruler was Nabia, who was assassinated in B.C. 192. (Wernsdorff, *De fide Lib. Macc.* §§93-112; Grimm, *l. c.*; Herzfeld, *l. c.* The early literature of the subject is given by Wernsdorff.) [B. F. W.]

SPEAR. [ARMS.]

SPEARMEN (ἰσχυροὶ). The word thus rendered in the A. V. of Acts xxiii. 23 is of very rare occurrence, and its meaning is extremely obscure. Our translators followed the *tanosarii* of the Vulgate, and it seems probable that their rendering approximates most nearly to the true meaning. The reading of the Codex Alexandrinus is ἰσχυροὶ, which is literally followed by the Peshito-Syriac, where the word is translated "darters with the right hand." Lachmann adopts this reading, which appears also to have been that of the Arabic in Walton's Polyglot. Two hundred ἰσχυροὶ formed part of the escort which accompanied St. Paul in the night-march from Jerusalem to Caesarea. They are clearly distinguished both from the *εὐπεριόδοι*, or heavy-armed legionaries, who only went as far as Antipatris, and from the *ἱππεῖς*, or cavalry, who continued the journey to Caesarea. As nothing is said of the return of the ἰσχυροὶ to Jerusalem after their arrival at Antipatris, we may infer that they accompanied the cavalry to Caesarea, and this

* Ewald (*Gen.* iv. 276, 277, note) supposes that the letter was addressed to Onias II. during his minority (a.d. 280-240), in the course of the wars with Demetrius.

strengthens the supposition that they were irregular light-armed troops, so lightly armed, indeed, as to be able to keep pace on the march with mounted soldiers. Meyer (*Kommentar*, II. 2 s. 404, 2te Aufl.) conjectures that they were a particular kind of light-armed troops (called by the Romans *Velites*, or *Rorarii*), probably either javelin-men or slingers. In a passage quoted by the Emperor Constantine Porphyrogeneta (*Them.* i. 1) from John of Philadelphia they are distinguished both from the archers and from the peltasts, or targeteers, and with these are described as forming a body of light-armed troops, who in the 10th century were under the command of an officer called a *tumarch*. Grotius, however, was of opinion that at this late period the term had merely been adopted from the narrative in the Acts, and that the usage in the 10th century is no safe guide to its true meaning. Others regard them as body-guards of the governor, and Meursius, in his *Glossarium Graeco-barbarum*, supposes them to have been a kind of auxiliary lighters, who had the charge of arresting prisoners; but the great number (200) employed is against both these suppositions. In Sukias and the *Etymologicum Magnum* *σπασφόροι* is given as the equivalent of ἰσχυροὶ. The word occurs again in one of the Byzantine Historians, Theophylactus Simocatta (iv. 1), and is used by him of soldiers who were employed on skirmishing duty. It is probable, therefore, that the ἰσχυροὶ were light-armed troops of some kind, but nothing is certainly known about them. [W. A. W.]

SPICE, SPICES. Under this head it will be desirable to notice the following Hebrew words, *bāšām*, *nīšōth*, and *samim*.

1. *Bāšām*, *basam*, or *bāsem* (בָּשָׂם, בִּשְׂמָה, or בִּשְׂמָה: *ḥōšēmanā*, *šummanā*: *aromata*). The first-named form of the Hebrew term, which occurs only in Cant. v. 1, "I have gathered my myrrh with my spice," points apparently to some definite substance. In the other places, with the exception perhaps of Cant. i. 13, vi. 2, the words refer more generally to sweet aromatic odours, the principal of which was that of the balsam, or balm of Gilead; the tree which yields this substance is now generally admitted to be the *Amyris* (*Balsamodendron*; *opobalsamum*; though it is probable that other species of *Amyridaceae* are included under the terms. The identity of the Hebrew name with the Arabic

Basham (بَشَام) or *Balastān* (بَلَسْتَان) leaves no reason to doubt that the substances are identical. The *Amyris opobalsamum* was observed by Yerahkeli near Mecca; it was called by the Arabs *Abnasham*, i. e. "very odorous." But whether this was the same plant that was cultivated in the plains of Jericho, and celebrated throughout the world (Pliny, *N. H.* xii. 25; Theophrastus, *Hist. Plant.* ix. 6; Josephus, *Ant.* xv. 4, §2; Strabo, xvi. 387; *sec.*), it is difficult to determine; but being a tropical plant, it cannot be supposed to have grown except in the warm valleys of the S. of Palestine. The shrub mentioned by Burckhardt (*Trav.* p. 323) as growing in gardens near Tiberias, and which he was informed was the balsam, cannot have been the tree in question. The A. V. never renders *Bāšām* by "balm;" it gives this word as the representative of the Hebrew *šēmet*, or *šēmet* [BALM]. The form *Basem* or *Bāsem*, which is of frequent occurrence as

the O. T., may well be represented by the general term of "spices," or "sweet odours," in accordance with the renderings of the LXX. and Vulg. The balm of Gilead tree grows in some parts of Arabia and Africa, and is seldom more than fifteen feet high, with straggling branches and scanty foliage. The balsam is chiefly obtained from incisions in the bark, but the substance is procured also from the green and ripe berries. The balsam orchards near Jericho appear to have existed at the time of Titus by whose legions they were taken formal possession of, but no remains of this celebrated plant are now to be seen in Palestine. (See *Scripture Herbal*, p. 53.)

Balm of Gilead (*Amyris Nodosa*).

2. *Nôdôth* (נֹדֹת): *Opulasma. aromata*. The company of Ishmaelitic merchants to whom Joseph was sold were on their way from Gilead to Egypt, with their camels bearing *nôdôth*, *tseri* [BALM], and *lôl* (*ladanum*) (Gen. xxxvii. 25); this same substance was also among the presents which Jacob sent to Joseph in Egypt (see Gen. xliii. 11). It is probable from both these passages that *nôdôth*, if a name for some definite substance, was a product of Palestine, as it is named with other "best fruits of the land," the *lôl* in the former passage being the gum of the *Cistus creticus*, and not "myrrh," as the A. V. renders it. [MYRRH.] Various opinions have been formed as to what *nôdôth* denotes, for which see Celsius, *Hierob.* i. 548, and Rosenmüller, *Sokol.* in *Gen.* (l. c.); the most probable explanation is that which refers the word to the Arabic

nakd'at (נֹכֶדֶת), i. e. "the gum obtained from the *Tragacanth*" (*Astragalus*), three or four species of which genus are enumerated as occurring in Palestine; see Strand's *Flora Palaestina*, No. 413-416. The gum is a natural exudation from the trunk and branches of the plant, which on being

"exposed to the air grows hard, and is formed either into lumps or slender pieces curled and winding like worms, more or less long according as matter offers" (Tournafort, *Voyage*, i. 59, ed. Lond. 1741).

Astragalus Tragacantha.

It is uncertain whether the word נֹכֶדֶת in 2 K.

xx. 13; Is. xxxix. 2, denotes spice of any kind. The A. V. reads in the text "the house of his precious things," the margin gives "spicery," which has the support of the Vulg., Aq., and Symm. It is clear from the passages referred to that Hezekiah possessed a house or treasury of precious and useful vegetable productions, and that *nôdôth* may in these places denote, though perhaps not exclusively, *Tragacanth* gum. Keil (*Comment.* l. c.) derives the word from an unused root (נָכַד, "implevit loculum"), and renders it by "treasure."

3. *Samân* (סַמָּן): *ḥibsumma, ḥibsumas, ḥibsumma, Opulasma: suave fragrans, boni odoris, gratissimus, aromata*. A general term to denote those aromatic substances which were used in the preparation of the anointing oil, the incense offerings, &c. The root of the word, according to Gesenius, is to be referred to the Arabic *Samen*, "olefecit," whence *Samân*, "an odoriferous substance." For more particular information on the various aromatic substances mentioned in the Bible the reader is referred to the articles which treat of the different kinds: FRANKINCENSE, GALBANUM, MYRRH, SPIKENARD, CINNAMON, &c.

The spices mentioned as being used by Nicodemus for the preparation of our Lord's body (John xix. 39, 40) are "myrrh and aloes," by which latter word must be understood, not the aloes of medicine (*Aloe*), but the highly-scented wood of the *Aquilaria agallochum* (but see *ALOES*, App. A). The enormous quantity of 100 lbs. weight of which St. John speaks, has excited the incredulity of some authors. Josephus, however, tells us that there were five hundred spicebearers at Herod's funeral (*Ant.* xvii. 8, §3), and in the Talmud it is said

that 80 lbs. of opobalsamum were employed at the funeral of a certain Rabbi; still there is no reason to conclude that 100 lbs. weight of pure myrrh and aloes was consumed; the words of the Evangelist imply a preparation (*μίγμα*) in which perhaps the myrrh and aloes were the principal or most costly aromatic ingredients; again, it must be remembered that Nicodemus was a rich man, and perhaps was the owner of large stores of precious substances; as a constant though timid disciple of our Lord, he probably did not scruple at any sacrifice so that he could show his respect for Him. [W. H.]

SPIDER. The representative in the A. V. of the Hebrew words *'acôbîsh* and *semâmîth*.

1. *'Acôbîsh* (עֲכֹבִישׁ: ἀράχνη: *aranea*) occurs in Job viii. 14, where of the ungodly (A. V. hypocrite) it is said his "hope shall be cut off, and his trust shall be the house of an *'acôbîsh*," and in Is. lix. 5, where the wicked Jews are allegorically said to "weave the web of the *'acôbîsh*." There is no doubt of the correctness of our translation in rendering this word "spider." In the two passages quoted above, allusion is made to the fragile nature of the spider's web, which, though admirably suited to fulfil all the requirements of the animal, is yet most easily torn by any violence that may be offered to it. In the passage in Is. (l. c.), however, there is probably allusion also to the lurking habits of the spider for his prey: "The wicked hatch viper's eggs and weave the spider's web . . . their works are works of iniquity, wasting and destruction are in their paths." We have no information as to the species of *Araneidae* that occur in Palestine, but doubtless this order is abundantly represented.

2. *Semâmîth* (סַמְאִמִּית: καλαβότης: *stellio*), wrongly translated by the A. V. "spider" in Prov. xxx. 28, the only passage where the word is found, has reference, it is probable, to some kind of lizard (Bochart, *Hieroz.* ii. 510). The *Semâmîth* is mentioned by Solomon as one of the four things that are exceeding clever, though they be little upon earth. "The *Semâmîth* taketh hold with her hands, and is in kings' palaces." This term exists in the modern Greek language under the form *σαμίδμυθος*. "Quem Graeci hodie *σαμίδμυθος* vocant, antiquae Graeciae est *καλαβότης*, id est *stellio*—quae vox pura Hebraica est et reperitur in Prov. cap. xxx. 28, סַמְאִמִּית" (Salmusii *Plin. Exercit.* p. 817, b. G.). The lizard indicated is evidently some species of *Gecko*, some notice of which genus of animals is given under the article *LIZARD*, where the *Letidh* was referred to the *Ptyodactylus Gecko*. The *Semâmîth* is perhaps another species. [W. H.]

SPIKENARD (שִׁנְאֵל: *nârd*: *νάρδος*: *nardus*).

We are much indebted to the late lamented Dr. Royle for helping to clear up the doubts that had long existed as to what particular plant furnished the aromatic substance known as "spikenard." Of this substance mention is made twice in the O. T., viz. in Cant. i. 12, where its sweet odour is alluded to, and in iv. 13, 14, where it is enumerated with various other aromatic substances which were imported at an early age from Arabia or India and the far East. The ointment with which our Lord was anointed as He sat at meat in Simon's house at Bethany consisted of this precious substance, the costliness of which may be inferred from the indignant surprise manifested by

some of the witnesses of the transaction (Mark xiv. 3-5; John xii. 3-5). With this may be compared Horace, 4 *Carm.* xii. 16, 17—

"Nardo vina merebere.

Nardi parvus onyx eliciet odorem."

Dioscorides speaks of several kinds of *νάρδος*, and gives the names of various substances which composed the ointment (i. 77). The Hebrew *nârd*, according to Gesenius, is of Indian origin, and signifies the *stalk* of a plant; hence one of the Arabic names given by Avicenna as the equivalent of *nard* is *sunbul*, "spica;" comp. the Greek *σακδόσταχυς*, and our "spikenard." But whatever may be the derivation of the Heb. שִׁנְאֵל, there is no doubt that *sunbul* is by Arabian authors used as the representative of the Greek *nardos*, as Sir Wm. Jones has shown (*Asiat. Res.* ii. 416). It appears, however, that this great Oriental scholar was unable to obtain the plant from which the drug is procured, a wrong plant having been sent him by Roxburgh. Dr. Royle when director of the E. I. Company's botanic garden at Saharunpore, about 30 miles from the foot of the Himalayan Mountains, having ascertained that the *jatamansae*, one of the Hindu synonyms for the *sunbul*, was annually brought from the mountains overhanging the Ganges and Jumna rivers down to the plains, purchased some of these fresh roots and planted them in the botanic gardens. They produced the same plant which in 1825 had been described by Don from specimens sent by Dr. Wallich from Nepal, and named by him *Patrinia jatamansi* (see the *Prodromus Florae Nepalesis*, &c., *accedunt plantae a Wallichio nuperius missae*, Lond. 1825). The identity of the *jatamansi* with the *Sunbul hindae* of the Arabs is established beyond a doubt by the form of a portion of the rough stem of the plant, which the Arabs describe as being like the tail of an ermine (see woodcut). This plant, which has

Spikenard.

been called *Nardostachys jatamansi* by De Candolle, is evidently the kind of *nardos* described by Dioscorides (i. 8) under the name of γαργυρίς, i. e. "the Ganges nard." Dioscorides refers especially to its having many haggly (σολυαδμους) spikes

growing from one root. It is very interesting to note that Dioscorides gives the same locality for the plant as is mentioned by Royle, ἀπὸ τινος κα-
ταμὸν παραβάντος τοῦ ὄρους, Ἐγγυον καλου-
μένου παρ' ὃ φύεται: though he is here speaking
of lowland specimens, he also mentions plants ob-
tained from the mountains. [W. H.]

SPINNING (𐤒𐤍𐤕: 𐤓𐤁𐤕). The notices of spinning in the Bible are confined to Ex. xxxv. 25, 26; Matt. vi. 28; and Prov. xxxi. 13. The latter passage implies (according to the A. V.) the use of the same instruments which have been in vogue for hand-spinning down to the present day, viz. the distaff and spindle. The distaff, however, appears to have been dispensed with, and the term^a so rendered means the spindle itself, while that rendered "spindle"^b represents the *whirl* (*verticillus*, Plin. xxviii. 11) of the spindle, a button or circular rim which was affixed to it, and gave steadiness to its circular motion. The "whirl" of the Syrian women was made of amber in the time of Pliny (l. c.). The spindle was held perpendicularly in the one hand, while the other was employed in drawing out the thread. The process is exhibited in the Egyptian paintings (Wilkinson, ii. 85). Spinning was the business of women, both among the Jews (Ex. l. c.), and for the most part among the Egyptians (Wilkinson, ii. 84). [W. L. B.]

SPIRIT, THE HOLY. In the O. T. He is generally called 𐤒𐤓𐤕𐤍 𐤍𐤕𐤕, or 𐤍𐤕𐤕 𐤍𐤕𐤕, the Spirit of God, the Spirit of Jehovah; sometimes the Holy Spirit of Jehovah, as Ps. li. 11; Is. lxiii. 10, 11; or the Good Spirit of Jehovah, as Ps. cxlvi. 10; Neh. ix. 20. In the N. T. He is generally 𐤓𐤁𐤕 𐤓𐤁𐤕, or simply 𐤓𐤁𐤕, the Holy Spirit, the Spirit; sometimes the Spirit of God, of the Lord, of Jesus Christ, as in Matt. iii. 16; Acts v. 9; Phil. i. 19, &c.

In accordance with what seems to be the general rule of Divine Revelation, that the knowledge of heavenly things is given more abundantly and more clearly in later ages, the person, attributes, and operations of the Holy Ghost are made known to us chiefly in the New Testament. And in the light of such later revelation, words which when heard by patriarchs and prophets were probably understood imperfectly by them, became full of meaning to Christians.

In the earliest period of Jewish history the Holy Spirit was revealed as co-operating in the creation of the world (Gen. i. 2), as the Source, Giver, and Sustainer of life (Job xxvii. 3, xxxiii. 4; Gen. ii. 7); as resisting (if the common interpretation be correct) the evil inclinations of men (Gen. vi. 3); as the Source of intellectual excellence (Gen. xii. 38; Deut. xxxiv. 9); of skill in handicraft (Ex. xxviii. 3, xxxi. 3, xxxv. 31); of supernatural knowledge and prophetic gifts (Num. xxiv. 2); of valour and those qualities of mind or body which give one man acknowledged superiority over others (Judg. iii. 10, vi. 34, xi. 29, xiii. 25).

In that period which began with Samuel, the effect of the Spirit coming on a man is described in the remarkable case of Saul as change of heart (1 Sam. x. 6, 9), shown outwardly by prophesying (1 Sam. x. 10; comp. Num. xi. 25, and 1 Sam. xix. 30). He departs from a man whom He has once changed (1 Sam. xvi. 14). His departure is the

departure of God (xvi. 14, xviii. 12, xxviii. 15). His presence is the presence of God (xvi. 13, xviii. 12). In the period of the Kingdom the operation of the Spirit was recognised chiefly in the inspiration of the prophets (see Witatus, *Miscellanea Sacra*, lib. i.; J. Smith's *Select Discourses*, 6. *Of Prophecy*; Knobel, *Prophetismus der Hebräer*). Separated more or less from the common occupations of men to a life of special religious exercise (Bp. Bull's *Sermons*, x. p. 187, ed. 1840), they were sometimes workers of miracles, always foretellers of future events, and guides and advisers of the social and political life of the people who were contemporary with them (2 K. ii. 9; 2 Chr. xxiv. 20; Ex. ii. 23; Neh. ix. 30, &c.). In their writings are found abundant predictions of the ordinary operations of the Spirit which were to be most frequent in later times, by which holiness, justice, peace, and consolation were to be spread throughout the world (Is. xi. 2, xlii. 1, lxi. 1, &c.).

Even after the closing of the canon of the O. T. the presence of the Holy Spirit in the world continued to be acknowledged by Jewish writers (Wisd. i. 7, ix. 17; Philo, *De Gigant.* 5; and see Ridley, *Mayer Lectures*, Sermon ii. p. 81, &c.).

In the N. T., both in the teaching of our Lord and in the narratives of the events which preceded His ministry and occurred in its course, the existence and agency of the Holy Spirit are frequently revealed, and are mentioned in such a manner as shows that these facts were part of the common belief of the Jewish people at that time. There was, in truth, the ancient faith, but more generally entertained, which looked upon prophets as inspired teachers, accredited by the power of working signs and wonders (see Nitzsch, *Christl. Lehre*, §84). It was made plain to the understanding of the Jews of that age that the same Spirit who wrought of old amongst the people of God was still at work. "The Dove forsook the ark of Moses and fixed its dwelling in the Church of Christ" (Bull, *On Justification*, Diss. ii. ch. xi. §7). The gifts of miracles, prediction, and teaching, which had cast a fitful lustre on the times of the great Jewish prophets, were manifested with remarkable vigour in the first century after the birth of Christ. Whether in the course of eighteen hundred years miracles and predictions have altogether ceased, and, if so, at what definite time they ceased, are questions still debated among Christians. On this subject reference may be made to Dr. Conyers Middleton's *Free Enquiry into the Miraculous Powers of the Christian Church*; Dr. Brooke's *Examination of Middleton's Free Enquiry*; W. Dodwell's *Letter to Middleton*; Bp. Douglas's *Criterion*; J. H. Newman's *Essay on Miracles*, &c. With respect to the gifts of teaching bestowed both in early and later ages, compare Neander, *Planting of Christianity*, b. iii. ch. v., with Horsley, *Sermons*, xiv., Potter, *On Church Government*, ch. v., and Hooker, *Eccles. Polity*, v. 72, §§5-8.

The relation of the Holy Spirit to the Incarnate Son of God (see Oxford translation of *Treatises of Athanasius*, p. 196, note d) is a subject for reverent contemplation rather than precise definition. By the Spirit the redemption of mankind was made known, though imperfectly, to the prophets of old (2 Pet. i. 21), and through them to the people of God. And when the time for the Incarnation had arrived, the miraculous conception of the Redeemer (Matt. i. 18) was the work of the Spirit; by the Spirit He was anointed in the womb or at baptism

(Acts x. 38; cf. Pearson, *On the Creed*, Art. i. p. 126, ed. Oxon. 1843); and the gradual growth of His perfect human nature was in the Spirit (Luke ii. 49, 52). A visible sign from heaven showed the Spirit descending on and abiding with Christ, whom He thenceforth filled and led (Luke iv. 1), co-operating with Christ in His miracles (Matt. xii. 18). The multitude of disciples are taught to pray for and expect the Spirit as the best and greatest boon they can seek (Luke xi. 13). He inspires with miraculous powers the first teachers whom Christ sends forth, and He is repeatedly promised and given by Christ to the Apostles (Matt. x. 20, xii. 28; John xiv. 16, xx. 22; Acts i. 8).

Perhaps it was in order to correct the grossly defective conceptions of the Holy Spirit which prevailed commonly among the people, and to teach them that this is the most awful possession of the heirs of the kingdom of heaven, that our Lord Himself pronounced the strong condemnation of blasphemers of the Holy Ghost (Matt. xii. 31). This has roused in every age the susceptibility of tender consciences, and has caused much inquiry to be made as to the specific character of the sin so denounced, and of the human actions which fall under so terrible a ban. On the one hand it is argued that no one now occupies the exact position of the Pharisees whom our Lord condemned, for they had not entered into covenant with the Holy Spirit by baptism; they did not merely disobey the Spirit, but blasphemously attributed His works to the devil; they resisted not merely an inward motion but an outward call, supported by the evidence of miracles wrought before their eyes. On the other hand, a morbid conscience is prone to apprehend the unpardonable sin in every, even unintentional, resistance of an inward motion which may proceed from the Spirit. This subject is referred to in Article XVI. of the Church of England, and is discussed by Burnet, Beveridge, and Harold Browne, in their *Expositions of the Articles*. It occupies the greater part of Athanasius' *Fourth Epistle to Serapion*, ch. 8-22 (sometimes printed separately as a Treatise on Matt. xii. 31). See also Augustine, *Ep. ad Rom. Expositio inchoata*, §§14-23, tom. iii. pt. 2, p. 933. Also Odo Cameracensis (A.D. 1113), *De Blasphemia in Sp. Sanctum*, in Migne's *Patrologia Lat.* vol. 183; J. Denison (A.D. 1611), *The Sin against the Holy Ghost*; Waterland's *Sermons*, xvii. in *Works*, vol. v. p. 706; Jackson, *On the Creed*, bk. viii. ch. iii. p. 770.

But the Ascension of our Lord is marked (Eph. iv. 8; John vii. 39, &c.) as the commencement of a new period in the history of the inspiration of men by the Holy Ghost. The interval between that event and the end of the world is often described as the Dispensation of the Spirit. It was not merely (as Didymus Alex. *De Trinitate*, iii. 34, p. 431, and others have suggested) that the knowledge of the Spirit's operations became more general among mankind. It cannot be allowed (though Bp. Heber, *Lectures*, viii. 514 and vii. 488, and Warburton have maintained it) that the Holy Spirit has sufficiently redeemed His gracious promise to every succeeding age of Christians only by presenting us with the New Testament. Something more was promised, and continues to be given. Under the old dispensation the gifts of the Holy Spirit were unaccompanied, not universal, intermittent, chiefly external. All this was changed. Our Lord, by enjoining (Matt. xxviii. 19) that every Christian should be baptized in the name of the Holy Ghost,

indicated at once the absolute necessity from that time forth of a personal connexion of every believer with the Spirit; and (in John xvi. 7-15) He declares the internal character of the Spirit's work, and (in John xiv. 16, 17, &c.) His permanent stay. And subsequently the Spirit's operations under the new dispensation are authoritatively announced as universal and internal in two remarkable passages (Acts ii. 16-21; Heb. viii. 8-12). The different relations of the Spirit to believers severally under the old and new dispensation are described by St. Paul under the images of a master to a servant, and a father to a son (Rom. viii. 15); so much deeper and more intimate is the union, so much higher the position (Matt. xi. 11) of a believer, in the later stage than in the earlier (see J. G. Walchius, *Miscellanea Sacra*, p. 763, *De Spiritu Adoptionis*, and the opinions collected in note H in Harp's *Mission of the Comforter*, vol. ii. p. 433). The rite of imposition of hands, not only on teachers, but also on ordinary Christians, which has been used in the Apostolic (Acts vi. 6, xiii. 3, xix. 6, &c.) and in all subsequent ages, is a testimony borne by those who come under the new dispensation to their belief of the reality, permanence, and universality of the gift of the Spirit.

Under the Christian dispensation it appears to be the office of the Holy Ghost to enter into and dwell within every believer (Rom. viii. 9, 11; 1 John iii. 24). By Him the work of Redemption is (so to speak) appropriated and carried out to its completion in the case of every one of the elect people of God. To believe, to profess sincerely the Christian faith, and to walk as a Christian, are His gifts (2 Cor. iv. 13; 1 Cor. xii. 3; Gal. v. 16) to each person severally: not only does He bestow the power and faculty of acting, but He concurs (1 Cor. iii. 9; Phil. ii. 13) in every particular action so far as it is good (see South's *Sermons*, xxv., vol. ii. p. 292). His inspiration brings the true knowledge of all things (1 John ii. 27). He unites the whole multitude of believers into one regularly organized body (1 Cor. xii., and Eph. iv. 4-16). He is not only the source of life to us on earth (2 Cor. iii. 6; Rom. viii. 2), but also the power by whom God raises us from the dead (Rom. viii. 11). All Scripture, by which men in every successive generation are instructed and made wise unto salvation, is inspired by Him (Eph. iii. 5; 2 Tim. iii. 16; 2 Pet. i. 21); He co-operates with supplicants in the utterance of every effectual prayer that ascends on high (Eph. ii. 18, vi. 18; Rom. viii. 26; He strengthens (Eph. iii. 16), sanctifies (2 Thess. ii. 13), and seals the souls of men unto the day of completed redemption (Eph. i. 13, iv. 30).

That this work of the Spirit is a real work, and not a mere imagination of enthusiasts, may be shown (1) from the words of Scripture to which reference has been made, which are too definite and clear to be explained away by any such hypothesis; (2) by the experience of intelligent Christians in every age, who are ready to specify the marks and tokens of His operation in themselves, and even to describe the manner in which they believe He works, on which see Barrow's *Sermons*, lxxvii. and lxxviii., towards the end; Waterland's *Sermons*, xxvi., vol. v. p. 686; (3) by the superiority of Christian nations over heathen nations, in the possession of those characteristic qualities which are gifts of the Spirit, in the establishment of such customs, habits, and laws as are agreeable thereto, and in the exercise of an enlightening and purifying

influence in the world. Christianity and civilization are never far asunder: those nations which are now eminent in power and knowledge are all to be found within the pale of Christendom, not indeed free from national vices, yet on the whole manifestly superior both to contemporary unbelievers and to Paganism in its ancient palmy days. (See Hare's *Mission of the Comforter*, Sermon, 8, vol. i. p. 202; Porteus on the *Beneficial Effects of Christianity on the Temporal Concerns of Mankind*, in *Works*, vol. vi. pp. 375-460.)

It has been inferred from various passages of Scripture that the operations of the Holy Spirit are not limited to those persons who either by circumcision or by baptism have entered into covenant with God. Abimelech (Gen. xx. 3), Melchizedek (xiv. 18), Jethro (Ex. xviii. 12), Balaam (Num. xii. 9), and Job in the O. T.; and the Magi (Matt. ii. 12) and the case of Cornelius, with the declaration of St. Peter (Acts x. 35) thereon, are instances showing that the Holy Spirit bestowed His gifts of knowledge and holiness in some degree even among heathen nations; and if we may go beyond the attestation of Scripture, it might be argued from the virtuous actions of some heathens, from their ascription of whatever good was in them to the influence of a present Deity (see the references in Heber's *Lectures*, vi. p. 446), and from their tenacious preservation of the rite of animal sacrifice, that the Spirit whose name they knew not must have girded them, and still girds such as they were, with secret blessedness.

Thus far it has been attempted to sketch briefly the work of the Holy Spirit among men in all ages as it is revealed to us in the Bible. But after the closing of the canon of the N. T. the religious subtlety of Oriental Christians led them to scrutinize, with the most intense accuracy, the words in which God has, incidentally as it were, revealed to us something of the mystery of the Being of the Holy Ghost. It would be vain now to condemn the superfluous and irreverent curiosity with which these researches were sometimes prosecuted, and the scandalous contentions which they caused. The result of them was the formation and general acceptance of certain statements as inferences from Holy Scripture which took their place in the established creeds and in the teaching of the fathers of the Church, and which the great body of Christians throughout the world continue to adhere to, and to guard with more or less vigilance.

The Sadducees are sometimes mentioned as preceding any professed Christians in denying the personal existence of the Holy Ghost. Such was the inference of Epiphanius (*Hæres.* xii.), Gregory Nazianzen (*Oratio* xxxi. §5, p. 558, ed. Ben.), and others, from the testimony of St. Luke (Acts xxiii. 8). But it may be doubted whether the error of the Sadducees did not rather consist in asserting a corporeal Deity. Passing over this, in the first youthful age of the Church, when, as Noander observes (*Ch. Hist.* ii. 327, Bohn's edit.), the power of the Holy Spirit was so mightily felt as a new creative, transforming principle of life, the knowledge of this Spirit, as identical with the Essence of God, was not so thoroughly and distinctly impressed on the understanding of Christians. Simon Magus, the Montanists, and the Manicheans, are said to have imagined that the promised Comforter was personified in certain human beings. The language of some of the primitive Fathers, though its deficiencies have been greatly exaggerated, occasionally

comes short of a full and complete acknowledgment of the Divinity of the Spirit. Their opinions are given in their own words, with much valuable criticism, in Dr. Burton's *Testimonies of the Ant-Nicene Fathers to the Doctrine of the Trinity and the Divinity of the Holy Ghost* (1831). Valentinus believed that the Holy Spirit was an angel. The Sabellians denied that He was a distinct Person from the Father and the Son. Eunomius, with the Anomæans and the Arians, regarded Him as a created Being. Macedonius, with his followers the Pneumatomachi, also denied His Divinity, and regarded Him as a created Being attending on the Son. His Procession from the Son as well as from the Father was the great point of controversy in the Middle Ages. In modern times the Socinians and Spinoza have altogether denied the Personality, and have regarded Him as an influence or power of the Deity. It must suffice in this article to give the principal texts of Scripture in which these erroneous opinions are contradicted, and to refer to the principal works in which they are discussed at length. The documents in which various existing communities of Christians have stated their belief are specified by G. B. Winer, *Comparative Darstellung des Lehrbegriffs*, &c., pp. 41 and 80.

The Divinity of the Holy Ghost is proved by the fact that He is called God. Compare 1 Sam. xvi. 13 with xviii. 12; Acts v. 3 with v. 4; 2 Cor. iii. 17 with Ex. xxiv. 34; Acts xxviii. 25 with 1a. vi. 8; Matt. xii. 28 with Luke xi. 20; 1 Cor. iii. 16 with vi. 19. The attributes of God are ascribed to Him. He creates, works miracles, inspires prophets, is the Source of holiness (see above), is everlasting (Heb. ix. 14), omnipresent, and omniscient (1a. cxxxix. 7; and 1 Cor. ii. 10).

The Personality of the Holy Ghost is shown by the actions ascribed to Him. He hears and speaks (John xvi. 13; Acts x. 19, xiii. 2, &c.). He wills and acts on His decision (1 Cor. xii. 11). He chooses and directs a certain course of action (Acts xv. 28). He knows (1 Cor. ii. 11). He teaches (John xiv. 26). He intercedes (Rom. viii. 26). The texts 2 Thess. iii. 5, and 1 Thess. iii. 12, 13, are quoted against those who confound the three Persons of the Godhead.

The Procession of the Holy Ghost from the Father is shown from John xiv. 26, xv. 26, &c. The tenet of the Western Church that He proceeds from the Son is grounded on John xv. 26, xvi. 7; Rom. viii. 9; Gal. iv. 6; Phil. i. 19; 1 Pet. i. 11; and on the action of our Lord recorded by St. John xx. 22. The history of the long and important controversy on this point has been written by Pfaff, by J. G. Walchius, *Historia Controversiarum de Processione*, 1751, and by Neale, *History of the Eastern Church*, ii. 1093.

Besides the *Expositions of the Thirty-nine Articles* referred to above, and Pearson, *On the Creed*, art. viii., the work of Barrow (*De Spiritu Sancto*) contains an excellent summary of the various heresies and their confutation. The following works may be consulted for more detailed discussion:—Athanasius, *Epistolæ IV. ad Serapionem*; Didymus Alex. *De Spiritu Sancto*; Basil the Great, *De Spiritu Sancto*, and *Adversus Eunomium*; Gregory Nazianzen, *Orationes de Theologia*; Gregory of Nyssa, *Contra Eunomium* lib. xiii.; Ambrose, *De Spiritu Sancto*, lib. iii.; Augustine, *Contra Maximinum*, and *De Trinitate*; Paschasius Diaconus, *De Sp. Sanc.*; Isidorus, Hisp. *Etymologia*, vii. 3, *De Sp. Sanc.*; Ilatruncus Cortesius, *Contra*

Grascorum, &c. lib. 1r.; Alcuin, P. Damian, and Anselm, *De Processione*; Aquinas, *Sum. Theol.* I. 36-43; Owen, *Treatise on the Holy Spirit*; J. Howe, *Office and Works of the Holy Spirit*; W. Clagett, *On the Operations of the Spirit*, 1878; M. Hole, *On the Gifts and Graces of the H. S.*; Bp. Warburton, *Doctrine of Grace*; Gl. Ridley, *Moyer Lectures on the Divinity and Operations of the H. S.* 1742; S. Ogden, *Sermons*, pp. 157-176; Faber, *Practical Treatise on the Ordinary Operations of the H. S.* 1813; Bp. Heber, *Bampton Lectures on the Personality and Office of the Comforter*, 1818; Archd. Hare, *Mission of the Comforter*, 1846. [W. T. B.]

SPONGE (σπόγγη: *spongia*) is mentioned only in the N. T. In those passages which relate the incident of "a sponge filled with vinegar and put on a reed" (Matt. xxvii. 48; Mark xv. 36), or "on hyssop" (John xix. 29) being offered to our Lord on the cross. The commercial value of the sponge was known from very early times; and although there appears to be no notice of it in the O. T., yet it is probable that it was used by the ancient Hebrews, who could readily have obtained it good from the Mediterranean. Aristotle mentions several kinds, and carefully notices those which were useful for economic purposes (*Hist. Anim.* v. 14). His speculations on the nature of the sponge are very interesting. [W. H.]

STACHYS (Στάχυς: *Stachys*). A Christian at Rome, saluted by St. Paul in the Epistle to the Romans (xvi. 9). The name is Greek. According to a tradition recorded by Nicephorus Callistus (*H. E.* viii. 6) he was appointed bishop of Byzantium by St. Andrew, held the office for sixteen years, and was succeeded by Onesimus.

SPOUSE. [MARRIAGE.]

STACTE (στάξ, στάξις: *stactē*; *stactis*), the name of one of the sweet spices which composed the holy incense (see Ex. xxx. 34). The Heb. word occurs once again (Job xxxvi. 27), where it is used to denote simply "a drop" of water. For the various opinions as to what substance is intended by στάξις, see Celsius (*Hierob.* i. 529); Rosenmüller (*Bib. Bot.* p. 164) identifies the στάξις with the gum of the storax tree (*Styrax officinale*); the LXX. στάχυς (from στάζω, "to drop") is the exact translation of the Heb. word. Now Dioscorides describes two kinds of στάχυς: one is the fresh gum of the myrrh tree (*Balsanodendron myrrha*) mixed with water and squeezed out through a press (i. 74); the other kind, which he calls, σκαληκίτης στάχυς, denotes the resin of the storax adulterated with wax and fat. The true stacte of the Greek writers points to the distillation from the myrrh tree, of which, according to Theophrastus (*Fr.* iv. 29, ed. Schneider), both a natural and an artificial kind were known; this is the *môr dêrôr* (מור דרור) of Ex. xxx. 23. Perhaps the στάξις denotes the storax gum; but all that is positively known is that it signifies an odorous distillation from some plant. For some account of the styrax tree see under POPLAR. [W. H.]

STANDARDS. [ENSIGNS.]

STAR OF THE WISE MEN. Until the last few years the interpretation of St. Matt. ii. 1-12, by theologians in general, coincided in the

STAR OF THE WISE MEN

main with that which would be given to it by any person of ordinary intelligence who read the account with due attention. Some supernatural light resembling a star had appeared in some country (possibly Persia) far to the East of Jerusalem, to men who were versed in the study of celestial phenomena, conveying to their minds a supernatural impulse to repair to Jerusalem, where they would find a new-born king. It supposed them to be followers, and possibly priests, of the Zoroastrian religion, whereby they were led to expect a Redeemer in the person of the Jewish infant. On arriving at Jerusalem, after diligent inquiry and consultation with the priests and learned men who could naturally best inform them, they are directed to proceed to Bethlehem. The star which they had seen in the East re-appeared to them and preceded them (προηγούμενον), until it took up its station over the place where the young child was: (ὅτε ἴδοντες ἰσχυρῶς ἐβόων οὗ ἦν τὸ νηστέον). The whole matter, that is, was supernatural; forming a portion of that divine pre-arrangement, whereby, in his deep humiliation among men, the child Jesus was honoured and acknowledged by the Father, as His beloved Son in whom He was well pleased. Thus the lowly shepherds who kept their nightly watch on the hills near to Bethlehem, together with all that remained of the highest and best philosophy of the East, are alike the partakers and the witnesses of the glory of Him who was "born in the city of David, a Saviour which is Christ the Lord." Such is substantially the account which, until the earlier part of the present century would have been given by orthodox divines, of the Star of the Magi. Latterly, however, a very different opinion has gradually become prevalent upon the subject. The star has been displaced from the category of the supernatural, and has been referred to the ordinary astronomical phenomenon of a conjunction of the planets Jupiter and Saturn. The idea originated with Kepler, who, among many other brilliant but untenable fancies, supposed that if he could identify a conjunction of the above named planets with the Star of Bethlehem, he would thereby be able to determine, on the basis of certainty, the very difficult and obscure point of the Annus Domini. Kepler's suggestion was worked out with great care and no very great inaccuracy by Dr. Ideler of Berlin, and the results of his calculations certainly do, on the first impression, seem to show a very specious accordance with the phenomena of the star in question. We purpose, then, in the first place, to state what celestial phenomena did occur with reference to the planets Jupiter and Saturn, at a date assuredly not very distant from the time of our Saviour's birth; and then to examine how far they fulfil, or fail to fulfil, the conditions required by the narrative in St. Matthew.

In the month of May, B.C. 7, a conjunction of the planets Jupiter and Saturn occurred, not far from the first point of Aries, the planets rising in Chaldaea about 3½ hours before the sun. It is said that on astrological grounds such a conjunction could not fail to excite the attention of men like the Magi, and that in consequence partly of their knowledge of Balaam's prophecy, and partly from the uneasy persuasion then said to be prevalent that some great one was to be born in the East, these Magi commenced their journey to Jerusalem. Supposing them to have set out at the end of May B.C. 7 upon a journey for which the circumstances

will be seen to require at least seven months, the planets were observed to separate slowly until the end of July, when their motions becoming retrograde, they again came into conjunction by the end of September. At that time there can be no doubt Jupiter would present to astronomers, especially in so clear an atmosphere,* a magnificent spectacle. It was then at its most brilliant apparition, for it was at its nearest approach both to the sun and to the earth. Not far from it would be seen its duller and much less conspicuous companion Saturn. This glorious spectacle continued almost unaltered for several days, when the planets again slowly separated, then came to a halt, when, by re-assuming a direct motion, Jupiter again approached to a conjunction for the third time with Saturn, just as the Magi may be supposed to have entered the Holy City. And, to complete the fascination of the tale, about an hour and a half after sunset, the two planets might be seen from Jerusalem, hanging as it were in the meridian, and suspended over Bethlehem in the distance. These celestial phenomena thus described are, it will be seen, beyond the reach of question, and at the first impression they assuredly appear to fulfil the conditions of the Star of the Magi.

The first circumstance which created a suspicion to the contrary, arose from an exaggeration, unaccountable for any man having a claim to be ranked among astronomers, on the part of Dr. Ideler himself, who described the two planets as wearing the appearance of one bright but diffused light to persons having weak eyes. "*So dass für ein schwaches Auge der eine Planet fast in den Zerstreuungskreis des andern trat, mithin beide als ein einziger Stern erscheinen konnten*," p. 407, vol. II. Not only is this imperfect eyesight inflicted upon the Magi, but it is quite certain that had they possessed any remains of eyesight at all, they could not have failed to see, not a single star, but two planets, at the very considerable distance of double the moon's apparent diameter. Had they been even twenty times closer, the duplicity of the two stars must have been apparent; Saturn, moreover, rather confusing than adding to the brilliance of his companion. This forced blending of the two lights into one by Ideler was still further improved by Dean Alford, in the first edition of his very valuable and suggestive Greek Testament, who indeed restores ordinary sight to the Magi, but represents the planets as forming a single star of surpassing brightness, although they were certainly at more than double the distance of the sun's apparent diameter. Exaggerations of this description induced the writer of this article to undertake the very formidable labour of calculating afresh an ephemeris of the planets Jupiter and Saturn, and of the sun, from May to December B.C. 7. The result was to confirm the fact of there being three conjunctions during the above period, though somewhat to modify the dates assigned to them by Dr. Ideler. Similar results, also, have been obtained by Encke, and the December conjunction has been confirmed by the Astronomer-Royal; no celestial phenomena, therefore, of ancient date are so certainly ascertained as the conjunctions in question. We shall now proceed to examine to what extent, or, as it will be seen, to how slight an extent the

December conjunction fulfils the conditions of the narrative of St. Matthew. We can hardly avoid a feeling of regret at the dissipation of so fascinating an illusion: but we are in quest of the truth, rather than of a picture, however beautiful.

(a.) The writer must confess himself profoundly ignorant of any system of astrology; but supposing that some system did exist, it nevertheless is inconceivable that solely on the ground of astrological reasons men would be induced to undertake a seven months' journey. And as to the widely-spread and prevalent expectation of some powerful personage about to show himself in the East, the fact of its existence depends on the testimony of Tacitus, Suetonius, and Josephus. But it ought to be very carefully observed that all these writers speak of this expectation as applying to Vespasian, in A.D. 69, which date was seventy-five years, or two generations after the conjunctions in question! The well-known and often quoted words of Tacitus are, "*eo ipso tempore*;" of Suetonius, "*eo tempore*;" of Josephus, "*κατὰ τὴν κατὰ ἐκείνους*;" all pointing to A.D. 69, and not to B.C. 7. Seeing, then, that these writers refer to no general uneasy expectation as prevailing in B.C. 7, it can have formed no reason for the departure of the Magi. And, furthermore, it is quite certain that in the February of B.C. 66 (Pritchard, in *Trans. R. Ast. Soc.* vol. xiv.), a conjunction of Jupiter and Saturn occurred in the constellation *Pisces*, closer than the one on Dec. 4, B.C. 7. If, therefore, astrological reasons alone impelled the Magi to journey to Jerusalem in the latter instance, similar considerations would have impelled their fathers to take the same journey fifty-nine years before.

(b.) But even supposing the Magi did undertake the journey at the time in question, it seems impossible that the conjunction of Dec. B.C. 7 can on any reasonable grounds be considered as fulfilling the conditions in St. Matt. ii. 9. The circumstances are as follows: On Dec. 4, the sun set at Jerusalem at 5 p.m. Supposing the Magi to have then commenced their journey to Bethlehem, they would first see Jupiter and his dull and somewhat distant companion $1\frac{1}{2}$ hour distant from the meridian, in a S.E. direction, and decidedly to the East of Bethlehem. By the time they came to Rachel's tomb (see Robinson's *Bib. Res.* ii. 568) the planets would be due south of them, on the meridian, and no longer over the hill of Bethlehem (see the maps of Van de Velde and of Tobler), for that village (see Robinson, as above) bears from Rachel's tomb S. 50° E. + 8° declension = S. 13° E. The road then takes a turn to the east, and ascends the hill near to its western extremity; the planets therefore would now be on their right hands, and a little behind them: the "star," therefore, ceased altogether to go "before them" as a guide. Arrived on the hill and in the village, it became physically impossible for the star to stand over any house whatever close to them, seeing that it was now visible far away beyond the hill to the west, and far off in the heavens at an altitude of 57° . As they advanced, the star would of necessity recede, and under no circumstances could it be said to stand "over" ("*ἐπάνω*") any house, unless at the distance of miles from the place where they were. Thus the two heavenly bodies altogether fail to fulfil either of the conditions implied in the words "*ὑποῖπυρ ἀρούρης*," or "*ἐπιδόνη ἐπάνω*." A star, if vertical, would appear to stand over any house or object to which a spectator might chance

* The atmosphere in parts of Persia is so transparent that the Magi may have seen the satellites of Jupiter with their naked eyes.

to be near; but a star at an altitude of 57° could appear to stand over no house or object in the immediate neighbourhood of the observer. It is scarcely necessary to add that if the Magi had left the Jaffa Gate before sunset, they would not have seen the planets at the outset; and if they had left Jerusalem later, the "star" would have been a more useless guide than before. Thus the beautiful phantasm of Kepler and Ideler, which has fascinated so many writers, vanishes before the more perfect daylight of investigation.

A modern writer of great ability (Dr. Wordsworth) has suggested the antithesis to Kepler's speculation regarding the star of the Magi, viz. that the star was visible to the Magi alone. It is difficult to see what is gained or explained by the hypothesis. The song of the multitude of the heavenly host was published abroad in Bethlehem; the journey of the Magi thither was no secret whispered in a corner. Why, then, should the heavenly light, standing as a beacon of glory over the place where the young child was, be concealed from all eyes but theirs, and form no part in that series of wonders which the Virgin Mother kept and pondered in her heart?

The original authorities on this question are Kepler, *De Jesu Christi vero anno natalitio*, Frankfurt, 1614; Ideler, *Handbuch der Chronologie*, ii. 399; Pritchard, *Memoirs of Royal Ast. Society*, vol. xxv. [C. P.]

STATER (στᾰτήρ: stater: A. V. "a piece of money;" margin, "stater").

1. The term stater, from *στᾰτήρ*, is held to signify a coin of a certain weight, but perhaps means a standard coin. It is not restricted by the Greeks to a single denomination, but is applied to standard coins of gold, electrum, and silver. The gold staters were didrachms of the later Phœnician and the Attic talents, which, in this denomination, differ only about four grains troy. Of the former talent were the Daric staters or Darics (στᾰτήρες Δαρεικοί, Δαρεικοί), the famous Persian gold pieces, and those of Croesus (Κροισίαι), of the latter, the stater of Athens. The electrum staters were coined by the Greek towns on the west coast of Asia Minor; the most famous were those of Cyzicus (στᾰτήρες Κυζικηνοί, Κυζικηνοί), which weigh about 248 grains. They are of gold and silver mixed, in the proportion, according to ancient authority—for we believe these rare coins have not been analysed—of three parts of gold to one of silver. The gold was alone reckoned in the value, for it is said that one of these coins was equal to 28 Athenian silver drachms, while the Athenian gold stater, weighing about 132 grains, was equal to 20 (20:132::28:184 + or $\frac{1}{2}$ of a Cyzicene stater). This stater was thus of 184 + grains, and equivalent to a didrachm of the Aeghetan talent. Thus *στᾰτήρ* the stater is always a didrachm. In silver, however, the term is applied to the tetradrachm of Athens, which was of the weight of two gold staters of the same currency. There can therefore be no doubt that the name stater was applied to the standard denomination of both metals, and does not positively imply either a didrachm or a tetradrachm.

2. In the N. T. the stater is once mentioned, in the narrative of the miracle of the sacred tribute-money. At Capernaum the receivers of the didrachms (οἱ τὰ διδράχμια λαμβάνοντες) asked

St. Peter whether his master paid the didrachm. The didrachm refers to the yearly tribute paid by every Hebrew into the treasury of the Temple. The sum was half a shekel, called by the LXX. τὸ ἥμισυ τοῦ διδράχμου. The plain inference would therefore be, that the receivers of sacred tribute took their name from the ordinary coin or weight of metal, the shekel, of which each person paid half. But it has been supposed that as the coined equivalent of this didrachm at the period of the Evangelist was a tetradrachm, and the payment of each person was therefore a current didrachm [of account], the term here applies to single payments of didrachms. This opinion would appear to receive some support from the statement of Josephus, that Vespasian fixed a yearly tax of two drachms on the Jews instead of that they had formerly paid into the treasury of the Temple (*B. J.* vii. 6, §6). But this passage loses its force when we remember that the common current silver coin in Palestine at the time of Vespasian, and that in which the civil tribute was paid, was the denarius, the tribute-money, then equivalent to the debased Attic drachm. It seems also most unlikely that the use of the term didrachm should have so remarkably changed in the interval between the date of the LXX. translation of the Pentateuch and that of the writing of St. Matthew's Gospel. To return to the narrative. St. Peter was commanded to take up a fish which should be found to contain a stater, which he was to pay to the collectors of tribute for Our Lord and himself (*Matt.* xvii. 24-27). The stater must here mean a silver tetradrachm; and the only tetradrachms then current in Palestine were of the same weight as the Hebrew shekel. And it is observable, in confirmation of the minute accuracy of the Evangelist, that at this period the silver currency in Palestine consisted of Greek imperial tetradrachms, or staters, and Roman denarii of a quarter their value, didrachms having fallen into disuse. Had two didrachms been found by St. Peter the receivers of tribute would scarcely have taken them; and, no doubt, the ordinary coin paid was that miraculously supplied. [R. B. P.]

STEEL. In all cases where the word "steel" occurs in the A. V. the true rendering of the Hebrew is "copper." *נִכְשֶׁתָּן*, *nichshethan*, except in 2 Sam. xxii. 35, Job xx. 24, Ps. xviii. 34 [35], is always translated "brass;" as is the case with the cognate word *נִכְשֶׁתֶּתֶי*, *nichshetheth*, with the two exceptions of Jer. xv. 12 (A. V. "steel"), and Ezr. viii. 27 (A. V. "copper"). Whether the Ancient Hebrews were acquainted with steel is not perfectly certain. It has been inferred from a passage in Jeremiah (xv. 12), that the "iron from the north" there spoken of denoted a superior kind of metal, hardened in an unusual manner, like the steel obtained from the Chalybes of the Pontus, the ironsmiths of the ancient world. The hardening of iron for cutting instruments was practised in Pontus, Lydia, and Laconia (Eustath. *Il.* ii. p. 294, 62, quoted in Müller, *Hand. d. Arch. d. Kunst*, §307, n. 4). Justin (*xiv.* 3, §8) mentions two rivers in Spain, the Bilbilis (the Salo, or Xalón, a tributary of the Ebro) and Chalybe, the water of which was used for hardening iron (comp. Plin. *xxxiv.* 41). The same practice is alluded to both by Homer (*Od.* ix. 393), and Sophocles (*Aj.*

* It has been supposed by some ancient and modern commentators that the civil tribute is here referred to;

but by this explanation the force of our Lord's reason for freedom from the payment seems to be completely missed.

650). The Celtiberians, according to Diodorus Siculus (v. 33), had a singular custom. They buried boots of iron in the earth till the weak part, as Diodorus calls it, was consumed by rust, and what was hardest remained. This firmer portion was then converted into weapons of different kinds. The same practice is said by Beckmann (*Hist. of Inv.* ii. 328, ed. Bohn) to prevail in Japan. The last mentioned writer is of opinion that of the two methods of making steel, by fusion either from iron-stone or raw iron, and by cementation, the ancients were acquainted only with the former.

There is, however, a word in Hebrew, פָּדֶה, *paddāh*, which occurs only in Nah. ii. 3 [4], and is there rendered "torches," but which most probably denotes steel or hardened iron, and refers to the flashing scythes of the Assyrian chariots. In Syriac

and Arabic the cognate words (فَدَّه, *paddāh*, فدّ, *faddāh*) signify a kind of iron of excellent quality, and especially steel.

Steel appears to have been known to the Egyptians. The steel weapons in the tomb of Rameses III., says Wilkinson, are painted blue, the bronze red (*Ann. Eg.* iii. 247). [W. A. W.]

STEPHANAS (Στεφανῶς: *Stephanos*). A Christian convert of Corinth whose household Paul baptised as the "first fruits of Achaia" (1 Cor. i. 16, xvi. 15). He was present with the Apostle at Ephesus when he wrote his First Epistle to the Corinthians, having gone thither either to consult him about matters of discipline connected with the Corinthian Church (Chrysost. *Hom.* 44), or on some charitable mission arising out of the "service for the saints" to which he and his family had devoted themselves (1 Cor. xvi. 16, 17). [W. L. B.]

STEPHEN (Στεφάνος: *Stephanus*), the First Martyr. His Hebrew^a (or rather Syriac) name is traditionally said to have been Chellil, or Cheliel (a crown).

He was the chief of the Seven (commonly called **DEACONS**) appointed to rectify the complaints in the early Church of Jerusalem, made by the Hellenistic against the Hebrew Christians. His Greek name indicates his own Hellenistic origin.

His importance is stamped on the narrative by a reiteration of emphatic, almost superlative phrases: "full of faith and of the Holy Ghost" (Acts vi. 5); "full of grace^b and power" (ib. 8); irresistible "spirit and wisdom" (ib. 10); "full of the Holy Ghost" (vii. 55). Of his ministrations amongst the poor we hear nothing. But he seems to have been an instance, such as is not uncommon in history, of a new energy derived from a new sphere. He shot far ahead of his six companions, and far above his particular office. First, he arrests attention by the "great wonders and miracles that he did." Then begins a series of disputations with the Hellenistic Jews of North Africa, Alexandria, and Asia Minor, his companions in race and birthplace. The subject of these disputations is not expressly mentioned; but, from what follows, it is evident that he struck into a new vein of teaching, which eventually caused his martyrdom.

^a Basil of Seleucia, *Orat. de S. Stephano*. See *Uvenerus in voce* 773.

^b A. B. 11, and most of the versions, read χάριτος. The *Rec. Tex.* reads *virtutis*.

^c Traditionally he was reckoned amongst the Seventy disciples.

VOL. III.

Down to this time the Apostles and the early Christian community had clung in their worship, not merely to the Holy Land and the Holy City, but to the Holy Place of the Temple. This local worship, with the Jewish customs belonging to it, he now denounced. So we must infer from the accusations brought against him, confirmed as they are by the tenor of his defence. The actual words of the charge may have been false, as the sinister and malignant intention which they ascribed to him was undoubtedly false. "Blasphemous" (βλασφημία), that is, "calumnious" words, "against Moses and against God" (vi. 11), he is not likely to have used. But the overthrow of the Temple, the cessation of the Mosaic ritual, no more than St. Paul preached openly, or than is implied in Stephen's own speech: "against this holy place and the Law"—"that Jesus of Nazareth shall destroy this place, and shall change the customs that Moses delivered us" (vi. 13, 14).

For these sayings he was arrested at the instigation of the Hellenistic Jews, and brought before the Sanhedrin, where, as it would seem, the Pharisaic party had just before this time (v. 34, vii. 51) gained an ascendancy.

When the charge was formally lodged against him, his countenance kindled as if with the view of the great prospect which was opening for the Church; the whole body even of assembled judges was transfixed by the sight, and "saw his face as it had been the face of an angel" (vi. 15).

For a moment, the account seems to imply, the judges of the Sanhedrin were awed at his presence.^d Then the High Priest that presided appealed to him (as Caiaphas had in like manner appealed in the Great Trial in the Gospel History) to know his own sentiments on the accusations brought against him. To this Stephen replied in a speech which has every appearance of being faithfully reported. The peculiarities of the style, the variations from the Old Testament history, the abruptness which, by breaking off the argument, prevents us from easily doing it justice, are all indications of its being handed down to us substantially in its original form.

The framework in which his defence is cast is a summary of the history of the Jewish Church. In this respect it has only one parallel in the N. T., the 11th chapter^e of the Epistle to the Hebrews—a likeness that is the more noticeable, as in all probability the author of that Epistle was, like Stephen, a Hellenist.

In the facts which he selects from this history he is guided by two principles—at first more or less latent, but gradually becoming more and more apparent as he proceeds. The first is the endeavour to prove that, even in the previous Jewish history, the presence and favour of God had not been confined to the Holy Land or the Temple of Jerusalem. This he illustrates with a copiousness of detail which makes his speech a summary almost as much of sacred geography as of sacred history—the appearance of God to Abraham "in Mesopotamia before he dwelt in Haran" (vii. 2); his successive migrations to Haran and to Canaan (vii. 4); his want of even a resting place for his foot in Canaan (vii. 5); the dwelling of his seed in a strange land

^d Well described in Conybeare and Howson, *Life of S. Paul*, i. 74; the poetic aspect of it beautifully given in Tenneyson's *Two Voices*.

^e Other verbal likenesses to this Epistle are pointed out by Dr. Howson, i. 77 (quoting from Mr. Humphry, *Comment on the Acts*).

(vii. 6); the details of the stay at *Egypt* (vii. 8-13); the education of Moses in *Egypt* (vii. 20-22); his exile in *Midian* (vii. 29); the appearance in *Sinai*, with the declaration that the *desert ground* was holy earth (ἁγία γῆ) (vii. 30-33); the forty years in the *wilderness* (vii. 36, 44); the long delay before the preparation for the Tabernacle of David (vii. 45); the proclamation of spiritual worship even after the building of the Temple (vii. 47-50).

The second principle of selection is based on the attempt to show that there was a tendency from the earliest times towards the same ungrateful and narrow spirit that had appeared in this last stage of their political existence. And this rigid, suspicious, disposition he contrasts with the freedom of the Divine Grace and of the human will, which were manifested in the exaltation of Abraham (vii. 4), Joseph (vii. 10), and Moses (vii. 20), and in the jealousy and rebellion of the nation against these their greatest benefactors, as chiefly seen in the bitterness against Joseph (vii. 9) and Moses (vii. 27), and in the long neglect of true religious worship in the wilderness (vii. 38-43).

Both of these selections are worked out on what may almost be called critical principles. There is no allegorizing of the text, nor any forced constructions. Every passage quoted yields fairly the sense assigned to it.

Besides the direct illustration of a freedom from local restraints involved in the general argument, there is also an indirect illustration of the same doctrine, from his mode of treating the subject in detail. No less than twelve of his references to the Mosaic history differ from it either by variation or addition.

1. The call of Abraham *before the migration* to Haran (vii. 2), not, as according to Gen. xii. 1, in Haran.

2. The death of his father *after the call* (vii. 4), not, as according to Gen. xi. 32, before it.

3. The 75 souls of Jacob's migration (vii. 14), not (as according to Gen. xli. 27) 70.

4. The *goodlike* loveliness (ἀρετὴς τῆς ὁμοίας) of Moses (vii. 20), not, simply, as according to Ex. i. 2, the statement that "he was a goodly child."

5. His Egyptian education (vii. 22) as contrasted with the silence on this point in Ex. iv. 10.

6. The same contrast with regard to his secular greatness, "mighty in words and deeds" (vii. 22, comp. Ex. ii. 10).

7. The distinct mention of the three periods of forty years (vii. 23, 30, 36) of which only the last is specified in the Pentateuch.

8. The terror of Moses at the bush (vii. 32), not mentioned in Ex. iii. 3.

9. The supplementing of the Mosaic narrative by the allusions in Amos to their neglect of the true worship in the desert (vii. 42, 43).

10. The intervention of the angels in the giving of the Law (vii. 53), not mentioned in Ex. xix. 16.

11. The burial of the twelve Patriarchs at Shechem (vii. 16), not mentioned in Ex. i. 8.

12. The purchase of the tomb at Shechem by Abraham from the sons of Emmor (vii. 16), not, as according to Gen. xxiii. 15, the purchase of the cave at Machpelah from Ephron the Hittite.

To which may be added

13. The introduction of Kemphan from the LXX. of Amos v. 26, not found in the Hebrew.

The explanation and source of these variations must be sought under the different names to which they refer; but the general fact of their adoption

by Stephen is significant as showing the freedom with which he handled the sacred history, and the comparative unimportance assigned by him and by the sacred historian who records his speech, to minute accuracy. It may almost be said that the whole speech is a protest against a rigid view of the mechanical exactness of the inspired records of the O. T. "He had regard," as St. Jerome says, "to the meaning, not to the words."

It would seem that, just at the close of his argument, Stephen saw a change in the aspect of his judges, as if for the first time they had caught the drift of his meaning. He broke off from his calm address, and turned suddenly upon them in an impassioned attack which shows that he saw what was in store for him. Those heads thrown back on their unbending necks, those ears closed against any penetration of truth, were too much for his patience:—"Ye stiffnecked and uncircumcised in heart and ears! ye do always resist the Holy Ghost: as your fathers did, so do ye. Which of the prophets did not *your* fathers persecute? . . . the Just One: of whom ye are the betrayers and murderers." As he spoke they showed by their faces that their hearts (to use the strong language of the narrative) "were being sawn asunder," and they kept gnashing their set teeth against him; but still, though with difficulty, restraining themselves. He, in this last crisis of his fate, turned his face upwards to the open sky, and as he gazed the vault of heaven seemed to him to part asunder (*ὑπερσυνέστροφος*): and the Divine Glory appeared through the rending of the earthly veil—the Divine Presence, seated on a throne, and on the right hand the human form of "Jesus," not, as in the usual representations, sitting in repose, but standing erect as if to assist His suffering servant. Stephen spoke as if to himself, describing the glorious vision; and, in so doing, alone of all the speakers and writers in the N. T., except only Christ Himself, uses the expressive phrase, "the Son of Man." As his judges heard the words, expressive of the Divine exaltation of Him whom they had sought so lately to destroy, they could forbear no longer. They "rode into a loud yell; they clapped their hands to their ears, as if to prevent the entrance of any more blasphemous words; they flew as with one impulse upon him, and dragged him out of the city to the place of execution."

It has been questioned by what right the Sanhedrin proceeded to this act without the concurrence of the Roman government; but it is enough to reply that the whole transaction is one of violent excitement. On one occasion, even in our Lord's life, the Jews had nearly stoned Him even within the precincts of the Temple (John viii. 59). "Their vengeance in other cases was confined to those subordinate punishments which were left under their own jurisdiction: imprisonment, public scourging in the synagogue, and excommunication" (Millman's *Hist. of Latin Christianity*, i. 400). See Conybeare and Howson's *St. Paul*, i. 74.

On this occasion, however, they determined for once to carry out the full penalty enjoined by the severe code of the Mosaic ritual.

Any violator of the law was to be taken outside the gates, and there, as if for the sake of giving to each individual member of the community a sense of his responsibility in the transaction, he was to be crushed by stones, thrown at him by all the people.

Those, however, were to take the lead in this wild and terrible act who had taken upon them-

selves the responsibility of denouncing him (Deut. xvii. 7; comp. John viii. 7). These were, in this instance, the witnesses who had reported or mis-reported the words of Stephen. They, according to the custom, for the sake of facility in their dreadful task, stripped themselves, as is the Eastern practice on commencing any violent exertion; and one of the prominent leaders in the transaction was deputed by custom to signify his assent^f to the act by taking the clothes into his custody, and standing over them whilst the bloody work went on. The person who officiated on this occasion was a young man from Tarsus—one probably of the Cilician Hellenists who had disputed with Stephen. His name, as the narrative significantly adds, was Saul.

Everything was now ready for the execution. It was outside the gates of Jerusalem. The earlier traditions fixed it at what is now called the Damascus gate. The later, which is the present tradition, fixed it at what is hence called St. Stephen's gate, opening on the descent to the Mount of Olives; and in the red streaks of the white limestone rocks of the sloping hill used to be shown the marks of his blood, and on the first rise of Olivet, opposite, the eminence on which the Virgin stood to support him with her prayers.

The sacred narrative fixes its attention only on two figures—that of Saul of Tarsus already noticed, and that of Stephen himself.

As the first volley of stones burst upon him, he called upon the Master whose human form he had just seen in the heavens, and repeated almost the words with which He himself had given up His life on the cross, "O Lord Jesus, receive my spirit."

Another crash of stones brought him on his knees. One loud piercing cry (*ἔκραξε μεγάλῃ φωνῇ*)—answering to the loud shriek or yell with which his enemies had flown upon him—escaped his dying lips. Again clinging to the spirit of his Master's words, he cried "Lord, lay not this sin to their charge," and instantly sank upon the ground, and, in the touching language of the narrator, who then uses for the first time the word, afterwards applied to the departure of all Christians, but here the more remarkable from the bloody scenes in the midst of which the death took place—*ἐκοιμήθη*, "fell asleep."^g

His mangled body was buried by the class of Hellenists and proselytes to which he belonged (*οἱ εὐσεβεῖς*), with an amount of funeral state and lamentation expressed in two words used here only in the N. T. (*συσκευάσαντες* and *κονέοντες*).

This simple expression is enlarged by writers of the 5th century into an elaborate legend. The High-Priest it is said, had intended to leave the corpse to be devoured by beasts of prey. It was rescued by Gamaliel, carried off in his own chariot by night, and buried in a new tomb on his property at Caphar Gamala (village of the Camel), 8 leagues from Jerusalem. The funeral lamentations lasted for forty days. All the Apostles attended. Gamaliel undertook the expense, and, on his death, was interred in an adjacent cave.

This story was probably first drawn up on the occasion of the remarkable event which occurred in

A.D. 415, under the name of the Invention and Translation of the Relics of S. Stephen. Successive visions of Gamaliel to Lucian, the parish priest of Caphar Gamala, on the 3rd and 18th of December in that year, revealed the spot where the martyr's remains would be found. They were identified by a tablet bearing his name *Cheliel*, and were carried in state to Jerusalem, amidst various portents, and buried in the church on Mount Zion, the scene of so many early Christian traditions. The event of the Translation is celebrated in the Latin Church on August 3, probably from the tradition of that day being the anniversary of the dedication of a chapel of S. Stephen at Ancona.

The story itself is encompassed with legend, but the event is mentioned in all the chief writers of the time. Parts of his remains were afterwards transported to different parts of the coast of the West—Minorca, Portugal, North Africa, Ancona, Constantinople—and in 460 what were still left at Jerusalem were translated by the Empress Eudocia to a splendid church called by his name on the supposed scene of his martyrdom (Tillemont, *S. Etienne*, art. 5-9, where all the authorities are quoted).

The importance of Stephen's career may be briefly summed up under three heads:—

I. He was the first great Christian ecclesiastic. The appointment of "the Seven," commonly (though not in the Bible) called Deacons, formed the first direct institution of the nature of an organised Christian ministry, and of these Stephen was the head—"the Archdeacon," as he is called in the Eastern Church—and in this capacity represented as the companion or precursor of Laurence, Archdeacon of Rome in the Western Church. In this sense allusion is made to him in the Anglican Ordination of Deacons.

II. He is the first martyr—the proto-martyr. To him the name "martyr" is first applied (Acts xxii. 20). He, first of the Christian Church, bore witness to the truth of his convictions by a violent and dreadful death. The veneration which has accrued to his name in consequence is a testimony of the Bible to the sacredness of truth, to the nobleness of sincerity, to the wickedness and the folly of persecution. It also contains the first germs of the reverence for the character and for the relics of martyrs, which afterwards grew to a height, now regarded by all Christians as excessive. A beautiful hymn by Reginald Heber commemorates this side of Stephen's character.

III. He is the forerunner of St. Paul. So he was already regarded in ancient times. *Παύλου δὲ διδασκαλός* is the expression used for him by Basil of Seleucia. But it is an aspect that has been much more forcibly drawn out in modern times. Not only was his martyrdom (in all probability) the first means of converting St. Paul—his prayer for his murderers not only was fulfilled in the conversion of St. Paul—the blood of the first martyr, the seed of the greatest Apostle—the pangs of remorse for his death, amongst the stings of conscience, against which the Apostle vainly writhed (Acts ix. 5); not only thus, but in his doctrine also he was the

^f Comp. "I was standing by and consenting to his death, and kept the raiment of those that slew him" (Acts xxii. 20).

^g These conflicting versions are well given in Conybeare and Howson, *S. Paul*, i. 90.

^h The date of Stephen's death is unknown. But eccle-

siastical tradition fixes it in the same year as the Crucifixion, on the 26th of December, the day after Christmas-day. It is beautifully said by Augustine (in allusion to the juxtaposition of the two festivals), that men would not have had the courage to die for God, if God had not become man to die for them (Tillemont, *S. Etienne*, art. 4).

anticipator, as, had he lived, he would have been the propagator, of the new phase of Christianity, of which St. Paul became the main support. His denunciations of local worship—the stress which he lays on the spiritual side of the Jewish history—his freedom in treating that history—the very turns of expression that he uses—are all Pauline.

The history of the above account is taken from Acts (vi. 1–viii. 2; xiii. 19, 20); the legends from Tillmann (ii. p. 1–24); the more general treatment from Neander's *Planting of the Christian Church*, and from Howson and Conybeare in *The Life of St. Paul*, ch. 2. [A. P. S.]

STOCKS (שֶׁטֶן, שֶׁטֶן; ξέλον). The term "stocks" is applied in the A. V. to two different articles, one of which (the Hebrew *mahpeceth*) answers rather to our pillory, inasmuch as its name implies that the body was placed in a bent position by the confinement of the neck and arms as well as the legs; while the other (*sad*) answers to our "stocks," the feet alone being confined in it. The former may be compared with the Greek *κύβαν*, as described in the Scholia ad Aristoph. *Plut.* 476: the latter with the Roman *neruus* (Plaut. *Asin.* iii. 2, 5; *Capt.* v. 3, 40), which admitted, however, of being converted into a species of torture, as the legs could be drawn asunder at the will of the jailor (Blacoe on Acts, p. 229). The prophet Jeremiah was confined in the first sort (Jer. xx. 2), which appears to have been a common mode of punishment in his day (Jer. xxix. 26), as the prisons contained a chamber for the special purpose, termed "the house of the pillory" (2 Chr. xvi. 10; A. V. "prison-house"). The stocks (*sad*) are noticed in Job xiii. 27, xxxiii. 11, and Acts xvi. 24. The term used in Prov. vii. 22 (A. V. "stocks") more properly means a fetter. [W. L. B.]

STOICS. The Stoics and Epicureans, who are mentioned together in Acts xvii. 18, represent the two opposite schools of practical philosophy which survived the fall of higher speculation in Greece [PHILOSOPHY]. The Stoic school was founded by Zeno of Citium (c. B.C. 280), and derived its name from the painted portico (ἡ στωϊκὴ σκῆνα, Diog. L. vii.) in which he taught. Zeno was followed by Cleanthes (c. B.C. 260), Cleanthes by Chrysippus (c. B.C. 240), who was regarded as the intellectual founder of the Stoic system (Diog. L. vii. 183). Stoicism soon found an entrance at Rome. Diogenes Babylonius, a scholar of Chrysippus, was its representative in the famous embassy of philosophers, B.C. 161 (Aulus Gellius, *N. A.* vii. 14); and not long afterwards Panaetius was the friend of Scipio Africanus the younger, and many other leading men at Rome. His successor Posidonius numbered Cicero and Pompey among his scholars; and under the Empire stoicism was not unnaturally connected with republican virtue. Seneca († A.D. 65) and Musonius (Tac. *Hist.* iii. 81) did much to popularize the ethical teaching of the school by their writings; but the true glory of the later Stoics is Epictetus († A.D. 115), the records of whose doctrine form the noblest monument of

heathen morality (*Epictetæ Philos. Monum.*, ed. Schweighäuser, 1799). The precepts of Epictetus were adopted by Marcus Aurelius (A.D. 121–180), who endeavoured to shape his public life by their guidance. With this last effort stoicism reached its climax and its end. [PHILOSOPHY.]

The ethical system of the Stoics has been commonly supposed to have a close connexion with Christian morality (Gataker, *Antoninus Pref.*; Meyer, *Stoic. Eth. c. Christ. compar.*, 1823), and the outward similarity of isolated precepts is very close and worthy of notice. But the morality of stoicism is essentially based on pride, that of Christianity on humility; the one upholds individual independence, the other absolute faith in another; the one looks for consolation in the issue of fate, the other in Providence; the one is limited by periods of cosmical ruin, the other is consummated in a personal resurrection (Acts xvii. 18).

But in spite of the fundamental error of stoicism, which lies in a supreme egotism, the teaching of this school gave a wide currency to the noble doctrines of the Fatherhood of God (Cleanthes, *Hymn.* 31–38; comp. Acts xvii. 28), the common bonds of mankind (Anton. iv. 4), the sovereignty of the soul. Nor is it to be forgotten that the earlier Stoics were very closely connected with the East, from which much of the form, if not of the essence, of their doctrines seems to have been derived. Zeno himself was a native of Citium, one of the oldest Phœnician settlements. [CHITTIM.] His successor Chrysippus came from Soli or Tarsus; and Tarsus is mentioned as the birthplace of a second Zeno and Antipater. Diogenes came from Seleucia in Babylon, Posidonius from Apamea in Syria, and Epictetus from the Phrygian Hierapolis (comp. Sir A. Grant, *The Ancient Stoics, Oxford Essays*, 1858, p. 82).

The chief authorities for the opinions of the Stoics are Diog. Laert. vii.; Cicero, *De Fin.*; Plutarch, *De Stoic. repugn.*; *De plac. Philos. adv. Stoic.*; Sextus Empiricus; and the remains of Seneca, Epictetus, and Marcus Aurelius. Gataker, in his edition of the *Meditations of M. Aurelius*, has traced out with the greatest care the parallels which they offer to Christian doctrine. [B. F. W.]

STOMACHEE (שֶׁטֶן). The Heb. *petheyl* describes some article of female attire (*Is.* iii. 24), the character of which is a mere matter of conjecture. The LXX. describes it as a variegated tunic (χιτών μεσσηρόφυρος); the Vulg. as a species of girdle (*fascia pectoralis*). The word is evidently a compound, but its elements are uncertain. Gesenius (*Thes.* p. 1137) derives it from שֶׁטֶן שֶׁטֶן, with very much the same sense as in the LXX.; Saalschütz (*Archæol.* i. 30) from שֶׁטֶן שֶׁטֶן, with the sense of "undisguised lust," as applied to some particular kind of dress. Other explanations are given in Gesen. *Thes.* L. c. [W. L. B.]

STONES (שֶׁטֶן). The uses to which stones were applied in ancient Palestine were very various.

Id. §15: "In regno nati sumus: Deo parere libertas est." Epict. *Diss.* ii. 17, 22: ἀπλῶς μὲν ἄλλο θεῶν ἢ ἃ ὁ θεὸς θέλει.

Anton. vii. 74: μὴ οὐδὲν κάμει ἀφελύμενος ἐν τῷ ἀφελείῳ.

Seneca, *De Vit. beat.* §8: "Incorruptus vir sit externis et insuperabilis miratorum tantum sui, sedes autem non alius in utrumque pariterque virtutis virtus."

^a E. g. Seneca, *De Clem.* §5: "Peccavimus omnes . . . nec deliquimus tantum sed ad extremum aevi delinquemus." Rom. iii. 23: "Peccaverunt omnes" . . .

^b Ex. i. "Quem nihil dabis . . . qui intelligat se quotidie mori?" Rom. xv. 31: "Quotidie moritur."

^c Ps. xcvi. §12: "Laudant enim [Epictet] ea quibus erubescunt et vultu gloriantur." Phil. iii. 19: "Quotum . . . gloria in confusione eorum."

1. They were used for the ordinary purposes of building, and in this respect the most noticeable point is the very large size to which they occasionally run (Mark xiii. 1). Robinson gives the dimensions of one as 24 feet long by 6 feet broad and 3 feet high (*Res.* i. 233; see also p. 284, note). For most public edifices hewn stones were used: an exception was made in regard to altars, which were to be built of unhewn stone (Ex. xx. 25; Deut. xvii. 5; Josh. viii. 31), probably as being in a more natural state. The Phœnicians were particularly famous for their skill in hewing stone (2 Sam. v. 11; 1 K. v. 18). Stones were selected of certain colours in order to form ornamental string-courses: in 1 Chr. xix. 2 we find enumerated "onyx stones and stones to be set, glistening stones (lit. stones of eye-paint), and of divers colours (i. e. streaked with veins), and all manner of precious stones, and marble stones" (comp. 2 Chr. iii. 6). They were also employed for pavements (2 K. xvi. 17; comp. *Eth.* i. 6). 2. Large stones were used for closing the entrances of caves (Josh. x. 18; Dan. vi. 17), sepulchres (Matt. xxvii. 60; John xi. 38, xx. 1), and springs (Gen. xxix. 2). 3. Flint-stones* occasionally served the purpose of a knife, particularly for circumcision and similar objects (Ex. iv. 25; Josh. v. 2, 3; comp. Herod. ii. 86; Plutarch, *Nicias*, 13; Catull. *Carm.* lxii. 5). 4. Stones were further used as a munition of war for slings (1 Sam. xvii. 40, 49), catapults (2 Chr. xxvi. 14), and bows (Wisd. v. 22; comp. 1 Macc. vi. 51); as boundary marks (Deut. xix. 14, xxvii. 17; Job xxiv. 2; Prov. xxi. 28, xxiii. 10); such were probably the stone of Bohan (Josh. iv. 6, xviii. 17), the stone of Abel (1 Sam. vi. 15, 18), the stone Esel (1 Sam. xx. 19), the great stone by Gibeon (2 Sam. xx. 8), and the stone Zohaleth (1 K. i. 9); as weights for scales (Deut. xxv. 13; Prov. xvi. 11); and for mills (2 Sam. xi. 21). 5. Large stones were set up to commemorate any remarkable events, as by Jacob at Bethel after his interview with Jehovah (Gen. xxviii. 18, xxxv. 14), and again when he made the covenant with Laban (Gen. xxxi. 45); by Joshua after the passage of the Jordan (Josh. iv. 9); and by Samuel in token of his victory over the Philistines (1 Sam. vii. 12). Similarly the Egyptian monarchs erected their *stelae* at the farthest point they reached (Herod. ii. 106). Such stones were occasionally consecrated by anointing, as instanced in the stone erected at Bethel (Gen. xxviii. 18). A similar practice existed in heathen countries, and by a singular coincidence these stones were described in Phœnicia by a name very similar to Bethel, viz. *baetylia* (*Barrûlia*), whence it has been surmised that the heathen name was derived from the Scriptural one, or vice versa (Kalisch's *Comm. in Gen.* i. c.). But neither are the names actually identical, nor are the associations of a kindred nature; the *baetylia* were meteoric stones, and derived their sanctity from the belief that they had fallen from heaven, whereas the stone at Bethel was simply commemorative. [BETHEL; IDOL.] The only point of resemblance between the two consists in the custom of anointing—the anointed stones (*ἁγία λίθων*), which are frequently mentioned by ancient writers as objects of divine honour (Aronob. *adv. Gent.* i. 39; Euseb. *Praep. Evan.* i.

10, §18; Plin. xxxvii. 51), being probably *aërolites*. 6. That the worship of stones prevailed among the heathen nations surrounding Palestine, and was borrowed from them by apostate Israelites, appears from Is. ivii. 6, according to the ordinary rendering of the passage; but the original^b admits of another sense, "in the smooth (clear of wood) places of the valley," and no reliance can be placed on a peculiar term introduced partly for the sake of alliteration. The *eben mascith*,^c noticed in Lev. xvi. 1 (A. V. "image of stone"), has again been identified with the *baetylia*, the doubtful term *mascith* (comp. Num. xxxiii. 52, "picture;" Ex. viii. 12, "imagery") being supposed to refer to devices engraven on the stone. [IDOL.] The statue (*matstsebhâh*)^d of Baal is said to have been of stone and of a conical shape (Movers, *Phoen.* i. 673), but this is hardly reconcilable with the statement of its being burnt in 2 K. x. 26 (the correct reading of which would be *matstsebhâh*, and not *matstsebhâh*). 7. Heaps of stones were piled up on various occasions, as in token of a treaty (Gen. xxxi. 46), in which case a certain amount of sanctity probably attached to them (cf. *Hom. Od.* vi. 471); or over the grave of some notorious offender (Josh. vii. 26, viii. 29; 2 Sam. xviii. 17; see Propert. iv. 5, 75, for a similar custom among the Romans). The size of some of these heaps becomes very great from the custom prevalent among the Arabs that each passer-by adds a stone;^e Burckhardt mentions one near Damascus 20 ft. long, 2 ft. high, and 3 ft. broad (*Syria*, p. 46). 8. The "white stone" noticed in Rev. ii. 17 has been variously regarded as referring to the pebble of acquittal used in the Greek courts (Ov. *Met.* xv. 41); to the lot cast in elections in Greece; to both these combined, the white conveying the notion of acquittal, the stone that of election (Bengel, *Gnom.*); to the stones in the high-priest's breastplate (Züllig); to the tickets presented to the victors at the public games, securing them maintenance at the public expense (Hammond); or, lastly, to the custom of writing on stones (Alford in *l. o.*). 9. The use of stones for tablets is alluded to in Ex. xxiv. 12, and Josh. viii. 32. 10. Stones for striking fire are mentioned in 2 Macc. x. 3. 11. Stones were prejudicial to the operations of husbandry: hence the custom of spoiling an enemy's field by throwing quantities of stones upon it (2 K. iii. 19, 25), and, again, the necessity of gathering stones previous to cultivation (Is. v. 2); allusion is made to both these practices in Eccl. iii. 5 ("a time to cast away stones, and a time to gather stones"). 12. The notice in Zech. xii. 3 of the "burdensome stone" is referred by Jerome to the custom of lifting stones as an exercise of strength, which he describes as being practised in Judaea in his day (comp. Ecclus. vi. 21); but it may equally well be explained of a large corner-stone as a symbol of strength (Is. xxviii. 16).

Stones are used metaphorically to denote hardness or insensibility (1 Sam. xxv. 37; Ex. xi. 19, xxxvi. 28), as well as firmness or strength, as in Gen. xlix. 24, where "the stone of Israel" is equivalent to "the rock of Israel" (2 Sam. xxiii. 3; Is. xxx. 29). The members of the Church are called "living stones," as contributing to rear that living temple in which Christ, himself "a living stone," is the

ב. אֶבֶן יְהוֹנָתָן חֶלֶקֶת.

אֶבֶן מַעֲבֹרִית.

אֶבֶן מַעֲבֹרִית.

A reference to this practice is supposed by Gesenius

to be contained in Prov. xxvi. 8, which he renders "as a bag of gems in a heap of stones" (*Thea* p. 1963). For *viduata* has a curious version of this passage "Sicut qui multum lapidem in acervum Messuri."

chief or head of the corner (Eph. ii. 20-23, 1 Pet. ii. 4-8). [W. L. B.]

STONES, PRECIOUS. The reader is referred to the separate articles, such as AGATE, CARBUNCLE, SARDONYX, &c., for such information as it has been possible to obtain on the various gems mentioned in the Bible. The identification of many of the Hebrew names of precious stones is a task of considerable difficulty: sometimes we have no further clue to aid us in the determination of a name than the mere derivation of the word, which derivation is always too vague to be of any service, as it merely expresses some quality often common to many precious stones. As far, however, as regards the stones of the high-priest's breastplate, it must be remembered that the authority of Josephus, who had frequent opportunities of seeing it worn, is preferable to any other. The Vulgate agrees with his nomenclature, and in Jerome's time the breastplate was still to be inspected in the Temple of Concord: hence this agreement of the two is of great weight.^a The modern Arabic names of the more usual gems, which have probably remained fixed the last 2000 years, afford us also some approximations to the Hebrew nomenclature; still, as it was intimated above, there is much that can only be regarded as conjecture in attempts at identification. Precious stones are frequently alluded to in the Holy Scriptures; they were known and very highly valued in the earliest times. The onyx-stone, fine specimens of which are still of great value, is expressly mentioned by Moses as being found in the land of Havilah. The sard and sardonyx, the amethyst or rose-quartz, with many agates and other varieties of quartz, were doubtless the best known and most readily procured. "Onyx-stones, and stones to be set, glistening stones and of divers colours, and all manner of precious stones," were among the articles collected by David for the temple (1 Chr. xxix. 2). The Tyrians traded in precious stones supplied by Syria (Es. xxvii. 16), and the robes of their king were covered with the most brilliant gems. The merchants of Sheba and Raamah in South Arabia, and doubtless India and Ceylon, supplied the markets of Tyre with various precious stones.

The art of engraving on precious stones was known from the very earliest times. Sir G. Wilkinson says (*Anc. Egypt.* ii. 87, Lond. 1854), "The Israelites learnt the art of cutting and engraving stones from the Egyptians." There can be no doubt that they did learn much of the art from this skilful nation, but it is probable that it was known to them long before their sojourn in Egypt; for we read in Gen. xxxviii. 18, that when Tamar desired a pledge Judah gave her his signet, which we may safely conclude was engraved with some device. The twelve stones of the breastplate were engraved each one with the name of one of the tribes (Ex. xxviii. 17-21). The two onyx (or sardonyx) stones which formed the high-priest's shoulder-pieces were engraved with the names of the twelve tribes, six on one stone and six on the other, "with the work of an engraver in stone like the engravings of a signet." See also ver. 36, "like the en-

gravings of a signet." It is an undecided question whether the diamond was known to the early nations of antiquity. The A. V. gives it as the rendering of the Heb. *Yahalom*, (דללם), but it is probable that the jasper is intended. Sir G. Wilkinson is of opinion that the ancient Egyptians were acquainted with the diamond, and used it for engraving (ii. p. 67). Beckmann, on the other hand, maintains that the use of the diamond was unknown even to the Greeks and Romans: "I must confess that I have found no proofs that the ancients cut glass with a diamond" (*Hist. of Inventions*, ii. p. 87, Bohn's ed.). The substance used for polishing precious stones by the ancient Hebrews and Egyptians was emery powder or the emery stone (*Corundum*), a mineral inferior only to the diamond in hardness [ADAMANT, App. A.]. There is no proof that the diamond was known to the ancient Orientals, and it certainly must be banished from the list of engraved stones which made the sacerdotal breastplate; for the diamond can be cut only by abrasion with its own powder, or by friction with another diamond; and this, even in the hands of a well-practised artist, is a work of most patient labour and of considerable difficulty; and it is not likely that the Hebrews, or any other Oriental people, were able to engrave a name upon a diamond as upon a signet ring.^b Again, Josephus tells us (*Ant.* iii. 7, §5) that the twelve stones of the breastplate were of great size and extraordinary beauty. We have no means of ascertaining their size; probably they were nearly an inch square; at any rate a diamond only half that size, with the five letters of זבולן (*Zebulun*) engraved on it—for, as he was the sixth son of Jacob (*Gen.* xxx. 20), his name would occupy the third place in the second row—is quite out of the question, and cannot possibly be the *Yahalom* of the breastplate.

Perhaps the stone called "figure" by the A. V. has been the subject of more discussion than any other of the precious stones mentioned in the Bible. In our article on that subject we were of opinion that the stone denoted was probably *tourmaline*. We objected to the "hyacinth stone" representing the *hyacinthum* of the ancients, because of its not possessing attractive powers in any marked degree, as we supposed and had been informed by a well-known jeweller. It appears, however, from a communication kindly made to us by Mr. King, that the *hyacinth* (*zircon*) is highly electric when rubbed: He states he is practically convinced of this fact, although he allows that highly electric powers are not usually attributed to it by mineralogists. Mr. King asserts that our *hyacinth* (*zircon*) was greatly used for engraving on by Greeks, Romans, and Persians, and that numerous intaglios in it exist of the age of Theophrastus. The ancient *hyacinthus* was our *sapphire*, as Solinus shows.

Precious stones are used in Scripture in a figurative sense, to signify value, beauty, durability, &c., in those objects with which they are compared (see Cant. v. 14; Is. liv. 11, 12; Lam. iv.

^a The LXX., Vulg., and Josephus, are all agreed as to the names of the stones; there is, however, some little difference as to their relative positions in the breastplate: thus the *lapis*, which, according to Josephus, occupies the second place in the third row, is by the LXX. and Vulg. put in the third place; a similar transposition

occurs with respect to the *ἀψιδωρος* and the *ἐκέρπε* in the third row.

^b "The artists of the Renaissance actually succeeded in engraving on the diamond; the discovery is assigned to Clement Birago, by others to J. da Tressa, Philip II.'s engraver." [C. W. King.]

STONING

7; Rev. iv. 3, xxi. 10-21). As to the precious stones in the breastplate of the high-priest, see Josephus, *Ant.* iii. 7, §5; Epiphanius, *επιτ. τῶν ἱερ.* ἀποτ. τῶν ὁσίων ἐν τ. σκολ. τ. Ἀσπέν, in Epiphaniū *Opus.* ed. Petavius, ii. p. 225-232, Cologne, 1882, (this treatise has been edited separately by Conr. Gesner, *De omni rerum fœcil. genere*, &c. Tiguri, 1585; and by Mat. Miller, the author of the *Hierophyticon*, in his *Synagmata Hermeneutica*, p. 83, Tubing, 1711); Braun, *De Vestitu Sacerdotum Hebræorum* (Amstel. 1680, and 2nd ed. 1698), lib. ii. capp. 7 and 8; Bellermann, *Die Urin und Thummin die Aeltesten Gemmen*, Berlin, 1824; Rosenmüller, 'The Mineralogy of the Bible,' *Biblical Cabinet*, vol. xviii.

[W. H.]

STONING. [PUNISHMENTS.]

STORK (הִרְדִּית, *chardidh*: translated indifferently by LXX. ἀσίδα, *herodius*, *herodius*, *herodius*; Vulg. *herodius*, *herodius*, *herodius*; A. V. "stork," except in Job xxxix. 13, where it is translated "wing" ("stork" in the margin). But there is some question as to the correct reading in this passage. The LXX. do not seem to have recognised the stork under the Hebrew term הִרְדִּית; otherwise they could scarcely have missed the obvious rendering of *herodius*, or have adopted in two instances the phonetic representation of the original, ἀσίδα (whence no doubt Hensch. *herodius*, *herodius*). It is singular that a bird so conspicuous and familiar as the stork must have been both in Egypt and Palestine should have escaped notice by the LXX., but there can be no doubt of the correctness of the rendering of A. V. The Heb. term is derived from the root הִרְדִּית, whence הִרְדִּית, "kindness," from the maternal and filial affection of which this bird has been in all ages the type).

White Stork (*Ciconia alba*).

The White Stork (*Ciconia alba*, L.) is one of the largest and most conspicuous of land birds, standing nearly four feet high, the jet black of its wings and its bright red beak and legs contrasting finely with

STORK

1388

the pure white of its plumage (Zech. v. 9, "They had wings like the wings of a stork"). It is placed by naturalists near the Heron tribe, with which it has some affinity, forming a connecting link between it and the spoonbill and ibis, like all of which, the stork feeds on fish and reptiles, especially on the latter. In the neighbourhood of man it devours readily all kinds of offal and garbage. For this reason, doubtless, it is placed in the list of unclean birds by the Mosaic law (Lev. xi. 19; Deut. xiv. 18). The range of the white stork extends over the whole of Europe, except the British Isles, where it is now only a rare visitant, and over Northern Africa and Asia, as far at least as Birmah.

The Black Stork (*Ciconia nigra*, L.), though less abundant in places, is scarcely less widely distributed, but has a more easterly range than its congener. Both species are very numerous in Palestine, the white stork being universally distributed, generally in pairs, over the whole country, the black stork living in large flocks after the fashion of herons, in the more secluded and marshy districts. The writer met with a flock of upwards of fifty black storks feeding near the west shore of the Dead Sea. They are still more abundant by the Sea of Galilee, where also the white stork is so numerous as to be gregarious; and in the swamps round the waters of Merom.

While the black stork is never found about buildings, but prefers marshy places in forests, and breeds on the tops of the loftiest trees, where it heaps up its ample nest far from the haunts of man; the white stork attaches itself to him, and for the service which it renders in the destruction of reptiles and the removal of offal has been repaid from the earliest times by protection and reverence. This is especially the case in the countries where it breeds. In the streets of towns in Holland, in the villages of Denmark, and in the bazars of Syria and Tunis, it may be seen stalking gravely among the crowd, and wo betide the stranger either in Holland or in Palestine who should dare to molest it. The claim of the stork to protection seems to have been equally recognized by the ancients. Semp. Rufus, who first ventured to bring young storks to table, gained the following epigram, on the failure of his candidature for the praetorship:—

"Quoniam est duobus elegantior Plancius
Suffragiorum puncta non tulit septem.
Ciconiarum populus citius est mortem."

Horace contemptuously alludes to the same sacrilege in the lines

"Tutoque ciconia nido,
Donec vos auctor docuit praetoris" (*Sat.* ii. 2, 48).

Pliny (*Nat. Hist.* x. 21) tells us that in Thessaly it was a capital crime to kill a stork, and that they were thus valued equally with human life, in consequence of their warfare against serpents. They were not less honoured in Egypt. It is said that at Fes in Morocco, there is an endowed hospital for the purpose of assisting and nursing sick cranes and storks, and of burying them when dead. The Moroccans hold that storks are human beings in that form from some distant islands (see note to Brown's *Pseud. Epid.* iii. 27, §3). The Turks in Syria point to the stork as a true follower of Islam, from the preference he always shows for the Turkish and Arab over the Christian quarters. For this undoubted fact, however, there may be two other reasons—the greater amount of offal to be found about the Moslem houses, and the persecutions suffered from the wop

tical Greeks, who rob the nests, and show none of the gentle consideration towards the lower animals which often redeems the Turkish character. Strickland, *Mém. and Papers*, vol. ii. p. 227, states that it is said to have quite deserted Greece, since the expulsion of its Mohammedan protectors. The observations of the writer corroborated this remark. Similarly the rooks were said to be so attached to the old régime, that most of them left France at the Revolution; a true statement, and accounted for by the clearing of most of the fine old timber which used to surround the châteaux of the noblesse.

The derivation of סְטוּר points to the paternal and filial attachment of which the stork seems to have been a type among the Hebrews no less than the Greeks and Romans. It was believed that the young repaid the care of their parents by attaching themselves to them for life, and tending them in old age. Hence it was commonly called among the Latins "avis pia." (See Laburnus in Petronius Arbitr.; Aristotle, *Hist. Anim.* ix. 14; and Pliny, *Nat. Hist.* x. 32.)

Pliny also notices their habit of always returning to the same nest. Probably there is no foundation for the notion that the stork so far differs from other birds as to recognise its parents after it has become mature; but of the fact of these birds returning year after year to the same spot, there is no question. Unless when molested by man, storks' nests all over the world are rebuilt, or rather repaired, for generations on the same site, and in Holland the same individuals have been recognised for many years. That the parental attachment of the stork is very strong, has been proved on many occasions. The tale of the stork which, at the burning of the town of Delft, vainly endeavoured to carry off her young, and at length sacrificed her life with theirs rather than desert them, has been often repeated, and seems corroborated by unquestionable evidence. Its watchfulness over its young is unremitting, and often shown in a somewhat droll manner. The writer was once in camp near an old ruined tower in the plain of Zana, south of the Atlas, where a pair of storks had their nest. The four young might often be seen from a little distance, surveying the prospect from their lonely height; but whenever any of the human party happened to stroll near the tower, one of the old storks, invisible before, would instantly appear, and, lighting on the nest, put its foot gently on the necks of all the young, so as to hold them down out of sight till the stranger had passed, snapping its bill meanwhile, and assuming a grotesque air of indifference and unconsciousness of there being anything under its charge.

Few migratory birds are more punctual to the time of their reappearance than the white stork, or at least, from its familiarity and conspicuousness, its migrations have been more accurately noted. "The stork in the heaven knoweth her appointed times" (see Virgil, *Georg.* ii. 319, and Petron. *Sat.*). Pliny states that it is rarely seen in Asia Minor after the middle of August. This is probably a slight error, as the ordinary date of its arrival in Holland is the second week in April, and it remains until October. In Denmark Judge Boie noted its arrival from 1820 to 1847. The earliest date was the 28th March, and the latest the 12th April (Kjærboelling, *Danmarks Fugle*, p. 262). In Palestine it has been observed to arrive on the 22nd March. Immense flocks of storks may be seen on the banks of the Upper Nile during winter, and

some few further west, in the Sahara; but it does not appear to migrate very far south, unless indeed the birds that are seen at the Cape of Good Hope in December be the same which visit Europe.

The stork has no note, and the only sound it emits is that caused by the sudden snapping of its long mandibles, well expressed by the epithet "crota-listria" in Petron. (quasi *aporalis*, to rattle the castanets). From the absence of voice probably arose the error alluded to by Pliny, "Sunt qui ciconiis non inesse linguas confirmant."

Some unnecessary difficulty has been raised respecting the expression in Ps. civ. 17, "As for the stork, the fir-trees are her house." In the west of Europe the home of the stork is connected with the dwellings of man, and in the East, as the eagle is mentally associated with the most sublime scenes in nature, so, to the traveller at least, is the stork with the ruins of man's noblest works. Amid the desolation of his fallen cities throughout Eastern Europe and the classic portions of Asia and Africa, we are sure to meet with them surmounting his temples, his theatres or baths. It is the same in Palestine. A pair of storks have possession of the only tall piece of ruin in the plain of Jericho; they are the only tenants of the noble tower of Richard Coeur de Lion at Lydda; and they gaze on the plain of Sharon from the lofty tower of Ramleh (the ancient Arimathea). So they have a pillar at Tiberias, and a corner of a ruin at Nebi Mounseh. And no doubt in ancient times the sentry shared the watch-tower of Samaria or of Jezreel with the cherished storks. But the instinct of the stork seems to be to select the loftiest and most conspicuous spot he can find where his huge nest may be supported; and whenever he can combine this taste with his instinct for the society of man, he naturally selects a tower or a roof. In lands of ruins, which from their neglect and want of drainage supply him with abundance of food, he finds a column or a solitary arch the most secure position for his nest; but where neither towers nor ruins abound he does not hesitate to select a tall tree, as both storks, swallows, and many other birds must have done before they were tempted by the artificial conveniences of man's buildings to desert their natural places of nidification. Thus the golden eagle builds, according to circumstances, in cliffs, on trees, or even on the ground; and the common heron, which generally associates on the tops of the tallest trees, builds in Westmoreland and in Galway on bushes. It is therefore needless to interpret the text of the stork merely *perching* on trees. It probably was no less numerous in Palestine when David wrote than now; but the number of suitable towers must have been far fewer, and it would therefore resort to trees. Though it does not frequent trees in South Judaea, yet it still builds on trees by the Sea of Galilee, according to several travellers; and the writer may remark, that while he has never seen the nest except on towers or pillars in that land of ruins, Tunis, the only nest he ever saw in Morocco was on a tree. Varro (*Re Rustica*, iii. 5) observes, "Advenae volucres pullos faciunt, in agro ciconiae, in tecto hirundines." All modern authorities give instances of the white stork building on trees. Degland mentions several pairs which still breed in a marsh near Châlons-sur-Marne (*Orn. Europ.* ii. 153). Kjærboelling makes a similar statement with respect to Denmark, and Nilsson also as to Sweden. Böhlen observes "that in Germany the white stork builds

in the gables, &c., and in trees, chiefly the tops of poplars and the strong upper branches of the oak, binding the branches together with twigs, turf, and earth, and covering the flat surface with straw, moss, and feathers" (*Eier Eur.* pl. xxxvi.).

The black stork, no less common in Palestine, has never relinquished its natural habit of building upon trees. This species, in the north-eastern portion of the land, is the most abundant of the two (*Harmer's Obs.* iii. 323). Of either, however, the expression may be taken literally, that "the fir-trees are a dwelling for the stork." [H. B. T.]

STRAIN AT. The A. V. of 1611 renders Matt. xxiii. 24, "Ye blind guides! which strain at a gnat, and swallow a camel." There can be little doubt, as Dean Trench has supposed, that this obscure phrase is due to a printer's error, and that the true reading is "strain out." Such is the sense of the Greek διῴλίζω, as used by Plutarch (*Op. Mor.* p. 692 D, *Synop. Probl.* vi. 7, §1) and Dioscorides (ii. 86), viz. to clarify by passing through a strainer (διὰ στήρης). "Strain out," is the reading of Tyndale's (1539), Cranmer's (1539), the Bishops' (1568), and the Geneva (1557) Bibles, and "strain at," which is neither correct nor intelligible, could only have crept into our A. V., and been allowed to remain there, by an oversight. Dean Trench gives an interesting illustration of the passage from a private letter written to him by a recent traveller in North Africa, who says: "In a ride from Tangier to Tetuan, I observed that a Moorish soldier who accompanied me, when he drank, always unfolded the end of his turban and placed it over the mouth of his *bota*, drinking through the muslin, to strain out the gnats, whose larvae swarm in the water of that country" (*On the Auth. Vers. of the N. T.* pp. 172, 173). If one might conjecture the cause which led, even erroneously, to the substitution of *at* for *out*, it is perhaps to be found in the marginal note of the Geneva Version, which explains the verse thus: "Ye stay at that which is nothing, and let pass that which is of greater importance."

STRANGER (גֵּר, אֲרָם). A "stranger" in the technical sense of the term may be defined to be a person of foreign, i. e. non-Israelitish, extraction resident within the limits of the promised land. He was distinct from the proper "foreigner," inasmuch as the latter still belonged to another country, and would only visit Palestine as a traveller: he was still more distinct from the "nations,"^a or non-Israelite peoples, who held no relationship with the chosen people of God. The term answers most nearly to the Greek μέτοικος, and may be compared with our expression "naturalized foreigner," in as far as this implies a certain political status in the country where the foreigner resides: it is opposed to one "born in the land,"^b or, as the term more properly means, "not transplanted," in the same way that a naturalized foreigner is opposed to a native. The terms applied to the "stranger" have special reference to the fact of his residing^c in the land. The existence of such

a class of persons among the Israelites is easily accounted for: the "mixed multitude" that accompanied them out of Egypt (*Ex.* xii. 38) formed one element; the Canaanitish population, which was never wholly extirpated from their native soil, formed another and a still more important one; captives taken in war formed a third; fugitives, hired servants, merchants, &c., formed a fourth. The number from these various sources must have been at all times very considerable; the census of them in Solomon's time gave a return of 153,600 males (2 Chr. ii. 17), which was equal to about a tenth of the whole population. The enactments of the Mosaic Law, which regulated the political and social position of resident strangers, were conceived in a spirit of great liberality. With the exception of the Moabites and Ammonites (*Deut.* xxiii. 3), all nations were admissible to the rights of citizenship under certain conditions. It would appear, indeed, to be a consequence of the prohibition of intermarriage with the Canaanites (*Deut.* vii. 3), that these would be excluded from the rights of citizenship; but the Rabbinical view that this exclusion was superseded in the case of proselytes seems highly probable, as we find Doeg the Edomite (1 Sam. xxi. 7, xxii. 9), Uriah the Hittite (2 Sam. xi. 6), and Araunah the Jebusite (2 Sam. xxiv. 18), enjoying to all appearance the full rights of citizenship. Whether a stranger could ever become legally a landowner is a question about which there may be doubt. Theoretically the whole of the soil was portioned out among the twelve tribes, and Ezekiel notices it as a peculiarity of the division which he witnessed in vision, that the strangers were to share the inheritance with the Israelites, and should thus become as those "born in the country" (*Ex.* xlvii. 22). Indeed the term "stranger" is more than once applied in a pointed manner to signify one who was not a landowner (*Gen.* xxiii. 4; *Lev.* xiv. 23); while on the other hand *ezrak* (A. V. "born in the land") may have reference to the possession of the soil, as it is borrowed from the image of a tree not transplanted, and so occupying its native soil. The Israelites, however, never succeeded in obtaining possession of the whole, and it is possible that the Canaanitish occupants may in course of time have been recognised as "strangers," and had the right of retaining their land conceded to them. There was of course nothing to prevent a Canaanite from becoming the mortgagee in possession of a plot, but this would not constitute him a proper landowner, inasmuch as he would lose all interest in the property when the year of Jubilee came round. That they possessed land in one of these two capacities is clear from the case of Araunah above cited. The stranger appears to have been eligible to all civil offices, that of king excepted (*Deut.* xvii. 15). In regard to religion, it was absolutely necessary that the stranger should not infringe any of the fundamental laws of the Israelitish state: he was forbidden to blaspheme the name of Jehovah (*Lev.* xxiv. 16), to work on the Sabbath (*Ex.* xx. 10), to eat leavened bread at the

^a גֵּרִים.

^b יוֹדֵי אֶרֶץ.

^c אֲרָם.

^d גֵּר, אֲרָם. These terms appear to describe, not two different classes of strangers, but the stranger under two different aspects, *ger* rather implying his foreign origin, or the fact of his having turned aside to abide with another people, *aram* implying his permanent residence in the land of his adoption. Winer (*Realwörterbuch*) regards the latter as equivalent to *bi-refling*.

Jahn (*Archaeol.* i. 11, §181) explains *aram* of one who, whether Hebrew or foreigner, was destitute of a home. We see no evidence for either of these opinions. In the LXX. these terms are most frequently rendered by *επίτοκος*, the Alexandrian substitute for the classical *μέτοικος*. Sometimes *προσέλυτος* is used, and in two passages (*Kx.* xii. 19; *Is.* xiv. 1) *γενοίμενος*, as representing the Chaldean form of the word *ger*.

ruce of the Passover (Ex. xii. 19), to commit any breach of the marriage laws (Lev. xviii. 26), to worship Molech (Lev. xx. 2), or to eat blood or the flesh of any animal that had died otherwise than by the hand of man (Lev. xvii. 10, 15). He was required to release a Hebrew servant in the year of Jubilee (Lev. xxv. 47-54), to observe the day of atonement (Lev. xvi. 29), to perform the rites of purification when necessary (Lev. xvii. 15; Num. xix. 10), and to offer sin-offerings after sins of ignorance (Num. xv. 29). If the stranger was a bondman he was obliged to submit to circumcision (Ex. xii. 44); if he was independent, it was optional with him; but if he remained uncircumcised, he was prohibited from partaking of the Passover (Ex. xii. 48), and could not be regarded as a full citizen. Liberty was also given in regard to the use of prohibited food to an uncircumcised stranger; for on this ground alone can we harmonise the statements in Deut. xiv. 21 and Lev. xvii. 10, 15. Assuming, however, that the stranger was circumcised, no distinction existed in regard to legal rights between the stranger and the Israelite: "one law" for both classes is a principle affirmed in respect to religious observances (Ex. xii. 49; Num. xv. 16), and to legal proceedings (Lev. xxiv. 22), and the judges are strictly warned against any partiality in their decisions (Deut. i. 16, xxiv. 17, 18). The Israelite is also enjoined to treat him as a brother (Lev. xix. 34; Deut. x. 19), and the precept is enforced in each case by a reference to his own state in the land of Egypt. Such precepts were needed in order to counteract the natural tendency to treat persons in the position of strangers with rigour. For, though there was the possibility of a stranger acquiring wealth and becoming the owner of Hebrew slaves (Lev. xxv. 47), yet his normal state was one of poverty, as implied in the numerous passages where he is coupled with the fatherless and the widow (e.g. Ex. xxii. 21-23; Deut. x. 18, xxiv. 17), and in the special directions respecting his having a share in the feasts that accompanied certain religious festivals (Deut. xvi. 11, 14, xxvi. 11), in the leasing of the corn-field, the vineyard, and the olive-yard (Lev. xix. 10, xxiii. 22; Deut. xxiv. 20), in the produce of the triennial tithe (Deut. xiv. 28, 29), in the forgotten sheaf (Deut. xxiv. 19), and in the spontaneous production of the soil in the sabbatical year (Lev. xxv. 6). It also appears that the "stranger" formed the class whence the hirelings were drawn: the terms being coupled together in Ex. xii. 45; Lev. xxii. 10, xxv. 6, 40. Such labourers were engaged either by the day (Lev. xix. 13; Deut. xxiv. 15), or by the year (Lev. xxv. 53), and appear to have been considerably treated, for the condition of the Hebrew slave is favourably compared with that of the hired servant and the sojourner in contradistinction to the bondman (Lev. xxv. 39, 40). A less fortunate class of strangers, probably captives in war or for debt, were reduced to slavery, and were subject to be bought and sold (Lev. xxv. 45), as well as to be put to task-work, as was the case with the Gibeonites (Josh. ix. 21) and with those whom Solomon employed in the building of the Temple (2 Chr. ii. 16). The liberal spirit of the Mosaic regulations respecting strangers presents a strong contrast to the rigid exclusiveness of the Jews at the commencement of the Christian era. The growth of this spirit dates from the time of the Babylonian captivity, and originated partly in the outrages which the Jews suffered at the hands of foreigners, and partly through a fear lest their

nationality should be swamped by constant association with foreigners: the latter motive appears to have dictated the stringent measures adopted by Nehemiah (Neh. ix. 2, xiii. 3). Our Lord condemns this exclusive spirit in the parable of the good Samaritan, where He defines the term "neighbour" in a sense new to His hearers (Luke x. 36). It should be observed, however, that the proselyte of the New Testament is the true representative of the stranger of the Old Testament, and towards this class a cordial feeling was manifested. [PROSELYTE.] The term "stranger" (ξένος) is generally used in the New Testament in the general sense of *foreigner*, and occasionally in its more technical sense as opposed to a citizen (Eph. ii. 19). [W. L. B.]

STRAW (סֵבֶל, *sebel*; ἄχυρον: *palea*). Both wheat and barley straw were used by the ancient Hebrews chiefly as fodder for their horses, cattle, and camels (Gen. xxiv. 25; 1 K. iv. 28; Is. xi. 7, lxx. 25). The straw was probably often chopped and mixed with barley, beans, &c., for provender (see Harmer's *Observations*, i. 423-4; Wilkinson, *Anc. Egypt*, ii. 48, Lond. 1854). There is no intimation that straw was used for litter; Harmer thinks it was not so employed; the litter the people now use in those countries is the animals' dung, dried in the sun and bruised between their hands, which they heap up again in the morning, sprinkling it in the summer with fresh water to keep it from corrupting (Obs. p. 424, Lond. 1797). Straw was employed by the Egyptians for making bricks (Ex. v. 7, 16): it was chopped up and mixed with the clay to make them more compact and to prevent their cracking (*Anc. Egypt*, ii. 194). [BRICKS.] The ancient Egyptians reaped their corn close to the ear, and afterwards cut the straw close to the ground (*Id.* p. 48) and laid it by. This was the straw that Pharaoh refused to give to the Israelites, who were therefore compelled to gather "stubble" (שֵׁבֶל, *Kash*) instead, a matter of considerable difficulty, seeing that the straw itself had been cut off near to the ground. The *Stubble* frequently alluded to in the Scriptures may denote either the short standing straw, mentioned above, which was commonly set on fire, hence the allusions in Is. v. 24; Joel ii. 5, or the small fragments that would be left behind after the reaping, hence the expression, "as the *Kash* before the wu" (Ps. lxxxiii. 13; Is. xli. 2; Jer. xiii. 24). [W. L.]

STREAM OF EGYPT (וְנַחַל מִצְרַיִם: *En-nehroua* (pl.): *torrens Aegypti*), once occurs in the A. V. instead of "the river of Egypt," apparently to avoid tautology (Is. xxvii. 12). It is the best translation of this doubtful name, for it expresses the sense of the Hebrew while retaining the vagueness it has, so long as we cannot decide whether it is applied to the Pelusian branch of the Nile or the stream of the Wadi-el-Areesh. [RIVER OF EGYPT; NILE.] [R. S. P.]

STREET (וְיָמֵי, בֵּיתָא, דָּבָר: *πλατεα, βόμη*). The streets of a modern Oriental town present a great contrast to those with which we are familiar, being generally narrow, tortuous, and gloomy, even in the best towns, such as Cairo (Lane, i. 25), Damascus (Porter, i. 30), and Aleppo (Russell, 14). Their character is mainly fixed by the cli-

* The term *προσάναρος* occurs in the LXX. as = נַחַל in Ex. xii. 19, xx. 10, xxii. 21, xxiii. 9.

ments and the style of architecture, the narrowness being due to the extreme heat, and the gloominess to the circumstance of the windows looking for the most part into the inner court. As these same influences existed in ancient times, we should be inclined to think that the streets were much of the same character as at present. The opposite opinion has, indeed, been maintained on account of the Hebrew term *רחוב*, frequently applied to streets, and properly meaning a wide place. The specific signification of this term, however, is rather a courtyard or square: it is applied in this sense to the broad open space adjacent to the gate of a town, where public business was transacted (Deut. xiii. 16), and, again, to the court before the Temple (Ezr. x. 9) or before a palace (Esth. iv. 8). Its application to the street may point to the comparative width of the main street, or it may perhaps convey the idea of publicity rather than of width, a sense well adapted to the passages in which it occurs (*e. g.* Gen. xix. 2; Judg. xix. 15; 2 Sam. xxi. 12). The street called "Straight," in Damascus (Acts ix. 11), was an exception to the rule of narrowness: it was a noble thoroughfare, 100 feet wide, divided in the Roman age by colonnades into three avenues, the central one for foot passengers, the side passages for vehicles and horsemen going in different directions (Porter, i. 47). The shops and warehouses were probably collected together into bazars in ancient as in modern times: we read of the bakers' bazar (Jer. xxxvii. 21), and of the wool, bracer, and clothes bazars (*dryops*) in Jerusalem (Joseph. *B. J.* v. 8, §1), and perhaps the agreement between Benhadad and Ahab that the latter should "make streets in Damascus" (1 K. xx. 34), was in reference rather to bazars (the term *châls* here used being the same as in Jer. xxxvii. 21), and thus amounted to the establishment of a *jus commercii*. A lively description of the bazars at Damascus is furnished us by Porter (*i.* 58-60). The broad and narrow streets are distinguished under the terms *רחוב* and *חלה* in the following passages, though the point is frequently lost in the A. V. by rendering the latter term "abroad" or "without"—Prov. v. 16, vii. 12, xii. 13; Jer. v. 1, ix. 21; Am. v. 16; Nah. ii. 4. The same distinction is apparently expressed by the terms *רחוב* and *shâk* in Cant. iii. 2, and by *πλατεία* and *βέμνη* in Luke xiv. 21: but the etymological sense of *shâk* points rather to a place of concourse, such as a market-place, while *βέμνη* is applied to the "Straight" street of Damascus (Acts ix. 11), and is also used in reference to the Pharisees (Matt. vi. 2) as a place of the greatest publicity: it is therefore doubtful whether the contrast can be sustained: Josephus describes the alleys of Jerusalem under the term *στενωπολ* (*B. J.* v. 8, §1). The term *shâk* occurs elsewhere only in Prov. vii. 8; Eccl. xii. 4, 5. The term *châls*, already noticed, applies generally to that which is outside the residence (as in Prov. vii. 12, A. V. "she is without"), and hence to other places than streets, as to a pasture-ground (Job xiii. 17, where the A. V. requires emendation). That streets occasionally had names appears from Jer. xxxvii. 21; Acts ix. 11. That they were generally unpaved may be inferred from the notices of the pavement laid by Herod the Great at Antioch (Joseph. *Ant.* xvi. 5, §3), and by Herod Agrippa II. at Jerusalem (*Ant.* xx. 9, §7). Hence pavement forms one of the peculiar features of the ideal Jerusalem (Tob. xiii. 17; Rev. xxi. 21). Each street and bazar in a modern town is locked

up at night (Lane, i. 25; Russell, i. 21), and hence a person cannot pass without being observed by the watchman: the same custom appears to have prevailed in ancient times (Cant. iii. 3). [W. L. B.]

STRIPES. [PUNISHMENTS.]

SU'AH (סוּאָה: *Sue*). Son of Zophah, an Asherite (1 Chr. vii. 36).

SUBA (סוּבָא; Alex. *Σουβας*: *Suba*). The sons of Suba were among the sons of Solomon's servants who returned with Zerubbabel (1 Esd. v. 34). There is nothing corresponding to the name in the Hebrew lists of Ezra and Nehemiah.

SUBAI (סוּבַי; Alex. *Σουβαι*: *Obas*) = SHALMAI (1 Esd. v. 30; comp. Ezr. ii. 46).

SUC'COTH (סוּכּוֹת: *Succoth* in Gen. in both MSS., elsewhere *סוכות*, *סוכות*, *סוכות*; Alex. *Σοκχωθ*: in Gen. *Socoth, ul est, tabernacula; Socoth, Socoth*). A town of ancient date in the Holy Land, which is first heard of in the account of the homeward journey of Jacob from Padan-aram (Gen. xxxiii. 17). The name is fancifully derived from the fact of Jacob's having there put up "booths" (*Succoth, סוכות*) for his cattle, as well as a house for himself. Whether that occurrence originated the name of Succoth (and, following the analogy of other history, it is not probable that it did), the mention of the house and the booths in contrast to the "tents" of the wandering life indicates that the Patriarch made a lengthened stay there—a fact not elsewhere alluded to.

From the itinerary of Jacob's return it seems that Succoth lay between PENIEL, near the ford of the torrent Jabbok, and Shechem (comp. xxxii. 30, and xxxiii. 18, which latter would be more accurately rendered "Came safe to the city Shechem"). In accordance with this is the mention of Succoth in the narrative of Gideon's pursuit of Zebah and Zalmunna (Judg. vii. 5-17). His course is eastward—the reverse of Jacob's—and he comes first to Succoth, and then to Peniel, the latter being further up the mountain than the former (ver. 8, "went up thence"). Its importance at this time is shown by the organisation and number of its seventy-seven head-men—chiefs and sheikhs—and also by the defiance with which it treated Gideon on his first application.

It would appear from this passage that it lay on the east of Jordan, which is corroborated by the fact that it was allotted to the tribe of Gad (Josh. xiii. 27). In the account of Jacob's journey, all mention of the Jordan is omitted.

Succoth is named once again after this—in 1 K. vii. 46; 2 Chr. iv. 17—as marking the spot at which the brass foundries were placed for casting the metal-work of the Temple, "in the district of Jordan, in the fat or soft ground between Succoth and Zarthan." But, as the position of Zarthan is not yet known, this notice has no topographical value beyond the mention of the Jordan.

It appears to have been known in the time of Jerome, who says (*Quaest. in Gen.* xxxiii. 16) that there was then a town named Socoth beyond the Jordan (*trans Jordanem*), in the district (*parte*) of Scythopolis. Nothing more, however, was heard of it till Burckhardt's journey. He mentions it in

* סוּכּוֹת, A. V. "elders." The word has exactly the signification of the Arabic *sheikh*, an old man, and hence the head of a tribe.

a note to p. 345 (July 2). He is speaking of the places about the Jordan, and, after naming three ruined towns "on the west side of the river to the north of Byzan," he says: "Near where we crossed

to the south are the ruins of Sukkot (سكوت). On the western bank of the river there are no ruins between Ain Sultan (which he has just said was the southernmost of the three ruined places north of Byzan) and Kieha or Jericho." There can, therefore, be no doubt that the Sukkot of Burckhardt was on the east of the Jordan. The spot at which he crossed he has already stated (p. 343, 4) to have been "two hours from Byzan, which bore N.N.W."

Dr. Robinson (*B. R.* iii. 309, &c.) and Mr. Van de Velde (*Syr. and Pal.* ii. 343) have discovered a place named *Sakūt* (ساکوت), evidently entirely

distinct both in name and position from that of Burckhardt. In the accounts and maps of these travellers it is placed on the west side of the Jordan, less than a mile from the river, and about 10 miles south of *Beisān*. A fine spring bubbles out on the east side of the low bluff on which the ruins stand. The distance of *Sakūt* from *Beisān* is too great, even if it were on the other side of the Jordan, to allow of its being the place referred to by Jerome. The Sukkot of Burckhardt is more suitable. But it is doubtful whether either of them can be the Succoth of the Old Test. For the events of Gideon's story the latter of the two is not unsuitable. It is in the line of flight and pursuit which we may suppose the Midianites and Gideon to have taken, and it is also near a ford. *Sakūt*, on the other hand, seems too far south, and is also on the west of the river. But both appear too far to the north for the Succoth of Jacob, lying as that did between the Jabbok and Shechem, especially if we place the *Wady Zerka* (usually identified with the Jabbok) further to the south than it is placed in Van de Velde's map, as Mr. Beke^b proposes to do. Jacob's direct road from the *Wady Zerka* to Shechem would have led him by the *Wady Ferah*, on the one hand, or through *Yamūn*, on the other. If he went north as far as *Sakūt*, he must have ascended by the *Wady Maleh* to *Teyasir*, and so through *Tubās* and the *Wady Biddān*. Perhaps his going north was a ruse to escape the dangerous proximity of Esau; and if he made a long stay at Succoth, as suggested in the outset of this article, the détour from the direct road to Shechem would be of little importance to him.

Until the position of Succoth is more exactly ascertained, it is impossible to say what was the VALLEY OF SUCCOTH mentioned in Ps. lx. 6 and cviii. 7. The word rendered "Valley" is *'emek* in both cases (*ἡ κοιλάς τῶν ἐμεκῶν*; *Vallis Succoth*). The same word is employed (Josh. xiii. 27, in specifying the position of the group of towns amongst which Succoth occurs, in describing the allotment of Gad. So that it evidently denotes some marked feature of the country. It is not probable, however, that the main valley of the Jordan, the *Ghōr*, is intended, that being always designated in the Bible by the name of "the Arabah." [G.]

^b This gentleman, an old and experienced traveller, has lately returned from a journey between Damascus, the *Wady Zerka*, and Nablus. It was undertaken with the view of testing his theory that Haran was in the neighbourhood of Damascus. Without going into that question,

SUC'OTH (סוּכּוֹת: Σοχοῦθ: *Socoth, Socoth*

"booths," or "tents"), the first camping-place of the Israelites when they left Egypt (*Ex.* xii. 37 xiii. 20; *Num.* xxxiii. 5, 6). This place was apparently reached at the close of the first day's march. It can scarcely be doubted that each of the first three stations marks the end of a single journey. *Rameses*, the starting-place, we have shown was probably near the western end of the *Wādī-t-Tumeylāt*. We have calculated the distance traversed in each day's journey to have been about fifteen miles, and as Succoth was not in the desert, the next station, *Etham*, being "in the edge of the wilderness" (*Ex.* xiii. 20; *Num.* xxxiii. 6), it must have been in the valley, and consequently nearly due east of *Rameses*, and fifteen miles distant in a straight line. If *Rameses* may be supposed to have been near the mound called *El-'Abdāsseyeh*, the position of Succoth can be readily determined within moderate limits of uncertainty. It was probably, to judge from its name, a resting-place of caravans, or a military station, or a town named from one of the two. We find similar names in *Scenae Mandrae* (*Itin. Ant.*), *Scenae Mandrorum* (*Not. Dign.*) or *Σκηνή Μανδρῶν* (*Not. Dign.*), *Episcopatum*, *Scenae Veteranorum* (*It. Ant. Not. Dign.*), and *Scenae extra Gerasa* (*Not. Dign.*). See, for all these places, Parthey, *Zur Erdkunde des alten Aegyptens*, p. 535. It is, however, evident that such a name would be easily lost, and even if preserved, hard to recognize, as it might be concealed under a corresponding name of similar signification, though very different in sound, as that of the settlement of Ionian and Carian mercenaries, called *τὰ Στρατῶνεια* (*Herod.* ii. 154).

We must here remark upon the extreme carelessness with which it has been taken for granted that the whole journey to the Red Sea was through the desert, and an argument against the authenticity of the sacred narrative based upon evidence which it not only does not state but contradicts. For, as we have seen, *Etham*, the second camping-place, was "in the edge of the wilderness," and the country was once cultivated along the valley through which passed the canal of the Red Sea. The demand that Moses was commissioned to make, that the Israelites might take "three days' journey into the wilderness" (*Ex.* iii. 18), does not imply that the journey was to be of three days through the wilderness, but rather that it would be necessary to make three days' journey in order to sacrifice in the wilderness. [EXODUS, THE; RED SEA, PASSAGE OF.] [R. S. P.]

SUC'OTH-BEN'OTH (סוּכּוֹת-בְּנוֹת: Σοχοῦθ-Βενὶθ: *Socoth-benoth*) occurs only in 2 K. xvii. 30, where the Babylonish settlers in Samaria are said to have set up the worship of Succoth-benoth on their arrival in that country. It has generally been supposed that this term is pure Hebrew, and signifies the "tents of daughters;" which some explain as "the booths in which the daughters of the Babylonians prostituted themselves in honour of their idol," others as "small tabernacles in which were contained images of female deities" (compare Gesenius and S. Newman, *ad voc.* סוכה; Winer;

all that concerns us here is to say that he has fixed the latitude of the mouth of the *Wady Zerka* at 32° 13', or more than ten miles south of its position in Van de Velde's map. Mr. Beke's paper and map will be published in the *Journal* of the R. Geogr. Society for 1883

Recherches, ii. p. 543; Calmet, *Commentaire Littéral*, ii. 337). It is a strong objection to both these explanations, that Succoth-benoth, which in the passage in Kings occurs in the same construction with Nergal and various other gods, is thus not a deity at all, nor, strictly speaking, an object of worship. Perhaps therefore the suggestion of Sir H. Rawlinson, against which this objection does not lie, may be admitted to deserve some attention. This writer thinks that Succoth-benoth represents the Chaldaean goddess *Zir-banit*, the wife of Merodach, who was especially worshipped at Babylon, in conjunction with her husband, and who is called the "queen" of the place. *Succoth* he supposes to be either "a Hamitic term equivalent to *Zir*," or possibly a Shemitic mistranslation of the term—*Zurat*, "supreme," being confounded with *Zarat*, "tents." (See the Essay of Sir H. Rawlinson in Rawlinson's *Herodotus*, vol. i. p. 630.) [G. R.]

SUCHATHITES (סוּחַתִּיתִים: *Σουκαθῖται*: in *tabernaculis commorantes*). One of the families of scribes at Jabez (1 Chr. ii. 55).

SUD (סוּד: *Sodî*). A river in the immediate neighbourhood of Babylon, on the banks of which Jewish exiles lived (Bar. i. 4). No such river is known to geographers: but if we assume that the first part of the book of Baruch was written in Hebrew, the original text may have been *Sur*, the final *ו* having been changed into *ו*. In this case the name would represent, not the town of Sora, as suggested by Bochart (*Phaleg*, i. 8), but the river Euphrates itself, which is always named by Arab geographers "the river of Sura," a corruption probably of the "Sippara" of the inscriptions (Rawlinson's *Herod.* i. 611, note 4). [W. L. B.]

SUD (סוּדָּה: Alex. *Σουδά*: *Su*) = *SIA*, or *SIANA* (1 Esd. v. 29; comp. Neh. vii. 47; Ezr. ii. 44).

SUDIAS (Σουδίας: *Serebias et Edias*) = *HODAVIAH* 3 and *HODEVAH* (1 Esd. v. 26; comp. Ezr. iii. 40; Neh. vii. 43).

SUK'KIIMS (סוּכִּיִּים: *Σουκιῖται*: *Troglo-ditæ*), a nation mentioned (2 Chr. xii. 3) with the Lubim and Cushim as supplying part of the army which came with Shishak out of Egypt when he invaded Judah. Gesenius (*Lex.* s. v.) suggests that their name signifies "dwellers in tents," in which case it might perhaps be better to suppose them to have been an Arab tribe like the *Scenitæ*, than Ethiopians. If it is borne in mind that Zerah was apparently allied with the Arabs south of Palestine [*ZERAH*], whom we know Shishak to have subdued [*SHISHAK*], our conjecture does not seem to be improbable. The Sukkiims may correspond to some one of the shepherd or wandering races mentioned on the Egyptian monuments, but we have not found any name in hieroglyphics resembling their name in the Bible, and this somewhat favours the opinion that it is a Shemitic appellation. [R. S. P.]

SUN (שֶׁן). In the history of the creation the sun is described as the "greater light" in contradistinction to the moon or "lesser light," in conjunction with which it was to serve "for signs, and for seasons, and for days, and for years," while its special office was "to rule the day" (Gen. i. 14-16). The "signs" referred to were probably such extraordinary phenomena as eclipses, which were regarded as conveying premonitions of coming

events (Jer. x. 2; Matt. xxiv. 29, with Luke xxi. 25). The joint influence assigned to the sun and moon in deciding the "seasons," both for agricultural operations and for religious festivals, and also in regulating the length and subdivisions of the "years," correctly describes the combination of the lunar and solar year, which prevailed at all events subsequently to the Mosaic period—the moon being the *measurer* (*καρ' ἔσχατον*) of the lapse of time by the subdivisions of months and weeks, while the sun was the ultimate *regulator* of the length of the year by means of the recurrence of the feast of Pentecost at a fixed agricultural season, viz. when the corn became ripe. The sun "ruled the day" alone, sharing the dominion of the skies with the moon, the brilliancy and utility of which for journeys and other purposes enhances its value in Eastern countries. It "ruled the day," not only in reference to its powerful influences, but also as deciding the length of the day and supplying the means of calculating its progress. Sun-rise and sun-set are the only defined points of time in the absence of artificial contrivances for telling the hour of the day: and as these points are less variable in the latitude of Palestine than in our country, they served the purpose of marking the commencement and conclusion of the working day. Between these two points the Jews recognized three periods, viz. when the sun became hot, about 9 A.M. (1 Sam. xi. 9; Neh. vii. 3); the double light or noon (Gen. xliii. 16; 2 Sam. iv. 5), and "the cool of the day" shortly before sunset (Gen. iii. 8). The sun also served to fix the quarters of the hemisphere, east, west, north, and south, which were represented respectively by the rising sun, the setting sun (Is. xiv. 6; Ps. l. 1), the dark quarter (Gen. xiii. 14; Joel ii. 20), and the brilliant quarter (Deut. xxxiii. 28; Job xxxvii. 17; Eccl. xl. 24); or otherwise by their position relative to a person facing the rising sun—before, behind, on the left hand, and on the right hand (Job xxiii. 8, 9). The apparent motion of the sun is frequently referred to in terms that would imply its reality (Josh. x. 13; 2 K. xx. 11; Ps. xix. 6; Eccl. i. 5; Hab. iii. 11). The ordinary name for the sun, *shemesh*, is supposed to refer to the extreme brilliancy of its rays, producing *stupor* or *astonishment* in the mind of the beholder; the poetical names, *chammah* (Job xxx. 28; Cant. vi. 10; Is. xxx. 26), and *cheres* (Judg. xiv. 18; Job ix. 7) have reference to its heat, the beneficial effects of which are duly commemorated (Deut. xxxiii. 14; Ps. xix. 6), as well as its baneful influence when in excess (Ps. cxxi. 6; Is. xlix. 10; Jon. iv. 8; Eccles. xliii. 3, 4). The vigour with which the sun traverses the heavens is compared to that of a "bridegroom coming out of his chamber," and of a "giant rejoicing to run his course" (Ps. xix. 5). The speed with which the beams of the rising sun dart across the sky, is expressed in the term "wings" applied to them (Ps. cxxxix. 9; Mal. iv. 2).

The worship of the sun, as the most prominent and powerful agent in the kingdom of nature, was widely diffused throughout the countries adjacent to Palestine. The Arabians appear to have paid direct worship to it without the intervention of any statue or symbol (Job xxii. 26, 27; Strab. xvi. p. 784), and this simple style of worship was probably familiar to the ancestors of the Jews in

Chaldaea and Mesopotamia. In Egypt the sun was worshipped under the title of Rê or Ra, and not as was supposed by ancient writers under the form of Oairis (Diod. Sic. i. 11; see Wilkinson's *Anc. Eg.* iv. 289): the name came conspicuously forward as the title of the kings, Pharaoh, or rather Phra, meaning "the sun" (Wilkinson, iv. 287). The Hebrews must have been well acquainted with the idolatrous worship of the sun during the captivity in Egypt, both from the contiguity of On, the chief seat of the worship of the sun as implied in the name itself (On = the Hebrew Bethshemesh, "house of the sun," Jer. xliii. 13), and also from the connexion between Joseph and Poti-pherah ("he who belongs to Ra"), the priest of On (Gen. xli. 45). After their removal to Canaan, the Hebrews came in contact with various forms of idolatry, which originated in the worship of the sun; such as the Baal of the Phœnicians (Movers, *Phœn.* i. 180), the Molech or Milcom of the Ammonites, and the Iladad of the Syrians (Plin. xxxvii. 71). These idols were, with the exception of the last, introduced into the Hebrew commonwealth at various periods (Judg. ii. 11; 1 K. xi. 5); but it does not follow that the object symbolized by them was known to the Jews themselves. If we have any notice at all of conscious sun-worship in the early stages of their history, it exists in the doubtful term *chanánim* (Lev. xvi. 30; Is. xvii. 8, &c.), which was itself significant of the sun, and probably described the stone pillars or statues under which the solar Baal (Baal-Hamon of the Punic inscriptions, Gesen. *Thes.* i. 439) was worshipped at Baal-Hamon (Cant. viii. 11) and other places. Pure sun-worship appears to have been introduced by the Assyrians, and to have become formally established by Manasseh (2 K. xxi. 3, 5), in contravention of the prohibitions of Moses (Deut. iv. 19, xvii. 3). Whether the practice was borrowed from the Sepharvites of Samaria (2 K. xvii. 31), whose gods Adrammelech and Anammelech are supposed to represent the male and female sun, and whose original residence (the Heliopolis of Berosus) was the chief seat of the worship of the sun in Babylonia (Rawlinson's *Herod.* i. 611), or whether the kings of Judah drew their model of worship more immediately from the East, is uncertain. The dedication of chariots and horses to the sun (2 K. xxiii. 11) was perhaps borrowed from the Persians (Herod. i. 189; Curt. iii. 3, §11; Xen. *Cyrop.* viii. 8, §24), who honoured the sun under the form of Mithras (Strab. xv. p. 732). At the same time it should be observed that the horse was connected with the worship of the sun in other countries, as among the Massagetas (Herod. i. 216), and the Armenians (Xen. *Anab.* iv. 5, §35), both of whom used it as a sacrifice. To judge from the few notices we have on the subject in the Bible, we should conclude that the Jews derived their mode of worshipping the sun from several quarters. The practice of burning incense on the house-tops (2 K. xxiii. 5, 12; Jer. xix. 13; Zeph. i. 5) might have been borrowed from the Arabians (Strab. xvi. p. 784), as also the simple act of adoration directed towards the rising sun (Is. viii. 16; comp. Job xxxi. 27). On the other hand, the use of the chariots and horses in the processions on festival days came, as we have observed,

from Persia; and so also the custom of "putting the branch to the nose" (Ex. viii. 17) according to the generally received explanation, which identifies it with the Persian practice of holding in the left hand a bundle of twigs called Bersam while worshipping the sun (Strab. xv. p. 733; Hyde, *Rel. Pers.* p. 345). This, however, is very doubtful, the expression being otherwise understood of "putting the knife to the nose," i. e. producing self-mutilation (Hitzig, *On Ezek.*). An objection lies against the former view from the fact that the Persians are not said to have held the branch to the nose. The importance attached to the worship of the sun by the Jewish kings, may be inferred from the fact that the horses were stalled within the precincts of the temple (the term *parva* meaning not "suburb" as in the A. V., but either a portico or an outbuilding of the temple). They were removed thence by Josiah (2 K. xxiii. 11).

In the metaphorical language of Scripture the sun is emblematic of the law of God (Ps. xix. 7), of the cheering presence of God (Ps. lxxiv. 11), of the person of the Saviour (John i. 9; Mal. iv. 2), and of the glory and purity of heavenly beings (Rev. i. 16, x. 1, xii. 1). [W. L. B.]

SUR (Σούρ: Vulg. omits). One of the places on the sea-coast of Palestine, which are named as having been disturbed at the approach of Holofernes with the Assyrian army (Jud. ii. 28). It cannot be Tyre, the modern *Sâr*, since that is mentioned immediately before. Some have suggested Dor, others a place named Sora, mentioned by Steph. Byz. as in Phœnicia, which they would identify with *Athê*; others, again, *Sârafend*. But none of these are satisfactory.

SURETISHIP. (1.) The A. V. rendering for *tsûm*, lit. in marg. "those that strike (hands)." (2.) The phrase *tsûmeth yad*, "depositing in the hand," i. e. giving in pledge, may be understood to apply to the act of pledging, or virtual though not personal suretiship (Lev. vi. 2, in Hebr. v. 21). In the entire absence of commerce the law laid down no rules on the subject of suretiship, but it is evident that in the time of Solomon commercial dealings had become so multiplied that suretiship in the commercial sense was common (Prov. vi. 1, xi. 15, xvii. 18, xx. 16, xxii. 26, xxvii. 13). But in older times the notion of one man becoming a surety for a service to be discharged by another was in full force (see Gen. xiv. 32), and it is probable that the same form of undertaking existed, viz. the giving the hand to (striking hands with), not, as Michaelis represents, the person who was to discharge the service—in the commercial sense the debtor—but the person to whom it was due, the creditor (Job xvii. 3; Prov. vi. 1; Michaelis, *Laws of Moses*, §151, ii. 322, ed. Smith). The surety of course became liable for his client's debts in case of his failure. In later Jewish times the system had become common, and caused much distress in many instances, yet the duty of suretiship in certain cases is recognised as valid (Ecclus. viii. 13, xxix. 14, 15, 16, 18, 19). [LOAN.] [H. W. P.]

SUSA (Σωσαν). Esth. xi. 3. xvi. 18. [SUS SHAN.]

חֲפָצִים.

פָּרֶה.

חֲפָצִים Voig. *laques*; from פָּרֶה, "strike"

(Gen. 15:17).

פָּרֶה וְשִׁבְחָה; *parashah*.

SUBANCHITES (סִבְאֲנִיטִים: Σ. σαβανίται:

Susanchites) is found once only—in Ex. iv. 9, where it occurs among the list of the nations whom the Assyrians had settled in Samaria, and whose descendants still occupied the country in the reign of the Pseudo-Smerdis. There can be no doubt that it designates either the inhabitants of the city Susa (סִבְאֲנִיטִים), or those of the country—Susia or Susiana—whereof Susa was the capital. Perhaps as the Elamites are mentioned in the same passage, and as Daniel (viii. 2) seems to call the country Elam and the city Shushan (or Susa), the former explanation is preferable. (See SHUSHAN.) [G. R.]

SUSAN'NA (סוּסַנְנָה, Σοῦσαννα, i. e. סִבְאֲנִיטִים, "a lily"). 1. The heroine of the story of the Judgment of Daniel. [DANIEL, APOCRYPHAL ADDITIONS TO.] The name occurs in Diol. Sic. as that of the daughter of Ninus (ii. 6), and Sheshan (1 Chr. ii. 31, 34, 35) is of the same origin and meaning (Ges. *Thes.* s. v.).

2. One of the women who ministered to the Lord (Luke viii. 3). [B. F. W.]

SUSI (סִיטִי: Σοῦσι: Susi). The father of Gaddi the Manassite spy (Num. xiii. 11).

SWALLOW, חֲרִיט, *dérér*, and חֲרִיט, *dérér*, both thus translated in A. V. חֲרִיט occurs twice, Ps. lxxiv. 3, and Prov. xxvi. 2: transl. by LXX. *τρογών* and *στρομβός*; Vulg. *turtur* and *passer*. חֲרִיט also twice, Is. xxxviii. 14, and Jer. viii. 7, both times in conjunction with *דִּבְדִּי* or *דִּבְדִּי*, and rendered by LXX. *περιστέρα* and *στρομβίον*, Vulg. "columba" and "ciconia." In each passage *דִּבְדִּי* is rendered, probably correctly, by LXX. *χειιδών* (swallow), A. V. crane [CRANE], which is more probably the true signification of חֲרִיט. *דִּבְדִּי* is, perhaps, connected with Arab. *ṣamsam* ('maissi'), applied to many warbling birds.

The rendering of A. V. for חֲרִיט seems less open to question, and the original (quasi חֲרִיט, "freedom") may include the swallow with other swiftly flying or free birds. The old commentators, except Bochart, who renders it "columba fera," apply it to the swallow from the love of freedom in this bird and the impossibility of retaining it in captivity.

Whatever be the precise rendering, the characters ascribed in the several passages where the names occur, are strictly applicable to the swallow, viz. its swiftness of flight, its nesting in the buildings of the Temple, its mournful, garrulous note, and its regular migration, shared indeed in common with several others. But the turtle-dove, for which the LXX. have taken חֲרִיט, was scarcely likely to be a familiar resident in the Temple enclosure. On Is. xxxviii. 14, "Like a swallow, so did I chatter," we may observe that the garrulosity of the swallow was proverbial among the ancients (see Nonn. Dionys. ii. 133, and Aristoph. *Batr.* 93). Hence its epithet *κωτιλός*, "the twitterer," *κωτιλός* δὲ τὰς χειιδόνας, Athen. 622. See Anacr. 104, and *ἑρμηνεύει*, Hes. *Op.* 566; and Virg. *Georg.* iv. 304.

Although Aristotle in his "Natural History," and

Pliny following him, have given currency to the fable that many swallows bury themselves during winter, yet the regularity of their migration alluded to by the Prophet Jeremiah was familiarly recognised by the ancients. See Anacr. (Od. xxxiii.).

The ditty quoted by Athen. (360) from Theognis is well known—

Πᾶς φέρε χειιδόν, καλὰς ἄρας ἔχοντα,
καλοὺς ἐνιαντούς, ἐνὶ γαστέρας λευκά, ἐνὶ νύκτι
μέλαινα.

So Ovid (*Fast.* ii. 853), "Prænuntia veris hirundo."

Many species of swallow occur in Palestine. All those familiar to us in Britain are found. The swallow (*Hirundo rustica*, L., var. *Cahérica*, Licht.), martin (*Chelidon urbica*, L.), sand martin (*Cotyle riparia*, L.), abound. Besides these the eastern swallow (*Hir. rufula*, Tem.), which nestles generally in fissures in rocks, and the crag martin (*Cotyle rupestris*, L.), which is confined to mountain gorges and desert districts, are also common. See *Ibis*, vol. i. p. 27, vol. ii. p. 386. The crag martin is the only member of the genus which does not migrate from Palestine in winter. Of the genus *Cypselus* (swift), our swift (*Cypselus apus*, L.) is common, and the splendid alpine swift (*Cyp. melba*, L.) may be seen in all suitable localities. A third species, peculiar, so far as is yet known, to the north-east of Palestine, has recently been described under the name of *Cypselus Gullileensis*.

Whatever be the true appellation for the swallow tribe in Hebrew, it would perhaps include the bee-eaters, so similar to many of the swallows, at least in the eyes of a cursory observer, in flight, note, and habits. Of this beautiful genus three species occur in Palestine, *Merops apiaster*, L., *Merops persicus*, L., and in the valley of the Jordan only, the eastern sub-tropical form *Merops viridis*, L. [H. B. T.]

SWAN (תְּשֻׁנָּה, *teshemeth*). Thus rendered by A. V. in Lev. xi. 18, Deut. xiv. 16, where it occurs in the list of unclean birds; LXX. *πορφυρίων*, *ibis*; Vulg. *porphyrio*, *ibis*. Bochart (*Hier.* ii. 290) explains it *noctua* (owl), and derives the name from תְּשֻׁנָּה, "to astonish," because other birds are startled at the apparition of the owl. Gesenius suggests the *pelican*, from תְּשֻׁנָּה, "to breathe, to puff," with reference to the inflation of its pouch. Whatever may have been the bird intended by Moses, these conjectures cannot be admitted as satisfactory, the owl and pelican being both distinctly expressed elsewhere in the catalogue. Nor is the A. V. translation likely to be correct. It is not probable that the swan was known to Moses or the Israelites, or at least that it was sufficiently familiar to have obtained a place in this list. Hasselquist indeed mentions his having seen a swan on the coast of Damietta; but though a regular winter visitant to Greece, only accidental stragglers wander so far south as the Nile, and it has not been observed by recent naturalists either in Palestine or Egypt. Nor, if it had been known to the Israelites, is it easy to understand why the swan should have been classed among the unclean birds. The renderings of the LXX., "porphyrio" and "ibis," are either of them more probable. Neither of these birds occur elsewhere in the catalogue, both would be familiar to residents in Egypt, and

the original seems to point to some water-fowl. The Samaritan Version also agrees with the LXX. *Πορφυρα, porphyrio antiquorum*, Bp., the purple water-hen, is mentioned by Aristotle (*Hist. An.* viii. 8), Aristophanes (*Av.* 707), Pliny (*Nat. Hist.* x. 63), and more fully described by Athenaeus (*Deipn.* ix. 388). It is allied to our corn-crake and water-hen, and is the largest and most beautiful of the family *Rallidae*, being larger than the domestic fowl, with a rich dark-blue plumage, and brilliant red beak and legs. From the extraordinary length of its toes it is enabled, lightly treading on the flat leaves of water-plants, to support itself without immersion, and apparently to run on the surface of the water. It frequents marshes and the sedge by the banks of rivers in all the countries bordering on the Mediterranean, and is abundant in Lower Egypt. Athenaeus has correctly noted its singular habit of grasping its food with its very long toes, and thus conveying it to its mouth. It is distinguished from all the other species of *Rallidae* by its short powerful mandibles, with which it crushes its prey, consisting often of reptiles and young birds. It will frequently seize a young duck with its long feet, and at once crunch the head of its victim with its beak. It is an omnivorous feeder, and from the miscellaneous character of its food, might reasonably find a place in the catalogue of unclean birds. Its flesh is rank, coarse, and very dark-coloured. [H. B. T.]

SWEARING. [OATH.]

SWEAT, BLOODY. One of the physical phenomena attending our Lord's agony in the garden of Gethsemane is described by St. Luke (xxii. 44): "His sweat was as it were great drops (lit. clots, *θρόμβοι*) of blood falling down to the ground." The genuineness of this verse and of the preceding has been doubted, but is now generally acknowledged. They are omitted in A and B, but are found in the Codex Sinaiticus (N), Codex Bezae, and others, and in the Peshito, Philoxenian, and Curetonian Syriac (see Tregelles, *Greek New Test.*; Scrivener, *Introd. to the Crit. of the N. T.* p. 434), and Tregelles points to the notation of the section and canon in ver. 42 as a trace of the existence of the verse in the Codex Alexandrinus.

Of this malady, known in medical science by the term *dyspepsis*, there have been examples recorded both in ancient and modern times. Aristotle was aware of it (*De Part. Anim.* lii. 5). The cause assigned is generally violent mental emotion. "Kannegiesser," quoted by Dr. Stroud (*Phys. Cause of the Death of Christ*, p. 86), "remarks, 'Violent mental excitement, whether occasioned by uncontrollable anger or vehement joy, and in like manner sudden terror or intense fear, forces out a sweat, accompanied with signs either of anxiety or hilarity.' After ascribing this sweat to the unequal constriction of some vessels and dilatation of others, he further observes: 'If the mind is seized with a sudden fear of death, the sweat, owing to the excessive degree of constriction, often becomes bloody.'" Dr. Millingen (*Curiosities of Medical Experience*, p. 489, 2nd ed.) gives the following explanation of the phenomenon: "It is probable that this strange disorder arises from a violent commotion of the nervous system, turning the streams of blood out of their natural course, and forcing the red particles into the cutaneous excretories. A mere relaxation of the fibres could not produce so powerful a revolution. It may also arise in cases of extreme

debility in connexion with a thinness condition of the blood."

The following are a few of the instances on record which have been collected by Calmet (*Diss. sur le Sueur du Sang*), Millingen, Stroud, Trusen (*Die Sitten, Gebräuche, und Krankheiten d. alt. Hebr.*, Breslau, 1853). Schenknius (*Obs. Med. lib.* iii. p. 458) mentions the case of a nun who was so terrified at falling into the hands of soldiers that blood oozed from all the pores of her body. The same writer says that in the plague of Miseno in 1554 a woman who was seized sweated blood for three days. In 1552, Conrad Lycosthenes (*de Prodigis*, p. 623, ed. 1557) reports, a woman sick of the plague sweated blood from the upper part of her body. Maldonato (*Comm. in Evang.*) gives an instance, attested by eyewitnesses, of a man at Paris in full health and vigour, who, hearing the sentence of death, was covered with a bloody sweat. According to De Thou (*lib.* xi. vol. i. p. 326, ed. 1626), the governor of Montemaro, being seized by stratagem and threatened with death, was so moved theret that he sweated blood and water. Another case, recorded in the same historian (*lib.* lxxii. vol. iv. p. 44.), is that of a Florentine youth who was unjustly condemned to death by Pope Sixtus V. The death of Charles IX. of France was attended by the same phenomenon. Mezeray (*Hist. de France*, ii. p. 1170, ed. 1646) says of his last moments, "Il s'agitoit et se remuoit sans cesse, et le sang luy jaillissoit par tous les conduits, mesme par les pores, de sorte qu'on le trouva une fois qui baignoit dedans." A sailor, during a fearful storm, is said to have fallen with terror, and when taken up his whole body was covered with a bloody sweat (Millingen, p. 488). In the *Mélanges d'Histoire* (iii. 179), by Dom Bonaventure d'Argonne, the case is given of a woman who suffered so much from this malady that, after her death, no blood was found in her veins. Another case, of a girl of 18 who suffered in the same way, is reported by Meusporiti, a physician at Genoa, accompanied by the observations of Valisneri, Professor of Medicine at Padua. It occurred in 1703 (*Phil. Trans.* No. 303, p. 2144). There is still, however, wanted a well-authenticated instance in modern times, observed with all the care and attested by all the exactness of later medical science. That given in Caspar's *Wochenschrift*, 1848, as having been observed by Dr. Schneider, appears to be the most recent, and resembles the phenomenon mentioned by Theophrastus (*London Med. Gaz.*, 1848, vol. ii. p. 953). For further reference to authorities, see Copeland's *Dict. of Medicine*, ii. 72. [W. A. W.]

SWINE (חֵזִיר, *cházir*: זֶר, *zeir*, זֵר, *zeir*; *χοῖρος* in N. T.: *sus*, *aper*). Allusion will be found in the Bible to these animals, both (1) in their domestic and (2) in their wild state.

(1.) The flesh of swine was forbidden as food by the Levitical law (*Lev.* xi. 7; *Deut.* xiv. 8); the abhorrence which the Jews as a nation had of it may be inferred from *Is.* lvi. 4, where some of the idolatrous people are represented as "eating swine's flesh," and as having the "broth of abominable things in their vessels;" see also *Levi.* 3, 17, and 2 *Macc.* vi. 18, 19, in which passage we read that Eleazar, an aged scribe, when compelled by

* So, this name is given in the *Philo. Trans.*; Calmet writes it "Al. Saporitus."

Antiochus to receive in his month swine's flesh, "spit it forth, choosing rather to die gloriously than to live stained with such an abomination." The use of swine's flesh was forbidden to the Egyptian priests, to whom, says Sir G. Wilkinson (*Asc. Egypt.* i. 322), "above all meats it was particularly obnoxious" (see Herodotus, ii. 47; Aelian, *de Nat. Anim.* x. 16; Josephus, *Contr. Apion.* ii. 14), though it was occasionally eaten by the people. The Arabians also were disallowed the use of swine's flesh (see Pliny, *N. H.* viii. 52; Koran, ii. 175), as were also the Phoenicians, Aethiopians, and other nations of the East.

No other reason for the command to abstain from swine's flesh is given in the law of Moses beyond the general one which forbade any of the mammalia as food which did not literally fulfil the terms of the definition of a "clean animal," viz. that it was to be a cloven-footed ruminant. The pig, therefore, though it divides the hoof, but does not chew the cud, was to be considered unclean; and consequently, inasmuch as, unlike the ass and the horse in the time of the Kings, no use could be made of the animal when alive, the Jews did not breed swine (Lactant. *Instit.* iv. 17). It is, however, probable that dietetical considerations may have influenced Moses in his prohibition of swine's flesh; it is generally believed that its use in hot countries is liable to induce cutaneous disorders; hence in a people liable to leprosy the necessity for the observance of a strict rule. "The reason of the meat not being eaten was its unwholesomeness, on which account it was forbidden to the Jews and Moslems" (Sir G. Wilkinson's note in Rawlinson's *Herodotus*, ii. 47). Esm. Smith, however (Kitto's *Cycl.* art. 'Swine'), maintains that this reputed unwholesomeness of swine's flesh has been much exaggerated; and recently a writer in Colburn's *New Monthly Magazine* (July 1, 1862, p. 266) has endorsed this opinion. Other conjectures for the reason of the prohibition, which are more curious than valuable, may be seen in Bochart (*Hieros.* i. 806, seq.). Callistratus (apud Plutarch. *Sympos.* iv. 5) suspected that the Jews did not use swine's flesh for the same reason which, he says, influenced the Egyptians, viz. that this animal was sacred, inasmuch as by turning up the earth with its snout it first taught men the art of ploughing (see Bochart, *Hieros.* i. 806, and a dissertation by Camæl, entitled *De Judæorum odio et abstinentia a porcina ejusque causis*, Magdeb.; also Michaelis, *Comment. on the Laws of Moses*, art. 203, iii. 230, Smith's transl.). Although the Jews did not breed swine, during the greater period of their existence as a nation, there can be little doubt that the heathen nations of Palestine used the flesh as food.

At the time of our Lord's ministry it would appear that the Jews occasionally violated the law of Moses with respect to swine's flesh. Whether "the herd of swine" into which the devils were allowed to enter (Matt. viii. 32; Mark v. 13) were the property of the Jewish or Gentile inhabitants of Gadara does not appear from the sacred narrative; but that the practice of keeping swine did exist amongst some of the Jews seems clear from the enactment of the law of Hyrcanus, "ne cui porcum alere liceret" (Grotius, *Annot. ad Matt.* i. c.). Allusion is made in 2 Pet. ii. 22 to the fondness which swine have for "wallowing in the mire;" this, it appears, was a proverbial expression, with which may be compared the "amice

luto sus" of Horace (*Ep.* i. 2, 26). Solomon's comparison of a "jewel of gold in a swine's snout" to a "fair woman without discretion" (Prov. xi. 22), and the expression of our Lord, "neither cast ye your pearls before swine," are so obviously intelligible as to render any remarks unnecessary. The transaction of the destruction of the herd of swine already alluded to, like the cursing of the barren fig-tree, has been the subject of most unfair cavil: it is well answered by Trench (*Miracles*, p. 173), who observes that "a man is of more value than many swine;" besides which it must be remembered that it is not necessary to suppose that our Lord sent the devils into the swine. He merely permitted them to go, as Aquinas says, "quod autem porci in mare præcipitati sunt non fuit operatio divini miraculi, sed operatio daemonum e permissione divina;" and if these Gadarene villagers were Jews and owned the swine, they were rightly punished by the loss of that which they ought not to have had at all.

WILD BOAR.

(2.) The wild boar of the wood (Ps. lxxx. 13) is the common *Sus scrofa* which is frequently met with in the woody parts of Palestine, especially in Mount Tabor. The allusion in the psalm to the injury the wild boar does to the vineyards is well borne out by fact. "It is astonishing what havoc a wild boar is capable of effecting during a single night; what with eating and trampling under foot, he will destroy a vast quantity of grapes" (Hartley's *Researches in Greece*, p. 234). [W. H.]

SWORD. [ARMS.]

SYCAMINE-TREE (*συκάμινος*: *morus*) is mentioned once only, viz., in Luke xvii. 8, "If ye had faith as a grain of mustard-seed, ye might say to this sycamine-tree, Be thou plucked up," &c. There is no reason to doubt that the *συκάμινος* is distinct from the *συκομυρπά* of the same Evangelist (xix. 4) [SYCAMORE], although we learn from Dioscorides (i. 180) that this name was sometimes given to the *συκίμπος*. The sycamine is the mulberry-tree (*Morus*), as is evident from Dioscorides, Theophrastus (*H. P.* i. 6, §1; 10, §10; 13, §4, &c.), and various other Greek writers; see Celsius, *Hierob.* i. 288. A form of the same word, *συκαμυρπά*, is still one of the names for the mulberry-tree in Greece (see Heldreich's *Naturpflanzen Griechenlands*, Athen. 1862, p. 19 "Morus alba L. und M. nigra L. ἡ Μορπά, Μορρυπά, und Μορρπά, auch Συκαμυρπά—*palas. muré*,—*ed.*"). Both black and white mulberry-

trees are common in Syria and Palestine, and are largely cultivated there for the sake of supplying food to the caterpillars of the silk-worm, which are bred in great numbers. The mulberry-tree is too well known to render further remarks necessary. [W. H.]

Morus nigra (Mulberry).

SYCAMORE (שִׁיטִּי, *Shit'ndh*: *συκδαμνος*, *συκομυρία* or *συκομυρία*, in the N. T.: *Sycamorus*, *morus*, *fictum*). The Hebrew word occurs in the O. T. only in the plural form masc. and once fem., Ps. lxxviii. 47; and it is in the LXX. always translated by the Greek word *συκδαμνος*. The two Greek words occur only once each in the N. T., *συκδαμνος* (Luke xvii. 6), and *συκομυρία* (Luke xix. 4). Although it may be admitted that the *Sycamine* is properly, and in Luke xvii. 6, the *Mulberry*, and the *Sycamore* the *Fig-mulberry*, or *Sycamore-fig* (*Ficus Sycomorus*), yet the latter is the tree generally referred to in the O. T., and called by the Sept. *sycamine*, as 1 K. x. 27; 1 Chr. xxvii. 28; Ps. lxxviii. 47; Am. vii. 14. Dioscorides expressly says *Συκομυρία*. *ἔνιοι δὲ καὶ τοῦτο συκδαμνον λέγουσι*, lib. i. cap. 180. Compare Gesenius, *Thesaurus Heb.* p. 1476 b; Winer, *Rob.* ii. 65 ff.; Rosenmüller, *Alterthumskunde*, B. iv. s. 281 ff.; Celsius, *Hierob.* i. 310.

The *Sycamore*, or *Fig-mulberry* (from *συκον*, *fig*, and *μύρον*, *mulberry*), is in Egypt and Palestine a tree of great importance and very extensive use. It attains the size of a walnut-tree, has wide-spreading branches, and affords a delightful shade. On this account it is frequently planted by the waysides. Its leaves are heart-shaped, downy on the under side, and fragrant. The fruit grows directly from the trunk itself on little sprigs, and in clusters like the grape. To make it eatable, each

* Amos says of himself he was *בֹּלֵם שִׁיטִּי*: LXX.

οὐκ ἔσθ' ἐν συκάμινᾳ: Vulg. *villicans sycamina*; i. e. a cutter of the fruit for the purpose of ripening it. *Kriḡm* is the very word used by Theophrastus.

* See Wilkinson's *Ancient Egyptians*, ii. 110, Lond. 1854. "For coffins, boxes, tables, doors, and other

fruit, three or four days before gathering, must, it is said, be punctured with a sharp instrument or the finger-nail. Comp. Theophrastus, *De Caus. Plant.* i. 17, §9; *Hist. Pl.* iv. 2, §1; Pliny, *N. H.* xiii. 7; Forskål, *Descr. Plant.* p. 182. This was the original employment of the prophet Amos, as he says vii. 14.* Hasselquist (*Trav.* p. 260 Lond. 1766) says, "the fruit of this tree tastes pretty well; when quite ripe it is soft, watery, somewhat sweet, with a very little portion of an aromatic taste." It appears, however, that a species of gull insect (*Cynips Sycomori*) often spoils

Ficus Sycomorus.

much of the fruit. "The tree," Hasselquist adds, "is wounded or cut by the inhabitants at the time it buds, for without this precaution, as they say, it will not bear fruit" (p. 261). In form and smell and inward structure it resembles the fig, and hence its name. The tree is always verdant, and bears fruit several times in the year without being confined to fixed seasons, and is thus, as a permanent food-bearer, invaluable to the poor. The wood of the tree, though very porous, is exceedingly durable. It suffers neither from moisture nor heat. The Egyptian mummy coffins, which are made of it, are still perfectly sound after an entombment of thousands of years. It was much used for doors, and large furniture, such as sofas, tables, and chairs.*

objects which required large and thick planks, for idols and wooden statues, the sycamore was principally employed; and from the quantity discovered in the tombs alone, it is evident that the tree was cultivated to a great extent." Don, however, believed that the mummy-cases of the Egyptians were made of the wood of the *Cordia Muxa*, a tree which furnishes the *Babouat*

So great was the value of these trees, that David appointed for them in his kingdom a special overseer, as he did for the olives (1 Chr. xxvii. 28); and it is mentioned as one of the heaviest of Egypt's calamities, that her sycamores were destroyed by hailstones (Ps. lxxviii. 47). That which is called Sycamore in N. America, the *Occidental Plane* or *Button-wood* tree, has no resemblance whatever to the sycamore of the Bible; the name is also applied to a species of maple (the *Acer Pseudo-platanus* or *False-plane*), which is much used by turners and millwrights. [C. E. S.]

SYCHAR (Συχάρ in *N A C D*; but Rec. Text Συχάρ with B: *Sichar*; but Codd. Am. and Fuld. *Sychar*: Syriac, *Socar*). A place named only in John iv. 5. It is specified as "a city of Samaria called Sychar, near the ground which Jacob gave to Joseph his son; and there was the well of Jacob."

Jerome believed that the name was merely a copyist's error for Sychem; but the unanimity of the MSS. is sufficient to dispose of this supposition.

Sychar was either a name applied to the town of Shechem, or it was an independent place. 1. The first of these alternatives is now almost universally accepted. In the words of Dr. Robinson (*Bib. Res.* ii. 290), "In consequence of the hatred which existed between the Jews and the Samaritans, and in allusion to their idolatry, the town of Sichem received, among the Jewish common people, the by-name Sychar." This theory may be correct, but the only support which can be found for it is the very imperfect one afforded by a passage in Isaiah (xxviii. 1, 7), in which the prophet denounces the Ephraimites as *shicorim*—"drunkards;" and by a passage in Habakkuk (ii. 18) in which the words *nebrek sheker*, "a teacher of lies," are supposed to contain an allusion to Moreh, the original name of the district of Shechem, and to the town itself. But this is surely arguing in a circle. And had such a nickname been applied to Shechem so habitually as its occurrence in St. John would seem to imply, there would be some trace of it in those passages of the Talmud which refer to the Samaritans, and in which every term of opprobrium and ridicule that can be quoted or invented is heaped on them. It may be affirmed, however, with certainty that neither in Targum nor Talmud is there any mention of such a thing. Lightfoot did not know of it. The numerous treatises on the Samaritans are silent about it, and recent close search has failed to discover it.

Presuming that Jacob's well was then, where it is now shown, at the entrance of the valley of *Nablus*, Shechem would be too distant to answer to the words of St. John, since it must have been more than a mile off.

"A city of Samaria called Sychar, near to the plot of ground which Jacob gave to Joseph"—surely these are hardly the terms in which such a place as Shechem would be described; for though it was then perhaps at the lowest ebb of its fortunes, yet the tenacity of places in Syria to name and fame is almost proverbial.

plains. There can be no doubt, however, that the wood of the *Ficus Sycomorus* was extensively used in ancient days. The dry climate of Egypt might have helped to have preserved the timber, which must have been valuable in a country where large timber-trees are scarce.

* The text of Eusebius reads 6 = 9 miles; but this is corrected by Jerome to 2.

† The tomb or monument alluded to in these two passages must have occupied the place of the Joseph

There is not much force in the argument that St. Stephen uses the name Sychem in speaking of Shechen, for he is recapitulating the ancient history, and the names of the Old Testament narrative (in the LXX. form) would come most naturally to his mouth. But the earliest Christian tradition, in the persons of Eusebius and the Bourdeaux Pilgrim—both in the early part of the 4th century—discriminates Shechem from Sychar. Eusebius (*Onomast.* Συχάρ and Λουζά) says that Sychar was in front of the city of Neapolis; and, again, that it lay by the side of Luxa, which was "three miles from Neapolis. Sychem, on the other hand, he places in the suburbs of Neapolis by the tomb of Joseph. The Bourdeaux Pilgrim describes Sechim as at the foot of the mountain, and as containing Joseph's monument^b and plot of ground (*villa*). And he then proceeds to say that a thousand paces thence was the place called Sechar.

And notwithstanding all that has been said of the predilection of Orientals for the water of certain springs or wells (Porter, *Handbook*, 342), it does appear remarkable, when the very large number of sources in Nablus itself is remembered, that a woman should have left them and come out a distance of more than a mile. On the other hand, we need not suppose that it was her habit to do so; it may have been a casual visit.

2. In favour of Sychar having been an independent place is the fact that a village named 'Askar (عسكر) still exists^c at the south-east foot of Ebal, about north-east of the Well of Jacob, and about half a mile from it. Whether this is the village alluded to by Eusebius, and Jerome, and the Bourdeaux Pilgrim, it is impossible to tell. The earliest notice of it which the writer has been able to discover is in Quaresmius (*Elucidatio*, ii. 808 b). It is uncertain if he is speaking of himself or quoting Brocardus. If the latter, he had a different copy from that which is^d published. It is an important point, because there is a difference of more than four centuries between the two, Brocardus having written about 1280, and Quaresmius about 1630. The statement is, that "on the left of the well," i. e. on the north, as Garizim has just been spoken of as on the right, "is a large city (*oppidum magnum*), but deserted and in ruins, which is believed to have been the ancient Sichem. . . . The natives told me that they called the place *Istar*."

A village like 'Askar^e answers much more appropriately to the casual description of St. John than so large and so venerable a place as Shechem.

On the other hand there is an etymological difficulty in the way of this identification. 'Askar begins with the letter 'Ain, which Sychar does not appear to have contained; a letter too stubborn and enduring to be easily either dropped or assumed in a name.

In favour of the theory that Sychar was a "nickname" of Shechem, it should not be overlooked that St. John appears always to use the expression *λεγόμενος*, "called," to denote a soubriquet or title

tomb of Yusuf, now shown at the foot of Gerizim, not far from the east gate of Nablus.

* Dr. Rosen, in *Zeitschrift der D. M. G.* xlv. 634. Van de Velde (*S. & P.* ii. 333) proposes 'Askar as the native place of Judas Iscariot.

† Perhaps this is one of the variations spoken of by Robinson (ii. 539).

* The identity of Askar with Sychar is supported by Dr. Thomson (*Land and Book*, ch. xxal), and by Mr. Williams in the *Dict. of Geogr.* (ii. 412 b).

borne by place or person in addition to the name, or to attach it to a place remote and little known. Instances of the former practice are xi. 16, xx. 24, xix. 13, 17; of the latter, xi. 54.

These considerations have been stated not so much with the hope of leading to any conclusion on the identity of Sychar, which seems hopeless, as with the desire to shew that the ordinary explanation is not nearly so obvious as it is usually assumed to be. [G.]

SYCHEM (Συχέμ: *Sichem*; Cod. Amiat. *Sychem*). The Greek form of the word Shechem, the name of the well known city of Central Palestine. It occurs in Acts vii. 16 only. The main interest of the passage rests on its containing two of those numerous and singular variations from the early history, as told in the Pentateuch, with which the speech of St. Stephen^a abounds. [STEPHEN.] This single verse exhibits an addition to, and a discrepancy from, the earlier account. (1) The patriarchs are said in it to have been buried at Sychem, whereas in the O. T. this is related of the bones of Joseph alone (Josh. xxiv. 32). (2) The sepulchre at Sychem is said to have been bought from Emmor by Abraham; whereas in the O. T. it was the cave of Machpelah at Kirjath-arba which Abraham bought and made into his sepulchre, and Jacob who bought the plot of ground at Shechem from Hamor (Gen. xxxiii. 19). In neither of these cases is there any doubt of the authenticity of the present Greek text, nor has any explanation been put forward which adequately meets the difficulty—if difficult: it be. That no attempt should have been made to reconcile the numerous and obvious discrepancies contained in the speech of St. Stephen by altering the MSS. is remarkable, and a cause of great thankfulness. Thankfulness because we are thus permitted to possess at once a proof that it is possible to be as thoroughly inspired by the Spirit of God as was Stephen on this occasion, and yet have remained ignorant or forgetful of minute facts,—and a broad and conspicuous seal to the unimportance of such slight variations in the different accounts of the Sacred History, as long as the general tenor of the whole remains harmonious.

A bastard variation of the name Sychem, viz. **SYCHEMITE**, is found, and its people are mentioned as—

SYCHEMITE, THE (τῶν Συχέμ: *Hevæus*), in Jud. v. 16. This passage is remarkable for giving the inhabitants of Shechem an independent place among the tribes of the country who were dispossessed at the conquest. [G.]

SYELUS (Συήλος; Alex. *Ἡουήλος*: om. in Vulg.)=JERIEL 3 (1 Ead. l. 8; comp. 2 Chr. xxxv. 8).

SYENE, properly **SEVENEH** (סֵנִי: *Synēn*; *Syene*), a town of Egypt on the frontier of Cush or Ethiopia. The prophet Ezekiel speaks of the desolation of Egypt "from Migdol to Seveneh, even unto the border of Cush" (xxix. 10), and of its people being slain "from Migdol to Seveneh" (xxx. 6). Migdol was on the eastern border [MIGDOL], and Seveneh is thus rightly identified with the town of Syene, which was always the last town of Egypt on the south, though at one time included in the nome Nubia. Its ancient Egyptian name is **SUN** (Brugsch, *Geogr. Inschrift.* i. 155, tab. 1., No. 55),

^a These are examined at great length, and elaborately reconciled, in the *New Testament of Canon Wordsworth*, 1860, pp. 66-69.

preserved in the Coptic **COYAN, CENON**, and the Arabic **Aswān**. The modern town is slightly to the north of the old site, which is marked by an interesting early Arab burial-ground, covered with remarkable tombstones, having inscriptions in the Coptic character. Champollion suggests the derivation **CA**, catasive, **OTHN OTEN**, "to open," as though it signified the opening or key of Egypt (*L'Égypte*, i. 161-166), and this is the meaning of the hieroglyphic name. [R. S. P.]

SYNAGOGUE (Συναγωγή: *Synagoga*).—It may be well to note at the outset the points of contact between the history and ritual of the synagogues of the Jews, and the facts to which the inquiries of the Biblical student are principally directed. (1.) They meet us as the great characteristic institution of the later phases of Judaism. More even than the Temple and its services, in the time of which the N. T. treats, they at once represented and determined the religious life of the people. (2.) We cannot separate them from the most intimate connexion with our Lord's life and ministry. In them He worshipped in His youth, and in His manhood. Whatever we can learn of the ritual which then prevailed tells us of a worship which He recognised and sanctioned; which for that reason, if for no other, though, like the stately services of the Temple, it was destined to pass away, is worthy of our respect and honour. They were the scenes, too, of no small portion of His work. In them were wrought some of His mightiest works of healing (Mark i. 23; Matt. xii. 9; Luke xiii. 11). In them were spoken some of the most glorious of His recorded words (Luke iv. 16; John vi. 59); many more, beyond all reckoning, which are not recorded (Matt. iv. 23, xiii. 54; John xviii. 20, etc., etc.). (3.) There are the questions, leading us back to a remoter past: In what did the worship of the synagogue originate? what type was it intended to reproduce? what customs, alike in nature, if not in name, served as the starting-point for it? (4.) The synagogue, with all that belonged to it, was connected with the future as well as with the past. It was the order with which the first Christian believers were most familiar, from which they were most likely to take the outlines, or even the details, of the worship, organization, government of their own society. Widely divergent as the two words and the things they represented afterwards became, the Ecclesia had its starting-point in the Synagogue.

Keeping these points in view, it remains to deal with the subject in a somewhat more formal manner.

I. Name.—(1.) The Aramaic equivalent **סִנְגָּא** first appears in the Targum of Onkelos as a substitute for the Hebrew **קָהָל** (=congregation) in the Pentateuch (Leyrer, *ut sup.*). The more precise local designation, **בֵּית אֱסָפָה** (*Beth As-safah*=House of gathering), belongs to a yet later date. This is, in itself, tolerably strong evidence that nothing precisely answering to the later synagogue was recognised before the Exile. If it had been, the name was quite as likely to have been perpetuated as the thing.

(2.) The word *συναγωγή*, not unknown in classical Greek (Thuc. ii. 18, Plato, *Republ.* 52C D), became prominent in that of the Hellenists. It appears in the LXX. as the translation of not less than twenty-one Hebrew words in which the idea of a gathering is implied (Trenn. *Concordant.* s. v.)

With most of these we have nothing to do. Two of them are more noticeable. It is used 130 times for סִנְגוֹגָה , where the prominent idea is that of an appointed meeting (Gesenius, s. o.), and 25 times for בֵּית דִּין , a meeting called together, and therefore more commonly translated in the LXX. by ἐκκλησία . In one memorable passage (Prov. v. 14), the two words, ἐκκλησία and συναγωγή , destined to have such divergent histories, to be representatives of such contrasted systems, appear in close juxtaposition. In the books of the Apocrypha the word, as in those of the O. T., retains its general meaning, and is not used specifically for any recognised place of worship. For this the received phrase seems to be τόπος προσευχῆς (1 Macc. iii. 46, 3 Macc. vii. 20). In the N. T., however, the local meaning is the dominant one. Sometimes the word is applied to the tribunal which was connected with or sat in the synagogue in the narrower sense (Matt. x. 17, xlii. 34; Mark xlii. 9; Luke xxi. 12, xli. 11). Within the limits of the Jewish Church it perhaps kept its ground as denoting the place of meeting of the Christian brethren (Jas. ii. 2). It seems to have been claimed by some of the pseudo-Judaizing, half-Gnostic sects of the Asiatic Churches for their meetings (Rev. ii. 9). It was not altogether obsolete, as applied to Christian meetings, in the time of Ignatius (*Ep. ad Trall.* c. 5, *ad Polyc.* c. 3). Even in Clement of Alexandria the two words appear united as they had done in the LXX. (*ἐν τῇ συναγωγῇ ἐκκλησίας*, *Strom.* vi. p. 633). Afterwards when the chasm between Judaism and Christianity became wider, Christian writers were fond of dwelling on the meanings of the two words which practically represented them, and showing how far the Synagogue was excelled by the Ecclesia (August. *Sermon* in Ps. lxxx; Trench, *Synonyms of N. T.* §1.). The cognate word, however, συναγωγή , was formed or adopted in its place, and applied to the highest act of worship and communion for which Christians met (Saicer, *Thes.* s. v.).

II. *History*.—(1.) Jewish writers have claimed for their synagogues a very remote antiquity. In well-nigh every place where the phrase "before the Lord" appears, they recognise in it a known sanctuary, a fixed place of meeting, and therefore a synagogue (Vitrings, *De Synag.* pp. 271 *et seq.*). The Targum of Onkelos finds in Jacob's "dwelling in tents" (Gen. xxv. 27) his attendance at a synagogue or house of prayer. That of Jonathan finds them in Judg. v. 9, and in "the calling of assemblies" of Is. i. 13 (Vitrings, pp. 271-315).

(2.) Apart from these far-fetched interpretations, we know too little of the life of Israel, both before and under the monarchy, to be able to say with certainty whether there was anything at all corresponding to the synagogues of later date. On the one hand, it is probable that if new moons and sabbaths were observed at all, they must have been attended by some celebration apart from, as well as at, the Tabernacle or the Temple (1 Sam. xx. 5; 2 K. iv. 23). On the other, so far as we find traces of such local worship, it seems to have fallen too readily into a fetish-religion, sacrifices to epheods and terrapins (Judg. viii. 27, xvii. 5) in groves and on high-places, offering nothing but a contrast to the "reasonable service," the prayers, psalms, in-

struction in the Law, of the later synagogue. The special mission of the Priests and Levites under Jehoshaphat (2 Chr. xvii. 7-9) shows that there was no regular provision for reading the "book of the law of the Lord" to the people, and makes it probable that even the rule which prescribed that it should be read once every seven years at the feast of Tabernacles had fallen into disuse (Deut. xxxi. 10). With the rise of the prophetic order we trace a more distinct though still a partial approximation. Wherever there was a company of such prophets there must have been a life analogous in many of its features to that of the later Essenes and Therapeutae, to that of the *coenobia* and monasteries of Christendom. In the abnormal state of the polity of Israel under Samuel, they appear to have aimed at purifying the worship of the high-places from idolatrous associations, and met on fixed days for sacrifice and psalmody (1 Sam. ix. 12, x. 5). The scene in 1 Sam. xix. 20-24 indicates that the meetings were open to any worshippers who might choose to come, as well as to "the sons of the prophets," the brothers of the order themselves. Later on, in the time of Elijah, the question of the Shunammite's husband (2 K. iv. 23), "Wherefore wilt thou go to him (the prophet) to-day? It is neither new moon nor sabbath," implies frequent periodical gatherings, instituted or perhaps revived by Elijah and his successors, as a means of sustaining the religious life of the northern kingdom, and counteracting the prevalent idolatry. The date of Ps. lxxiv. is too uncertain for us to draw any inference as to the nature of the "synagogues of God" (בְּתֵי יְהוָה , meeting-places of God), which the invaders are represented as destroying (v. 8). It may have belonged to the time of the Assyrian or Chaldean invasion (Vitrings, *Synag.* pp. 396-405). It has been referred to that of the Maccabees (De Wette, *Psalmen*, in loc.), or to an intermediate period when Jerusalem was taken and the land laid waste by the army of Bagoas, under Artaxerxes II. (Ewald, *Post. Bûch.* ii. 358). The "assembly of the elders," in Ps. cvii. 32, leaves us in like uncertainty.

(3.) During the exile, in the abeyance of the Temple-worship, the meetings of devout Jews probably became more systematic (Vitrings, *De Synag.* pp. 413-429; Jost, *Judenthum*, i. 168; Bornitz, *De Synagog.* in Ugolini, *Thes.* xxi.), and must have helped forward the change which appears so conspicuously at the time of the return. The repeated mention of gatherings of the elders of Israel, sitting before the prophet Ezekiel, and hearing his word (Ex. viii. 1, xiv. 1, xx. 1, xxxiii. 81), implies the transfer to the land of the captivity of the customs that had originated in the schools of the prophets. One remarkable passage may possibly contain a more distinct reference to them. Those who still remained in Jerusalem taunted the prophet and his companions with their exile, as outcasts from the blessings of the sanctuary. "Get ye far from the Lord; unto us is this land given in a possession." The prophet's answer is, that it was not so; Jehovah was as truly with them in their "little sanctuary" as He had been in the Temple at Jerusalem. His presence, not the outward glory, was itself the sanctuary (Ex. xi. 15, 16). The whole history of Ezra presupposes the habit of solemn,

* The passage is not without its difficulties. The interpretation given above is supported by the LXX., Vulg., and A.V. It is confirmed by the general consensus

of Jewish interpreters. (Vatabius, in *Crit. Sac.* in loca Calmet, s. v. *Synagogus*.) The other rendering (comp. Ewald and Rosenmüller, in loc.) "I will be to them a

probably of periodic meetings (Ezr. viii. 15; Neh. viii. 2, is. 1; Zech. vii. 5). To that period accordingly we may attribute the revival, if not the institution of synagogues. The "ancient days" of which St. James speaks (Acts xv. 21) may, at least, go back so far. Assuming Ewald's theory as to the date and occasion of Ps. lxxiv., there must, at some subsequent period, have been a great destruction of the buildings, and a consequent suspension of the services. It is, at any rate, striking that they are not in any way prominent in the Maccabean history, either as objects of attack, or rallying points of defence, unless we are to see in the gathering of the persecuted Jews at Maspha (Mispah) as at a "place where they prayed aforetime in Israel" (1 Macc. iii. 46), not only a reminiscence of its old glory as a holy place, but the continuance of a more recent custom. When that struggle was over, there appears to have been a freer development of what may be called the synagogue parochial system among the Jews of Palestine and other countries. The influence of John Hyrcanus, the growing power of the Pharisees, the authority of the Scribes, the example, probably, of the Jews of the "dispersion" (Vitringa, p. 426), would all tend in the same direction. Well-nigh every town or village had its one or more synagogues. Where the Jews were not in sufficient numbers to be able to erect and fill a building, there was the *συναγωγή*, or place of prayer, sometimes open, sometimes covered in, commonly by a running stream or on the sea-shore, in which devout Jews and proselytes met to worship, and, perhaps, to read (Acts xvi. 13; Jos. Ant. xiv. 10, 23; Juven. Sat. iii. 296).^b Sometimes the term *συναγωγή* (= *סִנְגָּוָה*) was applied even to an actual synagogue (Jos. Vit. c. 54).

(4.) It is hardly possible to overestimate the influence of the system thus developed. To it we may ascribe the tenacity with which, after the Maccabean struggle, the Jews adhered to the religion of their fathers, and never again relapsed into idolatry. The people were now in no danger of forgetting the Law, and the external ordinances that bedged it round. If pilgrimages were still made to Jerusalem at the great feasts, the habitual religion of the Jews in, and yet more out of Palestine was connected much more intimately with the synagogue than with the Temple. Its simple, edifying devotion, in which mind and heart could alike enter, attracted the heathen proselytes who might have been repelled by the bloody sacrifices of the Temple, or would certainly have been driven from it unless they could make up their minds to submit to circumcision (Acts xxi. 28; comp. PROSELYTES). Here too, as in the cognate order of the Scribes, there was an influence tending to

diminish and ultimately almost to destroy the authority of the hereditary priesthood. The services of the synagogue required no sons of Aaron; gave them nothing more than a complimentary precedence. [PRIESTS; SCRIBES.] The way was silently prepared for a new and higher order, which should rise in "the fulness of time" out of the decay and abolition of both the priesthood and the Temple. In another way too the synagogues everywhere prepared the way for that order. Not "Moses" only but "the Prophets" were read in them every Sabbath day, and thus the Messianic hopes of Israel, the expectation of a kingdom of Heaven, were universally diffused.

III. *Structure*.—(1.) The size of a synagogue, like that of a church or chapel, varied with the population. We have no reason for believing that there were any fixed laws of proportion for its dimensions, like those which are traced in the Tabernacle and the Temple. Its position was, however, determinate. It stood, if possible, on the highest ground, in or near the city to which it belonged. Failing this, a tall pole rose from the roof to render it conspicuous (Layrer, s. v. *Synag.* in Herzog's *Real-Encycl.*). And its direction too was fixed. Jerusalem was the *Kiblah* of Jewish devotion. The synagogue was so constructed, that the worshippers as they entered, and as they prayed, looked toward it* (Vitringa, pp. 178, 457). The building was commonly erected at the cost of the district, whether by a church-rate levied for the purpose, or by free gifts, must remain uncertain (Vitringa, p. 229). Sometimes it was built by a rich Jew, or even as in Luke vii. 5, by a friendly proselyte. In the later stages of Eastern Judaism it was often erected, like the mosques of Mahometans, near the tombs of famous Rabbis or holy men. When the building was finished it was set apart, as the Temple had been, by a special prayer of dedication. From that time it had a consecrated character. The common acts of life, eating, drinking, reckoning up accounts, were forbidden in it. No one was to pass through it as a short cut. Even if it ceased to be used, the building was not to be applied to any base purpose—might not be turned, e. g. into a bath, a laundry, or a tannery. A scraper stood outside the door that men might rid themselves, before they entered, of anything that would be defiling (Layrer, l. c., and Vitringa).

(2.) In the internal arrangement of the synagogue we trace an obvious analogy, *mutatis mutandis*, to the type of the Tabernacle. At the upper or Jerusalem end stood the Ark, the chest which, like the older and more sacred Ark, contained the Book of the Law. It gave to that end the name and character of a sanctuary (*קֹדֶשׁ*). The same thought was sometimes expressed by its being called

sanctuary, for a little time," or "in a little measure," give a less satisfactory meaning. The language of the later Jews applied the term "sanctuary" to the ark-end of the synagogue (*מִזְבֵּחַ*).

^b We may trace perhaps in this selection of localities, like the "sacri fontis nemus" of Juv. Sat. iii. 13, the re-appearance, freed from its old abominations, of the attachment of the Jews to the worship of the groves, of the charm which led them to bow down under "every green tree" (Is. lvii. 8; Jer. ii. 20).

* The practice of a fixed *Kiblah* (= direction) in prayer was clearly very ancient, and commended itself to some special necessities of the Eastern character. In Ps. cxviii., ascribed to David, we have probably the

earliest trace of it (De Wette, in loc.). It is recognised in the dedication prayer of Solomon (1 K. viii. 20 et al.). It appears as a fixed rule in the devotions of Daniel (Dan. vi. 10). It was adopted afterwards by Mahomet, and the point of the *Kiblah*, after some lingering reverence to the Holy City, transferred from Jerusalem to the Kaaba of Mecca. The early Christian practice of praying towards the East indicates a like feeling, and probably originated in the adoption by the Churches of Europe and Africa of the structure of the synagogue. The position of the altar in those churches rested on a like analogy. The table of the Lord, bearing witness of the blood of the New Covenant, took the place of the Ark which contained the Law that was the groundwork of the Old.

after the name of Aaron (Buxtorf, *Synag. Jud.* ch. i.), and was developed still further in the name of *Cypharoth*, or Mercy-seat, given to the lid, or door of the chest, and in the Veil which hung before it (Vitringa, p. 181). This part of the synagogue was naturally the place of honour. Here were the *spartocathedrai*, after which Pharisees and Scribes strove so eagerly (Matt. xiii. 6), to which the wealthy and honoured worshipper was invited (James ii. 2, 3). Here too, in front of the Ark, still reproducing the type of the Tabernacle, was the eight-branched lamp, lighted only on the greater festivals. Besides this, there was one lamp kept burning perpetually. Others, brought by devout worshippers, were lighted at the beginning of the Sabbath, i. e. on Friday evening (Vitringa, p. 198).⁴ A little further towards the middle of the building was a raised platform, on which several persons could stand at once, and in the middle of this rose a pulpit, in which the Reader stood to read the lesson or sat down to teach. The congregation were divided, men on one side, women on the other, a low partition, five or six feet high, running between them (Léilo, *De Vit. Contempl.* ii. 476). The arrangements of modern synagogues, for many centuries, have made the separation more complete by placing the women in low side-galleries, screened off by lattice-work (Leo of Modena, in Picart, *Cérém. Relig.* i.). Within the Ark, as above stated, were the rolls of the sacred books. The rollers round which they were wound were often elaborately decorated, the cases for them embroidered or enamelled, according to their material. Such cases were customary offerings from the rich when they brought their infant-children on the first anniversary of their birthday, to be blessed by the Rabbi of the synagogue.⁵ As part of the fittings we have also to note (1.) another chest for the *Haphtaroth*, or rolls of the prophets. (2.) Alms-boxes at or near the door, after the pattern of those at the Temple, one for the poor of Jerusalem, the other for local charities.⁶ (3.) Notice-boards, on which were written the names of offenders who had been "put out of the synagogue." (4.) A chest for trumpets and other musical instruments, used at the New Years, Sabbaths, and other festivals (Vitringa, Leyrer, l. c.).

IV. *Officers*.—(1.) In smaller towns there was often but one Rabbi (Vitringa, p. 549). Where a fuller organization was possible, there was a college of Elders (עֲלֵיָא = *presbiteros*, Luke vii. 3) presided over by one who was *κατ' ἐξοχήν, ὁ ἀρχισυνάγωγος* (Luke viii. 41, 49, xiii. 14; Acts xviii. 8, 17). To these elders belonged a variety of synonyms, each with a special significance. They were *בְּרִיָא* (Parnasim = *primiæves*, Eph. iv. 11), watching over their flock, *προεστῆτες, ἡγούμενοι*, as ruling over it (1 Tim. v. 17;

Heb. xiii. 7). With their head, they formed a kind of Chapter, managed the affairs of the synagogue, possessed the power of excommunicating (Vitringa, pp. 549-821, 727).

(2.) The most prominent functionary in a large synagogue was known as the *גבאי* (*Gabai* = *legatus*), the officiating minister who acted as the delegate of the congregation, and was therefore the chief reader of prayers, &c., in their name. The conditions laid down for this office remind us of St. Paul's rule for the choice of a bishop. He was to be active, of full age, the father of a family, not rich or engaged in business, possessing a good voice, apt to teach (comp. 1 Tim. iii. 1-7; Tit. i. 6-9). In him we find, as the name might lead us to expect, the prototype of the *ἐγγελεος ἐκκλησίας* of Rev. i. 20, ii. 1, &c. (Vitringa, p. 934).

(3.) The *Chazzan* (חַזָּן), or *synagogue* (Luke iv. 20) had duties of a lower kind resembling those of the Christian deacon, or sub-deacon. He was to open the doors, to get the building ready for service. For him too there were conditions like those for the *legatus*. Like the *legatus* and the *elders*, he was appointed by the imposition of hands (Vitringa, p. 836). Practically he often acted during the week as schoolmaster of the town or village, and in this way came to gain a prominence which placed him nearly on the same level as the *legatus*.

(4.) Besides these there were ten men attached to every synagogue, whose functions have been the subject-matter of voluminous controversy.⁷ They were known as the *Batla'im* (בְּטָלִים = *Otiot*), and no synagogue was complete without them. They were to be men of leisure, not obliged to labour for their livelihood, able therefore to attend the weekday as well as the Sabbath services. By some (Lightfoot, *Hor. Heb.* in Matt. iv. 23, and, in part, Vitringa, p. 532) they have been identified with the above officials, with the addition of the alms-collectors.⁸ Rhenferd, however (Ugolini, *Thes.* vol. xxi.), sees in them simply a body of men, permanently on duty, making up a congregation (ten being the minimum number⁹), so that there might be no delay in beginning the service at the proper hours, and that no single worshipper might go away disappointed. The latter hypothesis is supported by the fact that there was a like body of men, the *Stationarii* or *Viri Stationis* of Jewish Archaeologists, appointed to act as permanent representatives of the congregation in the services of the Temple (Jost, *Gesch. Judenth.* i. 168-172). It is of course possible that, in many cases the same persons may have united both characters, and been, e. g. at once *Otiot* and alms-collectors.

(5.) It will be seen at once how closely the organization of the synagogue was reproduced in that of the Ecclesia. Here also there was the single

⁴ Here also the customs of the Eastern Church, the votive silver lamps hanging before the shrines and holy places, bring the old practice vividly before our eyes.

⁵ The custom, it may be noticed, connects itself with the memorable history of those who "brought young children" to Jesus that He should touch them (Mark x. 13).

⁶ If this practice existed, as is probable, in the first century, it throws light upon the special stress laid by St. Paul on the collection for the "poor saints" in Jerusalem (1 Cor. xvi. &c.). The Christian Churches were not to be behind the Jewish Synagogues in their contributions to the Palestine Relief Fund.

⁷ The two treatises *De decem Otiot*, by Rhenferd and

Vitringa, in Ugolini's *Thesaurus*, vol. xxi., occupy more than 700 folio pages. The present writer has not read them through. Is there any one living who has?

⁸ Lightfoot's classification is as follows. The Ten consisted of three Judges, the *Legatus*, whom this writer identifies with the *Chazzan*, three *Parnasim*, whom he identifies with alms-collectors and compares to the deacons of the church, the *Targumist* or interpreter, the schoolmaster and his assistant. The whole is, however, very conjectural.

⁹ This was based on a fantastic inference from Num. xiv. 27. The ten unfaithful spies were spoken of as an "evil congregation." *Sam. Ach.* (v. 3, in Lightfoot. L. a

presbyter: *ἐπίσκοπος* [BISHOP] in small towns, a council of presbyters under one head in large cities. The *legatus* of the synagogue appears in the *ἄγγελος* (Rev. i. 20, ii. 1), perhaps also in the *ἀρχισυνάγωγος* of the Christian Church. To the elders as such is given the name of Shepherds (Eph. iv. 11; 1 Pet. v. 1). They are known also as *ἐργοῦμενοι* (Heb. xiii. 7). Even the transfer to the Christian proselytes of the once distinctively sacerdotal name of *lepréts*, foreign as it was to the feelings of the Christians of the Apostolic Age, was not without its parallel in the history of the synagogue. Soeva, the exorcist Jew of Ephesus, was probably a "chief priest" in this sense (Acts xix. 14). In the edicts of the later Roman emperors, the terms *ἀρχιερεῖς* and *ιερεῖς* are repeatedly applied to the rulers of synagogues (Cod. Theodos. *De Jud.*, quoted by Vitranga, *De decem Otiosis*, in Ugolini, *Thes.* xxi.). Possibly, however, this may have been, in part, owing to the presence of the scattered priests, after the destruction of the Temple, as the Rabbis or elders of what was now left to them as their only sanctuary. To them, at any rate, a certain precedence was given in the synagogue services. They were invited first to read the lessons for the day. The benediction of Num. vi. 22, was reserved for them alone.

V. *Worship*.—(1.) The ritual of the synagogue was to a large extent the reproduction (here also, as with the fabric, with many inevitable changes) of the statelier liturgy of the Temple. This is not the place for an examination of the principles and structure of that liturgy, or of the baser elements, wild Talmudic legends, curses against Christians under the name of Ewangelians, and other extravagances which have mingled with it (McCaul, *Old Paths*, ch. xvii., xix.). It will be enough, in this place, to notice in what way the ritual, no less than the organization, was connected with the facts of the N. T. history, and with the life and order of the Christian Church. Here too we meet with multiplied coincidences. It would hardly be an exaggeration to say that the worship of the Church was identical with that of the Synagogue, modified (1.) by the new truths, (2.) by the new institution of the Supper of the Lord, (3.) by the spiritual *Charismata*.

(2.) From the synagogue came the use of fixed forms of prayer. To that the first disciples had been accustomed from their youth. They had asked their Master to give them a distinctive one, and he had complied with their request (Luke xi. 1), as the Baptist had done before for his disciples, as every Rabbi did for his. The forms might be and were abused. The Pharisees might in synagogues, or, when the synagogues were closed, in the open street, recite aloud the devotions appointed for hours of prayer, might gabble through the *Shema* ("Hear O Israel," *sec.* from Deut. vi. 4), his *Kaddish*, his *Shemoneh Esreh*, the eighteen *Berachoth* or blessings, with the "vain repetition" which has reappeared in Christian worship. But for the disciples this was, as yet, the true pattern of devotion, and their Master sanctioned it. To their minds there would seem nothing inconsistent with true heart worship in the recurrence of a fixed order (*κατὰ τάξιν*, 1 Cor. xiv. 40), of the same prayers, hymns, doxologies, such as all liturgical study leads us to think of as existing in the Apostolic Age. If the gifts of utterance which characterised the first period of that age led for a time to greater freedom, to unpremeditated prayer,

if that was in its turn succeeded by the renewed predominance of a formal fixed order, the alternation and the struggle which have reappeared in so many periods of the history of the Church were not without their parallel in that of Judaism. There also, was a protest against the rigidity of an unbending form. Eliezer of Lydda, a contemporary of the second Gamaliel (circ. A.D. 80-115), taught that the *legatus* of the synagogue should discard even the *Shemoneh Esreh*, the eighteen fixed prayers and benedictions of the daily and Sabbath services, and should pray as his heart prompted him. The offence against the formalism into which Judaism stiffened, was apparently too great to be forgiven. He was excommunicated (not, indeed, avowedly on this ground), and died at Caesarea (Jost, *Gesch. Judenth.* ii. 36, 45).

(3.) The large admixture of a didactic element in Christian worship, that by which it was distinguished from all Gentile forms of adoration, was derived from the older order. "Moses" was "read in the synagogues every Sabbath-day" (Acts xv. 21), the whole Law being read consecutively, so as to be completed, according to one cycle, in three years, according to that which ultimately prevailed and determined the existing divisions of the Hebrew text (BIBLE, and Leyrer, *l. c.*), in the 52 weeks of a single year. The writings of the Prophets were read as second lessons in a corresponding order. They were followed by the *Devarim*, the *ᾠδὴς ψαλμῶν* (Acts xiii. 15), the exposition, the sermon of the synagogue. The first Christian synagogues, we must believe, followed this order with but little deviation. It remained for them before long to add "the other Scriptures" which they had learnt to recognise as more precious even than the Law itself, the "prophetic word" of the New Testament, which not less truly than that of the Old, came, in epistle or in narrative, from the same Spirit [SCRIPTURE]. The synagogue use of Psalms again, on the plan of selecting those which had a special fitness for special times, answered to that which appears to have prevailed in the Church of the first three centuries, and for which the simple consecutive repetition of the whole Psalter, in a day as in some Eastern monasteries, in a week as in the Latin Church, in a month as in the English Prayer-book is, perhaps, a less satisfactory substitute.

(4.) To the ritual of the synagogue we may probably trace a practice which has sometimes been a stumbling-block to the student of Christian antiquity, the subject-matter of fierce debate among Christian controversialists. Whatever account may be given of it, it is certain that Prayers for the Dead appear in the Church's worship as soon as we have any trace of it after the immediate records of the Apostolic age. It has well been described by a writer, whom no one can suspect of Romish tendencies, as an "immemorial practice." Though "Scripture is silent, yet antiquity plainly speaks." The prayers "have found a place in every early liturgy of the world" (Ellicott, *Duties of the Creature*, Sermon vi.). How, indeed, we may ask, could it have been otherwise? The strong feeling shown in the time of the Maccabees, that it was not "superfluous and vain" to pray for the dead (2 Macc. xii. 44), was sure, under the influence of the dominant Pharisaic Scribes, to show itself in the devotions of the synagogue. So far as we trace back these devotions, we may say that there also the practice is "immemorial," as old at least as

the traditions of the Rabbinic fathers (Buxtorf, *De Synag.* pp. 709, 710; McCaul, *Old Paths*, ch. xxviii.). There is a probability indefinitely great that prayers for the departed (the *Kaddish* of later Judaism) were familiar to the synagogues of Palestine and other countries, that the early Christian believers were not startled by them as an innovation, that they passed uncondemned even by our Lord Himself. The writer already quoted sees a probable reference to them in 2 Tim. i. 18 (Ellicott, *Past. Epistles*, in loc.). St. Paul, remembering Onesiphorus as one whose "house" had been bereaved of him, prays that he may find mercy of the Lord "in that day." Prayers for the dead can hardly, therefore, be looked upon as anti-Scriptural. If the English Church has wisely and rightly eliminated them from her services, it is not because Scripture says nothing of them, or that their antiquity is not primitive, but because, in such a matter, experience is a truer guide than the silence or the hints of Scripture, or than the voice of the most primitive antiquity.

(5.) The conformity extends also to the times of prayer. In the hours of service this was obviously the case. The third, sixth, and ninth hours were, in the times of the N. T. (Acts iii. 1, x. 3, 9), and had been, probably, for some time before (Ps. lv. 17; Dan. vi. 10), the fixed times of devotion, known then, and still known, respectively as the *Shacharit*, the *Minccha*, and the *Arbit*; they had not only the prestige of an authoritative tradition, but were connected respectively with the names of Abraham, Isaac, and Jacob, to whom, as to the first originators, their institution was ascribed (Buxtorf, *Synag.* p. 280). The same hours, it is well known, were recognised in the Church of the second, probably in that of the first century also (Clem. Al. *Strom.* i. c.; Tertull. *De Orat.* c. xxv.). The sacred days belonging to the two systems seem, at first, to present a contrast rather than a resemblance; but here, too, there is a symmetry which points to an original connexion. The solemn days of the synagogue were the second, the fifth, and the seventh, the last or Sabbath being the conclusion of the whole. In whatever way the change was brought about, the transfer of the sanctity of the Sabbath to the Lord's Day involved a corresponding change in the order of the week, and the first, the fourth, and the sixth became to the Christian society what the other days had been to the Jewish.

(6.) The following suggestion as to the mode in which this transfer was effected, involves, it is believed, fewer arbitrary assumptions than any other [comp. LORD'S DAY, SABBATH], and connects itself with another interesting custom, common to the Church and the Synagogue. It was a Jewish custom to end the Sabbath with a feast, in which they did honour to it as to a parting king. The feast was held in the synagogue. A cup of wine, over which a special blessing had been spoken, was handed round (Jost, *Gesch. Judenth.* i. 180). It is obvious that, so long as the Apostles and their followers continued to use the Jewish mode of

reckoning, so long &c. as they fraternised with their brethren of the stock of Abraham, this would coincide in point of time with their *Seirrov* on the first day of the week. A supper on what we should call Sunday evening would have been to them on the second. By degrees, as has been shown elsewhere [LORD'S SUPPER], the time became later, passed on to midnight, to the early dawn of the next day. So the Lord's Supper ceased to be a supper really. So, as the Church rose out of Judaism, the supper gave its holiness to the coming, instead of deriving it from the departing day. The day came to be *supper*, because it began with the *Seirrov* *supper*.¹ Gradually the Sabbath ceased as such to be observed at all. The practice of observing both, as in the Church of Rome up to the fifth century, gives us a trace of the transition period.

(7.) From the synagogue lastly came many less conspicuous practices, which meet us in the liturgical life of the first three centuries. Ablution, entire or partial, before entering the place of meeting (Heb. x. 22; John xiii. 1-15; Tertull. *De Orat.* cap. xi.); standing and not kneeling, as the attitude of prayer (Luke xviii. 11; Tertull. *ibid.* cap. xxi.); the arms stretched out (Tertull. *ibid.* cap. xiii.); the face turned towards the Kibleh of the East (Clem. Al. *Strom.* i. c.); the responsive Amen of the congregation to the prayers and benedictions of the elders (1 Cor. xiv. 16).² In one strange exceptional custom of the Church of Alexandria we trace the wilder type of Jewish, of Oriental devotion. There, in the closing responsive chorus of the prayer, the worshippers not only stretched out their necks and lifted up their hands, but leapt up with wild gestures (*rois te wōdas dweysipoues*), as if they would fain rise with their prayers to heaven itself (Clem. Al. *Strom.* vii. 40).³ This, too, reproduced a custom of the synagogue. Three times did the whole body of worshippers leap up simultaneously as they repeated the great Ter-sanctus hymn of Isaiah vi. (Vitringa, p. 1100 et seq.; Buxtorf, cap. x.).

VI. *Judicial Functions.*—(1.) The language of the N.T. shows that the officers of the synagogue exercised in certain cases a judicial power. The synagogue itself was the place of trial (Luka xii. 11; xli. 12); even, strange as it may seem, of the actual punishment of scourging (Matt. x. 17; Mark xli. 9). They do not appear to have had the right of inflicting any severer penalty, unless, under this head, we may include that of excommunication, or "putting a man out of the synagogue" (John xii. 42, xvi. 2), placing him under an anathema (1 Cor. xvi. 22; Gal. i. 8, 9), "delivering him to Satan" (1 Cor. v. 5; 1 Tim. i. 20). (Mayer and Stanley, *in loc.*) In some cases they exercised the right, even outside the limits of Palestine, of seizing the persons of the accused, and sending them in chains to take their trial before the Supreme Council at Jerusalem (Acts ix. 2; xli. 5).

(2.) It is not quite so easy, however, to define the nature of the tribunal, and the precise limits of

¹ It has always to be borne in mind that the word was seriously coined for the purposes of Christian life, and is applied in the first instance to the supper (1 Cor. xi. 20), afterwards to the day (Rev. i. 10).

² One point of contrast is as striking as these points of resemblance. The Jew prayed with his head covered, with the *Tallith* drawn over his ears and reaching to the shoulders. The Greek, however, habitually in worship as in other acts, went bare-headed, and the Apostle of

the Gentile Churches, renouncing all early prejudices, recognises this as more fitting, more natural, more in harmony with the right relation of the sexes (1 Cor. xi. 4).

³ The same curious practice existed in the 17th century, and is perhaps not yet extinct in the Church of Abyssinia, in this, as in other things, preserving more than any other Christian society, the type of Judaism (Ludolf *Hist. Aethiop.* iii. 6; Stanley, *Eastern Church*, p. 17).

its jurisdiction. In two of the passages referred to (Matt. x. 17; Mark xiii. 9) they are carefully distinguished from the *συνέδρια*, or councils, yet both appear as instruments by which the spirit of religious persecution might fasten on its victims. The explanation commonly given that the council sat in the synagogue, and was thus identified with it, is hardly satisfactory (Leyrer, in Herzog's *Real-Encyc.* "Synedrien"). It seems more probable that the council was the larger tribunal of 23, which sat in every city [COUNCIL], identical with that of the seven, with two Levites as assessors to each, which Josephus describes as acting in the smaller provincial towns (*Ant.* iv. 8, §14; *B. J.* ii. 20, §5),* and that under the term synagogue we are to understand a smaller court, probably that of the Ten judges mentioned in the Talmud (Gem. Hieros. *Sanhedr.* l. c.), consisting either of the elders, the chazzan, and the legatus, or otherwise (as Herzfeld conjectures, i. 392) of the ten Batlanim, or *Otiotai* (see above, IV. 4).

(3.) Here also we trace the outline of a Christian institution. The *ἐκκλησία*, either by itself or by appointed delegates, was to act as a Court of Arbitration in all disputes among its members. The elders of the Church were not, however, to descend to the trivial disputes of daily life (*τὰ βιωτικά*). For these any men of common sense and fairness, however destitute of official honour and position (*οἱ ἀξιοσημείωτοι*), would be enough (1 Cor. vi. 1-8). For the elders, as for those of the synagogue, were reserved the graver offences against religion and morals. In such cases they had power to excommunicate, to "put out of" the Ecclesia, which had taken the place of the synagogue, sometimes by their own authority, sometimes with the consent of the whole society (1 Cor. v. 4). It is worth mentioning that Hammond and other commentators have seen a reference to these judicial functions in James ii. 2-4. The special sin of those who frowned upon the rich was, on this view, that they were "*judges of evil thoughts*," carrying respect of persons into their administration of justice. The interpretation, however, though ingenious, is hardly sufficiently supported. [E. H. P.]

SYNAGOGUE, THE GREAT (הַבְּיָדוּת הַגְּדוֹלָה). The institution thus described, though not Biblical in the sense of occurring as a word in the Canonical Scriptures, is yet too closely connected with a large number of Biblical facts and names to be passed over. In the absence of direct historical data, it will be best to put together the traditions or conjectures of Rabbinic writers.

(1.) On the return of the Jews from Babylon, a great council was appointed, according to these traditions, to re-organise the religious life of the people. It consisted of 120 members (*Megilloth*, 17b, 18c), and these were known as the men of the Great Synagogue, the successors of the prophets, themselves, in their turn, succeeded by scribes prominent, individually, as teachers (*Pirke Aboth*, i. 1). Ezra was recognised as president. Among the other members, in part together, in part successively, were Joshua, the High Priest, Zerubbabel, and their companions, Daniel and the three "children," the prophets Haggai, Zechariah, Malachi, the rulers Nehemiah and Mordecai. Their aim was to restore again the *qanon*, or *gury* of

Israel, i. e. to reinstate in its majesty the name of God as Great, Mighty, Terrible (*Deut.* vi. 21 x. 17; *Neh.* i. 5, ix. 32; *Jer.* xxxii. 18; *Dan.* ix. 4). To this end they collected all the sacred writings of former ages and their own, and so completed the canon of the O.T. Their work included the revision of the text, and this was settled by the introduction of the vowel points, which have been handed down to us by the Masoretic editors. They instituted the feast of Purim. They organised the ritual of the synagogue, and gave their sanction to the *Shemoneh Esreh*, the eighteen solemn benedictions in it (*Ewald, Gesch.* iv. 193). Their decrees were quoted afterwards as those of the elders (the *πρεσβύτεροι* of Mark vii. 3, the *ἀρχαῖοι* of Matt. v. 21, 27, 33), the *Dibrei Sopherim* (= words of the scribes), which were of more authority than the Law itself. They left behind them the characteristic saying, handed down by Simon the high-priest, the last member of the order, "Be cautious in judging; train up many scholars; set a hedge about the Law" (*Pirke Aboth*, i. 1). [SCRIBES.]

(2.) Much of this is evidently uncertain. The absence of any historical mention of such a body, not only in the O.T. and the Apocrypha, but in Josephus, Philo, and the *Seder Olam*, so that the earliest record of it is found in the *Pirke Aboth*, circ. the second century after Christ, had led some critics (e.g. De Wette, J. D. Michaelis) to reject the whole statement as a Rabbinic invention, resting on no other foundation than the existence, after the exile, of a Sanhedrim of 71 or 72 members, charged with supreme executive functions. Ewald (*Gesch. Isr.* iv. 192) is disposed to adopt this view, and looks on the number 120 as a later element, introduced for its symbolic significance. Jost (*Gesch. des Jud.* i. 41) maintains that the Greek origin of the word Sanhedrim points to its later date, and that its functions were prominently judicial, while those of the so-called Great Synagogue were prominently legislative. He recognises, on the other hand, the probability that 120 was used as a round number, never actually made up, and thinks that the germ of the institution is to be found in the 85 names of those who are recorded as having joined in the solemn league and covenant of *Neh.* x. 1-27. The narrative of *Neh.* viii. 13 clearly implies the existence of a body of men acting as counsellors under the presidency of Ezra, and these may have been (as Jost, following the idea of another Jewish critic, suggests) an assembly of delegates from all provincial synagogues—a synod (to use the terminology of a later time) of the National Church. The *Pirke Aboth*, it should be mentioned, speaks of the Great Synagogue as ceasing to exist before the historical origin of the Sanhedrim (x. 1), and it is more probable that the latter rose out of an attempt to reproduce the former than that the former was only the mythical transfer of the latter to an earlier time. (Comp. Leyrer, s. v. *Synagoge, die grosse*, in Herzog's *Encyclop.*) [E. H. P.]

SYNTYCHE (Συντύχη: *Syntyche*), a female member of the Church of Philippi, mentioned (*Phil.* iv. 2, 3) along with another named EUODIAS (or rather Euodia). To what has been said under the latter head the following may be added. The Apostle's injunction to these two women is, that they should live in harmony with one another; from which we

* The identification of these two is due to an ingenious conjecture by Grotius (on Matt. v. 21). The ad-

dition of two scribes or secretaries makes the number in both cases equal.

infer that they had, more or less, failed in this respect. Such harmony was doubly important, if they held an office, as deaconesses, in the Church: and it is highly probable that this was the case. They had afforded to St. Paul active co-operation under difficult circumstances (*ἐν τῇ εὐαγγελίᾳ συνήλθον μοι*, ver. 2), and perhaps there were at Philippi other women of the same class (*αἰτίβες*, ib.). At all events this passage is an illustration of what the Gospel did for women, and women for the Gospel, in the Apostolic times: and it is the more interesting, as having reference to that Church which was the first founded by St. Paul in Europe, and the first member of which was LYDIA. Some thoughts on this subject will be found in *Reillet, Comm. sur l'Épître aux Philippi.* pp. 311-314. [J. S. H.]

SYRACUSE (*Συρακοῦσαι*: *Syracusa*). The celebrated city on the eastern coast of Sicily. St. Paul arrived thither in an Alexandrian ship from Melita, on his voyage to Rome (Acts xxviii. 12). The magnificence which Cicero describes as still remaining in his time, was then no doubt greatly impaired. The whole of the resources of Sicily had been exhausted in the civil wars of Caesar and Pompey, and the piratical warfare which Sextus Pompeius, the youngest son of the latter, subsequently carried on against the triumvir Octavius. Augustus restored Syracuse, as also Catana and Centoripa, which last had contributed much to the successful issue of his struggle with Sextus Pompeius. Yet the island Ortygia, and a very small portion of the mainland adjoining, sufficed for the new colonists and the remnant of the former population. But the site of Syracuse rendered it a convenient place for the African corn-ships to touch at, for the harbour was an excellent one, and the fountain Arethusa in the island furnished an unfailling supply of excellent water. The prevalent wind in this part of the Mediterranean is the W.N.W. This would carry the vessels from the corn region lying eastward of Cape Bon, round the southern point of Sicily, Cape Pachynus, to the eastern shore of the island. Creeping up under the shelter of this, they would lie either in the harbour of Messina, or at Rhegium, until the wind changed to a southern point and enabled them to fetch the Campanian harbours, Puteoli or Gaeta, or to proceed as far as Ostia. In crossing from Africa to Sicily, if the wind was excessive, or varied two or three points to the northward, they would naturally bear up for Malta,—and this had probably been the case with the "Twins," the ship in which St. Paul found a passage after his shipwreck on the coast of that island. Arrived in Malta, they watched for the opportunity of a wind to take them westward, and with such a one they readily made Syracuse. To proceed further while it continued blowing would have exposed them to the dangers of a lee-shore, and accordingly they remained "three days." They then, the wind having probably shifted into a westerly quarter so as to give them smooth water, coasted the shore and made (*περιελθόντες κατηντήσαμεν εἰς*) Rhegium. After one day there, the wind got round still more and blew from the south; they therefore weighed, and arrived at Puteoli in the course of the second day of the run (Acts xxviii. 12-14).

In the time of St. Paul's voyage, Sicily did not supply the Romans with corn to the extent it had done in the time of King Hiero, and in a less degree as late as the time of Cicero. It is an error, however, to suppose that the soil was exhausted; for Strabo expressly says, that for corn, and some other

productions, Sicily even surpassed Italy. But the country had become depopulated by the long series of wars, and when it passed into the hands of Rome her great nobles turned vast tracts into pasture. In the time of Augustus, the whole of the centre of the island was occupied in this manner, and among its exports (except from the neighbourhood of the volcanic region, where excellent wine was produced), fat stock, hides, and wool appear to have been the prominent articles. These grazing and horse-breeding farms were kept up by slave labour; and this was the reason that the whole island was in a chronic state of disturbance, owing to the slaves continually running away and forming bands of brigands. Sometimes these became so formidable as to require the aid of regular military operations to put them down; a circumstance of which Tiberius Gracchus made use as an argument in favour of his measure of an Agrarian law (Appian, *B. C.* i. 9), which would have reconverted the spacious grass-lands into small arable farms cultivated by Roman freemen.

In the time of St. Paul there were only five Roman colonies in Sicily, of which Syracuse was one. The others were Catana, Tauromenium, Thermae, and Tyndaris. Messina too, although not a colony, was a town filled with a Roman population. Probably its inhabitants were merchants connected with the wine trade of the neighbourhood, of which Messina was the shipping port. Syracuse and Panormus were important as strategical points, and a Roman force was kept up at each. Sicels, Sicani, Morgetes, and Iberes (aboriginal inhabitants of the island, or very early settlers), still existed in the interior, in what exact political condition it is impossible to say; but most likely in that of velleins. Some few towns are mentioned by Pliny as having the Latin franchise, and some as paying a fixed tribute; but with the exception of the five colonies, the owners of the soil of the island were mainly great absentee proprietors, and almost all its produce came to Rome (Strabo, vi. c. 2; Appian, *B. C.* iv. 84 seqq., v. 15-118; Cicero, *Verr.* iv. 53; Plin. *N. H.* iii. 8). [J. W. B.]

SYRIA (סִירְיָא: *Συρία*: *Syria*) is the term used throughout our version for the Hebrew *Aram*, as well as for the Greek *Συρία*. The Greek writers generally regarded it as a contraction or corruption of Assyria (Herod. vii. 63; Scylax, *Peripl.* p. 80; Dionys. *Perieg.* 970-975; Eustath. *Comment.* ad loc. &c.). But this derivation is exceedingly doubtful. Most probably Syria is for *Tyria*, the country about *Tsur* (צֵר), or Tyre, which was the first of the Syrian towns known to the Greeks. The resemblance to Assyria (אַשּׁוּר) is thus purely accidental; and the two words must be regarded as in reality completely distinct.

1. *Geographical extent.*—It is very difficult to fix the limits of Syria. The Hebrew *Aram* seems to commence on the northern frontier of Palestine, and to extend thence northward to the skirts of Taurus, westward to the Mediterranean, and eastward probably to the Khabour river. Its chief divisions are Aram-Dammeseck, or "Syria of Damascus," Aram-Zobah, or "Syria of Zobah," Aram-Naharaim, "Mesopotamia," or "Syria of the Two Rivers," and Padan-Aram, "the plain Syria," or "the plain at the foot of the mountains." Of these we cannot be mistaken in identifying the first with the rich country about Damascus, lying between Anti-Libanus and the desert, and the last with the

district about Harran and Orfah, the flat country stretching out from the western extremity of Mons Masius towards the true source of the Khabour at *Eas-el-Ais*. Aram-Naharaim seems to be a term including this last tract, and extending beyond it, though how far beyond is doubtful. The "two rivers" intended are probably the Tigris and the Euphrates, which approach very near each other in the neighbourhood of Diarbekr; and Aram-Naharaim may have originally been applied especially to the mountain tract which here separates them. If so, it no doubt gradually extended its meaning; for in Gen. xiv. 10 it clearly includes the district about Harran, the Padan-Aram of other places. Whether the Scriptural meaning ever extends much beyond this is uncertain. It is perhaps most probable that, as the Mesopotamia of the later Greeks, as the Aram-Naharaim of the Hebrews was limited to the north-western portion of the country contained between the two great streams. [See MESOPOTAMIA.] Aram-Zobah seems to be the tract between the Euphrates and Coele Syria; since, on the one hand, it reaches down to the Great River (2 Sam. viii. 3, x. 16), and on the other excludes Hamath (2 Sam. viii. 9, 10). The other divisions of Aram, such as Aram-Maschah and Aram-beth-Rechob, are more difficult to locate with any certainty. Probably they were portions of the tract intervening between Anti-libanus and the desert.

The Greek writers used the term Syria still more vaguely than the Hebrews did Aram. On the one hand they extended it to the Euxine, including in it Cappadocia, and even Bithynia (Herod. i. 72, 76, ii. 104; Strab. xvi. 1, §2; Dionys. Perieg. 972); on the other they carried it to the borders of Egypt, and made it comprise Philistia and Edom (Herod. iii. 5; Strab. xvi. 2, §2). Again, through the confusion in their minds between the Syrians and the Assyrians, they sometimes included the country of the latter, and even its southern neighbour Babylonia, in Syria (Strab. xvi. 1, §2). Still they seem always to have had a feeling that Syria Proper was a narrower region. Herodotus, while he calls the Cappadocians and the Assyrians Syrians, gives the name of Syria only to the country lying on the Mediterranean between Cilicia and Egypt (ii. 106, 157, 159, iii. 6, 91). Dionysius, who speaks of two Syrias, an eastern and a western, assigns the first place to the latter (Perieg. 895). Strabo, like Herodotus, has one Syria only, which he defines as the maritime tract between Egypt and the Gulf of Issus. The ordinary use of the term Syria, by the LXX. and New Testament writers, is even more restricted than this. They distinguish Syria from Phoenicia on the one hand, and from Samaria, Judaea, Idumaea, &c., on the other. In the present article it seems best to take the word in this narrow sense, and to regard Syria as bounded by Amanus and Taurus on the north, by the Euphrates and the Arabian desert on the east, by Palestine, or the Holy Land, on the south, by the Mediterranean near the mouth of the Orontes, and then by Phoenicia upon the west. The tract thus circumscribed is about 300 miles long from north to south, and from 50 to 150 miles broad. It contains an area of about 30,000 square miles.

2. *General physical features.*—The general character of the tract is mountainous, as the Hebrew name Aram (from a root signifying "height") sufficiently implies. On the west, two longitudinal chains, running parallel with the coast at no great

distance from one another, extend along two-thirds of the length of Syria, from the latitude of Tyre to that of Antioch. These chains, towards the south, were known respectively as Libanus and Anti-libanus, after which, about lat. 35°, the more western chain, Libanus, became Bergylus; while the eastern, sinking into comparative insignificance, was without any special appellation. In the latitude of Antioch the longitudinal chains are met by the chain of Amanus, an outlying barrier of Taurus, having the direction of that range, which in this part is from south-west to north-east. From this point northwards to the true Taurus, which here bounded Syria, and eastward to the Euphrates about *Birah-jik* and *Susmeiat*, the whole tract appears to consist of mountains infinitely ramified; below which, towards *Sajer* and Aleppo, are some elevated plains, diversified with ranges of hills, while south of these, in about lat. 36°, you enter the desert. The most fertile and valuable tract of Syria is the long valley intervening between Libanus and Anti-libanus, which slopes southward from a point a little north of Baalbek, and is there drained by the *Litany*; while above that point the slope is northward, and the streams form the Orontes, whose course is in that direction. The northern mountain region is also fairly productive; but the soil of the plains about Aleppo is poor, and the eastern flank of the Anti-libanus, except in one place, is peculiarly sterile. The exception is at the lower or southern extremity of the chain, where the stream of the Barada forms the rich and delightful tract already described under the head of DAMASCUS.

3. *The Mountain Ranges.*—(a) *Lebanon.* Of the various mountain ranges of Syria, Lebanon possesses the greatest interest. It extends from the mouth of the Litany to Arka, a distance of nearly 100 miles, and is composed chiefly of Jura limestone, but varied with sandstone and basalt. It culminates towards its northern extremity, half-way between Tripoli and Beyrut, and at this point attains an elevation of nearly 10,000 feet (Robinson, *Bibl. Researches*, iii. 547). Anciently it was thickly wooded with cypresses, cedars, and firs; but it is now very scantily clothed. As a minute description of its present condition has been already given in the proper place, it is unnecessary to prolong the present account. [LEBANON.] (b) *Anti-libanus.* This range, as the name implies, stands over against Lebanon, running in the same direction, i.e. nearly north and south, and extending the same length. It is composed of Jura limestone,oolite, and Jura dolomite. The culminating point is Hermon, at the southern, or rather the south-eastern end of the chain; for Anti-libanus, unlike Libanus, bifurcates at its lower extremity, dividing into two distinct ridges, between which flows the stream of the *Hasbeya*. Hermon is thought to exceed the height of 9000 feet. (c) *Bergylus.* Mount Bergylus, called now *Jebel Nosairi* towards the south, and towards the north *Jebel Krand*, extends from the mouth of the *Nahr-el-Kebir* (Eleutherus), nearly opposite Hama, to the vicinity of Antioch, a distance of rather more than 100 miles. It is separated from Lebanon by a comparatively level tract, 15 or 20 miles broad (*El-Butees*), through which flows the stream called *El-Kebir*. Mount Bergylus is broader than Lebanon, and throws out a number of short spurs east and west, both towards the sea and towards the valley of the Orontes. One of the western spurs terminates in a

remarkable headland, known to the ancients as Mount Casius, and now called *Jebel-el-Akra*, or the "Bald Mountain," which rises abruptly from the sea to a height exceeding 5000 feet. At the northern extremity of Bargylus, where it overhangs the lower course of the Orontes, was Daphne, the delicious suburb of Antioch, and the favourite haunt of its luxurious populace. (d) Amanus. North of the mouth of the Orontes, between its course and the eastern shore of the Gulf of Issus (*Iskanderus*), lies the range of Amanus, which extends from the south-west end of the gulf, in a north-easterly direction, a distance of 85 or 90 miles, and finally forms a junction with Taurus in about long. $36^{\circ} 25'$. Amanus divides Syria from Cilicia, and is a stony range with bold rugged peaks and conical summits, formed of serpentine and other secondary rocks supporting a tertiary formation. Its average elevation is 5000 feet, and it terminates abruptly at *Ras-el-Khanzir*, in a high cliff overhanging the sea. There are only two or three passes across it; and one alone, that of *Beilan*, is tolerably commodious. Amanus, like Anti-Libanus, bifurcates at its south-western extremity, having, besides its termination at the *Ras-el-Khanzir*, another, now called *Musa Dagh*, which approaches within about six miles of the mouth of the Orontes, and seems to be the Pieria of Strabo (xvi. 2, §8). This spur is of limestone formation. The flanks of Amanus are well clothed with forests of pine, oak, and laroh, or copse of myrtle, arbutus, oleander, and other shrubs. The range was well known to the Assyrians, who called it *Khamana*, and it unfrequently cut timber in it, which was conveyed thence to their capital.

4. *The Rivers*.—The principal rivers of Syria are the Litany and the Orontes. The Litany springs from a small lake situated in the middle of the Coele-syrian valley, about six miles to the south-west of Beisbek. Hence it descends the valley called *El-Bakaa*, with a course a little west of south, sending out on each side a number of canals for irrigation, and receiving rills from the opposite ranges of Libanus and Anti-libanus, which compensate for the water given off. The chief of these is called *El-Bardony*, and descends from Lebanon near *Zahleh*. The *Bakaa* narrows as it proceeds southwards, and terminates in a gorge, through which the Litany forces itself with a course which is still to the south-west, flowing deep between high precipices, and spanned by a bold bridge of a single arch, known as the *Jisr Burghus*. Having emerged from the ravine, it flows first south-west by west, and then nearly due south, till it reaches the latitude of Tyre, when meeting the mountains of Upper Galilee, it is forced to bend to the west, and, passing with many windings through the low coast tract, enters the sea about 5 miles north of the great Phœnician city. The entire course of the stream, exclusive of small windings, is about 80 miles. The source of the Orontes is but about 15 miles from that of the Litany. A little north of Beisbek, the highest point or water-shed of the Coele-syrian valley is reached, and the ground begins to descend northwards. A small rill breaks out from the foot of Anti-libanus, which, after flowing nearly due north for 15 miles across the plain, meets another greater source given out by Lebanon in lat. $34^{\circ} 22'$, which is now considered the true "head of the stream." The Orontes from this point flows down the valley to the north-east, and passing through the *Bahr-el-Kades*—a lake

about 6 miles long and 2 broad—approaches *Hama* (Emesa), which it leaves on its right bank. It then flows for 20 miles nearly due north; after which, on approaching *Hamah* (Hamath), it makes a slight bend to the east round the base of the *Jebel Erbayn*, and then, entering the rich pasture country of *El-Ghab*, runs north-west and north to *Jisr Hadid*. The tributaries which it receives in this part of its course are many but small, the only one of any importance being the *Wady-el-Saraj*, which enters it from the west a little below Hamath. At *Jisr Hadid*, or "the Iron Bridge," the course of the Orontes suddenly changes. Prevented by the range of Amanus from flowing any further to the north, it sweeps round boldly to the west, and receiving a large tributary—the *Kara-Su*—from the north-east, the volume of whose water exceeds its own, it enters the broad valley of Antioch, "doubling back here upon itself, and flowing to the south-west." In this part of its course the Orontes has been compared to the Wye (Stanley, *Sinai and Palestine*, p. 409). The entire length of the stream is estimated at above 200 miles. Its modern name is the *Nahr-el-Asi*, or "Rebel Stream," an appellation given to it on account of its violence and impetuosity in many parts of its course.

The other Syrian streams of some consequence, besides the Litany and the Orontes, are the *Barada*, or river of Damascus, the *Kowsit*, or river of Aleppo, and the *Sajur*, a tributary of the Euphrates. The course of the *Barada* has already been described under the head of Damascus. [DAMASCUS.] The *Kowsit* rises in the highlands south of *Ain Tab*, from two sources, one of which is known as the *Balokhs-Su*, or "Fish-River." It seems to be the Chalus of Xenophon (*Anab.* i. 4, §9). Its course is at first east, but soon becomes south, or a little west of south, to Aleppo, after which it meanders considerably through the high plain south of that city, finally terminating in a marsh known as *El-Mutkh*. The *Sajur* rises a little further to the north, in the mountains north of *Ain-Tab*. Its course for the first 25 miles is south-east, after which it runs east for 15 or 20 miles, finally resuming its first direction, and flowing by the town of *Sajur* into the Euphrates. It is a larger river than the *Kowsit*, though its course is scarcely so long.

5. *The Lakes*.—The principal lakes of Syria are the *Agh-Dengiz*, or Lake of Antioch; the *Subakhah*, or Salt Lake, between Aleppo and Balis; the *Bahr-el-Kades*, on the upper Orontes; and the *Bahr-el-Merj*, or Lake of Damascus. (a) The Lake of Antioch is an oblong fresh-water basin, 10 miles long by 7 broad, situated to the north of the Orontes, where it sweeps round through the plain of *Umt*, before receiving the *Kara-Su*. It is formed by the waters of three large streams—the *Kara-Su*, the *Afrin*, and the *Awad*—which collect the drainage of the great mountain tract lying north-east and east of Antioch, between the 36th and 37th parallels. It has been argued, from the silence of Xenophon and Strabo, that this lake did not exist in ancient times (Rennell, *Illustrations of the Expedition of Cyrus*, p. 65), but modern investigations pursued upon the spot are thought to disprove this theory (Ainsworth, *Researches in Mesopotamia*, p. 299). The waters flow into the lake on the east and north, and flow out of it at its south-west angle by a broad and deep stream, known as the *Kara-Su*, which falls into the Orontes a few miles

above Antioch. (b) The *Sal-ia* is a salt lake, into which only insignificant streams flow, and which has no outlet. It lies midway between Balis and Aleppo, the route between these places passing along its northern shore. It is longer than the Lake of Antioch, but narrower, being about 13 miles from east to west, and 4 miles only from north to south, even where it is widest. (c) The *Bahr-el-Kades* is smaller than either of the foregoing lakes. It has been estimated at 8 miles long and 3 broad (Pococke, *Description of the East*, i. 140), and again at 6 miles long and 2 broad (Chesney, *Euphrates Exp.* i. 394), but has never been accurately measured. Pococke conjectures that it is of recent formation; but his only reason seems to be the silence of ancient writers, which is scarcely sufficient to prove the point. (d) The *Bahr-el-Merj*, like the piece of water in which the *Koweik* or river of Aleppo ends, scarcely deserves to be called a lake, since it is little better than a large marsh. The length, according to Col. Chesney, is 9 miles, and the breadth 2 miles (*Euphrat. Exp.* i. 503); but the size seems to vary with the seasons, and with the extent to which irrigation is used along the course of the *Barada*. A recent traveller, who traced the *Barada* to its termination, found it divide a few miles below Damascus, and observed that each branch terminated in a marsh of its own; while a neighbouring stream, the *Awaadj*, commonly regarded as a tributary of the *Barada*, also lost itself in a third marsh separate from the other two (Porter in *Geograph. Journ.* xvi. 43-46).

6. *The Great Valley*.—By far the most important part of Syria, and on the whole its most striking feature, is the great valley which reaches from the plain of *Umk*, near Antioch, to the narrow gorge on which the *Litany* enters in about lat. $33^{\circ} 30'$. This valley, which runs nearly parallel with the Syrian coast, extends the length of 230 miles, and has a width varying from 6 or 8 to 15 or 20 miles. The more southern portion of it was known to the ancients as *Coele-Syria*, or "the Hollow Syria," and has been already described. [COELESYRIA.] In length this portion is rather more than 100 miles, terminating with a screen of hills a little south of Hems, at which point the north-eastern direction of the valley also ceases, and it begins to bend to the north-west. The lower valley from Hems downward is broader, generally speaking, and richer than the upper portion. Here was "Hamath the Great" (Am. vi. 2), now Hamah; and here too was Apameia, a city but little inferior to Antioch, surrounded by rich pastures, where Seleucus Nicator was wont to feed 500 elephants, 300 stallion horses, and 30,000 mares (Strab. xvi. 2, §10). The whole of this region is fertile, being watered not only by the Orontes, but by the numerous affluents which flow into it from the mountain ranges enclosing the valley on either side.

7. *The Northern Highlands*.—Northern Syria, especially the district called *Commagène*, between Taurus and the Euphrates, is still very insufficiently explored. It seems to be altogether an elevated tract, consisting of twisted spurs from Taurus and Amanus, with narrow valleys between them, which open out into bare and sterile plains. The valleys themselves are not very fertile. They are watered by small streams, producing often abundant fish,

and, for the most part, flowing into the Orontes or the Euphrates. A certain number of the more central ones, however, unite, and constitute the "river of Aleppo" which, unable to reach either of the Oceanic streams, forms (as we have seen) a lake or marsh, wherein its waters evaporate. Along the course of the Euphrates there is rich land and abundant vegetation; but the character of the country thence to the valley of the Orontes is bare and woodless, except in the vicinity of the towns, where fruit-trees are cultivated, and orchards and gardens make an agreeable appearance. Most of this region is a mere sheep-walk, which grows more and more harsh and repulsive as we approach the south, where it gradually mingles with the desert. The highest elevation of the plateau between the two rivers is 1500 feet; and this height is reached soon after leaving the Euphrates, while towards the west the decline is gradual.

8. *The Eastern Desert*.—East of the inner mountain-chain, and south of the cultivable ground about Aleppo, is the great Syrian Desert, an "elevated dry upland, for the most part of gypsum and marls, producing nothing but a few spare bushes of wormwood, and the usual aromatic plants of the wilderness." Here and there bare and stony ridges of no great height cross this arid region, but fail to draw water from the sky, and have, consequently, no streams flowing from them. A few wells supply the nomad population with a brackish fluid. The region is traversed with difficulty, and has never been accurately surveyed. The most remarkable oasis is at Palmyra, where there are several small streams and abundant palm-trees. [See TADMOR.] Towards the more western part of the region along the foot of the mountain-range which there bounds it, is likewise a good deal of tolerably fertile country, watered by the streams which flow eastward from the range, and after a longer or a shorter course are lost in the desert. The best known and the most productive of these tracts, which seem stolen from the desert, is the famous plain of Damascus—the *el-Ghuta* and *el-Merj* of the Arabs—already described in the account given of that city. [DAMASCUS.] No rival to this "earthly paradise" is to be found along the rest of the chain, since no other stream flows down from it at all comparable to the *Barada*; but wherever the eastern side of the chain has been visited, a certain amount of cultivable territory has been found at its foot; corn is grown in places, and olive-trees are abundant (Burckhardt, *Travels in Syria*, pp. 124-129; Pococke, *Description of the East*, vol. ii. p. 146). Further from the hills all is bare and repulsive; a dry hard desert like that of the Sinaitic peninsula, with a soil of marl and gravel, only rarely diversified with sand.

9. *Chief Divisions*.—According to Strabo, Syria Proper was divided into the following districts:—1. *Commagène*; 2. *Cyrrhæstia*; 3. *Seleucia*; 4. *Coele-syria*; and 5. *Damascène*. If we take its limits, however, as laid down above (§1), we must add to these districts three others: *Chalybonitis* or the country about Aleppo; *Chalcis* or *Chalcidicæ*, a small tract south of this, about the lake in which the river of Aleppo ends; and *Palmyrène*, or the desert so far as we consider it to have been Syrian. (a) *Commagène** lay to the north. Its capital was *Samosata* or *Sumeisat*. The territory is said

* The root of this name appears in the early Assyrian script as that of a people, the *Qummuḫ*, or *Qum-*

mukki. They dwell, however, east of the Euphrates between *Sumeisat* and *Marbekr*.

to have been fairly fertile, but small; and from this we may gather that it did not descend lower than about *Ain-Tab*. (b) From *Ain-Tab*, or perhaps from a point higher up, commenced *Cyrrhestica* or *Cyristica*. It was bounded on the north by *Commagéné*, on the north-west by *Amanus*, on the west and south-west by *Seleucia*, and on the south by *Chalybonitis* or the region of *Chalybon*. Both it and *Commagéné* reached eastward to the *Euphrates*. *Cyrrhestica* was so called from its capital *Cyrrhus*, which seems to be the modern *Corus*. It included *Hierapolis* (*Bambuk*), *Batnae* (*Dahab?*), and *Gindarus* (*Gindaries*). (c) *Chalybonitis* adjoined *Cyrrhestica* on the south, lying between that region and the desert. It extended probably from the *Euphrates*, about *Balis*, to Mount St. Simeon (*Anguli Dagh*). Like *Cyrrhestica*, it derived its name from its capital city, which was *Chalybon*, now corrupted into *Haleb*, or *Aleppo*. (d) *Chalcidice* was south of the more western portion of *Chalybonitis*, and was named from its capital, *Chalcis*, which seems to be marked by the modern *Kemasseria*, a little south of the lake in which the river of *Aleppo* ends (Pococke, *Travels*, ii. 149). (e) *Seleucia* lay between *Cyrrhestica*, *Chalybonitis*, and *Chalcis* on the one side, and the *Mediterranean* on the other. It was a large province, and contained four important subdivisions, 1. *Seleucia Proper* or *Pieria*, the little corner between *Amanus* and the *Orontes*, with its capital, *Seleucia*, on the coast, above the mouth of the *Orontes*; 2. *Antiochia*, the region about *Antioch*; 3. *Laodicene*, the coast tract between the mouth of the *Orontes* and *Phoenicia*, named after its capital, *Laodicea* (still called *Ladikiyeh*), which was an excellent port, and situated in a most fertile district (Strab. xvi. 2, §9); and 4. *Apamene*, consisting of the valley of the *Orontes* from *Jisr Hadid* to *Hamah*, or perhaps to *Hems*, and having *Apamea* (now *Famieh*) for its chief city. (f) *Coele-syria* lay south of *Apamea*, being the continuation of the *Great Valley*, and extending from *Hems* to the gorge in which the valley ends. The chief town of this region was *Heliopolis* (*Baalbek*). (g) *Damascene* included the whole cultivable tract between the bare range which breaks away from *Anti-Libanus* in lat. 33° 30', and the hills which shut in the valley of the *Awaj* on the south. It lay east of *Coele-syria* and south-west of *Palmyrène*. (h) *Palmyrène* was the name applied to the whole of the *Syrian Desert*. It was bounded on the east by the *Euphrates*, on the north by *Chalybonitis* and *Chalcidice*, on the west by *Apamene* and *Coele-syria*, and on the south by the great desert of *Arabia*.

10. *Principal towns*.—The chief towns of *Syria* may be thus arranged, as nearly as possible in the order of their importance: 1. *Antioch*; 2. *Damascus*; 3. *Apameia*; 4. *Seleucia*; 5. *Tadmor* or *Palmyra*; 6. *Laodicea*; 7. *Epiphaneia* (*Hamath*); 8. *Samosata*; 9. *Hierapolis* (*Mabog*); 10. *Chalybon*; 11. *Emesa*; 12. *Heliopolis*; 13. *Laodicea ad Libanum*; 14. *Cyrrhus*; 15. *Chalcis*; 16. *Poseideium*; 17. *Heracleia*; 18. *Gindarus*; 19. *Zugma*; 20. *Thapsacus*. Of these, *Samosata*, *Zugma*, *Thapsacus*, are on the *Euphrates*; *Seleucia*, *Laodicea*, *Poseideium*, and *Heracleia*, on the seashore; *Antioch*, *Apameia*, *Epiphaneia*, and *Emesa* (*Hems*) on the *Orontes*; *Heliopolis* and *Laodicea ad Libanum*, in *Coele-syria*; *Hierapolis*, *Chalybon*, *Cyrrhus*, *Chalcis*, and *Gindarus*, in the northern highlands; *Damascus* on the skirts, and *Palmyra* in the centre of the eastern desert.

11. *History*.—The first occupants of *Syria* appear to have been of *Hamitic* descent. The *Canaanitish* races, the *Hittites*, *Jebusites*, *Amorites*, &c., are connected in *Scripture* with *Egypt* and *Ethiopia*, *Cush* and *Misraim* (Gen. x. 6 and 15-18); and even independently of this evidence, there seems to be sufficient reason for believing that the races in question stood in close ethnic connexion with the *Cushite* stock (Rawlinson's *Herodotus*, iv. 243-245). These tribes occupied not *Palæstine* only, but also *Lower Syria*, in very early times, as we may gather from the fact that *Hamath* is assigned to them in *Genesis* (x. 18). Afterwards they seem to have become possessed of *Upper Syria* also, for when the *Assyrians* first push their conquests beyond the *Euphrates*, they find the *Hittites* (*Khatti*) established in strength on the right bank of the *Great River*. After a while the first comers, who were still to a great extent nomads, received a *Shemitic* infusion, which most probably came to them from the south-east. The family of *Abraham*, whose original domicile was in *Lower Babylonia*, may, perhaps, be best regarded as furnishing us with a specimen of the migratory movements of the period. Another example is that of *Chedorlaomer* with his confederate kings, of whom one at least—*Amraphel*—must have been a *Shemite*. The movement may have begun before the time of *Abraham*, and hence, perhaps, the *Shemitic* names of many of the inhabitants when *Abraham* first comes into the country, as *Atimelerh*, *Melchizedek*, *Eliezer*, &c.^b The only *Syrian* town whose existence we find distinctly marked at this time is *Damascus* (Gen. xiv. 15; xv. 2), which appears to have been already a place of some importance. Indeed, in one tradition, *Abraham* is said to have been king of *Damascus* for a time (Nic. Dam. *Fr.* 30); but this is quite unworthy of credit. Next to *Damascus* must be placed *Hamath*, which is mentioned by *Moses* as a well-known place (Num. xiii. 21, xxxiv. 8), and appears in *Egyptian* papyri of the time of the eighteenth dynasty (*Cambridge Essays*, 1858, p. 268). *Syria* at this time, and for many centuries afterwards, seems to have been broken up among a number of petty kingdoms. Several of these are mentioned in *Scripture*, as *Damascus*, *Rehob*, *Maachab*, *Zobah*, *Geshur*, &c. We also hear occasionally of "the kings of *Syria* and of the *Hittites*" (1 K. x. 29; 2 K. vii. 6)—an expression indicative of that extensive subdivision of the tract among numerous petty chiefs which is exhibited to us very clearly in the early *Assyrian* inscriptions. At various times different states had the pre-eminence; but none was ever strong enough to establish an authority over the others.

The *Jews* first come into hostile contact with the *Syrians*, under that name, in the time of *David*. The war of *Joshua*, however, must have often been with *Syrian* chiefs, with whom he disputed the possession of the tract about *Lebanon* and *Hermon* (Josh. xi. 2-18). After his time the *Syrians* were apparently undisturbed, until *David* began his aggressive wars upon them. Claiming the frontier of the *Euphrates*, which *God* had promised to *Abraham* (Gen. xv. 18), *David* made war on *Hadadsezer*, king of *Zobah*, whom he defeated in a great battle, killing 18,000 of his men, and taking from him 1000 chariots, 700

^b It is possible, however, that these names may be the *Shemitic* equivalents of the real names of those persons which *Syrians* might in that case have used *Hamitic*.

warzenen, and 20,000 footmen (2 Sam. vii. 8, 4, 13). The Damascus Syrians, having endeavoured to succour their kinsmen, were likewise defeated with great loss (ib. ver. 5); and the blow so weakened them that they shortly afterwards submitted and became David's subjects (ver. 6). Zobah, however, was far from being subdued as yet. When, a few years later, the Ammonites determined on engaging in a war with David, and applied to the Syrians for aid, Zobah, together with Beth-Rehob, sent them 20,000 footmen, and two other Syrian kingdoms furnished 13,000 (2 Sam. x. 6). This army being completely defeated by Joab, Hadadezer obtained aid from Mesopotamia (ib. ver. 16), and tried the chance of a third battle, which likewise went against him, and produced the general submission of Syria to the Jewish monarch. The submission thus begun continued under the reign of Solomon, who "reigned over all the kingdoms from the river (Euphrates) unto the land of the Philistines and unto the border of Egypt; they brought presents and served Solomon all the days of his life" (1 K. iv. 21). The only part of Syria which Solomon lost seems to have been Damascus, where an independent kingdom was set up by Rezon, a native of Zobah (1 K. xi. 23-25). On the separation of the two kingdoms, soon after the accession of Rehoboam, the remainder of Syria no doubt shook off the yoke. Damascus now became decidedly the leading state, Hamath being second to it, and the northern Hittites, whose capital was Carchemish near *Bambuk*, third. [CARCHEMISH.] The wars of this period fall most properly into the history of Damascus, and have already been described in the account given of that city. [DAMASCUS.] Their result was to attach Syria to the great Assyrian empire, from which it passed to the Babylonians, after a short attempt on the part of Egypt to hold possession of it, which was frustrated by Nebuchadnezzar. From the Babylonians Syria passed to the Persians, under whom it formed a satrapy in conjunction with Judaea, Phoenicia, and Cyprus (Herod. iii. 91). Its resources were still great, and probably it was his confidence in them which encouraged the Syrian satrap, Megabazus, to raise the standard of revolt against Artaxerxes Longimanus (B.C. 447). After this we hear little of Syria till the year of the battle of Issus (B.C. 333), when it submitted to Alexander without a struggle.

Upon the death of Alexander Syria became, for the first time, the head of a great kingdom. On the division of the provinces among his generals (B.C. 321), Seleucus Nicator received Mesopotamia and Syria; and though, in the twenty years of struggle which followed, this country was lost and won repeatedly, it remained finally, with the exception of Coele-syria, in the hands of the prince to whom it was originally assigned. That prince, whose dominions reached from the Mediterranean to the Indus, and from the Oxus to the Southern Ocean, having, as he believed, been exposed to great dangers on account of the distance from Greece of his original capital, Babylon, resolved immediately upon his victory of Ipsus (B.C. 301) to fix his metropolis in the West, and settled upon Syria as the fittest place for it. Antioch was begun in B.C. 300, and, being finished in a few years, was made the capital of Seleucus' kingdom. The whole realm was thenceforth ruled from this centre, and Syria, which had long been the prey of stronger countries, and had been exhausted by

their incursions, grew rich with the wealth which now flowed into it on all sides. The luxury and magnificence of Antioch were extraordinary. Broad straight streets, with colonnades from end to end, temples, statues, arches, bridges, a royal palace, and various other public buildings dispersed throughout it, made the Syrian capital by far the most splendid of all the cities of the East. At the same time, in the provinces, other towns of large size were growing up. Seleucia in Pieria, Apameia, and both Laodiceae were foundations of the Seleucidae, as their names sufficiently indicate. Weak and indolent as were many of these monarchs, it would seem that they had a hereditary taste for building; and so each aimed at outdoing his predecessors in the number, beauty, and magnificence of his constructions. As the history of Syria under the Seleucid princes has been already given in detail, in the articles treating of each monarch [ANTIOCHUS, DEMETRIUS, SELEUCUS, &c.], it will be unnecessary here to do more than sum it up generally. The most flourishing period was the reign of the founder, Nicator. The empire was then almost as large as that of the Achaemenian Persians, for it at one time included Asia Minor, and thus reached from the Egean to India. It was organised into satrapies, of which the number was 72. Trade flourished greatly, old lines of traffic being restored and new ones opened. The reign of Nicator's son, Antiochus I., called Soter, was the beginning of the decline, which was progressive from his date, with only one or two slight interruptions. Soter lost territory to the kingdom of Pergamus, and failed in an attempt to subject Bithynia. He was also unsuccessful against Egypt. Under his son, Antiochus II., called *Θεός*, or "the God," who ascended the throne in B.C. 261, the disintegration of the empire proceeded more rapidly. The revolt of Parthia in B.C. 256, followed by that of Bactria in B.C. 254, deprived the Syrian kingdom of some of its best provinces, and gave it a new enemy which shortly became a rival and finally a superior. At the same time the war with Egypt was prosecuted without either advantage or glory. Fresh losses were suffered in the reign of Seleucus II. (Callinicus), Antiochus the Second's successor. While Callinicus was engaged in Egypt against Ptolemy Evergetes, Eumenes of Pergamus obtained possession of a great part of Asia Minor (B.C. 242); and about the same time Artabanes II., king of Parthia, conquered Hyrcania and annexed it to his dominions. An attempt to recover this latter province cost Callinicus his crown, as he was defeated and made prisoner by the Parthians (B.C. 226). In the next reign, that of Seleucus III. (Ceraunus), a slight reaction set in. Most of Asia Minor was recovered for Ceraunus by his wife's nephew, Achæus (B.C. 224), and he was preparing to invade Pergamus when he died poisoned. His successor and brother, Antiochus III., though he gained the surname of Great from the grandeur of his expeditions and the partial success of some of them, can scarcely be said to have really done anything towards raising the empire from its declining condition, since his conquests on the side of Egypt, consisting of Coele-syria, Phoenicia, and Palestine, formed no sufficient compensation for the loss of Asia Minor, which he was forced to cede to Rome for the aggrandisement of the rival kingdom of Pergamus (B.C. 190). Even had the territorial balance been kept more even, the ill policy of

making Rome an enemy of the Syrian kingdom, with which Antiochus the Great is taxable, would have necessitated our placing him among the princes to whom its ultimate ruin was mainly owing. Towards the East, indeed, he did something, if not to thrust back the Parthians, at any rate to protect his empire from their aggressions. But the exhaustion consequent upon his constant wars and signal defeats—more especially those of Raphia and Magnesia—left Syria far more feeble at his death than she had been at any former period. The almost eventless reign of Seleucus IV. (Philopator), his son and successor (B.C. 187-175), is sufficient proof of this feebleness. It was not till twenty years of peace had recruited the resources of Syria in men and money, that Antiochus IV. (Epiphanes), brother of Philopator, ventured on engaging in a great war (B.C. 171)—a war for the conquest of Egypt. At first it seemed as if the attempt would succeed. Egypt was on the point of yielding to her foe of so many years, when Rome, following out her traditions of hostility to Syrian power and influence, interposed her mediation, and deprived Epiphanes of all the fruits of his victories (B.C. 168). A greater injury was, about the same time (B.C. 167), inflicted on Syria by the folly of Epiphanes himself. Not content with replenishing his treasury by the plunder of the Jewish temple, he madly ordered the desecration of the Holy of Holies, and thus caused the revolt of the Jews, which proved a permanent loss to the empire and an aggravation of its weakness. After the death of Epiphanes the empire rapidly verged to its fall. The regal power fell into the hands of an infant, Antiochus V. (Eupator), son of Epiphanes (B.C. 164); the nobles contended for the regency; a pretender to the crown started up in the person of Demetrius, son of Seleucus IV.; Rome put in a claim to administer the government; and amid the troubles thus caused, the Parthians, under Mithridates I., overran the eastern provinces (B.C. 164), conquered Media, Persia, Susiana, Babylonia, &c., and advanced their frontier to the Euphrates. It was in vain that Demetrius II. (Nicator) made an attempt (B.C. 142) to recover the lost territory; his boldness cost him his liberty; while a similar attempt on the part of his successor, Antiochus VII. (Sidetes), cost that monarch his life (B.C. 128). Meanwhile, in the aborn Syrian kingdom, disorders of every kind were on the increase; Commagene revolted and established her independence; civil wars, murders, mutinies of the troops, rapidly succeeded one another; the despised Jews were called in by both sides in the various struggles; and Syria, in the space of about ninety years, from B.C. 154 to B.C. 64, had no fewer than ten sovereigns. All the wealth of the country had been by this time dissipated; much had flowed Rome-wards in the shape of bribes; more, probably, had been spent on the wars; and still more had been wasted by the kings in luxury of every kind. Under these circumstances the Romans showed no eagerness to occupy the exhausted region, which passed under the power of Tigranes, king of Armenia, in B.C. 83, and was not made a province of the Roman Empire till after Pompey's complete defeat of Mithridates and his ally Tigranes, B.C. 64.

The chronology of this period has been well worked out by Clinton (*F. H.* vol. iii. pp. 308-346), from whom the following table of the kings, with the dates of their accession, is taken:—

VOL. III.

Kings.	Length of Reign.	Date of Accession.
1. Seleucus Nicator . . .	32 years.	Oct. 312
2. Antiochus Soter . . .	18 "	Jan. 280
3. Antiochus Theos . . .	15 "	Jan. 261
4. Seleucus Callinicus . . .	20 "	Jan. 246
5. Seleucus Ceraunus . . .	36 "	Aug. 226
6. Antiochus Magnus . . .	12 "	Aug. 223
7. Seleucus Philopator . . .	12 "	Oct. 187
8. Antiochus Epiphanes . . .	11 "	Aug. 175
9. Antiochus Eupator . . .	2 "	Dec. 164
10. Demetrius Soter . . .	12 "	Nov. 162
11. Alexander Bala . . .	5 "	Aug. 166
12. Demetrius Nicator (1st reign) . . .	9 "	Nov. 146
13. Antiochus Sidetes . . .	9 "	Feb. 137
14. Demetrius Nicator (2nd reign) . . .	3 "	Feb. 126
15. Antiochus Grypus . . .	13 "	Aug. 126
16. Antiochus Cyrenicus . . .	16 "	113
17. Antiochus Eusebes and Philippus . . .	12 "	96
18. Tigranes . . .	14 "	83
19. Antiochus Asiaticus . . .	4 "	69

As Syria holds an important place, not only in the Old Testament, but in the New, some account of its condition under the Romans must now be given. That condition was somewhat peculiar. While the country generally was formed into a Roman province, under governors who were at first proprætors or quæstors, then præconsuls, and finally legates, there were exempted from the direct rule of the governor, in the first place, a number of "free cities," which retained the administration of their own affairs, subject to a tribute levied according to the Roman principles of taxation; and 2dly, a number of tracts, which were assigned to petty princes, commonly natives, to be ruled at their pleasure, subject to the same obligations with the free cities as to taxation (Appian, *Syr.* 50). The free cities were Antioch, Seleucia, Apameia, Epiphaneia, Tripolis, Sidon, and Tyre; the principalities, Commagene, Chalcis ad Belum (near *Baalbek*), Arethusa, Abila or Abilene, Palmyra, and Damascus. The principalities were sometimes called kingdoms, sometimes tetrarchies. They were established where it was thought that the natives were so inveterately wedded to their own customs, and so well disposed for revolt, that it was necessary to consult their feelings, to flatter the national vanity, and to give them the semblance without the substance of freedom. (a) Commagene was a kingdom (*regnum*). It had broken off from Syria during the later troubles, and become a separate state under the government of a branch of the Seleucidae, who affected the names of Antiochus and Mithridates. The Romans allowed this condition of things to continue till A.D. 17, when, upon the death of Antiochus III., they made Commagene into a province; in which condition it continued till A.D. 38, when Caligula gave the crown to Antiochus IV. (Epiphanes), the son of Antiochus III. Antiochus IV. continued king till A.D. 72, when he was deposed by Vespasian, and Commagene was finally absorbed into the Empire. He had a son, called also Antiochus and Epiphanes, who was betrothed to Drusilla, the sister of "King Agrippa," and afterwards the wife of Felix, the procurator of Judaea. (b) Chalcis "ad Belum" was not the city so called near Aleppo, which gave name to the district of Chalcidica, but a town of less importance near Heliopolis (*Baalbek*), whence probably the suffix "ad Belum." It is mentioned in this con-

4 X

sion by Strabo (xvi. 2, §10), and Josephus says that it was under Lebanon (*Ant.* xiv. 7, §4), so that there cannot be much doubt as to its position. It must have been in the "Hollow Syria"—the modern *Bāḥaa*—to the south of *Baalbek* (Joseph. *B. J.* i. 9, §2), and therefore probably at *Anjar*, where there are large ruins (Robinson, *Bibl. Res.* iii. 496, 497). This too was generally, or perhaps always, a "kingdom." Pompey found it under a certain Ptolemy, "the son of Mennaeus," and allowed him to retain possession of it, together with certain adjacent districts. From him it passed to his son, Lysanias, who was put to death by Antony at the instigation of Cleopatra (ab. B.C. 34), after which we find its revenues farmed by Lysanias' steward, Zenodorus, the royalty being in abeyance (Joseph. *Ant.* xv. 10, §1). In B.C. 22 Chalcis was added by Augustus to the dominions of Herod the Great, at whose death it probably passed to his son Philip (ib. xvii. 11, §4). Philip died A.D. 34; and then we lose sight of Chalcis, until Claudius in his first year (A.D. 41) bestowed it on a Herod, the brother of Herod Agrippa I., still as a "kingdom." From this Herod it passed (A.D. 49) to his nephew, Herod Agrippa II., who held it only three or four years, being promoted from it to a better government (ib. xx. 7, §1). Chalcis then fell to Agrippa's cousin, Aristobulus, son of the first Herodian king, under whom it remained till A.D. 73 (Joseph. *B. J.* vii. 7, §1). About this time, or soon after, it ceased to be a distinct government, being finally absorbed into the Roman province of Syria. (c) *Arethusa* (now *Restus*) was for a time separated from Syria, and governed by phylarchs. The city lay on the right bank of the Orontes between Hamah and Hems, rather nearer to the former. In the government were included the Emisani, or people of Hems (*Emesa*), so that we may regard it as comprising the Orontes valley from the *Jebel Erbayn*, at least as high as the *Bahr-el-Kades*, or *Bakeiret-Hems*, the lake of Hems. Only two governors are known, Sampaiceramus, and Jamblichus, his son (Strab. xvi. 2, §10). Probably this principality was one of the first absorbed. (d) *Abiléné*, so called from its capital Abila, was a "tetrarchy." It was situated to the east of Anti-libanus, on the route between Baalbek and Damascus (*Itin. Ant.*). Ruins and inscriptions mark the site of the capital (Robinson, *Bibl. Res.* iii. 479-482), which was at the village called *El Suk*, on the river Barada, just where it breaks forth from the mountains. The limits of the territory are uncertain. We first hear of this tetrarchy in St. Luke's Gospel (iii. 1), where it is said to have been in the possession of a certain Lysanias at the commencement of St. John's ministry, which was probably A.D. 27. Of this Lysanias nothing more is known; he certainly cannot be the Lysanias who once held Chalcis; since that Lysanias died above sixty years previously. Eleven years after the date mentioned by St. Luke, A.D. 38, the heir of Caligula bestowed "the tetrarchy of Lysanias," by which Abiléné is no doubt intended, on the elder Agrippa (Joseph. *Ant.* xviii. 6, §10), and four years later Claudius confirmed the same prince in the possession of the "Abila of Lysanias" (ib. xix. 5, §1). Finally, in A.D. 53, Claudius, among other grants, conferred on the younger Agrippa "Abila, which had been the tetrarchy of Lysanias" (ib. xx. 7, §1). Abila was taken by Placidius, one of the generals of Vespasian, in B.C. 69 (Joseph. *Bell. Jud.* iv. 7, §6), and thenceforth was annexed to Syria. (e) Palmyra appears to have

occupied a different position from the rest of the Syrian principalities. It was in no sense dependent upon Rome (Plin. *H. N.* v. 25), but, relying on its position, claimed and exercised the right of self-government from the breaking up of the Syrian kingdom to the reign of Trajan. Antony made an attempt against it, B.C. 41, but failed. It was not till Trajan's successes against the Parthians, between A.D. 114 and A.D. 116, that Palmyra was added to the Empire. (f) Damascus is the last of the principalities which it is necessary to notice here. It appears to have been left by Pompey in the hands of an Arabian prince, Aretas, who, however, was to pay a tribute for it, and to allow the Romans to occupy it at their pleasure with a garrison (Joseph. *Ant.* xiv. 4, §5; 5, §1; 11, §7). This state of things continued most likely to the settlement of the Empire by Augustus, when Damascus was attached to the province of Syria. During the rest of Augustus' reign, and during the entire reign of Tiberius, this arrangement was in force; but it seems probable that Caligula on his accession separated Damascus from Syria, and gave it to another Aretas, who was king of Petra, and a relation (son?) of the former. [See *ARETAS*.] Hence the fact, noted by St. Paul (2 Cor. xi. 32), that at the time of his conversion Damascus was held by an "ethnarch of king Aretas." The semi-independence of Damascus is thought to have continued through the reigns of Caligula and Claudius (from A.D. 37 to A.D. 54), but to have come to an end under Nero, when the district was probably re-attached to Syria.

The list of the governors of Syria, from its conquest by the Romans to the destruction of Jerusalem, has been made out with a near approach to accuracy, and is as follows:—

Names.	Title of office.	Date of entering office.	Date of quitting office.
M. Aemilius Scaurus . . .	Quæstor pro prætor . . .	B.C. 63 . . .	B.C. 61 . . .
L. Marcus Philippus . . .	Prætor . . .	61 . . .	60 . . .
Lentulus Marcellinus . . .	Prætor . . .	60 . . .	57 . . .
Gabinus . . .	Proconsul . . .	56 . . .	56 . . .
Crassus . . .	Proconsul . . .	55 . . .	53 . . .
Cassius . . .	Quæstor . . .	53 . . .	51 . . .
M. Calpurnius Bibulus . . .	Proconsul . . .	51 . . .	47 . . .
Sext. Julius Cæsar . . .	Prætor . . .	47 . . .	46 . . .
Q. Cæcilius Bassus . . .	Prætor . . .	46 . . .	63 . . .
Q. Cornificius . . .	received authority from the Senate to dispossess Bassus, (but failed).		
L. Statius Murcus . . .	Prætor . . .	44 . . .	43 . . .
Q. Marcus Crispus . . .	Proconsul . . .	B.C. 43 . . .	B.C. 42 . . .
C. Cassius Longinus . . .	Legatus . . .	41 . . .	40 . . .
L. Decidius Saxa . . .	Legatus . . .	40 . . .	38 . . .
P. Ventidius Bassus . . .	Legatus . . .	38 . . .	36 . . .
C. Sosius . . .	Legatus . . .	36 . . .	35 . . .
L. Munatius Plancus . . .	Legatus . . .	35 . . .	32 . . .
L. Calpurnius Bibulus . . .	Legatus . . .	31 . . .	31 . . .
Q. Didius . . .	Legatus . . .	30 . . .	30 . . .
M. Valerius Messalla . . .	Legatus . . .	29 . . .	29 . . .
Varro . . .	Legatus . . .	24 . . .	24 . . .
M. Vipanius Agrippa . . .	Legatus . . .	23 . . .	20 . . .
M. Tullius . . .	Legatus . . .	19 (?) . . .	19 (?) . . .
M. Vipanius Agrippa . . .	Legatus . . .	15 . . .	15 . . .
M. Tullius . . .	Legatus . . .	11 . . .	7 . . .
C. Sentius Saturninus . . .	Legatus . . .	7 . . .	3 . . .
P. Quintilius Varus . . .	Legatus . . .	3 . . .	A.D. 6 . . .
P. Sulpicius Quirinus . . .	Legatus . . .	A.D. 6 . . .	
Q. Cæcilius Metellus . . .	Legatus . . .		17 . . .
Creticus Silianus . . .	Legatus . . .		17 . . .
M. Calpurnius Piso . . .	Legatus . . .	17 . . .	19 . . .
Cn. Sentius Saturninus . . .	Prolegatus . . .	19 . . .	19 . . .
L. Pomponius Flaccus . . .	Prætor . . .	22 . . .	33 . . .
L. Vitellius . . .	Legatus . . .	35 . . .	39 . . .
P. Petronius . . .	Legatus . . .	39 . . .	42 . . .
Vibius Marsus . . .	Legatus . . .	42 . . .	48 . . .
C. Cassius Longinus . . .	Legatus . . .	48 . . .	51 . . .
T. Numidius * Quadratus . . .	Legatus . . .	51 . . .	60 . . .
Domitius Corbulo . . .	Legatus . . .	60 . . .	68 . . .
Cincius . . .	Legatus . . .	60 . . .	60 . . .
C. Cestius Gallus . . .	Legatus . . .	66 . . .	67 . . .
P. Lælius Mucianus . . .	Legatus . . .	67 . . .	69 . . .

* Called "Vindius" by Tacitus.

The history of Syria during this period may be summed up in a few words. Down to the battle of Pharsalia, Syria was fairly tranquil, the only troubles being with the Arabs, who occasionally attacked the eastern frontier. The Roman governors laboured hard to raise the condition of the province, taking great pains to restore the cities, which had gone to decay under the later Selencidae. Gabinus, proconsul in the years 56 and 55 B.C., made himself particularly conspicuous in works of this kind. After Pharsalia (B.C. 46) the troubles of Syria were renewed. Julius Caesar gave the province to his relative Sextus in B.C. 47; but Pompey's party was still so strong in the East, that in the next year one of his adherents, Caecilius Bassus, put Sextus to death, and established himself in the government so firmly that he was able to resist for three years three proconsuls appointed by the Senate to dispossess him, and only finally yielded upon terms which he himself offered to his antagonists. Many of the petty princes of Syria aided with him, and some of the nomadic Arabs took his pay and fought under his banner (Strab. xvi. 2, §10). Bassus had but just made his submission, when, upon the assassination of Caesar, Syria was disrupted between Cassius and Dolabella, the friend of Antony, a dispute terminated by the suicide of Dolabella, B.C. 43, at Laodicea, where he was besieged by Cassius. The next year Cassius left his province and went to Philippi, where, after the first unsuccessful engagement, he too committed suicide. Syria then fell to Antony, who appointed as his legate, L. Decidius Saxa, in B.C. 41. The troubles of the empire now tempted the Parthians to seek a further extension of their dominions at the expense of Rome, and Pacorus, the crown-prince, son of Arsaces XIV., assisted by the Roman refugee, Labienus, overran Syria and Asia Minor, defeating Antony's generals, and threatening Rome with the loss of all her Asiatic possessions (B.C. 40-39). Ventidius, however, in B.C. 38, defeated the Parthians, slew Pacorus, and recovered for Rome her former boundary. A quiet time followed. From B.C. 38 to B.C. 31 Syria was governed peaceably by the legates of Antony, and, after his defeat at Actium and death at Alexandria in that year, by those of Augustus. In B.C. 27 took place that formal division of the provinces between Augustus and the Senate from which the imperial administrative system dates; and Syria, being from its exposed situation among the *provinciae principis*, continued to be ruled by legates, who were of consular rank (*consulares*) and bore severally the full title of "Legatus Augusti pro praetore." During the whole of this period the province enlarged or contracted its limits according as it pleased the reigning emperor to bestow tracts of land on the native princes, or to resume them and place them under his legate. Jndaea, when attached in this way to Syria, occupied a peculiar position. Partly perhaps on account of its remoteness from the Syrian capital, Antioch, partly no doubt because of the peculiar character of its people, it was thought best to make it, in a certain sense, a separate government. A special procurator was therefore appointed to rule it, who was subordinate to the governor of Syria, but within his own province had the power of a *legatus*. [See JUDAEA.] Syria continued without serious disturbance from the expulsion of the Parthians (B.C. 38) to the breaking out of the Jewish war (A.D. 66). In B.C. 16 it was visited by Augustus, and in A.D. 18-19 by Germanicus who died at Antioch in the last-

named year. In A.D. 44-47 it was the scene of a severe famine. [See AGABUS.] A little earlier Christianity had begun to spread into it, partly by means of those who "were scattered" at the time of Stephen's persecution (Acts xi. 19), partly by the exertions of St. Paul (Gal. i. 21). The Syrian Church soon grew to be one of the most flourishing (Acts xiii. 1, xv. 23, 35, 41, &c.). Here the name of "Christian" first arose—at the outset no doubt a gibe, but thenceforth a glory and a boast. Antioch, the capital, became as early probably as A.D. 44 the see of a bishop, and was soon recognised as a patriarchate. The Syrian Church is accused of laxity both in faith and morals (Newman, *Arians*, p. 10); but, if it must admit the disgrace of having given birth to Lucian and Paulus of Samosata, it can claim on the other hand the glory of such names as Ignatius, Theophilus, Ephraem, and Beryllus. It suffered without shrinking many grievous persecutions; and it helped to make that emphatic protest against worldliness and luxuriousness of living at which monasticism, according to its original conception, must be considered to have aimed. The Syrian monks were among the most earnest and most self-denying; and the names of Hilarion and Simon Stylites are enough to prove that a most important part was played by Syria in the ascetic movement of the 4th and 5th centuries.

(For the geography of Syria, see Pococke's *Description of the East*, vol. ii. pp. 88-209; Burckhardt's *Travels in Syria and the Holy Land*, pp. 1-309; Robinson's *Later Biblical Researches*, pp. 419-625; Stanley's *Sinai and Palestine*, pp. 403-414; Porter's *Five Years in Damascus*; Ainsworth's *Travels in the Track of the Ten Thousand*, pp. 57-70; *Researches*, &c., p. 290 et seq. For the history under the Selencidae, see (besides the original sources) Clinton's *Fasti Hellenici*, vol. iii. Appendix iii. pp. 308-346; Vaillant's *Imperium Seleucidarum*, and Frölich's *Annales Rerum et Regum Syriacae*. For the history under the Romans, see Noriaius, *Conotaphia Pisana*, Op. vol. iii. pp. 424-531.) [G. E.]

SYRIAC VERSIONS. [VERSIONS, SYRIAC.]

SYRO-PHOENICIAN (*Συροφινίκισσα*, *Συροφινισσα*, or *Σύρα Φοινισσα*: *Syro-Phoenicia*) occurs only in Mark vii. 26. The coinage of the words "Syro-Phoenicia," and "Syro-Phoenicians," seems to have been the work of the Romans, though it is difficult to say exactly what they intended by the expressions. It has generally been supposed that they wished to distinguish the Phoenicians of Syria from those of Africa (the Carthaginians); and the term "Syrophoenix" has been regarded as the exact converse to "Libyphoenix" (Alford, *in loc.*). But the Libyphoenices are not the Phoenicians of Africa generally—they are a peculiar race, half-African and half-Phoenician ("mixture Punicum Afris genus," Liv. xxi. 22). The Syro-Phoenicians, therefore, should, on this analogy, be a mixed race, half-Phoenicians and half-Syrians. This is probably the sense of the word in the satirists Lucilius (ap. Non. Marc. *De proprietat. serm.* iv. 431) and Juvenal (*Sat.* viii. 159), who would regard a mongrel Oriental as peculiarly contemptible.

In later times a geographic sense of the terms superseded the ethnic ones. The Emperor Hadrian divided Syria into three parts, Syria Proper, Syro-Phoenice, and Syria Palaestina; and henceforth a Syro-Phoenician meant a native of this sub-pre-

vince (Lucian, *De Conc. Deor.* §4), which included Phoenicia Proper, Damascus, and Palmyrenê.

As the geographic sense had not come into use in St. Mark's time, and as the ethnic one would be a refinement unlikely in a sacred writer, it is perhaps most probable that he really wrote *Σύρα Φοινισσα*, "a Phoenician Syrian," which is found in some copies.

St. Matthew uses "Canaanitish" (Χαναναία) in the place of St. Mark's "Syro-Phoenician," or "Phoenician Syrian," on the same ground that the LXX. translate Canaan by Phoenicia (Φοινίκη). The terms Canaan and Phoenicia had succeeded one another as geographical names in the same country; and Phoenicians were called "Canaanites," just as Englishmen are called "Britons." No conclusion as to the identity of the Canaanites with the Phoenicians can properly be drawn from the indifferent use of the two terms. (See Rawlinson's *Herodotus*, vol. iv. pp. 243-245.) [G. R.]

T

TA'ANACH (תַּאנַח: *Tanach*, *Baldach*, *Sanadach*, *Baldô*; Alex. *Θαναχ*, *Tanax*, *εθανασαδ*, *Θερναχ*, *Θαναχ*: *Thanac*, *Thanach*). An ancient Canaanitish city, whose king is enumerated amongst the thirty-one conquered by Joshua (Josh. xii. 21). It came into the hands of the half tribe of Manasseh (Josh. xvii. 11, xxi. 25; 1 Chr. vii. 29), though it would appear to have lain outside their boundary and within the allotment of either Issachar or Asher (Josh. xvii. 11), probably the former. It was bestowed on the Kohathite Levites (Josh. xxi. 25). Taanach was one of the places in which, either from some strength of position, or from the ground near it being favourable for their mode of fighting, the Aborigines succeeded in making a stand (Josh. xvii. 12; Judg. i. 27); and in the great struggle of the Canaanites under Sisera against Deborah and Barak, it appears to have formed the head-quarters of their army (Judg. v. 19). After this defeat the Canaanites of Taanach were probably made, like the rest, to pay a tribute (Josh. xvii. 13; Judg. i. 28), but in the town they appear to have remained to the last. Taanach is almost always named in company with Megiddo, and they were evidently the chief towns of that fine rich district which forms the western portion of the great plain of Esdraelon (1 K. iv. 12).

There it is still to be found. The identification of *Ta'annak* with Taanach, may be taken as one of the surest in the whole Sacred Topography. It was known to Eusebius, who mentions it twice in the *Onomasticon* (*Θαναχ* and *Θαναή*) as a "very large village," standing between 3 and 4 Roman miles from *Legio*—the ancient Megiddo. It was known to hap-Parchi, the Jewish mediaeval traveller, and it still stands about 4 miles south-east of *Lejjân*, retaining its old name with hardly the change of a letter. The ancient town was planted on a large mound at the termination of a long spur or promontory, which runs out northward from the hills of Manasseh into the plain, and leaves a recess or bay, subordinate to the main plain on its north side and between it and *Lejjân*. The modern hamlet clings to the S.W. base of the mound (Rob. ii. 316, 329; Van de Velde, i. 258; Stanley, *Sinai and Palestine*, 221, 222).

In one passage the name is slightly changed both in original and A. V. [TANACH.] [G.]

TA'ANATH-SHI'LOH (תַּאנַת שִׁילֹה: *Taanath-Selo*). A place named once only (Josh. xvi. 6) as one of the landmarks of the boundary of Ephraim, but of which boundary it seems impossible to ascertain. All we can tell is, that at this part the enumeration is from west to east, Janohah being east of Taanath Shiloh. With this agrees the statement of Eusebius (*Onomasticon*), who places Janohah 12, and Thenath, or as it was then called Thana, 10 Roman miles east of Neapolis. Janohah has been identified with some probability at *Yamâh*, on the road from *Nâblus* to the Jordan Valley. The name *Tâna*, or *Ain Tâna*, seems to exist in that direction. A place of that name was seen by Robinson N.E. of *Mejdel* (*B. R.* iii. 295), and it is mentioned by Barth (Ritter, *Jordan*, 471), but without any indication of its position. Much stress cannot however be laid on Eusebius's identification.

In a list of places contained in the Talmud (*Jerusalem Megillah* i.), Taanath Shiloh is said to be identical with SHILOH. This has been recently revived by Kurtz (*Gesch. des Alt. Bundes*, ii. 70). His view is that Taanath was the ancient Canaanite name of the place, and Shiloh the Hebrew name, conferred on it in token of the "rest" which allowed the tabernacle to be established there after the conquest of the country had been completed. This is ingenious, but at present it is a mere conjecture, and it is at variance with the identification of Eusebius, with the position of Janohah, and, as far as it can be inferred, of Michmethah, which is mentioned with Taanath Shiloh in Josh. xvi. 6. [G.]

TAB'AOTH (Ταβαῖθ; Alex. *Tabâth*: *Tubboch*). TABBAOTH (1 Esd. v. 29).

TAB'BAOTH (תַּבְּבוֹת: *Tabâith*; Alex. *Tab-Bâth*: *Tabbaoth*, *Tebbaoth*). The children of Tabbaoth were a family of Nethinim who returned with Zerubbabel (Ezr. ii. 43; Neh. vii. 46). The name occurs in the form TABBAOTH in 1 Esd. v. 29.

TAB'BATH (תַּבְּבַת: *Tabâth*; Alex. *Tabâth*: *Tebbath*). A place mentioned only in Judg. vii. 22, in describing the flight of the Midianite host after Gideon's night attack. The host fled to Beth-shittah, to Zererah, to the brink of Abel-meholah on (77), Tabbath. Beth-shittah may be *Shâttah*, which lies on the open plain between *Jebel Fâkâ* and *Jebel Duhy*, 4 miles east of *Ain Jalûd*, the probable scene of Gideon's onslaught. Abel-meholah was no doubt in the Jordan Valley, though it may not have been so much as 8 miles south of Beth-shean, where Eusebius and Jerome would place it. But no attempt seems to have been made to identify Tabbath, nor does any name resembling it appear in the books or maps, unless it be *Tubukhat-Fahil*, i.e. "Terrace of Fahil." This is a very striking natural bank, 600 feet in height (Rob. iii. 325), with a long, horizontal, and apparently flat top, which is embanked against the western face of the mountains east of the Jordan, and descends with a very steep front to the river. It is such a remarkable object in the whole view of this part of the Jordan Valley that it is difficult to imagine that it did not bear a distinctive name in ancient as well as modern times.

* Ptolemy names Thana and Neapolis as the two chief towns of the district of Samaria (cap. 16, quoted in *Revue* i. 461).

At any rate, there is no doubt that, whether this *Tabutah* represents *Tabbath* or not, the latter was somewhere about this part of the Ghor. [G.]

TABEAL (תַּבְעָל: *Tabēal*). Properly "Tabeel," the *pathach* being due to the pause (Gesen. *Lehrg.* §52, 1 b; *Heb. Gr.* §29, 4 c). The son of Tabeal was apparently an Ephraimite in the army of Pekah the son of Remaliah, or a Syrian in the army of Rezin, when they went up to besiege Jerusalem in the reign of Ahas (Is. vii. 6). The Aramaic form of the name favours the latter supposition [comp. *TABRIMMON*]. The Targum of Jonathan renders the name as an appellative, "and we will make king in the midst of her him who seems good to us" (מֶלֶךְ כִּי יֵשֶׁר יִבְרַח לָנוּ). Rashi by *Gematria* turns the name into מְלִיטָה, *Rimla*, by which apparently he would understand *Remaliah*.

TABEEL (תַּבְעָל: *Tabēal*). An officer of the Persian government in Samaria in the reign of Artaxerxes (Ezr. iv. 7). His name appears to indicate that he was a Syrian, for it is really the same as that of the Syrian vassal of Rezin who is called in our A. V. "Tabeal." Add to this that the letter which he and his companions wrote to the king was in the Syrian or Aramaean language. Gesenius, however (*Jes.* i. 280), thinks that he may have been a Samaritan. He is called *TABELLIUS* in 1 Esd. ii. 16. The name of Tobiel the father of Tobit is probably the same. [W. A. W.]

TABELLIUS (Ταβέλλιος: *Sabellius*). (1 Esd. ii. 16.) [TABELL.]

TABERAH (תַּבְרָה: *taburismos*). The name of a place in the wilderness of Paran, given from the fact of a "burning" among the people by the "fire of the Lord" which there took place (Num. xi. 3, Dent. ix. 22). It has not been identified and is not mentioned among the list of encampments in Num. xxxiii. [H. H.]

TABERING (תַּבְרִינָה: *taburizantes*). The obsolete word thus used in the A. V. of Nah. ii. 7 requires some explanation. The Hebrew word connects itself with תַּבְרָה, "a timbrel," and the image which it brings before us in this passage is that of the women of Nineveh, led away into captivity, mourning with the plaintive tones of doves, and beating on their breasts in anguish, as women bent upon their timbrels (comp. Pa. lxviii. 25 [26], where the same verb is used). The LXX. and Vulg., as above, make no attempt at giving the exact meaning. The Targum of Jonathan gives a word which, like the Hebrew, has the meaning of "tympanizantes." The A. V. in like manner reproduces the original idea of the words. The "tabour" or "tabor," was a musical instrument of the drum-type, which with the pipe formed the band of a country village. We retain a trace at once of the word and of the thing in the "tabourine" or "tambourine" of modern music, in the "tabret" of the A. V. and older English writers. To "tabour," accordingly, is to beat with loud strokes as men bent upon such an instrument. The verb is found in this sense in Beaumont and Fletcher, *The Tamer Tamed* ("I would tabor her"), and answers with a singular felicity to the exact meaning of the Hebrew. [E. H. P.]

TABERNACLE (מִשְׁכָּן, אֹהֶל: *sknēh*: *tabernaculum*). The description of the Tabernacle and its materials will be found under *TEMPLE*.

The writer of that article holds that he cannot deal satisfactorily with the structural order and proportions of the one without discussing also those of the other. Here, therefore, it remains for us to treat—(1) of the word and its synonyms; (2) of the history of the Tabernacle itself; (3) of its relation to the religious life of Israel; (4) of the theories of later times respecting it.

I. *The Word and its Synonyms*.—(1.) The first word thus used (Ex. xxv. 9) is מִשְׁכָּן (*Mishkan*), formed from שָׁכַן = to settle down or dwell, and thus itself = dwelling. It connects itself with the Jewish, though not Scriptural, word *Shechinah*, as describing the dwelling-place of the Divine Glory. It is noticeable, however, that it is not applied in prose to the common dwellings of men, the tents of the Patriarchs in Genesis, or those of Israel in the wilderness. It seems to belong rather to the speech of poetry (Ps. lxxxvii. 2; Cant. i. 8). The latter character of the word may obviously have helped to determine its religious use, and justifies translators who have the choice of synonyms like "tabernacle" and "tent" in a like preference.

(2.) Another word, however, is also used, more connected with the common life of men; אֹהֶל (*ohel*), the "tent" of the Patriarchal age, of Abraham, and of Isaac, and of Jacob (Gen. ix. 21, &c.). For the most part, as needing something to raise it, it is used, when applied to the Sacred Tent, with some distinguishing epithet. In one passage only (1 K. i. 39) does it appear with this meaning by itself. The LXX. not distinguishing between the two words gives σκηνή for both. The original difference appears to have been that אֹהֶל represented the outermost covering, the black goat's hair curtains; מִשְׁכָּן, the inner covering, the curtains which rested on the boards (Gesenius, s. v.). The two words are accordingly sometimes joined, as in Ex. xxxix. 32, xl. 2, 6, 29 (A. V. "the tabernacle of the tent"). Even here, however, the LXX. gives σκηνή only, with the exception of the var. lect. of ἡ σκηνὴ τῆς σκευῆς in Ex. xl. 29.

(3.) בית (*Baith*), *oikos*, *domus*, is applied to the Tabernacle in Ex. xxiii. 19, xxiv. 26; Josh. vi. 24, ix. 23; Judg. xviii. 31, xx. 18, as it had been, apparently, to the tents of the Patriarchs (Gen. xxxiii. 17). So far as it differs from the two preceding words, it expresses more definitely the idea of a fixed settled habitation. It was therefore fitter for the sanctuary of Israel after the people were settled in Canaan, than during their wanderings. For us the chief interest of the word lies in its having descended from a yet older order, the first word ever applied in the O. T. to a local sanctuary, "BETH-EL," "the house of God" (Gen. xxviii. 17, 22), keeping its place, side by side, with other words, tent, tabernacle, palace, temple, synagogue, and at last outliving all of them, rising, in the Christian Ecclesia, to yet higher uses (1 Tim. iii. 15).

(4.) קֹדֶשׁ (*Kôdesh*), מִקְדָּשׁ (*Mikdash*), ἁγίασμα, ἁγιαστήριον, τὸ ἅγιον, τὰ ἅγια, *sanctuarium*, the holy, consecrated place, and therefore applied, according to the graduated scale of holiness of which the Tabernacle bore witness, sometimes to the whole structure (Ex. xxv. 8; Lev. xii. 4), sometimes to the court into which none but the priests might enter (Lev. iv. 6; Num. iii. 38, iv. 12), sometimes to the innermost sanctuary of all, the Holy of Holies

(Lev. iv. 6?). Here also the word had an earlier starting-point and a far-reaching history. EN-MISHPAT, the city of judgment, the seat of some old oracle, had been also KADESH, the sanctuary (Gen. xiv. 7; Ewald, *Gesch. Isr.* ii. 307). The name *El Khuds* clings still to the walls of Jerusalem.

(5.) הֵיכָל (*Hēkāl*), *vaos*, *temphum*, as meaning the stately building, or palace of Jehovah (1 Chr. xxix. 1, 19), is applied more commonly to the Temple (2 K. xxiv. 13, &c.), but was used also (probably at the period when the thought of the Temple had affected the religious nomenclature of the time) of the Tabernacle at Shiloh (1 Sam. i. 9, iii. 3) and Jerusalem (Ps. v. 7). In either case the thought which the word embodies is, that the "tent," the "house," is royal, the dwelling-place of the great king.

(6.) The two words (1) and (2) receive a new meaning in combination (a.) with מוֹעֵד (*mō'ed*), and (b.) with מִקְדָּשׁ (*miqdash*). To understand the full meaning of the distinctive titles thus formed is to possess the key to the significance of the whole Tabernacle. (a.) The primary force of מוֹעֵד is "to meet by appointment," and the phrase מוֹעֵד הָאֵל has therefore the meaning of "a place of or for a fixed meeting." Acting on the belief that the meeting in this case was that of the worshippers, the A. V. has uniformly rendered it by "tabernacle of the congregation" (so Seh. Schmidt, "tentorium conventus," and Luther, "Stiftshütte" in which Stift = Pfarrkirche), while the LXX. and Vulg., confounding it with the other epithet, have rendered both by ἡ σκηνή τοῦ μαρτυρίου, and "tabernaculum testimonii." None of these renderings, however, bring out the real meaning of the word. This is to be found in what may be called the *locus classicus*, as the interpretation of all words connected with the Tabernacle. "This shall be a continual burnt-offering . . . at the door of the tabernacle of meeting" (מִקְדָּשׁ הָאֵל) where I will meet you (מִקְדָּשׁ הָאֵל) to speak there unto thee. And there will I meet (מִקְדָּשׁ הָאֵל) with the children of Israel. And I will sanctify (מִקְדָּשׁ הָאֵל) the tabernacle of meeting . . . and I will dwell (מִקְדָּשׁ הָאֵל) among the children of Israel, and will be their God. And they shall know that I am the Lord their God" (Ex. xxix. 42-46). The same central thought occurs in Ex. xxv. 22, "There I will meet with thee" (comp. also Ex. xxx. 6, 36; Num. xvii. 4). It is clear, therefore, that "congregation" is inadequate. Not the gathering of the worshippers only, but the meeting of God with His people, to commune with them, to make himself known to them, was what the name embodied. Ewald has accordingly suggested *Offenbarungszelt* = Tent of Revelation, as the best equivalent (*Alterthümer*, p. 130). This made the place a sanctuary. Thus it was that the tent was the dwelling, the house of God (Bähr, *Symbolik*, i. 81).

(7.) The other compound phrase, (b.) מִקְדָּשׁ הָאֵל, as connected with מוֹעֵד (= to bear witness), is rightly rendered by ἡ σκηνή τοῦ μαρτυρίου,

tabernaculum testimonii, die Wohnung des Zeugnisses, "the tent of the testimony" (Num. ix. 15) "the tabernacle of witness" (Num. xvii. 7, xviii. 2). In this case the tent derives its name from that which is the centre of its holiness. The two tables of stone within the ark are emphatically the testimony (Ex. xxv. 16, 21, xxxi. 18). They were to all Israel the abiding witness of the nature and will of God. The tent, by virtue of its relation to them, became the witness of its own significance as the meeting-place of God and man. The probable connexion of the two distinct names, in sense as well as in sound (Bähr, *Symbol.* i. 83; Ewald, *Alt.* p. 230), gave, of course, a force to each which no translation can represent.

II. *History.*—(1.) The outward history of the Tabernacle begins with Ex. xxv. It comes after the first great group of Laws (xix.-xxiii.), after the covenant with the people, after the vision of the Divine Glory (xxiv.). For forty days and nights Moses is in the mount. Before him there lay a problem, as measured by human judgment, of gigantic difficulty. In what fit symbols was he to embody the great truths, without which the nation would sink into brutality? In what way could those symbols be guarded against the evil which he had seen in Egypt, of idolatry the most degrading? He was not left to solve the problem for himself. There rose before him, not without points of contact with previous associations, yet in no degree formed out of them, the "pattern" of the Tabernacle. The lower analogies of the painter and the architect seeing, with their inward eye, their completed work, before the work itself begins, may help us to understand how it was that the vision on the mount included all details of form, measurement, materials, the order of the ritual, the apparel of the priests.^a He is directed in his choice of the two chief artists, Bezaleel of the tribe of Judah,^b Aholiat of the tribe of Dan (xxxi.). The sin of the golden calf apparently postpones the execution. For a moment it seems as if the people were to be left without the Divine Presence itself, without any recognised symbol of it (Ex. xxxiii. 3). As in a transition period, the whole future depending on the penitence of the people, on the intercession of their leader, a tent is pitched, probably that of Moses himself, outside the camp, to be provisionally the Tabernacle of Meeting. There the mind of the Lawgiver enters into ever-closer fellowship with the mind of God (Ex. xxxiii. 11), learns to think of Him as "merciful and gracious" (Ex. xxxiv. 6), in the strength of that thought is led back to the fulfilment of the plan which had seemed likely to end, as it began, in vision. Of this provisional Tabernacle it has to be noticed, that there was as yet no ritual and no priesthood. The people went out to it as to an oracle (Ex. xxxiii. 7). Joshua, though of the tribe of Ephraim, had free access to it (Ex. xxxiii. 11).

(2.) Another outline Law was however given, another period of solitude, like the first, followed. The work could now be resumed. The people offered the necessary materials in excess of what was wanted (Ex. xxxvi. 5, 6). Other workmen (Ex. xxxvi. 2) and work-women (Ex. xxxv. 25)

^a An interesting parallel is found in the preparations for the Temple. There also the extremest minutiae were among the things which the Lord made (David) "to understand in writing by His hand upon him," i. e. by an inward illumination which seemed to exclude the slow

process of deliberation and decision (1 Chr. xxviii. 19).

^b The prominence of artistic power in the genealogies of the tribe of Judah is worth noticing (1 Chr. iv. 4, 10, 21, 23). Dan, also, in the person of Hiram, is afterwards conspicuous (2 Chr. ii. 14; comp. 1 K. vii. 13, 14).

placed themselves under the direction of Bezaleel and Aholiab. The parts were completed separately, and then, on the first day of the second year from the Exodus, the Tabernacle itself was erected and the ritual appointed for it begun (Ex. xl. 2).

(3.) The position of the new Tent was itself significant. It stood, not, like the provisional Tabernacle, at a distance from the camp, but in its very centre. The multitude of Israel, hitherto scattered with no fixed order, were now, within a month of its erection (Num. ii. 2), grouped round it, as around the dwelling of the unseen Captain of the Host, in a fixed order, according to their tribal rank. The Priests on the east, the other three families of the Levites on the other sides, were closest in attendance, the "body-guard" of the Great King. [LEVITES.] In the wider square, Judah, Zebulun, Issachar, were on the east; Ephraim, Manasseh, Benjamin, on the west; the less conspicuous tribes, Dan, Asher, Naphtali, on the north; Reuben, Simeon, Gad, on the south side. When the army put itself in order of march, the position of the Tabernacle, carried by the Levites, was still central, the tribes of the east and south in front, those of the north and west in the rear (Num. ii.). Upon it there rested the symbolic cloud, dark by day, and fiery red by night (Ex. xl. 38). When the cloud removed, the host knew that it was the signal for them to go forward (Ex. xl. 36, 37; Num. ix. 17). As long as it remained, whether for a day, or month, or year, they continued where they were (Num. ix. 15-23). Each march, it must be remembered, involved the breaking-up of the whole structure, all the parts being carried on waggons by the three Levite families of Kohath, Gershon, and Merari, while the "sons of Aaron" prepared for the removal by covering everything in the Holy of Holies with a purple cloth (Num. iv. 6-15).

(4.) In all special facts connected with the Tabernacle, the original thought reappears. It is the place where man meets with God. There the Spirit "comes upon" the seventy Elders, and they prophesy (Num. xi. 24, 25). Thither Aaron and Miriam are called out, when they rebel against the servant of the Lord (Num. xii. 4). There the "glory of the Lord" appears after the unfaithfulness of the twelve spies (Num. xiv. 10), and the rebellion of Korah and his company (Num. xvi. 19, 42), and the sin of Meribah (Num. xx. 6). Thither, when there is no sin to punish, but a difficulty to be met, do the daughters of Zelophehad come to bring their cause "before the Lord" (Num. xxvii. 2). There, when the death of Moses draws near, is the solemn "charge" given to his successor (Deut. xxxi. 14).

(5.) As long as Canaan remained unconquered, and the people were still therefore an army, the Tabernacle was probably moved from place to place, wherever the host of Israel was, for the time, encamped, at Gilgal (Josh. iv. 19), in the valley between Ebal and Gerizim (Josh. viii. 30-35); again, at the head-quarters of Gilgal (Josh. ix. 6, x. 15, 43); and, finally, as at "the place which the Lord had chosen," at Shiloh (Josh. ix. 27, xviii. 1). The reasons of the choice are not given. Partly, perhaps, its central position, partly its belonging to

* The occurrence of the same distinctive word in Ex. xxxviii. 8, implies a recognised dedication of some kind, by which women bound themselves to the service of the Tabernacle, probably as singers and dancers. What we find under Eli was the corruption of the original practice

the powerful tribe of Ephraim, the tribe of the great captain of the host, may have determined the preference. There it continued during the whole period of the Judges, the gathering-point for "the heads of the fathers" of the tribes (Josh. xix. 51), for councils of peace or war (Josh. xxii. 12; Judg. xxi. 12), for annual solemn dances, in which the women of Shiloh were conspicuous (Judg. xxi. 21). There, too, as the religion of Israel sank towards the level of an orgiastic Heathenism, troops of women assembled,* shameless as those of Midian, worshippers of Jehovah, and, like the *ἱερόδουλο* of heathen temples, concubines of His priests (1 Sam. ii. 22). It was far, however, from being what it was intended to be, the one national sanctuary, the witness against a localized and divided worship. The old religion of the high places kept its ground. Altars were erected, at first under protest, and with reserves, as being not for sacrifice (Josh. xxii. 26), afterwards freely and without scruple (Judg. vi. 24, xiii. 19). Of the names by which the one special sanctuary was known at this period, those of the "House," or the "Temple," of Jehovah (1 Sam. i. 9, 24, iii. 3, 15) are most prominent.

(6.) A state of things which was rapidly assimilating the worship of Jehovah to that of Ashtaroth, or Mylitta, needed to be broken up. The Ark of God was taken and the sanctuary lost its glory; and the Tabernacle, though it did not perish, never again recovered it[†] (1 Sam. iv. 22). Samuel, at once the Luther and the Alfred of Israel, who had grown up within its precincts, treats it as an abandoned shrine (so Ps. lxxviii. 60), and sacrifices elsewhere, at Milpeh (1 Sam. vii. 9), at Ramah (ix. 12, x. 3), at Gilgal (x. 8, xi. 15). It probably became once again a moveable sanctuary, less honoured as no longer possessing the symbol of the Divine Presence, yet cherished by the priesthood, and some portions, at least, of its ritual, kept up. For a time it seems, under Saul, to have been settled at Nob (1 Sam. xxi. 1-6), which thus became what it had not been before—a priestly city. The massacre of the priests and the flight of Abiathar must, however, have robbed it yet further of its glory. It had before lost the Ark. It now lost the presence of the High-Priest, and with it the oracular ephod, the URIM and the THUMMIM (1 Sam. xxii. 20, xxiii. 6). What change of fortune then followed we do not know. The fact that all Israel was encamped, in the last days of Saul at Gilboa, and that there Saul, though without success, inquired of the Lord by Urim (1 Sam. xxviii. 4-6), makes it probable that the Tabernacle, as of old, was in the encampment, and that Abiathar had returned to it. In some way or other, it found its way to Gibeon (1 Chr. xvi. 39). The anomalous separation of the two things which, in the original order, had been joined, brought about yet greater anomalies; and, while the ark remained at Kirjath-jearim, the Tabernacle at Gibeon connected itself with the worship of the high-places (1 K. iii. 4). The capture of Jerusalem and the erection there of a new Tabernacle, with the ark, of which the old had been deprived (2 Sam. vi. 17; 1 Chr. xv. 1), left it little more than a traditional, historical sanctity. It retained only the old altar of burnt-offerings (1 Chr. xxi. 29). Such as it was,

(comp. Ewald, *Altth. 297*). In the dances of Judges, xxi. 21, we have a stage of transition.

[†] Ewald (*Genethia*, ii. 540) infers that Shiloh itself was conquered and laid waste.

however, neither king nor people could bring themselves to sweep it away. The double service went on; Zadok, as high-priest, officiated at Gibeon (1 Chr. xvi. 39); the more recent, more prophetic service of psalms and hymns and music, under Asaph, gathered round the Tabernacle at Jerusalem (1 Chr. xvi. 4, 37). The divided worship continued all the days of David. The sanctity of both places was recognised by SOLOMON on his accession (1 K. iii. 15; 2 Chron. i. 3). But it was time that the anomaly should cease. As long as it was simply Tent against Tent, it was difficult to decide between them. The purpose of David fulfilled by Solomon, was that the claims of both should merge in the higher glory of the Temple. Some, Abiathar probably among them, clung to the old order, in this as in other things [SOLOMON; URM AND THUMMIM], but the final day at last came, and the Tabernacle of Meeting was either taken down,* or left to perish and be forgotten. So a page in the religious history of Israel was closed. So the disaster of Shiloh led to its natural consummation.

III. Relation to the religious life of Israel.—

(1.) Whatever connexion may be traced between other parts of the ritual of Israel and that of the nations with which Israel had been brought into contact, the thought of the Tabernacle meets us as entirely new.[†] The "house of God" [BETHEL] of the Patriarchs had been the large "pillar of stone" (Gen. xxviii. 18, 19), bearing record of some high spiritual experience, and tending to lead men upward to It (Bähr, *Symbol.* i. 93), or the grove which, with its dim, doubtful light, attuned the souls of men to a divine awe (Gen. xxi. 33). The temples of Egypt were stately and colossal, hewn in the solid rock, or built of huge blocks of granite, as unlike as possible to the sacred Tent of Israel. The command was one in which we can trace a special fitness. The stately temples belonged to the house of bondage which they were leaving. The sacred places of their fathers were in the land towards which they were journeying. In the mean while, they were to be wanderers in the wilderness. To have set up a Bethel after the old pattern would have been to make that a resting-place, the object then or afterwards of devout pilgrimage; and the multiplication of such places at the different stages of their march would have led inevitably to polytheism. It would have failed utterly to lead them to the thought which they needed most—of a Divine Presence never absent from them, protecting, ruling, judging. A sacred tent, a moving Bethel, was the fit sanctuary for a people still nomadic.[‡] It was capable of being united afterwards, as it actually came to be, with "the grove" of the older *cultus* (Josh. xxiv. 26).

(2.) The structure of the Tabernacle was obviously determined by a complex and profound symbolism; but its meaning remains one of the things at which we can but dimly guess. No interpretation is given in the Law itself. The explanations of Jewish writers long afterwards are manifestly

wide of the mark. That which meets us in this Epistle to the Hebrews, the application of the *types* of the Tabernacle to the mysteries of Redemption, was latent till those mysteries were made known. And, yet, we cannot but believe that, as each portion of the wonderful order rose before the inward eye of the lawgiver, it must have embodied distinctly manifold truths which he apprehended himself, and sought to communicate to others. It entered, indeed, into the order of a Divine education for Moses and for Israel; and an education by means of symbols, no less than by means of words, presupposes an existing language. So far from shrinking, therefore, as men have timidly and unwisely shrunk (Witsius, *Aegyptiaca*, in Ugolini, *Thes.* i.) from naking what thoughts the Egyptian education of Moses would lead him to connect with the symbols he was now taught to use, we may see in it a legitimate method of inquiry—almost the only method possible. Where that fails, the gap may be filled up (as in Bähr, *Symbol. possim.*) from the analogies of other nations, indicating, where they agree; a wide-spread primeval symbolism. So far from labouring to prove, at the price of ignoring or distorting facts, that everything was till then unknown, we shall as little expect to find it so, as to see in Hebrew a new and heaven-born language, spoken for the first time on Sinai, written for the first time on the Two Tables of the Covenant.

(3.) The thought of a graduated sanctity, like that of the outer court, the Holy Place, the Holy of Holies, had its counterpart, often the same number of stages, in the structure of Egyptian temples (Bähr, i. 216). The interior Adytum (to proceed from the innermost recess outward) was small in proportion to the rest of the building, and commonly, as in the Tabernacle (Joseph. *Ant.* ii. 6, §3), was at the western end (Spencer, iii. 2), and was unlighted from without.

In the Adytum, often at least, was the sacred *Ark*, the culminating point of holiness, containing the highest and most mysterious symbols, winged figures, generally like those of the cherubim (Wilkinson, *Anc. Egypt.* v. 275; Kenrick, *Egypt*, i. 480), the emblems of stability and life. Here were outward points of resemblance. Of all elements of Egyptian worship this was one which could be transferred with least hazard, with most gain. No one could think that the Ark itself was the likeness of the God he worshipped. When we ask what gave the Ark its holiness, we are led on at once to the infinite difference, the great gulf between the two systems. That of Egypt was predominantly *cosmical*, starting from the productive powers of nature. The symbols of those powers, though not originally involving what we know as impurity, tended to it fatally and rapidly (Spencer, iii. 1; Warburton, *Divine Legation*, II. 4 note). That of Israel was predominantly *ethical*. The nation was taught to think of God, not chiefly as revealed in nature, but as manifesting Himself in and to the spirits of men. In the Ark of the Covenant, as the highest revelation then

* The language of 2 Chr. v. 8, leaves it doubtful whether the Tabernacle there referred to was that at Jerusalem or Gibeon. (But see Joseph. *Ant.* viii. 4, §1.)

† Spencer (*De leg. Hebraeor.* iii. 3) labours hard, but not successfully, to prove that the tabernacles of Melch of Amos v. 26, were the prototypes of the Tent of Meeting. It has to be remembered, however, (1) that the word used to Amos (*mercā*) is never used of the Tabernacle, and means something very different; and (2) that the

Moloch-worship represented a defection of the people subsequent to the erection of the Tabernacle. On these grounds then, and not from any abstract repugnance to the idea of such a transfer, I abide by the statement in the text.

‡ Analogies of like wants met in a like way, with no ascertainable historical connexion, are to be found among the Taelians and other tribes of northern Africa (SIL Ital. iii. 289), and in the Sacred Tent of the Carthaginian encampments (Diod. Sic. ix. 65).

possible of the Divine Nature, were the two tables of stone, on which were graven, by the teaching of the Divine Spirit, and therefore by "the finger of God,"¹ the great unchanging laws of human duty which had been proclaimed on Sinai. Here the lesson taught was plain enough. The highest knowledge was as the simplest, the esoteric as the exoteric. In the depths of the Holy of Holies, and for the high-priest as for all Israel, there was the revelation of a righteous Will requiring righteousness in man (Saalehitz, *Archäol.* c. 77). And over the Ark was the *Côphereth* (MERCY-SEAT), so called with a twofold reference to the root-meaning of the word. It covered the Ark. It was the witness of a mercy covering sins. As the "footstool" of God, the "throne" of the Divine Glory, it declared that over the Law which seemed so rigid and unbending there rested the compassion of ONE forgiving "iniquity and transgression."² And over the Mercy-seat were the *CHERUBIM*, reproducing in part at least, the symbolism of the great Hamitic races, forms familiar to Moses and to Israel, needing no description for them, interpreted for us by the fuller vision of the later prophets (Ezek. i. 5-13, x. 8-15, xli. 19), or by the winged forms of the imagery of Egypt. Representing as they did the manifold powers of nature, created life in its highest form (Bähr, i. 341) their "over-shadowing wings," "meeting" as in token of perfect harmony, declared that nature as well as man found its highest glory in subjection to a Divine Law, that men might take refuge in that Order, as under "the shadow of the wings" of God (Stanley, *Jewish Church*, p. 98). Placed where those and other like figures were, in the temples of Egypt, they might be hindrances and not helps, might sensualize instead of purifying the worship of the people. But it was part of the wisdom which we may reverently trace to the order of the Tabernacle, that while Egyptian symbols are retained, as in the Ark, the Cherubim, the *URIM* and the *THUMMIM*, their place is changed. They remind the high-priest, the representative of the whole nation, of the truths on which the order rests. The people cannot bow down and worship that which they never see.

The material not less than the forms, in the Holy of Holies was significant. The acacia or shittim-wood, least liable, of woods then accessible, to decay, might well represent the imperishableness of Divine Truth, of the Laws of Duty (Bähr, i. 288). Ark,

¹ The equivalence of the two phrases, "by the Spirit of God," and "by the finger of God," is seen by comparing Matt. xli. 28, and Luke xi. 20. Comp. also the language of Clement of Alexandria (*Strom.* vi. §133) and the use of "the hand of the Lord" in 1 K. xviii. 46; 2 K. xli. 15; Ezek. i. 3, iii. 14; 1 Chr. xxviii. 19.

² Ewald, giving to *ḥḥḥ*, the root of *Côphereth*, the meaning of "to scrape," "erase," derives from that meaning the idea implied in the *LXX*, *ἀσκήσιον*, and denies that the word ever signified *tribuna* (*Altorth.* p. 128, 129).

³ A full discussion of the subject is obviously impossible here, but it may be useful to exhibit briefly the chief thoughts which have been connected with the numbers that are most prominent in the language of symbolism. Arbitrary as some of them may seem, a sufficient induction to establish each will be found in Bähr's elaborate dissertation, i. 128-255, and other works. Comp. Wilkinson, *Anc. Eg.* iv. 190-199; Leyrer in *Berzog's Encyclop.* "Stiftshütte."

One—The Godhead, Eternity, Life, Creative Word, the Son, Man

mercy-seat, cherubim, the very walls, were all overlaid with gold, the noblest of all metals, the symbol of light and purity, sun-light itself as it were, fixed and embodied, the token of the incorruptible, of the glory of a great king (Bähr, i. 282). It was not without meaning that all this lavish expenditure of what was most costly was placed where none might gaze on it. The gold thus offered taught man, that the noblest acts of beneficence and sacrifice are not those which are done that they may be seen of men, but those which are known only to Him who "seeth in secret" (Matt. vi. 4). Dimensions also had their meaning. Difficult as it may be to feel sure that we have the key to the enigma, there can be but little doubt that the older religious systems of the world did attach a mysterious significance to each separate number; that the training of Moses, as afterwards the far less complete initiation of Pythagoras in the symbolism of Egypt, must have made that transparently clear to him, which to us is almost impenetrably dark.³ To those who think over the words of two great teachers, one heathen (Plutarch, *De Is. et Os.* p. 411), and one Christian (Clem. Al. *Strom.* vi. p. 84-87), who had at least studied as far as they could the mysteries of the religion of Egypt, and had inherited part of the old system, the precision of the numbers in the plan of the Tabernacle will no longer seem unaccountable. If in a cosmical system, a right-angled triangle with the sides three, four, five, represented the triad of Osiris, Isis, Orus, creative force, receptive matter, the universe of creation (Plutarch, *l. c.*), the perfect cube of the Holy of Holies, the constant recurrence of the numbers 4 and 10, may well be accepted as symbolizing order, stability, perfection (Bähr, i. 225).⁴

(4.) Into the inner sanctuary neither people nor the priests as a body ever entered. Strange as it may seem, that in which everything represented light and life was left in utter darkness, in profound solitude. Once only in the year, on the DAY OF ATONEMENT, might the high-priest enter. The strange contrast has, however, its parallel in the spiritual life. Death and life, light and darkness, are wonderfully united. Only through death can we truly live. Only by passing into the "thick darkness" where God is (Ex. xx. 21; 1 K. viii. 12), can we enter at all into the "light inaccessible," in which He dwells everlastingly. The solemn annual entrance, like the withdrawal of symbolic forms from

Two—Matter, Time, Death, Receptive Capacity, the Moon, Woman.

THREE (as a number, or in the triangle)—The Universe in connexion with God, the Absolute in itself, the Unconditioned, God.

FOUR (the number, or in the square or cube)—Conditioned Existence, the World as created, Divine Order, Revelation.

SEVEN (as = 3 + 4)—The Union of the World and God, Rest (as in the Sabbath), Peace, Blessing, Purification.

TEN (as = 1 + 2 + 3 + 4)—Completeness, moral and physical, Perfection.

FIFTEEN—Perfection half attained, Incompleteness.

TWELVE—The Signs of the Zodiac, the Cycle of the Seasons; to Israel the ideal number of the people, of the Covenant of God with them.

⁴ The symbol reappears in the most startling form in the closing visions of the Apocalypse. There the heavenly Jerusalem is described, in words which absolutely exclude the literalism which has sometimes been blindly applied to it, as a city four-square, 12,000 furlongs in length and breadth and height (Rev. xxi. 16).

the gaze of the people, was itself part of a wise and Divine order. Intercourse with Egypt had shown how easily the symbols of Truth might become common and familiar things, yet without symbols, the truths themselves might be forgotten. Both dangers were met. To enter once, and once only in the year, into the awful darkness, to stand before the Law of Duty, before the presence of the God who gave it, not in the stately robes that became the representative of God to man, but as representing man in his humiliation, in the garb of the lower priests, bare-footed and in the linen ephod, to confess his own sins and the sins of the people, this was what connected the Atonement-day (*Cippur*) with the Mercy-seat (*Côphereth*). And to come there with blood, the symbol of life, touching with that blood the mercy-seat, with incense, the symbol of adoration (Lev. xvi. 12-14), what did that express but the truth, (1.) that man must draw near to the righteous God with no lower offering than the pure worship of the heart, with the living sacrifice of body, soul, and spirit; (2.) that could such a perfect sacrifice be found, it would have a mysterious power working beyond itself, in proportion to its perfection, to cover the multitude of sins?

(5.) From all others, from the high-priest at all other times, the Holy of Holies was shrouded by the double VEIL, bright with many colours and strange forms, even as curtains of golden tissue were to be seen hanging before the Adytum of an Egyptian temple, a strange contrast often to the bestial form behind them (Clem. Al. *Paed.* iii. 4). In one memorable instance, indeed, the veil was the witness of higher and deeper thoughts. On the shrine of Isis at Saïs, there were to be read words which, though pointing to a pantheistic rather than an ethical religion, were yet wonderful in their loftiness, "I am all that has been (*ἦν τὸ γεγεμένον*), and is, and shall be, and my veil no mortal hath withdrawn" (*ἀνεκδύσθην*) (*de Is. et Osir.* p. 394). Like, and yet more, unlike the truth, we feel that no such words could have appeared on the veil of the Tabernacle. In that identification of the world and God, all idolatry was latent, as in the faith of Israel in the I AM, all idolatry was excluded.^a In that despair of any withdrawal of the veil, of any revelation of the Divine Will, there were latent all the arts of an unbelieving priesthood, substituting symbols, pomp, ritual for such a revelation. But what then was the meaning of the veil which met the gaze of the priests as they did service in the sanctuary? Colours in the art of Egypt were not less significant than number, and the four bright colours, probably, after the fashion of that art, in parallel bands, blue symbol of heaven, and purple of kingly glory, and crimson of life and joy, and white of light and purity (Bähr, i. 305-330), formed in their combination no remote similitude of the rainbow, which of old had been a symbol of the Divine covenant with man, the pledge of peace and hope, the sign of the Divine Presence (Ex. i. 28; Ewald, *Alterth.* p. 333). Within the veil, light and truth were seen in their unity. The veil itself represented the infinite variety, the *πολυτρόπος σοφία* of the Divine order in Creation (Eph. iii. 10). And there again were seen copied upon the veil, the mysterious forms of the cherubim; how many, or in what atti-

tude, or of what size, or in what material, we are not told. The words "cunning work" in Ex. xxvi. 35, applied elsewhere to combinations of embroidery and metal (Ex. xxviii. 15, xxxi. 4), justify perhaps the conjecture that here also they were of gold. In the absence of any other evidence it would have been, perhaps, natural to think that they reproduced on a larger scale, the number and the position of those that were over the mercy-seat. The visions of Ezekiel, however, reproducing, as they obviously do, the forms with which his priestly life had made him familiar, indicate not less than four (c. i. and x.), and those not all alike, having severally the faces of a man, a lion, an ox, and an eagle, strange symbolic words, which elsewhere we should have identified with idolatry, but which here were bearing witness against it, emblems of the manifold variety of creation as at once manifesting and concealing God.

(6.) The outer sanctuary was one degree less awful in its holiness than the inner. Silver, the type of Human Purity, took the place of gold, the type of the Divine Glory (Bähr, i. 284). It was to be trodden daily by the priests, as by men who lived in the perpetual consciousness of the nearness of God, of the mystery behind the veil. Barefooted and in garments of white linen, like the priests of Isis [PRIESTS], they accomplished their ministrations. And here, too, there were other emblems of Divine realities. With no opening to admit light from without, it was illumined only by the golden LAMP with its seven lights, one taller than the others, as the Sabbath is more sacred than the other days of the week, never all extinguished together, the perpetual symbol of all derived gifts of wisdom and holiness in man, reaching their mystical perfection when they shine in God's sanctuary to His glory (Ex. xxv. 31, xxvii. 20; Zech. iv. 1-14). The SHEW-BREAD, the "bread of faces," of the Divine Presence, not unlike in outward form to the sacred cakes which the Egyptians placed before the shrines of their gods, served as a token that, though there was no form or likeness of the Godhead, He was yet there, accepting all offerings, recognising in particular that special offering which represented the life of the nation at once in the distinctness of its tribes and in its unity as a people (Ewald, *Alterth.* p. 120). The meaning of the ALTAR OF INCENSE was not less obvious. The cloud of fragrant smoke was the natural, almost the universal, emblem of the heart's adoration (Ps. cxi. 2). The incense sprinkled on the shew-bread and the lamp taught men that all other offerings needed the intermingling of that adoration. Upon that altar no "strange fire" was to be kindled. When fresh fire was needed it was to be taken from the ALTAR OF BURN-OFFERING in the outer court (Lev. ix. 24, x. 1). Very striking, as compared with what is to follow, is the sublimity and the purity of these symbols. It is as though the priestly order, already leading a consecrated life, were capable of understanding a higher language which had to be translated into a lower for those that were still without (Saalschütz, *Archäol.* §77).

(7.) Outside the tent, but still within the consecrated precincts, was the COURT, fenced in by an enclosure, yet open to all the congregation as well as to the Levites, those only excepted who were ceremonially unclean. No Gentile might pass beyond the curtains of the entrance, but every member of the priestly nation might thus "draw near" to the presence of Jehovah. Here therefore stood the

^a The name Jehovah, it has been well said, was "the reading asunder of the veil of Saïs" (Stanley, *Jewish Church*, p. 110.)

ALTAR OF BURNT-OFFERINGS, at which SACRIFICES in all their varieties were offered by penitents or thankful worshippers (Ex. xxvii. 1-8; xxxviii. 1), the brazen **LAVER** at which those worshippers purified themselves before they sacrificed, the priests before they entered into the sanctuary (Ex. xxx. 17-31). Here the graduated scale of holiness ended. What Israel was to the world, fenced in and set apart, that the Court of the Tabernacle was to the surrounding wilderness, just as the distinction between it and the sanctuary answered to that between the sons of Aaron and other Israelites, just as the idea of holiness culminated personally in the high-priest, locally in the Holy of Holies.

IV. *Theories of later times.*—(1.) It is not probable that the elaborate symbolism of such a structure was understood by the rude and sensual multitude that came out of Egypt. In its fulness perhaps no mind but that of the lawgiver himself ever entered into it, and even for him, one-half, and that the highest, of its meaning must have been altogether latent. Yet it was not the less, was perhaps the more fitted, on that account to be an instrument for the education of the people. To the most ignorant and debased it was at least a witness of the nearness of the Divine King. It met the craving of the human heart which prompts to worship, with an order which was neither idolatrous nor impure. It taught men that their fleshly nature was the hindrance to worship; that it rendered them unclean; that only by subduing it, killing it, as they killed the bullock and the goat, could they offer up an acceptable sacrifice; that such a sacrifice was the condition of forgiveness, a higher sacrifice than any they could offer the ground of that forgiveness. The sins of the past were considered as belonging to the fleshly nature which was slain and offered, not to the true inner self of the worshipper. More thoughtful minds were led inevitably to higher truths. They were not slow to see in the Tabernacle the parable of God's presence manifested in Creation. Darkness was as His pavilion (2 Sam. xxii. 12). He has made a Tabernacle for the Sun (Ps. xix. 4). The heavens were spread out like its curtains. The beams of His chambers were in the mighty waters (Ps. civ. 2, 3; Is. xl. 22; Lowth, *De Sac. Poes.* viii.). The majesty of God seen in the storm and tempest was as of one who rides upon a cherub (2 Sam. xxii. 11). If the words, "He that dwelleth between the cherubim," spoke on the one side of a special, localised manifestation of the Divine Presence, they spoke also on the other of that Presence as in the heaven of heavens, in the light of setting suns, in the blackness and the flashes of the thunder-clouds.

(2.) The thought thus uttered, essentially poetical in its nature, had its fit place in the psalms and hymns of Israel. It lost its beauty, it led men on a false track, when it was formalised into a system. At a time when Judaism and Greek philosophy were alike effete, when a feeble physical science which could read nothing but its own thoughts in the symbols of an older and deeper system, was after its own fashion rationalising the mythology of heathenism, there were found Jewish writers willing to apply the same principle of interpretation

to the Tabernacle and its order. In that way, it seemed to them, they would secure the respect even of the men of letters who could not bring themselves to be Proselytes. The result appears in Josephus and in Philo, in part also in Clement of Alexandria and Origen. Thus interpreted, the entire significance of the Two Tables of the Covenant and their place within the Ark disappeared, and the truths which the whole order represented became *cosmical* instead of *ethical*. If the special idiosyncrasy of one writer (Philo, *De Profug.*) led him to see in the Holy of Holies and the Sanctuary that which answered to the Platonic distinction between the visible (*αἰσθητὸν*) and the spiritual (*νοητὸν*), the coarser, less intelligent Josephus goes still more completely into the new system. The Holy of Holies is the visible firmament in which God dwells, the Sanctuary as the earth and sea which men inhabit (*Ant.* iii. 6, §4, 7; 7. §7). The twelve loaves of the shew-bread represented the twelve months of the year, the twelve signs of the Zodiac. The seven lamps were the seven planets. The four colours of the veil were the four elements (*στοιχεῖα*), air, fire, water, earth. Even the wings of the cherubim were, in the eyes of some, the two hemispheres of the universe, or the constellations of the Greater and the Lesser Bears! (Clem. Alex. *Strom.* v. §35). The table of shew-bread and the altar of incense stood on the north, because north winds were most fruitful, the lamp on the south because the motions of the planets were southward (ib. §34, 35). We need not follow such a system of interpretation further. It was not unnatural that the authority with which it started should secure for it considerable respect. We find it re-appearing in some Christian writers, Chrysostom (*Hom. in Joann. Bapt.*) and Theodoret (*Quaest. in Exod.*)—in some Jewish, Ben Uzziel, Kimchi, Abarbanel (Bähr, i. 103 *et seq.*). It was well for Christian thought that the Church had in the Epistle to the Hebrews and the Apocalypse of St. John that which helped to save it from the pedantic puerilities of this physico-theology.*

(3.) It will have been clear from all that has been said that the Epistle to the Hebrews has not been looked on as designed to limit our inquiry into the meaning of the symbolism of the Tabernacle, and that there is consequently no ground for adopting the system of interpreters who can see in it nothing but an aggregate of types of Christian mysteries. Such a system has, in fact, to choose between two alternatives. Either the meaning was made clear, at least to the devout worshippers of old, and then it is no longer true that the mystery was hid "from ages and generations," or else the mystery was concealed, and then the whole order was voiceless and unmeaning as long as it lasted, then only beginning to be instructive when it was "ready to vanish away." Rightly viewed there is, it is believed, no antagonism between the interpretation which starts from the idea of *symbols* of Great, Eternal Truths, and that which rests on the idea of *types* foreshadowing Christ and His Work, and His Church. If the latter were the highest manifestation of the former (and this is the key note of the Epistle to the Hebrews), then the two systems run parallel with each other. The type

* It is curious to note how in Clement of Alexandria the two systems of interpretation cross each other, leading sometimes to extravagances like those in the text, sometimes to thoughts at once lofty and true. Some of these have been already noticed. Others, not to be

passed over, are, that the seven lamps set forth the varied degrees and forms (*πολυμερὲς καὶ πολυτρόπος*) of God's Revelation, the form and the attitude of the Cherubim, the notion of active ministry and grateful, ceaseless contemplation (*Strom.* v. §34, 35).

may help us to understand the symbol. The symbol may guard us against misinterpreting the type. That the same things were at once symbols and types may take its place among the proofs of an insight and a foresight more than human. Not the veil of nature only but the veil of the flesh, the humanity of Christ, at once conceals and manifests the Eternal's Glory. The reading of that veil enabled all who had eyes to see and hearts to believe, to enter into the Holy of Holies, into the Divine Presence, and to see, not less clearly than the High Priest, as he looked on the ark and the Mercy Seat, that Righteousness and Love, Truth and Mercy were as one. Blood had been shed, a life had been offered which, through the infinite power of its Love, was able to atone, to satisfy, to purify.*

(4.) We cannot here follow out that strain of a higher mood, and it would not be profitable to enter into the speculations which later writers have engrafted on the first great thought. Those who wish to enter upon that line of inquiry may find materials enough in any of the greater commentaries on the Epistle to the Hebrews (Owen's, Stuart's, Bleek's, Tholuck's, Delitzsch's, Alford's), or in special treatises, such as those of Van Till (*De Tabernac.* in Ugolini, *Theol.* viii.); Bede (*Expositio Mystica et Moralis Mosaiici Tabernaculi*); Witsius (*De Tabern. Levit. Mysteriorum*, in *Miscell. Sacr.*). Strange, outlying hallucinations, like those of ancient Rabbis, inferring from "the pattern showed to Moses in the Mount," the permanent existence of a heavenly Tabernacle, like in form, structure, proportions to that which stood in the wilderness (Leyrer, *l. c.*), or of later writers who have seen in it (not in the spiritual but the anatomical sense of the word) a type of humanity, representing the outer bodily framework, the inner vital organs (Friedrich, *Symbol. der Mos. Stifteshütte* in Leyrer, *l. c.*; and Ewald, *Alt.* p. 338), may be dismissed with a single glance:

* Non ragionamur di lor, ma guarda e passa."

(5.) It is not quite as open to us to ignore a speculative hypothesis which, though in itself unsubstantial enough, has been lately revived under circumstances which have given it prominence. It has been maintained by Von Bohlen and Vatke (Bähr, i. 117, 273) that the commands and the descriptions relating to the Tabernacle in the Books of Moses are altogether unhistorical, the result of the effort of some late compiler to ennoble the cradle of his people's history by transferring to a remote antiquity what he found actually existing in the Temple, modified only so far as was necessary to fit it in to the theory of a migration and a wandering. The structure did not belong to the time of the Exodus, if indeed there ever was an Exodus. The Tabernacle thus becomes the mythical aftergrowth of the Temple, not the Temple the historical sequel to the Tabernacle. It has lately been urged as tending to the same conclusion that the circumstances connected with the Tabernacle in the Pentateuch are manifestly unhistorical. The whole congregation of Israel are said to meet in a court which could not have contained more than a few hundred men (Colenso, *Pentateuch and Book of Joshua*, P. I. c. iv. v.). The number of priests was

utterly inadequate for the services of the Tabernacle (*Ibid.* c. xx.). The narrative of the *hosh* money collection, of the gifts of the people, is full of anachronisms (*Ibid.* c. xiv.).

(6.) Some of these objections—those, e. g. as to the number of the first-born, and the disproportionate smallness of the priesthood, have been met by anticipation in remarks under PRIESTS and LEVITES, written some months before the objections, in their present form, appeared. Others bearing upon the general veracity of the Pentateuch history it is impossible to discuss here. It will be sufficient to notice such as bear immediately upon the subject of this article. (1.) It may be said that this theory, like other similar theories as to the history of Christianity, adds to instead of diminishing difficulties and anomalies. It may be possible to make out plausibly that what purports to be the first period of an institution, is, with all its documents, the creation of the second; but the question then comes how we are to explain the existence of the second. The world rests upon an elephant, and the elephant on a tortoise, but the footing of the tortoise is at least somewhat insecure. (2.) Whatever may be the weight of the argument drawn from the alleged presence of the whole congregation at the door of the Tabernacle tells with equal force against the historical existence of the Temple and the narrative of its dedication. There also when the population numbered some seven or eight millions (2 Sam. xiv. 9), "all the men of Israel" (1 K. viii. 2), all "the congregation" (ver. 5., all the children of Israel (ver. 63) were assembled, and the king "blessed" all the congregation (ver. 14, 55). (3.) There are, it is believed, undesigned touches indicating the nomadic life of the wilderness. The wood employed for the Tabernacle is not the sycamore of the valleys nor the cedar of Lebanon, as afterwards in the Temple, but the shittim of the Sinaitic peninsula. [SHITTIM-TREE, SHITTIM.] The abundance of fine linen points to Egypt, the seal or dolphin skins ("badgers" in A. V., but see Gesenius s. v. שִׁטְמָה) to the shores of the Red Sea. [BADGER-SKINS, Appendix A.] The Levites are not to enter on their office till the age of thirty, as needing for their work as bearers a man's full strength (Num. iv. 23, 30). Afterwards when their duties are chiefly those of singers and gatekeepers, they were to begin at twenty (1 Chr. xxiii. 24). Would a later history again have excluded the priestly tribe from all share in the structure of the Tabernacle, and left it in the hands of mythical persons belonging to Judah, and to a tribe then so little prominent as that of Dan? (4.) There remains the strong Egyptian stamp impressed upon well-nigh every part of the Tabernacle and its ritual, and implied in other incidents. [Comp. PRIESTS, LEVITES, URIM AND THUMMIM, BRAZEN SERPENT.] Whatever bearing this may have on our views of the things themselves, it points, beyond all doubt, to a time when the two nations had been brought into close contact, when not jewels of silver and gold only, but treasures of wisdom, art, knowledge were "borrowed" by one people from the other. To what other period in the history before Samuel than that of the Exodus of the Pen-

* The allusions to the Tabernacle in the Apocalypse are, as might be expected, full of interest. As in a vision, which loses sight of all time limits, the Temple of the Tabernacle is seen in heaven (Rev. xv. 5), and yet in

the heavenly Jerusalem there is no Temple seen (xii. 22). And in the heavenly Temple there is no longer any veil; it is open, and the ark of the covenant is clearly seen (xi. 19)

how can we refer that intercourse? When was it likely that a wild tribe, with difficulty keeping its ground against neighbouring nations, would have adopted such a complicated ritual from a system so alien to its own? So it is that the wheel comes full circle. The facts which when urged by Spencer, with or without a hostile purpose, were denounced as daring and dangerous and unsettling, are now seen to be witnesses to the antiquity of the religion of Israel, and so to the substantial truth of the Mosaic history. They are used as such by theologians who in various degrees enter the protest against the more destructive criticism of our own time (Hengstenberg, *Egypt and the Books of Moses*; Stanley, *Jewish Church*, lect. iv.). (5.) We may, for a moment, put an imaginary case. Let us suppose that the records of the O. T. had given us in 1 and 2 Sam. a history like that which men now seek to substitute for what is actually given, had represented Samuel as the first great preacher of the worship of Elohim, Gad, or some later prophet as introducing for the first time the name and worship of Jehovah, and that the O. T. began with this (Colenso, P. II. c. xxi.). Let us then suppose that some old papyrus, freshly discovered, slowly deciphered, gave us the whole or the greater part of what we now find in Exodus and Numbers, that there was thus given an explanation both of the actual condition of the people and of the Egyptian element so largely intermingled with their ritual. Can we not imagine with what jubilant zeal the Books of Samuel would then have been "critically examined," what inconsistencies would have been detected in them, how eager men would have been to prove that Samuel had had credit given him for a work which was not his, that not he, but Moses, was the founder of the polity and creed of Israel, that the Tabernacle on Zion, instead of coming fresh from David's creative mind, had been preceded by the humbler Tabernacle in the Wilderness?

[E. H. P.]

TABERNALES, THE FEAST OF (תּוֹבֹת הַמִּשְׁכָּן: *εορτή σκηναῶν*: *feriae tabernaculorum*: תּוֹבֹת הַמִּשְׁכָּן, Ex. xxiii. 16, "the feast of ingathering": *σκηνοπηγία*, John vii. 2; *Jos. Ant.* viii. 4, §5: *σκηναί*, Philo, *De Sept.* §24: *ἡ σκηνή*, Plut. *Sympos.* iv. 6, 2), the third of the three great festivals of the Hebrews, which lasted from the 15th till the 22nd of Tisri.

1. The following are the principal passages in the Pentateuch which refer to it: Exod. xxiii. 16, where it is spoken of as the Feast of Ingathering, and is brought into connexion with the other festivals under their agricultural designations, the Feast of Unleavened Bread and the Feast of Harvest; Lev. xxiii. 34-36, 39-43, where it is mentioned as commemorating the passage of the Israelites through the desert; Deut. xvi. 13-15, in which there is no notice of the eighth day, and it is treated as a thanksgiving for the harvest; Num. xxix. 12-38, where there is an enumeration of the sacrifices which be-

long to the festival; Deut. xxxi. 10-13, where the injunction is given for the public reading of the Law in the Sabbatical year, at the Feast of Tabernacles. In Neh. viii. there is an account of the observance of the feast by Ezra, from which several additional particulars respecting it may be gathered.

II. The time of the festival fell in the autumn, when the whole of the chief fruits of the ground, the corn, the wine, and the oil, were gathered in (Ex. xxiii. 16; Lev. xxiii. 39; Deut. xvi. 13-15). Hence it is spoken of as occurring "in the end of the year, when thou hast gathered in thy labours out of the field." Its duration was strictly only seven days (Deut. xvi. 13; Ex. xlv. 25). But it was followed by a day of holy convocation, distinguished by sacrifices of its own, which was sometimes spoken of as an eighth day (Lev. xxiii. 36; Neh. viii. 18).

During the seven days the Israelites were commanded to dwell in booths or huts^a formed of the boughs of trees. These huts, when the festival was celebrated in Jerusalem, were constructed in the courts of houses, on the roofs, in the court of the Temple, in the street of the water gate, and in the street of the gate of Ephraim. The boughs were of the olive, palm, pine, myrtle, and other trees with thick foliage (Neh. viii. 15, 16). The command in Lev. xxiii. 40 is said to have been so understood,^b that the Israelites, from the first day of the feast to the seventh, carried in their hands "the fruit (as in the margin of the A. V., not branches, as in the text) of goodly trees, with branches of palm trees, boughs of thick trees, and willows of the brook."

According to Rabbinical tradition, each Israelite used to tie the branches into a bunch, to be carried in his hand, to which the name *lulab*^c was given. The "fruit of goodly trees" is generally taken by the Jews to mean the citron.^d But Josephus (*Ant.* iii. 10, §4) says that it was the fruit of the *persea*, a tree said by Pliny to have been conveyed from Persia to Egypt (*Hist. Nat.* xv. 13), and which some have identified with the peach (*Malus persica*). The boughs of thick trees were understood by Onkelos and others to be myrtles (מִרְיָסִים), but that no such limitation to a single species could have been intended seems to be proved by the boughs of thick trees and myrtle branches being mentioned together (Neh. viii. 15).

The burnt-offerings of the Feast of Tabernacles were by far more numerous than those of any other festival. It is said that the services of the priests were so ordered that each one of the courses was employed during the seven days (*Succah*, v. 6). There were offered on each day two rams, fourteen lambs, and a kid for a sin-offering. But what was most peculiar was the arrangement of the sacrifices of bullocks, in all amounting to seventy. Thirteen were offered on the first day, twelve on the second, eleven on the third, and so on, reducing the number by one each day till the seventh, when seven bullocks only were offered (Num. xxix. 12-38).

that the willow branches were merely for tying the parts of the huts together.

^a The word *סֻכּוֹת* strictly means simply a palm branch. Bozt. *Lex. Talm.* c. 1143; Carpov. *App. Crit.* p. 418; Drusius, *Not. Mag.* in Lev. xxiii.

^b מִתְרֵינָם So Onkelos, Jonathan, and Succah. Bozt. *Lex. Talm.* sub מִתְרֵינָם.

^a The word *סֻכּוֹת* means "a hut," and is to be distinguished from *מִשְׁכָּן*, "a tent of skins or cloth," which is the term applied to the Tabernacle of the Congregation. See Geom. s. s.

^b This is the view of the Rabbinites, which appears to be countenanced by a comparison of v. 40 with v. 42. But the Karaites held that the boughs here mentioned were for no other purpose than to cover the huts, and

The eighth day was a day of holy convocation of peculiar solemnity, and, with the seventh day of the Passover, and the day of Pentecost, was designated *חַג הַמִּצֵּוֹת* [PASSOVER, §2, note¹]. We are told that on the morning of this day the Hebrews left their huts and dismantled them, and took up their abode again in their houses. The special offerings of the day were a bullock, a ram, seven lambs, and a goat for a sin-offering (Num. xxix. 36-38).²

When the Feast of Tabernacles fell on a Sabbatical year, portions of the Law were read each day in public, to men, women, children, and strangers (Deut. xxxi. 10-13). It is said that, in the time of the Kings, the king himself used to read from a wooden pulpit erected in the court of the women, and that the people were summoned to assemble by sound of trumpet.³ Whether the selections were made from the Book of Deuteronomy only, or from the other books of the Law also, is a question. But according to the Mishna (*Sota*, vi. 8, quoted by Reland) the portions read were Deut. i. 1-vi. 4, xi. 13-xiv. 22, xiv. 23-xvi. 22, xviii. 1-14, xxvii. 1-xxviii. 68 (see Fagius and Rosenmüller on Deut. xxxi. 11; Lightfoot, *Temple Service*, c. xvii.). We find Ezra reading the Law during the festival "day by day, from the first day to the last day" (Neh. viii. 18).⁴

III. There are two particulars in the observance of the Feast of Tabernacles which appear to be referred to in the New Testament, but are not noticed in the Old. These were, the ceremony of pouring out some water of the pool of Siloam, and the display of some great lights in the court of the women.

We are told that each Israelite, in holiday attire, having made up his *halab*, before he broke his fast (Fagius in Lev. xxiii.), repaired to the Temple with the *halab* in one hand and the citron in the other, at the time of the ordinary morning sacrifice. The parts of the victim were laid upon the altar. One of the priests fetched some water in a golden ewer from the pool of Siloam, which he brought into the court through the water gate. As he entered the trumpets sounded, and he ascended the slope of the altar. At the top of this were fixed two silver basins with small openings at the bottom. Wine was poured into that on the eastern side, and the water into that on the western side, whence it was conducted by pipes into the Cedron (Maimon. ap. Carpsov. p. 419). The *hallel* was then sung, and when the singers reached the first verse of Ps. cxviii. all the company shook their lulabs. This gesture was repeated at the 25th verse, and again when they sang the 29th verse. The sacrifices which belonged to the day of the festival were then offered, and special passages from the Psalms were chanted.

In the evening (it would seem after the day of holy convocation with which the festival had com-

menored had ended), both men and women assembled in the court of the women, expressly to hold a rejoicing for the drawing of the water of Siloam. On this occasion, a degree of unrestrained hilarity was permitted, such as would have been unbecoming while the ceremony itself was going on, in the presence of the altar and in connexion with the offering of the morning sacrifice (*Succoth*, iv. 9, v. 1, and the passage from the Gem. given by Lightfoot, *Temple Service*, §4).

At the same time there were set up in the court two lofty stands, each supporting four great lamps. These were lighted on each night of the festival. It is said that they cast their light over nearly the whole compass of the city. The wicks were furnished from the cast-off garments of the priests, and the supply of oil was kept up by the sons of the priests. Many in the assembly carried flambeaux. A body of Levites, stationed on the *flexes* steps leading up to the women's court, played instruments of music, and chanted the fifteen psalms which are called in the A. V. Songs of Degrees (Ps. cxx.-cxxxiv.). Singing and dancing were afterwards continued for some time. The same ceremonies in the day, and the same joyous meeting in the evening, were renewed on each of the seven days.

It appears to be generally admitted that the words of our Saviour (John vii. 37, 38)—"If any man thirst, let him come unto me and drink. He that believeth on me, as the Scripture hath said, out of his belly shall flow rivers of living water"—were suggested by the pouring out of the water of Siloam. The Jews seem to have regarded the rite as symbolical of the water miraculously supplied to their fathers from the rock at Meribah. But they also gave to it a more strictly spiritual significance, in accordance with the use to which our Lord appears to turn it. Maimonides (note in *Succoth*) applies to it the very passage which appears to be referred to by our Lord (Is. xlii. 3)—"Therefore with joy shall ye draw water out of the wells of salvation." The two meanings are of course perfectly harmonious, as is shown by the use which St. Paul makes of the historical fact (1 Cor. x. 4)—"they drank of that spiritual rock that followed them: and that rock was Christ."

But it is very doubtful what is meant by "the last day, that great day of the feast." It would seem that either the last day of the feast itself, that is the seventh, or the last day of the religious observances of the series of annual festivals, the eighth, must be intended. But there seems to have been nothing, according to ancient testimony, to distinguish the seventh, as a great day, compared with the other days; it was decidedly inferior, in not being a day of holy convocation, and in its number of sacrifices, to the first day.⁵

¹ The notion of Münster, Godwin, and others, that the eighth day was called "the day of palms," is utterly without foundation. No trace of such a designation is found in any Jewish writer. It probably resulted from a theory that the Feast of Tabernacles must, like the Passover and Pentecost, have a festival to answer to it in the calendar of the Christian Church, and that "the day of palms" passed into Palm Sunday.

² A story is told of Agrippa that when he was once performing this ceremony, as he came to the words "thou may'st not set a stranger over thee which is not thy brother," the thought of his foreign blood occurred to him, and he was affected to tears. But the bystanders encouraged him, crying out: "Fear not, Agrippa! Thou

art our brother." Lightfoot, *T. S. c. xvii.*

³ Dean Alford considers that there may be a reference to the public reading of the Law at the Feast of Tabernacles, John vii. 19—"Did not Moses give you the law?" and yet none of you keepeth the law"—even if that year was not the Sabbatical year, and the observance did not actually take place at the time.

⁴ But Buxtorf, who contends that St. John speaks of the seventh day, says that the modern Jews of his time called that day "the Great Hosanna," and distinguished it by a greater attention than usual to their personal appearance, and by performing certain peculiar rites in the synagogues (*Syn. Jud. xxi.*)

On the other hand, it is nearly certain that the ceremony of pouring out the water did not take place on the eighth day; though the day might have been, by an easy licence, called the great day of the feast (2 Macc. x. 6; Joseph. Ant. iii. 10, §4; Philo, *De Sept.* §24). Dean Ailford reasonably supposes that the eighth day may be meant, and that the reference of our Lord was to an ordinary and well-known observance of the feast, though it was not, at the very time, going on.

We must resort to some such explanation, if we adopt the notion that our Lord's words (John viii. 12)—"I am the light of the world"—refer to the great lamps of the festival. The suggestion must have arisen in the same way, or else from the apparatus for lighting not being removed, although the festival had come to an end. It should, however, be remarked that Bengel, Stier, and some others, think that the words refer to the light of morning which was then dawning. The view that may be taken of the genuineness of John viii. 1-11 will modify the probability of the latter interpretation.

IV. There are many directions given in the Mishna for the dimensions and construction of the huts. They were not to be lower than ten palms, nor higher than twenty cubits. They were to stand by themselves, and not to rest on any external support, nor to be under the shelter of a larger building, or of a tree. They were not to be covered with skins or cloth of any kind, but only with boughs, or, in part, with reed mats or laths. They were to be constructed expressly for the festival, out of new materials. Their forms might vary in accordance with the taste of the owners.¹ According to some authorities, the Israelites dwelt in them during the whole period of the festival (*Sifra*, in Reband), but others said it was sufficient if they ate fourteen meals in them, that is, two on each day (*Succah*, ii. 6). Persons engaged in religious service, the sick, nurses, women, slaves, and minors, were excepted altogether from the obligation of dwelling in them, and some indulgence appears to have been given to all in very tempestuous weather (*Succah*, i. ii.; Münster on Lev. xxiii. 40; Buxt. *Syn. Jud.* c. xii.).

The furniture of the huts was to be, according to most authorities, of the plainest description. There was to be nothing which was not fairly necessary. It would seem, however, that there was no strict rule on this point, and that there was a considerable difference according to the habits or circumstances of the occupant² (Carpzov, p. 415; Buxt. *Syn. Jud.* p. 451).

It is said that the altar was adorned throughout the seven days with sprigs of willows, one of which each Israelite who came into the court brought with him. The great number of the sacrifices has been already noticed. The number of public victims offered on the first day exceeded those of any day in the year (*Menach.* xiii. 5). But besides these, the Chagigahs or private peace-offerings [*PASSEVER*, ii. 3, f.] were more abundant than at any other time; and there is reason to believe that the whole of the sacrifices nearly outnumbered all those offered at the other festivals put together. It belongs to the character of the feast that on each

day the trumpets of the Temple are said to have sounded twenty-one times.

V. Though all the Hebrew annual festivals were seasons of rejoicing, the Feast of Tabernacles was, in this respect, distinguished above them all. The huts and the lulabs must have made a gay and striking spectacle over the city by day, and the lamps, the flambeaux, the music, and the joyous gatherings in the court of the Temple must have given a still more festive character to the night. Hence, it was called by the Rabbis *Shuk*, the festival, *שִׁשְׁתֵּי עָשָׂר*. There is a proverb in *Succah* (v. 1). "He who has never seen the rejoicing at the pouring out of the water of Siloam has never seen rejoicing in his life." Maimonides says that he who failed at the Feast of Tabernacles in contributing to the public joy according to his means, incurred especial guilt (Carpzov, p. 419). The feast is designated by Josephus (Ant. viii. 4, §1) *ἡ ἑορτὴ ἡνιωδότης καὶ μενιόρτη*, and by Philo, *ἡ εὐφροσύνη*. Its thoroughly festive nature is shown in the accounts of its observance in Josephus (Ant. viii. 4, §1, xv. 33), as well as in the accounts of its celebration by Solomon, Esra, and Judas Maccabaeus. From this fact, and its connexion with the ingathering of the fruits of the year, especially the vintage, it is not wonderful that Plutarch should have likened it to the Dionysiac festivals, calling it *Θυρσοφορία* and *ἀπαρτησοφορία* (*Sympos.* iv.). The account which he gives of it is curious, but it is not much to our purpose here. It contains about as much truth as the more famous passage on the Hebrew nation in the fifth book of the History of Tacitus.

VI. The main purposes of the Feast of Tabernacles are plainly set forth (Ex. xxiii. 16, and Lev. xxiii. 43). It was to be at once a thanksgiving for the harvest, and a commemoration of the time when the Israelites dwelt in tents during their passage through the wilderness. In one of its meanings, it stands in connexion with the Passover, as the Feast of Abib, the month of green ears, when the first sheaf of barley was offered before the Lord; and with Pentecost, as the feast of harvest, when the first loaves of the year were waved before the altar: in its other meaning, it is related to the Passover as the great yearly memorial of the deliverance from the destroyer, and from the tyranny of Egypt. The tents of the wilderness furnished a home of freedom compared with the house of bondage out of which they had been brought. Hence the Divine Word assigns as a reason for the command that they should dwell in huts during the festival, "that your generations may know that I made the children of Israel to dwell in booths, when I brought them out of the land of Egypt" (Lev. xxiii. 43).

But naturally connected with this exultation in their regained freedom, was the rejoicing in the more perfect fulfilment of God's promise, in the settlement of His people in the Holy Land. Hence the festival became an expression of thanksgiving for the rest and blessing of a settled abode, and, as connected with it, for the regular annual cultivation of the ground, with the storing up of the corn and the wine and the oil, by which the prosperity of the nation was promoted and the fear

¹ R. Jehuda, however, said that the water was poured out on eight days. *Succah*, (v. 9, with Bartenora's note.

² There are some curious figures of different forms of huts, and of the great lights of the Feast of Tabernacles,

in Surenhusius' *Mishna*, vol. ii.

³ There is a lively description of some of the huts used by the Jews in modern times in *La Vie Juive en Arabie* p. 170, &c.

of famine put into a remoter distance. Thus the agricultural and the historical ideas of the feast became essentially connected with each other.

But besides this, Philo saw in this feast a witness for the original equality of all the members of the chosen race. All, during the week, poor and rich, the inhabitant alike of the palace or the hovel, lived in huts which, in strictness, were to be of the plainest and most ordinary materials and construction.* From this point of view the Israelite would be reminded with still greater edification of the perilous and toilsome march of his forefathers through the desert, when the nation seemed to be more immediately dependent on God for food, shelter and protection, while the completed harvest stored up for the coming winter set before him the benefits he had derived from the possession of the land flowing with milk and honey which had been of old promised to his race.

But the culminating point of this blessing was the establishment of the central spot of the national worship in the Temple at Jerusalem. Hence it was evidently fitting that the Feast of Tabernacles should be kept with an unwonted degree of observance at the dedication of Solomon's Temple (1 K. viii. 2, 65; Joseph. *Ant.* viii. 4, §5), again, after the rebuilding of the Temple by Ezra (Neh. viii. 13-18), and a third time by Judas Maccabaeus when he had driven out the Syrians and restored the Temple to the worship of Jehovah (2 Macc. x. 5-8).

The origin of the Feast of Tabernacles is by some connected with Succoth, the first halting-place of the Israelites on their march out of Egypt; and the huts are taken not to commemorate the tents in the wilderness, but the leafy booths (*succoth*) in which they lodged for the last time before they entered the desert. The feast would thus call to mind the transition from settled to nomadic life (Stanley, *Sinai and Palestine*, Appendix, §89).

Of the monographs on the subject the most important appear to be, Ikenius, *De Libatione Aquae in Fest. Tab.*; Groddek, *De Ceremonia Palmarum in Fest. Tab.* (in Ugolini, vol. xviii.), with the Notes of Dachs on *Succah*, in the Jerusalem Gemara. [S. C.]

TABITHA (Ταβιθά: *Tabitha*), also called Dorcas (Δορκάς) by St. Luke: a female disciple of Joppa, "full of good works," among which that of making clothes for the poor is specifically mentioned. While St. Peter was at the neighbouring town of Lydda, Tabitha died, upon which the disciples at Joppa sent an urgent message to the Apostle,

* Some Jewish authorities and others connect with this the fact that in the month Tlari the weather becomes rather cold, and hence there was a degree of self-denial, at least for the rich, in dwelling in huts (Jos. *Ant.* iii. 10, § 4; Buxt. *Syn. Jud.* p. 447; Mel. *Ant.* iv. 5). They see in this a reason why the commemoration of the journey through the desert should have been fixed at this season of the year. The notion seems, however, not to be in keeping with the general character of the feast, the time of which appears to have been determined entirely on agricultural ground. Hence the appropriateness of the language of the prophet, Zech. xiv. 16, 17; comp. Exod. xiii. 18; Deut. xvi. 13-17. As little worthy of more

begging him to come to them without delay. It is not quite evident from the narrative whether they looked for any exercise of miraculous power on his part, or whether they simply wished for Christian consolation under what they regarded as the common calamity of their Church; but the miracle recently performed on Enes (Acts ix. 34), and the expression in ver. 38 (ἡσυχάζειν ἑαυτὴν ἡμῶν), lead to the former supposition. Upon his arrival Peter found the deceased already prepared for burial, and laid out in an upper chamber, where she was surrounded by the recipients and the tokens of her charity. After the example of our Saviour in the house of Jairus (Matt. ix. 25; Mark v. 40), "Peter put them all forth," prayed for the Divine assistance, and then commanded Tabitha to arise (comp. Mark v. 41; Luke viii. 54). She opened her eyes and sat up, and then, assisted by the Apostle, rose from her couch. This great miracle, as we are further told, produced an extraordinary effect in Joppa, and was the occasion of many conversions there (Acts ix. 36-42).

The name of "Tabitha" (תַּבִּי־תָא) is the Aramaic form answering to the Hebrew תַּבִּיָּצָא, a "female gazelle," the gazelle being regarded in the East, among both Jews and Arabs, as a standard of beauty,—indeed, the word תַּבִּיָּצָא properly means "beauty." St. Luke gives "Dorcas" as the Greek equivalent of the name. Similarly we find Δορκάς as the LXX. rendering of תַּבִּיָּצָא in Deut. xii. 15, 22; 2 Sam. ii. 18; Prov. vi. 5. It has been inferred from the occurrence of the two names, that Tabitha was a Hellenist (see Whitby *in loc.*). This, however, does not follow, even if we suppose that the two names were actually borne by her, as it would seem to have been the practice even of the Hebrew Jews at this period to have a Gentile name in addition to their Jewish name. But it is by no means clear from the language of St. Luke that Tabitha actually bore the name of Dorcas. All he tells us is that the name of Tabitha means "gazelle" (Δορκάς), and, for the benefit of his Gentile readers, he afterwards speaks of her by the Greek equivalent. At the same time it is very possible that she may have been known by both names; and we learn from Josephus (*B. J.* iv. 3, §5) that the name of Dorcas was not unknown in Palestine. Among the Greeks, also, as we gather from Lucret. iv. 1154, it was a term of endearment. Other examples of the use of the name will be found in Wetstein, *in loc.* [W. B. J.]

TABOR and **MOUNT TABOR** (תְּבֹרָה, probably = height, as in Simonis' *Onomasticom*, p. 300: Γαββόρ, ὄρος; Θαββόρ, Θαββόρ, but תְּבֹרָה in Jer. and Hosea, and in Josephus, who has also Ἀραβόριον: *Tabor*), one of the most interesting and remarkable of the single moun-

than a passing notice is the connecting the fall of Jericho with the Festival (Godwyn, p. 73; Reland, iv. 5), and of the seventy bullocks offered during the seven days being a symbol of the seventy Gentile nations (Reland, iv. 5; Bochart, *Phaleg*, l. 15). But of somewhat more interest is the older notion found in Onkelos, that the shade of the branches represented the cloud by day which sheltered the Israelites. He renders the words in Lev. xiii. 43—"that I made the children of Israel to dwell under the shadow of a cloud."

* The full form occurs in Jodg. iv. 6, 12, 14; that of Tabor only in Josh. xix. 24; Judg. viii. 18; Ps. lxxxix. 13; Jer. xvi. 18; Hos. v. 1.

View of Mount Tabor from the S.W., from a sketch taken in 1842 by W. Tipping, Esq., and engraved by his permission.

trains in Palestine. It was a Rabbinic saying (and shows the Jewish estimate of the attractions of the locality) that the Temple ought of right to have been built here, but was required by an express revelation to be erected on Mount Moriah. It rises abruptly from the north-eastern arm of the Plain of Esdraelon, and stands entirely insulated, except on the west, where a narrow ridge connects it with the hills of Nazareth. It presents to the eye, as seen from a distance, a beautiful appearance, being so symmetrical in its proportions, and rounded off like a hemisphere or the segment of a circle, yet varying somewhat as viewed from different directions. The body of the mountain consists of the peculiar limestone of the country. It is studded with a comparatively dense forest of oaks, pistacias, and other trees and bushes, with the exception of an occasional opening on the sides and a small uneven tract on the summit. The coverts afford not present a shelter for wolves, wild boars, lynxes, and various reptiles. Its height is estimated at 1000 feet, but may be somewhat less rather than more. Its ancient name, as already suggested, indicates its elevation, though it does not rise much, if at all, above some of the other summits in the vicinity. It is now called *Jebel et-Tûr*. It lies about six or eight miles almost due east from Nazareth. The writer, in returning to that village towards the close of the day (May 3rd, 1852), found the sun as it went down in the west shining directly in his face, with hardly any deviation to the right hand or the left by a single turn of the path. The ascent is usually made on the west side, near the little village of Debûrieh, probably the ancient Daberath (Josh. xix. 12), though it can be made with entire ease in other places. It requires three-quarters of an hour or an hour to reach the top. The path is circuitous and not times steep, but not so much so as to render it

difficult to ride the entire way. The trees and bushes are generally so thick as to intercept the prospect; but now and then the traveller as he ascends comes to an open spot which reveals to him a magnificent view of the plain. One of the most pleasing aspects of the landscape, as seen from such points, in the season of the early harvest, is that presented in the diversified appearance of the fields. The different plots of ground exhibit various colours, according to the state of cultivation at the time. Some of them are red, where the land has been newly ploughed up, owing to the natural properties of the soil; others yellow or white, where the harvest is beginning to ripen or is already ripe; and others green, being covered with grass or springing grain. As they are contiguous to each other, or intermixed, these parti-coloured plots present, as looked down upon from above, an appearance of gay checkered work which is singularly beautiful. The top of Tabor consists of an irregular platform, embracing a circuit of half-an-hour's walk and commanding wide views of the subjacent plain from end to end. A copious dew falls here during the warm months. Travellers who have spent the night there have found their tents as wet in the morning as if they had been drenched with rain.

It is the universal judgment of those who have stood on the spot that the panorama spread before them as they look from Tabor includes as great a variety of objects of natural beauty and of sacred and historic interest as any one to be seen from any position in the Holy Land. On the east the waters of the Sea of Tiberias, not less than fifteen miles distant, are seen glittering through the clear atmosphere in the deep bed where they repose so quietly. Though but a small portion of the surface of the lake can be distinguished, the entire outline of its basin can be traced on every side. In the same direction the eye follows the

course of the Jordan for many miles; while still further east it rests upon a boundless perspective of hills and valleys, embracing the modern Haurân, and further south the mountains of the ancient Gilead and Bashan. The dark line which skirts the horizon on the west is the Mediterranean; the rich plains of Galilee fill up the intermediate space as far as the foot of Tabor. The ridge of Carmel lifts its head in the north-west, though the portion which lies directly on the sea is not distinctly visible. On the north and north-east we behold the last ranges of Lebanon as they rise into the hills about Safed, overtopped in the rear by the snow-capped Hermon, and still nearer to us the Horns of Hattîn, the reputed Mount of the Beatitudes. On the south are seen, first the summits of Gilboa, which David's touching elegy on Saul and Jonathan has fixed for ever in the memory of mankind, and further onward a confused view of the mountains and valleys which occupy the central part of Palestine. Over the heads of Dûhy and Gilboa the spectator looks into the valley of the Jordan in the neighbourhood of Beisân (itself not within sight), the ancient Beth-shean, on whose walls the Philistines hung up the headless trunk of Saul, after their victory over Israel. Looking across a branch of the plain of Esdraïlon, we behold Endor, the abode of the sorceress whom the king consulted on the night before his fatal battle. Another little village clings to the hill-side of another ridge, on which we gaze with still deeper interest. It is Nain, the village of that name in the New Testament, where the Saviour touched the bier, and restored to life the widow's son. The Saviour must have passed often at the foot of this mount in the course of his journeys in different parts of Galilee. It is not surprising that the Hebrews looked up with so much admiration to this glorious work of the Creator's hand. The same beauty rests upon its brow to-day, the same richness of verdure refreshes the eye, in contrast with the bleaker aspect of so many of the adjacent mountains. The Christian traveller yields spontaneously to the impression of wonder and devotion, and appropriates as his own the language of the psalmist (lxxxix. 11, 12):—

"The heavens are thine, the earth also is thine;

The world and the fulness thereof, thou hast founded them.

The north and the south thou hast created them;
Tabor and Hermon shall rejoice in thy name."

Tabor does not occur in the New Testament, but makes a prominent figure in the Old. The Book of Joshua (ix. 22) mentions it as the boundary between Issachar and Zebulun (see ver. 12). Barak, at the command of Deborah, assembled his forces on Tabor, and, on the arrival of the opportune moment, descended thence with "ten thousand men after him" into the plain, and conquered Sisera on the banks of the Kishon (Judg. iv. 6-15). The brothers of Gideon, each of whom "resembled the children of a king," were murdered here by Zebah and Zalmunna (Judg. viii. 18, 19). Some writers, after Heuler and others, think that Tabor is intended when it is said of Issachar and

Zebulun in Deut. xxxiii. 19, that "they shall call the people unto the mountain; there they shall offer sacrifices of righteousness." Stanley, who holds this view (*Sinai and Palestine*, p. 351), remarks that he was struck with the aspect of the open glades on the summit as specially fitted for the convocation of festive assemblies, and could well believe that in some remote age it may have been a sanctuary of the northern tribes, if not of the whole nation. The prophet in Hos. v. 1, reproaches the priests and royal family with having "been a snare on Mizpah and a net spread upon Tabor." The charge against them probably is that they had set up idols and practised heathenish rites on the high places which were usually selected for such worship. The comparison in Jer. xvi. 18, "As Tabor is among the mountains and Carmel by the sea," imports apparently that these heights were proverbial for their conspicuousness, beauty, and strength.

Dr. Robinson (*Researches*, ii. 353) has thus described the ruins which are to be seen at present on the summit of Tabor. "All around the top are the foundations of a thick wall built of large stones, some of which are bevelled, shewing that the entire wall was perhaps originally of that character. In several parts are the remains of towers and bastions. The chief remains are upon the ledge of rocks on the south of the little basin, and especially towards its eastern end; here are—in indiscriminate confusion—walls, and arches, and foundations, apparently of dwelling-houses, as well as other buildings, some of hewn, and some of large bevelled stones. The walls and traces of a fortress are seen here, and further west along the southern brow, of which one tall pointed arch of a Saracenic gateway is still standing, and bears the name of *Bâb el-Hawa*, 'Gate of the Wind.' Connected with it are loopholes, and others are seen near by. These latter fortifications belong to the era of the Crusades; but the large bevelled stones we refer to a style of architecture not later than the times of the Romans, before which period, indeed, a town and fortress already existed on Mount Tabor. In the days of the crusaders, too, and earlier, there were here churches and monasteries. The summit has many cisterns, now mostly dry." The same writer found the thermometer here, 10 A.M. (June 18th), at 98° F., at sunrise at 64°, and at sunset at 74°. The Latin Christians have now an altar here, at which their priests from Nazareth perform an annual mass. The Greeks also have a chapel, where, on certain festivals, they assemble for the celebration of religious rites.^b

Most travellers who have visited Tabor in recent times have found it utterly solitary so far as regards the presence of human occupants. It happened to the writer on his visit here to meet, unexpectedly, with four men who had taken up their abode in this retreat, so well suited to encourage the devotion of religious devotees. One of them was an aged priest of the Greek Church, a native of Wallachia, named Erinna, according to his own account more than a hundred years old, who had come here to await the final advent of

^b Professor Stanley, in his *Notices of Localities visited with the Prince of Wales*, has mentioned some particulars attached to the modern history of Tabor which appear to have escaped former travellers. "The fortress, of which the ruins crown the summit, had evidently four gateways, like those by which the great Roman camps of our own

country were entered. By one of these gateways my attention was called to an Arabic inscription, said to be the only one on the mountain." It records the building or rebuilding of "this blessed fortress" by the order of the Sultan Abu Bekr on his return from the East. A. D. 607.

(Christ. His story was an interesting one. In his early years "he received an intimation in his sleep that he was to build a church on a mountain shown to him in his dream. He wandered through many countries, and found his mountain at last in Tabor. There he lived, and collected money from pilgrims, which at his death, a few years ago, amounted to a sufficient sum to raise the church, which is approaching completion. He was remarkable for his long beard and for a tame panther, which, like the ancient hermits, he made his constant companion" (Stanley, *Localities*, 191-2). He was a man of huge physical proportions, and stood forth as a good witness for the efficacy of the diet of milk and herbs, on which, according to his own account, he subsisted. The other three men were natives of the same province. Two of them, having been to Jerusalem and the Jordan on a pilgrimage, had taken Tabor in their way on their return homeward, where, finding unexpectedly the priest, whom they happened to know, they resolved to remain with him for a time. One of them was deliberating whether he should not take up his permanent abode there. The fourth person was a young man, a relative of the priest, who seemed to have taken on himself the filial office of caring for his aged friend in the last extremity. In the monastic ages Tabor, in consequence, partly, of a belief that it was the scene of the Saviour's transfiguration, was crowded with hermits. It was one of the shrines from the earliest period which pilgrims to the Holy Land regarded it as a sacred duty to honour with their presence and their prayers. Jerome, in his *Itinerary of Paula*, writes, "Scandebat montem Thabor, in quo transfiguratus est Dominus; aspicebat procul Hermon et Hermonim et campos latissimos Galilaeae (Jesreel), in quibus Sizarra prostratus est. Torrens Cison qui medium planitiem dividebat, et oppidum juxta, Naïm, monstrabantur."

This idea that our Saviour was transfigured on Tabor prevailed extensively among the early Christians, who adopted legends of this nature, and reappears often still in popular religious works. If one might choose a place which he would deem peculiarly fitting for so sublime a transaction, there is none certainly which would so entirely satisfy our feelings in this respect as the lofty, majestic, beautiful Tabor. It is impossible, however, to acquiesce in the correctness of this opinion. It is susceptible of proof from the Old Testament, and from later history, that a fortress or town existed on Tabor from very early times down to B.C. 50 or 53; and, as Josephus says (*Bell. Jud.* iv. 1, §8) that he strengthened the fortifications of a city there, about A.D. 60, it is morally certain that Tabor must have been inhabited during the intervening period, that is, in the days of Christ. Tabor, therefore, could not have been the Mount of Transfiguration; for when it is said that Jesus took his disciples "up into a high mountain apart and was transfigured before them" (Matt. xvii. 1, 2), we must understand that He brought them to the summit of the mountain, where they were alone by themselves (καὶ ἑαυτοῖς). It is impossible to ascertain with certainty what place is entitled to the glory of this marvellous scene. The evangelists record the event in connexion with a journey of the Saviour to Caesarea Philippi, near the sources of the Jordan. It is conjectured that the Transfiguration may have taken place on one of the summits of Mount Hermon in that vicinity. See

Ritter's *Erdkunde*, xv. 394 sq.; and Liebenstein's *Leben Jesu*, p. 309. For the history of the tradition which connects Tabor with the Transfiguration, consult Robinson's *Researches*, ii. 358, 9. [H. B. H.]

TABOR (תָּבוֹר; Θαβὼρ; Alex. Θαβὼρ :

Thabor) is mentioned in the lists of 1 Chr. vi. as a city of the Merarite Levites, in the tribe of Zebulun (ver. 77). The catalogue of Levitical cities in Josh. xxi. does not contain any name answering to this (comp. vers. 34, 35). But the list of the towns of Zebulun (ib. xix.) contains the name of CHISLOTH-TABOR (ver. 12). It is therefore, possible, either that Chisloth-Tabor is abbreviated into Tabor by the chronicler, or that by the time these later lists were compiled, the Merarites had established themselves on the sacred mountain, and that Tabor is Mount Tabor. [G.]

TA'BOR, THE PLAIN OF (תְּלֵךְ תָּבוֹר :

ἡ δὲ περὶ Θαβὼρ: *quercus Thabor*). It has been already pointed out [see PLAIN, p. 890 b], that this is an incorrect translation, and should be THE OAK OF TABOR. It is mentioned in 1 Sam. x. 3, only as one of the points in the homeward journey of Saul after his anointing by Samuel. It was the next stage in the journey after "Rachel's sepulchre at Zelzach." But unfortunately, like so many of the other spots named in this interesting passage, the position of the Oak of Tabor has not yet been fixed.

Ewald seems to consider it certain (*gewiss*) that Tabor and Deborah are merely different modes of pronouncing the same name, and he accordingly identifies the oak of Tabor with the tree under which Deborah, Rachel's nurse, was buried (Gen. xxxv. 8), and that again with the palm, under which Deborah the prophetess delivered her oracles (*Gesen.* iii. 29, i. 390, ii. 489), and this again with the Oak of the old Prophet near Bethel (ib. iii. 444). But this, though most ingenious, can only be received as a conjecture, and the position on which it would land us—"between Hamah and Bethel" (Judg. iv. 5), is too far from Rachel's sepulchre to fall in with the conditions of the narrative of Saul's journey, as long as we hold that to be the traditional sepulchre near Bethlehem. A further opportunity for examining this most puzzling route will occur under ZELZAH; but the writer is not sanguine enough to hope that any light can be thrown on it in the present state of our knowledge. [G.]

TABRET. [TIMBREL.]

TAB'RIMON (תַּבְרִימון: *Tabrepmud*; Alex. *Taberpanmud*: *Tabremon*). Properly, Tebrimmon, i. e.

"good is Rimmon," the Syrian god; compare the analogous forms Tobiel, Tobiah, and the Phœnician Tab-saram (*Gesen. Mon. Phœn.* 458). The father of Benhadad I., king of Syria in the reign of Aas (1 K. xv. 18).

TACHE (תָּחַ: *kipkos*: *circulus, fibula*). The

word thus rendered occurs only in the description of the structure of the tabernacle and its fittings (Ex. xxvi. 6, 11, 33, xxxv. 11, xxxvi. 13, xxxix. 33), and appears to indicate the small hooks by which a curtain is suspended to the rings from which it hangs, or connected vertically, as in the case of the veil of the Holy of Holies, with the loops of another curtain. The history of the English

word is philologically interesting, as presenting points of contact with many different languages. The Gaelic and Breton branches of the Celtic family give *tac*, or *tach*, in the sense of a nail or hook. The latter meaning appears in the *ottaccare*, *staccare*, of Italian, in the *attacher*, *détacher*, of French. On the other hand, in the *tak* of Dutch, and the *Zacke* of German, we have a word of like sound and kindred meaning. Our Anglo-Saxon *taccan* and English *take* (to seize *is* with a hook ?) are probably connected with it. In later use the word has slightly altered both its form and meaning, and the *tack* is no longer a hook, but a small flat-headed nail (comp. *Diez, Roman. Wörterb.* s. v. *Tacco*). [E. H. P.]

TACHMONITE, THE (תַּחְמוֹנִית; *ḥachmoni*; *sapientissimus*). "The Tachmonite (properly, Tachemnite) that sat in the seat," chief among David's captains (2 Sam. xxiii. 8), is in 1 Chr. xi. 11 called "Jashobeam an Hachmonite," or, as the margin gives it, "son of Hachmoni." The Geneva version has in 2 Sam. xxiii. 8, "He that sat in the seat of wisdom, being chiefs of the princes, was Adino of Ezri," regarding "Tachmonite" as an adjective derived from תַּחְמוֹן, *chacham*, "wise," and in this derivation following Kimchi. Kennicott has shown, with much appearance of probability, that the words תַּחְמוֹן יָשׁוּבֵם, *yashob bashebeth*, "he that sat in the seat," are a corruption of Jashobeam, the true name of the hero, and that the mistake arose from an error of the transcriber, who carelessly inserted תַּחְמוֹן from the previous verse where it occurs. He further considers "the Tachmonite" a corruption of the appellation in Chronicles, "son of Hachmoni," which was the family or local name of Jashobeam. "The name here in Samuel was at first יָשׁוּבֵם בַּשֶּׁבֶת, the article ה' at the beginning having been corrupted into a ת; for the word ת in Chronicles is regularly supplied in Samuel by that article" (*Disert.* p. 82). Therefore he concludes "Jashobeam the Hachmonite" to have been the true reading. Josephus (*Ant.* vii. 12, §4) calls him Ἰεσσαμὸς υἱὸς Ἀχμελίου, which favours Kennicott's emendation. [W. A. W.]

TADMOR (תַּדְמוֹר; *Tadmor*; *Palmyra*), called "Tadmor in the wilderness" (2 Chr. viii. 4). There is no reasonable doubt that this city, said to have been built by Solomon, is the same as the one known to the Greeks and Romans and to modern Europe by the name, in some form or other, of Palmyra (Παλμυρά, Παλμυρὰ, *Palmyra*). The identity of the two cities results from the following circumstances: 1st, The same city is specially mentioned by Josephus (*Ant.* viii. 6, §1) as bearing in his time the name of Tadmor among the Syrians, and Palmyra among the Greeks; and in his Latin translation of the Old Testament, Jerome translates Tadmor by Palmyra (2 Chr. viii. 4). 2ndly, The modern Arabic name of Palmyra is substantially the same as the Hebrew word, being Tadmur or Tathmur. 3rdly, The word Tadmor has nearly the same meaning as Palmyra, signifying probably the "City of Palms," from Tamar, a Palm; and this is confirmed by the Arabic word for Palma, a Spanish town on the Gualquivir, which is said to be called Tadmir (see Gesenius in his *Thesaurus*, p. 345). 4thly, The name Tadmor or Tadmōr actually occurs as the name of the city in Aramaic and Greek inscriptions which have been found there. 5thly, In the Chronicles, the city is men-

tioned as having been built by Solomon after his conquest of Hamath Zobah, and it is named in conjunction with "all the store-cities which he built in Hamath." This accords fully with the situation of Palmyra [HAMATH]; and there is no other known city, either in the desert or not in the desert, which can lay claim to the name of Tadmor.

In addition to the passage in the Chronicles, there is a passage in the Book of Kings (1 K. ix. 18) in which, according to the marginal reading (*Keri*), the statement that Solomon built Tadmor, likewise occurs. But on referring to the original text (*Cethib*), the word is found to be not Tadmor, but Tamar. Now, as all the other towns mentioned in this passage with Tamar are in Palestine (Gezer, Beth-horon, Bealath), as it is said of Tamar that it was "in the wilderness in the land," and as, in Ezekiel's prophetic description of the Holy Land, there is a Tamar mentioned as one of the borders of the land on the south (Ez. xlvii. 19), where, as is notorious, there is a desert, it is probable that the author of the Book of Kings did not really mean to refer to Palmyra, and that the marginal reading of "Tadmor" was founded on the passage in the Chronicles (see Thenius, *Eregetisches Handbuch*, 1 K. ix. 18).

If this is admitted, the suspicion naturally suggests itself, that the compiler of the Chronicles may have misapprehended the original passage in the Book of Kings, and may have incorrectly written "Tadmor" instead of "Tamar." On this hypothesis there would have been a curious circle of mistakes; and the final result would be, that any supposed connexion between Solomon and the foundation of Palmyra must be regarded as purely imaginary. This conclusion is not necessarily incorrect or unreasonable, but there are not sufficient reasons for adopting it. In the first place, the Tadmor of the Chronicles is not mentioned in connexion with the same cities as the Tamar of the Kings, so there is nothing cogent to suggest the inference that the statement of the Chronicles was copied from the Kings. Secondly, admitting the historical correctness of the statement that the kingdom of Solomon extended from Gaza, near the Mediterranean Sea, to Tiphah or Thapsacus, on the Euphrates (1 K. iv. 24; comp. Ps. lxxii. 8, 9), it would be in the highest degree probable that Solomon occupied and garrisoned such a very important station for connecting different parts of his dominions as Palmyra. And, even without reference to military and political considerations, it would have been a masterly policy in Solomon to have secured Palmyra as a point of commercial communication with the Euphrates, Babylon, and the Persian Gulf. It is evident that Solomon had large views of commerce; and as we know that he availed himself of the nautical skill of the Tyrians by causing some of his own subjects to accompany them in distant voyages from a port on the Red Sea (1 K. ix. 26, 27, 28, x. 22), it is unlikely that he should have neglected trade by land with such a centre of wealth and civilization as Babylon. But that great city, though so nearly in the same latitude with Jerusalem that there is not the difference of even one degree between them, was separated from Jerusalem by a great desert, so that regular direct communication between the two cities was impracticable. In a celebrated passage, indeed, of Isaiah (xl. 3), connected with "the voice of him that crieth in the wilderness," images are introduced of a direct return of the Jewish exiles from Babylon through

the desert. Such a route was known to the Bedawin of the desert; and may have been exceptionally passed over by others; but evidently these images are only poetical, and it may be deemed indisputable that the successive caravans of Jews who returned to their own land from Babylon arrived from the same quarter as Nebuchadnezzar and the Chaldeans (Jer. i. 14, 15, x. 22, xxv. 9), viz., from the North. In fact, Babylon thus became so associated with the North in the minds of the Jews, that in one passage of Jeremiah^a (xliii. 8) it is called "the North country," and it is by no means impossible that many of the Jews may have been ignorant that Babylon was nearly due east from Jerusalem, although somewhat more than 600 miles distant. Now, the way in which Palmyra would have been useful to Solomon in trade between Babylon and the west is evident from a glance at a good map. By merely following the road up the stream on the right bank of the Euphrates, the traveller goes in a north-westerly direction, and the width of the desert becomes proportionally less, till at length, from a point on the Euphrates, there are only about 120 miles across the desert to Palmyra,^b and thence about the same distance across the desert to Damascus. From Damascus there were ultimately two roads into Palestine, one on each side of the Jordan; and there was an easy communication with Tyre by Ptolemais, or Caesarea Philippi, now *Banias*. It is true that the Assyrian and Chaldean armies did not cross the desert by Palmyra, but took the more circuitous road by Hamath on the Orontes; but this was doubtless owing to the greater facilities which that route afforded for the subsistence of the cavalry of which those armies were mainly composed. For mere purposes of trade, the shorter road by Palmyra had some decided advantages, as long as it was thoroughly secure. See Movers, *Das Phönizische Alterthum*, 3ter Theil, p. 243, &c.

Hence there are not sufficiently valid reasons for denying the statement in the Chronicles that Solomon built Tadmor in the wilderness, or Palmyra. As, however, the city is nowhere else mentioned in the whole Bible, it would be out of place to enter into a long, detailed history of it on the present occasion. The following leading facts, however, may be mentioned. The first author of antiquity who mentions Palmyra is Pliny the Elder (*Hist. Nat.* v. 26), who says, "Palmyra nobilis urbs situ, divitiis soli et aquae amoenia vasto undique ambitu arenis includit agros;" and then proceeds to speak of it as placed apart, as it were between the two empires of the Romans and the Parthians, and as the first object of solicitude to each at the commencement of war. Afterwards it was mentioned by Appian (*De Bell. Civil.* v. 9), in reference to a still earlier period of time, in connection with a design of Mark Antony to let his cavalry plunder it. The inhabitants are said to have withdrawn themselves and their effects to a strong position on the Euphrates—and the cavalry entered an empty city. In the second century A.D. it seems to have been beautified by the Emperor Hadrian, as may be inferred from a statement of

Stephanus of Byzantium as to the name of the city having been changed to Hadrianopolis (*s. v. Παδριουπόλις*). In the beginning of the third century A.D. it became a Roman colony under Caracalla (211–217 A.D.), and received the *jus Italicum*. Subsequently, in the reign of Gallienus, the Roman Senate invested Odenathus, a senator of Palmyra, with the regal dignity, on account of his services in defeating Sapor king of Persia. On the assassination of Odenathus, his celebrated wife Zenobia seems to have conceived the design of erecting Palmyra into an independent monarchy; and, in prosecution of this object, she, for a while, successfully resisted the Roman arms. She was at length defeated and taken captive by the Emperor Aurelian (A.D. 273), who left a Roman garrison in Palmyra. This garrison was massacred in a revolt; and Aurelian punished the city by the execution not only of those who were taken in arms, but likewise of common peasants, of old men, women, and children. From this blow Palmyra never recovered, though there are proofs of its having continued to be inhabited until the downfall of the Roman Empire. There is a fragment of a building, with a Latin inscription, bearing the name of Diocletian; and there are existing walls of the city of the age of the Emperor Justinian. In 1172, Benjamin of Tudel found 4000 Jews there; and at a later period Abulfeda mentioned it as full of splendid ruins. Subsequently its very existence had become unknown to modern Europe, when, in 1691 A.D., it was visited by some merchants from the English factory in Aleppo; and an account of their discoveries was published in 1695, in the *Philosophical Transactions* (vol. xix. No. 217, p. 83, No. 218, p. 129). In 1751, Robert Wood took drawings of the ruins on a very large scale, which he published in 1753, in a splendid folio work, under the title of *The Ruins of Palmyra, otherwise, Tadmor in the Desert*. This work still continues to be the best on Palmyra; and its valuable engravings fully justify the powerful impression which the ruins make on every intelligent traveller who crosses the desert to visit them. The colonnade and individual temples are inferior in beauty and majesty to those which may be seen elsewhere—such, for example, as the Parthenon, and the remains of the Temple of Jupiter, at Athens: and there is evidently no one temple equal to the Temple of the Sun at Baalbek, which, as built both at about the same period of time and in the same order of architecture, suggests itself most naturally as an object of comparison. But the long lines of Corinthian columns at Palmyra, as seen at a distance, are peculiarly imposing; and in their general effect and apparent vastness, they seem to surpass all other ruins of the same kind. All the buildings to which these columns belonged were probably erected in the second and third centuries of our era. Many inscriptions are of later date; but no inscription earlier than the second century seems yet to have been discovered.

For further information consult the original authorities for the history of Palmyra in the *Scriptores Historiae Augustae*, *Triginta Tyranni*, xiv., *Diem*

^a A misunderstanding of this passage has counteracted the ideas of those who believe in a future second return of the Jews to Palestine. This belief may, under peculiarly favourable circumstances, lead hereafter to its own realisation. It has not, however, been hitherto really proved that a second dispersion or a second return of the Jews was ever contemplated by any Hebrew

prophet.

^b The exact latitude and longitude of Palmyra do not seem to have been scientifically taken. Mr. Wood mentions that his party had no quadrant with them, and there is a disagreement between various maps and geographical works. According to Mr. Johnston, the position is, lat. 34° 18' N., and long. 38° 13' E.

Aurelianus, xvi.; *Eutropius*, ix. cap. 10, 11, 12. In 1696 A.D., Abraham Sella published a most instructive work entitled, *The Antiquities of Palmyra, containing the History of the City and its Emperors*, which contains several Greek inscriptions, with translations and explanations. The Preface to Wood's work likewise contains a detailed

history of the city; and Gibbon, in the 11th chapter of the *Decline and Fall*, has given an account of Palmyra with his usual vigour and accuracy. For an interesting account of the present state of the ruins see Porter's *Handbook for Syria and Palestine*, pp. 543-549, and Beaufort's *Egyptian Sepulchres*, &c. 1. [E. T.]

Remains of Tahpanhes or Taphne.

TAHAN (תָּחַן *Tachan*, טַחַן. *Thehen*, *Thaan*). A descendant of Ephraim, but of what degree is uncertain (*Num.* xvi. 35). In 1 Chr. vii. 25 he appears as the son of Telah.

TAHANITES, THE (תָּחַנִּי: *δ Tachani*: *Thehenites*). The descendants of the preceding, a branch of the tribe of Ephraim (*Num.* xvi. 35).

TAHATH (תָּחַת: *Θαδδ*: *Thathath*). 1. A Kohathite Levite, ancestor of Samuel and Heman (1 Chr. vi. 24, 37 [9, 22]).

2. (*Θαδδ*; Alex. *Θαδδ*.) According to the present text, son of Bered, and great-grandson of Ephraim (1 Chr. vii. 20). Buntington, however (*Geneal.* i. 273), identifies Tahath with Tahan, the son of Ephraim.

3. (*Θαδδ*; Alex. *Νουδδ*.) Grandson of the preceding, as the text now stands (1 Chr. vii. 20). But Buntington considers him as a son of Ephraim (ii. tab. xix.). In this case Tahath was one of the sons of Ephraim who were slain by the men of Gath in a raid made upon their cattle.

TAHATH (תָּחַת: *Karadδ*). The name of a desert-station of the Israelites between Makheloth and Tarah (*Num.* xxxiii. 26). The name, signifying "under" or "below," may relate to the level of the ground. The site has not been identified.

Tachta, from the same root, is the common word employed to designate the lower one of the double villages so common in Syria, the upper one being *foka*. Thus *Beitür el-foka* is the upper Beth-horon, *Beitür el-tachta* the lower one. [H. H.]

TAHPANHES, TEHAPHNEHES, TAHAP'ANES (תַּחְפַּנְהֶס, תַּחְפַּנְהֶס, תַּחְפַּנְהֶס, the last form in text, but *Keri* has first: *Táphras*,

Táphras: *Taphnis*, *Taphne*). A city of Egypt, of importance in the time of the prophets Jeremiah and Ezekiel. The name is evidently Egyptian, and closely resembles that of the Egyptian queen *TAHPENES*.

The Coptic name of this place, *ΤΑΦΝΑC*, (*Quatremère*, *Mém. Géog. et Hist.* i. 297, 298), is evidently derived from the LXX. form: the Gr. and Lat. forms, *Δάφνας*, *Hdt.*, *Δάφνη*, *Steph. Byz.* *Dafno*, *Itin. Ant.*, are perhaps nearer to the Egyptian original (see Parthey, *Zur Erdkunde des Alten Aegyptens*, p. 528).

Tahpanhes was evidently a town of Lower Egypt near or on the eastern border. When Johanan and the other captains went into Egypt "they came to Tahpanhes" (*Jer.* xliii. 7). Here Jeremiah prophesied the conquest of the country by Nebuchadnezzar (8-13). Ezekiel foretells a battle to be there fought apparently by the king of Babylon just mentioned (xxx. 18). The Jews in Jeremiah's time remained here (*Jer.* xli. 1). It was an important town, being twice mentioned by the latter prophet with Noph or Memphis (ii. 16, xli. 14, as well as in the passage last previously cited. Here stood a house of Pharaoh Hophra before which Jeremiah hid great stones, where the throne of Nebuchadnezzar would afterwards be set, and his pavilion spread (xlii. 8-10). It is mentioned with "Ramesse and all the land of Gessen" in *Jnd.* i. 9. Herodotus calls this place Daphnæ of Pelusium (*Δάφναι αὐτὴ Πηλουσίαι*), and relates that Psammetichus I. here had a garrison against the Arabians and Syrians, as at Elephantine against the Ethiopians, and at Marea against Libya, adding that in his own time the Persians had garrisons at Daphnæ and Elephantine (ii. 30). Daphnæ was therefore a very important post under the xxvth dynasty. According to Stephanus it was near Pelusium (s. v.).

In the *Itinerary of Antoninus* this town, called Daphne, is placed 16 Roman miles to the south-west of Pelusium (sp. Partby, Map vi., where observe that the name of Pelusium is omitted). This position seems to agree with that of Tel-Defenneh, which Sir Gardner Wilkinson supposes to mark the site of Daphnae (*Modern Egypt and Thebes*, i. 447, 448). This identification favours the inland position of the site of Pelusium, if we may trust to the distance stated in the *Itinerary*. [SIN.] Sir G. Wilkinson (*l. c.*) thinks it was an outpost of Pelusium. It may be observed that the Campa, τὰ Στρατώματα, the fixed garrison of Ionians and Carians established by Psammethichus I., may possibly have been at Daphnae. Can the name be of Greek origin? If the HANES mentioned by Isaiah (xxx. 4) be the same as Tahpanhes, as we have suggested (s. v.), this conjecture must be dismissed. No satisfactory Egyptian etymology of this name has been suggested, Jablonaki's ΤΑΦΕ-ΕΝΕΣ, "the head" or "beginning of the age" (*Opusc.* i. 343), being quite untenable, nor has any Egyptian name resembling it been discovered.* The name of Queen TAHPENES throws no light upon this matter. [R. S. P.]

TAHPENES (Θηκεμίνη: *Thēkemina*: *Taphnes*), a proper name of an Egyptian queen. She was wife of the Pharaoh who received Hadad the Edomite, and who gave him her sister in marriage (1 K. xi. 18-20). In the LXX. the latter is called the elder sister of Thekemina, and in the addition to ch. xli. Shishak (Susakim) is said to have given Ano, the elder sister of Thekemina his wife, to Jeroboam. It is obvious that this and the earlier statement are irreconcilable, even if the evidence from the probable repetition of an elder sister be set aside, and it is scarcely necessary to add that the name of Shishak's chief or only wife, KARAĀMAT, does not support the LXX. addition. [SHISHAK.] There is therefore but one Tahpenes or Thekemina. At the time to which the narrative refers there were probably two, if not three, lines ruling in Egypt, the Tanites of the xxiist dynasty in the lower country, the high-priest kings at Thebes, but possibly they were of the same line, and perhaps one of the last *faineants* of the Rameses family. To the Tanite line, as apparently then the most powerful, and as holding the territory nearest Palestine, the Pharaoh in question, as well as the father-in-law of Solomon, probably belonged. If Manetho's list be correct he may be conjectured to have been Psusennes. [PHARAOH.] No name that has any near resemblance to either Tahpenes or Thekemina has yet been found among those of the period (see Lepsius, *Ägyptische Geschichte*). [R. S. P.]

TAHRE'A (Ἰσάχα: *Isachā*; Alex. *Isach*: *Tharua*). Son of Micah, and grandson of Mephobosheth (1 Chr. ix. 41). In the parallel list of 1 Chr. viii. 35 his name appears as TAREA.

TAHTIM HOD'SHI, THE LAND OF (ἡ γῆ τοῦ ὁδοῦ: *el tēn ὁδοῦ ἡ γῆ*: *Naḥadai*; Alex. *γῆν ὁδοῦ ἡ γῆ*: *terra inferiora Hodi*). One of the places visited by Joab during his census of the land of Israel. It occurs between Gilead and Dan-jaan (2 Sam. xxiv. 6). The name has puzzled all the interpreters. The old versions

throw no light upon it. Fürst (*Handb.* i. 380) proposes to separate the "Land of the Tachtim" from "Hodshi," and to read the latter as Harahi—the people of Harosheth (comp. Judg. iv. 2). The text restores the text of the LXX. to read "the Land of Bashan, which is Edrei." This in itself is feasible although it is certainly very difficult to connect it with the Hebrew. Ewald (*Gesch.* iii. 207) proposes to read Hermon for Hodshi; and Gesenius (*Thes.* 450 a) dismisses the passage with a *vix pro sano habendum*.

There is a district called the *Ard et-tahia*, to the E.N.E. of Damascus, which recalls the old name—but there is nothing to show that any Israelite was living so far from the Holy Land in the time of David. [G.]

TALENT (טָלַת: *talant*: *talentum*), the greatest weight of the Hebrews. Its Hebrew name properly signifies "a circle" or "globe," and was perhaps given to it on account of a form in which it was anciently made. The Assyrian name of the talent is *titum* according to Dr. Hincks.

The subject of the Hebrew talent will be fully discussed in a later article [WEIGHTS]. [R. S. P.]

TALI' THA CUMI (ταλιθά κουμί: *talitha cumi*). Two Syriac words (Mark v. 41), signifying "Damsel, arise."

The word טָלַת occurs in the Chaldean paraphrase of Prov. ix. 3, where it signifies a girl; and Lightfoot (*Horae Heb.* Mark v. 41) gives an instance of its use in the same sense by a Rabbinical writer. Gesenius (*Thesaurus*, 550) derives it from the Hebrew תָּלַת, a lamb. The word טָלַת is both Hebrew and Syriac (2 p. fem. Imperative, Kal, and Peal), signifying stand, arise.

As might be expected, the last clause of this verse, after Cumi, is not found in the Syriac version.

Jerome (Ep. lvii. ad *Pammachium*, *Opp.* tom. 1. p. 308, ed. Vallars.) records that St. Mark was blamed for a false translation on account of the insertion of the words, "I say unto thee;" but Jerome points to this as an instance of the superiority of a free over a literal translation, inasmuch as the words inserted serve to show the emphasis of our Lord's manner in giving this command on His own personal authority. [W. T. B.]

TALMA'I (טַלְמַאי: *ṭalmāi*, *ṭalmāi*, *ṭalmāi*; Alex. *ṭalmāi*, *ṭalmāi*, *ṭalmāi*: *Tholmai*). 1. One of the three sons of "the Anak," who were driven out from their settlement in Kirjath-Arba, and slain by the men of Judah, under the command of Caleb (Num. xiii. 22; Josh. xv. 14; Judg. i. 10).

2. (*ṭalmāi* in 2 Sam., *ṭalmāi* in 1 Chr.; Alex. *ṭalmāi*, *ṭalmāi*, *ṭalmāi*: *Tholmai*, *Tholomai*.) Son of Ammihud, king of Geshur (2 Sam. iii. 3, xiii. 37; 1 Chr. iii. 2). His daughter Maachah was one of the wives of David and mother of Absalom. He was probably a petty chieftain dependent on David, and his wild retreat in Bashan afforded a shelter to his grandson after the assassination of Amnon.

* Dr. Briggs, following Mr. Heath (*Exodus Papyri*, p. 116), identifies the fort TeBNeT with Tahpanhes; but his name does not seem to us sufficiently near either to

the Hebrew or to the Greek (*Geogr. Anach.* i. 306, 301 *Taf.* tvi. no. 1728).

TALMON (תלמון; Τελαμών, but Τελαμίν in Neh. xi. 19; Alex. Τελαμίν, Τολμών, Τελαμίν; *Telmon*). The head of a family of doorkeepers in the Temple, "the porters for the camps of the sons of Levi" (1 Chr. ix. 17; Neh. xi. 19). Some of his descendants returned with Zerubbabel (Ezr. ii. 42; Neh. vii. 45), and were employed in their hereditary office in the days of Nehemiah and Ezra (Neh. xii. 25), for the proper names in this passage must be considered as the names of families.

TAL'SAS (Ταλσας; *Thalsas*). ELASAH (1 Esd. ix. 22).

TAMAH (תמא; Θημά; FA Ημαθ; *Tiema*). The children of Tamah, or Thamah (Ezr. ii. 53), were among the Nethinim who returned with Zerubbabel (Neh. vii. 55).

TAMAR (תמר; "palm-tree"). The name of three women remarkable in the history of Israel.

1. (Θάμαρ; *Tamar*). The wife successively of the two sons of Judah, ER and ONAN (Gen. xxxviii. 6-30). Her importance in the sacred narrative depends on the great anxiety to keep up the lineage of Judah. It seemed as if the family were on the point of extinction. ER and ONAN had successively perished suddenly. Judah's wife Bathshuah died; and there only remained a child Shelah, whom Judah was unwilling to trust to the dangerous union, as it appeared, with Tamar, lest he should meet with the same fate as his brothers. That he should, however, marry her seems to have been regarded as part of the fixed law of the tribe, whence its incorporation into the Mosaic Law in later times (Deut. xiv. 5; Matt. xxi. 24); and, as such, Tamar was determined not to let the opportunity escape through Judah's parental anxiety. Accordingly she resorted to the desperate expedient of entrapping the father himself into the union which he feared for his son. He, on the first emergence from his mourning for his wife, went to one of the festivals often mentioned in Jewish history as attendant on sheep-shearing. He wore on his finger the ring of his chieftainship; he carried his staff in his hand; he wore a collar or necklace round his neck. He was encountered by a veiled woman on the road leading to Timnath, the future birthplace of Samson, amongst the hills of Dan. He took her for one of the unfortunate women who were consecrated to the impure rites of the Canaanite worship. [SODOMITES.] He promised her, as the price of his intercourse, a kid from the flocks to which he was going, and left as his pledge his ornaments and his staff. The kid he sent back by his shepherd (LXX.), Hirah of Adullam. The woman could nowhere be found. Months afterwards it was discovered to be his own daughter-in-law Tamar who had thus concealed herself under the veil or mantle, which she cast off on her return home, where she resumed the seclusion and dress of a widow. She was sentenced to be burnt alive, and was only saved by the discovery, through the pledges which Judah had left, that her seducer was no less than the chieftain of the tribe. He had the magnanimity to recognise that she had been driven into this crime by his own neglect of his promise to give her in marriage to his youngest son. "She hath been more righteous than I . . . and he knew her again no more" (Gen. xxxviii. 26). The fruit of this intercourse were twins, PHARAZ and ZARAH, and through Pharez the sacred line was

continued. Hence the prominence given to Tamar in the nuptial benediction of the tribe of Judah (Ruth iv. 12), and in the genealogy of our Lord (Matt. i. 3).

The story is important (1.) as showing the significance, from early times, attached to the continuance of the line of Judah; (2.) as a glimpse into the rough manners of the patriarchal time; (3.) as the germ of a famous Mosaic law.

2. (Θημά; Alex. Θάμαρ; Joseph. Θάμαρα; *Tamar*.) Daughter of David and Maachah the Geshurite princess, and thus sister of Absalom (2 Sam. xiii. 1-32; 1 Chr. iii. 9; Joseph. *Ant.* vii. 8, §1). She and her brother were alike remarkable for their extraordinary beauty. Her name ("Palm-tree") may have been given her on this account. This fair beauty inspired a frantic passion in her half-brother Amnon, the eldest son of David by Ahinoam. He wasted away from the feeling that it was impossible to gratify his desire, "for she was a virgin"—the narrative leaves it uncertain whether from a scruple on his part, or from the seclusion in which in her unmarried state she was kept. Morning by morning, as he received the visits of his friend JONADAB, he is paler and thinner (Joseph. *Ant.* vii. 8, §1). Jonadab discovers the cause, and suggests to him the means of accomplishing his wicked purpose. He was to feign sickness. The king, who appears to have entertained a considerable affection, almost awe, for him, as the eldest son (2 Sam. xiii. 5, 21; LXX.), came to visit him; and Amnon entreated the presence of Tamar, on the pretext that she alone could give him food that he would eat. What follows is curious, as showing the simplicity of the royal life. It would almost seem that Tamar was supposed to have a peculiar art of baking palatable cakes. She came to his house (for each prince appears to have had a separate establishment), took the dough and kneaded it, and then in his presence (for this was to be a part of his fancy, as though there were something exquisite in the manner of her performing the work) kneaded it a second time into the form of cakes. The name given to these cakes (*lebībāh*), "heart-cakes," has been variously explained: "hollow cakes"—"cakes with some stimulating spices" (like our word *cordials*)—cakes in the shape of a heart (like the Moravian *gerührte Herzen*, Thienius, *ad loc.*)—cakes "the delight of the heart." Whatever it be, it implies something special and peculiar. She then took the pan, in which they had been baked, and poured them all out in a heap before the prince. This operation seems to have gone on in an outer room on which Amnon's bedchamber opened. He caused his attendants to retire—called her to the inner room and there accomplished his design. In her touching remonstrance two points are remarkable. First, the expression of the infamy of such a crime "in Israel," implying the loftier standard of morals that prevailed, as compared with other countries at that time; and, secondly, the belief that even this standard might be overcome lawfully by royal authority—"Speak to the King, for he will not withhold me from thee." This expression has led to much needless explanation, from its contradiction to Lev. xviii. 9, xx. 17; Deut. xxvii. 22; as, e.g., that, her mother Maachah not being a Jewess, there was no proper legal relationship between her and Amnon; or that she was ignorant of the law; or that the Mosaic laws were not then in existence (Thienius, *ad loc.*). It is enough to express, what evidently her whole speech

anpries, that the king had a dispensing power, which was conceived to cover even extreme cases.

The brutal hatred of Amnon succeeding to his brutal passion, and the indignation of Tamar at his barbarous insult, even surpassing her indignation at his shameful outrage, are pathetically and graphically told, and in the narrative another glimpse is given us of the manners of the royal household. The unmarried princesses, it seems, were distinguished by robes or gowns with sleeves (so the LXX., Josephus, &c., take the word translated in the A. V. "divers colours"). Such was the dress worn by Tamar on the present occasion, and when the guard at Amnon's door had thrust her out and closed the door after her to prevent her return, she, in her agony, snatched handfuls of ashes from the ground and threw them on her hair, then tore off her royal sleeves, and clasped her bare hands upon her head, and rushed to and fro through the streets screaming aloud. In this state she encountered her brother Absalom, who took her to his house, where she remained as if in a state of widowhood. The king was afraid or unwilling to interfere with the heir to the throne, but she was avenged by Absalom, as Dinah had been by Simeon and Levi, and out of that vengeance grew the series of calamities which darkened the close of David's reign.

The story of Tamar, revolting as it is, has the interest of revealing to us the interior of the royal household beyond that of any other incident of those times. (1.) The establishments of the princes. (2.) The simplicity of the royal employments. (3.) The dress of the princesses. (4.) The relation of the king to the princes and to the law.

3. (Θαμυζ; Alex. Θαμυζ; *Tamar*.) Daughter of Absalom, called probably after her beautiful aunt, and inheriting the beauty of both aunt and father (2 Sam. xiv. 7). She was the sole survivor of the house of Absalom; and ultimately, by her marriage with Uriah of Gibeah, became the mother of Maachah, the future queen of Judah, or wife of Abijah (1 K. xv. 2), Maachah being called after her great-grandmother, as Tamar after her aunt. [A. P. S.]

TAMAR (תָּמָר; Θαμυζ* in both MSS.: *Tamar*). A spot on the south-eastern frontier of Judah, named in Ezek. xlvii. 19, xlviii. 28 only, evidently called from a palm-tree. If not *Hazazon Tamar*, the old name of Engedi, it may be a place called *Thamar* in the *Onomasticon* ("Hazazon Tamar"), a day's journey south of Hebron. The Pautinger Tables give *Thamar* in the same direction, and Robinson (*B. R.* ii. 198, 201) identifies the place with the ruins of an old fortress at *Kurnub*. De Saulcy (*Narr.* i. ch. 7) endeavours to establish a connexion between *Tamar* and the Kalat embarras, at the mouth of the ravine of that name on the S.W. side of the Dead Sea, on the ground (amongst others) that the names are similar. But this, to say the least, is more than doubtful. [A. P. S.]

TAMMUZ (תַּמְּוִז; δ Θαμμοῦς; *Adonis*). Properly "the Tammuz," the article indicating that at some time or other the word had been regarded as an appellative, though at the time of its

occurrence and subsequently it may have been applied as a proper name. As it is found once only in the O. T., and then in a passage of extreme obscurity, it is not surprising that many conjectures have been formed concerning it; and as none of the opinions which have been expressed rise above the importance of conjecture, it will be the object of this article to set them forth as clearly as possible, and to give at least a history of what has been said upon the subject.

In the sixth year of the captivity of Jehoiachin, in the sixth month and on the fifth day of the month, the prophet Ezekiel as he sat in his house surrounded by the elders of Judah, was transported in spirit to the far distant Temple at Jerusalem. The hand of the Lord God was upon him, and led him "to the door of the gate of the house of Jehovah, which was towards the north; and behold there the women sitting, weeping for the Tammuz." Some translate the last clause "causing the Tammuz to weep," and the influence which this rendering has upon the interpretation will be seen hereafter. If תַּמְּוִז be a regularly formed Hebrew word, it must be derived either from a root תַּמַּ or תַּמַּ (comp. the forms תַּמַּ, תַּמַּ), which is not known to exist. To remedy this defect Fürst (*Handb.* s. v.) invents a root, to which he gives the significance "to be strong, mighty, victorious," and transitively, "to overpower, annihilate." It is to be regretted that this lexicographer cannot be contented to confess his ignorance of what is unknown. Roediger (in Gesen. *Thes.* s. v.) suggests the derivation from a root, תַּמַּ = תַּמַּ; according to which תַּמְּוִז is a contraction of תַּמְּוִז, and signifies a melting away, dissolution, departure, and so the ἀφανισμὸς *Adonidos*, or disappearance of Adonis, which was mourned by the Phœnician women, and after them by the Greeks. But the etymology is unsound, and is evidently contrived so as to connect the name Tammuz with the general tradition regarding it.

The ancient versions supply us with no help. The LXX., the Targum of Jonathan Ben Uzziel, the Peshito Syriac, and the Arabic in Walton's Polyglot, merely reproduce the Hebrew word. The Vulgate alone gives *Adonis* as a modern equivalent, and this rendering has been eagerly adopted by subsequent commentators, with but few exceptions. It is at least as old, therefore, as Jerome, and the fact of his having adopted it shows that it must have embodied the most credible tradition. In his note upon the passage he adds that since, according to the Gentile fable, Adonis had been slain in the month of June, the Syrians give the name of Tammuz to this month, when they celebrate to him an anniversary solemnity, in which he is lamented by the women as dead, and afterwards coming to life again is celebrated with songs and praises. In another passage (*ad Paulinum*, Op. i. p. 102, ed. Basil. 1565) he laments that Bethlehem was overshadowed by a grove of Tammuz, that is, of Adonis, and that "in the cave where the infant Christ once cried, the lover of Venus was bewailed." Cyril of Alexandria (in *Oseam*, Op. iii. 79, ed. Paris, 1638), and Theodoret (in *Ezech.*), give the same explanation, and are followed by the author of the *Chronicon Paschale*. The only exception to this uniformity is in the Syriac translation of Melito's Apology, edited by Dr. Cureton in his *Spicilegium Syriacum*. The date of the translation is unknown; the original if genuine must belong to the second

* Ms. xlviii. 19 contains an instance of the double translation not infrequent in the present text of the LXX., δὲ Θαμυζ καὶ Θεομωυζ.

century. The following is a literal rendering of the Syriac: "The sons of Phoenicia worshipped Balthi, the queen of Cyprus. For she loved Tammuz the son of Cuthar, the king of the Phoenicians, and forsook her kingdom and came and dwelt in Gebal, a fortress of the Phoenicians. And at that time she made all the villages subject to Cuthar the king. For before Tammuz she had loved Ares, and committed adultery with him, and Hephaestus her husband caught her, and was jealous of her. And he (i. e. Ares) came and slew Tammuz on Lebanon while he made a hunting among the wild boars.^a And from that time Balthi remained in Gebal, and died in the city of Aphaca, where Tammuz was buried" (p. 25 of the Syriac text). We have here very clearly the Greek legend of Adonis reproduced with a simple change of name. Whether this change is due to the translator, as is not improbable, or whether he found "Tammuz" in the original of Melito, it is impossible to say. Be this as it may, the tradition embodied in the passage quoted, is probably as valuable as that in the same author which regards Serapis as the deification of Joseph. The Syriac lexicographer Bar Bahlul (10th cent.), gives the legend as it had come down to his time. "Tammuz was, as they say, a hunter shepherd and chaser of wild beasts; who when Balthi loved him took her away from her husband. And when her husband went forth to seek her Tammuz slew him. And with regard to Tammuz also, there met him in the desert a wild boar and slew him. And his father made for him a great lamentation and weeping in the month Tammuz: and Balthi his wife, she too made a lamentation and mourning over him. And this tradition was handed down among the heathen people during her lifetime and after her death, which same tradition the Jews received with the rest of the evil festivals of the people, and in that month Tammuz used to make for him a great feast. Tammuz also is the name of one of the months of the Syrians."^b In the next century the legend assumes for the first time a different form in the hands of a Rabbinical commentator. Rabbi Solomon Isakli (Rashi) has the following note on the passage in Ezekiel. "An image which the women made hot in the inside, and its eyes were of lead, and they melted by reason of the heat of the burning and it seemed as if it wept; and they (the women) said, He asketh for offerings. Tammuz is a word signifying burning, as על די חמה לטמיה (Dan. iii. 19), and חמה יחירה (ibid. ver. 22)." And instead of rendering "weeping for the Tammuz," he gives, what appears to be the equivalent in French, "faisantes pleurer l'échauffé." It is clear, therefore, that Rashi regards Tammuz as an appellative, derived from the Chaldean root טמא, *ārd*, "to make hot." It is equally clear that his etymology cannot be defended for an instant. In the 12th century (A.D. 1161). Solomon ben Abraham Parchon in his lexicon, compiled at Salerno from the works of Jehuda Chayug, and Abulwalid Merwan ben Gannach, has the following observations upon Tammuz. "It is the likeness of a reptile which they make upon the water, and the water is collected in it and flows through

its holes, and it seems as if it wept. But the month called Tammuz is Persian, and so are all our months; none of them is from the sacred tongue, though they are written in the Scripture they are Persian; but in the sacred tongue the first month, the second month," &c. At the close of this century we meet for the first time with an entirely new tradition repeated by R. David Kimchi, both in his Lexicon and in his Commentary, from the Moreh Nebuchim of Maimonides. "In the month Tammuz they made a feast of an idol, and the women came to gladden him; and some say that by crafty means they caused the water to come into the eyes of the idol which is called Tammuz, and it wept, as if it asked them to worship it. And some interpret Tammuz 'the burnt one,' as if from Dan. iii. 19 (see above), i. e. they wept over him because he was burnt; for they used to burn their sons and their daughters in the fire, and the women used to weep over them. . . . But the Rab, the wise, the great, our Rabbi Moshe bar Maimon, of blessed memory, has written, that it is found written in one of the ancient idolatrous books, that there was a man of the idolatrous prophets, and his name was Tammuz. And he called to a certain king and commanded him to serve the seven planets and the twelve signs. And that king put him to a violent death, and on the night of his death there were gathered together all the images from the ends of the earth to the temple of Babel, to the golden image which was the image of the sun. Now this image was suspended between heaven and earth, and it fell down in the midst of the temple, and the images likewise (fell down) round about it, and it told them what had befallen Tammuz the prophet. And the images all of them wept and lamented all the night; and, as it came to pass, in the morning all the images flew away to their own temples in the ends of the earth. And this was to them for an everlasting statute; at the beginning of the first day of the month Tammuz each year they lamented and wept over Tammuz. And some interpret Tammuz as the name of an animal, for they used to worship an image which they had, and the Targum of (the passage) ופשו ציים את איים (Isa. xxxiv. 14) is יערערן חמוץ בחתולין. But in most copies תמוזין is written with two vavs." The book of the ancient idolaters from which Maimonides quotes, is the now celebrated work on the Agriculture of the Nabatheans, to which reference will be made hereafter. Ben Melech gives no help, and Abendana merely quotes the explanations given by Rashi and Kimchi.

The tradition recorded by Jerome, which identifies Tammuz with Adonis, has been followed by most subsequent commentators: among others by Vatablus, Castellio, Cornelius a Lapide, Oslander, Caspar Sanctius, Lavater, Villalpandus, Selden, Simonis, Calmet, and in later times by J. D. Michaelis, Gesenius, Ben Zeb, Rosenmüller, Maurer, Ewald, Hävernick, Hitzig, and Mövers. Lutha and others regarded Tammuz as a name of Bacchus. That Tammuz was the Egyptian Osiris, and that his worship was introduced to Jerusalem from Egypt, was held by Calvin, Piscator, Junius, Leusden, and Pfeiffer. This view depends chiefly

^a Not "Cyprians," as Dr. Cureton translates

^b Dr. Cureton's emendation of this corrupt passage seems to be the only one which can be adopted.

^c In this translation I have followed the MS. of Bar

Bahlul in the Cambridge University Library, the readings of which seem preferable in many respects to those in the extract furnished by Bernstein to *Die Strabon* (No. II. 206).

upon a false etymology proposed by Kircher, which connects the word Tammuz with the Coptic *tamut*, to hide, and so makes it signify the hidden or concealed one; and therefore Osiris, the Egyptian king slain by Typho, whose loss was commanded by Isis to be yearly lamented in Egypt. The women weeping for Tammuz are in this case, according to Junius, the priestesses of Isis. The Egyptian origin of the name Tammuz has also been defended by a reference to the god Amun, mentioned by Plutarch and Herodotus, who is identical with Osiris. There is good reason, however, to believe that Amun is a mistake for Amun. That something corresponding to Tammuz is found in Egyptian proper names, as they appear in Greek, cannot be denied. *Tamús*, an Egyptian, appears in Thucydides (viii. 31) as a Persian officer, in Xenophon (*Anab.* i. 4, §2) as an admiral. The Egyptian pilot who heard the mysterious voice bidding him proclaim, "Great Pan is dead," was called *Θαμυός* (Plutarch, *De Defect. Orac.* 17). The names of the Egyptian kings, *Θαμυσις*, *Τέμυσις*, and *Θυμσις*, mentioned by Manetho (Jos. c. *Ap.* i. 14, 15), have in turn been compared with Tammuz; but unless some more certain evidence be brought forward than is found in these apparent resemblances, there is little reason to conclude that the worship of Tammuz was of Egyptian origin.

It seems perfectly clear, from what has been said, that the name Tammuz affords no clue to the identification of the deity whom it designated. The slight hint given by the prophet of the nature of the worship and worshippers of Tammuz has been sufficient to connect them with the yearly mourning for Adonis by the Syrian damsels. Beyond this we can attach no especial weight to the explanation of Jerome. It is a conjecture and nothing more, and does not appear to represent any tradition. All that can be said therefore is, that it is not impossible that Tammuz may be a name of Adonis the sun-god, but that there is nothing to prove it. The town of Byblos in Phoenicia was the headquarters of the Adonis-worship.⁴ The feast in his honour was celebrated each year in the temple of Aphrodite on the Lebanon* (Lucian, *De Dea Syra*, §6), with rites partly sorrowful, partly joyful. The Emperor Julian was present at Antioch when the same festival was held (Amm. Marc. xxii. 9, §13). It lasted seven days (Amm. Marc. xx. 1), the period of mourning among the Jews (Ecclus. xxi. 12; Gen. i. 10; 1 Sam. xxi. 13; Jud. xvi. 24), the Egyptians (Heliodor. *Aeth.* vii. 11), and the Syrians (Lucian, *De Dea Syra*, §52), and began with the disappearance (*ἀφαισιμύς*) of Adonis. Then followed the search (*ζητήσις*) made by the women after him. His body was represented by a wooden image placed in the so-called "gardens of Adonis" (*Ἀδωνιδος κήποι*), which were earthenware vessels filled with mould, and planted with wheat, barley, lettuce, and fennel. They were exposed by the women to the heat of the sun, at the house-doors or in the "Porches of Adonis;" and the withering of the plants was regarded as symbolical of the slaughter of the youth by the fire-god Mars. In one of these gardens Adonis was found again, whence the fable says he was slain by the boar in the lettuce (*ἀφάκη* = *Aphaca*?), and was there found by Aphrodite. The finding again

(*εὐρεσις*) was the commencement of a wake, accompanied by all the usages which in the East attend such a ceremony—prostitution, cutting off the hair (comp. Lev. xix. 28, 29, xi. 5; Dent. xiv. 1), cutting the breast with knives (Jer. xvi. 6), and playing on pipes (comp. Matt. ix. 23). The image of Adonis was then washed and anointed with spices, placed in a coffin on a bier, and the wound made by the boar was shown on the figure. The people sat on the ground round the bier, with their clothes rent (comp. *Ep. of Jer.* 31, 32), and the women howled and cried aloud. The whole terminated with a sacrifice for the dead, and the burial of the figure of Adonis (see Movers, *Phoenizier*, i. c. 7). According to Lucian, some of the inhabitants of Byblos maintained that the Egyptian Osiris was buried among them, and that the mourning and orgies were in honour of him, and not of Adonis (*De Dea Syra*, §7). This is in accordance with the legend of Osiris as told by Plutarch (*De Is. et Os.*). Lucian further relates that, on the same day on which the women of Byblos every year mourned for Adonis, the inhabitants of Alexandria sent them a letter, enclosed in a vessel which was wrapped in rushes or papyrus, announcing that Adonis was found. The vessel was cast into the sea, and carried by the current to Byblos (Procopius on Is. xviii.). It is called by Lucian *βυσάλιον νεφέλην*, and is said to have traversed the distances between Alexandria and Byblos in seven days. Another marvel related by the same narrator is that of the river Adonis (*Nahr Ibrahim*), which flows down from the Lebanon, and once a year was tinged with blood, which, according to the legend, came from the wounds of Adonis (comp. Milton, *P. L.* i. 460); but a rationalist of Byblos gave him a different explanation, how that the soil of the Lebanon was naturally very red-coloured, and was carried down into the river by violent winds, and so gave a bloody tinge to the water; and to this day, says Mr. Porter (*Handb.* p. 187), "after every storm that breaks upon the brow of Lebanon, the Adonis still 'runs purple to the sea.' The rushing waters tear from the banks red soil enough to give them a ruddy tinge, which poetical fancy, aided by popular credulity, converted into the blood of Tammuz."

The time at which these rites of Adonis were celebrated is a subject of much dispute. It is not so important with regard to the passage in Ezekiel, for there does not appear to be any reason for supposing that the time of the prophet's vision was coincident with the time at which Tammuz was worshipped. Movers, who maintained the contrary, endeavoured to prove that the celebration was in the late autumn, the end of the Syrian year, and corresponded with the time of the autumnal equinox. He relies chiefly for his conclusion on the account given by Ammianus Marcellinus (xxii. 9, §13) of the feast of Adonis, which was being held at Antioch when the Emperor Julian entered the city. It is clear, from a letter of the Emperor's (*Ep. Jul.* 52), that he was in Antioch before the first of August, and his entry may therefore have taken place in July, the Tammuz of the Syrian year. This time agrees moreover with the explanation of the symbolical meaning of the rites given by Ammianus Marcellinus (xxii. 9, §15),

⁴ There was a temple at Amathus, in Cyprus, shared by Adonis and Aphrodite (Paus. ix. 41, §2); and the worship of Adonis is said to have come from Cyprus to Athens

in the time of the Persian War.

* Said to have been founded by Klugmas, the rejected father of Adonis.

that they were a token of the fruits cut down in their prime. Now at Aleppo (Itusell, *Aleppo*, i. 72) the harvest is all over before the end of June, and we may fairly conclude that the same was the case at Antioch. Add to this that in Hebrew astronomical works תְּקֻפַּת תַּמְּזִיז *tékphath Tammáz* is the "summer solstice," and it seems more reasonable to conclude that the Adonia feast of the Phoenicians and Syrians was celebrated rather as the summer solstice than as the autumnal equinox. At this time the sun begins to descend among the wintry signs (Kenrick, *Phoenicia*, 310).

The identification of Tammuz with an idolatrous prophet, which has already been given in a quotation from Maimonides, who himself quotes from the *Agriculture of the Nabatheans*, has been recently revived by Prof. Chwolson of St. Petersburg (*Ueber Tammuz*, &c. 1860). An Arab writer of the 10th century, En-Nedim, in his book called *Fihrist el-'Ulüm*, says (quoting from Abü Sa'id Wahb ben Ibrahim) that in the middle of the month Tammuz a feast is held in honour of the god Tâ'üz. The women bewailed him because his lord slew him and ground his bones in a mill, and scattered them to the winds. In consequence of this the women ate nothing during the feast that had been ground in a mill (Chwolson, *Die Ssabier*, &c. ii. 27). Prof. Chwolson regards Tâ'üz as a corruption of Tammuz; but the most important passage in his eyes is from the old Babylonian book called the *Agriculture of the Nabatheans*, to which he attributes a fabulous antiquity. It was written, he maintains, by one Qût'âml, towards the end of the 14th century B.C., and was translated into Arabic by a descendant of the ancient Chaldeans, whose name was Ibn Washiyyah. As Professor Chwolson's theory has been strongly attacked, and as the chief materials upon which it is founded are not yet before the public, it would be equally premature to take him as an authority, or to pronounce positively against his hypothesis, though, judging from present evidence, the writer of this article is more than sceptical as to its truth. Qût'âml then, in that dim antiquity from which he speaks to us, tells the same story of the prophet Tammuz as has already been given in the quotation from Kimchi. It was read in the temples after prayers, to an audience who wept and wailed; and so great was the magic influence of the tale that Qût'âml himself, though incredulous of its truth, was unable to restrain his tears. A part, he thought, might be true, but it referred to an event so far removed by time from the age in which he lived that he was compelled to be sceptical on many points. His translator, Ibn Washiyyah, adds that Tammuz belonged neither to the Chaldeans nor to the Canaanites, nor to the Hebrews, nor to the Assyrians, but to the ancient people of Janbân. This last, Chwolson conjectures, may be the Shemitic name given to the gigantic Cushite aborigines of Chalden, whom the Shemitic Nabatheans found when they first came into the country, and from whom they adopted certain elements of their worship. Thus Tammûz, or Tammûzi, belongs to a religious epoch in Babylonia which preceded the Shemitic (Chwolson, *Ueberreste d. Altbabyl.* Lf. p. 19). Ibn Washiyyah says moreover that all the Sabians of his time, both those of Babylonia and of Harran, wept and wailed for Tammuz in the month which was named after him, but that none of them preserved any tradition of the origin of the worship. This fact alone appears to militate strongly

against the truth of Ibn Washiyyah's story as to the manner in which he discovered the works he professed to translate. It has been due to Professor Chwolson's reputation to give in brief the substance of his explanation of Tammuz; but it must be confessed that he throws little light upon the obscurity of the subject.

In the Targum of Jonathan on Gen. viii. 5, "the tenth month" is translated "the month Tammuz." According to Castell (*Lex. Hept.*), *tamáz* is used in Arabic to denote "the heat of summer;" and *Tamâzi* is the name given to the Pharaoh who cruelly treated the Israelites. [W. A. W.]

TANACH (תַּנַּח): *ḥ Tanach*; Alex. *ḥ Tanach*: *Thanach*). A slight variation, in the vowel-points alone, of the name **TAMNACH**. It occurs in Josh. xxi. 25 only. [G.]

TANHUMETH (תַּנְחֻמֶּת): *Tanhumeth*, *Tanhumeth*; Alex. *Tanhumeth* in 2 K.: *Tanhumeth*). The father of Sennah in the time of Gedaliah (2 K. xiv. 23; Jer. xl. 8). In the former passage he is called "the Netophathite," but a reference to the parallel narrative of Jeremiah will show that some words have dropped out of the text.

TANIS (תַּנִּיִּס), Jud. i. 10. [ZOAN.]

TAPHATH (תַּפַּחַת; *Tephath*; Alex. *Taphath*: *Tapheth*). The daughter of Solomon, who was married to Ben-Abinadab, one of the king's twelve commissariat officers (1 K. iv. 11).

TAPHON (תַּפּוֹן; Joseph. *Taphon* or *Taphon*: *Thopo*: Syr. *Tifon*). One of the cities in Judaea fortified by Bacchides (1 Mac. ix. 50). It is probably the BETH-TAPPUAH of the Old Test which lay near Hebron. The form given by Josephus suggests Tekoa, but Grimm (*Exeg. Handbuch*) has pointed out that his equivalent for that name is *Θεωα*; and there is besides too much unanimity among the Versions to allow of its being accepted. [G.]

TAPPU'AH (תַּפּוּאָה; LXX. omits in both MSS.: *Tapphuah*). 1. A city of Judah, in the district of the Shefelah, or lowland (Josh. xv. 34). It is a member of the group which contains Zorah, Zanoah, and Jarmuth; and was therefore no doubt situated on the lower slopes of the mountains of the N.W. portion of Judah, about 12 miles W. of Jerusalem, where these places have all been identified with tolerable probability. It is remarkable that the name should be omitted in both MSS. of the LXX. The Syriac Peshito has Pathuch, which, when connected with the Enam that follows it in the list, recalls the *Pathuch-enayim* of Gen. xxi. 14, long a vexed place with the commentators. [See ENAM, 549 b.] Neither Tappuah nor Pathuch have however been encountered. This Tappuah must not be confounded either with the Beth-Tappuah near Hebron, or with the Land of Tappuah in the territory of Ephraim. It is uncertain which of the three is named in the list of the thirty-one kings in Josh. xii.

2. (Τάπου, Θάφου; Alex. Εφφου, Θάφου: *Tapphuah*). A place on the boundary of the "children of Joseph" (Josh. xvi. 8, xvii. 8). Its full name was probably En-tappuah (xvii. 7), and it had attached to it a district called the Land of

* It is probable that the *φ* is the sign of the accusative case. Jericho, Emmaus, and Bethel, in the same form again, are certainly in the accusative.

Tappuah (xvii. 8). This document is evidently in so imperfect or confused a state that it is impossible to ascertain from it the situation of the places it names, especially as comparatively few of them have been yet met with on the ground. But from the apparent connexion between Tappuah and the Nachal Kanah, it seems natural to look for the former somewhere to the S.W. of Nablus, in the neighbourhood of the Wady Falaik, the most likely claimant for the Kanah. We must await further investigation in this hitherto unexplored region before attempting to form any conclusion. [G.]

TAPPU'AH (תַּפּוּאָה: *Θαπούς*; Alex. *Θαφφου*: *Thaphphu*). One of the sons of Hebron, of the tribe of Judah (1 Chr. ii. 43). It is doubtless the same as BETH-TAPPUAH, Dow *Tefu'a*, near Hebron; and the meaning of the record is that Tappuah was colonized by the men of Hebron. [G.]

TAPPU'AH, THE LAND OF (תְּרֶמֶת תַּפּוּאָה: Vat. omits; Alex. *ἡ γῆ Θαφφου*: *terra Thaphphuae*). A district named in the specification of the boundary between Ephraim and Manasseh (Josh. xvii. 8). It apparently lay near the torrent Kanah (probably the Wady Falaik), but the name has not yet been met with at all in the central district of Palestine. [G.]

TARAH (תָּרַח: *Tarph*: Nuni. xxiii. 27). A desert-station of the Israelites between Tahath and Mithcah, not yet identified with any known site. [H. H.]

TAR'ALAH (תָּרְאֵלָה: *Θαρσάλα*; Alex. *Θαρσάλα*: *Thurala*). One of the towns in the allotment of Benjamin (Josh. xviii. 27 only). It is named between Irpeel and Zelah; but nothing certain is known of the position of either of those places, and no name at all resembling Taralah has yet been discovered. Schwart's identification (with "Thaniel" *Danial*), near Lydd, is far-fetched in etymology, and unsuitable as to position; for there is nothing to lead to the conclusion that the Benjamites had extended themselves so far to the west when the lists of Joshua were drawn up. [G.]

TARE'A (תָּרְעָא: *Θαρέχ*; Alex. *Θαρέ*: *Tharaa*). The same as Tahren, the son of Micah (1 Chr. vii. 35), the Hebrew letters ת and ר being interchanged, a phenomenon of rare occurrence (Gesen. *Thes.* p. 2).

TARES (ζιζάνια: *zizania*). There can be little doubt that the ζιζάνια of the parable (Matt. xiii. 25) denote the weed called "darnel" (*Lolium temulentum*), a widely distributed grass, and the only species of the order that has deleterious properties. The word used by the Evangelist is an Oriental, and not a Greek term. It is the Arabic

zawdn (زَوْدَن), and the *zōdn* (זוֹדֵן) of the Talmud (Buxtorf, *Lex. Talm.* s. v.). The derivation of the Arabic word, from *zdn* (زَدَن),

"nausea," is well suited to the character of the plant, the grains of which produce vomiting and purging, convulsions, and even death. Volney (*Trav.* ii. 306) experienced the ill effects of eating its seeds; and "the whole of the inmates of the

* The principal valley of the town of Hebron is called Wady Tuffah (Map to Rosen's paper in *Zeitsch. D. M. G.* xli. and p. 481)

Sheffield workhouse were attacked some years ago with symptoms supposed to be produced by their oatmeal having been accidentally adulterated with *lolium*" (*Engl. Cyc.* s. v. *Lolium*). The darnel before it comes into ear is very similar in appearance to wheat; hence the command that the *zizania* should be left to the harvest, lest while men plucked up the tares "they should root up also the wheat with them." Prof. Stanley, however (*S. and P.* p. 426), speaks of women and children picking out from the wheat in the corn-fields of Samaria the tall green stalks, still called by the Arabs *zawdn*. "These stalks," he continues, "if sown designedly throughout the fields, would be inseparable from the wheat, from which, even when growing naturally and by chance, they are at first sight hardly distinguishable." See also Thomson (*The Land and the Book*, p. 420):—"The grain is just in the proper stage to illustrate the parable. In those parts where the grain has headed out, the tares have done the same, and then a child cannot mistake them for wheat or barley; but where both are less developed, the closest scrutiny will often fail to detect them. Even the farmers, who in this country generally weed their fields, do not attempt to separate the one from the other." The grain-growers in Palestine believe that the *zawdn* is merely a degenerate wheat; that in wet seasons the wheat turns to tares. Dr. Thomson asserts that this is their fixed opinion. It is curious to observe the retention of the fallacy through many ages. "Wheat and *zunia*," says Lightfoot (*Hor. Heb.* on Matt. xiii. 25), quoting from the Talmud, "are not seeds of different kinds." See also Buxtorf (*Lex. Talm.* s. v. זָוֵדֵן):—"Zizania, species tritici degeneris, sic dicti, quod scortando cum bono tritico, in pejorem datum degenerat." The Roman writers appear to have entertained a similar opinion with respect to some of the cereals: thus Pliny (*N. H.* xviii. 17), borrowing probably from Theophrastus, asserts that "barley will degenerate into the oat." The notion that the *zizania* of the parable are merely diseased or degenerate wheat has been defended by P. Brederod (see his letter to Schultetus in *Exercit. Evang.* ii. cap. 65), and strangely adopted by Trench, who (*Notes on the Parables*, p. 91, 4th ed.) regards the distinction of these two plants to be "a falsely assumed fact." If the *zizania* of the parable denote the *Lolium temulentum*, and there cannot be any reasonable doubt about it, the plants are certainly distinct, and the *L. temulentum* has as much right to specific distinction as any other kind of grass. [W. H.]

TARGUMS. [VERSIONS, CHALDEE.]

TARPELITES, THE (תַּרְפְּלִיטִים: *Tarphalaitai*; Alex. *Tarphallaitai*: *Tharphalaitai*). A race of colonists who were planted in the cities of Samaria after the captivity of the northern kingdom of Israel (Ezr. iv. 9). They have not been identified with any certainty. Junius and others have found a kind of resemblance in name to the Tarpeletes in the Tapyri (*Taroupoi*) of Ptolemy (vi. 2, §6), a tribe of Media who dwelt eastward of Elymais, but the resemblance is scarcely more than apparent. They are called by Strabo *Taroupoi* (xi. 514, 515, 520, 523). Others, with as little probability, have sought to recognise the Tarpeletes in the Tarpetes (*Tarpetes*, Strab. xi. 495), a Maeotic race. In the Peshito-Syriac the resemblance is greater, for they are there called *Tarphyl*. First (*Handb.*)

says in no case can *Turpel*, the country of the Tarpeites, be the Phoenician *Tripolis*. [W. A. W.]

TARSHISH (תַּרְשִׁישׁ): *Θαρσις*: *Tharsis*;

Gen. x. 4). 1. Probably Tartessus; Gr. *Ταρτησσός*. A city and emporium of the Phoenicians in the south of Spain. In Psalm lxxiii. 10, it seems applied to a large district of country; perhaps, to that portion of Spain which was known to the Hebrews when that Psalm was written. And the word may have been likewise used in this sense in Gen. x. 4, where Knobel (*Volkertafel der Genesis*, Giessem, 1850, *ad loc.*) applies it to the Tuscans, though he agrees with nearly all biblical critics in regarding it elsewhere as synonymous with Tartessus. The etymology is uncertain.

With three exceptions in the Book of Chronicles, which will be noticed separately (see below, No. 2), the following are references to all the passages in the Old Testament, in which the word "Tarshish" occurs; commencing with the passage in the Book of Jonah, which shows that it was accessible from Yaphô, Yafa, or Joppa, a city of Palestine with a well-known harbour on the Mediterranean Sea (Jon. i. 3, iv. 2; Gen. x. 4; 1 Chr. i. 7; Is. ii. 16, xxiii. 1, 6, 10, 14, lx. 9, lvi. 19; Jer. x. 9; Ez. xxvii. 12, 25, xxxvii. 13; 1 K. x. 22, xxii. 48 [49]; Ps. xlviii. 8, lxvii. 10). On a review of these passages, it will be seen that not one of them furnishes direct proof that Tarshish and Tartessus were the same cities. But their identity is rendered highly probable by the following circumstances. 1st. There is a very close similarity of name between them, Tartessus being merely Tarshish in the Aramaic form, as was first pointed out by Bochart (*Phaleg*, lib. iii. cap. 7). Thus the Hebrew word *Ashshûr* = Assyria, is in the Aramaic form *Attûr*, *Attûr* and in Greek *Ἀρούρα* (Strabo, xvi. 1, 2), and *Ἀρούρα* (Dion Cass., lxxviii. 26)—though, as is well known, the ordinary Greek form was *Ἀσσυρία*. Again, the Hebrew word *Bathan*, translated in the same form in the A. V. of the Old Testament, is *Bathan* or *Bathnan* in Aramaic, and *Batanaea* in Greek; whence also *Batanaea* in Latin (see Buxtorfii *Lexicon Chaldaicum Talmudicum et Rabbinicum*, s. vv.). Moreover, there are numerous changes of the same kind in common words; such as the Aramaic numeral 8, *tamnei*, which corresponds with the Hebrew word *shemoneh*; and *teku*, the Aramaic word for "snow," which is the same word as the Hebrew *shaleg* (see Gesenius, *Thesaurus*, p. 1344). And it is likely that in some way which cannot now be explained, the Greeks received the word "Tarshish" from the Phoenicians in a partly Aramaic form, just as they received in that form many Hebrew letters of the alphabet. The last *sh* of Tarshish* would naturally be represented by the double *s* in the Greek ending, as the sound and letter *sh* was unknown to the Greek language. [SHIRPOLETH.] 2ndly. There seems to have been a special relation between Tarshish and Tyre, as there was at one time between Tartessus and the Phoenicians. In the 23rd chapter of Isaiah, there is something like an appeal to Tarshish to assert its independence (see the notes of Rosenmüller, Gesenius, and Ewald, on verse 18). And Arrian (*De Exped. Alexandri*, ii. 16, §3) expressly states that Tutessus was founded or colonized by the Phoeni-

cians, saying—*Φοινίκων κτίσμα ἡ Ταρτησσός*. It has been suggested that this is a mistake on the part of Arrian, because Diodorus (xiv. 14) represents Hamilcar as defeating the Iberians and Tartessians, which has been thought to imply that the latter were not Phoenicians. But it is to be remembered that there was a river in Hispania Baetica called Tartessus, as well as a city of that name (Strabo, iii. p. 148), and it may easily have been the case that tribes which dwelt on its banks may have been called Tartessians, and may have been mentioned under this name, as defeated by Hamilcar. Still, this would be perfectly compatible with the fact, that the Phoenicians established there a factory or settlement called Tartessus, which had dominion for a while over the adjacent territory. It is to be borne in mind likewise, that Arrian, who must be pronounced on the whole to be a judicious writer, had access to the writings of Menander of Ephesus, who translated some of the Tyrian archives into Greek (Joseph. *Ant.* ix. 14, §2), and it may be presumed Arrian consulted those writings, when he undertook to give some account of Tyre, in reference to its celebrated siege by Alexander, in connexion with which he makes his statement respecting Tartessus.

3rdly. The articles which Tarshish is stated by the prophet Ezekiel to have supplied to Tyre, are precisely such as we know through classical writers to have been productions of the Spanish Peninsula. Ezekiel specifies silver, iron, lead, and tin (Ez. xxvii. 12), and in regard to each of these metals as connected with Spain, there are the following authorities. As to silver, Diodorus says (v. 35), speaking of Spain possessing this metal in the greatest abundance and of the greatest beauty (*αργέον τι πλεονεχον καὶ κάλλιστον*), and he particularly mentions that the Phoenicians made a great profit by this metal, and established colonies in Spain on its account, at a time when the mode of working it was unknown to the natives (comp. Aristot. *de Mirabil.* c. 135, 87). This is confirmed by Pliny, who says (*Nat. Hist.* xxxiii. 31), "Argentum reperiunt—in Hispaniâ pulcherrimum; id quoque in sterili solo, atque etiam montibus;" and he proceeds to say that wherever one vein has been found, another vein is found not far off. With regard to iron and lead, Pliny says, "metallis piceis, ferri, aeris, argenti, auri tota ferme Hispania acatet" (*Nat. Hist.* iii. 4). And as to lead, more especially, this is so true even at present, that a writer on Mines and Mining in the last edition of the *Encyc. Britannica*, p. 242, states as follows:—"Spain possesses numerous and valuable lead-mines. The most important are those of Linares, which are situated to the east of Bailen near the Sierra Morena. They have been long celebrated, and perhaps no known mineral field is naturally so rich in lead as this." And, lastly, in regard to tin, the trade of Tarshish in this metal is peculiarly significant, and taken in conjunction with similarity of name and other circumstances already mentioned, is remarkably conclusive as to its identity with Tartessus. For even now the countries in Europe, or on the shores of the Mediterranean Sea where tin is found are very few; and in reference to ancient times, it would be difficult to name any such countries except Iberia or Spain, Lusitania, which was some-

* It is unsafe to lay any stress on Tarselom (*Ταρσελόν*), which Stephanus of Byzantium says (s. v.) was a city near the Columns of Hercules. Stephanus was probably misled by a passage to which he refers in

Polybius, iii. 24. The *Ταρσελόν* of Polybius could scarcely have been very far from the *Polis* or *Pro-montorium* of Carthage.

what less in extent than Portugal, and Cornwall in Great Britain. Now if the Phoenicians, for purposes of trade, really made coasting voyages on the Atlantic Ocean as far as to Great Britain, no emporium was more favourably situated for such voyages than Tartessus. If, however, in accordance with the views of Sir G. Cornwall Lewis, it is deemed unlikely that Phoenician ships made such distant voyages (*Historical Survey of the Astronomy of the Ancients*, p. 455), it may be added, that it is improbable, and not to be admitted as a fact without distinct proof, that nearly 600 years before Christ, when Ezekiel wrote his prophecy against Tyre, they should have supplied the nations on the shores of the Mediterranean with British Tin obtained by the mouths of the Rhone. Diodorus indeed mentions, (v. 38), that in his time tin was imported into Gaul from Britain, and was then conveyed on horseback by traders across Gaul to Massilia, and the Roman colony of Narbo. But it would be a very different thing to assume that this was the case so many centuries earlier, when Rome, at that time a small and insignificant town, did not possess a foot of land in Gaul; and when, according to the received systems of chronology, the settlement of Massilia had only just been founded by the Phœceans. As countries then from which Tarshish was likely to obtain its tin, there remain only Lusitania and Spain. And in regard to both of these, the evidence of Pliny the Elder at a time when they were flourishing provinces of the Roman empire, remains on record to show that tin was found in each of them (*Hist. Nat.* xxiv. 47). After mentioning that there were two kinds of lead, viz. black lead, and white lead, the latter of which was called "Cassiteros" by the Greeks, and was fabulously reported to be obtained in islands of the Atlantic Sea, Pliny proceeds to say, "*Nunc certum est in Lusitania gigni, et in Gallia*;" and he goes on to describe where it is found, and the mode of extracting it (compare Pliny himself, iv. 34, and Diodorus, l. c., as to tin in Spain). It may be added that Strabo, on the authority of Poseidonius, had made previously a similar statement (iii. 147), though fully aware that in his time tin was likewise brought to the Mediterranean, through Gaul or Massilia, from the supposed Cassiterides or Tin Islands. Moreover, as confirming the statement of Strabo and Pliny, tin-mines now actually exist in Portugal; both in parts, which belonged to ancient Lusitania, and in a district which formed part of ancient Galicia.^b And it is to be borne in mind that Seville on the Guadalquivir, which has free communication with the sea, is only about 80 miles distant from the Portuguese frontier.

Subsequently when Tyre lost its independence, the relation between it and Tarshish was probably altered, and for a while, the exhortation of Isaiah xlii. 10, may have been realised by the inhabitants passing through their land, free as a river. This independence of Tarshish, combined with the overshadowing growth of the Carthaginian power, would explain why in after times the learned Jews do not seem to have known where Tarshish was. Thus, although in the Septuagint translation of the Pentateuch, the Hebrew word was as closely followed as it could be in Greek (*Θαρσῖς*, in which

the *θ* is merely *π* without a point, and *σ* is equivalent to *τ*, according to the pronunciation in modern Greek), the Septuagint translators of Isaiah and Ezekiel translate the word by "Carthage" and "the Carthaginians" (Is. xlii. 1, 10, 14; Ez. xxvii. 12, xxxviii. 13); and in the Targum of the Book of Kings and of Jeremiah, it is translated "Africa," as is pointed out by Gesenius (1 K. xlii. 48; Jer. x. 9). In one passage of the Septuagint (Is. ii. 16), and in others of the Targum, the word is translated *sea*; which receives apparently some countenance from Jerome, in a note on Is. ii. 16, wherein he states that the Hebrews believe that Tharsis is the name of the sea in their own language. And Josephus, misled, apparently, by the Septuagint translation of the Pentateuch, which he misinterpreted, regarded Tharsis as Tarsus in Cilicia (*Ant.* i. 6, §1), in which he was followed by other Jews, and (using Tarsus in the sense of all Cilicia) by one learned writer in modern times. See Hartmann's *Aufklärungen über Asien*, vol. i. p. 69, as quoted by Winer, s. v.

It tallies with the ignorance of the Jews respecting Tarshish, and helps to account for it, that in Strabo's time the emporium of Tartessus had long ceased to exist, and its precise site had become a subject of dispute. In the absence of positive proof, we may acquiesce in the statement of Strabo (iii. p. 148), that the river Baetis (now the Guadalquivir) was formerly called Tartessus, that the city Tartessus was situated between the two arms by which the river flowed into the sea, and that the adjoining country was called Tartessus. But there were two other cities which some deemed to have been Tartessus; one, Gadir, or Gadir (Cadix) (Sallust, *Fragm.* lib. ii.; Pliny, *Nat. Hist.* iv. 36, and Avienus, *Descript. Orb. Terr.* 614); and the other, Carteia, in the Bay of Gibraltar (Strabo, iii. p. 151; Ptolem., ii. 4; Pliny, iii. 3; Mela, ii. 6). Of the three, Carteia, which has found a learned supporter at the present day (Kersch and Gruber's *Encyclopædie*, s. v.), seems to have the weakest claims, for in the earliest Greek prose work extant, Tartessus is placed beyond the columns of Hercules (Herodotus, iv. 152); and in a still earlier fragment of Stesichorus (Strabo, iii. p. 148), mention is made of the river Tartessus, whereas there is no stream near Carteia (= El Roccadillo) which deserves to be called more than a rivulet. Strictly speaking, the same objection would apply to Gadir; but, for poetical uses, the Guadalquivir, which is only 20 miles distant, would be sufficiently near. It was, perhaps, in reference to the claim of Gadir that Cicero, in a letter to Atticus (vii. 8), loosely calls Balbus, a native of that town, "*Tartessium istum*." But Tartessus was, likewise, used by poets to express the extreme west where the sun set (Ovid, *Metam.* xiv. 416; Silius Italicus, x. 358; compare Sil. Ital., iii. 399).

Literature.—For Tarshish, see Bochart, *Phaleg*, lib. iii. cap. 7; Winer, *Biblisches Realwörterbuch*, s. v.; and Gesenius, *Thesaurus Ling. Hebr. et Chald.*, s. v. For Tartessus, see a learned Paper of Sir G. Cornwall Lewis, *Notes and Queries*, 2nd Series, vol. vii. p. 189-191.

2. If the Book of Chronicles is to be followed, there would seem to have been a Tarshish, accessible from the Red Sea, in addition to the Tarshish of the south of Spain. Thus, with regard to the ships of Tarshish, which Jehoshaphat caused to be constructed at Ezion Geber on the Aelanitic Gulf of the Red Sea (1 K. xlii. 48), it is said in the

^b Viz. in the provinces of Porto, Beira, and Braganza. Specimens were in the International Exhibition of 1882.

Chronicles (2 Chr. xx. 36) that they were made to go to Tarshish; and in like manner the navy of ships which Solomon had previously made in Ezion Geber (1 K. ix. 26., is said in the Chronicles (2 Chr. ix. 21) to have gone to Tarshish with the servants of Hiram. It is not to be supposed that the author of these passages in the Chronicles contemplated a voyage to Tarshish in the south of Spain by going round what has since been called the Cape of Good Hope. Sir G. Cornewall Lewis (*Notes and Queries*, 2nd series, vol. vi. 61-64, 81-83) has shown reasons to doubt whether the circumnavigation of Africa was ever effected by the Phœnicians, even in the celebrated voyage which Herodotus says (iv. 42) they made by Neco's orders; but at any rate it cannot be seriously supposed that, according to the Chronicles, this great voyage was regularly accomplished once in three years in the reign of Solomon. Keil supposes that the vessels built at Ezion Geber, as mentioned in 1 K. xxii. 49, 50, were really destined for the trade to Tarshish in Spain, but that they were intended to be transported across the isthmus of Suez, and to be launched in one of the havens of Palestine on the Mediterranean Sea. (See his *Notes ad locum*. Engl. Transl.) But this seems improbable; and the two alternatives from which selection should be made seem to be, 1st. That there were two emporia or districts called Tarshish, viz. one in the south of Spain, and one in the Indian Ocean; or, 2ndly, That the compiler of the Chronicles, misapprehending the expression "ships of Tarshish," supposed that they meant ships destined to go to Tarshish; whereas, although this was the original meaning, the words had come to signify large Phœnician ships, of a particular size and description, destined for long voyages, just as in English "East Indiaman" was a general name given to vessels, some of which were not intended to go to India at all. The first alternative was adopted by Bochart, *Phaleg*, lib. iii. c. 7, and has probably been the ordinary view of those who have perceived a difficulty in the passages of the Chronicles; but the second, which was first suggested by Vitrings, has been adopted by the acutest Biblical critics of our own time, such as De Wette, *Introduction to the Old Testament*, Parker's translation, Boston, 1843, p. 267, vol. ii.; Winer, *Biblisches Realwörterbuch*, s.v.; Gesenius, *Thesaurus Linguae Heb. et Chald.* s.v., and Ewald, *Geschichte des Volkes Israel*, vol. iii. 1st edit. p. 76; and is acknowledged by Movers, *Ueber die Chroniken*, 1834, 254, and Hävernick, *Spezielle Einleitung in das Alte Testament*, 1839, vol. ii. p. 237. This alternative is in itself by far the most probable, and ought not to occasion any surprise. The compiler of the Chronicles, who probably lived in the time of Alexander's successors, had the Book of Kings before him, and in copying its accounts, occasionally used later and more common words for words older and more unusual (De Wette, *l.c.* p. 266). It is probable that during the Persian domination Tartessus was independent (Herodotus i. 163; at any rate, when first visited by the Greeks, it appears to

* Sir Emerson Tennent has pointed out and translated a very instructive passage in Xenophon, *Aconom.* cap. viii., in which there is a detailed description of a large Phœnician vessel, τὸ μέγα πλοῖον τὸ φοινικαῖον. This seems to have struck Xenophon with the same kind of admiration which every one feels who becomes acquainted for the first time with the arrangements of an English man of war. See *Encyclop. Britannica*, 8th ed. s.v. "Tarshish."

have had its own kings. It is not, therefore, by any means unnatural that the old trad: of the Phœnicians with Tarshish had ceased to be understood; and the compiler of the Chronicles, when he read of "ships of Tarshish," presuming, as a matter of course, that they were destined for Tarshish, consulted, as he thought, the convenience of his readers by inserting the explanation as part of the text.

Although, however, the point to which the fleet of Solomon and Hiram went once in three years did not bear the name of Tarshish, the question here arises of what that point was, however it was called? And the reasonable answer seems to be India, or the Indian Islands. This is shown by the nature of the imports with which the fleet returned, which are specified as "gold, silver, ivory, apes, and peacocks" (1 K. x. 22). The gold might possibly have been obtained from Africa, or from Ophir in Arabia [OPHIR], and the ivory and the apes might likewise have been imported from Africa; but the peacocks point conclusively, not to Africa, but to India. One of the English translators of *Cuvier's Animal Kingdom*, London, 1829, vol. viii. p. 136, says, in reference to this bird: "It has long since been decided that India was the cradle of the peacock. It is in the countries of Southern Asia, and the vast Archipelago of the Eastern Ocean, that this bird appears to have fixed its dwelling, and to live in a state of freedom. All travellers who have visited these countries make mention of these birds. There are not encountered great numbers of them in the province of Guzerat; Tavernier throughout all India, and Payson in the neighbourhood of Calcutta. Labillardiere tells us that peacocks are common in the island of Java." To this may be added the statement of Sir William Jardine, *Naturalist's Library*, vol. xx. p. 147. There are only two species "known; both inhabit the continent and islands of India"—so that the mention of the peacock seems to exclude the possibility of the voyage having been to Africa. Mr. Crawford, indeed, in his excellent *Descriptive Dictionary of the Indian Islands*, p. 310, expresses an opinion that the birds are more likely to have been parrots than peacocks; and he objects to the peacock, that, independent of its great size, it is a delicate constitution, which would make it nearly impossible to convey it in small vessels and by a long sea voyage. It is proper, however, to mention, on the authority of Mr. Gould, whose splendid works on birds are so well known, that the peacock is by no means a bird of delicate constitution, and that it would bear a sea voyage very well. Mr. Gould observes that it might be easily fed during a long voyage, as it lives on grain; and that it would merely have been necessary, in order to keep it in a cage, to have cut off its train; which, it is to be observed, falls off of itself and is naturally renewed once a year.

The inference to be drawn from the importation of peacocks is confirmed by the Hebrew name for the ape and the peacock. Neither of these names is of Hebrew, or even Shemitic, origin; and each points to India.* Thus the Hebrew word for ape is

* The word "shenhabblim" = ivory, is likewise usually regarded as of Indian origin, "ibba" being in Sanscrit, "elephant." But "shenhabblim," or "shenhablim," as the word would be without points, is nowhere used for ivory except in connection with this voyage, the usual word for ivory being shen by itself. The conjecture of Röddiger in Gesenius's *Thesaurus*, s.v. is very probable that the correct reading is שֵׁן הַבָּלִים¹ ivory (and) shen-

Képh, while the Sanscrit word is *kapi* (see Gesenius and Fürst, s. v., and Max Müller, *On the Science of Language*, p. 190). Again, the Hebrew word for peacock is *tukki*, which cannot be explained in Hebrew, but is akin to *tôka* in the Tamil language, in which it is likewise capable of explanation. Thus, the Rev. Dr. R. Caldwell, than whom there is no greater authority on the Tamil language, writes as follows from Palamcottah, Madras, June 12, 1862.—“*Tôka*” is a well recognized Tamil word for peacock, though now used only in poetry. The Sanscrit *sikki* refers to the peculiar crest of the peacock, and means (*avis*) *cristata*; the Tamil *tôka* refers to the other and still more marked peculiarity of the peacock, its tail (i. e. its train), and means (*avis*) *caudata*. The Tamil *tôka* signifies, according to the dictionaries, ‘plumage, the peacock’s tail, the peacock, the end of a skirt, a flag, and, lastly, a woman’ (a comparison of gaily-dressed women with peacocks being implied). The explanation of all these meanings is, that *tôka* literally means that which hangs—a hanging. Hence *tôkhai*, another form of the same word in provincial use in Tamil (see also the *tôjai* of Rödiger in Gesenius’s *Theaurus*, p. 1502), means ‘skirt,’ and in Telugu, *tôka* means a tail.” It is to be observed, however, that, if there was any positive evidence of the voyage having been to Africa, the Indian origin of the Hebrew name for ape and peacock would not be of much weight, as it cannot be proved that the Hebrews first became acquainted with the name of these animals through Solomon’s naval expeditions from Ezion Geber. Still, this Indian origin of those names must be regarded as important in the absence of any evidence in favour of Africa, and in conjunction with the fact that the peacock is an Indian and not an African bird.

It is only to be added, that there are not sufficient data for determining what were the ports in India or the Indian Islands which were reached by the fleet of Hiram and Solomon. Sir Emerson Tennent has made a suggestion of *Point de Galle*, in Ceylon, on the ground that from three centuries before the Christian era there is one unbroken chain of evidence down to the present time, to prove that it was the grand emporium for the commerce of all nations east of the Red Sea. [See article TARSHISH, above.] But however reasonable this suggestion may be, it can only be received as a pure conjecture, inasmuch as there is no evidence that any emporium at all was in existence at the *Point de Galle* 700 years earlier. It can scarcely be doubted that there will always henceforth be an emporium at Singapore; and it might seem a spot marked out by nature for the commerce of nations; yet we know how fallacious it would be, under any circumstances, to argue 2000 years hence that it must have been a great emporium in the twelfth century, or even previous to the nineteenth century, of the Christian era. [E. T.]

TAR'SUS (*Taparús*). The chief town of CILICIA, “oo mean city” in other respects, but illustrious to all time as the birthplace and early residence of the Apostle Paul (Acts ix. 11, xxi. 39, xxii. 3). It is simply in this point of view that the place is

mentioned in the three passages just referred to. And the only other passages in which the name occurs are Acts ix. 30 and xi. 25, which give the limits of that residence in his native town which succeeded the first visit to Jerusalem after his conversion, and preceded his active ministerial work at Antioch and elsewhere (compare Acts xxii. 21 and Gal. i. 21). Though Tarsus, however, is not actually mentioned elsewhere, there is little doubt that St. Paul was there at the beginning of his second and third missionary journeys (Acts xv. 41, xviii. 23).

Even in the flourishing period of Greek history it was a city of some considerable consequence (Xen. *Anab.* i. 2, §23). After Alexander’s conquests had swept this way (Q. Curt. iii. 5), and the Seleucid kingdom was established at Antioch, Tarsus usually belonged to that kingdom, though for a time it was under the Ptolemies. In the Civil Wars of Rome it took Caesar’s side, and on the occasion of a visit from him had its name changed to Juliopolis (Caes. *Bell. Alex.* 66; Dion Cass. xlvii. 26). Augustus made it a “free city.” We are not to suppose that St. Paul had, or could have, his Roman citizenship from this circumstance, nor would it be necessary to mention this, but that many respectable commentators have fallen into this error. We ought to note, on the other hand, the circumstances in the social state of Tarsus, which had, or may be conceived to have had, an influence on the Apostle’s training and character. It was renowned as a place of education under the early Roman emperors. Strabo compares it in this respect to Athens and Alexandria, giving, as regards the seal for learning showed by the residents, the preference to Tarsus (xiv. 673). Some eminent Stoics resided here, among others Athenodorus, the tutor of Augustus, and Nestor, the tutor of Tiberius. Tarsus also was a place of much commerce, and St. Basil describes it as a point of union for Syrians, Cilicians, Isaurians, and Cappadocians (Basil, *Ep. Euseb. Samos. Episc.*).

Tarsus was situated in a wide and fertile plain on the banks of the Cydnus, the waters of which are famous for the dangerous fever caught by Alexander when bathing, and for the meeting of Antony and Cleopatra. This part of Cilicia was intersected in Roman times by good roads, especially one crossing the Taurus northwards by the “Cilician Gates” to the neighbourhood of Lystra and Iconium, the other joining Tarsus with Antioch, and passing eastwards by the “Amanian” and “Syrian Gates.” No ruins of any importance remain. The following

Coin of Tarsus.

—when habited, which is remarkably confirmed by a passage in Ezekiel (xxvii. 15), where he speaks of the men of Dedan having brought to Tyre barks of ivory and ebony, שֵׁן וְהַבְּנִיִּים.

• The Greeks received the peacock through the Persians, as is shown by the Greek name *tadē*, *ταδης*.

which is nearly identical with the Persian name *tadē*, *طاووس*. The fact that the peacock is mentioned for the first time in Aristophanes, *Aves*, 102, 260 (being unknown to the Homeric Poems) agrees with this Persian origin.

authorities may be consulted:—Bélley in vol. xxvii. of the *Académie des Inscriptions*; Beaufort's *Armenia*, p. 275; Leake's *Asia Minor*, p. 214; Barker's *Lares and Penates*, pp. 31, 173, 187. [J. S. H.]

TARTAK (תַּרְתָּק: *Ṭarṭak*: *Tharthak*). One of the gods of the Avite, or Avrite, colonists who were planted in the cities of Samaria after the removal of the tribes by Shalmaneser (2 K. xvii. 31). According to Rabbinical tradition, Tartak is said to have been worshipped under the form of an ass (Talm. Babil. *Sanhedrin*, fol. 63b). From this it has been conjectured that this idol was the Egyptian Typho, but though in the hieroglyphics the ass is the symbol of Typho, it was so far from being regarded as an object of worship, that it was considered absolutely unclean (Plut. *Is. et Os.* c. 14). A Persian or Pehlvi origin has been suggested for Tartak, according to which it signifies either "intense darkness," or "hero of darkness," or the underworld, and so perhaps some planet of ill-luck as Saturn or Mars (Gesen. *Thes.*; Fürst, *Handb.*). The Carmanians, a warlike race on the Persian Gulf, worshipped Mars alone of all the gods, and sacrificed an ass in his honour (Strabo, xv. p. 727). Perhaps some trace of this worship may have given rise to the Jewish tradition. [W. A. W.]

TARTAN (תַּרְתָּן: *Ṭarṭan*, or *Ṭarṭan*: *Tharthan*), which occurs only in 2 K. xviii. 17, and Is. xx. 1, has been generally regarded as a proper name. (Gesen. *Lex. Heb.* s. v.; Winer, *Realwörterbuch*; Kitto, *Bibl. Cyclopaed.*, &c.) Winer assumes, on account of the identity of name, that the same person is intended in the two places. Kitto, with more caution, notes that this is uncertain. Recent discoveries make it probable that in Tartan, as in Rabearis and Rabahakeh, we have not a proper name at all, but a title or official designation, like Pharaoh or Sorena.^a The Assyrian *Tartan* is a general, or commander-in-chief. It seems as if the Greek translator of 2 Kings had an inkling of the truth, and therefore prefixed the article to all three names (ἀνέστειλε βασιλεὺς Ἀσσυρίων τὸν Ṭarṭan καὶ τὸν Ṭarṭan (?) καὶ τὸν Ṭarṭan πρὸς τὸν βασιλῆα Ἑσάκιον), which he very rarely prefixes to the names of persons where they are first mentioned.

If this be the true account of the term *Tartan*, we must understand in 2 K. xviii. 17, that Sennacherib sent "a general," together with his "chief eunuch" and "chief cup-bearer," on an embassy to Hezekiah, and in Is. xx. 1 that "a general"—probably a different person—was employed by Sargon against Ashdod, and succeeded in taking the city. [G. R.]

TATNAI (תַּתְנַי: *Ṭatnai*; Alex. *Ṭatnai*: *Thathnai*: Simonis, Gesenius, Fürst), Satrap (Ṭatnai) of the province west of the Euphrates in the time of Darius Hystaspis and Zerubbabel (Ezr. v. 3, 6, vi. 6, 13). [SHEATHAR-BOZNAI.] The name is thought to be Persian. [A. C. H.]

TAVERNS, THE THREE. [THREE TAVERNS.]

TAXES. In the history of Israel, as of other nations, the student who desires to form a just estimate of the social condition of the people must

take into account the taxes which they had to pay. According as these are light or heavy may vary the happiness and prosperity of a nation. To them, though lying in the background of history, may often be traced, as to the true motive-power, many political revolutions. Within the limits of the present article, it will not be possible to do more than indicate the extent and form of taxation in the several periods of Jewish history and its influence on the life of the people.

I. Under the Judges, according to the theocratic government contemplated by the law, the only payments obligatory upon the people as of permanent obligation were the TITHES, the FIRST FRUITS, the REDEMPTION-MONEY of the first-born, and other offerings as belonging to special occasions [PRIESTS]. The payment by each Israelite of the half-shekel as "atonement-money," for the service of the tabernacle, on taking the census of the people (Ex. xxx. 13), does not appear to have had the character of a recurring tax, but to have been supplementary to the free-will offerings of Ex. xxv. 1-7, levied for the one purpose of the construction of the sacred tent. In later times, indeed, after the return from Babylon, there was an annual payment for maintaining the fabric and services of the Temple; but the fact that this begins by the voluntary compact to pay one-third of a shekel (Neb. x. 32) shows that till then there was no such payment recognised as necessary. A little later the third became a half, and under the name of the *didrachma* (Matt. xvii. 24) was paid by every Jew, in whatever part of the world he might be living (Jos. Ant. xviii. 9, §1). Large sums were thus collected in Babylon and other eastern cities, and were sent to Jerusalem under a special escort (Jos. Ant. l. c.; Cic. pro Flacc. c. 28). We have no trace of any further taxation than this during the period of the Judges. It was not in itself heavy: it was lightened by the feeling that it was paid as a religious act. In return for it the people secured the celebration of their worship, and the presence among them of a body of men acting more or less efficiently as priests, judges, teachers, perhaps also as physicians. [PRIESTS.] We cannot wonder that the people should afterwards look back to the good old days when they had been so lightly burdened.

II. The kingdom, with its centralised government and greater magnificence, involved, of course, a larger expenditure, and therefore a heavier taxation. This may have come, during the long history of the monarchy, in many different forms, according to the financial necessities of the times. The chief burdens appear to have been: (1) A tithe of the produce both of the soil and of live stock, making, together with the ecclesiastical tithe, 20 per cent. on incomes of this nature (1 Sam. viii. 15, 17). (2) Forced military service for a month every year (1 Sam. viii. 12; 1 K. ix. 22; 1 Chr. xxvii. 1). (3) Gifts to the king, theoretically free, like the old Benevolences of English taxation, but expected as a thing of course, at the commencement of a reign (1 Sam. x. 27 or in time of war (comp. the gifts of Jesse, 1 Sam. xvi. 20, xvii. 18). In the case of subject princes the gifts, still made in kind, armour, horses, gold, silver, &c., appear to have been regularly assessed

^a Sorena, the Parthian term for "a general," was often mistaken for a proper name by the classical writers. (Strab. xvi. 1 §23; Appian, *Bell. Parth.* p. 140; Dion

Cass. xl. 16; Plot. *Cruas.* p. 561, E, &c.) *Tatnai* is the first author who seems to be aware that it is a title (*Ann.* vi. 48).

(1 K. x. 25; 2 Chr. ix. 24) Whether this was over the case with the presents from Israelite subjects must remain uncertain. (4) Import duties, chiefly on the produce of the spice districts of Arabia (1 K. x. 15). (5) The monopoly of certain branches of commerce, as, for example, that of gold (1 K. ix. 28, xii. 48), fine linen or byssus from Egypt (1 K. x. 28), and horses (ib. ver. 29). (6) The appropriation to the king's use of the early crop of hay (Am. vii. 1). This may, however, have been peculiar to the northern kingdom or occasioned by a special emergency (Ewald, *Propä.* in loc.).^a

It is obvious that burdens such as these, coming upon a people previously unaccustomed to them, must have been almost intolerable. Even under Saul exemption from taxes is looked on as a sufficient reward for great military services (1 Sam. xvii. 25). Under the outward splendour and prosperity of the reign of Solomon there lay the deep discontent of an over-taxed people, and it contributed largely to the revolution that followed. The people complain not of Solomon's idolatry but of their taxes (1 K. xii. 4). Of all the king's officers he whom they hate most is ADORAM or ADONIRAM, who was "over the tribute" (1 K. xii. 18). At times, too, in the history of both the kingdoms there were special burdens. A tribute of 50 shekels a head had to be paid by Menahem to the Assyrian king (2 K. xv. 20), and under his successor Hoshea, this assumed the form of an annual tribute (2 K. xvii. 4; amount not stated). After the defeat of Josiah by Pharaoh-Necho, in like manner a heavy income-tax had to be imposed on the kingdom of Judah to pay the tribute demanded by Egypt (2 K. xxiii. 35), and the change of masters consequent on the battle of Carchemish brought in this respect no improvement (Jos. *Ant.* x. 9, §1-3).

III. Under the Persian empire, the taxes paid by the Jews were, in their broad outlines, the same in kind as those of other subject races. The financial system which gained for Darius Hystaspis the name of the "shopkeeper king" (καπηλός, Herod. iii. 89), involved the payment by each satrap of a fixed sum as the tribute due from his province (ibid.), and placed him accordingly in the position of a publicanus, or farmer of the revenue, exposed to all the temptation to extortion and tyranny inseparable from such a system. Here, accordingly, we get glimpses of taxes of many kinds. In Judaea, as in other provinces, the inhabitants had to provide in kind for the maintenance of the governor's household (comp. the case of Themistocles, Thuc. i. 138, and Herod. i. 192, ii. 88), besides a money-payment of 40 shekels a day (Neh. v. 14, 15). In Est. iv. 18, 20, vii. 24, we get a formal enumeration of the three great branches of the revenue. (1) The מַשְׁכָּן, fixed, measured payment, probably direct taxation (Grotius). (2) מַשְׁכָּן, the excise or octroi on articles of consumption (Ges. s. v.). (3) מַשְׁכָּן, probably the toll payable at bridges, fords, or certain stations on the high road. The influence of Ezra secured for the whole ecclesiastical order, from the priests down to the Nethinim, an immunity from all three (Est. vii. 24); but the burden

pressed heavily on the great body of the people, and they complained bitterly both of this and of the ἀργυρίων, or forced service, to which they and their cattle were liable (Neh. ix. 37). They were compelled to mortgage their vineyards and fields, borrowing money at 12 per cent., the interest being payable apparently either in money or in kind (Neh. v. 1-11). Failing payment, the creditors exercised the power (with or without the mitigation of the year of JUBILEE) of seizing the persons of the debtors and treating them as slaves (Neh. v. 5; comp. 2 K. iv. 1). Taxation was leading at Jerusalem to precisely the same evils as those which appeared from like causes in the early history of Rome. To this cause may probably be ascribed the incomplete payment of tithes or offerings at this period (Neh. xii. 10, 12; Mal. iii. 8), and the consequent necessity of a special poll-tax of the third part of a shekel for the services of the Temple (Neh. x. 32). What could be done to mitigate the evil was done by Nehemiah, but the taxes continued, and oppression and injustice marked the government of the province accordingly (Eccl. v. 8).^b

IV. Under the Egyptian and Syrian kings the taxes paid by the Jews became yet heavier. The "farming" system of finance was adopted in its worst form. The Persian governors had had to pay a fixed sum into the treasury. Now the taxes were put up to auction. The contract sum for those of Phoenicia, Judaea, Samaria, had been estimated at about 8000 talents. An unscrupulous adventurer (e.g. Joseph, under Ptolemy Evergetes) would bid double that sum, and would then go down to the province, and by violence and cruelty, like that of Turkish or Hindoo collectors, squeeze out a large margin of profit for himself (Jos. *Ant.* xii. 4, §1-5).

Under the Syrian kings we meet with an ingenious variety of taxation. Direct tribute (φόροι), an excise duty on salt, crown-taxes (στέφανοι, golden crowns, or their value, sent yearly to the king), one-half the produce of fruit trees, one-third that of corn land, a tax of some kind on cattle: these, as the heaviest burdens, are ostentatiously enumerated in the decrees of the two Demetriuses remitting them (1 Macc. x. 29, 30; xi. 35). Even after this, however, the golden crown and scarlet robe continue to be sent (1 Macc. xiii. 39). The proposal of the apostate Jason to farm the revenues at a rate above the average (460 talents, while Jonathan—1 Macc. xi. 28—pays 300 only), and to pay 150 talents more for a licence to open a circus (2 Macc. iv. 9), gives us a glimpse of another source of revenue. The exemption given by Antiochus to the priests and other ministers, with the deduction of one-third for all the residents in Jerusalem, was apparently only temporary (Jos. *Ant.* xii. 3, §3).

V. The pressure of Roman taxation, if not absolutely heavier, was probably more galling, as being more thorough and systematic, more distinctively a mark of bondage. The capture of Jerusalem by Pompey was followed immediately by the imposition of a tribute, and within a short time the sum thus taken from the resources of the country amounted to 10,000 talents (Jos. *Ant.* xiv. 4, §4, 5). The decrees of Julius Caesar showed

^a The history of the drought in the reign of Ahab (1 K. xviii. 5) shows that in such cases a power like this must have been essential to the support of the cavalry of

the royal army.

^b The later date of the book is assumed in this reference. Comp. ECCLESIASTES.

a characteristic desire to lighten the burdens that pressed upon the subjects of the republic. The tribute was not to be farmed. It was not to be levied at all in the Sabbatic year. One-fourth only was demanded in the year that followed (Jos. Ant. xiv. 10, §5, 6). The people, still under the government of Hyrcanus, were thus protected against their own rulers. The struggle of the republican party after the death of the Dictator brought fresh burdens upon the whole of Syria, and Cassius levied not less than 700 talents from Judaea alone. Under Herod, as might be expected from his lavish expenditure in public buildings, the taxation became heavier. Even in years of famine a portion of the produce of the soil was seized for the royal revenue (Jos. Ant. xv. 9, §1), and it was not till the discontent of the people became formidable that he ostentatiously diminished this by one-third (Jos. Ant. xv. 10, §4). It was no wonder that when Herod wished to found a new city in Trachonitis, and to attract a population of residents, he found that the most effective bait was to promise immunity from taxes (Jos. Ant. vii. 2, §1), or that on his death the people should be loud in their demands that Archelaus should release them from their burdens, complaining specially of the duty levied on all sales (Jos. Ant. xvii. 8, §4).

When Judaea became formally a Roman province, the whole financial system of the Empire came as a natural consequence. The taxes were systematically farmed, and the publicans appeared as a new curse to the country. [PUBLICANS.] The Portoria were levied at harbours, piers, and the gates of cities. These were the *τέλη* of Matt. xvii. 24; Rom. xiii. 7. In addition to this there was the *κῆνσος* or poll-tax (Cod. D. gives *ἐνκεφάλαιον* in Mark xii. 15) paid by every Jew, and looked upon, for that reason, as the special badge of servitude. It was about the lawfulness of this payment that the rabbis disputed, while they were content to acquiesce in the payment of the customs (Matt. xxii. 17; Mark xii. 13; Luke xx. 20). It was against this apparently that the struggles of Judas of Galilee and his followers were chiefly directed (Jos. Ant. xviii. 1, §6; B. J. ii. 8, §1). United with this, as part of the same system, there was also, in all probability, a property-tax of some kind. Quirinus, after the deposition of Archelaus, was sent to Syria to complete the work—begun, probably, at the time of our Lord's birth—of valuing and registering property [CYRENIUS, TAXING], and this would hardly have been necessary for a mere poll-tax. The influence of Joazar the high-priest led the people generally (the followers of Judas and the Pharisee Sadduc were the only marked exceptions) to acquiesce in this measure and to make the required returns (Jos. Ant. xviii. 1, §1); but their discontent still continued, and, under Tiberius, they applied for some alleviation (Tac. Ann. ii. 42). In addition to these general taxes, the inhabitants of Jerusalem were subject to a special house-duty about this period; Agrippa, in his desire to reward the good-will of the people, remitted it (Jos. Ant. xix. 6, §3).

It can hardly be doubted that in this, as in most other cases, an oppressive taxation tended greatly to demoralise the people. Many of the

most glaring faults of the Jewish character are distinctly traceable to it. The fierce, vindictive cruelty of the Galileans, the Zealots, the Sicarii, was its natural fruit. It was not the least striking proof that the teaching of our Lord and His disciples was more than the natural outgrowth of popular feeling, that it sought to raise men to the higher region in which all such matters were regarded as things indifferent; and, instead of expressing the popular impatience of taxation, gave, as the true counsel, the precept "Render unto Caesar the things that are Caesar's," "tribute to whom tribute is due, custom to whom custom." [E. H. P.]

TAXING. 1. (*ἡ ἀπογραφὴ*: *descriptio*, Luke ii. 2; *profectio*, Acts v. 37). The cognate verb *ἀπογράφειν* in like manner is rendered by "to be taxed" in the A. V.,^a while the Vulgate employs "ut describeretur universus orbis" in Luke ii. 1, and "ut proficeretur singuli" in ver. 3. Both the Latin words thus used are found in classical writers with the meaning of a registration or formal return of population or property (Cic. *Verr.* ii. 3, §47; *de Off.* i. 7; Sueton. *Tiber.* 30). The English word conveys to us more distinctly the notion of a tax or tribute actually levied, but it appears to have been used in the 16th century for the simple assessment of a subsidy upon the property of a given county (Bacon, *Hen. VII.* p. 67), or the registration of the people for the purpose of a poll-tax (Camden, *Hist. of Eliz.*). This may account for the choice of the word by Tindal in lieu of "description" and "profession," which Wyclif, following the Vulgate, had given. Since then "taxing" has kept its ground in most English versions with the exception of "tribute" in the Geneva, and "enrolment" in the Rheims of Acts v. 37. The word *ἀπογραφὴ* by itself leaves the question whether the returns made were of population or property undetermined. Josephus, using the words *ἡ ἀπογραφὴ τῶν οὐρανῶν* (Ant. xviii. 1, §1) as an equivalent, shows that "the taxing" of which Gamaliel speaks included both. That connected with the Nativity, the first step towards the complete statistical returns, was probably limited to the former (Greswell, *Harmony*, i. 542). In either case "Census" would have seemed the most natural Latin equivalent, but in the Greek of the N. T., and therefore probably in the familiar Latin of the period, as afterwards in the Vulg., that word slides off into the sense of the tribute actually paid (Matt. xxii. 17, xvii. 24).

2. Two distinct registrations, or taxings, are mentioned in the N. T., both of them by St. Luke. The first is said to have been the result of an edict of the emperor Augustus, that "all the world (i. e. the Roman empire) should be taxed" (*ἀπογράφειν πᾶσαν τὴν οἰκουμένην*) (Luke ii. 1), and is connected by the Evangelist with the name of Cyrenius, or Quirinus. The second, and more important (*ἡ ἀπογραφὴ*, Acts v. 37), is referred to in the report of Gamaliel's speech, and is there distinctly associated, in point of time, with the revolt of Judas of Galilee. The account of Josephus (Ant. xviii. 1, §1; B. J. ii. 8, §1) brings together the two names which St. Luke keeps distinct, with an interval of several years between them. Cyrenius comes as governor of Syria after the deposition of Archelaus, accompanied by Coponius as procurator of Judaea. He is sent to make an assessment of the

^a In H. b. xiii. 23 (*ἐπιστρέφοντες ἀπογραφὰς αὐτῶν ἐν σίναιοις*), where the idea is that of the registration of the

first-born as citizens of the heavenly Jerusalem, the A. V. has simply "written," but the Vulg. "qui conscripti sunt."

value of property in Syria (no intimation being given of its extension to the *οἰκουμένη*), and it is this which rouses Judas and his followers to their rebellion. The chronological questions presented by these apparent discrepancies have been discussed, so far as they are connected with the name of the governor of Syria, under CYRENIUS. An account of the tumults caused by the taxing will be found under JUDAS OF GALILEE.

III. There are, however, some other questions connected with the statement of Luke ii. 1-3, which call for some notice.

(1.) The truth of the statement has been questioned by Strauss (*Leben Jesu*, i. 28) and De Wette (*Comm. in loc.*), and others, on the ground that neither Josephus nor any other contemporary writer mentions a census extending over the whole empire at this period (A.U.C. 750). An edict like this, causing a general movement from the cities where men resided to those in which, for some reason or other, they were to be registered, must, it is said, have been a conspicuous fact, such as no historian would pass over. (2.) Palestine, it is urged further, was, at this time, an independent kingdom under Herod, and therefore would not have come under the operation of an imperial edict. (3.) If such a measure, involving the recognition of Roman sovereignty, had been attempted under Herod, it would have roused the same resistance as the undisputed census under Quirinus did at a later period. (4.) The statement of St. Luke that "all went to be taxed, every one into his own city," is said to be inconsistent with the rules of the Roman census, which took cognizance of the place of residence only, not of the place of birth. (5.) Neither in the Jewish nor the Roman census would it have been necessary for the wife to travel with her husband in order to appear personally before the registrar (*censitor*). The conclusions from all these objections are, that this statement belongs to legend, not to history; that it was a contrivance, more or less ingenious, to account for the birth at Bethlehem (that being assumed in popular tradition as a pre-conceived necessity for the Messiah) of one whose kindred lived, and who himself had grown up at Nazareth; that the whole narrative of the infancy of our Lord, in St. Luke's Gospel, is to be looked on as mythical. A sufficient defence of that narrative may, it is believed, be presented within comparatively narrow limits.

(1.) It must be remembered that our history of this portion of the reign of Augustus is defective. Tacitus begins his *Annals* with the emperor's death. Suetonius is gossiping, inaccurate, and ill-arranged. Dion Cassius leaves a gap from A.U.C. 748 to 756, with hardly any incidents. Josephus does not profess to give a history of the empire. It might easily be that a general census, circ. A.U.C. 749-750, should remain unrecorded by them. If the measure was one of frequent occurrence, it would be all the more likely to be passed over. The testimony of a writer, like St. Luke, obviously educated and well informed, giving many casual indications of a study of chronological data (Luke i. 5, iii.; Acts xxiv. 27), and of acquaintance with the Herodian family (Luke viii. 3, xiii. 8; Acts xii. 20, xiii. 1) and other official people (Acts xiii. -xxvi.), recognising distinctly the later and more conspicuous *ἀπογραφὴ*, must be admitted as fair presumptive evidence, hardly to be set aside in the absence of any evidence to the contrary. How hazardous such an inference from the silence of historians would be,

we may judge from the fact that there was undoubtedly a geometrical survey of the empire at some period in the reign of Augustus, of which none of the above writers take any notice (comp. the extracts from the *Rel Agrariae Scriptores* in Greswell, *Harmony*, i. p. 537). It has been argued further that the whole policy of Augustus rested on a perpetual communication to the central government of the statistics of all parts of the empire. The inscription on the monument of Ancyra (Gruter, *Corpus Inscript.* 1. 230) names three general censuses in the years A.U.C. 726, 746, 767 (comp. Sueton. *Octav.* c. 28; Greswell, *Harmon.* i. p. 535). Dion Cass. (lv. 13) mentions another in Italy in A.U.C. 757. Others in Gaul are assigned to A.U.C. 727, 741, 767. Strabo (vi. 4, §2) writing early in the reign of Tiberius speaks of *μὴ τῶν καθ' ἑμᾶς τιμῶσεων*, as if they were common things. In A.U.C. 726, when Augustus offered to resign his power, he laid before the senate a "rationarium imperii" (Sueton. *Octav.* c. 28). After his death, in like manner, a "breviarium totius imperii" was produced, containing full returns of the population, wealth, resources of all parts of the empire, a careful digest apparently of facts collected during the labours of many years (Sueton. *Octav.* c. 101; Dion Cass. lv.; Tacit. *Ann.* i. 11). It will hardly seem strange that one of the routine official steps in this process should only be mentioned by a writer who, like St. Luke, had a special reason for noticing it. A census, involving property-returns, and the direct taxation consequent on them, might excite attention. A mere *ἀπογραφὴ* would have little in it to disturb men's minds, or force itself upon a writer of history.

There is, however, some evidence, more or less circumstantial, in confirmation of St. Luke's statement. (1.) The inferences drawn from the silence of historians may be legitimately met by an inference drawn from the silence of objectors. It never occurred to Celsus, or Lucian, or Porphyry, questioning all that they could in the Gospel history, to question this. (2.) A remarkable passage in Suidas (s. v. *ἀπογραφὴ*) mentions a census, obviously differing from the three of the Ancyran monument, and agreeing, in some respects, with that of St. Luke. It was made by Augustus not as censor, but by his own imperial authority (*ἰδίᾳ αὐτοῦ*; comp. *ἐξῆλθε δόγμα*, Luke ii. 1). The returns were collected by twenty commissioners of high rank. They included property as well as population, and extended over the whole empire. (3.) Tertullian, incidentally, writing controversially, not against a heathen, but against Marcion, appeals to the returns of the census for Syria under Sentius Saturninus as accessible to all who cared to search them, and proving the birth of Jesus in the city of David (Tert. *adv. Marc.* iv. 19). Whatever difficulty the difference of names may present [comp. CYRENIUS], here is, at any rate, a strong indication of the fact of a census of population, circ. A.U.C. 748, and therefore in harmony with St. Luke's narrative. (4.) Greswell (*Harmon.* i. 476, iv. 6) has pointed to some circumstances mentioned by Josephus in the last year of Herod's life, and therefore coinciding with the time of the Nativity, which imply some special action of the Roman government in Syria, the nature of which the historian cautelessly or deliberately suppresses.^b When Herod attends the council at De-

^b The calmness with which Josephus dwells on the history of Herod's census and the tone in which he speaks of it

rytna there are mentioned as present, besides Saturninus and the Procurator, of *πρὸς ἡδύμωτον πρέσβεις*, as though the officer thus named had come, accompanied by other commissioners, for some purpose which gave him for the time almost co-ordinate influence with the governor of Syria himself (*B. J.* i. 27, §2). Just after this again, Herod, for some unexplained reason, found it necessary to administer to the whole people an oath, not of allegiance to himself, but of goodwill to the emperor; and this oath 6000 of the Pharisees refused to take (*Joseph. Ant.* xvii. 2, §4; *B. J.* i. 29, §2). This statement implies, it is urged, some disturbing cause affecting the public tranquillity, a formal appearance of all citizens before the king's officers, and lastly, some measure specially distasteful to the Pharisees. The narrative of St. Luke offers an undesigned explanation of these phenomena.

(2.) The second objection admits of as satisfactory an answer. The statistical document already referred to included subject-kingdoms and allies, no less than the provinces (*Sueton. l. c.*). If Augustus had any desire to know the resources of Judaea, the position of Herod made him neither willing nor able to resist. From first to last we meet with repeated instances of subservience. He does not dare to try or punish his sons, but refers their cause to the emperor's cognizance (*Joseph. Ant.* xvi. 4, §1, xvii. 5, §8). He holds his kingdom on condition of paying a fixed tribute. Permission is ostentatiously given him to dispose of the succession to his throne as he likes best (*Joseph. Ant.* xvi. 4, §5). He binds his people, as we have seen, by an oath of allegiance to the emperor (*Joseph. Ant.* xvii. 2, §4). The threat of Augustus that he would treat Herod no longer as an ally but as a subject (*Joseph. Ant.* xvi. 9, §3), would be followed naturally enough by some such step as this, and the desire of Herod to regain his favour would lead him to acquiescence in it.

(3.) We need not wonder that the measure should have been carried into effect without any popular outbreak. It was a return of the population only, not a valuation of property; there was no immediate taxation as the consequence. It might offend a party like the Pharisees. It was not likely to excite the multitude. Even if it seemed to some the prognostication of a coming change, and of direct government by the Roman emperor, we know that there was a large and influential party ready to welcome that change as the best thing that could happen for their country (*Joseph. Ant.* xvii. 11, §2).

(4.) The alleged inconsistency of what St. Luke narrates is precisely what might be expected under the known circumstances of the case. The census, though Roman in origin, was effected by Jewish instrumentality, and in harmony therefore with Jewish customs. The alleged practice is, however, doubtful, and it has been maintained (*Huschke, über den Census, &c.* in *Winer "Schatzung"*) that the inhabitants of the provinces were, as far as possible, registered in their *forum originis*—not in the place in which they were only residents. It may be noticed incidentally that the journey from Nazareth to Bethlehem belongs to a time when Galilee and Judaea were under the same ruler, and would therefore have been out of the question (as the subject of one prince would certainly not be (*Ant.* vii. 13) make it probable that there may have been a superstitious unwillingness to speak of this popu-

registered as belonging to another) after the death of Herod the Great. The circumstances of the Nativity indicate, if they do not prove, that Joseph went there only for personal enrolment, not because he was the possessor of house or land.

(5.) The last objection as to the presence of the Virgin, where neither Jewish nor Roman practice would have required it, is perhaps the most frivolous and vexatious of all. If Mary were herself of the house and lineage of David, there may have been special reasons for her appearance at Bethlehem. In any case the Scripture narrative is consistent with itself. Nothing could be more natural, looking to the unsettled state of Palestine at this period, than that Joseph should keep his wife under his own protection, instead of leaving her by herself in an obscure village, exposed to danger and reproach. In proportion to the hopes he had been taught to cherish of the birth of a Son of David, in proportion also to his acceptance of the popular belief that the Christ was to be born in the city of David (*Matt.* ii. 5; *John* vii. 42), would be his desire to guard against the accident of birth in the despised Nazareth out of which "no good thing" could come (*John* i. 46).

The literature connected with this subject is, as might be expected, very extensive. Every commentary contains something on it. Meyer, Wordsworth, and Alford may be consulted as giving the latest summaries. Good articles will be found under "Schatzung" in *Winer, Realhob.*; and Herzog's *Real-Encyclop.* A very full and exhaustive discussion of all points connected with the subject is given by Spanheim, *Dubia Evang.* ii. 3-9; and Richardus, *Diss. de Census Augusti*, in *Mentzer's Thesaurus*, ii. 428; comp. also Ellicott, *Hulsean Lectures*, p. 57. [E. H. P.]

TE'BAH (תֵּבַח: *Ta'bak: Tubas*). Eldest of the sons of Nahor, by his concubine Reumah (*Gen.* xxii. 24). Josephus calls him *TaBaies* (*Ant.* i. 6, §5).

TEBALI'AH (תֵּבַלְיָה: *TaBalal; Alex. TeBalas: Tabelias*). Third son of Hoshah of the children of Merari (1 Chr. xvi. 11).

TEBETH. [MONTH.]

TEHIN'NAH (תֵּהִינָה: *Teheina; Alex. Teheina*). The father or founder of Ir-Nahash, the city of Nahash, and son of Eshton (1 Chr. iv. 12). His name only occurs in an obscure genealogy of the tribe of Judah, among those who are called "the men of Rechab."

TEIL-TREE. [OAK.]

TEKO'A and TEKO'AH (תֵּקוֹא, but in 2 Sam. xiv. 2 only, תֵּקוֹעַ: *Tekeu' and Tekeu'*; *Joseph. Tekeu', Tekoa: Thecus*), a town in the tribe of Judah (2 Chr. xi. 6, as the associated places show), on the range of hills which rise near Hebron, and stretch eastward towards the Dead Sea. These hills bound the view of the spectator as he looks to the south from the summit of the Mount of Olives. Jerome (in *Amos, Proem.*) says that Tekoa was six Roman miles from Bethlehem, and that as he wrote (in *Jerem.* vi. 1) he had that village daily before his eyes (*Thekoam quotidie oculis cernimus*). In his *Onomasticon* (art. *Ethel*, 'Etheved') he represents Tekoa as nine miles only from Jerusalem; a statement which would not apply to the property assessment of *Jerusalem*.

but elsewhere he agrees with Eusebius in making the distance twelve miles. In the latter case he reckons by the way of Bethlehem, the usual course in going from the one place to the other; but there may have been also another and shorter way, to which he has reference in the other computation. Some suggest (Bachiens, *Palästina*, li. p. 60) that an error may have crept into Jerome's text, and that we should read *twelve* here instead of *nine*. In 2 Chr. xx. 20 (see also 1 Macc. ix. 33), mention is made of "the wilderness of Tekoa," which must be understood of the adjacent region on the east of the town (see *ay/r-o*), which in its physical character answers so entirely to that designation. It is evident from the name (derived from *תקע*, "to strike," said of driving the stakes or pins into the ground for securing the tent), as well as from the manifest adaptation of the region to pastoral pursuits, that the people who lived here must have been occupied mainly as shepherds, and that Tekoa in its best days could have been little more than a cluster of tents, to which the men returned at intervals from the neighbouring pastures, and in which their families dwelt during their absence.

The biblical interest of Tekoa arises, not so much from any events which are related as having occurred there, as from its connexion with various persons who are mentioned in Scripture. It is not enumerated in the Hebrew catalogue of towns in Judah (Josh. xv. 49), but is inserted in that passage of the Septuagint. The "wise woman" whom Job employed to effect a reconciliation between David and Absalom was obtained from this place (2 Sam. xiv. 2). Here also, Ira, the son of Ikkeah, one of David's thirty "mighty men" (*גִּבְיָרִים*) was born, and was called on that account "the Tekoite" (2 Sam. xlii. 26). It was one of the places which Rehoboam fortified, at the beginning of his reign, as a defence against invasion from the south (2 Chr. xi. 6). Some of the people from Tekoa took part in building the walls of Jerusalem, after the return from the Captivity (Neh. iii. 5, 27). In Jer. vi. 1, the prophet exclaims, "Blow the trumpet in Tekoa and set up a sign of fire in Beth-Haccerem"—the latter probably the "Frank Mountain," the cone-shaped hill so conspicuous from Bethlehem. It is the sound of the trumpet as a warning of the approach of enemies, and a signal-fire kindled at night for the same purpose, which are described here as so appropriately heard and seen, in the hour of danger, among the mountains of Judah. But Tekoa is chiefly memorable as the birthplace of the prophet Amos, who was here called by a special voice from heaven to leave his occupation as "a herdman" and "a gatherer of wild figs," and was sent forth thence to testify against the sins of the kingdom of Israel (Amos vii. 14). Accustomed to such pursuits, he must have been familiar with the solitude of the desert, and with the dangers there incident to a shepherd's life. Some effect of his peculiar training amid such scenes may be traced, as critics think (De Wette, *Eis. des Ate Test.* p. 356), in the contents and style of his prophecy. Jerome (*ad Am.* l. 2) says, "... etiam Amos prophetam qui pastor de pastoribus fuit et pastor non in locis cultis et arboribus ac vineis consuevit, aut certe inter sylvas et prata virentia, sed in lata eremi vastitate, in qua veretur leonum feritas et interfecio pecorum, *artis suae usum esse sermonibus.*" Compare Am. ii. 13, iii. 4, 12. iv. 1, vi. 12, vii. 1; and see the striking remarks of Dr. Pusey *Introd. to Amos*.

In the genealogies of Judah (1 Chr. ii. 24, and iv. 5) A-hur, a posthumous son of Hezron and a brother of Caleb, is there mentioned as the father of Tekoa, which appears to mean that he was the founder of Tekoa, or at least the owner of that village. See Roediger in Gesen. *Thesaur.* iii. p. 1518.

Tekoa is known still as *Tekû'a*, and, though it lies somewhat aside from the ordinary route, has been visited and described by several recent travellers. The writer was there on the 21st of April, 1852, during an excursion from Jerusalem by the way of Bethlehem and *Urtds*. Its distance from *Beit Lahm* agrees precisely with that assigned by the early writers as the distance between Tekoa and Bethlehem. It is within sight also of the "Frank Mountain," beyond question the famous Herodium, or site of Herod's Castle, which Josephus (*B. J.* iv. 9, §5) represents as near the ancient Tekoa. It lies on an elevated hill, which spreads itself out into an irregular plain of moderate extent. Its "high position" (Robinson, *Bib. Res.* i. 486) "gives it a wide prospect. Toward the north-east the land slopes down towards *Wady Khé-sitén*; on the other sides the hill is surrounded by a belt of level table land; beyond which are valleys, and then other higher hills. On the south, at some distance, another deep valley runs off south-east towards the Dead Sea. The view in this direction is bounded only by the level mountains of Moab, with frequent bursts of the Dead Sea, seen through openings among the rugged and desolate intervening mountains." The scene, on the occasion of the writer's journey above referred to, was eminently a pastoral one, and gave back no doubt a faithful image of the olden times. There were two encampments of shepherds there, consisting of tents covered with the black goat-skins so commonly used for that purpose; they were supported on poles and turned up in part on one side, so as to enable a person without to look into the interior. Flocks were at pasture near the tents and on the remoter hill-sides in every direction. There were horses and cattle and camels also, though these were not so numerous as the sheep and goats. A well of living water, on the outskirts of the village, was a centre of great interest and activity; women were coming and going with their pithers, and men were filling the troughs to water the animals which they had driven thither for that purpose. The general aspect of the region was sterile and unattractive; though here and there were patches of verdure, and some of the fields, which had yielded an early crop, had been recently ploughed up, as if for some new species of cultivation. Fleecy clouds, white as the driven snow, were floating towards the Dead Sea, and their shadows, as they chased each other over the landscape, seemed to be fit emblems of the changes in the destiny of men and nations, of which there was so much to remind one at such a time and in such a place. Various ruins exist at Tekoa, such as the walls of houses, cisterns, broken columns, and heaps of building stones. Some of these stones have the so-called "bevelled" edges which are supposed to show a Hebrew origin. There was a convent here at the beginning of the 6th century, and a Christian settlement in the time of the Crusaders; and undoubtedly most of these remains belong to modern times rather than ancient. Among these should be mentioned a baptismal font, sculptured out of a limestone block, three feet and nine inches deep, with an internal diameter at the top of four feet, and designed evidently for baptism as administered

in the Greek Church. It stands in the open air, like a similar one which the writer saw at *Jafna*, near *Beitín*, the ancient Bethel. See more fully in the *Christian Review* (New York, 1853, p. 519).

Near *Teká'a*, among the same mountains, on the brink of a frightful precipice, are the ruins of *Kháreilán*, possibly a corruption of Kerioth (Josh. xv. 25), and in that case perhaps the birthplace of Judas the traitor, who was thence called Iscariot, i. e. "man of Kerioth." It is impossible to survey the scenery of the place, and not feel that a dark spirit would find itself in its own element amid the seclusion and wildness of such a spot. High up from the bottom of the ravine is an opening in the face of the rocks which leads into an immense subterranean labyrinth, which many suppose may have been the Cave of Adullam, in which David and his followers sought refuge from the pursuit of Saul. It is large enough to contain hundreds of men, and is capable of defence against almost any attack that could be made upon it from without. When a party of the Turks fell upon *Teká'a* and sacked it, A.D. 1138, most of the inhabitants, anticipating the danger, fled to this cavern, and thus saved their lives. It may be questioned (Robinson, i. 481) whether this was the actual place of David's retreat, but it illustrates, at all events, that peculiar geological formation of the country, which accounts for such frequent allusions to "dens and caves" in the narrations of the Bible. The writer was told, as a common opinion of the natives, that some of the passages of this particular excavation extended as far as to Hebron, several miles distant, and that all the cord at Jerusalem would not be sufficient to serve as clue for traversing its windings. [ODOLLAM.]

One of the gates of Jerusalem in Christian times seems to have borne the name of Tekoa. Arculf, at any rate, mentions the "gate called Tecutis" in his enumeration of the gates of the city (A.D. 700). It appears to have led down into the valley of the Kedron, probably near the southern end of the East wall. But his description is not very clear. Can it be to this that St. Jerome alludes in the singular expression in the *Epit. Paulae* (§12), *revertar Ierosolymam et per Thecum atque Amos, rutilantem montis Oliveti Crucem aspiciam*. The Church of the Ascension on the summit of Olivet would be just opposite a gate in the East wall, and the "glittering cross" would be particularly conspicuous if seen from beneath its shadow. There is no more *prima facie* improbability in a Tekoa gate than in a Bethlehem, Jaffa, or Damascus gate, all which still exist at Jerusalem. But it is strange that the allusions to it should be so rare, and that the circumstances which made Tekoa prominent enough at that period to cause a gate to be named after it should have escaped preservation. [H. B. H.]

TEKO'A (תְּקוֹאָה; *Θεκωά*: *Thecus*). A name occurring in the genealogies of Judah (1 Chr. ii. 24, iv. 5), as the son of Ashur. There is little doubt that the town of Tekoa is meant, and that the notice implies that the town was colonized or founded by a man or a town of the name of ASHUR. [G.]

TEKOITE, THE (תְּקוֹיָה; in Chron. תְּקוֹיָה; *Θεκωίτης*, *δ Θεκώ, δ Θεκωίτης*: *de Thequa*,

* In this instance his rendering is more worthy of notice, because it would have been easy for him to have inter-

Thecutites). IRA ben-Ikkeh, one of David's warriors, is thus designated (2 Sam. xxiii. 26; 1 Chr. xi. 28, xxvii. 9). The common people among THE TEKOTITES displayed great activity in the repairs of the wall of Jerusalem under Nehemiah. They undertook two lengths of the rebuilding (Neh. iii. 5, 27). It is however specially mentioned that their "lords" (לְיָהוּדָה) took no part in the work. [G.]

TEL-A'BIB (תֵּל אֲבִיב; *μετέωρος*: *ad acervum novarum frugum*) was probably a city of Chaldaea or Babylonia, not of Upper Mesopotamia, as generally imagined. (See Calmet on Ez. iii. 15, and Winer, *ad voc.*) The whole scene of Ezekiel's preaching and visions seems to have been Chaldaea Proper; and the river Chebar, as already observed [see CHEBAR], was not the *Khabor*, but a branch of the Euphrates. Ptolemy has in this region a Thel-bencane and a Thal-atha (*Geograph.* v. 20); but neither name can be identified with Tel-abib, unless we suppose a serious corruption. The element "Tel" in Tel-abib, is undoubtedly "hill." It is applied in modern times by the Arabs especially to the mounds or heaps which mark the site of ruined cities all over the Mesopotamian plain, an application not very remote from the Hebrew use, according to which "Tel" is "especially a heap of stones" (*Gesen. ad voc.*). It thus forms the first syllable in many modern, as in many ancient names, throughout Babylonia, Assyria, and Syria. (See Asseman, *Bibl. Orient.* iii. pt. ii. p. 784.)

The LXX. have given a translation of the term, by which we can see that they did not regard it as a proper name, but which is quite inexplicable. The Vulgate likewise translates, and correctly enough, so far as Hebrew scholarship is concerned; but there seems to be no reason to doubt that the word is really a proper name, and therefore ought not to be translated at all. [G. R.]

TE'LAH (תֵּלַח; *Θαλέης*; Alex. *Θαλί*: *Thale*). A descendant of Ephraim, and ancestor of Joshua (1 Chr. vii. 25).

TEL'AIM (תֵּלַיִם, with the article: *τὸ Τελαίμ*; *γδαίμ* in both MSS., and so also Josephus: *quasi agnos*). The place at which Saul collected and numbered his forces before his attack on Amalek (1 Sam. xv. 4, only). It may be identical with TELEM, the southern position of which would be suitable for an expedition against Amalek; and a certain support is given to this by the mention of the name (Thailam or Thelam) in the LXX. of 2 Sam. iii. 12. On the other hand the reading of the LXX. in 1 Sam. xv. 4 (not only in the Vatican MS., but also in the Alex., usually so close an adherent of the Hebrew text), and of Josephus (*Ant.* vi. 7, §2), who is not given to follow the LXX. slavishly—viz. Gilgal is remarkable; and when the frequent connexion of that sanctuary with Saul's history is recollected, it is almost sufficient to induce the belief that in this case the LXX. and Josephus have preserved the right name, and that instead of Tellaím we should, with them, read Gilgal. It should be observed, however, that the Hebrew MSS. exhibit no variation in the name, and that, excepting the LXX. and the Targum, the Versions all agree with the Hebrew. The Targum renders it "lamb of the Passover," according to a curious fœcy, mentioned elsewhere in the Jewish books (*Talkut* on 1 Sam. interpreted the name as the Rabbin do, with whose traditions he was well acquainted.

xv. 4, &c.), that the army met at the Passover, and that the census was taken by counting the lambs. This is partly endorsed by Jerome in the *Vulgate*. [G.]

TELASSAR (תֵּלֶסָר: *Θεσάρ, Θεσάρδ*: *Thelassar, Thalassar*) is mentioned in 2 K. xix. 12, and in Is. xxxvii. 12 as a city inhabited by "the children of Eden," which had been conquered, and was held in the time of Sennacherib by the Assyrians. In the former passage the name is rather differently given both in Hebrew and English. [THELASSAR.] In both it is connected with Gozan (*Gauzautis*), Haran (Carrhae, now *Harran*), and Reseph (the *Rasappa* of the Assyrian Inscriptions), all of which belong to the hill country above the Upper Mesopotamian plain, the district from which rise the *Khabér* and *Belik* rivers. [See MESOPOTAMIA, GOZAN, and HARAN.] It is quite in accordance with the indications of locality which arise from this connection, to find Eden joined in another passage (Ex. xxvii. 23) with Haran and Asshur. Telassar, the chief city of a tribe known as the *Bemi Eden*, must have been in Western Mesopotamia, in the neighbourhood of Harran and Orfa. It would be uncritical to attempt to fix the locality more exactly. The name is one which might have been given by the Assyrians to any place where they had built a temple to Asshur,* and hence perhaps its application by the Targums to the Resen of Gen. x. 12, which must have been on the Tigris, near Nineveh and Calah. [RESEN.] [G. R.]

TELEM (תֵּלֶם: *Μαυδά**; Alex. *Τελεμ*: *Telem*). One of the cities in the extreme south of Judah (Josh. xv. 24). It occurs between ZIPH (not the Ziph of David's escape) and BEALOTH; but has not been identified. The name *Dhullām* is found in Van de Velde's map, attached to a district immediately to the north of the *Kubbet el-Baul*, south of *el Milh* and *Ar'arah*—a position very suitable; but whether the coincidence of the name is merely accidental or not, is not at present ascertainable. Telem is identified by some with Telaim, which is found in the Hebrew text of 1 Sam. xv. 4; but there is nothing to say either for or against this.

The LXX. of 2 Sam. iii. 12, in both MSS., exhibits a singular variation from the Hebrew text, instead of "on the spot" (יָמָיו, A. V. incorrectly, "on his behalf") they read "to Thailam (or Thelam) where he was." If this variation should be substantiated, there is some probability that Telem or Telaim is intended. David was at the time king, and quartered in Hebron, but there is no reason to suppose that he had relinquished his marauding habits; and the south country, where Telem lay, had formerly been a favourite field for his expeditions (1 Sam. xxvii. 8-11).

The Vat. LXX. in Josh. xix. 7, adds the name Θαλχά, between Remmon and Ether, to the towns of Simeon. This is said by Eusebius (*Onomast.*) and Jerome to have been then existing as a very large village called Thella, 16 miles south of Eleutheropolis. It is however claimed as equivalent to TUCHEN. [G.]

* A similar fancy in reference to the name BEZEK (1 Sam. xl. 8) is found in the Midrash. It is taken literally as meaning "broken pieces of pottery," by which, as by counters, the numbering was effected. Bezek and Telaim are considered by the Talmudists as two of the ten numberings of Israel, past and future.

* It would signify simply "the Hill of Asshur."

TELEM (תֵּלֶם: *Τελεμ*; Alex. *Τελεμ*: *Telem*). A porter or doorkeeper of the Temple in the time of Ezra, who had married a foreign wife (Ezr. x. 24). He is probably the same as TALMON in Neh. xii. 25, the name being that of a family rather than of an individual. In 1 Esd. ix. 25 he is called TOLBANES.

TEL-HAR'SA, or **TEL-HAR'ESHA** (תֵּל חַרְשָׁא: *Θελαρησά*: *Thelharsa*) was one of the Babylonian towns, or villages, from which some Jews, who "could not show their father's house, nor their seed, whether they were of Israel," returned to Judaea with Zerubbabel (Ezr. ii. 59; Neh. vii. 61). Gesenius renders the term "Hill of the Wood" (*Lex. ad voc.*). It was probably in the low country near the sea, in the neighbourhood of Tel-Melah and Cherub; but we cannot identify it with any known site. [G. R.]

TEL-MELAH (תֵּל מֶלַח: *Θελεμαλχ*, *Θελεμαλθ*: *Thelmala*) is joined with Tel-Harsa and Cherub in the two passages already cited under TEL-HARSA. It is perhaps the Thelme of Ptolemy (v. 20), which some wrongly read as Theame (ΘΕΑΜΗ for ΘΕΑΜΗ), a city of the low salt tract near the Persian Gulf, whence probably the name, which means "Hill of Salt" (Gesen. *Lex. Heb. sub voc.*). Cherub, which may be pretty surely identified with Ptolemy's Chiripha (Χιρίφα), was in the same region. [G. R.]

TEMA (תֵּמָא: *Θαιμά*: *Thema*). The ninth son of Ishmael (Gen. xxv. 15; 1 Chr. i. 30); whence the tribe called after him, mentioned in Job vi. 19, "The troops of Tema looked, the companies of Sheba waited for them," and by Jeremiah (xxv. 23), "Dedan, Tema, and Bux;" and also the land occupied by this tribe: "The burden upon Arabia. In the forest in Arabia shall ye lodge, O ye travelling companies of Dedanim. The inhabitants of the land of Tema brought water to him that was thirsty, they prevented with their bread him that fled" (Is. xxi. 13, 14).

The name is identified satisfactorily with Teymá,

تيماء, a small town on the confines of Syria, between It and Wadi-l-Kura, on the road of the Damascus pilgrim-caravan (*Marásid*, s. v.). It is in the neighbourhood of Dumat-el-Jendel, which agrees etymologically and by tradition with the Ishmaelite DUMAH, and the country of Keydár, or KEDAR. Teymá is a well-known town and district, and is appropriate in every point of view as the chief settlement of Ishmael's son Tema. It is commanded by the castle called El-Ablak (or El-Atlak el-Fard), of Es-Semâw-al (Samuel) Ibn-'Adiyâ the Jew, a contemporary of Imrâ-el-Keys (A.D. 550 cir.); but according to a tradition it was built by Solomon, which points at any rate to its antiquity (comp. El-Bekree, in *Marásid*, iv. 23); now in ruins, described as being built of rubble and crude bricks, and said to be named El-Ablak from having whiteness and redness in its structure (*Marásid*, s. v.

Compare Tei-ana, "the Hill of Ana," a name which seems to have been applied in later times to the city called by the Assyrians "Asshur," and marked by the ruins at *Kilel Sherphak*. (Steph. Byz. ad voc. *Telássa*.)

* The passage is in such confusion in the Vatican MS. that it is difficult rightly to assign the words, and impossible to infer anything from the equivalents.

Ablak). This fortress seems, like that of Doonatal-Jendel, to be one of the strongholds that must have protected the caravan route along the northern frontier of Arabia; and they recall the passage following the enumeration of the sons of Ishmael: "These [are] the sons of Ishmael, and these [are] their names, by their towns, and by their castles; twelve princes according to their nations" (Gen. xiv. 16).

Teymā signifies "a desert," "an untilled district," &c. Freytag (a. v.) writes the name without a long final alif, but not so the *Marsaid*.

Ptolemy (xix. 6) mentions *Θεμάν* in Arabia Deserta, which may be the same place as the existing Teymā. The LXX. reading seems to have a reference to TEMAN, which see. [E. S. P.]

TEMAN (תִּמָּן: *Ṭamān*: *Theman*). 1. A son of Eliphaz, son of Esau by Adah (Gen. xxxvi. 11; 1 Chr. i. 36, 53), afterwards named as a duke (phylarch) of Edom (ver. 15), and mentioned again in the separate list (vv. 40-43) of "the names of the rulers [that came] of Esau, according to their families, after their places, by their names;" ending, "these be the dukes of Edom, according to their habitations in the land of their possession: he [is] Esau the father of the Edomites."

2. A country, and probably a city, named after the Edomite phylarch, or from which the phylarch took his name, as may be perhaps inferred from the verses of Gen. xxxvi. just quoted. The Hebrew signifies "south," &c. (see Job ix. 9; Is. xliii. 6; besides the use of it to mean the south side of the Tabernacle in Ex. xxvi. and xxvii., &c.); and it is probable that the land of Teman was a southern portion of the land of Edom, or, in a wider sense, that of the sons of the East, the Beni-kedem. Teman is mentioned in five places by the Prophets, in four of which it is connected with Edom, showing it to be the same place as that indicated in the list of the dukes; twice it is named with Dedan—"Concerning Edom, thus saith the Lord of hosts: [Is] wisdom no more in Teman? is counsel perished from the prudent? is their wisdom vanished? Flee ye, turn back, dwell deep, O inhabitants of Dedan" (Jer. xlix. 7, 8); and "I will make it [Edom] desolate from Teman; and they of Dedan shall fall by the sword" (Ex. xxv. 13). This connection with the great Keturahite tribe of Dedan gives additional importance to Teman, and helps to fix its geographical position. This is further defined by a passage in the chapter of Jer. already cited, verses 20, 21, where it is said of Edom and Teman, "The earth is moved at the noise of their fall; at the cry the noise thereof was heard in the Red Sea (*yam Suf*). In the sublime prayer of Habakkuk, it is written, "God came from Teman, and the Holy One from mount Paran" (iii. 3). Jeremiah, it has been seen, speaks of the wisdom of Teman; and the prophecy of Obadiah implies the same (8, 9), "Shall I not in that day, saith the Lord, even destroy the wise (men) out of Edom, and understanding out of the mount of Esau? And thy [mighty] men, O Teman, shall be dismayed." In wisdom, the descendants of Esau, and especially the inhabitants of Teman, seem to have been pre-eminent among the sons of the East.

In common with most Edomite names, Teman appears to have been lost. The occupation of the country by the Nabatheans seems to have obliterated almost all of the traces (always olacure) of the migratory tribes of the desert. It is not likely that

much can ever be done by modern research to clear up the early history of this part of the "east country." True, Eusebius and Jerome mention Teman as a town in their day distant 15 miles (according to Eusebius) from Petra, and a Roman post. The identification of the existing Maan (see Burckhardt) with this Teman may be geographically correct, but it cannot rest on etymological grounds.

The gentile noun of Teman is תִּמְנִי (Job ii. 11; xlii. 1), and Eliphaz the Temanite was one of the wise men of Edom. The gen. n. occurs also in Gen. xxxvi. 34, where the land of Temani (so in the A. V.) is mentioned. [E. S. P.]

TEMANI. [TEMAN.]

TEMANITE. [TEMAN.]

TEMENI (תִּמְנִי: *Ṭamān*: *Themani*). Son of Ashur, the father of Tekoa, by his wife Naarah (1 Chr. iv. 6).

TEMPLE. There is perhaps no building of the ancient world which has excited so much attention since the time of its destruction as the Temple which Solomon built at Jerusalem, and its successor as rebuilt by Herod. Its spoils were considered worthy of forming the principal illustration of one of the most beautiful of Roman triumphal arches, and Justinian's highest architectural ambition was that he might surpass it. Throughout the middle ages it influenced to a considerable degree the forms of Christian churches, and its peculiarities were the watchwords and rallying points of all associations of builders. Since the revival of learning in the 16th century its arrangements have employed the pens of numberless learned antiquarians, and architects of every country have wasted their science in trying to reproduce its forms.

But it is not only to Christians that the Temple of Solomon is so interesting; the whole Mahomedan world look to it as the foundation of all architectural knowledge, and the Jews still recall its glories and sigh over their loss with a constant tenacity, unmatched by that of any other people to any other building of the ancient world.

With all this interest and attention it might fairly be assumed that there was nothing more to be said on such a subject—that every source of information had been ransacked, and every form of restoration long ago exhausted, and some settlement of the disputed points arrived at which had been generally accepted. This is, however, far from being the case, and few things would be more curious than a collection of the various restorations that have been proposed, as showing what different meanings may be applied to the same set of simple architectural terms.

The most important work on this subject, and that which was principally followed by restorers in the 17th and 18th centuries, was that of the brothers Pradi, Spanish Jesuits, better known as Villalpandi. Their work was published in folio at Rome, 1596-1604, superbly illustrated. Their idea of Solomon's Temple was, that both in dimensions and arrangement it was very like the Escorial in Spain. But it is by no means clear whether the Escorial was being built while their book was in the press, in order to look like the Temple, or whether its authors took their idea of the Temple from the palace. At all events their design is so much the more beautiful and commodious of the two, that we cannot but regret that Herrera was not employed on the book, and the Jesuits set to build the palace.

When the French expedition to Egypt, in the first years of this century, had made the world familiar with the wonderful architectural remains of that country, every one jumped to the conclusion that Solomon's Temple must have been designed after an Egyptian model, forgetting entirely how hateful that land of bondage was to the Israelites, and how completely all the ordinances of their religion were opposed to the idolatries they had escaped from—forgetting, too, the centuries which had elapsed since the Exode before the Temple was erected, and how little communication of any sort there had been between the two countries in the interval.

The Assyrian discoveries of Botta and Layard have within the last twenty years given an entirely new direction to the researches of the restorers, and this time with a very considerable prospect of success, for the analogies are now true, and whatever can be brought to bear on the subject is in the right direction. The original seats of the progenitors of the Jewish races were in Mesopotamia. Their language was practically the same as that spoken on the banks of the Tigris. Their historical traditions were contemporaneous, and, so far as we can judge, almost all the outward symbolism of their religions was the same, or nearly so. Unfortunately, however, no Assyrian temple has yet been exhumed of a nature to throw much light on this subject, and we are still forced to have recourse to the later buildings at Persepolis, or to general deductions from the style of the nearly contemporary secular buildings at Nineveh and elsewhere, for such illustrations as are available. These, however, nearly suffice for all that is required for Solomon's Temple. For the details of that erected by Herod we must look to Rome.

Of the intermediate Temple erected by Zerubbabel we know very little, but, from the circumstance of its having been erected under Persian influences contemporaneously with the buildings at Persepolis, it is perhaps the one of which it would be most easy to restore the details with anything like certainty.

Before proceeding, however, to investigate the arrangements of the Temple, it is indispensable first carefully to determine those of the Tabernacle which Moses caused to be erected in the Desert of Sinai immediately after the promulgation of the Law from that mountain. For, as we shall presently see, the Temple of Solomon was nothing more nor less than an exact repetition of that earlier Temple, differing only in being erected of more durable materials, and with exactly double the dimensions of its prototype, but still in every essential respect so identical that a knowledge of the one is indispensable in order to understand the other.

TABERNACLE.

The written authorities for the restoration of the Tabernacle are, first, the detailed account to be found in the 26th chapter of Exodus, and repeated

in the 36th, verses 8 to 38, without any variation beyond the slightest possible abridgement. Secondly, the account given of the building by Josephus (*Ant. iii. 6*), which is so nearly a repetition of the account found in the Bible that we may feel assured that he had no really important authority before him except the one which is equally accessible to us. Indeed we might almost put his account on one side, if it were not that, being a Jew, and so much nearer the time, he may have had access to some traditional accounts which may have enabled him to realize its appearance more readily than we can do, and his knowledge of Hebrew technical terms may have enabled him to understand what we might otherwise be unable to explain.

The additional indications contained in the Talmud and in Philo are so few and indistinct, and are besides of such doubtful authenticity, that they practically add nothing to our knowledge, and may safely be disregarded.

For a complicated architectural building these written authorities probably would not suffice without some remains or other indications to supplement them; but the arrangements of the Tabernacle were so simple that they are really all that are required. Every important dimension was either 5 cubits or a multiple of 5 cubits, and all the arrangements in plan were either squares or double squares, so that there really is no difficulty in putting the whole together, and none would ever have occurred were it not that the dimensions of the sanctuary, as obtained from the "boards" that formed its walls, appear at first sight to be one thing, while those obtained from the dimensions of the curtains which covered it appear to give another, and no one has yet succeeded in reconciling these with one another or with the text of Scripture. The apparent discrepancy is, however, easily explained, as we shall presently see, and never would have occurred to any one who had lived long under canvas or was familiar with the exigencies of tent architecture.

Outer Enclosure.—The court of the Tabernacle was surrounded by canvas screens—in the East called *Kannaute*—and still universally used to enclose the private apartments of important personages. Those of the Tabernacle were 5 cubits in height, and supported by pillars of brass 5 cubits apart, to which the curtains were attached by hooks and fillets of silver (*Ex. xxvii. 9, &c.*). This enclosure was only broken on the eastern side by the entrance, which was 20 cubits wide, and closed by curtains of fine twined linen wrought with needlework, and of the most gorgeous colours.

The space enclosed within these screens was a double square, 50 cubits, or 75 feet north and south, and 100 cubits or 150 ft. east and west. In the outer or eastern half was placed the altar of burnt-offerings, described in *Ex. xxvi. 1-8*, and be-

* The cubit used throughout this article is assumed to be the ordinary cubit, of the length of a man's fore-arm from the elbow-joint to the tip of the middle finger, or 18 Greek inches, equal to 18½ English inches. There seems to be little doubt but that the Jews also used occasionally a shorter cubit of 5 handbreadths, or 18 inches, but only (in so far as can be ascertained) in speaking of vessels or of metal work, and never applied it to buildings. After the Babylonish Captivity they seem also occasionally to have employed the Babylonian cubit of 7 handbreadths, or 21 inches. This, however, can evidently have no application to the Tabernacle or Solomon's Temple, which was erected before the Captivity; nor

can it be available to explain the peculiarities of Herod's Temple, as Josephus, who is our principal authority regarding it, most certainly did always employ the Greek cubit of 18 inches, or 400 to 1 stadium of 600 Greek feet; and the Talmud, which is the only other authority, always gives the same number of cubits where we can be certain they are speaking of the same thing; so that we may feel perfectly sure they both were using the same measure. Thus, whatever other cubits the Jews may have used for other purposes, we may rest assured that for the buildings referred to in this article the cubit of 18 inches, and that only, was the one employed.

tween it and the Tabernacle the laver (*Ant. m. 6, §2*), at which the priests washed their hands and feet on entering the Temple.

No. 1.—Plan of the Outer Court of the Tabernacle.

In the square towards the west was situated the Temple or Tabernacle itself. The dimensions in plan of this structure are easily ascertained. Josephus states them (*Ant. iii. 6, §3*) as 30 cubits long by 10 broad, or 45 feet by 15, and the Bible is scarcely less distinct, as it says that the north and south walls were each composed of twenty upright boards (*Ex. xxvi. 15, &c.*), each board one cubit and a half in width, and at the west end there were six boards: equal to 9 cubits, which, with the angle boards or posts, made up the 10 cubits of Josephus.

Each of these boards was furnished with two tenons at its lower extremity, which fitted into silver sockets placed on the ground. At the top at least they were jointed and fastened together by bars of shittim or acacia wood run through rings of gold (*Ex. xxvi. 26*). Both authorities agree that there were five bars for each side, but a little difficulty arises from the Bible describing (*ver. 28*) a middle bar which reached from end to end. As we shall presently see this bar was probably applied to a totally different purpose, and we may therefore assume for the present that Josephus

description of the mode in which they were applied is the correct one:—"Every one," he says (*Ant. iii. 6, §3*), "of the pillars or boards had a ring of gold affixed to its front outwards, into which were inserted bars gilt with gold, each of them 5 cubits long, and these bound together the boards; the head of one bar running into another after the manner of one tenon inserted into another. But for the wall behind there was only one bar that went through all the boards, into which one of the ends of the bars on both sides was inserted."

So far, therefore, everything seems certain and easily understood. The Tabernacle was an oblong rectangular structure, 30 cubits long by 10 broad, open at the eastern end, and divided internally into two apartments. The Holy of Holies, into which no one entered—not even the priest, except on very extraordinary occasions—was a cube, 10 cubits square in plan, and 10 cubits high to the top of the wall. In this was placed the Mercy-seat, surmounted by the cherubim, and on it was placed the Ark, containing the tables of the Law. In front of these was an outer chamber, called the Holy Place—20 cubits long by 10 broad, and 10 high, appropriated to the use of the priests. In it were placed the golden candlestick on one side, the table of shew-bread opposite, and between them in the centre the altar of incense.

No. 2.—The Tabernacle, showing one half ground plan and one half as covered by the curtains.

The roof of the Tabernacle was formed by 3, or rather 4, sets of curtains, the dimensions of two of which are given with great minuteness both in the Bible and by Josephus. The innermost (*Ex. xxvi. 1, &c.*), of fine twined linen according to our translation (Josephus calls them wool: *ἐπίμας*, *Ant. iii. 6, §4*), were ten in number, each 4 cubits wide and 28 cubits long. These were of various colours, and ornamented with cherubim of "cunning work." Five of these were sewn together so as to form larger

curtains, each 20 cubits by 28, and these two again were joined together, when used, by fifty gold buckles or clasps.

Above these were placed curtains of goats' hair, each 4 cubits wide by 30 cubits long, but eleven in number; these were also sewn together, six into one curtain, and five into the other, and, when used, were likewise joined together by fifty gold buckles.

Over these again was thrown a curtain of rams' skins with the wool on, dyed red, and a fourth covering is also specified as being of badgers' skins, so named in the A. V., but which probably really consisted of seal-skins. [BADGER-SKINS in Appendix A.] This did not of course cover the rams' skins, but most probably was only used as a coping or ridge piece to protect the junction of the two curtains of rams' skins which were laid on each slope of the roof, and probably only laced together at the top.

The question which has hitherto proved a stumbling block to restorers is, to know how these curtains were applied as a covering to the Tabernacle. Strange to say, this has appeared so difficult that, with hardly an exception, they have been content to assume that they were thrown over its walls as a pall is thrown over a coffin, and they have thus cut the Gordian knot in defiance of all probabilities, as well as of the distinct specification of the Pentateuch. To this view of the matter there are several important objections.

First. If the inner or ornamental curtain was so used, only about one-third of it would be seen; 3 cubits on each side would be entirely hidden between the walls of the Tabernacle and the goats'-hair curtain. It is true that Bähr (*Symbolik des Mosaischen Cultus*), Neumann (*Der Stiftshütte*, 1861), and others, try to avoid this difficulty by hanging this curtain so as to drape the walls inside; but for this there is not a shadow of authority, and the form of the curtain would be singularly awkward and unsuitable for this purpose. If such a thing were intended, it is evident that one curtain would have been used as wall-hangings and another as a ceiling, not one great range of curtains all joined the same way to hang the walls all round and form the ceiling at the same time.

A second and more cogent objection will strike anyone who has ever lived in a tent. It is, that every drop of rain that fell on the Tabernacle would fall through; for, however tightly the curtains might be stretched, the water could never run over the edge, and the sheep skins would only make the matter worse, as when wetted their weight would depress the centre, and probably tear any curtain that could be made, while snow lying on such a roof would certainly tear the curtains to pieces.

But a third and fatal objection is, that this arrangement is in direct contradiction to Scripture. We are there told (Ex. xxvi. 9) that half of one of the goats'-hair curtains shall be doubled back in front of the Tabernacle, and only the half of another (ver. 12) hang down behind; and (ver. 13), that one cubit shall hang down on each side—whereas this arrangement makes 10 cubits hang down all round, except in front.

The solution of the difficulty appears singularly obvious. It is simply, that the tent had a ridge, as all tents have had from the days of Moses down to the present day; and we have also very little difficulty in predicating that the angle formed by the two sides of the roof at the ridge was a right angle—not only because it is a reasonable and usual

angle for such a roof, and one that would most likely be adopted in so regular a building, but because its adoption reduces to harmony the only abnormal measurement in the whole building. As mentioned above, the principal curtains were only 28 cubits in length, and consequently not a multiple of 5; but if we assume a right angle at the ridge, each side of the slope was 14 cubits, and $14^2 + 14^2 = 392$, and $20^2 = 400$, two numbers which are practically identical in tent-building.

No. 2.—Diagram of the Dimensions of the Tabernacle in Section.

The base of the triangle, therefore, formed by the roof was 20 cubits, or in other words, the roof of the Tabernacle extended 5 cubits beyond the walls, not only in front and rear, but on both sides; and it may be added, that the width of the Tabernacle thus became identical with the width of the entrance to the enclosure; which but for this circumstance would appear to have been disproportionately large.

With these data it is easy to explain all the other difficulties which have met previous restorers.

First. The Holy of Holies was divided from the Holy Place by a screen of four pillars supporting curtains which no one was allowed to pass. But, strange to say, in the entrance there were five pillars in a similar space. Now, no one would put a pillar in the centre of an entrance without a motive; but the moment a ridge is assumed it becomes indispensable.

It may be assumed that all the five pillars were spaced within the limits of the 10 cubits of the breadth of the Tabernacle, viz. one in the centre, two opposite the two ends of the walls, and the other two between them; but the probabilities are so infinitely greater that those two last were beyond those at the angles of the tent, that it is hardly worth while considering the first hypothesis. By the one here adopted the pillars in front would, like every thing else, be spaced exactly 5 cubits apart.

Secondly. Josephus twice asserts (*Ant.* iii. 6, §4) that the Tabernacle was divided into three parts, though he specifies only two—the Adytum and the Pronaos. The third was of course the porch, 5 cubits deep, which stretched across the width of the house.

Thirdly. In speaking of the western end, the Bible always uses the plural, as if there were two sides there. There was, of course, at least one pillar in the centre beyond the wall,—there may have been five,—so that there practically were two sides there. It may also be remarked that the Pentateuch, in speaking (Ex. xxvi. 12) of this after part calls it *Mishkan*, or the dwelling, as contradistinguished from *Ohel*, or the tent, which applies to the whole structure covered by the curtains.

Fourthly. We now understand why there are 10

breadths in the under curtains, and 11 in the upper. It was that they might break joint—in other words, that the seam of the one, and especially the great joining of the two divisions, might be over the centre of the lower curtain, so as to prevent the rain penetrating through the joints. It may also be remarked that, as the two cubits which were in excess at the west hung at an angle, the depth of fringe would be practically about the same as on the sides.

With these suggestions, the whole description in the Book of Exodus is so easily understood that it is not necessary to dilate further upon it; there are, however, two points which remain to be noticed, but more with reference to the Temple which succeeded it than with regard to the Tabernacle itself.

The first is the disposition of the side bars of shittim-wood that joined the boards together. At first sight it would appear that there were 4 short and one long bar on each side, but it seems impossible to see how these could be arranged to accord with the usual interpretation of the text, and very improbable that the Israelites would have carried about a bar 45 feet long, when 5 or 6 bars would have answered the purpose equally well, and 5 rows of bars are quite unnecessary, besides being in opposition to the words of the text.

The explanation hinted at above seems the most reasonable one—that the five bars named (vers. 26 and 27) were joined end to end, as Josephus asserts, and the bar mentioned (ver. 28) was the ridge-pole of the roof. The words of the Hebrew text will equally well bear the translation—"and the middle bar which is *between*," instead of "*in the midst of* the boards, shall reach from end to end." This would appear a perfectly reasonable solution but for the mechanical difficulty that no pole could be made stiff enough to bear its own weight and that of the curtains over an extent of 45 feet, without intermediate supports. A ridge-rope could easily be stretched to twice that distance, if required for the purpose, though it too would droop in the centre. A pole would be a much more appropriate and likely architectural arrangement—so much so, that it seems more than probable that one was employed with supports. One pillar in the centre where the curtains were joined would be amply sufficient for all practical purposes; and if the centre board at the

back of the Holy of Holies was 15 cubits high (which there is nothing to contradict), the whole would be easily constructed. Still, as no internal supports are mentioned either by the Bible or Josephus, the question of how the ridge was formed and supported must remain an open one, incapable of proof with our present knowledge, but it is one to which we shall have to revert presently.

The other question is—were the sides of the Verandah which surrounded the Sanctuary closed or left open? The only hint we have that this was done, is the mention of the western *sides* always in the plural, and the employment of *Mishkan* and *Ohel* throughout this chapter, apparently in opposition to one another, *Mishkan* always seeming to apply to an enclosed space, which was or might be dwelt in, *Ohel* to the tent as a whole or to the covering only; though here again the point is by no means so clear as to be decisive.

The only really tangible reason for supposing the sides were enclosed is, that the Temple of Solomon was surrounded on all sides but the front, by a range of small cells 5 cubits wide, in which the priests resided who were specially attached to the service of the Temple.

It would have been so easy to have done this in the Tabernacle, and its convenience—at night at least—so great, that I cannot help suspecting it was the case.

It is not easy to ascertain, with anything like certainty, at what distance from the tent the tent-pegs were fixed. It could not be less on the sides than 7 cubits, it may as probably have been 10. In front and rear the central peg could hardly have been at a less distance than 20 cubits; so that it is by no means improbable that from the front to rear the whole distance may have been 80 cubits, and from side to side 40 cubits, measured from peg to peg; and it is this dimension that seems to have governed the pegs of the enclosures, as it would just allow room for the fastenings of the enclosure on either side, and for the altar and laver in front. It is scarcely worth while, however, insisting strongly on these and some other minor points.

Enough has been said to explain with the woodcuts all the main points of the proposed restoration, and to show that it is possible to reconstruct the Tabernacle in strict conformity with every word

Fig. 4.—Front View of the Tabernacle, as restored.

and every indication of the sacred text, and at the same time to show that the Tabernacle was a reasonable tent-like structure, admirably adapted to the purposes to which it was applied.

SOLOMON'S TEMPLE.

The Tabernacle accompanied the Israelites in all their wanderings, and remained their only Holy Place or Temple till David obtained possession of Jerusalem, and erected an altar in the threshing-floor of Araunah, on the spot where the altar of the Temple always afterwards stood. He also brought the Ark out of Kirjath-jearim (2 Sam. vi. 2; 1 Chr. xiii. 6) and prepared a tabernacle for it in the new city which he called after his own name. Both these were brought up thence by Solomon (2 Chr. v. 5); the Ark placed in the Holy of Holies, but the Tabernacle seems to have been put on one side as a relic (1 Chr. xxiii. 32). We have no account, however, of the removal of the original Tabernacle of Moses from Gibeon, nor anything that would enable us to connect it with that one which Solomon removed out of the City of David (2 Chr. v. 5). In fact, from the time of the building of the Temple, we lose sight of the Tabernacle altogether. It was David who first proposed to replace the Tabernacle by a more permanent building, but was forbidden for the reasons assigned by the prophet Nathan (2 Sam. vii. 5, &c.), and though he collected materials and made arrangements, the execution of the task was left for his son Solomon.

He, with the assistance of Hiram king of Tyre, commenced this great undertaking in the fourth year of his reign, and completed it in seven years, about 1005 B.C. according to the received chronology.

On comparing the Temple, as described in 1 Kings vi. and 2 Chronicles ii., and by Josephus vii. 3, with the Tabernacle, as just explained, the first thing that strikes us is that all the arrangements were identical, and the dimensions of every part were exactly double those of the preceding structure. Thus the Holy of Holies in the Tabernacle was a cube, 10 cubits each way; in the Temple it was 20 cubits. The Holy Place or outer hall was 10 cubits wide by 20 long and 10 high in the Tabernacle. In the Temple all these dimensions were exactly double. The porch in the Tabernacle was 5 cubits deep, in the Temple 10; its width in both instances being the width of the house. The chambers round the House and the Tabernacle were each 5 cubits wide on the ground-floor, the difference being that in the Temple the two walls taken together made up a thickness of 5 cubits, thus making 10 cubits for the chambers.

Taking all these parts together, the ground-plan of the Temple measured 80 cubits by 40; that of the Tabernacle, as we have just seen, was 40 by 20; and what is more striking than even this, is that though the walls were 10 cubits high in the one and 20 cubits in the other, the whole height of the Tabernacle was 15, that of the Temple 30 cubits; the one roof rising 5, the other 10 cubits above the height of the internal walls.^a So exact indeed is this coincidence, that it not only confirms to the fullest extent the restoration of the Tabernacle which has just been explained, but it is a singular confirmation

of the minute accuracy which characterised the writers of the Pentateuch and the Books of Kings and Chronicles in this matter; for not only are we able to check the one by the other at this distance of time with perfect certainty, but, now that we know the system on which they were constructed we might almost restore both edifices from Josephus' account of the Temple as re-erected by Herod, of which more hereafter.

No. 3.—Plan of Solomon's Temple, showing the disposition of the chambers in two stories.

The proof that the Temple, as built by Solomon, was only an enlarged copy of the Tabernacle, goes far also to change the form of another important question which has been long agitated by the students of Jewish antiquities, inasmuch as the inquiry as to whence the Jews derived the plan and design of the Temple must now be transferred to the earlier type, and the question thus stands, Whence did they derive the scheme of the Tabernacle?

From Egypt?

There is not a shadow of proof that the Egyptians ever used a moveable or tent-like temple, neither the pictures in their temples nor any historical records point to such a form, nor has any one hitherto ventured to suggest such an origin for that structure.

From Assyria?

Here too we are equally devoid of any authority or tangible data, for though the probabilities certainly are that the Jews would rather adopt a form from the kindred Assyrians than from the hated strangers whose land they had just left, we have nothing further to justify us in such an assumption.

From Arabia?

It is possible that the Arabs may have used moveable tent-like temples. They were a people nearly allied in race with the Jews. Moses' father-in-law was an Arab, and something he may have seen there may have suggested the form he adopted. But beyond this we cannot at present go.^c

^a In the Apocrypha there is a passage which bears curiously and distinctly on this subject. In Wisd. ix. 8 it is said, "Thou hast commanded me (i. e. Solomon) to build a Temple in Thy Holy mount, and an altar in the city wherein Thou dwellest, a resemblance of the Holy Tabernacle which Thou hast prepared from the beginning."

^c The only thing resembling it we know of is the Holy Tent of the Carthaginians, mentioned by Diodorus Siculus, xx. 65, which, in consequence of a sudden change of wind at night blowing the flames from the altar on which victims were being sacrificed, towards the tent itself, it took fire, a circumstance which spread such

FIG. 2.—Tomb of Darius near Persepolis.

For the present, at least, it must suffice to know that the form of the Temple was copied from the Tabernacle, and that any architectural ornaments that may have been added were such as were usually employed at that time in Palestine, and more especially at Tyre, whence most of the artificers were obtained who assisted in its erection.

So far as the dimensions above quoted are concerned, everything is as clear and as certain as anything that can be predicated of any building of which no remains exist, but beyond this there are certain minor problems by no means so easy to resolve, but fortunately they are of much less importance. The first is the

Height.—That given in 1 K. vi. 2—of 30 cubits—is so reasonable in proportion to the other dimensions, that the matter might be allowed to rest there were it not for the assertion (2 Chr. iii. 4) that the height, though apparently only of the porch, was 120 cubits = 180 feet (as nearly as may

be the height of the steeple of St. Martin's in the Fields). This is so unlike anything we know of in ancient architecture, that having no counterpart in the Tabernacle, we might at first sight feel almost justified in rejecting it as a mistake or interpolation, but for the assertion (2 Chr. iii. 9) that Solomon overlaid the *upper chambers* with gold, and 2 K. xxiii. 12, where the altars on the top of the *upper chambers*, apparently of the Temple, are mentioned. In addition to this, both Josephus and the Talmud persistently assert that there was a superstructure on the Temple equal in height to the lower part, and the total height they, in accordance with the Book of Chronicles, call 120 cubits or 180 feet (*Ant.* viii. 3, §2). It is evident, however, that he obtains these dimensions first by doubling the height of the lower Temple, making it 60 instead of 30 cubits, and in like manner exaggerating every other dimension to make up this quantity. Were it not for these authorities, it would satisfy

consternation throughout the army as to lead to its destruction.

The Carthaginians were a Shemitic people, and seem to have carried their Holy Tent about with their armies,

and to have performed sacrifices in front of it, precisely as was done by the Jews excepting, of course, the nature of the victims.

all the real exigencies of the case if we assumed that the upper chamber occupied the space between the roof of the Holy Place and the roof of the Temple. Ten cubits or 15 feet, even after deducting the thickness of the two roofs, is sufficient to constitute such an apartment as history would lead us to suppose existed there. But the evidence that there was something beyond this is so strong that it cannot be rejected.

In looking through the monuments of antiquity for something to suggest what this might be, the only thing that occurs is the platform or Talar that existed on the roofs of the Palace Temples at Persepolis—as shown in Woodcut No. 6, which represents the Tomb of Darius, and is an exact reproduction of the façade of the Palace shown in plan, Woodcut No. 9. It is true these were erected five centuries after the building of Solomon's Temple; but they are avowedly copies in stone of older Assyrian forms, and as such may represent, with more or less exactness, contemporary buildings. Nothing in fact could represent more correctly “the alters on the top of the upper chambers” which Josiah beat down (2 K. xxiii. 12) than this, nor could anything more fully meet all the architectural or devotional exigencies of the case; but its height never could have been 60 cubits, or even 30, but it might very probably be the 20 cubits which incidentally Josephus (xv. 11, §3) mentions as “sinking down in the failure of the foundations, but was so left till the days of Nero.” There can be little doubt but that the part referred to in this paragraph was some such superstructure as that shown in the last woodcut; and the incidental mention of 20 cubits is much more to be trusted than Josephus' heights generally are, which he seems systematically to have exaggerated when he was thinking about them.

Jackin and Boaz.—There are no features connected with the Temple of Solomon which have given rise to so much controversy, or been so difficult to explain, as the form of the two pillars of brass which were set up in the porch of the house. It has even been supposed that they were not pillars in the ordinary sense of the term, but obelisks; for this, however, there does not appear to be any authority. The porch was 30 feet in width, and a roof of that extent, even if composed of a

wooden beam, would not only look painfully weak without some support, but, in fact, almost impossible to construct with the imperfect science of those days. Another difficulty arises from the fact that the Book of Chronicles nearly doubles the dimensions given in Kings; but this arises from the systematic reduplication of the height which misled Josephus; and if we assume the Temple to have been 60 cubits high, the height of the pillars, as given in the Book of Chronicles, would be appropriate to support the roof of its porch, as those in Kings are the proper height for a temple 30 cubits high, which there is every reason to believe was the true dimension. According to 1 K. vii. 15 *et seq.*, the pillars were 18 cubits high and 12 in circumference, with capitals five cubits in height. Above this was (ver. 19, another member, called also chapter of lily-work, four cubits in height, but which from the second mention of it in ver. 22 seems more probably to have been an entablature, which is necessary to complete the order. As these members make out 27 cubits, leaving 3 cubits or 4½ feet for the slope of the roof, the whole design seems reasonable and proper.

If this conjecture is correct, we have no great difficulty in suggesting that the lily-work must have been something like the Persepolitan cornice (Woodcut No. 7), which is probably nearer in style to that of the buildings at Jerusalem than anything else we know of.

It seems almost in vain to try and speculate on what was the exact form of the decoration of these celebrated pillars. The nets of checker-work and wreaths of chain-work, and the pomegranates, &c., are all features applicable to metal architecture; and though we know that the old Tartar races did use metal architecture everywhere, and especially in bronze, from the very nature of the material every specimen has perished, and we have now no representations from which we can restore them. The styles we are familiar with were all derived more or less from wood, or from stone with wooden ornaments repeated in the harder material. Even at Persepolis, though we may feel certain that everything we see there had a wooden prototype, and may suspect that much of their wooden ornamentation was derived from the earlier metal forms, still it is so far removed from the original source that in the present state of our

No. 7.—Corbel of lily-work at Persepolis.

VOL. III.

No. 8.—Pillar of Northern Portico at Persepolis.

5 A

knowledge, it is dangerous to insist too closely on any point. Notwithstanding this, the pillars at Persepolis, of which Woodcut No. 8 is a type, are probably more like Jachin and Boaz than any other pillars which have reached us from antiquity, and give a better idea of the immense capitals of these columns than we obtain from any other examples; but being in stone, they are far more simple and less ornamental than they would have been in wood, and infinitely less so than their metal prototypes.

Internal Supports.—The existence of these two pillars in the porch suggests an inquiry which has hitherto been entirely overlooked: Were there any pillars in the interior of the Temple? Considering that the clear space of the roof was 20 cubits, or 30 feet, it may safely be asserted that no cedar beam could be laid across this without sinking in the centre by its own weight, unless trussed or supported from below. There is no reason whatever to suppose that the Tyrians in those days were acquainted with the scientific forms of carpentry implied in the first suggestion, and there is no reason why they should have resorted to them even if they knew how; as it cannot be doubted but that architecturally the introduction of pillars in the interior would have increased the apparent size and improved the artistic effect of the building to a very considerable degree.

If they were introduced at all, there must have been four in the sanctuary and ten in the hall, not necessarily equally spaced, in a transverse direction, but probably standing 6 cubits from the walls, leaving a centre aisle of 8 cubits.

The only building at Jerusalem whose construction throws any light on this subject is the House of the Forest of Lebanon. [PALACE.] There the pillars were an inconvenience, as the purposes of the hall were state and festivity; but though the pillars in the palace had nothing to support above the roof, they were spaced probably 10, certainly not more than 12½, cubits apart. If Solomon had been able to roof a clear space of 20 cubits, he certainly would not have neglected to do it there.

At Persepolis there is a small building, called the Palace or Temple of Darius (Woodcut No. 9), which more closely resembles the Jewish Temple than any other building we are acquainted with. It has a porch, a central hall, an adytum—the plan of which cannot now be made out—and a range of small chambers on either side. The principal dif-

ference is that it has four pillars in its porch instead of two, and consequently four rows in its interior hall instead of half that number, as suggested above. All the buildings at Persepolis have their floor equally crowded with pillars, and, as there is no doubt but that they borrowed this peculiarity from Nineveh, there seems no *a priori* reason why Solomon should not have adopted this expedient to get over what otherwise would seem an insuperable constructive difficulty.

The question, in fact, is very much the same that met us in discussing the construction of the Tabernacle. No internal supports to the roofs of either of these buildings are mentioned anywhere. But the difficulties of construction without them would have been so enormous, and their introduction so usual and so entirely unobjectionable, that we can hardly understand their not being employed. Either building was possible without them, but certainly neither in the least degree probable.

It may perhaps add something to the probability of their arrangement to mention that the ten bases for the lavers which Solomon made would stand one within each inter-column on either hand, where they would be beautiful and appropriate ornaments. Without some such accentuation of the space, it seems difficult to understand what they were, and why ten.

Chambers.—The only other feature which remains to be noticed is the application of three tiers of small chambers to the walls of the Temple externally on all sides, except that of the entrance. Though not expressly so stated, these were a sort of monastery, appropriated to the residence of the priests who were either permanently or in turn devoted to the service of the Temple. The lowest storey was only 5 cubits in width, the next 6, and the upper 7, allowing an offset of 1 cubit on the side of the Temple, or of 9 inches on each side, on which the flooring joists rested, so as not to cut into the walls of the Temple. Assuming the wall of the Temple at the level of the upper chambers to have been 2 cubits thick, and the outer wall one—it could not well have been less—this would exactly make up the duplication of the dimension found as before mentioned for the verandah of the Tabernacle.

It is, again, only at Persepolis that we find anything at all analogous to this; but in the plan last quoted as that of the Palace of Darius, we find a similar range on either hand. The palace of Xerxes possesses this feature also; but in the great hall there, and its counterpart at Susa, the place of these chambers is supplanted by lateral porticoes outside the walls that surrounded the central phalanx of pillars. Unfortunately our knowledge of Assyrian Temple architecture is too limited to enable us to say whether this feature was common elsewhere, and though something very like it occurs in Buddhist Viharas in India, these latter are comparatively so modern that their disposition hardly bears on the inquiry.

Outer Court.—The enclosure of the Temple consisted, according to the Bible (1 K. vi. 36), of a low wall of three courses of stones and a row of cedar beams, both probably highly ornamented. As it is more than probable that the same duplication of dimension

No. 9.—Palace of Darius at Persepolis Scale of 19 feet to 1 inch.

took place in this as in all the other features of the Tabernacle, we may safely assume that it was 10 cubits, or 15 feet, in height, and almost certainly 100 cubits north and south, and 200 east and west.

There is no mention in the Bible of any porticoes or gateways or any architectural ornaments of this enclosure, for though names which were afterwards transferred to the gates of the Temple do occur in 1 Chr. ix., xiv., and xxvi., this was before the Temple itself was built; and although Josephus does mention such, it must be recollected that he was writing five centuries after its total destruction, and he was too apt to confound the past and the present in his descriptions of buildings which did not then exist. There was an eastern porch to Herod's Temple, which was called Solomon's Porch, and Josephus tells us that it was built by that monarch; but of this there is absolutely no proof, and as neither in the account of Solomon's building nor in any subsequent repairs or incidents is any mention made of such buildings, we may safely conclude that they did not exist before the time of the great rebuilding immediately preceding the Christian era.

TEMPLE OF ZERUBBABEL.

We have very few particulars regarding the Temple which the Jews erected after their return from the Captivity (cir. 520 B.C.), and no description that would enable us to realize its appearance. But there are some dimensions given in the Bible and elsewhere which are extremely interesting as affording points of comparison between it and the Temples which preceded it, or were erected after it.

The first and most authentic are those given in the Book of Ezra (vi. 3), when quoting the decree of Cyrus, wherein it is said, "Let the house be builded, the place where they offered sacrifices, and let the foundations thereof be strongly laid; the height thereof threescore cubits, and the breadth thereof threescore cubits, with three rows of great stones and a row of new timber." Josephus quotes this passage almost literally (xi. 4, §6), but in doing so enables us with certainty to translate the word here called *Rov* as "Storey" (*ὀρόμιον*)—as indeed the sense would lead us to infer—for it could only apply to the three storeys of chambers that surrounded Solomon's, and afterward's Herod's Temple, and with this again we come to the wooden Talar which surmounted the Temple and formed a fourth storey. It may be remarked in passing, that this dimension of 60 cubits in height accords perfectly with the words which Josephus puts into the mouth of Herod (xv. 11, §1) when he makes him say that the Temple built after the Captivity wanted 60 cubits of the height of that of Solomon. For as he had adopted, as we have seen above, the height of 120 cubits, as written in the Chronicles, for that Temple, this one remained only 60.

The other dimension of 60 cubits in breadth, is 20 cubits in excess of that of Solomon's Temple, but there is no reason to doubt its correctness, for we find both from Josephus and the Talmud that it was the dimension adopted for the Temple when rebuilt, or rather repaired by Herod. At the same time we have no authority for assuming that any increase was made in the dimensions of either the

Holy Place or the Holy of Holies, since we find that these were retained in Ezekiel's description of an ideal Temple—and were afterwards those of Herod's. And as this Temple of Zerubbabel was still standing in Herod's time, and was more strictly speaking repaired than rebuilt by him, we cannot conceive that any of its dimensions were then diminished. We are left therefore with the alternative of assuming that the porch and the chambers all round were 20 cubits in width, including the thickness of the walls, instead of 10 cubits, as in the earlier building. This may perhaps to some extent be accounted for by the introduction of a passage between the Temple and the rooms of the priest's lodgings instead of each being a thoroughfare, as must certainly have been the case in Solomon's Temple.

This alteration in the width of the Pteromata made the Temple 100 cubits in length by 60 in breadth, with a height, it is said, of 60 cubits, including the upper room or Talar, though we cannot help suspecting that this last dimension is somewhat in excess of the truth.⁴

The only other description of this Temple is found in Hecataeus the Abderite, who wrote shortly after the death of Alexander the Great. As quoted by Josephus (*cont. Ap. l. 22*), he says, that "In Jerusalem towards the middle of the city is a stone walled enclosure about 500 feet in length (*ὡς πεντακισσῶν*), and 100 cubits in width, with double gates," in which he describes the Temple as being situated.

The last dimension is exactly what we obtained above by doubling the width of the Tabernacle enclosure as applied to Solomon's Temple, and may therefore be accepted as tolerably certain, but the 500 feet in length exceeds anything we have yet reached by 200 feet. It may be that at this age it was found necessary to add a court for the women or the Gentiles, a sort of Narthex or Galilee for those who could not enter the Temple. If this or these together were 100 cubits square, it would make up the "nearly 5 plethra" of our author. Hecataeus also mentions that the altar was 20 cubits square and 10 high. And although he mentions the Temple itself, he unfortunately does not supply us with any dimensions.

From these dimensions we gather, that if "the Priests and Levites and Elders of families were disconsolate at seeing how much more sumptuous the old Temple was than the one which on account of their poverty they had just been able to erect" (Ezr. iii. 12; Joseph. *Ant.* xi. 4, §2), it certainly was not because it was smaller, as almost every dimension had been increased one-third; but it may have been that the carving and the gold, and other ornaments of Solomon's Temple far surpassed this, and the pillars of the portico and the veils may all have been far more splendid, so also probably were the vessels; and all this is what a Jew would mourn over far more than mere architectural splendour. In speaking of these Temples we must always bear in mind that their dimensions were practically very far inferior to those of the Heathen. Even that of Ezra is not larger than an average parish church of the last century—Solomon's was smaller. It was the lavish display of the precious metals, the elaboration of carved ornament, and the beauty of the textile

⁴ In recounting the events narrated by Ezra (x. 9), Josephus says (*Ant.* xi. 2, §4) that the assembly there referred to took place in the upper room, *ἐν τῇ ὑπερσυνῶντι ἑσῶν*, which would be a very curious illustration of the use of that apartment if it could be depended

upon, but both the Hebrew and LXX. are so clear that it was in the "street," or "place" of the Temple, that we cannot base any argument upon it, though it is curious as indicating what was passing in the mind of Josephus.

fabrics, which made up their splendour and rendered them so precious in the eyes of the people, and there can consequently be no greater mistake than to judge of them by the number of cubits they measured. They were Temples of a Shemitic, not of a Celtic people.

TEMPLE OF EZEKIEL.

The vision of a Temple which the prophet Ezekiel saw while residing on the banks of the Chebar in Babylonia in the 25th year of the Captivity, does not add much to our knowledge of the subject. It is not a description of a Temple that ever was built or ever could be erected at Jerusalem, and can consequently only be considered as the *beau idéal* of what a Shemitic Temple ought to be. As such it would certainly be interesting if it could be correctly restored, but unfortunately the difficulties of making out a complicated plan from a mere verbal description are very great indeed, and are enhanced in this instance by our imperfect knowledge of the exact meaning of the Hebrew architectural terms, and it may also be from the prophet describing not what he actually knew, but only what he saw in a vision.

Be this as it may, we find that the Temple itself was of the exact dimensions of that built by Solomon, viz. an adytum (Ex. xl. 1-4), 20 cubits square, a naos, 20 x 40, and surrounded by cells of 10 cubits' width including the thickness of the walls, the whole, with the porch, making up 40 cubits by 80, or very little more than one four-thousandth part of the whole area of the Temple: the height unfortunately is not given. Beyond this were various courts and residences for the priests, and places for sacrifice and other ceremonies of the Temple, till he comes to the outer court, which measured 500 reeds on each of its sides; each reed (Ex. xl. 5) was 6 Babylonian cubits long, viz. of cubits each of one ordinary cubit and a handbreadth, or 21 inches. The

reed was therefore 10 feet 6 inches, and the side consequently 5250 Greek feet, or within a few feet of an English mile, considerably more than the whole area of the city of Jerusalem, Temple included!

It has been attempted to get over this difficulty by saying that the prophet meant cubits, not reeds; but this is quite untenable. Nothing can be more clear than the specification of the length of the reed, and nothing more careful than the mode in which reeds are distinguished from cubits throughout; as for instance in the two next verses (6 and 7, where a chamber and a gateway are mentioned, each of one reed. If cubit were substituted, it would be nonsense.

Notwithstanding its ideal character, the whole is extremely curious, as showing what were the aspirations of the Jews in this direction, and how different they were from those of other nations; and it is interesting here, inasmuch as there can be little doubt but that the arrangements of Herod's Temple were in a great measure influenced by the description here given. The outer court, for instance, with its porticoes measuring 400 cubits each way, is an exact counterpart on a smaller scale of the outer court of Ezekiel's Temple, and is not found in either Solomon's or Zerubabel's; and so too, evidently, are several of the internal arrangements.

TEMPLE OF HEROD.

For our knowledge of the last and greatest of the Jewish Temples we are indebted almost wholly to the works of Josephus, with an occasional hint from the Talmud.

The Bible unfortunately contains nothing to assist the researches of the antiquary in this respect. With true Shemitic indifference to such objects, the writers of the New Testament do not furnish a single hint which would enable us to ascertain either what the situation or the dimensions of the

Fig. 10. - Temple of Herod restored. Scale of 200 feet to 1 inch.

Temple were, nor any characteristic feature of its architecture. But Josephus knew the spot personally, and his horizontal dimensions are so minutely accurate that we almost suspect he had before his eyes, when writing, some ground-plan of the building prepared in the quartermaster-general's department of Titus's army. They form a strange contrast with his dimensions in height, which, with scarcely an exception, can be shown to be exaggerated, generally doubled. As the buildings were all thrown down during the siege, it was impossible to convict him of error in respect to elevations, but as regards plan he seems always to have had a wholesome dread of the knowledge of those among whom he was living and writing.

The Temple or *nasos* itself was in dimensions and arrangement very similar to that of Solomon, or rather that of Zerubbabel—more like the latter; but this was surrounded by an inner enclosure of great strength and magnificence, measuring as nearly as can be made out 180 cubits by 240, and adorned by porches and ten gateways of great magnificence; and beyond this again was an outer enclosure measuring externally 400 cubits each way, which was adorned with porticoes of greater splendour than any we know of attached to any temple of the ancient world: all showing how strongly Roman influence was at work in enveloping with Heathen magnificence the simple templar arrangements of a Shemitic people, which, however, remained nearly unchanged amidst all this external incrustation.

It has already been pointed out [JERUSALEM, vol. i. pp. 1019-20] that the Temple was certainly situated in the S.W. angle of the area now known as the Haram area at Jerusalem, and it is hardly necessary to repeat here the arguments there adduced to prove that its dimensions were what Josephus states them to be, 400 cubits, or one stadium, each way.

At the time when Herod rebuilt it he enclosed a space "twice as large" as that before occupied by the Temple and its courts (*B. J.* i. 21, §1), an expression that probably must not be taken too literally, at least if we are to depend on the measurements of *Hecataeus*. According to them the whole area of Herod's Temple was between four and five times greater than that which preceded it. What Herod did apparently was to take in the whole space between the Temple and the city wall on its eastern side, and to add a considerable space on the north and south to support the porticoes which he added there.

As the Temple terrace thus became the principal defence of the city on the east side, there were no gates or openings in that direction,* and being situated on a sort of rocky brow—as evidenced from its appearance in the vaults that bound it on this side—it was at all future times considered unattackable from the eastward. The north side, too, where not covered by the fortress *Antonia*, became part of the defences of the city, and was likewise without external gates. But it may also have been that, as the tombs of the kings, and indeed the general cemetery of Jerusalem, were situated immediately to the northward of the Temple, there was some religious feeling in preventing too ready access

* The Talmud, it is true, does mention a gate as existing in the eastern wall, but its testimony on this point is so unsatisfactory and in such direct opposition to Josephus and the probabilities of the case, that it may safely be disregarded.

† Owing to the darkness of the place, blocked up as it now is, and the ruined state of the capital, it is not easy to get a correct delineation of it. This is to be regretted,

from the Temple to the burying-place (*Ka. shu* 7-9).

On the south side, which was enclosed by the wall of Ophel, there were double gates nearly in the centre (*Ant.* xv. 11, §5). These gates still exist at a distance of about 365 feet from the south-western angle, and are perhaps the only architectural features of the Temple of Herod which remain *in situ*. This entrance consists of a double archway of Cyclopean architecture on the level of the ground, opening into a square vestibule measuring 40 feet each way. In the centre of this is a pillar crowned by a capital of the Greek—rather than Roman—Corinthian order (Woodcut No. 11); the acanthus alternating with the water-leaf, as in the Tower of the Winds at Athens, and other Greek examples, but which was an arrangement abandoned by the Romans as early as the time of Augustus, and never afterwards employed.† From this pillar spring four flat segmental arches, and the space between these

No. 11.—Capital of Pillar in Vestibule of southern entrance.

is roofed by flat domes, constructed apparently on the horizontal principle. The walls of this vestibule are of the same bevelled masonry as the exterior; but either at the time of erection or subsequently the projections seem to have been chiselled off in some parts so as to form pilasters. From this a double tunnel, nearly 200 feet in length, leads to a flight of steps which rise to the surface in the court of the Temple, exactly at that gateway of the inner Temple which led to the altar, and is the one of the four gateways on this side by which anyone arriving from Ophel would naturally wish to enter the inner enclosure. It seems to have been this necessity that led to the external gateway being placed a little more to the eastward than the exact centre of the enclosure, where naturally we should otherwise have looked for it.

We learn from the Talmud (*Mid.* ii. 6), that the gate of the inner Temple to which this passage led was called the "Water Gate;" and it is interesting to be able to identify a spot so prominent in the description of Nehemiah (xii. 37). The Water Gate is more often mentioned in the medieval references to the Temple than any other, especially by Mahomedan authors, though by them frequently confounded with the outer gate at the other end of this passage.

As a considerable controversy has arisen as to its exact character. It may therefore be interesting to mention that the drawing made by the architectural draughtsman who accompanied M. Renan in his late scientific expedition to Syria confirms to the fullest extent the character of the architecture, as shown in the view given above from Mr. Arundale's drawing.

Towards the westward there were four gateways to the external enclosure of the Temple (*Ant.* xv. 11, §5), and the positions of three of these can still be traced with certainty. The first or most southern led over the bridge the remains of which were identified by Dr. Robinson (of which a view is given in art. JERUSALEM, vol. i. p. 1019), and joined the Stoa Basilica of the Temple with the royal palace (*Ant.* ib.). The second was that discovered by Dr. Barclay, 270 feet from the S.W. angle, at a level of 17 feet below that of the southern gates just described. The site of the third is so completely covered by the buildings of the Meckmê that it has not yet been seen, but it will be found between 200 and 250 feet from the N.W. angle of the Temple area; for, owing to the greater width of the southern portico beyond that on the northern, the Temple itself was not in the centre of its enclosure, but situated more towards the north. The fourth was that which led over the causeway which still exists at a distance of 600 feet from the south-western angle.

In the time of Solomon, and until the area was enlarged by Herod, the ascent from the western valley to the Temple seems to have been by an external flight of stairs (*Neh.* xii. 37; 1 K. x. 5, &c.), similar to those at Persepolis, and like them probably placed laterally so as to form a part of the architectural design. When, however, the Temple came to be fortified "modo arcis" (*Tacit.* *H.* v. 12), the causeway and the bridge were established to afford communication with the upper city, and the two intermediate lower entrances to lead to the lower city, or, as it was originally called, "the city of David."

Cloisters.—The most magnificent part of the Temple, in an architectural point of view, seems certainly to have been the cloisters which were added to the outer court when it was enlarged by Herod. It is not quite clear if there was not an eastern porch before this time, and if so, it may have been nearly on the site of that subsequently erected; but on the three other sides the Temple area was so encircled at the last rebuilding that there can be no doubt but that from the very foundations the terrace walls and cloisters belonged wholly to the last period.

The cloisters in the west, north, and east side were composed of double rows of Corinthian columns, 25 cubits or 37 feet 6 inches in height (*B. J.* v. 5, §2) with flat roofs, and resting against the outer wall of the Temple. These, however, were immeasurably surpassed in magnificence by the royal porch or Stoa Basilica which overhung the southern wall. This is so minutely described by Josephus (*Ant.* xv. 11, §5) that there is no difficulty in understanding its arrangement or ascertaining its dimensions. It consisted (in the language of Gothic architecture) of a nave and two aisles, that towards the Temple being open, that towards the country closed by a wall. The breadth of the centre aisle was 45 feet; of the side aisles 30 from centre to centre of the pillars; their height 50 feet, and that of the centre aisle 100 feet. Its section was thus something in excess of that of York Cathedral, while its total length was one stadium or 600 Greek feet, or 100 feet in excess of York, or our largest Gothic cathedrals.

^e It does not appear difficult to account for this extraordinary excess. The Rabbis adopted the sacred number of Ezekiel of 500 for their external dimensions of the Temple, without caring much whether it meant reeds or cubits, and though the commentators say that they only meant the smaller cubit of 18 inches, or 636 feet in all, this explanation will not hold good, as all their other

This magnificent structure was supported by 168 Corinthian columns, arranged in four rows, forty in each row—the two odd pillars forming apparently a screen at the end of the bridge leading to the palace, whose axis was coincident with that of the Stoa, which thus formed the principal entrance from the city and palace to the Temple.

At a short distance from the front of these cloisters was a marble screen or enclosure, 3 cubits in height, beautifully ornamented with carving, but bearing inscriptions in Greek and Roman characters forbidding any Gentile to pass within its boundaries. Again, at a short distance within this was a flight of steps supporting the terrace or platform on which the Temple itself stood. According to Josephus (*B. J.* v. 5, §2) this terrace was 15 cubits or 22½ feet high, and was approached first by fourteen steps, each we may assume about one foot in height, at the top of which was a berm or platform, 10 cubits wide, called the Chel; and there were again in the depth of the gateways five or six steps, more leading to the inner court of the Temple, thus making 20 or 21 steps in the whole height of 22½ feet. To the eastward, where the court of the women was situated, this arrangement was reversed; five steps led to the Chel, and fifteen from that to the court of the Temple.

The court of the Temple, as mentioned above, was very nearly a square. It may have been exactly so, for we have not all the details to enable us to feel quite certain about it. The *Middoth* says it was 187 cubits E. and W., and 187 N. and S. (ii. 6). But on the two last sides there were the gateways with their exedrae and chambers, which may have made up 25 cubits each way, though, with such measurements as we have, it appears they were something less.

To the eastward of this was the court of the women, the dimensions of which are not given by Josephus, but are in the *Middoth*, as 137 cubits square—a dimension we may safely reject, first, from the extreme improbability of the Jews allotting to the women a space more than ten times greater than that allotted to the men of Israel or to the Levites, whose courts, according to the same authority, were respectively 137 by 11 cubits; but, more than this, from the impossibility of finding room for such a court while adhering to the other dimensions given.^e If we assume that the enclosure of the court of the Gentiles, or the Chel, was nearly equidistant on all four sides from the cloisters, its dimension must have been about 37 or 40 cubits east and west, most probably the former.

The great ornament of these inner courts seems to have been their gateways, the three especially on the north and south leading to the Temple court. These, according to Josephus, were of great height, strongly fortified and ornamented with great elaboration. But the wonder of all was the great eastern gate leading from the court of the women to the upper court. This seems to have been the pride of the Temple area—covered with carving richly gilt, having apartments over it (*Ant.* xv. 11, §7), more like the Gopura^h of an Indian temple than anything else we are acquainted with in archi-

measurements agree so closely with those of Josephus that they evidently were using the same cubit of 18 inches. The fact seems to be, that having erroneously adopted 500 cubits instead of 400 for the external dimensions, they had 100 cubits to spare, and introduced this where no authority existed to show they were wrong.

^h *Handbook of Architecture*, p. 93 et seq.

ture. It was also in all probability the one called the "Beautiful Gate" in the New Testament.

Immediately within this gateway stood the altar of burnt-offerings, according to Josephus (*B. J.* v. 5, §6), 50 cubits square and 15 cubits high, with an ascent to it by an inclined plane. The Talmud reduces this dimension to 32 cubits (*Middoth*, iii. 1), and adds a number of particulars, which make it appear that it must have been like a model of the Babylonian or other Assyrian temples. On the north side were the rings and stakes to which the victims were attached which were brought in to be sacrificed; and to the south an inclined plane led down, as before mentioned, to the Water Gate—so called because immediately in front of it was the great cistern excavated in the rock, first explored and described by Dr. Barclay (*City of the Great King*, p. 526), from which water was supplied to the Altar and the Temple. And a little beyond this, at the S.W. angle of the Altar was an opening (*Middoth*, iii. 3), through which the blood of the victims flowed¹ westward and southward to the king's garden at Siloam.

Both the Altar and the Temple were enclosed by a low parapet one cubit in height, placed so as to keep the people separate from the priests while the latter were performing their functions.

Within this last enclosure towards the westward stood the Temple itself. As before mentioned, its internal dimensions were the same as those of the Temple of Solomon, or of that seen by the Prophet in a vision, viz. 20 cubits or 30 feet, by 60 cubits or 90 feet, divided into a cubical Holy of Holies, and a holy place of 2 cubes; and there is no reason whatever for doubting but that the Sanctuary always stood on the identically same spot in which it had been placed by Solomon a thousand years before it was rebuilt by Herod.

Although the internal dimensions remained the same, there seems no reason to doubt but that the whole plan was augmented by the Pteromata or surrounding parts being increased from 10 to 20 cubits, so that the third Temple like the second, measured 60 cubits across, and 100 cubits east and west. The width of the façade was also augmented by wings or shoulders (*B. J.* v. 5, §4) projecting 20 cubits each way, making the whole breadth 100 cubits, or equal to the length. So far all seems certain, but when we come to the height, every measurement seems doubtful. Both Josephus and the Talmud seem delighted with the truly Jewish idea of a building which, without being a cube, was 100 cubits long, 100 broad, and 100 high—and everything seems to be made to bend to this simple ratio of proportion. It may also be partly owing to the difficulty of ascertaining heights as compared with horizontal dimensions, and the tendency that always exists to exaggerate these latter, that may have led to some confusion, but from whatever cause it arose, it is almost impossible to believe that the dimensions of the Temple as

regards height, were what they were asserted to be by Josephus, and specified with such minute detail in the *Middoth* (iv. 6). This authority makes the height of the floor 8, of the hall 40 cubits; the roofing 5 cubits in thickness; then the coenaculum or upper room 40, and the roof, parapet, &c., 9!—all the parts being named with the most detailed particularity.

As the Adytum was certainly not more than 20 cubits high, the first 40 looks very like a duplication, and so does the second; for a room 20 cubits wide and 40 high is so absurd a proportion that it is impossible to accept it. In fact, we cannot help suspecting that in this instance Josephus was guilty of systematically doubling the altitude of the building he was describing, as it can be proved he did in some other instances.²

From the above it would appear, that in so far as the horizontal dimensions of the various parts of this celebrated building, or their arrangement in plan is concerned, we can restore every part with very tolerable certainty; and there does not appear either to be very much doubt as to their real height. But when we turn from actual measurement and try to realize its appearance or the details of its architecture, we launch into a sea of conjecture with very little indeed to guide us, at least in regard to the appearance of the Temple itself.

We know, however, that the cloisters of the outer court were of the Corinthian order, and from the appearance of nearly contemporary cloisters at Palmyra and Baalbec we can judge of their effect. There are also in the Haram area at Jerusalem a number of pillars which once belonged to these colonnades, and so soon as any one will take the trouble to measure and draw them, we may restore the cloisters at all events with almost absolute certainty.

We may also realize very nearly the general appearance of the inner fortified enclosure with its gates and their accompaniments, and we can also restore the Altar, but when we turn to the Temple itself, all is guess work. Still the speculation is so interesting, that it may not be out of place to say a few words regarding it.

In the first place we are told (*Ant.* xv. 11, §5) that the priests built the Temple itself in eighteen months, while it took Herod eight years to complete his part, and as only priests apparently were employed, we may fairly assume that it was not a rebuilding, but only a repair—it may be with additions—which they undertook. We know also from Maccabees, and from the unwillingness of the priests to allow Herod to undertake the rebuilding at all that the Temple, though at one time desecrated was never destroyed; so we may fairly assume that a great part of the Temple of Zerubbabel was still standing, and was incorporated in the new.

Whatever may have been the case with the Temple of Solomon, it is nearly certain that the style of the second Temple must have been identical with that of the buildings we are so familiar with at Persepolis

¹ A channel exactly corresponding to that described in the Talmud has been discovered by Signor Pierotti, running towards the south-west. In his published accounts he mistakes it for one flowing north-east, in direct contradiction to the Talmud, which is our only authority on the subject.

² As it is not easy always to realize figured dimensions, it may assist those who are not in the habit of doing so to state that the western façade and nave of Lincoln Cathedral are nearly the same as those of Herod's Temple. Thus the façade with its shoulders is about 100 cubits wide.

The nave is 60 cubits wide and 60 high, and if you divide the aisle into three storeys you can have a correct idea of the chambers; and if the nave with its clerestory were divided by a floor, they would correctly represent the dimensions of the Temple and its upper rooms. The nave, however, to the transept, is considerably more than 100 cubits long, while the façade is only between 50 and 60 cubits high. Those, therefore, who adhere to the written text, must double its height in imagination to realise its appearance, but my own conviction is that the Temple was not higher in reality than the façade of the cathedral.

and Susa. In fact the Woodcut No. 6 correctly represents the second Temple in so far as its details are concerned; for we must not be led away with the modern idea that different people built in different styles, which they kept distinct and practised only within their own narrow limits. The Jews were too closely connected with the Persians and Babylonians at this period to know of any other style, and in fact their Temple was built under the superintendence of the very parties who were erecting the contemporary edifices at Persepolis and Susa.

The question still remains how much of this building or of its details were retained, or how much of Roman feeling added. We may at once dismiss the idea that anything was borrowed from Egypt. That country had no influence at this period beyond the limits of her own narrow valley, and we cannot trace one vestige of her taste or feeling in anything found in Syria at or about this epoch.

Turning to the building itself, we find that the only things that were added at this period were the wings to the façade, and it may consequently be surmised that the façade was entirely remodelled at this time, especially as we find in the centre a great arch, which was a very Roman feature, and very unlike anything we know of as existing before. This, Josephus says, was 25 cubits wide and 70 high, which is so monstrous in proportion, and, being wider than the Temple itself, so unlikely, that it may safely be rejected, and we may adopt in its stead the more moderate dimensions of the *Middoth* (iii. 7), which makes it 20 cubits wide by 40 high, which is not only more in accordance with the dimensions of the building, but also with the proportions of Roman architecture. This arch occupied the centre, and may easily be restored; but what is to be done with the 37 cubits on either hand? Were they plain like an unfinished Egyptian pylon, or covered with ornament like an Indian Gopura? My own impression is that the façade on either hand was covered with a series of small arches and panels four storeys in height, and more like the *Ták Kears* at Ctesiphon^a than any other building now existing. It is true that nearly five centuries elapsed between the destruction of the one building and the erection of the other. But Herod's Temple was not the last of its race, nor was Nushirvan's the first of its class, and its pointed arches and clumsy details show just such a degradation of style as we should expect from the interval which had elapsed between them. We know so little of the architecture of this part of Asia that it is impossible to speak with certainty on such a subject, but we may yet recover many of the lost links which connect the one with the other, and so restore the earlier examples with at least proximate certainty.

Whatever the exact appearance of its details may have been, it may safely be asserted that the triple Temple of Jerusalem—the lower court, standing on its magnificent terraces—the inner court, raised on its platform in the centre of this—and the Temple itself, rising out of this group and crowning the whole—must have formed, when combined with the

TEN COMMANDMENTS

beauty of its situation, one of the most splendid architectural combinations of the ancient world. [J. F.]

TEN COMMANDMENTS. (1.) The popular name in this, as in so many instances, is not that of Scripture. There we have the "ten words" (עֲשֵׂת הַדְּבָרִים; τὰ δέκα ῥήματα; *verba decem*), not the Ten Commandments (Ex. xxxiv. 28; Deut. iv. 13, x. 4, Heb.). The difference is not altogether an unmeaning one. The word of God, the "word of the Lord," the constantly recurring term for the fullest revelation, was higher than any phrase expressing merely a command, and carried with it more the idea of a self-fulfilling power. If on the one side there was the special contrast to which our Lord refers between the commandments of God and the traditions of men (Matt. xv. 3), the arrogance of the Rabbis showed itself, on the other, in placing the words of the Scribes on the same level as the words of God. [Comp. SCRIBES.] Nowhere in the later books of the O. T. is any direct reference made to their number. The treatise of Philo, however, *ὑπὲρ τῶν δέκα λόγων*, shows that it had fixed itself on the Jewish mind, and later still, it gave occasion to the formation of a new word ("The Decalogue" ἡ δέκαλογος, first in Clem. Al. *Paed.* iii. 12), which has perpetuated itself in modern languages. Other names are even more significant. These, and these alone, are "the words of the covenant," the unchanging ground of the union between Jehovah and His people, all else being as a superstructure, accessory and subordinate (Ex. xxxiv. 28). They are also the Tables of Testimony, sometimes simply "the testimony," the witness to men of the Divine will, righteous itself, demanding righteousness in man (Ex. xxv. 16, xxxi. 18, &c.). It is by virtue of their presence in it that the Ark becomes, in its turn, the Ark of the Covenant (Num. x. 33, &c.), that the sacred tent became the Tabernacle of Witness, of Testimony (Ex. xxxviii. 21, &c.). [TABERNACLE.] They remain there, throughout the glory of the kingdom, the primeval relics of a hoar antiquity (1 K. viii. 9), their material, the writing on them, the sharp incisive character of the laws themselves presenting a striking contrast to the more expanded teaching of a later time. Not less did the commandments themselves speak of the earlier age when not the silver and the gold, but the ox and the ass were the great representatives of wealth^a (comp. 1 Sam. xii. 3).

(2.) The circumstances in which the Ten great Words were first given to the people, surrounded them with an awe which attached to no other precept. In the midst of the cloud, and the dark noise, and the flashing lightning, and the fiery smoke, and the thunder, like the voice of a trumpet, Moses was called to receive the Law without which the people would cease to be a holy nation. Here, as elsewhere, Scripture unites two facts which men separate. God, and not man, was speaking to the Israelites in those terrors, and yet in the language of later inspired teachers, other instrumentality was not excluded.^b The law was "ordained by angels" (Gal.

^a *Handbook of Architecture*, p. 375.

^b Ewald is disposed to think that even in the form in which we have the Commandments there are some additions made at a later period, and that the second and the fourth commandments were originally as briefly imperative as the sixth or seventh (*Genet. Ier.* ii. 206). The difference between the reason given in Ex. xx. 11 for the fourth commandment, and that stated to have been given in Deut. v. 15, makes, perhaps, such a conjecture possible.

Scholies which modern annotators put into the margin are in the existing state of the O. T. incorporated into the text. Obviously both forms could not have appeared written on the Two Tables of Stone, yet Deut. v. 15, 21 not only states a different reason, but affirms that "all these words" were thus written. Kell (*Comm.* on Ex. xx.) seems on this point disposed to agree with Ewald.

^c Buxtorf, it is true, asserts that Jewish interpreters with hardly an exception, maintain that "Deum verbis

iii. 19), "spoken by angels" (Heb. ii. 2), received as the ordinance of angels (Acts vii. 53). The agency of those whom the thoughts of the Psalmist connected with the winds and the flaming fire (Ps. civ. 4; Heb. i. 7) was present also on Sinai. And the part of Moses himself was, as the language of St. Paul (Gal. iii. 19) affirms, that of "a mediator." He stood "between" the people and the Lord, "to show them the word of the Lord" (Deut. v. 5), while they stood afar off, to give form and distinctness to what would else have been terrible and overwhelming. The "voice of the Lord" which they heard in the thunderings and the sound of the trumpet, "full of majesty," "dividing the flames of fire" (Ps. xxix. 3-9), was for him a Divine word, the testimony of an Eternal will, just as in the parallel instance of John xii. 29, a like testimony led some to say, "it thundered," while others received the witness. No other words were proclaimed in like manner. The people shrank even from this nearness to the awful presence, even from the very echoes of the Divine voice. And the record was as exceptional as the original revelation. Of no other words could it be said that they were written as these were written, engraved on the Tables of Stone, not as originating in man's contrivance or sagacity, but by the power of the Eternal Spirit, by the "finger of God" (Ex. xxxi. 18, xxxii. 16; comp. note on TABERNACLE).

(3.) The number Ten was, we can hardly doubt, itself significant to Moses and the Israelites. The received symbol, then and at all times, of completeness (Bähr, *Symbolik*, i. 175-183), it taught the people that the Law of Jehovah was perfect (Ps. xix. 7). The fact that they were written not on one, but on two tables, probably in two groups of five each (*infra*), taught men (though with some variations from the classification of later ethics) the great division of duties towards God, and duties towards our neighbour, which we recognise as the groundwork of every true Moral system. It taught them also, five being the symbol of imperfection (Bähr, i. 183-187), how incomplete each set of duties would be when divorced from its companion. The recurrence of these numbers in the Pentateuch is at once frequent and striking. Ewald (*Gesch. Isr.* ii. 212-217) has shown by a large induction how continually laws and precepts meet us in groups of five or ten. The numbers, it will be remembered, meet us again as the basis of all the proportions of the Tabernacle. [TEMPLE.] It would show an ignorance of all modes of Hebrew thought to exclude this symbolic aspect. We need not, however, shut out altogether that which some writers (e. g. Grotius, *De Decal.* p. 36) have substituted for it, the connexion of the Ten Words with a decimal system of numeration, with the ten fingers on which a man counts. Words which were to be the rule of life for the poor as well as the learned, the groundwork of education for all children, might well be connected with the simplest facts and processes in man's mental growth, and thus stamped more indelibly on the memory.^c

(4.) In what way the Ten Commandments were to be divided has, however, been a matter of much

controversy. At least four distinct arrangements present themselves.

(a.) In the received teaching of the Latin Church resting on that of St. Augustine (*Qu. in Ex.* 71, *Ep. ad Januar.* c. xi., *De Decal. &c.*, &c.) the first Table contained three commandments, the second the other seven. Partly on mystical grounds, because the Tables thus symbolized the Trinity of Divine Persons, and the Eternal Sabbath, partly as seeing in it a true ethical division, he adopted this classification. It involved, however, and in part proceeded from an alteration in the received arrangement. What we know as the first and second were united, and consequently the Sabbath law appeared at the close of the First Table as the third, not as the fourth commandment. The completeness of the number was restored in the Second Table by making a separate (the ninth) command of the precept, "Thou shalt not covet thy neighbour's wife," which with us forms part of the tenth. It is an almost fatal objection to this order that in the First Table it confounds, where it ought to distinguish, the two sins of polytheism and idolatry; and that in the Second it introduces an arbitrary and meaningless distinction. The later theology of the Church of Rome apparently adopted it as seeming to prohibit image-worship only so far as it accompanied the acknowledgment of another God (*Catech. Trident.* iii. 2, 20).

(b.) The familiar division, referring the first four to our duty towards God, and the six remaining to our duty towards man, is, on ethical grounds, simple and natural enough. If it is not altogether satisfying, it is because it fails to recognise the symmetry which gives to the number five so great a prominence, and, perhaps also, because it looks on the duty of the fifth commandment from the point of view of modern ethics rather than from that of the ancient Israelites, and the first disciples of Christ (*infra*).

(c.) A modification of (d.) has been adopted by later Jewish writers (Jonathan ben Uzziel, Aben Ezra, Moses ben Nachman, in Suicer, *Thes. s. v. ὁμολόγος*). Retaining the combination of the first and second commandments of the common order, they have made a new "word" of the opening declaration, "I am the Lord thy God which brought thee out of the land of Egypt, out of the house of bondage," and so have avoided the necessity of the subdivision of the tenth. The objection to this division is, (1) that it rests on no adequate authority, and (2) that it turns into a single precept what is evidently given as the groundwork of the whole body of laws.

(d.) Rejecting these three, there remains that recognised by the older Jewish writers, Josephus (iii. 6, §6) and Philo (*De Decal.* i.), and supported ably and thoughtfully by Ewald (*Gesch. Isr.* ii. 208), which places five commandments in each Table; and thus preserves the *pentad* and *decad* grouping which pervades the whole code. A modern jurist would perhaps object that this places the fifth commandment in a wrong position, that a duty to parents is a duty towards our neighbour. From the Jewish point of view, it is believed, the place thus given to that commandment

Decalogi per se immediate locutum esse" (*Diss. de Decal.*). The language of Josephus, however (*Ant.* xv. 8, §5), not less than that of the N. T., shows that at one time the traditions of the Jewish schools pointed to the opposite conclusion.

^c Bähr absorbed in symbolism, has nothing for this

natural suggestion but two notes of admiration (!). The analogy of Ten Great Commandments in the moral law of Buddhism might have shown him how naturally men crave for a number that thus helps them. A true system was as little likely to ignore the natural craving as a false. (Comp. note in Ewald, *Gesch. Isr.* ii. 207.)

was essentially the right one. Instead of duties towards God, and duties towards our neighbours, we must think of the First Table as containing all that belonged to the *Eðvísæta* of the Greeks, to the *Pietas* of the Romans, duties *i. e.* with no corresponding rights, while the Second deals with duties which involve rights, and come therefore under the head of *Justitia*. The duty of honouring, *i. e.* supporting, parents came under the former head. As soon as the son was capable of it, and the parents required it, it was an absolute, unconditional duty. His right to any maintenance from them had ceased. He owed them reverence, as he owed it to his Father in heaven (Heb. xii. 9). He was to show piety (*εὐσεβείῃ*) to them (1 Tim. v. 4). What made the "Corban" casuistry of the Scribes so specially evil was, that it was, in this way, a sin against the piety of the First Table, not merely against the lower obligations of the second (Mark vii. 11; comp. PIRY). It at least harmonises with this division that the second, third, fourth, and fifth commandments, all stand on the same footing as having special sanctions attaching to them, while the others that follow are left in their simplicity by themselves, as though the reciprocity of rights were in itself a sufficient ground for obedience.⁴

(5.) To these Ten Commandments we find in the Samaritan Pentateuch an eleventh added:—"But when the Lord thy God shall have brought thee into the land of Canaan, whither thou goest to possess it, thou shalt set thee up two great stones, and shalt plaister them with plaister, and shalt write upon these stones all the words of this Law. Moreover, after thou shalt have passed over Jordan, thou shalt set up those stones which I command thee this day, on Mount Gerizim, and thou shalt build there an altar to the Lord thy God, an altar of stones: thou shalt not lift up any iron thereon. Of unlevied stones shalt thou build that altar to the Lord thy God, and thou shalt offer on it burnt-offerings to the Lord thy God, and thou shalt sacrifice peace-offerings, and shalt eat them there, and thou shalt rejoice before the Lord thy God in that mountain beyond Jordan, by the way where the sun goeth down, in the land of the Canaanite that dwelleth in the plain country over against Gilgal, by the oak of Moreh, towards Sichem" (Walton, *Bibl. Polyglott.*). In the absence of any direct evidence we can only guess as to the history of this remarkable addition. (1.) It will be seen that the whole passage is made up of two which are found in the Hebrew text of Deut. xxvii. 2-7, and xi. 30, with the *substitution*, in the former, of Gerizim for Ebal. (2.) In the absence of confirmation from any other version, Ebal must, as far as textual criticism is concerned, be looked upon as the true reading, Gerizim as a falsification, casual or deliberate, of the text. (3.) Probably the choice of Gerizim as the site of the Samaritan temple was determined by the fact that it had been the Mount of Blessings, Ebal that of Curses. Possibly, as Walton suggests (*Prolegom.* c. xi.), the difficulty of understanding how the latter should have been chosen instead of the former, as a place

for sacrifice and offering, may have led them to look on the reading Ebal as erroneous. They were unwilling to expose themselves to the taunts of their Jewish enemies by building a temple on the Hill of Curses. They would claim the inheritance of the blessings. They would set the authority of their text against that of the scribes of the Great Synagogue. One was as likely to be accepted as the other. The "Hebrew verity" was not then acknowledged as it has been since. (4.) In other repetitions or transfers in the Samaritan Pentateuch we may perhaps admit the plea which Walton makes in its behalf (*l. c.*), that in the first formation of the Pentateuch as a Codex, the transcribers had a large number of separate documents to copy, and that consequently much was left to the discretion of the individual scribe. Here, however, that excuse is hardly admissible. The interpolation has every mark of being a bold attempt to claim for the schismatic worship on Gerizim the solemn sanction of the voice on Sinai, to place it on the same footing as the Ten great Words of God. The guilt of the interpolation belonged of course only to the first contrivers of it. The later Samaritans might easily come to look on their text as the true one, on that of the Jews as corrupted by a fraudulent omission. It is to the credit of the Jewish scribes that they were not tempted to retaliate, and that their reverence for the sacred records prevented them from suppressing the history which connected the rival sanctuary with the blessings of Gerizim.

(6.) The treatment of the Ten Commandments in the Targum of Jonathan ben Uzziel is not without interest. There, as noticed above, the first and second commandments are united, to make up the second, and the words "I am the Lord thy God," &c., are given as the first. More remarkable is the addition of a distinct reason for the last five commandments no less than for the first five. "Thou shalt commit no murder, for because of the sins of murderers the sword goeth forth upon the world." So in like manner, and with the same formula, "death goeth forth upon the world" as the punishment of adultery, fornication as that of theft, drouth: as that of false witness, invasion, plunder, captivity as that of covetousness (Walton, *Bibl. Polyglott.*).

(7.) The absence of any distinct reference to the Ten Commandments as such in the *Pirke Aboth* (=Maxims of the Fathers) is both strange and significant. One chapter (ch. v.) is expressly given to an enumeration of all the Scriptural facts which may be grouped in decades, the ten words of Creation, the ten generations from Adam to Noah, and from Noah to Abraham, the ten trials of Abraham, the ten plagues of Egypt, and the like, but the ten divine words find no place in the list. With all their ostentation of profound reverence for the Law, the teaching of the Rabbis turned on other points than the great laws of duty. In this way, as in others, they made void the commandments of God that they might keep their own traditions.—Compare Stanley, *Jewish Church*, Lect. vii., in illustration of many of the points here noticed. [E. H. P.]

TENT.^a Among the leading characteristics of

2. תִּנְתָּן; except; tentorium; opposed to תִּבְנֶה "build."

3. תִּנְתָּן (accusative), only once "tent" (2 Sam. xi. 11).

4. תִּנְתָּן; adjectives; superlative; Arab. تَنْتَ whence

with art. prefixed, comes al-tent (Span.) and "al-tent" (Russell, *Altoppe*, l. 30): only once used (Num. xvi. 9).

^a A further confirmation of the truth of this division is found in Rom. xiii. 9. St. Paul, summing up the duties "briefly comprehended" in the one great Law, "Thou shalt love thy neighbour as thyself," enumerates the last five commandments, but makes no mention of the fifth.

^b 1. תִּנְתָּן; older, except; tabernaculum, tentorium; often in A. V. tabernacle.

ARAB TENT (LAYARD)

the nomade races, those two have always been numbered, whose origin has been ascribed to Jabel the son of Lamech (Gen. iv. 20), viz., to be tent-dwellers and keepers of cattle. The same may be said of the forefathers of the Hebrew race; nor was it until the return into Canaan from Egypt that the Hebrews became inhabitants of cities, and it may be remarked that the tradition of tent-usage survived for many years later in the Tabernacle of Shiloh, which consisted, as many Arab tents still consist, of a walled enclosure covered with curtains (*Mishna, Zebachin*, xiv. 6; Stanley, *S. and P.* p. 233). Among tent-dwellers of the present day must be reckoned, (1.) the great Mongol and Tartar hordes of central Asia, whose tent-dwellings are sometimes of gigantic dimensions, and who exhibit more contrivance both in the dwellings themselves and in their method of transporting them from place to place than is the case with the Arab races (Marco Polo, *Trav.* p. 128, 135, 211, ed. Bohn; Hor. 3 *Od.* xiv. 10; Gibbon, c. xxvi., vol. iii. p. 298, ed. Smith). (2.) The Bedouin Arab tribes, who inhabit tents which are probably constructed on the same plan as those which were the dwelling-places of Abraham and of Jacob (Heb. xi. 9). A tent or pavilion on a magnificent scale, constructed for Ptolemy Philadelphus at Alexandria, is described by Athenæus, v. 196 foll.

An Arab tent is minutely described by Burckhardt. It is called *beit*, "house;" its covering consists of stuff, about three-quarters of a yard broad, made of black goats'-hair (Cant. i. 5; Shaw, *Trav.* p. 220), laid parallel with the tent's length. This is sufficient to resist the heaviest rain. The tent-poles, called *amsid*, or columns, are usually nine in number, placed in three groups, but many tents have only one pole, others two or three. The ropes which hold the tent in its place are fastened, not to the tent-cover itself, but to loops consisting of a leathern thong tied to the ends of a stick, round which is twisted a piece of old cloth, which is itself sewed to the tent-cover. The ends of the tent-ropes are fastened to short sticks or pins, called *wed* or *acutad*, which are driven into the ground with a mallet

(Judg. iv. 21). [PIN.] Round the back and sides of the tents runs a piece of stuff removable at pleasure to admit air. The tent is divided into two apartments, separated by a carpet partition drawn across the middle of the tent and fastened to the three middle posts. The men's apartment is usually on the right side on entering, and the women's on the left; but this usage varies in different tribes, and in the Mesopotamian tribes the contrary is the rule. Of the three side posts on the men's side, the first and third are called *yed* (hand); and the one in the middle is rather higher than the other two. Hooks are attached to these posts for hanging various articles (Gen. xviii. 10; Jud. xiii. 6; Niebuhr, *Voy.* i. 187; Layard, *Nin. and Bas.* p. 261). [PILLAR.] Few Arabs have more than one tent, unless the family be augmented by the families of a son or a deceased brother, or in case the wives disagree, when the master pitches a tent for one of them adjoining his own. The separate tents of Sarah, Leah, Rachel, Zilpah, and Bilhah, may thus have been either separate tents or apartments in the principal tent in each case (Gen. xxiv. 67, xxxi. 33). When the pasture near an encampment is exhausted, the tents are taken down, packed on camels and removed (Is. xxxviii. 12; Gen. xxvi. 17, 22, 25). The beauty of an Arab encampment is noticed by Shaw (*Trav.* p. 221; see Num. xxiv. 5). Those who cannot afford more complete tents, are content to hang a cloth from a tree by way of shelter. In choosing places for encampment, Arabs prefer the neighbourhood of trees, for the sake of the shade and coolness which they afford (Gen. xviii. 4, 8; Niebuhr, *l. c.*). In observing the directions of the Law respecting the feast of Tabernacles, the Rabbinical writers laid down as a distinction between the ordinary tent and the booth, *sucoah*, that the latter must in no case be covered by a cloth, but be restricted to boughs of trees as its shelter (*Sucoah*, i. 3). In hot weather the Arabs of Mesopotamia often strike their tents and betake themselves to sheds of reeds and grass on the bank of the river (Layard, *Ninereh*, i. 123; Burckhardt, *Notes on Bed.* i. 37, 46; Volney, *Trav.* i. 398

Lazard, *Nis. and Bab.* p. 171, 175; Niebuhr, *Voy.* i. l. c.).

[H. W. P.]

TERAH (תֵּרַח: תֵּרַח, תֵּרַח in Josh.; Alex.

תֵּרַח, etc. Gen. xi. 28: *Thare*). The father of Abram, Nahor, and Haran, and through them the ancestor of the great families of the Israelites, Ishmaelites, Midianites, Moabites, and Ammonites (Gen. xi. 24-32). The account given of him in the O. T. narrative is very brief. We learn from it simply that he was an idolater (Josh. xxiv. 2), that he dwelt beyond the Euphrates in Ur of the Chaldees (Gen. xi. 28), and that in the south-westerly migration, which from some unexplained cause he undertook in his old age, he went with his son Abram, his daughter-in-law Sarai, and his grandson Lot, "to go into the land of Canaan, and they came unto Haran, and dwelt there" (Gen. xi. 31). And finally, "the days of Terah were two hundred and five years: and Terah died in Haran" (Gen. xi. 32). In connexion with this last-mentioned event a chronological difficulty has arisen which may be noticed here. In the speech of Stephen (Acts vii. 4) it is said that the further migration of Abram from Haran to the land of Canaan did not take place till after his father's death. Now as Terah was 205 years* old when he died, and Abram was 75 when he left Haran (Gen. xii. 4), it follows that, if the speech of Stephen be correct, at Abram's birth Terah must have been 130 years old; and therefore that the order of his sons—Abram, Nahor, Haran—given in Gen. xi. 26, 27, is not their order in point of age. [See LOT, 1436.] Lord Arthur Hervey says (*Geneal.* pp. 82, 83), "The difficulty is easily got over by supposing that Abram, though named first on account of his dignity, was not the eldest son, but probably the youngest of the three, born when his father was 130 years old—a supposition with which the marriage of Nahor with his elder brother Haran's daughter, Milcah, and the apparent nearness of age between Abram and Lot, and the three generations from Nahor to Rebecca corresponding to only two, from Abraham to Isaac, are in perfect harmony." From the simple facts of Terah's life recorded in the O. T. has been constructed the entire legend of Abram which is current in Jewish and Arabian traditions. Terah the idolater is turned into a maker of images, and "Ur of the Chaldees" is the original of the "furnace" into which Abram was cast (comp. Ex. v. 2). Rashi's note on Gen. xi. 28 is as follows:—"In the presence of Terah his father: in the lifetime of his father. And the Midrash Hagada says that he died beside his father, for Terah had complained of Abram his son, before Nimrod, that he had broken his images, and he cast him into a furnace of fire. And Haran was sitting and saying in his heart, If Abram overcome I am on his side, and if Nimrod overcome I am on his side. And when Abram was saved they said to Haran, On whose side art thou? He said to them, I am on Abram's side. So they cast him into the furnace of fire and he was burnt; and this is [what is meant by] *Ur Casdim* (Ur of the Chaldees)." In *Bereshith Rabba* (Par. 17) the story is told of Abraham being left to sell idols in his father's stead, which is repeated in Weil's *Biblical Legends*, p. 49. The whole legend depends upon the ambiguity of the word תֵּרַח, which signifies "to make" and "to serve or worship,"

* The Sam. text and version make him 145, and so avoid this difficulty.

TERAPHIM

so that Terah, who in the Biblical narrative is only a worshipper of idols, is in the Jewish tradition an image-maker; and about this single point the whole story has grown. It certainly was unknown to Josephus, who tells nothing of Terah, except that it was grief for the death of his son Haran that induced him to quit Ur of the Chaldees (*Ant.* i. 6, § 6).

In the Jewish traditions Terah is a prince and a great man in the palace of Nimrod (Jellinek, *Bet Hamidrash*, p. 27), the captain of his army (*Sepher Hayyashar*), his son-in-law according to the Arabs (Beer, *Leben Abrahams*, p. 97). His wife is called in the Talmud (*Baba Bathra*, fol. 91a) Amtelai, or Emtelai, the daughter of Carnebo. In the Book of the Jubilees she is called Edna, the daughter of Arem, or Aram; and by the Arabs Adna (D'Herbelot, art. *Abraham*; Beer, p. 97). According to D'Herbelot, the name of Abraham's father was Azar in the Arabic traditions, and Terah was his grandfather. Elmakin, quoted by Hottinger (*Snegma Orientale*, p. 281), says that, after the death of Yuna, Abraham's mother, Terah took another wife, who bore him Sarah. He adds that in the days of Terah the king of Babylon made war upon the country in which he dwelt, and that Hazrun, the brother of Terah, went out against him and slew him; and the kingdom of Babylon was transferred to Nineveh and Mosul. For all these traditions, see the Book of *Jashar*, and the works of Hottinger, D'Herbelot, Weil, and Beer above quoted. Philo (*De Somniis*) indulges in some strange speculations with regard to Terah's name and his migration. [W. A. W.]

TER'APHIM (תֵּרָפִים: *θεραφίμ, τὰ θεραφίμ, τὰ θεραφίμ, κεντάφια, εἰδωλα, γλυπτὰ, εἰδωλα, ἀποθεγγόμενοι: theraphim, statua, idola, simulacra, figuræ idolorum, idololatry*), only in plural, images connected with magical rites. The subject of teraphim has been fully discussed in art. MAGIC (ii. 195-197), and it is therefore unnecessary here to do more than repeat the results there stated. The derivation of the name is obscure. In one case a single statue seems to be intended by the plural (1 Sam. xix. 13, 16). The teraphim carried away from Laban by Rachel do not seem to have been very small; and the image (if one be intended), hidden in David's bed by Michal to deceive Saul's messengers, was probably of the size of a man, and perhaps in the head and shoulders, if not lower, of human or like form; but David's sleeping-room may have been a mere cell without a window, opening from a large apartment, which would render it necessary to do no more than till the bed. Laban regarded his teraphim as gods; and, as he was not ignorant of the true God, it would therefore appear that they were used by those who added corrupt practices to the patriarchal religion. Teraphim again are included among Micah's images, which were idolatrous objects connected with heretical corruptions rather than with heathen worship (Judg. xvii. 3-5, xviii. 17, 18, 20). Teraphim were consulted for oracular answers by the Israelites (Zech. x. 2; comp. Judg. xvii. 5, 6; 1 Sam. xv. 22, 23, xix. 13, 16, LXX.; and 2 K. xxiii. 24), and by the Babylonians, in the case of Nebuchadnezzar (Ex. xxi. 19-22). There is no evidence that they were ever worshipped. Though not frequently mentioned, we find they were used by the Israelites in the time of the Judges and of Saul, and until the reign of Josiah, who put them away

2 K. xlii. 24. and apparently again after the Captivity (Zech. i. 4). [H. S. P.]

TERESH (תֶּרֶשׁ): om. in Vat. and Alex.; FA. third hand has *Θάρας*, *Θάρρας*: *Thares*. One of the two eunuchs who kept the door of the palace of Ahasuerus, and whose plot to assassinate the king was discovered by Mordecai (Esth. ii. 21, vi. 2). He was hanged. Josephus calls him Theodestes (Ant. xi. 8, §4), and says that the conspiracy was detected by Barnabæus, a servant of one of the eunuchs, who was a Jew by birth, and who revealed it to Mordecai. According to Josephus, the conspirators were crucified.

TERTIUS (Τέρτιος: *Tertius*) was the amanuensis of Paul in writing the Epistle to the Romans (Rom. xvi. 22). He was at Corinth, therefore, and Cenchreæ, the port of Corinth, at the time when the Apostle wrote to the Church at Rome. It is noticeable that Tertius intercepts the message which Paul sends to the Roman Christians, and inserts a greeting of his own in the first person singular (*ἀσπάζομαι ἐνὶ Τέρτιος*). Both that circumstance and the frequency of the name among the Romans may indicate that Tertius was a Roman, and was known to those whom Paul salutes at the close of the letter. Secundus (Acts xx. 4) is another instance of the familiar usage of the Latin ordinals employed as proper names. The idle pedantry which would make him and Silas the same person because *tertius* and תִּרְיָא mean the same in Latin and Hebrew, hardly deserves to be mentioned (see Wolf, *Curse Philologicae*, tom. iii. p. 295). In regard to the ancient practice of writing letters from dictation, see Becker's *Gallus*, p. 180. Nothing certain is known of Tertius apart from this passage in the Romans. No credit is due to the writers who speak of him as bishop of Iconium (see Fabricius, *Lux Evangelica*, p. 117). [H. B. H.]

TETA (Vat. omits; Alex. Ἀττά: *Topa*). The form under which the name *HATITA*, one of the doorkeepers of the Temple, appears in the lists of 1 Esd. v. 28.

TERTULLUS (Τερτυλλος, a diminutive form from the Roman name *Tertius*, analogous to *Lucullus* from *Lucius*, *Fabullus* from *Fabius*, &c.), "a certain orator" (Acts xxiv. 1) who was retained by the High Priest and Sanhedrim to accuse the Apostle Paul at Caesarea before the Roman Procurator Antonius Felix. [PAUL.] He evidently belonged to the class of professional orators, multitudes of whom were to be found not only in Rome, but in other parts of the empire, to which they had betaken themselves in the hope of finding occupation at the tribunals of the provincial magistrates. Both from his name, and from the great probability that the proceedings were conducted in Latin (see especially Milman, *Bampton Lectures* for 1827, p. 185, *note*), we may infer that Tertullus was of Roman, or at all events of Italian origin. The Sanhedrim would naturally desire to secure his services on account of their own ignorance both of the Latin language and of the ordinary procedure of a Roman law-court.

The asordium of his speech is designed to conciliate the good will of the Procurator, and is accordingly overcharged with flattery. There is a strange contrast between the opening clause—

πολλὰς εἰρήνης τυγχάνοντες διὰ σοῦ—and the brief summary of the Procurator's administration given by Tacitus (*Hist.* v. 9):—"Antonius Felix per omnem sævitiam ac libidinem, jus regium servili ingenio exercuit" (comp. Tac. *Ann.* xii. 54). But the commendations of Tertullus were not altogether unfounded, as Felix had really succeeded in putting down several seditious movements. [FELIX.] It is not very easy to determine whether St. Luke has preserved the oration of Tertullus entire. On the one hand we have the elaborate and artificial opening, which can hardly be other than an accurate report of that part of the speech; and on the other hand we have a narrative which is so very dry and concise, that, if there were nothing more, it is not easy to see why the orator should have been called in at all. The difficulty is increased if, in accordance with the greatly preponderating weight of external authority, we omit the words in vers. 6-8, *καὶ κατὰ τὸς ἡμέτερον . . . ἔρχεσθαι ἐπὶ σέ*. On the whole it seems most natural to conclude that the historian, who was almost certainly an ear-witness, merely gives an abstract of the speech, giving however in full the most salient points, and those which had the most forcibly impressed themselves upon him, such as the exordium, and the character ascribed to St. Paul (ver. 5).

The doubtful reading in vers. 6-8, to which reference has already been made, seems likely to remain an unsolved difficulty. Against the external evidence there would be nothing to urge in favour of the disputed passage, were it not that the statement which remains after its removal is not merely extremely brief (its brevity may be accounted for in the manner already suggested), but abrupt and awkward in point of construction. It may be added that it is easier to refer *παρ' οὗ* (ver. 8) to the Tribune Lysias than to Paul. For arguments founded on the words *καὶ κατὰ . . . κλίσεις* (ver. 6)—arguments which are dependent on the genuineness of the disputed words—see Lardner, *Credibility of the Gospel History*, b. i. ch. 2; Biscoe, *On the Acts*, ch. vi. §16.

We ought not to pass over without notice a strange etymology for the name Tertullus proposed by Calmet, in the place of which another has been suggested by his English editor (ed. 1830), who takes credit for having rejected "fanciful and improbable" etymologies, and substituted improvements of his own. Whether the suggestion is an improvement in this case the reader will judge:—"Tertullus, Τερτυλλος, liar, impostor, from *τεπατολόγος*, a teller of stories, a cheat. [Qy. was his true appellation *Ter-Tullius*, 'thrice Tully,' that is, extremely eloquent, varied by Jewish wit into Tertullus?]" [W. B. J.]

TESTAMENT, NEW. [NEW TESTAMENT.]

TESTAMENT, OLD. [OLD TESTAMENT.]

TETRARCH (τετράρχης). Properly the sovereign or governor of the fourth part of a country. On the use of the title in Thessaly, Galatia, and Syria, consult the *Dictionary of Greek and Roman Antiquities*, "Tetrarcha," and the authorities there referred to. "In the later period of the republic and under the empire, the Romans seem to have used the title (as also those of *ethnarch* and *phylarch*) to designate those tributary princes who were not of sufficient importance to be called

kings." In the New Testament we meet with the designation, either actually or in the form of its derivative *τετραρχεῖν*, applied to three persons:—

(1.) Herod Antipas (Matt. xiv. 1; Luke vi. 1, 19, ix. 7; Acts xiii. 1), who is commonly distinguished as "Herod the tetrarch," although the title of "king" is also assigned to him both by St. Matthew (xiv. 9) and by St. Mark (vi. 14, 22 sqq.). St. Luke, as might be expected, invariably adheres to the formal title, which would be recognized by Gentile readers. Herod is described by the last-named Evangelist (ch. iii. 1) as "tetrarch of Galilee;" but his dominions, which were bequeathed to him by his father Herod the Great, embraced the district of Peraea beyond the Jordan (Joseph. *Ant.* xvii. 8, §1): this bequest was confirmed by Augustus (Joseph. *B. J.* ii. 8, §3). After the disgrace and banishment of Antipas, his tetrarchy was added by Caligula to the kingdom of Herod Agrippa I. (*Ant.* xviii. 7, §2). [HEROD ANTIPAS.]

(2.) Herod Philip (the son of Herod the Great and Cleopatra, not the husband of Herodias), who is said by St. Luke (iii. 1) to have been "tetrarch of Ituraea, and of the region of Trachonitis." Josephus tells us that his father bequeathed to him Gaulonitis, Trachonitis, and Paneas (*Ant.* xvii. 8, §1), and that his father's bequest was confirmed by Augustus, who assigned to him Batanaea, Trachonitis, and Auranitis, with certain parts about Jamnia belonging to the "house of Zenodorus" (*B. J.* ii. 6, §3). Accordingly the territories of Philip extended eastward from the Jordan to the wilderness, and from the borders of Peraea northwards to Lebanon and the neighbourhood of Damascus. After the death of Philip his tetrarchy was added to the province of Syria by Tiberius (*Ant.* xviii. 4, §6), and subsequently conferred by Caligula on Herod Agrippa I., with the title of king (*Ant.* xviii. 6, §10). [HEROD PHILIP I.; HEROD AGRIPIA I.]

(3.) Lysanias, who is said (Luke iii. 1) to have been "tetrarch of Abilene," a small district surrounding the town of Abila, in the fertile valley of the Barada or Chrysorrhoea, between Damascus and the mountain-range of Antilibanus. [ABILENE.] There is some difficulty in fixing the limits of this tetrarchy, and in identifying the person of the tetrarch. [LYSANIAS.] We learn, however, from Josephus (*Ant.* xviii. 6, §10, xix. 5, §1) that a Lysanias had been tetrarch of Abila before the time of Caligula, who added this tetrarchy to the dominions of Herod Agrippa I.—an addition which was confirmed by the emperor Claudius.

It remains to inquire whether the title of tetrarch, as applied to these princes, had any reference to its etymological signification. We have seen that it was at this time probably applied to petty princes without any such determinate meaning. But it appears from Josephus (*Ant.* xvii. 11, §4; *B. J.* ii. 6, §3) that the tetrarchies of Antipas and Philip were regarded as constituting each a fourth part of their father's kingdom. For we are told that Augustus gave one-half of Herod's kingdom to his son Archelaus, with the appellation of ethnarch, and with a promise of the regal title; and that he divided the remainder into the two tetrarchies. Moreover, the revenues of Archelaus, drawn from his territory, which included Judaea, Samaria, and Idumaea, amounted to 400 talents, the tetrarchies

of Philip and Antipas producing 200 talents each. We conclude that in these two cases, at least, the title was used in its strict and literal sense. [W. B. J.]

THADDAEUS (Θαδδαῖος: *Thaddaeus*). A name in St. Mark's catalogue of the twelve Apostles (Mark iii. 18) in the great majority of MSS. In St. Matthew's catalogue (Matt. x. 3) the corresponding place is assigned to Θαδδαῖος by the Vatican MS. (B), and to Λεββαῖος by the Codex Bezae (D). The Received Text, following the first correction of the Codex Ephraemi (C)—where the original reading is doubtful—as well as several cursive MSS., reads Λεββαῖος ὁ ἐπικληθεὶς Θαδδαῖος. We are probably to infer that Λεββαῖος, alone, is the original reading of Matt. x. 3, and Θαδδαῖος of Mark iii. 18. By these two Evangelists the tenth place among the Apostles is given to Lebbaeus or Thaddaeus, the eleventh place being given to Simon the Canaanite. St. Luke, in both his catalogues (Luke vi. 15; Acts i. 13), places Simon Zelotes tenth among the Apostles, and assigns the eleventh place to 'Ιούδας 'Ισκαρίωθ. As the other names recorded by St. Luke are identical with those which appear (though in a different order) in the first two Gospels, it seems scarcely possible to doubt that the three names of Judas, Lebbaeus, and Thaddaeus were borne by one and the same person. [JUDAS; LEBBAEUS.] [W. B. J.]

THA'HASH (תְּחַשׁ: *Toxos*: *Thahas*). Son of Nahor by his concubine Reumah (Gen. xxii. 24). He is called *Tahas* by Josephus (*Ant.* i. 6, §5).

THA'MAH (תָּמַר: *Them*: *Thema*). "The children of Thamah" were a family of Nethinim who returned with Zerubbabel (Ezr. ii. 53). The name elsewhere appears in the A. V. as TAMAH.

THA'MAR (תָּמָר: *Thamar*). TAMAR 1 (Matt. i. 3).

THAM'NATHA (תָּמְנָת: *Thamnatha*). One of the cities of Judaea fortified by Bacchides after he had driven the Maccabees over the Jordan (1 Macc. ix. 50). Thamnatha no doubt represents an ancient TAMNATH, possibly the present *Tibneh*, half-way between Jerusalem and the Mediterranean. Whether the name should be joined to Pharathon, which follows it, or whether they should be independent, is matter of doubt. [PHARATHON.] [G.]

THANK-OFFERING, or PEACE-OFFERING (תִּשְׁבָּעָה, or simply תִּשְׁבָּעָה, and

In Amos v. 22, תִּשְׁבָּעָה: *Thosha* *shenplov*, *shenplov*, occasionally *shenplov*: *hostia pacificorum*, *pacificorum*) the properly eucharistic offering among the Jews, in its theory resembling the MEAT-OFFERING, and therefore indicating that the offerer was already reconciled to, and in covenant with, God. Its ceremonial is described in Lev. iii. The nature of the victim was left to the sacrificer; it might be male or female, of the flock or of the herd, provided that it was unblemished; the hand of the sacrificer was laid on its head, the fat burnt, and the blood sprinkled, as in the burnt-offering; of the flesh, the breast and right shoulder were given to the priest; the rest belonged to the sacrificer, to be eaten, either on the day of sacrifice, or on the next day (Lev. vii. 11-13, 29-34), except in the case of the firstlings, which belonged to the priest alone

xiii. 20). The eating of the flesh of the meat-offering was considered a partaking of the "table of the Lord;" and on solemn occasions, as at the dedication of the Temple of Solomon, it was conducted on an enormous scale, and became a great national feast.

The peace-offerings, unlike other sacrifices, were not ordained to be offered in fixed and regular course. The meat-offering was regularly ordained as the eucharistic sacrifice; and the only constantly recurring peace-offering appears to have been that of the two firstling lambs at Pentecost (Lev. xxiii. 19). The general principle of the peace-offering seems to have been, that it should be entirely spontaneous, offered as occasion should arise, from the feeling of the sacrificer himself. "If ye offer a sacrifice of peace-offerings to the Lord, ye shall offer it at your own will" (Lev. xix. 5). On the first institution (Lev. vii. 11-17), peace-offerings are divided into "offerings of thanksgiving," and "vows or free-will offerings;" of which latter class the offering by a Nazarite, on the completion of his vow, is the most remarkable (Num. vi. 14). The very names of both divisions imply complete freedom, and show that this sacrifice differed from others, in being considered not a duty, but a privilege.

We find accordingly peace-offerings offered for the people on a great scale at periods of unusual solemnity or rejoicing; as at the first inauguration of the covenant (Ex. xxiv. 5), at the first consecration of Aaron and of the Tabernacle (Lev. ix. 18), at the solemn reading of the Law in Canaan by Joshua (Josh. viii. 31), at the accession of Saul (1 Sam. xi. 15), at the bringing of the ark to Mount Zion by David (2 Sam. vi. 17), at the consecration of the Temple, and thrice every year afterwards, by Solomon (1 K. viii. 63, ix. 25), and at the great passover of Hezekiah (2 Chr. xxx. 22). In two cases only (Judg. xx. 26; 2 Sam. xiv. 25) peace-offerings are mentioned as offered with burnt-offerings at a time of national sorrow and fasting. Here their force seems to have been precatory rather than eucharistic. [See SACRIFICES.] [A. B.]

THARA (Θάρα: *Thare*). **TERAH** the father of Abraham (Luke iii. 34).

THAR'RA (*Thara*), Esth. xii. 1. A corrupt form of the name **TERESH**.

THAR'SHISH (תַּרְשִׁישׁ: *Tharsis*).

1. In this more accurate form the translators of the A. V. have given in two passages (1 K. x. 22, xxii. 48) the name elsewhere presented as **TARSHISH**. In the second passage the name is omitted in both MSS. of the LXX., while the Vulgate has in *maris*.

2. (*Tarsus*; Alex. *Tharsis*: *Tharsis*). A Benjamite, one of the family of Bilhan and the house of Jedaiel (1 Chr. vii. 10 only). The variation in the Vatican LXX. (*Mai*) is very remarkable. [G.]

THAS'SI (Θασσι, *Thasi*, *Thassi*: Syr. ܬܫܝܐ). The surname of Simon the son of Mattathias (1 Macc. ii. 3). [MACCABEES, vol. ii. p. 166.]

The derivation of the word is uncertain. Michaelis suggests תַּרְשִׁישׁ, Chald. "the fresh grass springs up," i. e. "the spring is come," in reference to the tranquillity first secured during the supremacy of Simon (Grimm, *ad* 1 Macc. ii. 3). This seems very far-fetched. Winer (*Realwb.* "Simon") suggests a connexion with ܬܫܝܐ, *fervere*, as Grotius (*ad loc.*)

seems to have done before him. In Josephus (*Ant.* xii. 6, §1) the surname is written *Ματθῆς*, with various readings *Θαδῆς*, *Θαδῆς*. [B. F. W.]

THEATRE (θέατρον: *theatron*). For the general subject, see *Dict. of Ant.* pp. 995-998. For the explanation of the biblical allusions, two or three points only require notice. The Greek term, like the corresponding English term, denotes the place where dramatic performances are exhibited, and also the scene itself or spectacle which is witnessed there. It occurs in the first or local sense in Acts xix. 29, where it is said that the multitude at Ephesus rushed to the theatre, on the occasion of the excitement stirred up against Paul and his associates by Demetrius, in order to consider what should be done in reference to the charges against them. It may be remarked also (although the word does not occur in the original text or in our English version) that it was in the theatre at Caesarea that Herod Agrippa I. gave audience to the Tyrian deputies, and was himself struck with death, because he heard so gladly the impious acclamations of the people (Acts xii. 21-23). See the remarkably confirmatory account of this event in Josephus (*Ant.* xix. 8, §2). Such a use of the theatre for public assemblies and the transaction of public business, though it was hardly known among the Romans, was a common practice among the Greeks. Thus Valer. Max. li. 2: *Legati in theatrum, ut est consuetudo Graeciae, introducti*. Justin xiii. 2: *Veluti reipublicae statum formaturus in theatrum ad contionem vocari jussit*. Corn. Nep. *Timol.* 4, §2: *Veniebat in theatrum, cum ibi concilium plebis haberetur*. The other sense of the term "theatre" occurs in 1 Cor. iv. 9, where the Common Version renders: "God hath set forth as the apostles last, as it were appointed to death; for we are made (rather, *were made*, θέατρον ἐγενήθημεν) a spectacle unto the world, and to angels, and to men." Instead of "spectacle" (so also Wiclif and the Rhemish translators after the Vulgate), some might prefer the more energetic Saxon, "gazing-stock," as in Tyndale, Cranmer, and the Geneva version. But the latter would be now inappropriate, if it includes the idea of scorn or exultation, since the angels look down upon the sufferings of the martyrs with a very different interest. Whether "theatre" denotes more here than to be an object of earnest attention (θέαμα), or refers at the same time to the theatre as the place where criminals were sometimes brought forward for punishment, is not agreed among interpreters. In Heb. xii. 1, where the writer speaks of our having around us "so great a cloud of witnesses" (τοσούτων ἔχοντες περιεσυνεν ἡμῖν νέφος μαρτύρων), he has in mind no doubt the agonistic scene, in which Christians are viewed as running a race, and not the theatre or stage where the eyes of the spectators are fixed on them. [H. B. H.]

THEBES (Θῆβαι: *Thēbai*, *Diōneia*, *μετὰ Ἀμμών*; in Jer. τὸν Ἀμμὸν τὸν υἱὸν ἀβρῆς: *Alexandria*, *Al. populorum. tumultus Alexandriae*, *No-Amon*: A.V., No, the multitude of No, populous No).—A chief city of ancient Egypt, long the capital of the upper country, and the seat of the Diospolitan dynasties, that ruled over all Egypt at the era of its highest splendour. Upon the monuments this city bears three distinct names—that of the Nome, a sacred name, and the name by which it is commonly known in profane history. Of the twenty Nomes or districts into which Upper Egypt was divided, the fourth is

order, proceeding northward from Nubia, was designated in the hieroglyphics as *Za'm*—the Platyrite of the Greeks—and Thebes appears as the "*Za'm-city*," the principal city or metropolis of the *Za'm* Nome. In later times the name *Za'm* was applied in common speech to a particular locality on the western side of Thebes.

The sacred name of Thebes was *P-amen*, "the abode of Amon," which the Greeks reproduced in their *Diopolis* (*Διὸς πόλις*), especially with the addition *the Great* (*ἡ μεγάλη*), denoting that this was the chief seat of Jupiter-Ammon, and distinguishing it from *Diopolis the Less* (*ἡ μικρά*). No-Amon is the name of Thebes in the Hebrew Scriptures (Jer. xli. 25; Nah. iii. 8). Esaukel uses *No* simply to designate the Egyptian seat of Ammon, which the Septuagint translates by *Diopolis* (Ex. xxx. 14, 16). Gesenius defines this name by the phrase "portion of Ammon," i. e. the possession of the god Ammon, as the chief seat of his worship.

The name of Thebes in the hieroglyphics is explained under *NO-AMON*.

The origin of the city is lost in antiquity. Niebuhr is of opinion that Thebes was much older than Memphis, and that "after the centre of Egyptian life was transferred to Lower Egypt, Memphis acquired its greatness through the ruin of Thebes" (*Lectures on Ancient History*, Lect. vii.). Other authorities assign priority to Memphis. But both cities date from our earliest authentic knowledge of Egyptian history. The first allusion to Thebes in classical literature is the familiar passage of the *Iliad* (ix. 381-385):—"Egyptian Thebes, where are vast treasures laid up in the houses; where are a hundred gates, and from each two hundred men go forth with horses and chariots." Homer—speaking with a poet's licence, and not with the accuracy of a statistician—no doubt incorporated into his verse the glowing accounts of the Egyptian capital current in his time. Wilkinson thinks it conclusive against a literal understanding of Homer, that no traces of an ancient city-wall can be found at Thebes, and accepts as probable the suggestion of Diodorus Siculus that the "gates" of Homer may have been the propylææ of the temples:—"Non centum portas habuisse urbem, sed multe et ingentia templorum vestibula" (i. 45, 7). In the time of Diodorus, the city-wall, if any there was, had already disappeared, and the question of its existence in Homer's time was in dispute. But, on the other hand, to regard the "gates" of Homer as temple-porches is to make these the barracks of the army, since from these gates the horsemen and chariots issue forth to war. The almost universal custom of walling the cities of antiquity, and the poet's reference to the gates as pouring forth troops, point strongly to the supposition that the vast area of Thebes was surrounded with a wall having many gates.

Homer's allusion to the treasures of the city, and to the size of its standing army, numbering 20,000 chariots, shows the early repute of Thebes for wealth and power. Its fame as a great capital had crossed the sea when Greece was yet in its infancy as a nation. It has been questioned whether Herodotus visited Upper Egypt (see *Dict. of Greek and Rom. Geog.* art. "Thebes"), but he says, "I went to Heliopolis and to Thebes, expressly to try whether the priests of those places would agree in their accounts with the priests at Memphis" (Herod. ii. 3). Afterwards he describes the features

of the Nile valley, and the chief points and distances upon the river, as only an eye-witness would be likely to record them. He informs us that "from Heliopolis to Thebes is nine days' sail up the river, the distance 4800 stadia . . . and the distance from the sea inland to Thebes 6120 stadia" (Herod. ii. 8, 9). In chap. 29 of the same book he states that he ascended the Nile as high as Elephantine. Herodotus, however, gives no particular account of the city, which in his time had lost much of its ancient grandeur. He alludes to the temple of Jupiter there, with its ram-headed image, and to the fact that goats, never sheep, were offered in sacrifice. In the 1st century before Christ, Diodorus visited Thebes, and he devotes several sections of his general work to its history and appearance. Though he saw the city when it had sunk to quite secondary importance, he preserves the tradition of its early grandeur—its circuit of 140 stadia, the size of its public edifices, the magnificence of its temples, the number of its monuments, the dimensions of its private houses, some of them four or five stories high—all giving it an air of grandeur and beauty surpassing not only all other cities of Egypt, but of the world. Diodorus deplors the spoiling of its buildings and monuments by Cambyses (Diod. i. 45, 46). Strabo, who visited Egypt a little later—at about the beginning of the Christian era—thus describes (xvii. p. 816) the city under the name *Diopolis*:—"Vestiges of its magnitude still exist which extend 80 stadia in length. There are a great number of temples, many of which Cambyses mutilated. The spot is at present occupied by villages. One part of it, in which is the city, lies in Arabia; another is in the country on the other side of the river, where is the Memnonium." Strabo here makes the Nile the dividing line between Libya and Arabia. The temples of Karnak and Luxor are on the eastern side of the river, where was probably the main part of the city. Strabo gives the following description of the twin colossi still standing upon the western plain:—"Here are two colossal figures near one another, each consisting of a single stone. One is entire; the upper parts of the other, from the chair, are fallen down—the effect, it is said, of an earthquake. It is believed that once a day a noise, as of a slight blow, issues from the part of the statue which remains in the seat, and on its base. When I was at those places, with Aelius Gallus, and numerous friends and soldiers about him, I heard a noise at the first hour of the day, but whether proceeding from the base, or from the colossus, or produced on purpose by some of those standing around the base, I cannot confidently assert. For, from the uncertainty of the cause, I am inclined to believe anything rather than that stones disposed in that manner could send forth sound" (xvii. §46). Simple, honest, sceptical Strabo! Eighteen centuries later, the present writer interrogated these same stones as to the ancient mystery of sound; and not at sunrise, but in the glaring noon, the statue emitted a sharp, clear sound like the ringing of a disc of brass under a sudden concussion. This was produced by a ragged urchin, who, for a few piastres, clambered up the knees of the "vocal Memnon," and there effectually concealing himself from observation, struck with a hammer a sonorous stone in the lap of the statue. Wilkinson, who was one of the first to describe this sounding stone, conjectures that the priests had a secret chamber in the body of the statue, from which they could strike it unobserved at the instant of sunrise: thus

producing in the credulous multitude the notion of a supernatural phenomenon. It is difficult to conceive, however, that such a trick, performed in open day, could have escaped detection, and we are therefore left to share the mingled wonder and scepticism of Strabo (see Wilkinson; also Thompson's *Photographic Views of Egypt, Past and Present*, p. 156).

Pliny speaks of Thebes in Egypt as known to fame as "a hanging city," i. e. built upon arches, so that an army could be led forth from beneath the city while the inhabitants above were wholly unconscious of it. He mentions also that the river flows through the middle of the city. But he questions the story of the arches, because, "if this had really been the case, there is no doubt that Homer would have mentioned it, seeing that he has celebrated the hundred gates of Thebes." Do not the two stories possibly explain each other? May there not have been near the river-line arched buildings used as barracks, from whose gateways issued forth 20,000 chariots of war?

But, in the uncertainty of these historical allusions, the monuments of Thebes are the most reliable witnesses for the ancient grandeur of the city. These are found in almost equal proportions upon both sides of the river. The parallel ridges which skirt the narrow Nile valley upon the east and west from the northern limit of Upper Egypt, here sweep outward upon either side, forming a circular plain whose diameter is nearly ten miles. Through the centre of this plain flows the river, usually at this point about half a mile in width, but at the inundation overflowing the plain, especially upon the western bank, for a breadth of two or more miles. Thus the two colossal statues, which are several hundred yards from the bed of the low Nile, have accumulated about their bases alluvial deposit to the depth of seven feet.

The plan of the city, as indicated by the principal monuments, was nearly quadrangular, measuring two miles from north to south, and four from east to west. Its four great landmarks were, Karnak and Luxor upon the eastern or Arabian side, and Qoornah and Medeenet Haboo upon the western or Libyan side. There are indications that each of these temples may have been connected with those facing it upon two sides by grand *dromoi*, lined with sphinxes and other colossal figures. Upon the western bank there was almost a continuous line of temples and public edifices for a distance of two miles, from Qoornah to Medeenet Haboo; and Wilkinson conjectures that from a point near the latter, perhaps in the line of the colossus, the "Royal Street" ran down to the river, which was crossed by a ferry terminating at Luxor on the eastern side. The recent excavations and discoveries of M. Mariette, now in course of publication (1863), may enable us to restore the ground-plan of the city and its principal edifices with at least approximate accuracy.

It does not enter into the design, nor would it fall within the limits of this article, to give a minute description of these stupendous monuments. Not only are verbal descriptions everywhere accessible through the pages of Wilkinson, Kenrick, and other standard writers upon Egypt, but the magnificently illustrated work of Lepsius, already completed, the companion work of M. Mariette, just referred to, and multiplied photographs of the principal ruins, are within easy reach of the scholar through the munificence of public libraries. A mere

outline of the groups of ruins must here suffice. Beginning at the northern extremity on the western bank, the first conspicuous ruins are those of a palace-temple of the nineteenth dynasty, and therefore belonging to the middle style of Egyptian architecture. It bears the name *Menephtheion*, suggested by Champollion because it appears to have been founded by Menephthah (the Osirei of Wilkinson), though built principally by his son the great Rameses. The plan of the building is much obscured by mounds of rubbish, but some of the bas-reliefs are in a fine state of preservation. There are traces of a dromos, 128 feet in length, with sphinxes, whose fragments here and there remain. This building stands upon a slight elevation, nearly a mile from the river, in the now deserted village of old Qoornah.

Nearly a mile southward from the Menephtheion are the remains of the combined palace and temple known since the days of Strabo as the Memnonium. An examination of its sculptures shows that this name was inaccurately applied, since the building was clearly erected by Rameses II. Wilkinson suggests that the title Miamun attached to the name of this king misled Strabo in his designation of the building. The general form of the Memnonium is that of a parallelogram in three main sections, the interior areas being successively narrower than the first court, and the whole terminating in a series of sacred chambers beautifully sculptured and ornamented. The proportions of this building are remarkably fine, and its remains are in a sufficient state of preservation to enable one to reconstruct its plan. From the first court or area, nearly 180 feet square, there is an ascent by steps to the second court, 140 feet by 170. Upon three sides of this area is a double colonnade, and on the south side a single row of Osiride pillars, facing a row of like pillars on the north, the other columns being circular. Another ascent leads to the hall, 100 x 133, which originally had forty-eight huge columns to support its solid roof. Beyond the hall are the sacred chambers. The historical sculptures upon the walls and columns of the Memnonium are among the most finished and legible of the Egyptian monuments. But the most remarkable feature of these ruins is the gigantic statue of Rameses II., once a single block of syenite carved to represent the king upon his throne, but now scattered in fragments upon the floor of the first hall. The weight of this statue has been computed at 887 tons, and its height at 75 feet. By measurement of the fragments, the writer found the body 51 feet around the shoulders, the arm 11 feet 8 inches from shoulder to elbow, and the foot 10 feet 10 inches in length, by 4 feet 8 inches in breadth. This stupendous monolith must have been transported at least a hundred miles from the quarries of Assouan. About a third of a mile farther to the south are the two colossal statues already referred to, one of which is familiarly known as "the vocal Memnon." The height of each figure is about 53 feet above the plain.

Proceeding again toward the south for about the same distance, we find at Medeenet Haboo ruins upon a more stupendous scale than at any other point upon the western bank of Thebes. These consist of a temple founded by Thothmes I., but which also exhibits traces of the Ptolemaic architecture in the shape of pyramidal towers, gateways, colonnades, and vestibules, inscribed with the

memorials of the Roman era in Egypt. This temple, even with all its additions, is comparatively small; but adjacent to it is the magnificent ruin known as the southern Ramesseion, the palace-temple of Rameses III. The general plan of this building corresponds with those above described; a series of grand courts or halls adorned with columns, conducting to the inner pavilion of the king or sanctuary of the god. The second court is one of the most remarkable in Egypt for the massiveness of its columns, which measure 24 feet in height by a circumference of nearly 23. Within this area are the fallen columns of a Christian church, which once established the worship of the true God in the very sanctuary of idols and amid their sculptured images and symbols. This temple presents some of the grandest effects of the old Egyptian architecture, and its battle-scenes are a valuable contribution to the history of Rameses III.

Behind this long range of temples and palaces are the Libyan hills, which, for a distance of five miles, are excavated to the depth of several hundred feet for sepulchral chambers. Some of these are of vast extent—one tomb, for instance, having a total area of 22,217 square feet. A retired valley in the mountains, now known as Beban-el-Melook, seems to have been appropriated to the sepulchres of kings. Some of these, in the number and variety of their chambers, the finish of their sculptures, and the beauty and freshness of their frescoes, are among the most remarkable monuments of Egyptian grandeur and skill. It is from the tombs especially that we learn the manners and customs of domestic life, as from the temples we gather the record of dynasties and the history of battles. The preservation of these sculptured and pictorial records is due mainly to the dryness of the climate. The sacredness with which the Egyptians regarded their dead preserved these mountain catacombs from molestation during the long succession of native dynasties, and the sealing up of the entrance to the tomb for the concealment of the sarcophagus from human observation until its mummied occupant should resume his long-suspended life, has largely secured the city of the dead from the violence of invaders and the ravages of time. It is from the adornments of these subterranean tombs, often distinct and fresh as when prepared by the hand of the artist, that we derive our principal knowledge of the manners and customs of the Egyptians. Herodotus himself is not more minute and graphic than these silent but most descriptive walls. The illustration and confirmation which they bring to the sacred narrative, so well discussed by Hengstenberg, Osborn, Poole, and others, is capable of much ampler treatment than it has yet received. Every incident in the pastoral and agricultural life of the Israelites in Egypt and in the exactions of their servitude, every art employed in the fabrication of the tabernacle in the wilderness, every allusion to Egyptian rites, customs, laws, finds some counterpart or illustration in this picture-history of Egypt; and whenever the Theban cemetery shall be thoroughly explored, and its symbols and hieroglyphics fully interpreted by science, we shall have a commentary of unrivalled interest and value upon the books of Exodus and Leviticus, as well as the later historical books of the Hebrew Scriptures. The art of photography is already contributing to this result by furnishing scholars with materials for the leisurely study of the pictorial and monumental records of Egypt.

The eastern side of the river is distinguished by the remains of Luxor and Karnak, the latter being of itself a city of temples. The main colonnade of Luxor faces the river, but its principal entrance looks northward towards Karnak, with which it was originally connected by a dromos 6000 feet in length, lined on either side with sphinxes. At this entrance are two gigantic statues of Rameses II., one upon each side of the grand gateway; and in front of these formerly stood a pair of beautifully wrought obelisks of red granite, one of which now graces the Place de la Concorde at Paris.

The approach to Karnak from the south is marked by a series of majestic gateways and towers, which were the appendages of later times to the original structure. The temple properly faces the river, i. e. toward the north-west. The courts and propylæa connected with this structure occupy a space nearly 1800 feet square, and the buildings represent almost every dynasty of Egypt, from Sesotris I. to Ptolemy Euergetes I. Courts, pylons, obelisks, statues, pillars, everything pertaining to Karnak, are on the grandest scale. Nearest the river is an area measuring 275 feet by 329, which once had a covered corridor on either side, and a double row of columns through the centre, leading to the entrance of the hypostyle hall, the most wonderful monument of Egyptian architecture. This grand hall is a forest of sculptured columns; in the central avenue are twelve, measuring each 66 feet in height by 12 in diameter, which formerly supported the most elevated portion of the roof, answering to the clerestory in Gothic architecture; on either side of these are seven rows, each column nearly 42 feet high by 9 in diameter, making a total of 134 pillars in an area measuring 170 feet by 330. Most of the pillars are yet standing in their original site, though in many places the roof has fallen in. A moonlight view of this hall is the most weird and impressive scene to be witnessed among all the ruins of antiquity—the Coliseum of Rome not excepted. With our imperfect knowledge of mechanic arts among the Egyptians, it is impossible to conceive how the outer wall of Karnak—forty feet in thickness at the base, and nearly a hundred feet high—was built; how single blocks weighing several hundred tons were lifted into their place in the wall, or hewn into obelisks and statues to adorn its gates; how the majestic columns of the Grand Hall were quarried, sculptured, and set up in mathematical order; and how the whole stupendous structure was reared as a fortress in which the most ancient civilization of the world, as it were petrified or fossilized in the very flower of its strength and beauty, might defy the desolations of war, and the decay of centuries. The grandeur of Egypt is here in its architecture, and almost every pillar, obelisk, and stone tells its historic legend of her greatest monarchs.

We have alluded, in the opening of this article, to the debated question of the priority of Thebes to Memphis. As yet the data are not sufficient for its satisfactory solution, and Egyptologists are not agreed. Upon the whole we may conclude that before the time of Menes there was a local sovereignty in the Thebaid, but the historical nationality of Egypt dates from the founding of Memphis. "It is probable that the priests of Memphis and Thebes differed in their representations of early history, and that each sought to extol the glory of their own city. The history of Herodotus turns about Memphis as a centre; he mentions Thebes

only incidentally, and does not describe or allude to one of its monuments. Diodorus, on the contrary, is full in his description of Thebes, and says little of Memphis. But the distinction of Upper and Lower Egypt exists in geological structure, in language, in religion, and in historical tradition" (Kenrick). A careful digest of the Egyptian and Greek authorities, the Turin papyrus, and the monumental tablets of Abydos and Karnak, gives this general outline of the early history of Egypt:—That before Memphis was built, the nation was mainly confined to the valley of the Nile, and subdivided politically into several sovereignties, of which Thebes was one; that Menes, who was a native of This in the Thebaid, centralised the government at Memphis, and united the upper and lower countries; that Memphis retained its pre-eminence, even in the hereditary succession of sovereigns, until the twelfth and thirteenth dynasties of Manetho, when Diospolitan kings appear in his lists, who brought Thebes into prominence as a royal city; that when the Shepherds or Hyksos, a nomadic race from the east, invaded Egypt and fixed their capital at Memphis, a native Egyptian dynasty was maintained at Thebes, at times tributary to the Hyksos, and at times in military alliance with Ethiopia against the invaders; until at length, by a general uprising of the Thebaid, the Hyksos were expelled, and Thebes became the capital of all Egypt under the resplendent eighteenth dynasty. This was the golden era of the city as we have already described it from its monuments. The names and deeds of the Thothmes and the Rameses then figure upon its temples and palaces, representing its wealth and grandeur in architecture, and its prowess in arms. Then it was that Thebes extended her sceptre over Libya and Ethiopia on the one hand, and on the other over Syria, Media, and Persia; so that the walls of her palaces and temples are crowded with battle-scenes in which all contiguous nations appear as captives or as suppliants. This supremacy continued until the close of the nineteenth dynasty, or for a period of more than five hundred years; but under the twentieth dynasty—the Diospolitan house of Rameses numbering ten kings of that name—the glory of Thebes began to decline, and after the close of that dynasty her name no more appears in the lists of kings. Still the city was retained as the capital, in whole or in part, and the achievements of Shishonk the Bubastite, of Tirhakah the Ethiopian, and other monarchs of celebrity, are recorded upon its walls. The invasion of Palestine by Shishonk is graphically depicted upon the outer wall of the grand hall of Karnak, and the names of several towns in Palestine, as well as the general name of "the land of the king of Judah," have been deciphered from the hieroglyphics. At the later invasion of Judah by Sennacherib, we find Tirhakah, the Ethiopian monarch of the Thebaid, a powerful ally of the Jewish king. But a century later, Ezekiel proclaims the destruction of Thebes by the arm of Babylon:—"I will execute judgments in No;" "I will cut off the multitude of No;" "No shall be rent asunder, and Noph [Memphis] shall have distresses daily" (Ez. xix. 14-16); and Jeremiah, predicting the same overthrow, says, "The Lord of Hosts, the God of Israel saith, Behold, I will punish the multitude of No, and Pharaoh, and Egypt, with their gods and their kings." The Persian invader: completed the destruction that the Babylonian had begun; the hammer of Cambyses levelled the proud statue of Rameses, and his torch

consumed the temples and palaces of the city of the hundred gates. No-Ammon, the shrine of the Egyptian Jupiter, "that was situated among the rivers, and whose rampart was the sea," sank from its metropolitan splendour to the position of a mere provincial town; and, notwithstanding the spasmodic efforts of the Ptolemies to revive its ancient glory, became at last only the desolate and ruined sepulchre of the empire it had once embodied. It lies to-day a nest of Arab hovels amid crumbling columns and drifting sands. [J. P. T.]

THE'BEZ (תְּבֵז: *Θήβης, Θαμασι*; Alex. *Θαμασι, Θαμασι*: *Thebes*). A place memorable for the death of the bravo Abimelech (Judg. ix. 50^a). After suffocating a thousand of the Shechemites in the hold of Baal-berith by the smoke of green wood—an exploit which recalls the notorious feat of a modern French general in Algeria (Eccl. i. 9, 10)—he went off with his band to Thebez. The town was soon taken, all but one tower, into which the people of the place crowded, and which was strong enough to hold out. To this he forced his way, and was about to repeat the barbarous stratagem which had succeeded so well at Shechem, when the fragment of millstone descended and put an end to his turbulent career. The story was well known in Israel, and gave the point to a familiar maxim in the camp (2 Sam. xi. 21).

Thebez is not mentioned again in the Bible. But it was known to Eusebius and Jerome. In their day the village still bore its old name, and was situated "in the district of Neapolis," 13 Roman miles therefrom, on the road to Scythopolis (*Onom. Θήβης*). There it still is; its name—*Tibbs*—hardly changed; the village on a rising ground to the left of the road, a thriving, compact, and strong-looking place, surrounded by immense woods of olives, and by perhaps the best cultivated land in all Palestine. It was known to hap-Farchi in the 13th century (Zonz's *Benjamin*, ii. 426), and is mentioned occasionally by later travellers. But Dr. Robinson appears to have been the first to recognise its identity with Thebez (*B. R.* iii. 305). [G.]

THECO'E, THE WILDERNESS OF (τῆς ἔρημου Θεωαί: *desertum Thecoae*). The wild uncultivated pastoral tract lying around the town of Tekoa, more especially to the east of it (1 Macc. ix. 83). In the Old Test. (2 Chr. xx. 20) it is mentioned by the term *Midbar*, which answers to the Greek *ἔρημος*.

Thecoe is merely the Greek form of the name **TEKOA**. [G.]

THEL'ASAR (תֵּל אֶסַר: *Θασαρί*; Alex. *Θασαρί*: *Thelassar*). Another form of the name examined under **TEL-ASSAR**. It occurs 2 K. xix. 12. The A. V. is unfortunate in respect of this name, for it has contrived to give the contracted Hebrew form in the longest English shape, and *vice versa*. [G.]

THELER'SAS (Θελερσας: *Thelersas*), 1 Ead. v. 36. The Greek equivalent of the name **TEL-HARSAS**.

THEMAN (Θαιμαν: *Theman*), Bar. iii. 22, 23. [TEMAN.]

^a In the Hebrew text Thebez occurs twice in the verse but in the LXX. it stands thus, "And Abimelech went out of Bethelberith (Vulg. inde) and fell upon Thebez." &c.

THEOCANUS (Θεοκανός; Alex. Θεοκανός: Thecan). TIKVAH the father of Jahaziah (1 Ead. ix. 14).

THEODOTUS (Θεόδοτος: Theodotus, Theodorus). An envoy sent by Nicomachus to Judas Macc. c. B.C. 162 (2 Macc. xiv. 19). [B. F. W.]

THEOPHILUS (Θεόφιλος). 1. The person to whom St. Luke inscribes his Gospel and the Acts of the Apostles (Luke i. 3; Acts i. 1). The important part played by Theophilus, as having immediately occasioned the composition of these two books, together with the silence of Scripture concerning him, has at once stimulated conjecture, and left the field clear for it. Accordingly we meet with a considerable number and variety of theories concerning him.

(1.) Several commentators, especially among the Fathers, have been disposed to doubt the personality of Theophilus, regarding the name either as that of a fictitious person, or as applicable to every Christian reader. Thus Origen (*Hon. i. in Luc.*) raises the question, but does not discuss it, his object being merely practical. He says that all who are beloved of God are Theophili, and may therefore appropriate to themselves the Gospel which was addressed to Theophilus. Epiphanius (*Haeres. li. p. 429*) speaks doubtfully: *ἐστὶ οὖν τινὲς Θεοφίλου τὸτε γράψαντος λέγουσιν, ὅτι παντὶ ἀγαπῶντι Θεὸν ἀγαπῶντι. Salvianus (Epist. ix. ad Salonium) apparently assumes that Theophilus had no historical existence. He justifies the composition of a work addressed "Ad Ecclesiam Catholicam," under the name of Timotheus, by the example of the Evangelist St. Luke, who addressed his Gospel nominally to a particular man, but really to "the love of God:" "nam sicut Theophili vocabulo amor, sic Timothei honor divinitatis exprimitur." Even Theophylact, who believes in the existence of Theophilus, takes the opportunity of moralizing upon his name: *καὶ τὰς δὲ ἀγαπῶντας Θεοφίλους, καὶ πρῶτος κατὰ τῶν παθῶν ἀναδεύμενος, Θεοφίλος ἐστὶ κρᾶτιστος, ὅς καὶ ἕξιος ἐστὶ ἐστὶν ἀκούειν τοῦ Εὐαγγελίου (Argum. in Luc.).* Among modern commentators Hammond and Leclerc accept the allegorical view: Erasmus is doubtful, but on the whole believes Theophilus to have had a real existence.*

(2.) From the honourable epithet *κράτιστε*, applied to Theophilus in Luke i. 3, compared with the use of the same epithet as applied by Claudius Lysias and Tertullus severally to Felix, and by St. Paul to Festus (Acts xiii. 26, xiv. 3, xvi. 25), it has been argued with much probability, but not quite conclusively, that he was a person in high official position. Thus Theophylact (*Argum. in Luc.*) conjectures that he was a Roman governor, or a person of senatorial rank, grounding his conjecture expressly on the use of *κράτιστε*. Oecumenius (*ad Act. Apost. i. 1*) tells us that he was a governor, but gives no authority for the assertion. The traditional connexion of St. Luke with Antioch has disposed some to look upon Antioch as the abode of Theophilus, and possibly as the seat of his government. Bengel believes him to have been an inhabitant of Antioch, "ut veteres testantur." The belief may partly have grown out of a story in the so-called *Recognitions of St. Clement* (lib. x.), which represents a certain nobleman of Antioch of that name to have been converted by the preaching of St. Peter, and to have dedicated his own house as a church, in which, as we are told, the Apostle fixed his episcopal seat. Bengel thinks that the omission

of *κράτιστε* in Acts i. 1 proves that St. Luke was on more familiar terms with Theophilus than a man he composed his Gospel.

(3.) In the Syriac Lexicon extracted from the *Lexicon Heptaglotton* of Castell, and edited by Michaelis (p. 948), the following description of Theophilus is quoted from Bar Bahlul, a Syrian lexicographer of the 10th century:—"Theophilus primus credentium et celeberrimus apud Alexandrienses, qui cum aliis Aegyptiis Lucam rogabat ut eis Evangelium scriberet." In the inscription of the Gospel according to St. Luke in the Syriac version we are told that it was published at Alexandria. Hence it is inferred by Jacob Hase (*Bibl. Bremensis Class. iv. Fasc. iii. Diss. 4*, quoted by Michaelis, *Introd. to the N. T.*, vol. iii. ch. vi. §4, ed. Marsh) and by Bengel (*Ordo Temporum*, p. 196, ed. 2), that Theophilus was, as asserted by Bar Bahlul, a convert of Alexandria. This writer ventures to advance the startling opinion that Theophilus, if an Alexandrian, was no other than the celebrated Philo, who is said to have borne the Hebrew name of Jedidiah (יְדִידְיָהּ, i. e. Θεόφιλος). It hardly seems necessary to refute this theory, as Michaelis has refuted it, by chronological arguments.

(4.) Alexander Morus (*Ad quandam loca Nov. Fed. Notae: ad Luc. i. 1*) makes the rather hazardous conjecture that the Theophilus of St. Luke is identical with the person who is recorded by Tacitus (*Ann. ii. 55*) to have been condemned for fraud at Athens by the court of the Areopagus. Grotius also conjectures that he was a magistrate of Achaia baptized by St. Luke. The conjecture of Grotius must rest upon the assertion of Jerome (an assertion which, if it is received, renders that of Alex. Morus possible, though certainly most improbable), namely, that Luke published his Gospel in the parts of Achaia and Boeotia (Jerome, *Comm. in Matt. Proem.*).

(5.) It is obvious to suppose that Theophilus was a Christian. But a different view has been entertained. In a series of Dissertations in the *Bibliotheca Bremensis*, of which Michaelis gives a *résumé* in the section already referred to, the notion that he was not a Christian is maintained by different writers, and on different grounds. Heumann, one of the contributors, assuming that he was a Roman governor, argues that he could not be a Christian, because no Christian would be likely to have such a charge entrusted to him. Another writer, Theodore Hase, believes that the Theophilus of Luke was no other than the deposed High Priest Theophilus the son of Ananus, of whom more will be said presently. Michaelis himself is inclined to adopt this theory. He thinks that the use of the word *ἀρχιερέως* in Luke i. 4, proves that Theophilus had an imperfect acquaintance with the facts of the Gospel (an argument of which Bishop Marsh very properly disposes in his note upon the passage of Michaelis), and further contends, from the *ἐκκλησίαν* of Luke i. 1, that he was not a member of the Christian community. He thinks it probable that the Evangelist wrote his Gospel, during the imprisonment of St. Paul at Caesarea, and addressed it to Theophilus as one of the heads of the Jewish nation. According to this view, it would be regarded as a sort of historical apology for the Christian faith.

In surveying this series of conjectures, and of traditions which are nothing more than conjectures we find it easier to determine what is to be re-

jected than what we are to accept. In the first place, we may safely reject the Patristic notion that Theophilus was either a fictitious person, or a mere personification of Christian love. Such a personification is alien from the spirit of the New Testament writers, and the epithet *κρητορε* is a sufficient evidence of the historical existence of Theophilus. It does not, indeed, prove that he was a governor, but it makes it most probable that he was a person of high rank. His supposed connexion with Antioch, Alexandria, or Achaia, rests on too slender evidence either to claim acceptance or to need refutation; and the view of Theodore Hase, although endorsed by Michaelis, appears to be incontestably negated by the Gentile complexion of the Third Gospel. The grounds alleged by Heumann for his hypothesis that Theophilus was not a Christian are not at all trustworthy, as consisting of two very disputable premises. For, in the first place, it is not at all evident that Theophilus was a Roman governor; and in the second place, even if we assume that at that time no Christian would be appointed to such an office (an assumption which we can scarcely venture to make), it does not at all follow that no person in that position would become a Christian. In fact, we have an example of such a conversion in the case of Sergius Paulus (Acts xiii. 12). In the article on the GOSPEL OF LUKE [vol. ii. p. 155 a], reasons are given for believing that Theophilus was "not a native of Palestine . . . not a Macedonian, nor an Athenian, nor a Cretan. But that he was a native of Italy, and perhaps an inhabitant of Rome, is probable from similar data." All that can be conjectured with any degree of safety concerning him, comes to this, that he was a Gentile of rank and consideration, who came under the influence of St. Luke, or (not improbably) under that of St. Paul, at Rome, and was converted to the Christian faith. It has been observed that the Greek of St. Luke, which elsewhere approaches more nearly to the classical type than that of the other Evangelists, is purer and more elegant in the dedication to Theophilus than in any other part of his Gospel.

2. A Jewish High-Priest, the son of Annas or Ananias, brother-in-law to Caiaphas [ANNAS; CAIAPHAS], and brother and immediate successor of Jonathan. The Roman Prefect Vitellius came to Jerusalem at the Passover (A.D. 37), and deposed Caiaphas, appointing Jonathan in his place. In the same year, at the feast of Pentecost, he came to Jerusalem, and deprived Jonathan of the High Priesthood, which he gave to Theophilus (Joseph. *Ant.* xviii. 4, §3, xviii. 5, §3). Theophilus was removed from his post by Herod Agrippa I., after the accession of that prince to the government of Judaea in A.D. 41, so that he must have continued in office about five years (Joseph. *Ant.* xix. 6, §2). Theophilus is not mentioned by name in the New Testament; but it is most probable that he was the High Priest who granted a commission to Saul to proceed to Damascus, and to take into custody any believers whom he might find there. [W. B. J.]

THE'RAS (Θῤα: This: Syr. *Tharān*). The equivalent in 1 Esd. viii. 41, 61, for the AHAVA of the parallel passage in Ezra. Nothing whatever appears to be known of it.

THERMELETH (Θερμελεθ: *Thermela*), 1 Esd. v. 38. The Greek equivalent of the name TEL-MELAH.

THESSALONIANS, FIRST EPISTLE TO THE. 1. The date of the Epistle is made out

approximately in the following way. During the course of his second missionary journey, probably in the year 52, St. Paul founded the Church of Thessalonica. Leaving Thessalonica he passed on to Berea. From Berea he went to Athens, and from Athens to Corinth (Acts xvii. 1-xviii. 18). With this visit to Corinth, which extends over a period of two years or thereabouts, his second missionary journey closed, for from Corinth he returned to Jerusalem, paying only a brief visit to Ephesus on the way (xviii. 20, 21). Now it appears that, when this Epistle was written, Silvanus and Timothy were in the Apostle's company (1 Thess. i. 1; comp. 2 Thess. i. 1)—a circumstance which confines the date to the second missionary journey, for though Timothy was with him on several occasions afterwards, the name of Silvanus appears for the last time in connexion with St. Paul during this visit to Corinth (Acts xviii. 5; 2 Cor. i. 19). The Epistle then must have been written in the interval between St. Paul's leaving Thessalonica and the close of his residence at Corinth, i. e. according to the received chronology within the years 52-54. The following considerations however narrow the limits of the possible date still more closely. (1.) When St. Paul wrote, he had already visited, and probably left Athens (1 Thess. iii. 1). (2.) Having made two unsuccessful attempts to revisit Thessalonica, he had despatched Timothy to obtain tidings of his converts there. Timothy had returned before the Apostle wrote (iii. 2, 6). (3.) St. Paul speaks of the Thessalonians as "examples to all that believe in Macedonia and Achaia," adding that "in every place their faith to Godward was spread abroad" (i. 7, 8)—language prompted indeed by the overflowing of a grateful heart, and therefore not to be rigorously pressed, but still implying some lapse of time at least. (4.) There are several traces of a growth and progress in the condition and circumstances of the Thessalonian Church. Perhaps the mention of "rulers" in the Church (v. 12) ought not to be adduced as proving this, since some organisation would be necessary from the very beginning. But there is other evidence besides. Questions had arisen relating to the state of those who had fallen asleep in Christ, so that one or more of the Thessalonian converts must have died in the interval (iv. 13-18). The storm of persecution which the Apostle had discerned gathering on the horizon had already burst upon the Christians of Thessalonica (iii. 4, 7). Irregularities had crept in and sullied the infant purity of the Church (iv. 4, v. 14). The lapse of a few months however would account for these changes, and a much longer time cannot well be allowed. For (5) the letter was evidently written by St. Paul immediately on the return of Timothy, in the fulness of his gratitude for the joyful tidings (iii. 6). Moreover, (6) the Second Epistle also was written before he left Corinth, and there must have been a sufficient interval between the two to allow of the growth of fresh difficulties, and of such communication between the Apostle and his converts as the case supposes. We shall not be far wrong therefore in placing the writing of this Epistle early in St. Paul's residence at Corinth, a few months after he had founded the Church at Thessalonica, at the close of the year 52 or the beginning of 53. The statement in the subscription appearing in several MSS. and versions, that it was written "from Athens" is a superficial inference from 1 Thess. iii. 1, to which no weight should be attached. The views of critics who have

assigned to this Epistle a later date than the second missionary journey are stated and refuted in the Introductions of Koch (p. 23, &c.), and Lüdemann, (§3).

2. The Epistles to the Thessalonians then (for the second followed the first after no long interval) are the earliest of St. Paul's writings—perhaps the earliest written records of Christianity. They belong to that period which St. Paul elsewhere styles "the beginning of the Gospel" (Phil. iv. 15). They present the disciples in the first flush of love and devotion, yearning for the day of deliverance, and straining their eyes to catch the first glimpse of their Lord descending amidst the clouds of heaven, till in their feverish anxiety they forget the sober business of life, absorbed in this one engrossing thought. It will be remembered that a period of about five years intervenes before the second group of Epistles—those to the Corinthians, Galatians, and Romans—were written, and about twice that period to the date of the Epistles of the Roman Captivity. It is interesting therefore to compare the Thessalonian Epistles with the later letters, and to note the points of difference. These differences are mainly threefold. (1.) In the general style of these earlier letters there is greater simplicity and less exuberance of language. The brevity of the opening salutation is an instance of this. "Paul to the Church of the Thessalonians in God the Father and the Lord Jesus Christ, grace and peace to you" (1 Thess. i. 1; comp. 2 Thess. i. 1). The closing benediction is correspondingly brief:—"The grace of our Lord Jesus Christ be with you" (1 Thess. v. 28; comp. 2 Thess. iii. 18). And throughout the Epistles there is much more evenness of style, words are not accumulated in the same way, the syntax is less involved, parentheses are not so frequent, the turns of thought and feeling are less sudden and abrupt, and altogether there is less intensity and variety than we find in St. Paul's later Epistles. (2.) The antagonism to St. Paul is not the same. The direction of the attack has changed in the interval between the writing of these Epistles and those of the next group. Here the opposition comes from *Jews*. The admission of the Gentiles to the hopes and privileges of Messiah's kingdom on any condition is repulsive to them. They "forbad the Apostle to speak to the Gentiles that they might be saved" (ii. 18). A period of five years changes the aspect of the controversy. The opponents of St. Paul are now no longer *Jews*, so much as *Judaizing Christians* (Ewald, *Jahr-b.* iii. 249; *Semisch.*, p. 14). The question of the admission of the Gentiles has been solved by time, for they have "taken the kingdom of heaven by storm." But the antagonism to the Apostle of the Gentiles, having been driven from its first position, entrenched itself behind a second barrier. It was now urged that though the Gentiles may be admitted to the Church of Christ, the only door of admission is the Mosaic covenant-rite of circumcision. The language of St. Paul speaking of the Jewish Christians in this Epistle shows that the opposition to his teaching had not at this time assumed this second phase. He does not yet regard them as the disturbers of the peace of the Church, the false teachers who by imposing a "bondage of ceremonial observances frustrate the free grace of God. He can still point to them as examples to his converts at Thessalonica (ii. 14). The change indeed was imminent, the signs of the gathering storm had already appeared (Gal. ii. 11), but

hitherto they were faint and indistinct, and had scarcely darkened the horizon of the Gentile Churches. (3.) It will be no surprise that the doctrinal teaching of the Apostle does not take quite the same aspect in these as in the later Epistles. Many of the distinctive doctrines of Christianity, which are inseparably connected with St. Paul's name, though implicitly contained in the teaching of these earlier letters—as indeed they follow directly from the true conception of the Person of Christ—were yet not evolved and distinctly enunciated till the needs of the Church drew them out into prominence at a later date. It has often been observed for instance, that there is in the Epistles to the Thessalonians no mention of the characteristic contrast of "faith and works;" that the word "justification" does not once occur; that the idea of dying with Christ and living with Christ, so frequent in St. Paul's later writings, is absent in these. It was in fact the opposition of Judaizing Christians, insisting on a strict ritualism, which led the Apostle somewhat later to dwell at greater length on the true doctrine of a saving faith, and the true conception of a godly life. But the time had not yet come, and in the Epistles to the Thessalonians, as has been truly observed, the Gospel preached is that of the coming of Christ, rather than of the cross of Christ. There are many reasons why the subject of the second advent should occupy a larger space in the earliest stage of the Apostolic teaching than afterwards. It was closely bound up with the fundamental fact of the Gospel, the resurrection of Christ, and thus it formed a natural starting-point of Christian doctrine. It afforded the true satisfaction to those Messianic hopes which had drawn the Jewish converts to the fold of Christ. It was the best consolation and support of the infant Church under persecution, which must have been most keenly felt in the first abandonment of worldly pleasures and interests. More especially, as telling of a righteous Judge who would not overlook iniquity, it was essential to that call to repentance which must everywhere precede the direct and positive teaching of the Gospel. "Now He commandeth all men everywhere to repent, for He hath appointed a day in the which He will judge the world in righteousness by that man whom He hath ordained, whereof He hath given assurance unto all men in that He raised him from the dead" (Acts xvii. 30, 31).

3. The occasion of this Epistle was as follows. St. Paul had twice attempted to revisit Thessalonica, and both times had been disappointed. Thus prevented from seeing them in person, he had sent Timothy to inquire and report to him as to their condition (iii. 1-5). Timothy returned with most favourable tidings, reporting not only their progress in Christian faith and practice, but also their strong attachment to their old teacher (iii. 6-10). The First Epistle to the Thessalonians is the outpouring of the Apostle's gratitude on receiving this welcome news. At the same time the report of Timothy was not unmixed with alloy. There were certain features in the condition of the Thessalonian Church which called for St. Paul's interference, and to which he addresses himself in his letter (1.) The very intensity of their Christian faith, dwelling too exclusively on the day of the Lord's coming, had been attended with evil consequences. On the one hand a practical inconvenience had arisen. Is their feverish expectation of this great crisis, some had been led to neglect their ordinary business, as

though the daily concerns of life were of no account in the immediate presence of so vast a change (iv. 11; comp. 2 Thess. ii. 1, iii. 6, 11, 12). On the other hand a theoretical difficulty had been felt. Certain members of the Church had died, and there was great anxiety lest they should be excluded from any share in the glories of the Lord's advent (iv. 13-18). St. Paul rebukes the irregularities of the former, and dissipates the fears of the latter. (2.) The flame of persecution had broken out, and the Thessalonians needed consolation and encouragement under their sore trial (ii. 14, iii. 2-4). (3.) An unhealthy state of feeling with regard to spiritual gifts was manifesting itself. Like the Corinthians at a later day, they needed to be reminded of the superior value of "prophesying," compared with other gifts of the Spirit which they exalted at its expense (v. 19, 20). (4.) There was the danger, which they shared in common with most Gentile Churches, of relapsing into their old heathen profligacy. Against this the Apostle offers a word in season (iv. 4-8). We need not suppose however that Thessalonica was worse in this respect than other Greek cities.

4. Yet notwithstanding all these drawbacks, the condition of the Thessalonian Church was highly satisfactory, and the most cordial relations existed between St. Paul and his converts there. This honourable distinction it shares with the other great Church of Macedonia, that of Philippi. At all times, and amidst every change of circumstance, it is to his Macedonian Churches that the Apostle turns for sympathy and support. A period of about ten years is interposed between the First Epistle to the Thessalonians and the Epistle to the Philippians, and yet no two of his letters more closely resemble each other in this respect. In both he drops his official title of Apostle in the opening salutation, thus appealing rather to their affection than to his own authority; in both he commences the body of his letter with hearty and unqualified commendation of his converts; and in both the same spirit of confidence and warm affection breathes throughout.

5. A comparison of the narrative in the Acts with the allusions in this and the Second Epistle to the Thessalonians is instructive. With some striking coincidences, there is just that degree of divergence which might be expected between a writer who had borne the principal part in the scenes referred to, and a narrator who derives his information from others, between the casual half-expressed allusions of a familiar letter and the direct account of the professed historian.

Passing over patent coincidences, we may single out one of a more subtle and delicate kind. It arises out of the form which the accusation brought against St. Paul and his companions at Thessalonica takes in the Acts: "All these do contrary to the decrees of Caesar, saying that there is another king, one Jesus" (xvii. 7). The allusions in the Epistles to the Thessalonians enable us to understand the ground of this accusation. It appears that the kingdom of Christ had entered largely into his oral teaching in this city, as it does into that of the Epistles themselves. He had charged his new converts to await the coming of the Son of God from heaven, as their deliverer (i. 10). He had dwelt long and earnestly (*προσέειπεν αὐτοῖς διεμαρτυρούμεθα*) on the terrors of the judgment which would overtake the wicked (iv. 6). He had even explained at length the signs which would usher in the last day (2 Thess. ii. 5). Either from malice or in ignorance such

language had been misrepresented, and he was accused of setting up a rival sovereign to the Roman Emperor.

On the other hand, the language of these Epistles diverges from the narrative of St. Luke on two or three points in such a way as to establish the independence of the two accounts, and even to require some explanation. (1.) The first of these relates to the composition of the Church of Thessalonica. In the First Epistle St. Paul addresses his readers distinctly as Gentiles, who had been converted from idolatry to the Gospel (i. 9, 10). In the Acts we are told that "some (of the Jews) believed . . . and of the devout Greeks (i. e. proselytes) a great multitude, and of the chief women not a few" (xvii. 4). If for *σεβομένους Ἕλληνας* we read *σεβομένους καὶ Ἕλληνας*, "proselytes and Greeks," the difficulty vanishes; but though internal probabilities are somewhat in favour of this reading, the array of direct evidence (now reinforced by the Cod. Sinaiticus) is against it. But even if we retain the common reading, the account of St. Luke does not exclude a number of believers converted directly from heathendom—indeed, if we may argue from the parallel case at Berea (xvii. 12), the "women" were chiefly of this class; and, if any divergence remains, it is not greater than might be expected in two independent writers, one of whom, not being an eye-witness, possessed only a partial and indirect knowledge. Both accounts alike convey the impression that the Gospel made but little progress with the Jews themselves. (2.) In the Epistle the persecutors of the Thessalonian Christians are represented as their fellow-countrymen, i. e. as heathens (*ἐκ τῶν ἰδίων συμφορητῶν*, ii. 14), whereas in the Acts the Jews are regarded as the bitterest opponents of the faith (xvii. 5). This is fairly met by Paley (*Horae Paul.* ix. No. 5), who points out that the Jews were the instigators of the persecution, which however they were powerless of themselves to carry out without aid from the heathen, as may be gathered even from the narrative of St. Luke. We may add also, that the expression *ἱδιοὶ συμφορηταί* need not be restricted to the heathen population, but might include many Hellenist Jews who must have been citizens of the free town of Thessalonica. (3.) The narrative of St. Luke appears to state that St. Paul remained only three weeks at Thessalonica (xvii. 2), whereas in the Epistle, though there is no direct mention of the length of his residence among them, the whole language (i. 4, ii. 4-11) points to a much longer period. The latter part of the assertion seems quite correct; the former needs to be modified. In the Acts it is stated simply that for three Sabbath days (three weeks) St. Paul taught in the synagogue. The silence of the writer does not exclude subsequent labour among the Gentile population, and indeed as much seems to be implied in the success of his preaching, which exasperated the Jews against him. (4.) The notices of the movements of Silas and Timothy in the two documents do not accord at first sight. In the Acts St. Paul is conveyed away secretly from Berea to escape the Jews. Arrived at Athens, he sends to Silas and Timothy, whom he had left behind at Berea, urging them to join him as soon as possible (xvii. 14-16). It is evident from the language of St. Luke that the Apostle expects them to join him at Athens. Yet we hear nothing more of them for some time, when at length after St. Paul had passed on to Corinth, and several incidents had occurred since his arrival there, we

are told that Silas and Timothy came from Macedonia (xviii. 5). From the First Epistle, on the other hand, we gather the following facts. St. Paul here tells us that they (*ἡμεῖς*, i. e. himself, and probably Silas), no longer able to endure the suspense, "consented to be left alone at Athens, and sent Timothy their brother" to Thessalonica (iii. 1, 2). Timothy returned with good news (iii. 6) (whether to Athens or Corinth does not appear), and when the two Epistles to the Thessalonians were written, both Timothy and Silas were with St. Paul (1 Thess. i. 1; 2 Thess. i. 1; comp. 2 Cor. i. 19). Now, though we may not be prepared with Paley to construct an undesigned coincidence out of these materials, yet on the other hand there is no insoluble difficulty; for the events may be arranged in two different ways, either of which will bring the narrative of the Acts into accordance with the allusions of the Epistle. (i.) Timothy was despatched to Thessalonica, not from Athens, but from Beroea, a supposition quite consistent with the Apostle's expression of "consenting to be left alone at Athens." In this case Timothy would take up Silas somewhere in Macedonia on his return, and the two would join St. Paul in company; not however at Athens, where he was expecting them, but later on at Corinth, some delay having arisen. This explanation however supposes that the plurals "*we* consented, *we* sent" (*ἐνέθυκαμεν, ἐπέμψαμεν*), can refer to St. Paul alone. The alternative mode of reconciling the accounts is as follows:—(ii.) Timothy and Silas did join the Apostle at Athens, where we learn from the Acts that he was expecting them. From Athens he despatched Timothy to Thessalonica, so that he and Silas (*ἡμεῖς*) had to forego the services of their fellow-labourer for a time. This mission is mentioned in the Epistle, but not in the Acts. Subsequently he sends Silas on some other mission, not recorded either in the history or the Epistle; probably to another Macedonian Church, Philippi for instance, from which he is known to have received contributions about this time, and with which therefore he was in communication (2 Cor. xi. 9; comp. Phil. iv. 14-16; see Koch, p. 15). Silas and Timothy returned together from Macedonia and joined the Apostle at Corinth. This latter solution, if it assumes more than the former, has the advantage that it preserves the proper sense of the plural "*we* consented, *we* sent," for it is at least doubtful whether St. Paul ever uses the plural of himself alone. The silence of St. Luke may in this case be explained either by his possessing only a partial knowledge of the circumstances, or by his passing over incidents of which he was aware, as unimportant.

6. This Epistle is rather practical than doctrinal. It was suggested rather by personal feeling, than by any urgent need, which might have formed a centre of unity, and impressed a distinct character on the whole. Under these circumstances we need not expect to trace unity of purpose, or a continuous argument, and any analysis must be more or less artificial. The body of the Epistle, however, may conveniently be divided into two parts, the former of which, extending over the first three chapters, is chiefly taken up with a retrospect of the Apostle's relation to his Thessalonian converts, and an explanation of his present circumstances and feelings, while the latter, comprising the 4th and 5th chapters, contains some seasonable exhortations. At the close of each of these divisions is a prayer, commencing with the same words, "May God Him-

self," etc., and expressed in somewhat similar language.

The following is a table of contents:—

Salutation (i. 1).

1. Narrative portion (i. 2-iii. 13).

- (1.) i. 2-10. The Apostle gratefully records their conversion to the Gospel and progress in the faith.
- (2.) ii. 1-12. He reminds them how pure and blameless his life and ministry among them had been.
- (3.) ii. 13-16. He repeats his thanksgiving for their conversion, dwelling especially on the persecutions which they had endured.
- (4.) ii. 17-iii. 10. He describes his own suspense and anxiety, the consequent mission of Timothy to Thessalonica, and the encouraging report which he brought back.
- (5.) iii. 11-13. The Apostle's prayer for the Thessalonians.

2. Hortatory portion (iv. 1-v. 24).

- (1.) iv. 1-8. Warning against idleness.
- (2.) iv. 9-12. Exhortation to brotherly love and sobriety of conduct.
- (3.) iv. 13-v. 11. Touching the Advent of the Lord.
 - (a.) The dead shall have their place in the resurrection, iv. 13-18.
 - (b.) The time however is uncertain, v. 1-3.
 - (c.) Therefore all must be watchful, v. 4-11.
- (4.) v. 12-15. Exhortation to orderly living and the due performance of social duties.
- (5.) v. 16-22. Injunctions relating to prayer and spiritual matters generally.
- (6.) v. 23, 24. The Apostle's prayer for the Thessalonians.

The Epistle closes with personal injunctions and a benediction (v. 25-28).

7. The external evidence in favour of the genuineness of the First Epistle to the Thessalonians is chiefly negative, but this is important enough. There is no trace that it was ever disputed at any age or in any section of the Church, or even by any individual, till the present century. On the other hand, the allusions to it in writers before the close of the 2nd century are confessedly faint and uncertain—a circumstance easily explained, when we remember the character of the Epistle itself, its comparatively simple diction, its silence on the most important doctrinal questions, and, generally speaking, the absence of any salient points to arrest the attention and provoke reference. In Clement of Rome there are some slight coincidences of language, perhaps not purely accidental (c. 38, *καὶ ὡς ὅτε ἐχάρισται αὐτῷ*, comp. 1 Thess. v. 18; ib. *οὐκ ἐστὶν ὅν ἡμῖν ἄλλο νῦν σῶμα ἐν Χ.,* i., comp. 1 Thess. v. 23). Ignatius in two passages (*Polyc. 1*, and *Ephes. 10*) seems to be reminded of St. Paul's expression *ἀδελφίπτερος προσετέχεσθε* (1 Thess. v. 17), but in both passages of Ignatius the word *ἀδελφίπτερος*, in which the similarity mainly consists, is absent in the Syriac, and is therefore probably spurious. The supposed references in Polycarp (c. iv. to 1 Thess. v. 17, and c. ii. to 1 Thess. v. 22) are also unsatisfactory. It is more important to observe that the Epistle was included in the Old Latin and Syriac Versions, that it is found in the Canon of the Muratorian fragment, and that it was also contained in that of Marcion. Towards

the close of the 2nd century from Irenæus downwards, we find this Epistle directly quoted and ascribed to St. Paul.

The evidence derived from the character of the Epistle itself is so strong that it may fairly be called irresistible. It would be impossible to enter into the question of style here, but the reader may be referred to the Introduction of Jowett, who has handled this subject very fully and satisfactorily. An equally strong argument may be drawn also from the matter contained in the Epistle. Two instances of this must suffice. In the first place, the fineness and delicacy of touch with which the Apostle's relations towards his Thessalonian converts are drawn—his yearning to see them, his anxiety in the absence of Timothy, and his heartfelt rejoicing at the good news—are quite beyond the reach of the clumsy forgeries of the early Church. In the second place, the writer uses language which, however it may be explained, is certainly coloured by the anticipation of the speedy advent of the Lord—language natural enough on the Apostle's own lips, but quite inconceivable in a forgery written after his death, when time had disappointed these anticipations, and when the revival or mention of them would serve no purpose, and might seem to discredit the Apostle. Such a position would be an anachronism in a writer of the 2nd century.

The genuineness of this Epistle was first questioned by Schrader (*Apostel Paulus*), who was followed by Baur (*Paulus*, p. 480). The latter writer has elaborated and systematized the attack. The arguments which he alleges in favour of his view have already been anticipated to a great extent. They are briefly controverted by Lüdemann, and more at length and with great fairness by Jowett. The following is a summary of Baur's arguments. (i.) He attributes great weight to the general character of the epistle, the difference of style, and especially the absence of distinctive Pauline doctrines—a peculiarity which has already been remarked upon and explained, § 2. (ii.) In the mention of the "wrath" overtaking the Jewish people (ii. 16), Baur sees an allusion to the destruction of Jerusalem, and therefore a proof of the later date of the Epistle. The real significance of these words will be considered below in discussing the apocalyptic passage in the Second Epistle. (iii.) He urges the contradictions to the account in the Acts—a strange argument surely to be brought forward by Baur, who postdates and discredits the authority of that narrative. The real extent and bearing of these divergences has been already considered. (iv.) He discovers references to the Acts, which show that the Epistle was written later. It has been seen however that the coincidences are subtle and incidental, and the points of divergence and *prima facie* contradictions, which Baur himself allows, and indeed insists upon, are so numerous as to preclude the supposition of copying. Schleiermacher (*Einf. ins N. T.* p. 150) rightly infers the independence of the Epistle on these grounds. (v.) He supposes passages in this Epistle to have been borrowed from the acknowledged letters of St. Paul. The resemblances however which he points out are not greater than, or indeed so great as, those in other Epistles, and bear no traces of imitation.

8. A list of the Patristic commentaries comprising the whole of St. Paul's Epistles, will be found in the article on the EPISTLE TO THE ROMANS. To this list should be added the work of Theodore of Mopsuestia, a portion of which con-

taining the shorter Epistles from Galatians onwards is preserved in a Latin translation. The part relating to the Thessalonians is at present only accessible in the compilation of Rabanus Maurus (where it is quoted under the name of Ambrose), which ought to be read with the corrections and additions given by Dom Pitra (*Spicil. Solesm.* i. p. 133). This commentary is attributed by Pitra to Hilary of Poitiers, but its true authorship was pointed out by Hort (*Journal of Class. and Sac. Phil.* iv. p. 302). The portion of Cramer's *Catena* relating to this Epistle seems to be made up of extracts from Chrysostom, Severianus, and Theodore of Mopsuestia.

For the more important recent works on the whole of St. Paul's Epistles the reader may again be referred to the article on the Epistle to the Romans. The notes on the Thessalonians in Meyer's Commentary are executed by Lüdemann. Of special annotators on the Thessalonian Epistles, the chief are, in Germany, Platt (1829), Pelt (1830), Schott (1834), and Koch (2nd ed. 1855, the First Epistle alone), and in England Jowett (2nd ed. 1859) and Ellicott (2nd ed. 1862). [J. B. L.]

THESSALONIANS, SECOND EPISTLE TO THE. 1. This Epistle appears to have been written from Corinth not very long after the First, for Silvanus and Timotheus were still with St. Paul (i. 1). In the former letter we saw chiefly the outpouring of strong personal affection, occasioned by the renewal of the Apostle's intercourse with the Thessalonians, and the doctrinal and hortatory portions are there subordinate. In the Second Epistle, on the other hand, his leading motive seems to have been the desire of correcting errors in the Church of Thessalonica. We notice two points especially which call forth his rebuke. First, it seems that the anxious expectation of the Lord's advent, instead of subsiding, had gained ground since the writing of the First Epistle. They now looked upon this great crisis as imminent, and their daily avocations were neglected in consequence. There were expressions in the First Epistle which, taken by themselves, might seem to favour this view; and at all events such was falsely represented to be the Apostle's doctrine. He now writes to soothe this restless spirit and quell their apprehensions by showing that many things must happen first, and that the end was not yet, referring to his oral teaching at Thessalonica in confirmation of this statement (ii. 1-12, iii. 8-12). Secondly, the Apostle had also a personal ground of complaint. His authority was not denied by any, but it was tampered with, and an unauthorised use was made of his name. It is difficult to ascertain the exact circumstances of the case from casual and indirect allusions, and indeed we may perhaps infer from the vagueness of the Apostle's own language that he himself was not in possession of definite information; but at all events his suspicions were aroused. Designing men might misrepresent his teaching in two ways, either by suppressing what he actually had written or said, or by forging letters and in other ways representing him as teaching what he had not taught. St. Paul's language hints in different places at both these modes of false dealing. He seems to have entertained suspicions of this dishonesty even when he wrote the First Epistle. At the close of that Epistle he binds the Thessalonians by a solemn oath, "in the name of the Lord," to see that the Epistle is read "to all the holy brethren" (v. 27)—a charge unintelligible in itself.

and only to be explained by supposing some misgivings in the Apostle's mind. Before the Second Epistle is written, his suspicions seem to have been confirmed, for there are two passages which allude to these misrepresentations of his teaching. In the first of these he tells them in vague language, which may refer equally well to a false interpretation put upon his own words in the First Epistle, or to a supplemental letter forged in his name, "not to be troubled either by spirit or by word or by letter, as coming from us, as if the day of the Lord were at hand." They are not to be deceived, he adds, by any one, whatever means he employs (*κατὰ μηδένα τρόπον*, ii. 2, 3). In the second passage at the close of the Epistle he says, "The salutation of Paul with mine own hand, which is a token in every Epistle: so I write" (iii. 17)—evidently a precaution against forgery. With these two passages should be combined the expression in iii. 14, from which we infer that he now entertained a fear of direct opposition:—"If any man obey not our word conveyed by our Epistle, note that man."

It will be seen then that the teaching of the Second Epistle is corrective of, or rather supplemental to, that of the First, and therefore presupposes it. Moreover, the First Epistle bears on its face evidence that it is the first outpouring of his affectionate yearnings towards his converts after his departure from Thessalonica; while on the other hand the Second Epistle contains a direct allusion to a previous letter, which may suitably be referred to the First:—"Hold fast the tradition which ye were taught either by word or by letter from us" (ii. 15). We can scarcely be wrong therefore in maintaining the received order of the two Epistles. It is due however to the great names of Grotius and of Ewald (*Jahrb.* iii. p. 250; *Sendeschr.* p. 16) to mention that they reverse the order, placing the Second Epistle before the First in point of time—on different grounds indeed, but both equally insufficient to disturb the traditional order, supported as it is by the considerations already alleged.

2. This Epistle, in the range of subject as well as in style and general character, closely resembles the First; and the remarks made on that Epistle apply for the most part equally well to this. The structure also is somewhat similar, the main body of the Epistle being divided into two parts in the same way, and each part closing with a prayer (ii. 16, 17, iii. 16; both commencing with *αὐτὸς δὲ ὁ κύριος*). The following is a table of contents:—

The opening salutation (i. 1, 2).

1. A general expression of thankfulness and interest, leading up to the difficulty about the Lord's Advent (i. 3–ii. 17).

(1.) The Apostle pours forth his thanksgiving for their progress in the faith; he encourages them to be patient under persecution, reminding them of the judgment to come, and prays that they may be prepared to meet it (i. 3–12).

(2.) He is thus led to correct the erroneous idea that the judgment is imminent, pointing out that much must happen first (ii. 1–12).

(3.) He repeats his thanksgiving and exhortation, and concludes this portion with a prayer (ii. 13–17).

2. Direct exhortation (iii. 1–16).

(1.) He urges them to pray for him, and confidently anticipates their progress in the faith (iii. 1–5).

(2.) He reproves the idle, disorderly, and disobedient, and charges the faithful to withdraw from such (iii. 6–15).

This portion again closes with a prayer (iii. 16).

The Epistle ends with a special direction and benediction (iii. 17, 18).

3. The external evidence in favour of the Second Epistle is somewhat more definite than that which can be brought in favour of the First. It seems to be referred to in one or two passages of Polycarp (iii. 15, in Polyc. c. 11, and possibly i. 4 in the same chapter; cf. Polyc. c. 3, and see Lardner, pt. ii. c. 6); and the language in which Justin Martyr (*Dial.* p. 336 D) speaks of the Man of Sin is so similar that it can scarcely be independent of this Epistle. The Second Epistle, like the First, is found in the canons of the Syriac and Old Latin Versions, and in those of the Muratorian fragment and of the heretic Marcion; is quoted expressly by name by Irenaeus and others at the close of the second century, and was universally received by the Church. The internal character of the Epistle too, as in the former case, bears the strongest testimony to its Pauline origin. (See Jowett, i. 143.)

Its genuineness in fact was never questioned until the beginning of the present century. Objections were first started by Christ. Schmidt (*Eink. ins N. T.* 1804). He has been followed by Schrader (*Apostel Paulus*), Kern (*Tübing. Zeitschr. f. Theol.* 1839, ii. p. 145), and Baur (*Pastus der Apostel*). De Wette at first condemned this Epistle, but afterwards withdrew his condemnation and frankly accepted it as genuine.

It will thus be seen that this Epistle has been rejected by some modern critics who acknowledge the First to be genuine. Such critics of course attribute no weight to arguments brought against the First, such as we have considered already. The apocalyptic passage (ii. 1–12) is the great stumbling-block to them. It has been objected to, either as alluding to events subsequent to St. Paul's death, the Neronian persecution for instance; or as betraying religious views derived from the Montanism of the second century; or lastly, as contradicting St. Paul's anticipations expressed elsewhere, especially in the First Epistle, of the near approach of the Lord's advent. That there is no reference to Nero, we shall endeavour to show presently. That the doctrine of an Antichrist did not start into being with Montanism, is shown from the allusions of Jewish writers even before the Christian era (see Bertholdt, *Christ.* p. 69; Gfrörer, *Jahrb. des Heils*, pt. ii. p. 257); and appears still more clearly from the passage of Justin Martyr referred to in a former paragraph. That the language used of the Lord's coming in the Second Epistle does not contradict, but rather supplement the teaching of the First—postponing the day indeed, but still anticipating its approach as probable within the Apostle's lifetime—may be gathered both from expressions in the passage itself (e.g. ver. 7, "is already working"), and from other parts of the Epistle (i. 7, 8). Other special objections to the Epistle will scarcely command a hearing, and must necessarily be passed over here.

4. The most striking feature in the Epistle is this apocalyptic passage, announcing the revelation

of the "Man of Sin" (ii. 1-12); and it will not be irrelevant to investigate its meaning, bearing as it does on the circumstances under which the Epistle was written, and illustrating this aspect of the Apostle's teaching. He had dwelt much on the subject; for he appeals to the Thessalonians as knowing this truth, and reminds them that he had told them these things when he was yet with them.

(I.) The passage speaks of a great apostasy which is to usher in the advent of Christ, the great judgment. There are three prominent figures in the picture, Christ, Antichrist, and the Restrainer. Antichrist is described as the Man of Sin, the Son of Perdition, as the Adversary who exalteth himself above all that is called God, as making himself out to be God. Later on (for apparently the reference is the same) he is styled the "mystery of lawlessness," "the lawless one." The Restrainer is in one place spoken of in the masculine as a person (*ὁ κατέχων*), in another in the neuter as a power, an influence (*τὸ κατέχον*). The "mystery of lawlessness" is already at work. At present it is checked by the Restrainer; but the check will be removed, and then it will break out in all its violence. Then Christ will appear, and the enemy shall be consumed by the breath of His mouth, shall be brought to naught by the splendour of His presence.

(II.) Many different explanations have been offered of this passage. By one class of interpreters it has been referred to circumstances which passed within the circle of the Apostle's own experience, the events of his own lifetime, or the period immediately following. Others again have seen in it the prediction of a crisis yet to be realized, the end of all things. The former of these, the Præterists, have identified the "Man of Sin" with divers historical characters—with Caligula, Nero, Titus, Simon Magus, Simon son of Giora, the high-priest Ananias, &c., and have sought for a historical counterpart to the Restrainer in like manner. The latter, the Futurists, have also given various accounts of the Antichrist, the mysterious power of evil which is already working. To Protestants for instance it is the Papacy; to the Greek Church, Mohammedanism. And in the same way each generation and each section in the Church has regarded it as a prophecy of that particular power which seemed to them and in their own time to be most fraught with evil to the true faith. A good account of these manifold interpretations will be found in Lünemann's Commentary on the Epistle, p. 204; *Schlussbem. zu ii. 1-12*. See also Alford, *Proleg.*

(III.) Now in arbitrating between the Præterists and the Futurists, we are led by the analogy of other prophetic announcements, as well as by the language of the passage itself, to take a middle course. Neither is wholly right, and yet both are to a certain extent right. It is the special characteristic of prophecy to speak of the distant future through the present and immediate. The persons and events falling within the horizon of the prophet's own view, are the types and representatives of greater figures and crises far off, and as yet but dimly discerned. Thus the older prophets, while speaking of a delivery from the temporary oppression of Egypt or Babylon, spoke also of Messiah's kingdom. Thus our Lord himself, foretelling the doom which was even then hanging over the holy city, glances at the future judgment of the world as typified and portrayed in this; and the two are so interwoven that it is impossible to disentangle

them. Following this analogy, we may agree with the Præterists that St. Paul is referring to events which fell under his own cognizance; for indeed the Restrainer is said to be restraining now, and the mystery of iniquity to be already working: while at the same time we may accept the Futurist view, that the Apostle is describing the end of all things, and that therefore the prophecy has not yet received its most striking and complete fulfilment. This commingling of the immediate and partial with the final and universal manifestation of God's judgments, characteristic of all prophecy, is rendered more easy in St. Paul's case, because he seems to have contemplated the end of all things as possibly, or even probably, near at hand; and therefore the particular manifestation of Antichrist, which he witnessed with his own eyes, would naturally be merged in and identified with the final Antichrist in which the opposition to the Gospel will culminate.

(IV.) If this view be correct, it remains to inquire what particular adversary of the Gospel, and what particular restraining influence, St. Paul may have had in view. But, before attempting to approximate to an explanation, we may clear the way by laying down two rules. *First*. The imagery of the passage must be interpreted mainly by itself, and by the circumstances of the time. The symbols may be borrowed in some cases from the Old Testament; they may reappear in other parts of the New. But we cannot be sure that the same image denotes exactly the same thing in both cases. The language describing the Man of Sin is borrowed to some extent from the representation of Antiochus Epiphanes in the Book of Daniel, but Antiochus cannot be meant there. The great adversary in the Revelation seems to be the Roman power; but it may be widely different here. There were even in the Apostolic age "many Antichrists;" and we cannot be sure that the Antichrist present to the mind of St. Paul was the same with the Antichrist contemplated by St. John. *Secondly*. In all figurative passages it is arbitrary to assume that a person is denoted where we find a personification. Thus the "Man of Sin" here need not be an individual man; it may be a body of men, or a power, a spiritual influence. In the case of the Restrainer we seem to have positive ground for so interpreting it, since in one passage the neuter gender is used, "the thing which restraineth" (*τὸ κατέχον*), as if anonymous. (See Jowett's *Essay On the Man of Sin*, i. p. 178, rather for suggestions as to the mode of interpretation, than for the conclusion he arrives at.)

(V.) When we inquire then, what St. Paul had in view when he spoke of the "Man of Sin" and the Restrainer, we can only hope to get even an approximate answer by investigating the circumstances of the Apostle's life at this epoch. Now we find that the chief opposition to the Gospel, and especially to St. Paul's preaching at this time arose from the Jews. The Jews had conspired against the Apostle and his companions at Thessalonica, and he only saved himself by secret flight. Thence they followed him to Beroea, which he hurriedly left in the same way. At Corinth, whence the letters to the Thessalonians were written, they persecuted him still further, raising a cry of treason against him, and bringing him before the Roman proconsul. These incidents explain the strong expressions he uses of them in these Epistles; "They slew the Lord Jesus and the prophets, and per-

accused the Apostles; they are hateful to God; they are the common enemies of mankind, whom the Divine wrath ($\delta \delta \rho \gamma \acute{\eta}$) at length overtakes" (1 Thess. ii. 15, 16). With these facts in view, it seems on the whole probable that the Antichrist is represented especially by Judaism. With a prophetic insight the Apostle foresaw, as he contemplated the moral and political condition of the race, the approach of a great and overwhelming catastrophe. And it is not improbable that our Lord's predictions of the vengeance which threatened Jerusalem blended with the Apostle's vision, and gave a colour to this passage. If it seem strange that "lawlessness" should be mentioned as the distinguishing feature of those whose very zeal for "the Law" stimulated their opposition to the Gospel, we may appeal to our Lord's own words (Matt. xxiii. 28), describing the Jewish teachers: "within they are full of hypocrisy and lawlessness ($\delta \sigma \omega \mu \acute{\alpha}$ s)." Corresponding to this view of the Antichrist, we shall probably be correct in regarding the Roman Empire as the restraining power, for so it was taken by many of the Fathers, though without altogether understanding its bearing. It was to Roman justice and Roman magistrates that the Apostle had recourse at this time to shield him from the enmity of the Jews, and to check their violence. At Philippi, his Roman citizenship extorted an ample apology for ill-treatment. At Thessalonica, Roman law secured him fair play. At Corinth, a Roman proconsul acquitted him of frivolous charges brought by the Jews. It was only at a later date under Nero, that Rome became the antagonist of Christendom, and then she also in turn was fitly portrayed by St. John as the type of Antichrist. Whether the Jewish opposition to the Gospel entirely exhausted St. Paul's conception of the "mystery of lawlessness" as he saw it "already working" in his own day, or whether other elements did not also combine with this to complete the idea, it is impossible to say. Moreover at this distance of time and with our imperfect information, we cannot hope to explain the exact bearing of all the details in the picture. But following the guidance of history, we seem justified in adopting this as a probable, though only a partial, explanation of a very difficult passage.

5. A list of commentaries has been given in the article on the First Epistle.

[J. B. L.]

THESSALONICA ($\Theta \epsilon \sigma \sigma \alpha \lambda \omicron \nu \iota \kappa \eta$). The original name of this city was Therma; and that part of the Macedonian shore on which it was situated ("Medio flexu litoris sinus Thermaici," Plin. *H. N.* iv. 10) retained through the Roman period the designation of the Thermaic Gulf. The history of the city under its earlier name was of no great note; see Herod. vii. 128 seq.; Thucyd. i. 61, ii. 29; Aesch. *De fuis Leg.* p. 31). It rose into importance with the decay of Greek nationality. Cassander the son of Antipater rebuilt and enlarged it, and named it after his wife Thessalonica, the sister of Alexander the Great. The first author in which the new appellation occurs is Polybius (xxiii. 4). The name ever since, under various slight modifications, has been continuous, and the city itself has never ceased to be eminent. *Saloniki* (though Adrian-

THESSALONICA

ople may possibly be larger, is still the most important town of European Turkey, next after Constantinople.

Under the Romans, when MACEDONIA was divided into four governments, Thessalonica was made the capital of the second (Liv. xiv. 29); afterwards, when the whole was consolidated into one province, this city became practically the metropolis. Notices of the place now become frequent. Cicero was sent in his exile (*pro Planc.* 41), and some of his letters were written from hence during his journeys to and from his own province of Cilicia. During the first Civil War it was the head-quarters of the Pompeian party and the Senate (Dion Cass. xli. 20). During the second it took the name of Octavius (Plut. *Brut.* 46; Appian, *B. C.* iv. 118), whence apparently it reaped the honour and advantage of being made a "free city" (*libera civitas*, Plin. l. c.), a privilege which is commemorated on some of its coins. Strabo in the first century speaks of Thessalonica as the most populous city in Macedonia ($\mu \acute{\alpha} \lambda \iota \sigma \tau \alpha \tau \acute{\eta} \nu \delta \alpha \lambda \lambda \omega \nu \epsilon \upsilon \alpha \nu \delta \rho \epsilon \iota$), similar language to which is used by Lucian in the second century (*Asin.* 46).

Thus we are brought to St. Paul's visit (with Silas and Timothy)* during his second missionary journey, and to the introduction of Christianity into Thessalonica. Three circumstances must here be mentioned, which illustrate in an important manner this visit and this journey, as well as the two Epistles to the Thessalonians, which the Apostle wrote from Corinth very soon after his departure from his new Macedonian converts. (1.) This was the chief station on the great Roman Road, called the *Via Egnatia*, which connected Rome with the whole region to the north of the Aegean Sea. St. Paul was on this road at NEAPOLIS (Acts xvi. 11) and PHILIPPI (xvi. 12-40), and his route from the latter place (xvii. 1) had brought him through two of the well-known minor stations mentioned in the Itineraries. [AMPHIPOLIS; APOLLONIA.] (2.) Placed as it was on this great Road, and in connexion with other important Roman ways ("posita in gremio imperii Romani," to use Cicero's words), Thessalonica was an invaluable centre for the spread of the Gospel. And it must be remembered that, besides its inland communication with the rich plains of Macedonia and with far more remote regions, its maritime position made it a great emporium of trade by sea. In fact it was nearly, if not quite, on a level with Corinth and Ephesus in its share of the commerce of the Levant. Thus we see the force of what St. Paul says in his First Epistle, shortly after leaving Thessalonica— $\delta \rho \acute{\iota} \sigma \tau \epsilon \nu \epsilon \lambda \theta \epsilon \chi \eta \tau \alpha \iota \delta \lambda \acute{o} \gamma \circ \varsigma \tau \circ \upsilon \text{ Κυρίου οὐ μόνον ἐν τῇ Μακεδονίᾳ καὶ ἐν τῇ Ἀχαΐᾳ, ἀλλ' ἐν παντί τόπῳ}$ (i. 8). (3.) The circumstance noted in Acts xvii. 1, that here was the synagogue of the Jews in this part of Macedonia, had evidently much to do with the Apostle's plans, and also doubtless with his success. Trade would inevitably bring Jews to Thessalonica; and it is remarkable that, ever since, they have had a prominent place in the annals of the city. They are mentioned in the seventh century during the Slavonic wars; and again in the twelfth by Eustathius and Benjamin of Tudela. In the

* Timothy is not mentioned in any part of the direct narrative of what happened at Thessalonica, though he appears as St. Paul's companion before at Philippi (Acts xvi. 1-15), and afterwards at Berea (xvii. 14, 15); but from his subsequent mission to Thessalonica (1 Thess. ii.

1-7; see Acts xviii. 5), and the mention of his name in the opening salutation of both Epistles to the Thessalonians, we can hardly doubt that he had been with the Apostle throughout.

Thessalonica.

fifteenth century there was a great influx of Spanish Jews. At the present day the numbers of residents in the Jewish quarter (in the south-east part of the town) are estimated at 10,000 or 20,000, out of an aggregate population of 60,000 or 70,000.

The first scene of the Apostle's work at Thessalonica was the Synagogue. According to his custom he began there, arguing from the Ancient Scriptures (Acts xvii. 2, 3); and the same general results followed, as in other places. Some believed, both Jews and proselytes, and it is particularly added, that among these were many influential women (ver. 4); on which the general body of the Jews, stirred up with jealousy, excited the Gentile population to persecute Paul and Silas (vers. 5-10). It is stated that the ministrations among the Jews continued for three weeks (ver. 2). Not that we are obliged to limit to this time the whole stay of the Apostles at Thessalonica. A flourishing Church was certainly formed there: and the Epistles show that its elements were much more Gentile than Jewish. St. Paul speaks of the Thessalonians as having turned "from idols;" and he does not here, as in other Epistles, quote the Jewish Scriptures. In all respects it is important to compare these two letters with the narrative in the Acts; and such references have the greater freshness from the short interval which elapsed between visiting the Thessalonians and writing to them. Such expressions as *ἐκ βαλίου πολλῶν* (1 Thess. i. 6), and *ἐκ πολλῶν ἀγώνων* (ii. 2), sum up the suffering and conflict which Paul and Silas and their converts went through at Thessalonica. (See also 1 Thess. ii. 14, 15, iii. 3, 4; 2 Thess. i. 4-7.) The persecution took place through the instrumentality of worthless idlers (*τῶν ἀγροπαλῶν ἄνδρας τινὰς κοιμητοὺς*, Acts xvii. 5), who, instigated by the Jews, raised a tumult. The house of Jason, with whom the Apostles seem to have been residing, was attacked; they themselves were not found, but Jason was brought before the authorities on the accusation that the Christians were trying

to set up a new King in opposition to the Emperor; a guarantee (*τὸ ἱκανόν*) was taken from Jason and others for the maintenance of the peace, and Paul and Silas were sent away by night southwards to BEROEA (Acts xvii. 5-10). The particular charge brought against the Apostles receives an illustration from the Epistles, where the *kingdom of Christ* is prominently mentioned (1 Thess. ii. 12; 2 Thess. i. 5). So again, the doctrine of the Resurrection is conspicuous both in St. Luke's narrative (xvii. 3), and in the first letter (i. 10, iv. 14, 16). If we pass from these points to such as are personal, we are enabled from the Epistles to complete the picture of St. Paul's conduct and attitude at Thessalonica, as regards his love, tenderness, and zeal, his care of individual souls, and his disinterestedness (see 1 Thess. i. 5, ii. 1-10). As to this last point, St. Paul was partly supported here by contributions from Philippi (Phil. iv. 15, 16), partly by the labour of his own hands, which he diligently practised for the sake of the better success of the Gospel, and that he might set an example to the idle and selfish. (He refers very expressly to what he had said and done at Thessalonica in regard to this point. See 1 Thess. ii. 9, iv. 11; comparing 2 Thess. iii. 8-12.) [THESSALONIANS, EPISTLES TO.] To complete the account of St. Paul's connexion with Thessalonica, it must be noticed that he was certainly there again, though the name of the city is not specified, on his third missionary journey, both in going and returning (Acts xx. 1-3). Possibly he was also there again, after his liberation from his first imprisonment. See Phil. i. 25, 26, ii. 24, for the hope of revisiting Macedonia, entertained by the Apostle at Rome, and 1 Tim. i. 3; 2 Tim. iv. 13; Tit. iii. 12, for subsequent journeys in the neighbourhood of Thessalonica.

Of the first Christians of Thessalonica, we are able to specify by name the above-mentioned Jason (who may be the same as the Apostle's own kinsman mentioned in Rom. xvi. 21), Demas (at least conjo-

survive; see 2 Tim. iv. 10). Gaius, who shared some of St. Paul's perils at Ephesus (Acts xix. 29), Secundus, who accompanied him from Macedonia to Asia on the eastward route of his third missionary journey, and was probably concerned in the business of the collection; see Acts xx. 4), and especially Aristarchus (who, besides being mentioned here with Secundus, accompanied St. Paul on his voyage to Rome, and had therefore probably been with him during the whole interval, and is also specially referred to in two of the Epistles written during the first Roman imprisonment. See Acts xxvii. 2; Col. iv. 10; Philm. 24; also Acts xix. 29, for his association with the Apostle at Ephesus in the earlier part of the third journey).

We must recur, however, to the narrative in the Acts, for the purpose of noticing a singularly accurate illustration which it affords of the political constitution of Thessalonica. Not only is the *demos* mentioned (ῥῶν δήμων, Acts xvii. 5) in harmony with what has been above said of its being a "free city," but the peculiar title, *politarchs* (πολιτάρχας, lb. 6), of the chief magistrates. This term occurs in no other writing; but it may be read to this day conspicuously on an arch of the early Imperial times, which spans the main street of the city. From this inscription it would appear that the number of *politarchs* was seven. The whole may be seen in Boeckh, *Corp. Insc.* No. 1967.

This seems the right place for noticing the other remains at Thessalonica. The arch first mentioned (called the *Vardar* gate) is at the western extremity of the town. At its eastern extremity is another Roman arch of later date, and probably commemorating some victory of Constantine. The main street, which both these arches cross, and which intersects the city from east to west, is undoubtedly the line of the *Via Egnatia*. Near the course of this street, and between the two arches, are four Corinthian columns supporting an architrave, and believed by some to have belonged to the Hippodrome, which is so famous in connection with the history of Theodosius. Two of the mosques have been anciently heathen temples. The city walls are of late Greek construction, but resting on a much older foundation, with hewn stones of immense thickness. The castle contains the fragments of a shattered triumphal arch, erected in the reign of Marcus Aurelius.

A word must be said, in conclusion, on the later ecclesiastical history of Thessalonica. For during several centuries this city was the bulwark, not simply of the later Greek Empire, but of Oriental Christendom, and was largely instrumental in the conversion of the Slavonians and Bulgarians. Thus it received the designation of "the Orthodox City;" and its struggles are very prominent in the writings of the Byzantine historians. Three conspicuous passages are, its capture by the Saracens, A.D. 904 (Jo. Cameniata, *De Excidio Thessalonicensi*, with Theophanes Continuatus, 1838); by the Crusaders in 1185 (Nicetas Choniates, *De Andron. Comneno*, 1835; also Eustath. *De Thessalonica a Latinis captâ*, in the same vol. with Leo Grammaticus, 1842); and finally by the Turks under Amurath II. in 1430 (Jo. Anagnostes, *De Thessalonicensi Excidio Narratio*, with Phrantzes and Cananus, 1838). The references are to the Bonn editions. A very large part of the population at the present

day is Greek; and Thessalonica may still be destined to take a prominent part in struggles connected with nationality and religion.

The travellers to whom it is most important to refer, as having given full accounts of this place, are Clarke (*Travels in Europe, &c.*, 1810-1823), Sir H. Holland (*Travels in the Ionian Isles, &c.*, 1815), Comnery (*Voyage dans la Macédoine*, 1831), and Leake (*Northern Greece*, 1835). An antiquarian essay on the subject by the Abbé Belley will be found in the *Mémoires de l'Académie des Inscriptions*, tom. xxxviii. *Sect. Hist.* pp. 121-146. But the most elaborate work is that of Tafel, the first part of which was published at Tübingen in 1835. This was afterwards reprinted as "*Prolegomena*" to the *Dissertation de Thessalonica usque Agro Geographico*, Berlin, 1839. With this should be compared his work on the *Via Egnatia*. The Commentaries on the Epistles to the Thessalonians of course contain useful compilations on the subject. Among these, two of the most copious are those of Koch (Berlin, 1849) and Lünemann (Göttingen, 1850). [J. S. H.]

Coin of Thessalonica.

THEU'DAS (Θευδᾶς: *Theodas*; and probably = תודא), the name of an insurgent mentioned in Gamaliel's speech before the Jewish council (Acts v. 35-39) at the time of the arraignment of the Apostles. He appeared, according to Luke's account, at the head of about four hundred men; he sought not merely to lead the people astray by false doctrine, but to accomplish his designs by violence; he entertained a high conceit of himself (ἀέψυε σὺναι τὴν αὐτοῦ); was slain at last (ἀρπάξθη), and his party was dispersed and brought to nothing (διελύθησαν καὶ ἐγένετο εἰς ὄδῶν). Josephus (*Ant.* xx. 5, §1) speaks of a Theudas who played a similar part in the time of Claudius, about A.D. 44, i.e. some ten or twelve years at least later than the delivery of Gamaliel's speech; and since Luke places his Theudas, in the order of time, before Judas the Galilean, who made his appearance soon after the dethronement of Archelaüs, i.e. A.D. 6 or 7 (Jos. B. J. ii. 8, §1; *Ant.* xviii. 1, §6, xx. 5, §2), it has been charged that the writer of the Acts either fabricated the speech put into the mouth of Gamaliel, or has wrought into it a transaction which took place thirty years or more after the time when it is said to have occurred (see Zeller, *Die Apostelgeschichte*, pp. 132, seq.). Here we may protest, at the outset, against the injustice of hastily imputing to Luke so gross an error; for having established his character in so many decisive instances in which he has alluded, in the course of the Acts, to persons, places, customs, and events in sacred and profane history, he has a right to the presumption that he was well informed also as to the facts in this particular passage.* Every principle of just criticism demands that, instead of

* It may not be amiss to remind the reader of some fine remarks, in illustration of Luke's historical accuracy, to Tholuck's *Glaubwürdigkeit der evang. Geschichte*, pp.

161-177, 375-389. See also Ebrard, *Biblische Kritik*, pp. 618, sq.; and Lechler, *Das Apostolische Zeitalter*, pp. 6, sq.

distrusting him as soon as he goes beyond our means of verification, we should avail ourselves of any supposition for the purpose of upholding his credibility, which the conditions of the case will allow.

Various solutions of the difficulty have been offered. The two following have been suggested as especially commending themselves by their fulfilment of every reasonable requisition, and as approved by learned and judicious men:—(1.) Since Luke represents Theudas as having preceded Judas the Galilean [see vol. i. p. 1160], it is certain that he could not have appeared later, at all events, than the latter part of the reign of Herod the Great. The very year, now, of that monarch's death was remarkably turbulent; the land was overrun with belligerent parties, under the direction of insurrectionary chiefs or fanatics. Josephus mentions but three of these disturbers *by name*; he passes over the others with a general allusion. Among those whom the Jewish historian has omitted to name, may have been the Theudas whom Gamaliel cites as an example of unsuccessful innovation and insubordination. The name was not an uncommon one (Winer, *Realb.* ii. 609); and it can excite no surprise that one Theudas, who was an insurgent, should have appeared in the time of Augustus, and another, fifty years later, in the time of Claudius. As analogous to this supposition is the fact that Josephus gives an account of four men named *Simon*, who followed each other within forty years, and of three named *Judas*, within ten years, who were all instigators of rebellion. This mode of reconciling Luke with Josephus is affirmed by Lardner (*Credibility*, vol. i. p. 429), Bengel, Kuinoel, Olshausen, Anger (*de Tempp. in Act. Apost. Ratione*, p. 185), Winer, and others.

(2.) Another explanation (essentially different only as proposing to identify the person) is, that Luke's Theudas may have been one of the three insurgents whose names are mentioned by Josephus in connexion with the disturbances which took place about the time of Herod's death. Sonntag (*Theol. Stud. u. Kritik*, 1837, p. 622, &c.) has advanced this view, and supported it with much learning and ability. He argues that the Theudas referred to by Gamaliel is the individual who occurs in Josephus under the name of Simon (*B. J.* ii. 4, §2; *Ant.* xvii. 10, §6), a slave of Herod, who attempted to make himself king, amid the confusion which attended the vacancy of the throne when that monarch died. He urges the following reasons for that opinion: first, this Simon, as he was the most noted among those who disturbed the public peace at that time, would be apt to occur to Gamaliel as an illustration of his point; secondly, he is described as a man of the same lofty pretensions (*ἀνὴρ ἕγιος Ἰσραὴλ καὶ ἀντιπαραστήσει αὐτῷ τὴν βασιλείαν*); thirdly, he died a violent death, which Josephus does not mention as true of the other two insurgents; fourthly, he appears to have had comparatively few adherents, in conformity with Luke's *ὀλίγοι ὑπακούοντες*; and, lastly, his having been originally a slave accounts for the twofold appellation, since it was very common among the Jews to assume a different name on changing their occupation or mode of life. It is very possible, therefore, that Gamaliel speaks of him as Theudas, because, having borne that name so long at Jerusalem, he was best known by it to the members of the Sanhedrim; and that Josephus, on the contrary, who wrote for Romans and Greeks, speaks of him as Simon, because it was under that name that he set

himself up as king, and in that way acquired his foreign notoriety (see Tacit. *Hist.* v. 9).

There can be no valid objection to either of the foregoing suppositions: both are reasonable, and both must be disproved before Luke can be justly charged with having committed an anachronism in the passage under consideration. So impartial a witness as Jost, the historian of the Jews (*Geschichte der Israeliten*, ii. Anh. p. 76), admits the reasonableness of such combinations, and holds in this case to the credibility of Luke, as well as that of Josephus. The considerate Lardner (*Credibility*, vol. i. p. 433), therefore, could well say here, "Indeed I am surprised that any learned man should find it hard to believe that there were two impostors of the name of Theudas in the compass of forty years." It is hardly necessary to advert to other modes of explanation. Josephus was by no means infallible, as Strauss and critics of his school may almost be said to take for granted; and it is possible certainly (this is the position of some) that Josephus himself may have misplaced the time of Theudas, instead of Luke, who is charged with that oversight. Calvin's view that Judas the Galilean appeared not *after* but *before* Theudas (*μετὰ τοῦτον = insuper vel praeterea*), and that the examination of the Apostles before the Sanhedrim occurred in the time of Claudius (contrary to the manifest chronological order of the Acts), deserves mention only as a waymark of the progress which has been made in Biblical exegesis since his time. Among other writers, in addition to those already mentioned, who have discussed this question or touched upon it, are the following:—Wieseler, *Chronologie der Apost. Zeitalters*, 138; Neander, *Geschichte der Pflanzung*, i. 75, 76; Guericke, *Beiträge zur Einleit. ins N. Test.* 90; Baumgarten, *Apostelgeschichte*, i. 114; Lightfoot, *Hor. Hebr.* ii. 704; Biscoe, *History of the Acts*, 428; and Wordsworth's *Commentary*, ii. 26.

[H. B. H.]

THIEVES, THE TWO. The men who under this name appear in the history of the crucifixion were robbers (*ῥάπται*) rather than thieves (*κλέπται*), belonging to the lawless bands by which Palestine was at that time and afterwards infested (*Jos. Ant.* xvii. 10, §8, xx. 8, §10). Against these brigands every Roman procurator had to wage continual war (*Jos. B. J.* ii. 13, §2). The parable of the Good Samaritan shows how common it was for them to attack and plunder travellers even on the high road from Jerusalem to Jericho (*Luke* x. 30). It was necessary to use an armed police to encounter them (*Luke* xii. 52). Often, as in the case of Barabbas, the wild robber life was connected with a fanatic zeal for freedom, which turned the marauding attack into a popular insurrection (*Mark* xv. 7). For crimes such as these the Romans had but one sentence. Crucifixion was the penalty at once of the robber and the rebel (*Jos. B. J.* ii. 13, §2).

Of the previous history of the two who suffered on Golgotha we know nothing. They had been tried and condemned, and were waiting their execution before our Lord was accused. It is probable enough, as the death of Barabbas was clearly expected at the same time, that they were among the *συνταραχθέντες* who had been imprisoned with him, and had taken part in the insurrection in which zeal and hate, and patriotism, and lust of plunder were mingled in wild confusion.

They had expected to die with Jesus Barabbas.

[Comp. BARABBAS.] They find themselves with one who bore the same name, but who was described in the superscription on his cross as Jesus of Nazareth. They could hardly fail to have heard something of his fame as a prophet, of his triumphal entry as a king. They now find him sharing the same fate as themselves, condemned on much the same charge (Luke xxiii. 5). They too would bear their crosses to the appointed place, while He fainted by the way. Their garments would be parted among the soldiers. For them also there would be the drugged wine, which He refused. 'O dull the sharp pain of the first hours on the cross. They catch at first the prevailing tone of scorn. A king of the Jews who could neither save himself nor help them, whose followers had not even fought for him (John xviii. 36), was strangely unlike the many chieftains whom they had pretably known claiming the same title (Jos. Ant. xiii. 10, §8), strangely unlike the "notable prisoner" for whom they had not hesitated, it would seem, to incur the risk of bloodshed. But over one of them there came a change. The darkness which, at noon, was beginning to steal over the sky awed him, and the divine patience and silence and meekness of the sufferer touched him. He looked back upon his past life, and saw an infinite evil. He looked to the man dying on the cross beside him, and saw an infinite compassion. There indeed was one unlike all other "kings of the Jews" whom the robber had ever known. Such an one must be all that He had claimed to be. To be forgotten by that king seems to him now the most terrible of all punishments; to take part in the triumph of His return, the most blessed of all hopes. The yearning prayer was answered, not in the letter, but in the spirit. To him alone, of all the myriads who had listened to Him, did the Lord speak of Paradise [comp. PARADISE], waking with that word the thoughts of a purer past and the hopes of an immediate rest. But his joy was to be more than that of fair groves and pleasant streams. "Thou shalt be with me." He should be remembered there.

We cannot wonder that a history of such wonderful interest should at all times have fixed itself on men's minds, and led them to speculate and ask questions which we have no data to answer. The simplest and truest way of looking at it has been that of those who, from the great Alexandrian thinker (Origen, in *Rom.* iii.) to the writer of the most popular hymn of our own times, have seen in the "dying thief" the first great typical instance that "a man is justified by faith without the deeds of the law." Even those whose thoughts were less deep and wide acknowledged that in this and other like cases the baptism of blood supplied the place of the outward sign of regeneration (Hilar. *De Trin.* c. x.; Jerome, *Ep.* xiii.). The logical speculations of the Pelagian controversy overclouded, in this as in other instances, the clear judgment of Augustine. Maintaining the absolute necessity of baptism to salvation, he had to discuss the question whether the penitent thief had been baptised or not, and he oscillates, with melancholy indecision, between the two answers. At times he is disposed to rest contented with the solution which had satisfied others. Then again he ventures on the conjecture that the water which sprang forth from the pierced side had sprinkled him, and so had been a sufficient baptism. Finally, yielding to the inexorable logic of a sacramental theory, he rests in the assumption that he probably had been baptised

before, either in his prison or before he entered on his robber-life (comp. *De Anim.* i. 11, §. 12; *Serm. de Temp.* 130; *Retract.* i. 26, iii. 18, 55).

Other conjectures turn more on the circumstances of the history. Bengel, usually acute, here overshoots the mark, and finds in the Lord's words to him, dropping all mention of the Messianic kingdom, an indication that the penitent thief was a Gentile, the impenitent a Jew, and that thus the scene on Calvary was typical of the position of the two Churches (*Gnomon N. T.* in Luke xxiii.). Stier (*Words of the Lord Jesus*, in loc.) reads in the words of reproach (αὐτὸς φεβγὶς ἐν τῷ θεῷ the language of one who had all along listened with grief and horror to the revilings of the multitude, the burst of an indignation previously unexpressed. The Apocryphal Gospels, as usual, do their best to lower the divine history to the level of a legend. They follow the repentant robber into the unseen world. He is the first to enter Paradise of all mankind: Adam and Seth and the patriarchs find him already there bearing his cross. Michael the archangel had led him to the gate, and the fiery sword had turned aside to let him pass (*Evang. Nicod.* ii. 10). Names were given to the two robbers. Demas or Dismas was the penitent thief, hanging on the right, Gestas the impenitent on the left (*Evang. Nicod.* i. 10; *Narrat. Joseph.* c. 3). The cry of entreaty is expanded into a long wordy prayer (*Narr. Jos.* l. c.), and the promise suffers the same treatment. The history of the Infancy is made prophetic of that of the Crucifixion. The holy family, on their flight to Egypt, come upon a band of robbers. One of them, Titus (the names are different here), has compassion, purchases the silence of his companion, Dismachus, and the infant Christ prophesies that after thirty years Titus shall be crucified with him, and shall go before him into Paradise (*Evang. Infant.* c. 23). As in other instances [comp. MAGI], so in this, the fancy of inventors seems to have been fertile in names. Bede (*Collectan.*) gives Matha and Joca as those which prevailed in his time. The name given in the Gospel of Nicodemus has, however, kept its ground, and St. Dismas takes his place in the hagiology of the Syrian, the Greek, and the Latin Churches.

All this is, of course, puerile enough. The captious objections to the narrative of St. Luke are inconsistent with that of St. Matthew and St. Mark, and the inference drawn from them that both are more or less legendary, are hardly less puerile (Strauss, *Leben Jesu*, ii. 519; Zwald, *Christus. Gesch.* v. 438). The obvious answer to this is that which has been given by Origen (*Hom.* 35 in *Matt.*), Chrysostom (*Hom.* 88 in *Matt.*), and others (comp. Suicer, s. v. *Αποκρίσις*). Both began by reviling. One was subsequently touched with sympathy and awe. The other explanation, given by Cyprian (*De Passione Domini*), Augustine (*De Cons. Evang.* iii. 16), and others, which forces the statement of St. Matthew and St. Mark into agreement with that of St. Luke by assuming a *synecdoche*, or *syllepsis*, or *enallage*, is, it is believed, far less satisfactory. The technical word does but thinly veil the contradiction which this hypothesis admits but does not explain. [E. H. P.]

THIMNATHAH (תִּמְנַתָּה: *Thimnath*; Alex. *Θαυνα*: *Thamnatha*). A town in the allotment of Dan (Josh. xix. 43 only). It is named between Ekron and Ekron. The name is the same as that

the residence of Samson's wife (inaccurately given in A. V. TIMNAR); but the position of that place, which seems to agree with the modern *Tibneh* below *Zareah*, is not so suitable, being fully ten miles from *Atk*, the representative of Ekron. Timnah appears to have been almost as common a name as Gibeon, and it is possible that there may have been another in the allotment of Dan besides that represented by *Tibneh*. [G.]

THISBE (Θισβη, or Θισβη). A name found only in Tob. i. 2, as that of a city of Naphtali from which Tobit's ancestor had been carried captive by the Assyrians. The real interest of the name resides in the fact that it is maintained by some interpreters (Hiller, *Onom.* 236, 947; Reland, *Pol.* 1035) to be the place which had the glory of giving

birth to ELIJAH THE TISHBITE. This, however, is, at the best, very questionable, and derives its main support from the fact that the word employed in 1 K. xvii. 1 to denote the relation of Elijah to Gilead, if pointed as it now stands in the Received Hebrew Text, signifies that he was not a native of Gilead but merely a resident there, and came originally from a different and foreign district. But it is also possible to point the word so that the sentence shall mean "from Tishbi of Gilead," in which case all relation between the great Prophet and Thibse of Naphtali at once falls to the ground. [See TISHBITE.]

There is however a truly singular variation in the texts of the passage in Tobit, a glance at which will show how hazardous it is to base any definite topographical conclusions upon it:—

A. V.	VULGATE.	LXX.	REVISED GREEK TEXT.	VETUS LATINA.
Out of Thibse which is at the right hand of that city which is called properly Nephthali in Galilee above Aser.* [Marg. or Kedesh of Nephthali in Galilee, Judg. iv. 6.]	Out of the tribe and city of Nephthali which is in the upper parts of Galilee above Naasson, behind the road which leads to the west, having on the left hand the city of Sephet.	Out of Thibse which is at the right hand of Kudion of Nephthaleim in Galilee above Aser.	Out of Thibse which is at the right hand of Kudion of Nephthaleim in Upper Galilee above Aser, behind the setting sun on the right of Phogor (Peor).	Out of the city of Bihl which is on the right hand of Edisee, a city of Nephthaleim in Upper Galilee over against Naason, behind the road which leads to the west on the left of Raphaim. [Another MS. reads Gabriel, Cydiscus, and Raphaim, for Bihl, Edisee, and Raphaim.]
* i. e. probably, Habor.				

Assuming that Thisbe, and not Thibe, is the correct reading of the name, it has been conjectured (apparently for the first time by Keil, *Conun. über die Könige*, 247) that it originated in an erroneous rendering of the Hebrew word תִּשְׁבִּי, which word in fact occurs in the Hebrew version of the passage, and may be pointed in two ways, so as to mean either "from the inhabitants of," or "from Tishbi," i. e. Thibse. The reverse suggestion, in respect of the same word in 1 K. xvii. 1, has been already alluded to. [TISHBITE.] But this, though very ingenious, and quite within the bounds of possibility, is at present a mere conjecture, since none of the texts support it, and there is no other evidence in its favour.

No name resembling Thibse or Thibe has been yet encountered in the neighbourhood of *Kedes* or *Safed*, but it seems impossible to suppose that the minute definition of the Latin and Revised Greek Texts—equalled in the sacred books only by the well-known description of the position of Shiloh in Judg. xxi. 19—can be mere invention. [G.]

THISTLE. [THORNS AND THISTLES.]

THOM'AS (Θωμάς: *Thomas*), one of the Apostles. According to Eusebius (*H. E.* i. 13) his real name was Judas. This may have been a mere confusion with Thaddaeus, who is mentioned in the extract. But it may also be that Thomas was a surname. The word *Θωμάς*, *Thoma*, means "a twin;" and so it is translated in John xi. 16, xxi. 2, & *δίδυμος*. Out of this name has grown the tradition that he had a twin-sister, Lydia (*Patres Apost.* p. 272), or that he was a twin-brother of our Lord (Thilo, *Acta Thomae*, p. 94); which last, again, would

confirm his identification with Judas (comp. Matt. xiii. 55).

He is said to have been born at Antioch (*Patres Apost.* pp. 272, 512).

In the catalogue of the Apostles he is coupled with Matthew in Matt. x. 3, Mark iii. 18, Luke vi. 15, and with Philip in Acts i. 13.

All that we know of him is derived from the Gospel of St. John; and this amounts to three traits, which, however, so exactly agree together, that, slight as they are, they place his character before us with a precision which belongs to no other of the twelve Apostles, except Peter, John, and Judas Iscariot. This character is that of a man, slow to believe, seeing all the difficulties of a case, subject to despondency, viewing things on the darker side, and yet full of ardent love for his Master.

The first trait is his speech when our Lord determined to face the dangers that awaited Him in Judaea on his journey to Bethany. Thomas said to his fellow-disciples, "Let us also go (*καὶ ἡμεῖς*) that we may die with Him" (John xi. 16). He entertained no hope of His escape—he looked on the journey as leading to total ruin; but he determined to share the peril. "Though He slay me, yet will I trust in Him."

The second was his speech during the Last Supper. "Thomas saith unto Him, Lord, we know not whither thou goest, and how can we know the way" (xiv. 5)? It was the prosaic, incredulous doubt as to moving a step in the unseen future, and yet an eager inquiry to know how this step was to be taken.

The third was after the Resurrection. He was absent—possibly by accident, perhaps characteristically—from the first assembly when Jesus had appeared. The others told him what they had seen. He broke forth into an exclamation, the terms of which convey to us at once the vehemence of his doubt, and at the same time the vivid picture that

* In Cant. vii. 4, it is simply *דומ*, exactly our "Tom." The frequency of the name in England is derived not from the Apostle, but from St. Thomas of Canterbury.

his mind retained of his Master's form as he had last seen Him lifeless on the cross. "Except I see in his hands the print of the nails, and put my finger into the print of the nails, and thrust my hand into his side, I will not, I cannot, believe" (ὁ μὴ ᾤσταισθαι), John xx. 25.

On the eighth day he was with them at their gathering, perhaps in expectation of a recurrence of the visit of the previous week; and Jesus stood amongst them. He uttered the same salutation, "Peace be unto you;" and then turning to Thomas, as if this had been the special object of His appearance, uttered the words which convey as strongly the sense of condemnation and tender reproof, as those of Thomas had shown the sense of hesitation and doubt. "Bring thy finger hither [δὲ—] as if Himself pointing to His wounds; and see my hands; and bring thy hand and thrust it in my side; and do not become (μὴ γίνῃς) unbelieving (ἀπιστος), but believing (πιστός)." "He answers to the words that Thomas had spoken to the ears of his fellow-disciples only; but it is to the thought of his heart rather than to the words of his lips that the Searcher of hearts answers. . . . Eye, ear, and touch, at once appealed to, and at once satisfied—the form, the look, the voice, the solid and actual body: and not the senses only, but the mind satisfied too; the knowledge that searches the very reins and the hearts; the love that loveth to the end, infinite and eternal" (Arnold's *Serm.* vi. 238).

The effect on Thomas is immediate. The conviction produced by the removal of his doubt became deeper and stronger than that of any of the other Apostles. The words in which he expressed his belief contain a far higher assertion of his Master's divine nature than is contained in any other expression used by Apostolic lips, "My Lord, and my God." Some have supposed that κύριος refers to the human, θεός to the divine nature. This is too artificial. It is more to the point to observe the exact terms of the sentence, uttered (as it were) in astonished awe. "It is then my Lord and my God!"* And the word "my" gives it a personal application to himself. Additional emphasis is given to this declaration from its being the last incident narrated in the direct narrative of the Gospel (before the supplement of ch. xxi.), thus corresponding to the opening words of the prologue. "Thus Christ was acknowledged on earth to be what St. John had in the beginning of his Gospel declared Him to be from all eternity; and the words of Thomas at the end of the 20th chapter do but repeat the truth which St. John had stated before in his own words at the beginning of the first" (Arnold's *Serm.* vi. 401).

The answer of our Lord sums up the moral of the whole narrative: "Because thou hast seen me, thou hast believed: blessed are they that have not seen me, and yet have believed" (xx. 29). By this incident, therefore, Thomas, "the Doubting Apostle," is raised at once to the Theologian in the original sense of the word. "Ah eo dubitatum est," says Augustine, "ne a nobis dubitaretur." It is this feature of his character which has been caught in later ages, when for the first time its peculiar lesson became apparent. In the famous

statue of him by Thorwaldsen in the church at Copenhagen, he stands, the thoughtful, meditative sceptic, with the rule in his hand for the due measuring of evidence and argument. This scene was one of the favourite passages of the English theologian who in this century gave so great an impulse to the progress of free inquiry combined with fervent belief, of which Thomas is so remarkable an example. Two discourses on this subject occur in Dr. Arnold's published volumes of *Sermons* (v. 312, vi. 233). Amongst the last words which he repeated before his own sudden death (*Life and Correspondence*, 7th ed. 617) was the blessing of Christ on the faith of Thomas.

In the N. T. we hear of Thomas only twice again, once on the Sea of Galilee with the seven disciples, where he is ranked next after Peter (John xxi. 2), and again in the assemblage of the Apostles after the Ascension (Acts i. 13).

The close of his life is filled with traditions or legends; which, as not resting on Biblical grounds, may be briefly despatched.

The earlier traditions, as believed in the 4th century (Eus. *H. E.* i. 13, iii. 1; Socrat. *H. E.* i. 19), represent him as preaching in Parthia or Persia, and as finally buried at Edessa (Socrat. *H. E.* iv. 18). Chrysostom mentions his grave at Edessa, as being one of the four genuine tombs of Apostles; the other three being Peter, Paul, and John (*Hom. in Heb.* 26). With his burial at Edessa agrees the story of his sending Thaddæus to Abgarus with our Lord's letter (Eus. *H. E.* i. 13).

The later traditions carry him further East, and ascribe to him the foundation of the Christian Church in Malabar, which still goes by the name of "the Christians of St. Thomas;" and his tomb is shown in the neighbourhood. This, however, is now usually regarded as arising from a confusion with a later Thomas, a missionary from the Nestorians.

His martyrdom (whether in Persia or India) is said to have been occasioned by a lance; and is commemorated by the Latin Church on Dec. 21. by the Greek Church on Oct. 6. and by the Indians on July 1.

(For these traditions and their authorities, see Butler's *Lives of the Saints*, Dec. 21). An apocryphal "Gospel of Thomas" (chiefly relating to the infancy) is published in Tischendorf's *Evangelia Apocrypha*. The Apocryphal "Acts of Thomas" by Thilo (*Codex Apocryphus*). [A. P. S.]

ΘΩΜΟΙ (Θωμάς: Coēs). THAMAH or TAMAN (1 Esd. v. 32).

THORNS and THISTLES. There appear to be eighteen or twenty Hebrew words which point to different kinds of prickly or thorny shrubs, but the context of the passages where the several terms occur affords, for the most part, scarcely a single clue whereby it is possible to come to anything like a satisfactory conclusion with regard to their respective identifications. These words are variously rendered in the A. V. by "thorns," "briers," "thistles," &c. It were a hopeless task to enter into a discussion of these numerous Hebrew terms; we shall not therefore attempt it, but confine our remarks to some of the most important names, and

* It is useless to speculate whether he obeyed our Lord's invitation to examine the wounds. The impression is that he did not.

* It is obviously of no dogmatic importance whether the words are an address or a description. That they are

the latter, appears from the use of the nominative ὁ ἄνθρωπος. The form ὁ θεός proves nothing, as this is used for the vocative. At the same time it should be observed that the passage is said to Christ, εἰς τὸν αἰῶνα.

* "Thomas" (Θωμάς) is omitted in the best MSS.

THORNS AND THISTLES

those which seem to afford some slight indications as to the plants they denote.

1. *Áidd* (ῥῖνος: ὁ ῥάμνος: *rhamnus*) occurs as the name of some spinous plant in Judg. ix. 14, 15, where the A. V. renders it by "bramble" (Marg. "thistle"), and in Ps. lvi. 9 (A. V. "thorns"). The plant in question is supposed to be *Lycium Europæum*, or *L. afrum* (Box-thorn), both of which species occur in Palestine (see Strand, *Flor. Palaest.* Nos. 124, 125). Dioscorides (i. 119) thus speaks of the ῥάμνος: "The Rhamnus, which some call *persephonion*, others *leucacantha*, the Romans White-thorn, or *Cerbalis*, and the Carthaginians *atadân*, is a shrub which grows around hedges; it has erect branches with sharp spines, like the *oxyacantha* (Hawthorn?), but with small, oblong, thick, soft leaves." Dioscorides mentions three kinds of rhamnus, two of which are identified by Sprengel, in his Commentary, with the two species of *Lycium* mentioned above.* See Beloo, *Observations de Plus. Sing. &c.*, ii. ch. 78; Rauwolf, *Trav. B.* ii. ch. 8; Prosper Alpinus, *De Plant. Aegypt.* p. 21; Celsius, *Hierob.* i. p. 199. The Arabic

name of this plant (أدب, *áidd*) is identical with the Hebrew; but it was also known by the name

of 'Ausef. (أوسف).

Lycium Europæum.

Lycium Europæum is a native of the south of Europe and the north of Africa; in the Grecian islands it is common in hedges (*English Cyclop.*

* In the Hist. Rei Herb. however, he refers the ῥάμνος to the *Ascyrum vulgare*.

THORNS AND THISTLES 1491

"*Lycium*"). See also the passages in Belou and Rauwolf cited above.

2. *Chádek* (חֲדַק: ἀκανθα, οὗς ἐκτροχών. *spina, prunus*) occurs in Prov. xv. 19, "The way of the slothful is as an hedge of *Chádek* (A. V. 'thorns')," and in Mic. vii. 4, where the A. V. has "brier." The Alexand. LXX., in the former passage, interprets the meaning thus, "The ways of the slothful are strewn with thorns." Celsius (*Hierob.* ii. 35), referring the Heb. term to the

Arabic *Chadak* (حَدَق), is of opinion that some spinous species of the *Solanum* is intended. The Arabic term clearly denotes some kind of *Solanum*; either the *S. melongela*, var. *esculentum*, or the *S. Sodomeum* ("apple of Sodom"). Both these kinds are beset with prickles; it is hardly probable, however, that they are intended by the Heb. word. Several varieties of the Egg-plant are found in Palestine, and some have supposed that the famed Dead Sea apples are the fruit of the *S. Sodomeum* when suffering from the attacks of some insect; but see on this subject VINE OF SODOM. The Heb. term may be generic, and intended to denote any thorny plant suitable for hedges.

3. *Chádash* (חֲדָשׁ: ἀκανθα, ἀκχίτχ, κνίδη: *palurus, lappa, spina, tribulus*), a word of very uncertain meaning which occurs in the sense of some thorny plant in Is. xxxiv. 13, Hos. ix. 6, Prov. xxvi. 9, Cant. ii. 2, 2 K. xiv. 9, "the *chádash* of Lebanon sent to the cedar of Lebanon," &c. See also Job xxi. 40: "Let *chádash* (A. V. 'thistles') grow instead of wheat." Celsius (*Hierob.* i. p. 477) believes the black-thorn (*Prunus syriacensis*) is denoted, but this would not suit the passage in Job just quoted, from which it is probable that some thorny weed of a quick growth is intended. Perhaps the term is used in a wide sense to signify any thorny plant; this opinion may, perhaps, receive some slight confirmation from the various renderings of the Hebrew word as given by the LXX. and Vulgate.

4. *Dardar* (דַּרְדָּר: τριβόλος: *tribulus*) is mentioned twice in connexion with the Heb. *lós* (לֹס), viz. in Gen. iii. 18, "thorns and *thistles*" (A. V.), and in Hos. x. 8, "the thorn and the *thistle* shall come up on their altars." The Greek *tribolos* occurs in Matt. vii. 16, "Do men gather figs of thistles?" See also Heb. vi. 8, where it is rendered "briers" by the A. V. There is some difference of opinion as to the plant or plants indicated by the Greek *tribolos* and the Latin *tribulus*. Of the two kinds of land *tribulus* mentioned by the Greeks (Dioscorides, iv. 15; Theophrastus, *Hist. Plant.* vi. 7, §5), one is supposed by Sprengel, Stackhouse, Koyle, and others, to refer to the *Tribulus terrestris*, Linn., the other to the *Fagonia Cretica*; but see Schoeider's Comment. on Theophrastus l. c., and Du Molin (*Flora Potiticae Antienne*, p. 305), who identifies the *tribulus* of Virgil with the *Centauria cauletrapa*, Linn. ("star-thistle"). Celsius (*Hierob.* ii. p. 128) argues in favour of the *Fagonia Arabica*, of which a figure is given in Shaw's *Travels* (Catal. Plant. No. 229); see also Forsk. *Flor. Arab.* p. 88. It is probable that either the *Tribulus terrestris*, which, however, is not a spiny or thorny plant, but has spines on the fruit, or else the *C. cauletrapa*, is the plant which is more particularly intended by the word *dardar*.

Zizyphus Spina Christi.

5. *Shāmīr* (שָׁמִיר), almost always found in connexion with the word *shālīth* (שָׁלִיחַ), occurs in several places of the Hebrew text; it is variously rendered by the LXX., *χέστρος*, *χέστρος*, *δέφνις*, *εὐπονύρις*, *ξηπά*. According to Abu'lfaḍl, cited by Celsius

(*Hierob.* ii. 188), "the Samur (سمر) of the Arabs is a thorny tree; it is a species of *Sidra* which does not produce fruit." No thorny plants are more conspicuous in Palestine and the Bible Lands than different kinds of *Rhamnaceae* such as *Paliurus aculeatus* (Christ's Thorn), and *Zizyphus Spina Christi*; this latter plant is the *nebk* of the Arabs, which grows abundantly in Syria and Palestine, both in wet and dry places; Dr. Hooker noticed a specimen nearly 40 ft. high, spreading as widely as a good *Quercus ilex* in England. The *nebk* fringes the banks of the Jordan, and flourishes on the marshy banks of the Lake of Tiberias; it forms either a shrub or a tree, and, indeed, is quite common all over the country. The Arabs have the terms *Salam*, *Sidra*, *Dādī*, *Nabca*, which appear to denote either varieties or different species of *Paliurus* and *Zizyphus*, or different states perhaps of the same tree; but it is a difficult matter to assign to each its particular signification. The *Nadlādīs* (נָדְלָדִים) of Is. vii. 19, lv. 13, probably denotes some species of *Zizyphus*. The "crown of thorns" which was put in derision upon our Lord's head just before his crucifixion, was probably composed of the thorny twigs of the *nebk* (*Zizyphus Spina Christi*) mentioned above; being common everywhere, they could readily be procured. "This plant," says Hasselquist (*Trav.* p. 288), "was very suitable for the purpose, as it has many sharp thorns, and its flexible, pliant, and round branches might easily be plaited in the form of a crown; and what, in my opinion, seems to be the greatest proof is, that the leaves much resemble those of ivy, as they are a very deep green." Perhaps the enemies of Christ would have a plant somewhat resembling that with which emperors and generals were used to be crowned, that there might be calumny even in the punishment." Still, as Rosenmüller (*Bib. Bot.* p. 201) remarks, "there being so many kinds of thorny plants in Palestine, all conjectures must

remain uncertain, and can never lead to any satisfactory result." Although it is not possible to fix upon any one definite Hebrew word as the representative of any kind of "thistle," yet there can be no doubt this plant must be occasionally alluded to. Hasselquist (*Trav.* p. 280) noticed six species of *Cardui* and *Cnici* on the road between Jerusalem and Rama; and Miss Beaufort speaks of giant thistles of the height of a man on horseback, which she saw near the ruins of Fellhām (*Egyptian Sep. and Syrian Shrines*, ii. 45, 50). We must also notice another thorny plant and very troublesome weed, the rest-harrow (*Ononis spinosa*), which covers entire fields and plains both in Egypt and Palestine, and which, as Hasselquist says (p. 289), is no doubt referred to in some parts of the Holy Scripture.

Dr. Thomson (*The Land and the Book*, p. 59) illustrates Isa. xxxiii. 12, "the people shall be as the burning of lime, as thorns cut up shall they be burned in the fire," by the following observation, "Those people yonder are cutting up thorns with their mattocks and pruning-hooks, and gathering them into bundles to be burned in these burnings of lime. It is a curious fidelity to real life that when the thorns are merely to be destroyed, they are never cut up, but set on fire where they grow. They are cut up only for the lime-kiln." See also p. 342 for other Scriptural allusions. [W. H.]

THRACIA (Θρακία, ♀). A Thracian horseman is incidentally mentioned in 2 Macc. xii. 35, apparently one of the bodyguard of Gorgias, governor of Idumaea under Antiochus Epiphanes. Thrace at this period included the whole of the country within the boundary of the Strymon, the Danube, and the coasts of the Aegean, Propontis, and Euxine—all the region, in fact, now comprehended in Bulgaria and Roumelia. In the early times it was inhabited by a number of tribes, each under its own chief, having a name of its own and preserving its own customs, although the same general character of ferocity and addiction to plunder prevailed throughout. Thucydides describes the limits of the country at the period of the Peloponnesian war, when Sitakes king of the Odryse, who inhabited the valley of the Hebrus (*Maritza*), had acquired a predominant

^b Hasselquist must have intended to restrict the similarity here spoken of entirely to the colour of the leaves,

for the plants do not in the slightest degree resemble each other in the form of the leaves.

power in the country, and derived what was for those days a large revenue from it. This revenue, however, seems to have arisen mainly out of his relations with the Greek trading communities established on different points of his seaboard. Some of the clans, even within the limits of his dominion, still retained their independence; but after the establishment of a Macedonian dynasty under Lysimachus, the central authority became more powerful; and the wars on a large scale which followed the death of Alexander furnished employment for the martial tendencies of the Thracians, who found a demand for their services as mercenaries everywhere. Cavalry was the arm which they chiefly furnished, the rich pastures of Roumelia abounding in horses. From that region came the greater part of Sitalces's cavalry, amounting to nearly 50,000.

The only other passage, if any, containing an allusion to Thrace, to be found in the Bible, is Gen. x. 2, where—on the hypothesis that the sons of Japhet, who are enumerated, may be regarded as the eponymous representatives of different branches of the Japhetic family of nations—*Tiras* has by some been supposed to mean Thrace; but the only ground for this identification is a fancied similarity between the two names. A stronger likeness, however, might be urged between the name *Tiras* and that of the Tyrsi or Tyrseni, the ancestors of the Italian Etruscans, whom, on the strength of a local tradition, Herodotus places in Lydia in the ante-historical times. Strabo brings forward several facts to show that, in the early ages, Thracians existed on the Asiatic as well as the European shore; but this circumstance furnishes very little help towards the identification referred to. (Herodotus, i. 94, v. 3, seqq.; Thucydides, ii. 97; Tacitus, *Annal.* iv. 35; Horat. *Sat.* i. 6.) [J. W. B.]

THRASEAS (Θρασεας; *Thrasaeas*). Father of Apollonius (1). 2 Mac. iii. 5. [APOLLONIUS.]

THREE TAVERNS (Τρεῖς Ταβερναι: *Tres Tabernae*), a station on the Appian Road, along which St. Paul travelled from Puteoli to Rome (Acts xxviii. 15). The distances, reckoning southwards from Rome, are given as follows in the *Antonine Itinerary*, "to Aricia, 16 miles; to Three Taverns, 17 miles; to Appii Forum, 10 miles;" and, comparing this with what is observed still along the line of road, we have no difficulty in coming to the conclusion that "Three Taverns" was near the modern *Cisterna*. For details see the *Dict. of Greek and Rom. Geog.* ff. 1226 b, 1291 b.

Just at this point a road came in from Antium on the coast. This we learn from what Cicero says of a journey from that place to his villa at Formiae (*Att.* ii. 12). There is no doubt that "Three Taverns" was a frequent meeting-place of travellers. The point of interest as regards St. Paul is that he met here a group of Christians who (like a previous group whom he had met at APPII FORUM) came from Rome to meet him in consequence of having heard of his arrival at PUTEOLI. A good illustration of this kind of intercourse along the Appian Way is supplied by Josephus (*Ant.* xvii. 12, §1) in his account of the journey of the pretender Herod-Alexander. He landed at Puteoli (Dicaearchia) to gain over the Jews that were there; and "when the report went about him that he was coming to Rome, the whole multitude of the Jews that were there went out to meet him, ascribing it to Divine Providence that he had so unexpectedly escaped."

[J. S. H.]

THRESHING. [AGRICULTURE, i. p. 31.]

THRESHOLD. 1. [see GATE]. 2. Of the two words so rendered in A. V., one, *שַׁבְּחָה*, seems to mean sometimes, as the Targum explains it, a projecting beam or corbel, at a higher point than the threshold properly so called (Ex. ix. 3, x. 4, 18).

THRESHOLDS, THE (תְּבִינֵי: *tebînî*; *tebînî*: *vestibula*). This word, *tebînî*, appears to be inaccurately rendered in Neh. xii. 25, though its real force has perhaps not yet been discovered. The "house of the Asuppim" (תֵּיבֵי אֲסֻּפִּים), or simply "the Asuppim," is mentioned in 1 Chr. xxvi. 15, 17, as a part, probably a gate, of the enclosure of the "House of Jehovah," i. e. the Tabernacle, as established by David—apparently at its S.W. corner. The allusion in Neh. xii. 25 is undoubtedly to the same place, as is shown not only by the identity of the name, but by the reference to David (ver. 24; compare 1 Chr. xxv. 1). *Asuppim* is derived from a root signifying "to gather" (Gesenius, *Thes.* 131), and in the absence of any indication of what the "house of the Asuppim" was, it is variously explained by the lexicographers as a storechamber (Gesenius) or a place of assembly (Fürst, Bertheau). The LXX. in 1 Chr. xxvi. have *οἶκος Ἐσέφαι*: Volg. *domus seniorum concitium*. On the other hand the Targum renders the word by *שַׁבְּחָה*, "a lintel," as if deriving it from *שָׁבַח*. [G.]

THRONE (כִּסֵּא). The Hebrew term *ciśē* applies to any elevated seat occupied by a person in authority, whether a high-priest (1 Sam. i. 9), a judge (Ps. cxiii. 5), or a military chief (Jer. i. 15). The use of a chair in a country where the usual postures were squatting and reclining, was at all times regarded as a symbol of dignity (2 K. iv. 10; Prov. ix. 14). In order to specify a throne in our sense of the term, it was necessary to add to *ciśē* the notion of royalty: hence the frequent occurrence of such expressions as "the throne of the kingdom" (Deut. xvii. 18; 1 K. i. 46; 2 Chr. vii. 18). The characteristic feature in the royal throne was its elevation: Solomon's throne was approached by six steps (1 K. x. 19; 2 Chr. ix. 18); and Jehovah's throne is described as "high and lifted up" (Is. vi. 1). The materials and workmanship were costly: that of Solomon is described as a "throne of ivory" (i. e. inlaid with ivory), and overlaid with pure gold in all parts except where the ivory was apparent. It was furnished with arms or "stays," after the manner of the Assyrian chair of state depicted on the next page. The steps were also lined with pairs of lions, the number of them being perhaps designed to correspond with that of the tribes of Israel. As to the form of the chair, we are only informed in 1 K. x. 19 that "the top was round behind" (apparently meaning either that the back was rounded off at the top, or that there was a circular canopy over it): in lieu of this particular we are told in 2 Chr. ix. 18 that "there was a footstool of gold, fastened to the throne," but the verbal agreement of the descriptions in other respects leads to the presumption that this variation arises out of a corrupted text (Theinuis, *Comm.* in 1 K. i. c.), a presumption which is favoured by the fact that the

"*שַׁבְּחָה*; *αἰθρον*, *limen* (see Gen. 1141).

terms טִּמְמִים and the Hophai form חֹפְּאִים occur nowhere else. The king sat on his throne on state occasions, as when granting audiences (1 K. ii. 19, xii. 10; Esth. v. 1), receiving homage (2 K. xi. 19), or administering justice (Prov. xx. 8).

Assyrian throne or chair of state (Layard, *Nimrod*, ii. 501).

At such times he appeared in his royal robes (1 K. xii. 10; Jon. iii. 6; Acts xii. 21). The throne was the symbol of supreme power and dignity (Gen. xli. 40), and hence was attributed to Jehovah both in respect to his heavenly abode (Ps. xi. 4, ciii. 19; Is. lxvi. 1; Acts vii. 49; Rev. iv. 2), or to his earthly abode at Jerusalem (Jer. iii. 17), and more particularly in the Temple (Jer. xvii. 12; Ex. xliii. 7). Similarly, "to sit upon the throne," implied the exercise of regal power (Deut. xvii. 18; 1 K. xvi. 11; 2 K. x. 30; Esth. i. 2), and "to sit upon the throne of another person," succession to the royal dignity (1 K. i. 13). In Nehemiah iii. 7, the term *cassid* is applied to the official residence of the governor, which appears to have been either on or near to the city wall. [W. L. B.]

THUMMIM. [URIM and THUMMIM.]

THUNDER (רָעַם). In a physical point of view, the most noticeable feature in connexion with thunder is the extreme rarity of its occurrence during the summer months in Palestine and the adjacent countries. From the middle of April to the middle of September it is hardly ever heard. Robinson, indeed, mentions an instance of thunder in the early part of May (*Researches*, i. 430), and Russell in July (*Aleppo*, ii. 289), but in each case it is stated to be a most unusual event. Hence it was selected by Samuel as a striking expression of the Divine displeasure towards the Israelites:—"Is it not wheat harvest to-day? I will call upon the Lord, and he shall send thunder and rain" (1 Sam. xii. 17). Rain in harvest was deemed as extraordinary as snow in summer (Prov. xxvi. 1), and Jerome asserts that he had never witnessed it in the latter part of June, or in July (*Comm. on Am. iv. 7*): the same observations apply equally to thunder, which is rarely unaccompanied with rain (Russell, i. 72, ii. 285). In the imaginative philosophy of the Hebrews, thunder was regarded as the voice of Jehovah (Job xxxvii. 2, 4, 5, xl. 9; Ps. xviii. 13, xxix. 8-9; Is. xxx. 30, 31), who dwelt behind the

THYATIRA

thunder-cloud (Ps. lxxxi. 7). Hence thunder is occasionally described in the Hebrew by the term "voices" (Ex. ix. 23, 28; 1 Sam. xii. 17). Hence the people in the Gospel supposed that the voice of the Lord was the sound of thunder (John xii. 29). Thunder was, to the mind of the Jew, the symbol of Divine power (Ps. xix. 3, &c.), and vengeance (1 Sam. ii. 10; 2 Sam. xxii. 14; Ps. lxxvii. 18; Is. xxix. 6; Rev. viii. 5). It was either the sign or the instrument of His wrath on numerous occasions, as during the plague of hail in Egypt (Ex. ix. 23, 28), at the promulgation of the Law (Ex. xix. 16), at the discomfiture of the Philistines (1 Sam. vii. 10), and when the Israelites demanded a king (1 Sam. xii. 17). The term thunder was transferred to the war-cry of a military leader (Job xxxix. 25), and hence Jehovah is described as "causing His voice to be heard" in the battle (Is. xxx. 30). It is also used as a superlative expression in Job xxvi. 14, where the "thunder of his power" is contrasted with the "little portion," or rather the *gentle whisper* that can be heard. In Job xxxix. 19, "thunder" is a mistranslation for "a flowing mane." [W. L. B.]

THYATIRA (Θυάτειρα, *thá: ciáras Thyatirenorum*). A city on the Lycus, founded by Seleucus Nicator. It was one of the many Macedonian colonies established in Asia Minor, in the sequel of the destruction of the Persian empire by Alexander. It lay to the left of the road from Pergamus to Sardis, on the southern incline of the watershed which separates the valley of the Caicus (*Bakyrtskai*) from that of the Hermus, on the very confines of Mysia and Ionia, so as to be sometimes reckoned within the one, and sometimes within the other. In earlier times it had borne the names of Pelopia, Semiramis, and Eubippia. At the commencement of the Christian era, the Macedonian element so preponderated as to give a distinctive character to the population; and Strabo simply calls it a Macedonian colony. The original inhabitants had probably been distributed in hamlets round about, when Thyatira was founded. Two of these, the inhabitants of which are termed *Arces* and *Naydemi*, are noticed in an inscription of the Roman times. The resources of the neighbouring region may be inferred both from the name Eubippia and from the magnitude of the booty which was carried off in a foray conducted jointly by Eumenes of Pergamus and a force detached by the Roman admiral from Canae, during the war against Antiochus. During the campaign of B.C. 190, Thyatira formed the base of the king's operations; and after his defeat, which took place only a few miles to the south of the city, it submitted, at the same time with its neighbour Magnesia-on-Sipylus, to the Romans, and was included in the territory made over by them to their ally the Pergamene sovereign.

During the continuance of the Attalic dynasty, Thyatira scarcely appears in history; and of the various inscriptions which have been found on the site, now called *Ak Hisar*, not one unequivocally belongs to earlier times than those of the Roman empire. The prosperity of the city seems to have received a new impulse under Vespasian, whose acquaintance with the East, previously to mounting the imperial throne, may have directed his attention to the development of the resources of the Asiatic cities. A bilingual inscription, in Greek and Latin, belonging to the latter part of his reign, shows him to have restored the roads in the domain of Thyatira. From others, between this time and the

of Caracalla, there is evidence of the existence of many corporate guilds in the city. Bakers, potters, tanners, weavers, robemakers, and dyers (of βαφεῖς), are specially mentioned. Of these last there is a notice in no less than three inscriptions, so that dyeing apparently formed an important part of the industrial activity of Thyatira, as it did of that of Colossae and Laodiceae. With this guild there can be no doubt that Lydia, the seller of purple stuffs (πορφύρεωλις), from whom St. Paul met with so favourable a reception at Philippi (Acts xvi. 14), was connected.

The principal deity of the city was Apollo, worshipped as the sun-god under the surname Tyrinnas. He was no doubt introduced by the Macedonian colonists, for the name is Macedonian. One of the three mythical kings of Macedonia, whom the genealogists placed before Perdiccas—the first of the Temenidae that Herodotus and Thucydides recognize—is so called; the other two being Caranus and Coenus, manifestly impersonations of the chief and the tribe. The inscriptions of Thyatira give Tyrinnas the titles of *ὑπέρβολος* and *ὑπὲρ πάντων θεός*; and a special priesthood was attached to his service. A priestess of Artemis is also mentioned, probably the administratrix of a cult derived from the earlier times of the city, and similar in its nature to that of the Ephesian Artemis. Another superstition, of an extremely curious nature, which existed at Thyatira, seems to have been brought thither by some of the corrupted Jews of the dispersed tribes. A fane stood outside the walls, dedicated to *Sambathia*—the name of the sibyl who is sometimes called Chaldaean, sometimes Jewish, sometimes Persian—in the midst of an enclosure designated “the Chaldaean’s court” (τὸ καλδαίου νεφέλλης). This seems to lend an illustration to the obscure passage in Rev. ii. 20, 21, which Grotius interprets of the wife of the bishop. The drawback against the commendation bestowed upon the angel of the Thyatiran Church is that he tolerates “that woman, that Jezebel, who, professing herself to be a prophetess, teaches and deludes my servants into committing fornication and eating things offered to idols.” Time, however, is given her to repent; and this seems to imply a form of religion which had become condemnable from the admixture of foreign alloy, rather than one idolatrous *ab initio*. Now there is evidence to show that in Thyatira there was a great amalgamation of races. Latin inscriptions are frequent, indicating a considerable influx of Italian immigrants; and in some Greek inscriptions many Latin words are introduced. Latin and Greek names, too, are found accumulated on the same individuals,—such as Titus Antonius Alfenus Arignotus, and Julia Severina Stratonice. But amalgamation of different races, in pagan nations, always went together with a syncretism of different religions, every relation of life having its religious sanction. If the sibyl Sambathia was really a Jewess, lending her aid to this proceeding, and not discountenanced by the authorities of the Judaeo-Christian Church at Thyatira, both the censure and its qualification become easy of explanation.

It seems also not improbable that the imagery of the description in Rev. ii. 18, *ὁ ἔχων τοὺς ὀφθαλμοὺς αὐτοῦ ὡς φλόγα πυρὸς, καὶ οἱ πόδες αὐτοῦ ὅμοιοι χαλκοῖ βύσσου*, may have been suggested by the current pagan representations of the tutelary deity of the city. See a parallel case at Smyrna. [SMYRNA.]

Besides the cults which have been mentioned, there is evidence of a deification of Rome, of Ha-

dran, and of the imperial family. Games were celebrated in honour of Tyrinnas, of Hercules, and of the reigning emperor. On the coins before the imperial times, the heads of Bacchus, of Athena, and of Cybele, are also found: but the inscriptions only indicate a cult of the last of these.

(Strabo, xiii. c. 4; Pliny, *N. H.* v. 31; Liv. xxxvii. 8, 21, 44; Polybius, xvi. 1, xxxii. 25; Stephanus Byzant. sub v. *Θυάτειρα*; Boeckh, *Inscript. Graec. Thyatir.*, especially Nos. 3484-3499; Suidas, v. *Ἰαμβήθη*; Aelian, *Var. Hist.* xii. 35; Clinton, *P. H.* ii. 221; Hoffmann, *Griechenland*, ii. 1714.) [J. W. B.]

THYINE WOOD (ξύλον θύινον: *lycium thynum*) occurs once only, viz. in Rev. xviii. 12, where the margin has “sweet” (wood). It is mentioned as one of the valuable articles of commerce that should be found no more in Babylon (Rome), whose fall is here predicted by St. John. There can be little doubt that the wood here spoken of is that of the *Thuya articulata*, Desfont., the *Callitris quadrivalvis* of present botanists. This tree was much prized by the ancient Greeks and Romans, on account

Thuya articulata.

of the beauty of its wood for various ornamental purposes. It is the *θυεία* of Theophrastus (*Hist. Plant.* iii. 4, §§2, 8); the *θύινον ξύλον* of Dioscorides (l. 21). By the Romans the tree was called *citrus*, the wood *citrium*. It is a native of Barbary, and grows to the height of 15 to 25 feet. Pliny (*N. H.* xiii. 15) says that the *citrus* is found abundantly in Mauretania. He speaks of a mania amongst his countrymen for tables made of its wood; and tells us that when the Roman ladies were upbraided by their husbands for their extravagance in pearls, they retorted upon them their excessive fondness for tables made of this wood. Fabulous prices were given for tables and other ornamental furniture made of citrus wood (see Pliny, l. c.). The Greek and Roman writers frequently allude to this wood. See a number of references in Calisius, *Hierob.* ii. 25. The roof of the mosque at

Cordova, built in the 9th cent., is of "thyine wood" (London's *Arboretum*, iv. 2463). Lady Callicott says the wood is dark ant-brown, close grained, and very fragrant.^a The resin known by the name of Sarcarach is the produce of this tree, which belongs to the cypress tribe (*Cupressineae*), of the nat. order *Coniferus*. [W. H.]

TIBERIAS (*Tibēpūs*: *Tiberias*), a city in the time of Christ, on the Sea of Galilee; first mentioned in the New Testament (John vi. 1, 23, xxi. 1), and then by Josephus (*Ant.* xviii., *Bel. Jud.* ii. 9, §1), who states that it was built by Herod Antipas, and was named by him in honour of the emperor Tiberius. It was probably a new town, and not a restored or enlarged one merely; for "Hakkath" (Josh. xix. 35), which is said in the Talmud to have occupied the same position, lay in the tribe of Naphtali (if we insist on the boundaries as indicated by the clearest passages), whereas Tiberias appears to have been within the limits of Zebulun (Matt. iv. 13). See Winer, *Reale*. ii. p. 619. The same remark may be made respecting Jerome's statement, that Tiberias succeeded to the place of the earlier Chinnereth (*Onomasticon*, sub voce); for this latter town, as may be argued from the name itself, must have been further north than the site of Tiberias. The tenacity with which its Roman name has adhered to the spot (see *infra*) indicates the same fact; for, generally speaking, foreign names in the East applied to towns previously known under names derived from the native dialect, as e.g. Epiphania for Hammath (Josh. xix. 35), Palmyra for Tadmor (2 Chr. viii. 4), Ptolemais for Akko (Acts xxi. 7), lost their foothold as soon as the foreign power passed away which had imposed them, and gave place again to the original appellations. Tiberias was the capital of Galilee from the time of its origin until the reign of Herod Agrippa II., who changed the seat of power back again to Sepphoris, where it had been before the founding of the new city. Many of the inhabitants were Greeks and Romans, and foreign customs prevailed there to such an extent as to give offence to the stricter Jews [HERODIANS]. Herod, the founder of Tiberias, had passed most of his early life in Italy, and had brought with him thence a taste for the amusements and magnificent buildings, with which he had been familiar in that country. He built a stadium there, like that in which the Roman youth trained themselves for feats of rivalry and war. He erected a palace, which he adorned with figures of animals, "contrary," as Josephus says (*Vit.* §12, 13, 64), "to the law of our countrymen." The place was so much the less attractive to the Jews, because, as the same authority states (*Ant.* xviii. 2, §3), it stood on the site of an ancient burial-ground, and was viewed, therefore, by the more scrupulous among them almost as a polluted and forbidden locality. Coins of the city of Tiberias are still extant, which are referred to the times of Tiberias, Trajan, and Hadrian.

The ancient name has survived in that of the modern *Tibariyah*, which occupies unquestionably the original site, except that it is confined to narrower limits than those of the original city. Near *Tibariyah*, about a mile further south along the shore are the celebrated warm baths, which the Roman naturalists (Plin. *Hist. Nat.* v. 15) reckoned among

^a "It is highly balsamic and odoriferous, the resin, no doubt, preventing the ravages of insects as well as the influence of the air" (London's *Arb.* l. c.).

the greatest known curiosities of the world. [HARMATH.] The intermediate space between the baths and the town abounds with the traces of ruins, such as the foundations of walls, heaps of stone blocks of granite, and the like: and it cannot be doubted, therefore, that the ancient Tiberias occupied also this ground, and was much more extensive than its modern successor. From such indications, and from the explicit testimony of Josephus, who says (*Ant.* xviii. 2, §3) that Tiberias was near Amman (*Ἀμμαῖος*), or the Warm Baths, there can be no uncertainty respecting the identification of the site of this important city. It stood anciently as now, on the western shore, about two-thirds of the way between the northern and southern end of the Sea of Galilee. There is a margin or strip of land there between the water and the steep hills (which elsewhere in that quarter come down so boldly to the edge of the lake), about two miles long and a quarter of a mile broad. The tract in question is somewhat undulating, but approximates to the character of a plain. *Tibariyah*, the modern town, occupies the northern end of this parallelogram, and the Warm Baths the southern extremity; so that the more extended city of the Roman age must have covered all, or nearly all of the peculiar ground whose limits are thus clearly defined. (See Robinson's *Bib. Res.*, ii. 380; and Porter's *Handbook*, ii. 421.) The present *Tibariyah* has a rectangular form, is guarded by a strong wall on the land side, but is left entirely open towards the sea. A few palm-trees still remain as witnesses of the luxuriant vegetation which once adorned this garden of the Promised Land, but they are greatly inferior in size and beauty to those seen in Egypt. The oleander grows here profusely, almost rivaling that flower so much admired as found on the neighbouring Plain of Genesareth. The people, as of old, draw their subsistence in part from the adjacent lake. The spectator from his position here commands a view of almost the entire expanse of the sea, except the southern part, which is cut off by a slight projection of the coast. The precipices on the opposite side appear almost to overhang the water, but on being approached are found to stand back at some distance, so as to allow travellers to pass between them and the water. The lofty Hermon, the modern *Jebel-es-Sheikh*, with its glistening snow-heaps, forms a conspicuous object of the landscape in the north-east. Many rock-tombs exist in the sides of the hills, behind the town, some of them no doubt of great antiquity, and constructed in the best style of such monuments. The climate here in the warm season is very hot and unhealthy; but most of the tropical fruits, as in other parts of the valley of the Jordan, become ripe very early, and, with industry, might be cultivated in great abundance and perfection. The article on GENESARET [vol. i. p. 675] should be read in this connexion, since it is the relation of Tiberias to the surrounding region and the lake, which gave to it its chief importance in the first Christian age. The place is four and a half hours from Nazareth, one hour from Mejdol, possibly the ancient Magdala, and thirteen hours, by the shortest route, from *Bānās* or Caesarea Philippi.

It is remarkable that the Gospels give no information, that the Saviour, who spent so much of his public life in Galilee, ever visited Tiberias. The surer meaning of the expression, "He went away beyond the sea of Galilee of Tiberias" in John vi. 1 (*πέραν τῆς θαλάσσης τῆς Γαλιλαίας τῆς Τιβ-*

adhes), is not that Jesus embarked from Tiberias, but, as Meyer remarks, that He crossed from the west side of the *Galilean sea of Tiberias* to the opposite side. A reason has been assigned for this singular fact, which may or may not account for it. As Herod, the murderer of John the Baptist, resided most of the time in this city, the Saviour may have kept purposely away from it, on account of the sanguinary and artful (Luke xiii. 32) character of that ruler. It is certain, from Luke xxiii. 8, that though Herod had heard of the fame of Christ, he never saw Him in person until they met at Jerusalem, and never witnessed any of his miracles. It is possible that the character of the place, so much like that of a Roman colony, may have been a reason why He who was sent to the lost sheep of the house of Israel, performed so little labour in its vicinity. The head of the lake, and especially the Plain of Gennesaret, where the population was more dense and so thoroughly Jewish, formed the central point of his Galilean ministry. The feast of Herod and his courtiers, before whom the daughter of Herodias danced, and in fulfilment of the tetrarch's rash oath demanded the head of the dauntless reformer, was held in all probability at Tiberias, the capital of the province. If, as Josephus mentions (*Ant.* xviii. 5, §2), the Baptist was imprisoned at the time in the castle of Machærus beyond the Jordan, the order for his execution could have been sent thither, and the bloody trophy forwarded to the implacable Herodias at the palace where she usually resided. Gams (*Johannes der Täufer im Gefängnis*, p. 47, &c.) suggests that John, instead of being kept all the time in the same castle, may have been confined in different places, at different times. The three passages already referred to are the only ones in the New Testament which mention Tiberias by name, viz. John vi. 1, and xxi. 1 (in both instances designating the lake on which the town was situated), and John vi. 23, where boats are said to have come from Tiberias near to the place at which Jesus had supplied miraculously the wants of the multitude. Thus the lake in the time of Christ, among its other appellations, bore also that of the principal city in the neighbourhood; and in like manner, at the present day, *Bahr T'barleh*, "Sea of T'barleh," is almost the only name under which it is known among the inhabitants of the country.

Tiberias has an interesting history, apart from its strictly Biblical associations. It bore a conspicuous part in the wars between the Jews and the Romans. The Sanhedrim, subsequently to the fall of Jerusalem, after a temporary sojourn at Jamnia and Sepphoris, became fixed there about the middle of the 2nd century. Celebrated schools of Jewish learning flourished there through a succession of several centuries. The Mishna was compiled at this place by the great Rabbi Judah Hakkodesh (A.D. 190). The Masorah, or body of traditions, which transmitted the readings of the Hebrew text of the Old Testament, and preserved by means of the vowel system the pronunciation of the Hebrew, originated in a great measure at Tiberias. The place passed, under Constantine, into the power of the Christians; and during the period of the Crusades was lost and won repeatedly by the different combatants. Since that time it has been possessed successively by Persians, Arabs, and Turks; and contains now, under the Turkish rule, a mixed population of Mahomedans, Jews, and Christians, variously estimated at from two to four thousand.

The Jews constitute, perhaps, one-fourth of the entire number. They regard Tiberias as one of the four holy places (Jerusalem, Hebron, Safed, are the others), in which, as they say, prayer must be offered without ceasing, or the world would fall back instantly into chaos. One of their singular opinions is that the Messiah when He appears will emerge from the waters of the lake, and landing at Tiberias, proceed to Safed, and there establish his throne on the highest summit in Galilee. In addition to the language of the particular country, as Poland, Germany, Spain, from which they or their families emigrated, most of the Jews here speak also the Rabbinitic Hebrew, and modern Arabic. They occupy a quarter in the middle of the town, adjacent to the lake; just north of which, near the shore, is a Latin convent and church, occupied by a solitary Italian monk. Tiberias suffered terribly from the great earthquake in 1837, and has not yet recovered by any means from the effects of that disaster. In 1852, the writer of this article (later travellers report but little improvement) rode into the city over the dilapidated walls; in other parts of them not overthrown, rents were visible from top to bottom, and some of the towers looked as if they had been shattered by battering-rams. It is supposed that at least seven hundred of the inhabitants were destroyed at that time. This earthquake was severe and destructive in other parts of Galilee. It was a similar calamity no doubt, such as had left a strong impression on the minds of the people, to which Amos refers, at the beginning of his prophecy, as forming a well-known epoch from which other events were reckoned. There is a place of interment near Tiberias, in which a distinguished Rabbi is said to be buried with 14,000 of his disciples around him. The grave of the Arabian philosopher Lokman, as Burckhardt states, was pointed out here in the 14th century. Raumer's *Palästina* (p. 125) mentions some of the foregoing facts, and others of a kindred nature. The later fortunes of the place are sketched somewhat at length in Dr. Robinson's *Biblical Researches*, iii. 267-274 (ed. 1841). It is unnecessary to specify other works, as Tiberias lies in the ordinary route of travellers in the East, and will be found noticed more or less fully in most of the books of any completeness in this department of authorship.

Professor Stanley, in his *Notices of some Localities*, &c. (p. 193), has added a few charming touches to the admirable description already given in his *Sinai and Pal.* (368-82). [H. B. H.]

TIBERIAS, THE SEA OF (ἡ θάλασσα τῆς Τιβεριδῆος: *mare Tiberiadis*). This term is found only in John xxi. 1, the other passage in which it occurs in the A. V. (ib. vi. 1) being, if the original is accurately rendered, "the sea of Galilee, of Tiberias." St. John probably uses the name as more familiar to non-residents in Palestine than the indigenous name of the "sea of Galilee," or "sea of Gennesaret," actuated no doubt by the same motive which has induced him so constantly to translate the Hebrew names and terms which he uses (such as Rabbi, Rabboni, Messiah, Cephas, Siloam, &c.) into the language of the Gentiles. [GENNESARET SEA OF.] [G.]

TIBERIUS (*Tiberius*: in full, Tiberius Claudius Nero), the second Roman emperor, successor of Augustus, who began to reign A.D. 14, and reigned until A.D. 37. He was the son of Tiberius Claudius Nero and Livy, and hence a stepson of

Augustus. He was born at Rome on the 16th of November, B.C. 45. He became emperor in his fifty-fifth year, after having distinguished himself as a commander in various wars, and having evinced talents of a high order as an orator, and an administrator of civil affairs. His military exploits and those of Drusus, his brother, were sung by Horace (*Carm.* iv. 4, 14). He even gained the reputation of possessing the sterner virtues of the Roman character, and was regarded as entirely worthy of the imperial honours to which his birth and supposed personal merits at length opened the way. Yet on being raised to the supreme power, he suddenly became, or showed himself to be, a very different man. His subsequent life was one of inactivity, sloth, and self-indulgence. He was despotic in his government, cruel and vindictive in his disposition. He gave up the affairs of the state to the vilest favourites, while he himself wallowed in the very kennel of all that was low and debasing. The only palliation of his monstrous crimes and vices which can be offered is, that his disgust of life, occasioned by his early domestic troubles, may have driven him at last to despair and insanity. Tiberius died at the age of seventy-eight, after a reign of twenty-three years. The ancient writers who supply most of our knowledge respecting him are Suetonius, Tacitus (who describes his character as one of

Coin of Tiberius.

studied dissimulation and hypocrisy from the beginning, *Annal.* i.-vi.; Vell. Patern. L. ii. 94, etc.; and Dion Cass. xli.-xlviii. The article in the *Dict. of Gr. and Rom. Biog.* (vol. iii. pp. 1117-1127) furnishes a copious outline of the principal events in his life, and holds him up in his true light as deserving the scorn and abhorrence of men.

The city of TIBERIAS took its name from this emperor. It will be seen that the Saviour's public life, and some of the introductory events of the apostolic age, must have fallen within the limits of his administration. The memorable passage in Tacitus (*Annal.* xv. 44) respecting the origin of the Christian sect, places the crucifixion of the Redeemer under Tiberius: "Ergo abolendo rumor (that of his having set fire to Rome) Nero subdidit reos, et quæsitissimis poenis affecit, quos per flagitia invidiosus vulgus Christianos appellabat. Auctor nominis ejus Christus Tiberio imperitante per procuratorem Pontium Pilatum supplicio affectus erat." The martyrdom of Stephen belongs in all probability to the last year, or last but one of this reign. In Luke iii. 1 he is termed Tiberius Caesar; John the Baptist, it is there said, began his ministry in the *fifteenth year* of his reign (*ἑνδεκάτῃ ἐτῇ*). This chronological notation is an important one in determining the year of Christ's birth and entrance on his public work [*JESUS CHRIST*, vol. i. p. 1074]. Augustus admitted Tiberius to a share in the empire two or three years before his own death; and it is a question, therefore, whether the *fifteenth year* of which Luke speaks, should be reckoned from the time of the co-partnership, or from that when Tiberius began to reign alone. The former is the computation more generally adopted; but the data which relate to this point in the chronology of the Saviour's life may be reconciled easily with the one view or the other. Some discussion, more or less extended, in reference to this inquiry will be found in Kræmer's *Chronologie*, p. 66; Sepp's *Leben Christi*,

i. 1, &c.; Friedlieb's *Leben Jesu Christi*, 47, &c.; Ebrard's *Kritik*, 184; Tischendorf's *Synopsis*, xvi.; Greswell's *Dissertations*, i. 334; and Robinson's *Harmony of the Gospels*, 181. [H. B. H.]

TIBHATH (תִּבְחָת): *Ἰβηθ*. *Tibath*, a city of Hadadezer, king of Zobah (1 Chr. xviii. 8, which in 2 Sam. viii. 8 is called Betha, probably by an accidental transposition of the first two letters. Its exact position is unknown, but as Aram-Zobah is the country between the Euphrates and Coele Syria [see SYRIA], we must look for Tibhath on the eastern skirts of the Anti-Libanus, or of its continuation, the *Jebel Shakhshab* and the *Jebel Rieha*. [G. R.]

TIBNI (תִּבְנִי): *Ἰβνί*. *Theni*. After Zimri had burnt himself in his palace, there was a division in the northern kingdom, half of the people following Tibni the son of Ginath, and half following Omri (1 K. xvi. 21, 22). Omri was the choice of the army. Tibni was probably put forward by the people of Tirzah, which was then besieged by Omri and his host. The struggle between the contending factions lasted four years (comp. 1 K. xvi. 15, 21; but the only record of it is given in the few words of the historian: "The people that followed Omri prevailed against the people that followed Tibni the son of Ginath; so Tibni died, and Omri reigned." The LXX. add that Tibni was bravely seconded by his brother Joram, for they tell us, in a clause which Ewald pronounces to be undoubtedly genuine, "and Thanni and Joram his brother died at that time; and Ambri reigned after Thanni." [W. A. W.]

TIDAL (תִּדְאִל): *Ἰδαίλ*. *Thadal*, is mentioned only in Gen. xiv. 1, 9. He there appears among the kings confederated with, and subordinate to, Chedorlaomer, the sovereign of Elam, who leads two expeditions from the country about the mouth of the Tigris into Syria. The name, Tidal, is certainly an incorrect representation of the original. If the present Hebrew text is accepted, the king was called *Thid'al*; while, if the Septuagint more nearly represents the original, his name was *Thargal*, or perhaps *Thargal*. This last rendering is probably to be preferred, as the name is then a significant one in the early Hamitic dialect of the lower Tigris and Euphrates country—*Thargal* being "the great chief"—*Βασιλεὺς ὁ μέγας* (*naga wazarka*) of the Persians. *Thargal* is called "king of nations" (דָּוִד אֶלְדָּ), by which it is reasonable to understand that he was a chief over various nomadic tribes to whom no special tract of country could be assigned, since at different times of the year they inhabited different portions of Lower Mesopotamia. This is the case with the Arabs of these parts at the present day. *Thargal*, however, should from his name have been a Turanian. [G. R.]

TIGLATH-PILESER (תִּגְלַת-פִּלְעֶזֶר): *Ἰσραήλ-Πιλεσέρ*, *Ἰσραήλ-Πιλεσέρ*: *Thiglath Phulasar*. In 1 Chr. v. 26, and again in 2 Chr. xxviii. 20, the name of this king is written תִּגְלַת-פִּלְעֶזֶר. "Tilgath-pilueser;" but in this form there is a double corruption. The native word reads as

* The LXX. evidently read *Ἰσραήλ* for *Ἰσραήλ*, and therefore wrote *Ἰσραήλ*, representing the *p* by a *y*. The Alex. Codex, however, has *ΘΑΑΤΑ*, which originally was doubtless *ΘΑΔΤΑ*, agreeing so far with the present Hebrew text.

Tyalti-gal-taira, for which the Tiglath-pileser of 2 Kings is a fair equivalent. The signification of the name is somewhat doubtful. M. Oppert renders it, "Adoratio [ait] filio Zodiaci," and explains "the son of the Zodiac" as *Nin*, or Hercules (*Expédition Scientifique en Mésopotamie*, ii. 352).

Tiglath-Pileser is the second Assyrian king mentioned in Scripture as having come into contact with the Israelites. He attacked Samaria in the reign of Pekah, on what ground we are not told, but probably because Pekah withheld his tribute, and, having entered his territory, "took Ijon, and Abel-beth-maschah, and Janoah, and Kedesh, and Hizor, and Gilead, and Galilee, and all the land of Naphtali, and carried them captive to Assyria" (2 K. xv. 29): thus "lightly afflicting the land of Zebulun and the land of Naphtali" (Is. ix. 1)—the most northern, and so the most exposed portion of the country. The date of this invasion cannot at present be fixed; but it was, apparently, many years afterwards that Tiglath-Pileser made a second expedition into these parts, which had more important results than his former one. It appears that, after the date of his first expedition, a close league was formed between Rezin, king of Syria, and Pekah, having for its special object the humiliation of Judaea, and intended to further generally the interests of the two allies. At first great successes were gained by Pekah and his confederate (2 K. xv. 37; 2 Chr. xxviii. 6-8); but, on their proceeding to attack Jerusalem itself, and to threaten Ahaz, who was then king, with deposition from his throne, which they were about to give to a pretender, "the son of Tabeal" (Is. vii. 6), the Jewish monarch applied to Assyria for assistance, and Tiglath-Pileser, consenting to aid him, again appeared at the head of an army in these regions. He first marched, naturally, against Damascus, which he took (2 K. xvi. 9), razing it (according to his own statement) to the ground, and killing Rezin, the Damascene monarch. After this, probably, he proceeded to chastise Pekah, whose country he entered on the north-east, where it bordered upon "Syria of Damascus." Here he overran the whole district to the east of Jordan, no longer "lightly afflicting" Samaria, but injuring her far "more grievously, by the way of the sea, in Galilee of the Gentiles" (Is. ix. 1), carrying into captivity "the Reubenites, the Gadites, and the half tribe of Manasseh" (1 Chr. v. 26), who had previously held this country, and placing them in Upper Mesopotamia from Harran to about Nisibis (ib.). Thus the result of this expedition was the absorption of the kingdom of Damascus, and of an important portion of Samaria, into the Assyrian empire; and it further brought the kingdom of Judah into the condition of a mere tributary and vassal of the Assyrian monarch.

Before returning into his own land, Tiglath-Pileser had an interview with Ahaz at Damascus (2 K. xvi. 10). Here doubtless was settled the amount of tribute which Judaea was to pay annually; and it may be suspected that here too it was explained to Ahaz by his suzerain that a certain deference to the Assyrian gods was due on the part of all tributaries, who were usually required to set up in their capital "the Laws of Ashur," or "altars to the Great Gods" [see vol. i. p. 132 a]. The "altar" which Ahaz "saw at Damascus," and of which he sent the

pattern to Urijah the priest (2 K. xvi. 10, 11), was probably such a badge of subjection.

This is all that Scripture tells us of Tiglath-Pileser. He appears to have succeeded Pul, and to have been succeeded by Shalmaneser; to have been contemporary with Rezin, Pekah, and Ahaz; and therefore to have ruled Assyria during the latter half of the eighth century before our era. From his own inscriptions we learn that his reign lasted at least seventeen years; that, besides warring in Syria and Samaria, he attacked Babylonia, Media, Armenia, and the independent tribes in the upper regions of Mesopotamia, thus, like the other great Assyrian monarchs, warring along the whole frontier of the empire; and finally, that he was (probably) not a legitimate prince, but an usurper and the founder of a dynasty. This last fact is gathered from the circumstance that, whereas the Assyrian kings generally glory in their ancestry, Tiglath-Pileser omits all mention of his, not even recording his father's name upon his monuments. It accords remarkably with the statements of Berossus (in Euseb. *Chron. Can.* i. 4) and Herodotus (i. 95), that about this time, i. e. in the latter half of the eighth century B.C., there was a change of dynasty in Assyria, the old family, which had ruled for 520 (526) years, being superseded by another not long before the accession of Sennacherib. The authority of these two writers, combined with the monumental indications, justifies us in concluding that the founder of the Lower Dynasty or Empire, the first monarch of the New Kingdom, was the Tiglath-Pileser of Scripture, whose date must certainly be about this time, and whose monuments show him to have been a self-raised sovereign. The exact date of the change cannot be positively fixed; but it is probably marked by the era of Nebonassar in Babylon, which synchronises with B.C. 747. According to this view, Tiglath-Pileser reigned certainly from B.C. 747 to B.C. 730, and possibly a few years longer, being succeeded by Shalmaneser at least as early as B.C. 725.* [SHALMANESER.]

The circumstances under which Tiglath-Pileser obtained the crown have not come down to us from any good authority; but there is a tradition on the subject which seems to deserve mention. Alexander Polyhistor, the friend of Sylla, who had access to the writings of Berossus, related that the first Assyrian dynasty continued from Ninus, its founder, to a certain Belêta (Pul), and that he was succeeded by Belêtaras, a man of low rank, a mere vine-dresser (*φυτεύτης*), who had the charge of the gardens attached to the royal palace. Belêtaras he said, having acquired the sovereignty in an extraordinary way, fixed it in his own family, in which it continued to the time of the destruction of Nineveh (*Fr. Hist. Gr.* iii. 210). It can scarcely be doubted that Belêtaras here is intended to represent Tiglath-Pileser, Belêtar being in fact another mode of expressing the native *Pal-taira* or *Palti-tair* (Oppert), which the Hebrews represented by Pileser. Whether there is any truth in the tradition may perhaps be doubted. It bears too near a resemblance to the Oriental stories of Cyrus, Gyges, Amasis, and others, to have in itself much claim to our acceptance. On the other hand, it harmonises with the remarkable fact—unparalleled in the rest of the Assyrian records—that Tiglath-

* In the Assyrian Chronological Canon, of which there are four copies in the British Museum, all more or less fragmentary, the reign of Tiglath-Pileser seems to be

reckoned at either 16 or 17 years. (*See Athenæum* No. 1812, p. 84.)

Pileser is absolutely silent on the subject of his ancestry, neither mentioning his father's name, nor making any allusion whatever to his birth, descent, or parentage.

Tiglath-Pileser's wars do not, generally, appear to have been of much importance. In Babylonia he took Sippara (Sepharvaim), and several places of less note in the northern portion of the country; but he does not seem to have penetrated far, or to have come into contact with Nabonassar, who reigned from B.C. 747 to B.C. 733 at Babylon. In Media, Armenia, and Upper Mesopotamia, he obtained certain successes, but made no permanent conquests. It was on his western frontier only that his victories advanced the limits of the empire. The destruction of Damascus, the absorption of Syria, and the extension of Assyrian influence over Judaea, are the chief events of Tiglath-Pileser's reign, which seems to have had fewer external triumphs than those of most Assyrian monarchs. Probably his usurpation was not endured quite patiently, and domestic troubles or dangers acted as a check upon his expeditions against foreign countries.

No palace or great building can be ascribed to this king. His slabs, which are tolerably numerous, show that he must have built or adorned a residence at Calah (*Nimrud*), where they were found; but, as they were not discovered *in situ*, we cannot say anything of the edifice to which they originally belonged. They bear marks of wanton defacement; and it is plain that the later kings purposely injured them; for not only is the writing often erased, but the slabs have been torn down, broken, and used as building materials by Emar-haddon in the great palace which he erected at Calah, the southern capital [see vol. i. p. 573.] The dynasty of Sargon was hostile to the first two princes of the Lower Kingdom, and the result of their hostility is that we have far less monumental knowledge of Sargon and Tiglath-Pileser than of various kings of the Upper Empire. [G. R.]

TIGRIS (*Thypis: Tygris, Tigris*) is used by the LXX. as the Greek equivalent of the Hebrew *Hiddēkel* (חִדְדֵּקֶל); and occurs also in several of the apocryphal books, as in Tobit (vi. 1), Judith (i. 6), and Ecclesiasticus (xxiv. 25). The meaning, and various forms, of the word have been considered under HIDEKEL. It only remains, therefore, in the present article, to describe the course and character of the stream.

The Tigris, like the Euphrates, rises from two principal sources. The most distant, and therefore the true, source is the western one, which is in lat. 38° 10', long. 39° 20' nearly, a little to the south of the high mountain lake called *Göljik* or *Gölmjik*, in the peninsula formed by the Euphrates where it sweeps round between *Palou* and *Telek*. The Tigris' source is near the south-western angle of the lake, and cannot be more than two or three miles from the channel of the Euphrates. The course of the Tigris is at first somewhat north of east, but after pursuing this direction for about 25 miles it makes a sweep round to the south, and descends by *Arghari Maden* upon Diarbekr. Here it is already a river of considerable size, and is crossed by a bridge of ten arches a little below that city (Niebuhr, *Voyage en Arabie*, p. 326). It then turns suddenly to the east, and flows in this direction, past *Osman Kiewi* to *TU*, where it once more alters its course and takes that south-easterly

direction, which it pursues, with certain slight variations, to its final junction with the Euphrates. At *Osman Kiewi* it receives the second or Eastern Tigris, which descends from Niphates (the modern *Ala-Tugh*) with a course almost due south, and, collecting on its way the waters of a large number of streams, unites with the Tigris half-way between *Diarbekr* and *TU*, in long. 41° nearly. The courses of the two streams to the point of junction are respectively 150 and 100 miles. A little below the junction, and before any other tributary of importance is received, the Tigris is 150 yards wide and from three to four feet deep. Near *TU* a large stream flows into it from the north-east, bringing almost as much water as the main channel ordinarily holds (Layard, *Nimrod and Babylon*, p. 49). This branch rises near *Buk*, in northern Kurdistan, and runs at first to the north-east, but presently sweeps round to the north, and proceeds through the districts of *Skattak* and *Bektan* with a general westerly course, crossing and recrossing the line of the 38th parallel, nearly to *Sert*, whence it flows south-west and south to *TU*. From *TU* the Tigris runs southward for 20 miles through a long, narrow, and deep gorge, at the end of which it emerges upon the comparatively low but still hilly country of Mesopotamia, near *Jesireh*. Through this it flows with a course which is south-south-east to *Mosul*, thence nearly south to *Kilek-Sherghat*, and again south-south-east to *Samara*, where the hills end and the river enters on the great alluvium. The course is now more irregular. Between *Samara* and Baghdad a considerable bend is made to the east; and, after the *Skat-el-His* is thrown off in lat. 32° 30', a second bend is made to the north, the regular south-easterly course being only resumed a little above the 32nd parallel, from which point the Tigris runs in a tolerably direct line to its junction with the Euphrates at *Kurnah*. The length of the whole stream, exclusive of meanders, is reckoned at 1146 miles. It can be descended on rafts during the flood season from Diarbekr, which is only 150 miles from its source; and it has been navigated by steamers of small draught nearly up to *Mosul*. From Diarbekr to *Samara* the navigation is much impeded by rapids, rocks, and shallows, as well as by artificial *bunds* or dams, which in ancient times were thrown across the stream, probably for purposes of irrigation. Below *Samara* there are no obstructions; the river is deep, with a bottom of soft mud; the stream moderate; and the course very meandering. The average width of the Tigris in this part of its course is 200 yards, while its depth is very considerable.

Besides the three head-streams of the Tigris, which have been already described, the river receives, along its middle and lower course, no fewer than five important tributaries. These are the river of *Zakko* or Eastern Khabour, the Great *Zab* (*Zab Ala*), the Lesser *Zab* (*Zab Asfal*), the *Adhem*, and the *Diyaleh* or ancient *Gyndes*. All these rivers flow from the high range of *Zagros*, which shuts in the Mesopotamian valley on the east, and is able to sustain so large a number of great streams from its inexhaustible springs and abundant snows. From the west the Tigris obtains no tributary of the slightest importance, for the *Tharthar*, which is said to have once reached it, now ends in a salt lake, a little below *Thibet*. Its volume, however, is continually increasing as it descends, in consequence of the great bulk of water

brought into it from the east, particularly by the Great Zab and the Diyaleh; and in its lower course it is said to be a larger stream and to carry a greater body than the Euphrates (Chesney, *Euphrates Expedition*, i. 82).

The Tigris, like the Euphrates, has a flood season. Early in the month of March, in consequence of the melting of the snows on the southern flank of Niphates, the river rises rapidly. Its breadth gradually increases at Diarbekr from 100 or 120 to 250 yards. The stream is swift and turbid. The rise continues through March and April, reaching its full height generally in the first or second week of May. At this time the country about Baghdad is often extensively flooded, not, however, so much from the Tigris as from the overflow of the Euphrates, which is here poured into the eastern stream through a canal. Further down the river, in the territory of the *Beni-Lam* Arabs, between the 32nd and 31st parallels, there is a great annual inundation on both banks. About the middle of May the Tigris begins to fall, and by midsummer it has reached its natural level. In October and November there is another rise and fall in consequence of the autumnal rains; but compared with the spring flood that of autumn is insignificant.

The Tigris is at present better fitted for purposes of traffic than the Euphrates (Layard, *Nineveh and Babylon*, p. 475); but in ancient times it does not seem to have been much used as a line of trade. The Assyrians probably floated down it the timber which they were in the habit of cutting in Amanus and Lebanon, to be used for building purposes in their capital; but the general line of communication between the Mediterranean and the Persian Gulf was by the Euphrates. [See vol. i. p. 591.] According to the historians of Alexander (Arrian, *Exp. Al.* vii. 7; comp. Strab. xv. 3, §4), the Persians purposely obstructed the navigation of the lower Tigris by a series of dams which they threw across from bank to bank between the embouchure and the city of Opis, and such trade as there was along its course proceeded by land (Strab. *ibid.*). It is probable that the dams were in reality made for another purpose, namely, to raise the level of the waters for the sake of irrigation; but they would undoubtedly have also the effect ascribed to them, unless in the spring flood time, when they might have been shot by boats descending the river. Thus there may always have been a certain amount of traffic down the stream; but up it trade would scarcely have been practicable at any time further than Samarra or Tekrit, on account of the natural obstructions, and of the great force of the stream. The lower part of the course was opened by Alexander (Arrian, vii. 7); and Opis, near the mouth of the Diyaleh, became thenceforth known as a mart (*emporion*), from which the neighbouring districts drew the merchandise of India and Arabia (Strab. xvi. 1, §9). Seleucia, too, which grew up soon after Alexander, derived no doubt a portion of its prosperity from the facilities for trade offered by this great stream.

We find but little mention of the Tigris in Scripture. It appears indeed under the name of Hiddekel, among the rivers of Eden (Gen. ii. 14), and is there correctly described as "running eastward to Assyria." But after this we hear no more of it, if we except one doubtful allusion in Nahum (ii. 6), until the Captivity, when it becomes well known to the prophet Daniel, who had to cross it

in his journeys to and from Susa (Shushan). With Daniel it is "the Great River"—*הַנָּהָר הַגָּדוֹל*—an expression commonly applied to the Euphrates; and by its side he sees some of his most important visions (Dan. x. to xii.). No other mention of the Tigris seems to occur except in the apocryphal books; and there it is unconnected with any real history.

The Tigris, in its upper course, anciently ran through Armenia and Assyria. Lower down, from about the point where it enters on the alluvial plain, it separated Babylonia from Susiana. In the wars between the Romans and the Parthians, we find it constituting, for a short time (from A.D. 114 to A.D. 117), the boundary line between these two empires. Otherwise it has scarcely been of any political importance. The great chain of Zagros is the main natural boundary between Western and Central Asia; and beyond this, the next defensible line is the Euphrates. Historically it is found that either the central power pushes itself westward to that river; or the power ruling the west advances eastward to the mountain barrier.

The water of the Tigris, in its lower course, is yellowish, and is regarded as unwholesome. The stream abounds with fish of many kinds, which are often of a large size (see Tobit vi. 11, and compare Strab. xi. 14, §8). Abundant water-fowl float on the waters. The banks are fringed with palm-trees and pomegranates, or clothed with jungle and reeds, the haunt of the wild-beast and the lion.

(The most important notices of the Tigris to be found in the classical writers are the following: Strabo, xi. 14, §8, and xvi. 1, §9-13; Arrian, *Exp. Alex.* vii. 7; and Plin. *H. N.* vi. 27. The best modern accounts are those of Col. Chesney, *Euphrates Expedition*, i. 16, &c., and Winer, *Real-örterbuch*, li. 622, 623; with which may be compared Layard, *Nineveh and Babylon*, 49-51, and 464-476; Loftus, *Chaldaea and Susiana*, 3-8; Jones in *Transactions of the Geographical Society of Bombay*, vol. ix.; Lynch in *Journal of Geographical Society*, vol. ix.; and Rawlinson's *Herodotus*, i. 552, 553.) [G. R.]

TIK'VAH (תִּיקְוָה; *Θεκουε*; Alex. *Θεκουε*: *Thecuā*). 1. The father of Shallum the husband of the prophetess Huldah (2 K. xxii. 14). He is called TIKVATH in the A. V. of 2 Chr. xxiv. 22.

2. (*Θεκουε*; Alex. *Θεκουε*: *Thecuē*.) The father of Jahaziah (Ezr. x. 15). In 1 Ed. ix. 14 he is called THEOCANUS.

TIK'VATH (תִּיקְוָת; Keri, תִּיקְוָת; properly *Tōkēhath* or *Tōkēthā*; *Θεκουε*; Alex. *Θεκουε*: *Thecuath*). TIKVAH the father of Shallum (2 Chr. xxiv. 22).

TILE. For general information on the subject see the articles BRICK, POTTERY, SEAL. The expression in the A. V. rendering of Luke v. 19, "through" the tiling, has given much trouble to expositors, from the fact that Syrian houses are in general covered, not with tiles, but with plaster terraces. Some suggestions towards the solution of this difficulty have been already given. [HOUSE, vol. i. p. 837.] An additional one may here be offered. 1. Terrace-roofs, if constructed improperly, or at the wrong season of the year, are apt to crack, and to become so saturated with rain as to be easily penetrable. May not the roof of the house in which our Lord performed his miracle, have been in this

¹ *ὡς τὰς κεραμίδας.*

of their hands (Ovid, *Met.* iv. 29), and Juvenal (*Sat.* iii. 64) attributes to it a Syrian origin:

"Jura pridem Syrus in Tiberino defluit Orontes
Et linguam, et mores et cum tibiae chordas
Ooliquas, necnon gentilia tympana secum
Vexit."

In the same way the *tabor* is said to have been introduced into Europe by the Crusaders, who adopted it from the Saracens, to whom it was peculiar (see Du Cange's note on De Joinville's *Hist. du Roy Saint Louis*, p. 61).

The author of *Shilte Hagg'dborim* (c. 2) gives the Greek *κίμβαλον* as the equivalent of *tôph*, and says it was a hollow basin of metal, beaten with a stick of brass or iron.

The passage of Ezekiel (xxviii. 13) is obscure, and appears to have been early corrupted. Instead of תִּמְנָה, "thy tabrets," the Vulg. and Targum read תִּמְנִי, "thy beauty," which is the rendering adopted in Coverdale's and Cranmer's Bibles. The LXX. seem to have read תִּמְנָה, as in ver. 16. If the ordinary text be adopted, there is no reason for taking *tôph*, as Jerome suggests, in the sense of the setting of a gem, "pala qua gemma continetur." [W. A. W.]

TIM'NA, TIM'NAH (תִּמְנָה): *Θαμνά*: *Thamna*. 1. A concubine of Eliphaz son of Esau, and mother of Amalek (Gen. xxxvi. 12; in 1 Chr. i. 36 named as a son of Eliphaz): it may be presumed that she was the same as Timna, sister of Lotan, and daughter of Seir the Horite (ver. 22, and 1 Chr. i. 39).

2. A duke, or phylarch, of Edom in the last list in Gen. xxxvi. 40-43 (1 Chr. i. 51-54), where the dukes are named "according to their families, after their places, by their names . . . according to their habitations:" whence we may conclude, as in the case of TEMAN, that Timnah was also the name of a place or a district. [E. S. P.]

TIM'NAH (תִּמְנָה). A name which occurs, simple and compounded, and with slight variations of form, several times, in the topography of the Holy Land. The name is derived by the lexicographers (Gesenius, Simonis, Fürst) from a root signifying to "portion out, or divide;" but its frequent occurrence, and the analogy of the topographical names of other countries, would rather imply that it referred to some natural feature of the country.

1. (אֵיבָא, *Θαμνᾶ*; Alex. *πορον, Θαμνα*; Joseph. *Θαμνᾶ: Thamna, Thamnān*.) A place which formed one of the landmarks on the north boundary of the allotment of Judah (Josh. xv. 10). It was obviously near the western end of the boundary, being between Bethshemesh and the "shoulder of Ekron." It is probably identical with the TIMNATHAH of Josh. xix. 43, one of the towns of Dan, also named in connexion with Ekron, and that again with the Timnath, or more accurately Timnathah, of Samson, and the Thamnatha of the Maccabees. Its belonging at that time to Dan would explain its absence from the list of the towns of Judah (Josh. xv.), though mentioned in describing the course of the boundary. The modern representative of all these various forms of the same name is probably *Tibneh*, a village about two miles west of *Ain Shems* (Bethshemesh), among the broken undulating country by which the central mountains of this part of

Palestine descend to the maritime plain. It has been shown in several other cases [KEILAH, &c.] that this district contained towns which in the lists are enumerated as belonging to the plain. Timnah is probably another instance of the same thing, for in 2 Chr. xxviii. 18 a place of the same name is mentioned as among the cities of the Shefelah, which from its occurrence with Bethshemesh, Gideroth, Gimzo, all more or less in the neighbourhood of Ekron, is probably the same as that just described as in the hills. After the Danites had deserted their original allotment for the north, their towns would naturally fall into the hands of Judah, or of the Philistines, as the continual struggle between them might happen to fluctuate.

In the later history of the Jews Timnah must have been a conspicuous place. It was fortified by Bacchides as one of the most important military posts of Judaea (1 Macc. ix. 50), and it became the head of a district or toparchy, which was called after its name, and was reckoned the fourth in order of importance among the fourteen into which the whole country was divided at the time of Vespasian's invasion (Joseph. *B. J.* iii. 3, §5; and see Pliny, v. 14).

Tibneh is now spoken of as "a deserted site" (Rob. ii. 16), and not a single Western traveller appears to have visited it, or even to have seen it, though its position is indicated with tolerable certainty. [TIMNATH.]

2. (*Θαμνᾶθα*; Alex. *Θαμνα: Thamna*.) A town in the mountain district of Judah (Josh. xv. 57). It is named in the same group with Maon, Ziph, and Carmel, which are known to have been south of Hebron. It is, therefore, undoubtedly a distinct place from that just examined. [G.]

TIM'NATH. The form in which the translators of the A. V. inaccurately present two names which are certainly distinct, though it is possible that they refer to the same place.

1. TIMNAH (תִּמְנָה), i. e. Timnah: *Θαμνᾶ: Thamnatha*. The scene of the adventure of Judah with his daughter-in-law Tamar (Gen. xxxviii. 12, 13, 14). There is nothing here to indicate its position. The expression "went up to Timnah" (ver. 12) indicates that it was on higher ground than the spot from which Judah started. But as we are ignorant where that was, the indication is of no service. It seems to have been the place where Judah's flocks were kept. There was a road to it (A. V. "way"). It may be identified either with the Timnah in the mountains of Judah, which was in the neighbourhood of Carmel where Nabal kept his huge flocks of sheep; or with the Timnathah so familiar in the story of Samson's conflicts. In favour of the latter is the doubtful suggestion named under ENAM and TAPPUAH, that in the words translated "an open place" there is a reference to those two towns. In favour of the former is the possibility of the name in Gen. xxxviii. being not Timnah but Timnathah (as in the Vulgate), which is certainly the name of the Philistine place connected with Samson. More than this cannot be said.

The place is named in the specification of the allotment of the tribe of Dan, where the A. V. exhibits it accurately as TIMNATHAH, and its name doubtless survives in the modern *Tibneh* which is said to lie below *Zareah*, about three miles to the S.W. of it, where the great Wady es-Sûr issues upon the plain.

* The LXX., as above, derived it from *teman*, the South.

2. TIMNATHAN (תִּמְנַתָּן: *Θαμναθ*; Joseph. *Θαμνᾶ*: *Thamnatha*). The residence of Samson's wife (Judg. xiv. 1, 2, 5). It was then in the occupation of the Philistines. It contained vineyards, haunted however by such savage animals as indicate that the population was but sparse. It was on higher ground than Ashkelon (xiv. 19), but lower than Zorah, which we may presume was Samson's starting point (xiii. 25). [G.]

TIMNATH-HERES (תִּמְנַתָּן הֶרֶס: *Θαμναθῆρης*; Alex. *Θαμναθῆρως*: *Thamnath Sare*). The name under which the city and burial place of Joshua, previously called TIMNATH-SERAH, is mentioned in Judg. ii. 9. The constituent consonants of the word are the same, but their order is reversed. The authorities differ considerably in their explanations. The Jews adopt Heres as the real name; interpret it to mean the sun; and see in it a reference to the act of making the sun stand still, which is to them the greatest exploit of Joshua's life. Others (as Fürst, i. 442), while accepting Heres as the original form, interpret that word as "clay," and as originating in the character of the soil. Others again, like Ewald (*Gen.* ii. 347, 8), and Bertheau (*On Judges*), take Serah to be the original form, and Heres an ancient but unintentional error. [G.]

TIMNATH-SERAH (תִּמְנַתָּן סֶרַח: *Θαμναθῆρως*; Alex. *Θαμναθῆρως*; Joseph. *Θαμνᾶ*: *Thamnath Serea*, *Thamnath Sare*). The name of the city which at his request was presented to Joshua after the partition of the country was completed (Josh. xix. 50); and is "the border" of which he was buried (xxiv. 30). It is specified as "in Mount Ephraim on the north side of Mount Gaash." In Judg. ii. 9, the name is altered to TIMNATH-HERES. The latter form is that adopted by the Jewish writers, who interpret Heres as meaning the sun, and account for the name by stating that the figure of the sun (*temunath ha-cheres*) was carved upon the sepulchre, to indicate that it was the tomb of the man who had caused the sun to stand still (Rashi, *Comment.* on both passages). Accordingly, they identify the place with *Kefar cheres*, which is said by Rabbi Jacob (Carmoly, *Itinéraires*, &c., 186), hap-Parchi (*Ashe's Benj.* 434), and other Jewish travellers down to Schwarz in our own day (151), to be about 5 miles S. of Shechem (*Nabulus*). No place with that name appears on the maps, the closest approach to it being *Kefr-Hartt*, which is more nearly double that distance S.S.W. of *Nabulus*. Wherever it be, the place is said by the Jews still to contain the tombs of Joshua, of Nun, and of Caleb (Schwarz, 151).

Another and more promising identification has, however, been suggested in our own day by Dr. Eli Smith (*Bibl. Sacra*, 1843). In his journey from *Jifna* to *Mejdel-Yaba*, about six miles from the former, he discovered the ruins of a considerable town on a gentle hill on the left (south) of the road. Opposite the town (apparently to the south) was a much higher hill, in the north side of which are several excavated sepulchres, which in size and in the richness and character of their decorations resemble the so-called "Tombs of the Kings" at Jerusalem. The whole bears the name of *Timnah*, and although without further examination it can hardly be affirmed to be the Timnah of Joshua, yet the identification appears probable.

Timonh-Serah and the tomb of its illustrious owner were shown in the time of Jerome, who mentions them in the *Epitaphium Paulae* (§13). Beyond its being south of Shechem, he gives no indication of its position, but he dismisses it with the following characteristic remark, a fitting tribute to the simple self-denial of the great soldier of Israel:—"Satisque mirata est, quod distributor possessionum sibi montana et aspera delegisset." [G.]

TIMNITE, THE (תִּמְנִי: *τοῦ Θαμνῆ*; Alex. *δ Θαμναθῆρος*: *Thamnatheros*), that is, the Timnathite (as in the Alex. LXX., and Vulg.). Samson's father-in-law (Judg. xv. 6).

TIMON (*Τίμων*: *Timon*). One of the seven commonly called "Jacoons" [DEACON], who were appointed to act as almoners on the occasion of complaints of partiality being raised by the Hellenistic Jews at Jerusalem (Acts vi. 1-6). Like his colleagues, Timon bears a Greek name, from which, taken together with the occasion of their appointment, it has been inferred with much probability that the seven were themselves Hellenists. The name of Timon stands fifth in the catalogue. Nothing further is known of him with certainty; but in the "Synopsis de Vita et Morte Prophetarum Apostolorum et Discipulorum Domini," ascribed to Dorotheos of Tyre (*Bibl. Patrum*, iii. p. 149), we are informed that he was one of the "seventy-two" disciples (the catalogue of whom is a mere congeries of New Testament names), and that he afterwards became bishop of Bostra (? "Bostra Arabum"), where he suffered martyrdom by fire. [W. B. J.]

TIMOTHEUS (*Τιμόθεος*). 1. A "captain of the Ammonites" (1 Macc. v. 6), who was defeated on several occasions by Judas Maccabaeus, B.C. 164 (1 Macc. v. 6, 11, 34-44). He was probably a Greek adventurer (comp. Jos. *Ant.* xii. 8, §1), who had gained the leadership of the tribe. Thus Josephus (*Ant.* xiii. 8, §1, quoted by Grimm, on 1 Macc. v. 6) mentions one "Zeno, surnamed Cotylas, who was despot of Rabbah" in the time of Johannes Hyrcanus.

2. In 2 Macc. a leader named Timotheus is mentioned as having taken part in the invasion of Nicanor (B.C. 166: 2 Macc. viii. 30, ix. 3). At a later time he made great preparations for a second attack on Judas, but was driven to a stronghold, Gazara, which was stormed by Judas, and there Timotheus was taken and slain (2 Macc. x. 24-37). It has been supposed that the events recorded in this latter narrative are identical with those in 1 Macc. v. 6-8, an idea rendered more plausible by the similarity of the names Jazer and Gazara (in Lat. *Gazer*, *Jazara*, *Gazara*). But the name Timotheus was very common, and it is evident that Timotheus the Ammonite leader was not slain at Jazer (1 Macc. v. 34); and Jazer was on the east side of Jordan, while Gazara was almost certainly the same as Gezer. [JAAZER; GAZARA.] It may be urged further, in support of the substantial accuracy of 2 Macc., that the second campaign of Judas against Timotheus (1) (1 Macc. v. 27-44) is given in 2 Macc. xii. 2-24, after the account of the capture of Gazara and the death of Timotheus (2) there. Wernsdorff assumes that all the differences in the narratives are blunders in 2 Macc. (*De fide Libr. Macc.* §12.), and in this he is followed by Grimm (on 2 Macc. x. 24, 32). But, if any reliance is to be placed on 2 Macc., the differences of place and circumstances are rightly taken by Patritius to

mark different events (*De Libr. Moac.* § xxii. p. 259).

3. The Greek name of TIMOTHY (*Acts* xvi. 1, xvii. 14, &c.). He is called by this name in the A. V. in every case except 2 *Cor.* i. 1, *Philem.* 1, *Heb.* xiii. 23, and the Epistles addressed to him.

[B. F. W.]

TIMOTHY (*Τιμόθεος: Timotheus*). The disciple thus named was the son of one of those mixed marriages which, though condemned by stricter Jewish opinion, and placing their offspring on all but the lowest step in the Jewish scale of precedence,^a were yet not uncommon in the later periods of Jewish history. The father's name is unknown: he was a Greek, i. e. a Gentile by descent (*Acts* xvi. 1, 3). If in any sense a proselyte, the fact that the issue of the marriage did not receive the sign of the covenant would render it probable that he belonged to the class of half-converts, the so-called Proselytes of the Gate, not those of Righteousness [comp. *PROSELYTES*]. The absence of any personal allusion to the father in the *Acts* or Epistles suggests the inference that he must have died or disappeared during his son's infancy. The care of the boy thus devolved upon his mother Eunice and her mother Lois (2 *Tim.* i. 5). Under their training his education was emphatically Jewish. "From a child" he learnt (probably in the LXX. version) to "know the Holy Scriptures" daily. The language of the *Acts* leaves it uncertain whether Lystra or Derbe were the residence of the devout family. The latter has been inferred, but without much likelihood, from a possible construction of *Acts* xx. 4, the former from *Acts* xvi. 1, 2 (comp. *Neander, Pfl. und Leih.* i. 288; *Alford and Huther, in loc.*). In either case the absence of any indication of the existence of a synagogue makes this devout consistency more noticeable. We may think here, as at Philippi, of the few devout women going forth to their daily worship at some river-side oratory (*Conybeare and Howson, l. 211*). The reading *κατὰ ῥήμα*, in 2 *Tim.* iii. 14, adopted by *Lachmann* and *Tischendorf*, indicates that it was from them as well as from the Apostle that the young disciple received his first impression of Christian truth. It would be natural that a character thus fashioned should retain throughout something of a feminine piety. A constitution far from robust (1 *Tim.* v. 23), a morbid shrinking from opposition and responsibility (1 *Tim.* iv. 12-16, v. 20, 21, vi. 11-14; 2 *Tim.* ii. 1-7), a sensitiveness even to tears (2 *Tim.* i. 4), a tendency to an ascetic rigour which he had not strength to bear (1 *Tim.* v. 23), united, as it often is, with a temperament exposed to some risk from "youthful lusts"^b (2 *Tim.* ii. 22) and the softer emotions (1 *Tim.* v. 2)—these we may well think of as characterising the youth as they afterwards characterised the man.

The arrival of Paul and Barnabas in Lycaonia (*Acts* xiv. 6) brought the message of glad-tidings to Timotheus and his mother, and they received it with "unfeigned faith" (2 *Tim.* i. 5). If at Lystra, as seems probable from 2 *Tim.* iii. 11, he

may have witnessed the half-completed sacrifice, the half-finished martyrdom, of *Acts* xiv. 19. The preaching of the Apostle on his return from his short circuit prepared him for a life of suffering (*Acts* xiv. 22). From that time his life and education must have been under the direct superintendence of the body of elders (*ib.* 23). During the interval of seven years between the Apostle's first and second journeys, the boy grew up to manhood. His zeal, probably his asceticism, became known both at Lystra and Iconium. The mention of the two Churches as united in testifying to his character (*Acts* xvi. 2), leads us to believe that the early work was prophetic of the later, that he had been already employed in what was afterwards to be the great labour of his life, as "the messenger of the Churches," and that it was his tried fitness for that office which determined St. Paul's choice. Those who had the deepest insight into character, and spoke with a prophetic utterance, pointed to him (1 *Tim.* i. 18, iv. 14), as others had pointed before to Paul and Barnabas (*Acts* xiii. 2), as specially fit for the missionary work in which the Apostle was engaged. Personal feeling led St. Paul to the same conclusion (*Acts* xvi. 3), and he was solemnly set apart (the whole assembly of the elders laying their hands on him, as did the Apostle himself) to do the work and possibly to bear the title of Evangelist (1 *Tim.* iv. 14 2 *Tim.* i. 6, iv. 5).^c A great obstacle, however, presented itself. Timotheus, though inheriting, as it were, from the nobler side (*Wetstein, in loc.*), and therefore reckoned as one of the seed of Abraham, had been allowed to grow up to the age of manhood without the sign of circumcision, and in this point he might seem to be disclaiming the Jewish blood that was in him and choosing to take up his position as a heathen. Had that been his real position, it would have been utterly inconsistent with St. Paul's principle of action to urge on him the necessity of circumcision (1 *Cor.* vii. 18; *Gal.* ii. 3, v. 2). As it was, his condition was that of a negligent, almost of an apostate Israelite; and, though circumcision was nothing, and uncircumcision was nothing, it was a serious question whether the scandal of such a position should be allowed to frustrate all his efforts as an Evangelist. The fact that no offence seems to have been felt hitherto is explained by the predominance of the Gentile element in the churches of Lycaonia (*Acts* xiv. 27). But his wider work would bring him into contact with the Jews, who had already shown themselves so ready to attack, and then the scandal would come out. They might tolerate a heathen, as such, in the synagogue or the church, but an uncircumcised Israelite would be to them a horror and a portent. With a special view to their feelings, making no sacrifice of principle, the Apostle, who had refused to permit the circumcision of Titus, "took and circumcised" Timotheus (*Acts* xvi. 3); and then, as conscious of no inconsistency, went on his way distributing the decrees of the council of Jerusalem, the great charter of the freedom of the Gentiles (*ib.* 4). Henceforth Timotheus was one of his most constant

^a The children of these marriages were known as *Mamzerim* (bastards), and stood just above the *Netherim*. (his was, however, *asteris paribus*. A bastard who was a wise student of the Law was, in theory, above an ignorant high-priest (*Gem. Hieros. Berachoth*, fol. 84, in *Lightfoot, Hor. Heb. in Matt.* xliii. 14); and the education of Timotheus (2 *Tim.* iii. 15) may therefore have helped

to overcome the prejudice which the Jews would naturally have against him on this ground.

^b Comp. the elaborate dissertation, *De νεωτερισμῷ ἐκείνου*, by *Boulton*, in *Haase's Thesaurus*, vol. II.

^c Iconium has been suggested by *Conybeare* and *Howson* (l. 289) as the probable scene of the ordination.

companions. Not since he parted from Barnabas had he found one whose heart so answered to his own. If Barnabas had been as the brother and friend of early days, he had now found one whom he could claim as his own true son by a spiritual parentage (1 Cor. iv. 17; 1 Tim. i. 2; 2 Tim. i. 2). They and Silvanus, and probably Luke also, journeyed to Philippi (Acts xvi. 12), and there already the young Evangelist was conspicuous at once for his filial devotion and his zeal (Phil. ii. 22). His name does not appear in the account of St. Paul's work at Thessalonica, and it is possible that he remained some time at Philippi, and then acted as the messenger by whom the members of that Church sent what they were able to give for the Apostle's wants (Phil. iv. 15). He appears, however, at Berea, and remains there when Paul and Silas are obliged to leave (Acts xvii. 14), going on afterwards to join his master at Athens (1 Thess. iii. 2). From Athens he is sent back to Thessalonica (ib.), as having special gifts for comforting and teaching. He returns from Thessalonica, not to Athens but to Corinth,⁴ and his name appears united with St. Paul's in the opening words of both the letters written from that city to the Thessalonians (1 Thess. i. 1; 2 Thess. i. 1). Here also he was apparently active as an Evangelist (2 Cor. i. 19), and on him, probably, with some exceptions, devolved the duty of baptising the new converts (1 Cor. i. 14). Of the next five years of his life we have no record, and can infer nothing beyond a continuance of his active service as St. Paul's companion. When we next meet with him it is as being sent on in advance when the Apostle was contemplating the long journey which was to include Macedonia, Achaia, Jerusalem, and Rome (Acts xix. 22). He was sent to "bring" the churches "into remembrance of the ways" of the Apostle (1 Cor. iv. 17). We trace in the words of the "father" an anxious desire to guard the son from the perils which, to his eager but sensitive temperament, would be most trying (1 Cor. xvi. 10). His route would take him through the churches which he had been instrumental in founding, and this would give him scope for exercising the gifts which were afterwards to be displayed in a still more responsible office. It is probable, from the passages already referred to, that, after accomplishing the special work assigned to him, he returned by the same route and met St. Paul according to a previous arrangement (1 Cor. xvi. 11), and was thus with him when the second epistle was written to the Church of Corinth (2 Cor. i. 1). He returns with the Apostle to that city, and joins in messages of greeting to the disciples whom he had known personally at Corinth and who had since found their way to Rome (Rom. xvi. 21). He forms one of the company of friends who go with St.

⁴ Dr. Wordsworth infers from 2 Cor. ix. 11, and Acts xviii. 5 that he brought contributions to the support of the Apostle from the Macedonian Churches, and thus released him from his continuous labour as a tent-maker.

⁵ The writer has to thank Prof. Lightfoot for calling his attention to an article ("They of Caesar's Household") in *Journal of Class. and Sacred Philology*, No. X., in which the hypothesis is questioned, on the ground that the Epigrams are later than the Epistles, and that they connect the name of Pudens with heathen customs and vices. On the other hand it may be urged that the bantering tone of the Epigrams forbids us to take them as evidences of character. Pudens tells Martial that he does not "like his poems." "Oh, that is because you read too many at a

Paul to Philippi and then sail by themselves, waiting for his arrival by a different ship (Acts xx. 3-6). Whether he continued his journey to Jerusalem, and what became of him during St. Paul's two years' imprisonment, are points on which we must remain uncertain. The language of St. Paul's address to the elders of Ephesus (Acts xx. 17-35) renders it unlikely that he was then left there with authority. The absence of his name from Acts xxvii. in like manner leads to the conclusion that he did not share in the perilous voyage to Italy. He must have joined him, however, apparently soon after his arrival in Rome, and was with him when the Epistles to the Philippians, to the Colossians, and to Philemon were written (Phil. i. 1; ii. 19; Col. i. 1; Philem. 1). All the indications of this period point to incessant missionary activity. As before, so now, he is to precede the personal coming of the Apostle, inspecting, advising, reporting (Phil. ii. 19-23), caring especially for the Macedonian Churches as no one else could care. The special messages of greeting sent to him at a later date (2 Tim. iv. 21) show that at Rome also, as elsewhere, he had gained the warm affection of those among whom he ministered. Among those most eager to be thus remembered to him, we find, according to a fairly supported hypothesis, the names of a Roman noble [PUDENS], of a future bishop of Rome [LINTUS], and of the daughter of a British king [CLAUDIA] (Williams, *Claudia and Pudens*; Conybeare and Howson, ii. 501; Alford, *Excursus in Great Test.* iii. 104). It is interesting to think of the young Evangelist as having been the instrument by which one who was surrounded by the fathomless impurity of the Roman world was called to a higher life, and the names which would otherwise have appeared only in the foul epigrams of Martial (i. 33, iv. 13, v. 48, xi. 53) raised to a perpetual honour in the salutations of an apostolic epistle.⁶ To this period of his life (the exact time and place being uncertain) we may probably refer the imprisonment of Heb. xiii. 23, and the trial at which he "witnessed the good confession" not unworthy to be likened to that of the Great Confessor before Pilate (1 Tim. vi. 13).

Assuming the genuineness and the later date of the two epistles addressed to him [comp. the following article], we are able to put together a few notices as to his later life. It follows from 1 Tim. i. 3 that he and his master, after the release of the latter from his imprisonment, revisited the pre-conular Asia, that the Apostle then continued his journey to Macedonia,⁷ while the disciple remained, half-reluctantly, even weeping at the separation (2 Tim. i. 4), at Ephesus, to check, if possible, the outgrowth of heresy and licentiousness which had sprung up there. The time during which he was thus to exercise authority as the delegate of his

time" (iv. 20). He begs him to correct their blasphemy. "You want an autograph copy then, do you?" (vii. 11). The slave Eucor or Eucolpos (the name is possibly a wittol distortion of Eubulus) does what might be the fulfilment of a Christian vow (Acts xviii. 18), and this is the occasion of the suggestion which seems most damnable (v. 46). With this there mingles however, as in iv. 12, vi. 34, the language of a more real esteem than is common in Martial (comp. some good remarks in Rev. W. B. Geikoway, *A Clergyman's Holidays*, pp. 36-49).

⁷ Dr. Wordsworth, in an interesting note on 2 Tim. i. 18, supposes the parting to have been in consequence of St. Paul's second arrest, and sees in this the explanation of the tears of Timothy.

Apostle—a vicar apostolic rather than a bishop—was of uncertain duration (1 Tim. iii. 14). The position in which he found himself might well make him anxious. He had to rule presbyters, most of whom were older than himself (1 Tim. iv. 12), to assign to each a stipend in proportion to his work (ib. v. 17), to receive and decide on charges that might be brought against them (ib. v. 1, 19, 20), to regulate the almsgiving and the sisterhoods of the Church (ib. v. 8-10), to ordain presbyters and deacons (ib. iii. 1-13). There was the risk of being entangled in the disputes, prejudices, covetousness, sensuality of a great city. There was the risk of injuring health and strength by an overstrained asceticism (ib. iv. 4, v. 23). Leaders of rival sects were there—Hymenæus, Philetus, Alexander—to oppose and thwart him (1 Tim. i. 20; 2 Tim. ii. 17, iv. 14, 15). The name of his beloved teacher was no longer honoured as it had been; the strong affection of former days had vanished, and “Paul the aged” had become unpopular, the object of suspicion and dislike (comp. Acts xx. 37 and 2 Tim. i. 15). Only in the narrowed circle of the faithful few, Aquila, Priscilla, Mark, and others, who were still with him, was he likely to find sympathy or support (2 Tim. iv. 19). We cannot wonder that the Apostle, knowing these trials, and, with his marvellous power of bearing another’s burdens, making them his own, should be full of anxiety and fear for his disciple’s steadfastness; that admonitions, appeals, warnings should follow each other in rapid and vehement succession (1 Tim. i. 18, iii. 15, iv. 14, v. 21, vi. 11). In the second epistle to him this deep personal feeling utters itself yet more fully. The friendship of fifteen years was drawing to a close, and all memories connected with it throng upon the mind of the old man, now ready to be offered, the blameless youth (2 Tim. iii. 15), the holy household (ib. i. 5), the solemn ordination (ib. i. 6), the tears at parting (ib. i. 4). The last recorded words of the Apostle express the earnest hope, repeated yet more earnestly, that he might see him once again (ib. iv. 9, 21). Timothy is to come before winter, to bring with him the cloak for which in that winter there would be need (2 Tim. iv. 13). We may hazard the conjecture that he reached him in time, and that the last hours of the teacher were soothed by the presence of the disciple whom he loved so truly. Some writers have even seen in Heb. xiii. 23 an indication that he shared St. Paul’s imprisonment and was released from it by the death of Nero (Conybeare and Howson, ii. 502; Neander, *Pf. und Leit.* i. 552). Beyond this all is apocryphal and uncertain. He continues, according to the old traditions, to act as bishop of Ephesus (Euseb. *H. E.* iii. 14), and dies a martyr’s death under Domitian or Nerva (Niceph. *H. E.* iii. 11). The great festival of Artemis (the *Karavayios* of that goddess) led him to protest against the licence and frenzy which accompanied it. The mob were roused to fury, and put him to death with clubs (comp. Polycrates and Simeon Metaphr. in Henschen’s *Acta Sanctorum*, Jan. 24). Some later critics—Schleiermacher, Mayerhoff—have seen in him the author of the whole or part of the Acts (Olshausen, *Commentar.* ii. 612).

A somewhat startling theory as to the intervening period of his life has found favour with Chalmers (s. v. *Timothée*), Tillemont (i. 147), and others. If he continued, according to the received

tradition, to be bishop of Ephesus, then he, and no other, must have been the “angel” of that church to whom the message of Rev. ii. 1-7 was addressed. It may be urged, as in some degree confirming this view, that both the praise and the blame of that message are such as harmonise with the impressions as to the character of Timothy derived from the Acts and the Epistles. The refusal to acknowledge the self-styled Apostles, the abhorrence of the deeds of the Nicolaitans, the unwearied labour, all this belongs to “the man of God” of the Pastoral Epistles. And the fault is no less characteristic. The strong language of St. Paul’s entreaty would lead us to expect that the temptation of such a man would be to fall away from the glow of his “first love,” the zeal of his first faith. The promise of the Lord of the Churches is in substance the same as that implied in the language of the Apostle (2 Tim. ii. 4-6).

The conjecture, it should be added, has been passed over unnoticed by most of the recent commentators on the Apocalypse (comp. Alford and Wordsworth, *in loc.*). Trench (*Seven Churches of Asia*, p. 64) contrasts the “angel” of Rev. ii. with Timothy as an “earlier angel” who, with the generation to which he belonged, had passed away when the Apocalypse was written. It must be remembered, however, that, at the time of St. Paul’s death, Timothy was still “young,” probably not more than thirty-five, that he might, therefore, well be living, even on the assumption of the later date of the Apocalypse, and that the traditions (*valent quantum*) place his death after that date. Bengel admits this, but urges the objection that he was not the bishop of any single diocese, but the superintendent of many churches. This however may, in its turn, be traversed, by the answer that the death of St. Paul may have made a great difference in the work of one who had hitherto been employed in travelling as his representative. The special charge committed to him in the Pastoral Epistles might not unnaturally give fixity to a life which had previously been wandering.

An additional fact connected with the name of Timothy is that two of the treatises of the Pseudo-Dionysius the Areopagite are addressed to him (*De Hierarch. Coel.* i. 1; comp. Le Nourry, *Dissert.* c. ix., and Halloix, *Quæst.* iv. in Migne’s edition).

[E. H. P.]

TIMOTHY, EPISTLES TO. *Authorship.*

—The question whether these Epistles were written by St. Paul was one to which, till within the last half-century, hardly any answer but an affirmative one was thought possible. They are reckoned among the Pauline Epistles in the Muratorian Canon and the Peshito version. Eusebius (*H. E.* iii. 25) places them among the *ἀπολογισμοί* of the N. T., and, while recording the doubts which affected the 2nd Epistle of St. Peter and the other *ἀπολογισμοί*, knows of none which affect these. They are cited as authoritative by Tertullian (*De Præscr.* c. 25; *ad Uxorem*, i. 7), Clement of Alexandria (*Strom.* ii. 11), Irenæus (*Adv. Hæc.* iv. 16, §3, ii. 14, §8). Parallelisms, implying quotation, in some cases with close verbal agreement, are found in Clem. Rom. 1 Cor. c. 29 (comp. 1 Tim. ii. 8); Ignat. *ad Magn.* c. 8 (1 Tim. i. 4); Polycarp, c. 4 (comp. 1 Tim. vi. 7, 8); Theophilus of Antioch *ad Autol.* iii. 126 (comp. 1 Tim. ii. 1, 2). There were indeed some notable exceptions to this consensus. The three Pastoral Epistles were all re-

jected by Marcion (Tertull. *adv. Marc.* v. 21; Iren. i. 29), Basilides, and other Gnostic teachers (Hieron. *Præf. in Titum*). Tatian, while strongly maintaining the genuineness of the Epistle to Titus, denied that of the other two (Hieron. *ib.*). In these instances we are able to discern a dogmatic reason for the rejection. The sects which these leaders represented could not but feel that they were condemned by the teaching of the Pastoral Epistles. Origen mentions some who excluded 2 Tim. from the Canon for a very different reason. The names of Jaunes and Jambres belonged to an Apocryphal history, and from such a history St. Paul never would have quoted (Origen, *Comm. in Matt.* 117).

The Pastoral Epistles have, however, been subjected to a more elaborate scrutiny by the criticism of Germany. The first doubts were uttered by J. C. Schmidt. These were followed by the *Sendschreiben* of Schleiermacher, who, assuming the genuineness of 2 Tim. and Titus, undertook, on that hypothesis, to prove the spuriousness of 1 Tim. Bolder critics saw that the position thus taken was untenable, that the three Epistles must stand or fall together. Eichhorn (*Eind.* iii.) and De Wette (*Eind.*) denied the Pauline authorship of all three. There was still, however, an attempt to maintain their authority as embodying the substance of the Apostle's teaching, or of letters written by him, on the hypothesis that they had been sent forth after his death by some over-zealous disciple, who wished, under the shadow of his name, to attack the prevailing errors of the time (Eichhorn, *ib.*). One writer (Schott, *Isagoge Hist. Crit.* p. 324) ventures on the hypothesis that Luke was the writer. Baur (*Die sogenannten Pastoral-Briefe*), here as elsewhere more daring than others, assigns them to no earlier period than the latter half of the second century, after the death of Polycarp in A.D. 167 (p. 138). On this hypothesis 2 Tim. was the earliest, 1 Tim. the latest of the three, each probably by a different writer (p. 72-76). They grew out of the state of parties in the Church of Rome, and, like the Gospel of St. Luke and the Acts, were intended to mediate between the extreme Pauline and the extreme Petrine sections of the Church (p. 58). Starting from the data supplied by the Epistle to the Philippians, the writers, first of 2 Tim., then of Titus, and lastly of 1 Tim., aimed, by the insertion of personal incidents, messages, and the like, at giving to their compilations an air of verisimilitude (p. 70).

It will be seen from the above statement that the question of authorship is here more than usually important. There can be no solution as regards these Epistles like that of an obviously dramatic and therefore legitimate personation of character, such as is possible in relation to the authorship of Ecclesiastes. If the Pastoral Epistles are not Pauline, the writer clearly meant them to pass as such, and the *animus decipiendi* would be there in its most flagrant form. They would have to take their place with the Pseudo-Clementine Homilies, or the Pseudo-Ignatian Epistles. Where we now see the traces, full of life and interest, of the character of "Paul the aged," firm, tender, zealous, loving, we should have to recognise only the tricks, sometimes skilful, sometimes clumsy, of some unknown and dishonest controversialist.

Consequences such as these ought not, it is true, to lead us to suppress or distort one iota of evidence. They may well make us cautious, in ex-

amining the evidence, not to admit conclusions that are wider than the premises, nor to take the premises themselves for granted. The task of examining is rendered in some measure easier by the fact that, in the judgment of most critics, hostile as well as friendly, the three Pastoral Epistles stand on the same ground. The intermediate hypothesis of Schleiermacher (*supra*) and Credner (*Eind. des N. T.*), who looks on Titus as genuine, 2 Tim. as made up out of two genuine letters, and 1 Tim. as altogether spurious, may be dismissed as individual eccentricities, hardly requiring a separate notice. In dealing with objections which take a wider range, we are meeting those also which are confined to one or two out of the three Epistles.

The chief elements of the alleged evidence of spuriousness may be arranged as follows:—

1. *Language*.—The style, it is urged, is different from that of the acknowledged Pauline Epistles. There is less logical continuity, a want of order and plan, subjects brought up, one after the other, abruptly (Schleiermacher). Not less than fifty words, most of them striking and characteristic, are found in these Epistles which are not found in St. Paul's writings (see the list in Conybeare and Howson, App. I., and Huther's *Eind.*). The formula of salutation (*χαρις, ελεος, ελεος*), half-technical words and phrases, like *εὐδοκία* and its cognates (1 Tim. ii. 2, iii. 16, vi. 6, *et al.*), *συνακαθάρσις* (1 Tim. i. 18, vi. 20; 2 Tim. i. 12, 14, ii. 2), the frequently-recurring words *ἡ ἀδολογία* (1 Tim. i. 15, iii. 1, iv. 9; 2 Tim. ii. 11), the use of *ἐνυπνίου* as the distinctive epithet of a true teaching, these and others like them appear here for the first time (Schleierm. and Baur). Some of these words, it is urged, *φωσφορὴν, ἀνιδρομὴν, στερῆν, φῶς ἀπρόσβατον*, belong to the Gnostic terminology of the 2nd century.

On the other side it may be said, (1) that there is no test so uncertain as that of language and style thus applied; how uncertain we may judge from the fact that Schleiermacher and Neander find no stumbling-blocks in 2 Tim. and Titus, while they detect an un-Pauline character in 1 Tim. A difference like that which marks the speech of men divided from each other by a century may be conclusive against the identity of authorship, but short of that there is hardly any conceivable divergence which may not coexist with it. The style of one man is stereotyped, formed early, and enduring long. The sentences move after an unvarying rhythm; the same words recur. That of another changes, more or less, from year to year. As his thoughts expand they call for a new vocabulary. The last works of such a writer, as those of Bacon and of Burke, may be florid, redundant, figurative, while the earlier were almost meagre in their simplicity. In proportion as the man is a solitary thinker, or a strong assertor of his own will, will he tend to the former state. In proportion to his power of receiving impressions from without, of sympathising with others, will be his tendency to the latter. Apart from all knowledge of St. Paul's character, the alleged peculiarities are but of little weight in the adverse scale. With that knowledge we may see in them the natural result of the intercourse with men in many lands, of that readiness to become all things to all men, which could hardly fail to show itself in speech as well as in action. Each group of his Epistles has, in like manner, its characteristic words and phrases. (2) If this is true generally, it is so yet more emphatically when the

circumstances of authorship are different. The language of a Bishop's Charge is not that of his letters to his private friends. The Epistles, which St. Paul wrote to the churches as societies, might well differ from those which he wrote, in the full freedom of open speech, to a familiar friend, to his own "true son." It is not strange that we should find in the latter a Luther-like vehemence of expression (e.g. *κεκαυστηρισμένον*, 1 Tim. iv. 2, *διαταρατρίβαλ διεφθαρμένον ἀνθρώπων τὸν νοῦν*, 1 Tim. vi. 5, *σεσχημαίνεσθαι ἁμαρτίαις*, 2 Tim. iii. 6), mixed sometimes with words that imply that which few great men have been without, a keen sense of humour, and the capacity, at least, for satire (e.g. *ὑπαδίδεις μύθους*, 1 Tim. iv. 7; *φλόγαροι καὶ περιέργου*, 1 Tim. v. 13; *τετρίφεται*, 1 Tim. vi. 4; *ὑποτίθεις ἀργαί*, Tit. i. 12). (3) Other letters, again, were dictated to an amanuensis. These have every appearance of having been written with his own hand, and this can hardly have been without its influence on their style, rendering it less diffuse, the transitions more abrupt, the treatment of each subject more concise. In this respect it may be compared with the other two autograph Epistles, those to the Galatians and Philemon. A list of words given by Alford (iii. *Proleg.* c. vii.) shows a considerable resemblance between the former of the two and the Pastoral Epistles. (4) It may be added, that to whatever extent a forger of spurious Epistles would be likely to form his style after the pattern of the recognised ones, so that men might not be able to distinguish the counterfeit from the true, to that extent the diversity which has been dwelt on is, within the limits that have been above stated, not against, but for the genuineness of these Epistles. (5) Lastly, there is the positive argument that there is a large common element, both of thoughts and words, shared by these Epistles and the others. The grounds of faith, the law of life, the tendency to digress and go off at a word, the personal, individualising affection, the free reference to his own sufferings for the truth, all these are in both, and by them we recognise the identity of the writer. The evidence can hardly be given within the limits of this article, but its weight will be felt by any careful student. The coincidences are precisely those, in most instances, which the forger of a document would have been unlikely to think of, and give but scanty support to the perverse ingenuity which sees in these resemblances a proof of compilation, and therefore of spuriousness.

II. It has been urged (chiefly by Eichhorn, *Einf.* p. 315) against the reception of the Pastoral Epistles that they cannot be fitted in to the records of St. Paul's life in the Acts. To this there is a threefold answer. (1) The difficulty has been enormously exaggerated. If the dates assigned to them must, to some extent, be conjectural, there are, at least, two hypotheses in each case (*infra*) which rest on reasonably good grounds. (2) If the difficulty were as great as it is said to be, the mere fact that we cannot fix the precise date of three letters in the life of one of whose ceaseless labours and journeyings we have, after all, but fragmentary records, ought not to be a stumbling-block. The hypothesis of a release from the imprisonment with which the history of the Acts ends removes all difficulties; and if this be rejected (Baur, p. 67), as itself not resting on sufficient evidence, there is, in any case, a wide gap of which we know nothing. It may at least claim to be a theory

which explains phenomena. (3) Here, as before, the reply is obvious, that a man composing counterfeit Epistles would have been likely to make them square with the acknowledged records of the life.

III. The three Epistles present, it is said, a more developed state of Church organisation and doctrine than that belonging to the lifetime of St. Paul. (1) The rule that the bishop is to be "the husband of one wife" (1 Tim. iii. 2; Tit. i. 6) indicates the strong opposition to second marriages which characterised the 2nd century (Baur, pp. 113-120). (2) The "younger widows" of 1 Tim. v. 11 cannot possibly be literally widows. If they were, St. Paul, in advising them to marry, would be excluding them, according to the rule of 1 Tim. v. 8, from all chance of sharing in the Church's bounty. It follows therefore that the word *χήραι* is used, as it was in the 2nd century, in a wider sense, as denoting a consecrated life (Baur, pp. 42-49). (3) The rules affecting the relation of the bishops and elders indicate a hierarchic development characteristic of the Petrine element, which became dominant in the Church of Rome in the post-Apostolic period, but foreign altogether to the genuine Epistles of St. Paul (Baur, pp. 80-89). (4) The term *ἐπίσκοπος* is used in its later sense, and a formal procedure against the heretic is recognised, which belongs to the 2nd century rather than the 1st. (5) The upward progress from the office of deacon to that of presbyter, implied in 1 Tim. iii. 13, belongs to a later period (Baur, l. c.).

It is not difficult to meet objections which contain so large an element of mere arbitrary assumption. (1) Admitting Baur's interpretation of 1 Tim. iii. 2 to be the right one, the rule which makes monogamy a condition of the episcopal office is very far removed from the harsh, sweeping censures of all second marriages which we find in Athenagoras and Tertullian. (2) There is not a shadow of proof that the "younger widows" were not literally such. The *χήραι* of the Pastoral Epistles are, like those of Acts vi. 1, ix. 39, women dependent on the alms of the Church, not necessarily deaconesses, or engaged in active labours. The rule fixing the age of sixty for admission is all but conclusive against Baur's hypothesis. (3) The use of *ἐπίσκοποι* and *πρεσβύτεροι* in the Pastoral Epistles as equivalent (Tit. i. 5, 7), and the absence of any intermediate order between the bishops and deacons (1 Tim. iii. 1-8), are quite unlike what we find in the Ignatian Epistles and other writings of the 2nd century. They are in entire agreement with the language of St. Paul (Acts xx. 17, 28; Phil. i. 1). Few features of these Epistles are more striking than the absence of any high hierarchic system. (4) The word *ἐπίσκοπος* has its counterpart in the *ἐπίσκοπος* of 1 Cor. xi. 19. The sentence upon Hymeneus and Alexander (1 Tim. i. 20) has a precedent in that of 1 Cor. v. 5. (5) The best interpreters do not see in 1 Tim. iii. 13 the transition from one office to another (comp. Ellicott, *in loc.*, and DEACON). If it is there, the assumption that such a change is foreign to the Apostolic age is entirely an arbitrary one.

IV. Still greater stress is laid on the indications of a later date in the descriptions of the false teachers noticed in the Pastoral Epistles. These point, it is said, unmistakably to Marcion and his followers. In the *ἀντιθέσεις τῆς ψευδογράφου γράμματος* (1 Tim. vi. 20) there is a direct reference to the treatise which he wrote under the title of *Ἀντιθέσεις*, setting forth the contradiction between

the Old and New Testament (Baur, p. 26). The "genealogies" of 1 Tim. i. 4, Tit. iii. 9, in like manner, point to the Acons of the Valentinians and Ophites (*ibid.* p. 12). The "forbidding to marry, and commanding to abstain from meats," fits in to Marcion's system, not to that of the Judaizing teachers of St. Paul's time (*ibid.* p. 24). The assertion that "the law is good" (1 Tim. i. 8) implies a denial, like that of Marcion, of its divine authority. The doctrine that the "Resurrection was past already" (2 Tim. ii. 18), was thoroughly Gnostic in its character. In his eagerness to find tokens of a later date everywhere, Baur sees in the writer of these Epistles not merely an opponent of Gnosticism, but one in part infected with their teaching, and appeals to the doxologies of 1 Tim. i. 17, vi. 15, and their Christology throughout, as having a Gnostic stamp on them (pp. 28-33).

Carefully elaborated as this part of Baur's attack has been, it is perhaps the weakest and most capricious of all. The false teachers of the Pastoral Epistles are predominantly Jewish, *ὑποδιδάσκαλοι* (1 Tim. i. 7), belonging altogether to a different school from that of Marcion, giving heed to "Jewish fables" (Tit. i. 4) and "disputes connected with the Law" (Tit. iii. 9). Of all monstrosities of Exegesis few are more wilful and fantastic than that which finds in *ὑποδιδάσκαλοι* Antinomian teachers and in *μυαλὴ νομικὰ* Antinomian doctrine (Baur, p. 17). The natural suggestion that in Acts xx. 30, 31, St. Paul contemplates the rise and progress of a like perverse teaching, that in Col. ii. 8-23 we have the same combination of Judaism and a self-styled *γνῶσις* (1 Tim. vi. 20) or *φιλοσοφία* (Col. ii. 8), leading to a like false asceticism, is set aside summarily by the rejection both of the Speech and the Epistle as spurious. Even the denial of the Resurrection, we may remark, belongs as naturally to the mingling of a Sadducean element with an Eastern mysticism as to the teaching of Marcion. The self-contradictory hypothesis that the writer of 1 Tim. is at once the strongest opponent of the Gnostics, and that he adopts their language, need hardly be refuted. The whole line of argument, indeed, first misrepresents the language of St. Paul in these Epistles and elsewhere, and then assumes the entire absence from the first century of even the germs of the teaching which characterised the second (comp. Neander, *Pf. und Leit.* i. p. 401; Heydenreich, p. 64).

Date.—Assuming the two Epistles to Timothy to have been written by St. Paul, to what period of his life are they to be referred? The question as it affects each Epistle may be discussed separately.

First Epistle to Timothy.—The direct data in this instance are very few. (1) i. 3, implies a journey of St. Paul from Ephesus to Macedonia, Timothy remaining behind. (2) The age of Timothy is described as *νεῖρας* (iv. 12). (3) The general resemblance between the two Epistles indicates that they were written at or about the same time. Three hypotheses have been maintained as fulfilling these conditions.

(A) The journey in question has been looked on as an unrecorded episode in the two years' work at Ephesus of Acts xix. 10.

(B) It has been identified with the journey of Acts xx. 1, after the tumult at Ephesus.

On either of these suppositions the date of the Epistle has been fixed at various periods after St. Paul's arrival at Ephesus, before the conclusion of his first imprisonment at Rome.

(C) It has been placed in the interval between St. Paul's first and second imprisonments at Rome.

Of these conjectures, A and B have the merit of bringing the Epistle within the limit of the authentic records of St. Paul's life, but they have scarcely any other. Against A, it may be urged that a journey to Macedonia would hardly have been passed over in silence either by St. Luke in the Acts, or by St. Paul himself in writing to the Corinthians. Against B, that Timothy, instead of remaining at Ephesus when the Apostle left, had gone on into Macedonia before him (Acts xix. 22). The hypothesis of a possible return is traversed by the fact that he is with St. Paul in Macedonia at the time when 2 Cor. was written and sent off. In favour of C as compared with A or B, is the internal evidence of the contents of the Epistle. The errors against which Timothy is warned are present, dangerous, portentous. At the time of St. Paul's visit to Miletus in Acts xx., *i. e.*, according to those hypotheses, subsequent to the Epistle, they are still only looming in the distance (ver. 30). All the circumstances referred to, moreover, imply the prolonged absence of the Apostle. Discipline had become lax, heresies rife, the economy of the Church disordered. It was necessary to check the chief offenders by the sharp sentence of excommunication (1 Tim. i. 20). Other Churches called for his counsel and directions, or a sharp necessity took him away, and he hastens on, leaving behind him, with full delegated authority, the disciple in whose case he most confided. The language of the Epistle also has a bearing on the date. According to the hypotheses A and B, it belongs to the same periods as 1 and 2 Cor. and the Ep. to the Romans, or, at the latest, to the same group as Philippians and Ephesians; and, in this case, the differences of style and language are somewhat difficult to explain. Assume a later date, and then there is room for the changes in thought and expression which, in a character like St. Paul's, were to be expected as the years went by. The only objections to the position thus assigned are—(1) the doubtfulness of the second imprisonment altogether, which has been discussed in another place [PAUL]; and (2), the "youth" of Timothy at the time when the letter was written (iv. 12). In regard to the latter, it is sufficient to say that, on the assumption of the later date, the disciple was probably not more than 34 or 35, and that this was young enough for one who was to exercise authority over a whole body of Bishop-presbyters, many of them older than himself (v. 1).

Second Epistle to Timothy.—The number of special names and incidents in the 2nd Epistle make the chronological data more numerous. It will be best to bring them, as far as possible, together, noticing briefly with what other facts each connects itself, and to what conclusion it leads. Here also there are the conflicting theories of an earlier and later date, (A) during the imprisonment of Acts xviii. 30, and (B) during the second imprisonment already spoken of.

(1) A parting apparently recent, under circumstances of special sorrow (i. 4). Not decisive. The scene at Miletus (Acts xx. 37) suggests itself, if we assume A. The parting referred to in 1 Tim. i. 3 might meet B.

(2) A general desertion of the Apostle even by the disciples of Asia (i. 15). Nothing in the Acts indicates anything like this before the imprison-

ment of Acts xxviii. 30. Everything in Acts xix. and xx., and not less the language of the Epistle to the Ephesians, speaks of general and strong affection. This, therefore, so far as it goes, must be placed on the side of B.

(3) The position of St. Paul as suffering (i. 12), in bonds (ii. 9), expecting "the time of his departure" (iv. 6), forsaken by almost all (iv. 16). Not quite decisive, but tending to B rather than A. The language of the Epistles belonging to the first imprisonment imply, it is true, bonds (Phil. i. 13, 16; Eph. iii. 1, vi. 20), but in all of them the Apostle is surrounded by many friends, and is hopeful, and confident of release (Phil. i. 25; Philem. 22).

(4) The mention of Onesiphorus, and of services rendered by him both at Rome and Ephesus (i. 16-18). Not decisive again, but the tone is rather that of a man looking back on a past period of his life, and the order of the names suggests the thought of the ministrations at Ephesus being subsequent to those at Rome. Possibly too the mention of "the household," instead of Onesiphorus himself, may imply his death in the interval. This therefore tends to B rather than A.

(5) The abandonment of St. Paul by Demas (iv. 10). Strongly in favour of B. Demas was with the Apostle when the Epistles to the Colossians (iv. 14) and Philemon (24) were written. 2 Tim. must therefore, in all probability, have been written after them; but, if we place it anywhere in the first imprisonment, we are all but compelled* by the mention of Mark, for whose coming the Apostle asks in 2 Tim. iv. 11, and who is with him in Col. iv. 10, to place it at an earlier age.

(6) The presence of Luke (iv. 11). Agrees well enough with A (Col. iv. 14), but is perfectly compatible with B.

(7) The request that Timothy would bring Mark (iv. 11). Seems at first, compared as above, with Col. iv. 14, to support A, but, in connexion with the mention of Demas, tends decidedly to B.

(8) Mention of Tychicus as sent to Ephesus (iv. 12). Appears, as connected with Eph. vi. 21, 22, Col. iv. 7, in favour of A, yet, as Tychicus was continually employed on special missions of this kind, may just as well fit in with B.

(9) The request that Timothy would bring the cloak and books left at Troas (iv. 13). On the assumption of A, the last visit of St. Paul to Troas would have been at least four or five years before, during which there would probably have been opportunities enough for his regaining what he had left. In that case, too, the circumstances of the journey present no trace of the haste and suddenness which the request more than half implies. On the whole, then, this must be reckoned as in favour of B.

(10) "Alexander the copper-smith did me much evil," "greatly withstood our words" (iv. 14, 15). The part taken by a Jew of this name in the uproar of Acts xix., and the natural connexion of the χαλκῆρος with the artisans represented by Demetrius, suggest a reference to that event as something recent, and so far support A. On the other hand, the name Alexander was too common to make us certain as to the identity, and if it were the same, the hypothesis of a later date only requires us to assume what was probable enough, a renewed hostility.

(11) The abandonment of the Apostle in his first

defence (ἀπολογία), and his deliverance "from the mouth of the lion" (iv. 16, 17). Fits in as a possible contingency with either hypothesis, but, like the mention of Demas in (5), must belong, at any rate, to a time much later than any of the other Epistles written from Rome.

(12) "Erastus abode at Corinth, but Trophimus I left at Miletus sick" (iv. 20). Language, as in (9), implying a comparatively recent visit to both places. If, however, the letter were written during the first imprisonment, then Trophimus had not been left at Miletus, but had gone on with St. Paul to Jerusalem (Acts xxi. 29),^b and the mention of Erastus as remaining at Corinth would have been superfluous to one who had left that city at the same time as the Apostle (Acts xx. 4).

(13) "Hasten to come before winter." Assuming A, the presence of Timothy in Phil. i. 1; Col. i. 1; Philem. 1, might be regarded as the consequence of this; but then, as shown in (5) and (7), there are almost insuperable difficulties in supposing this Epistle to have been written before those three.

(14) The salutations from Eubulus, Pudens, Linus, and Claudia. Without laying much stress on this, it may be said that the absence of these names from all the Epistles, which, according to A, belong to the same period, would be difficult to explain. B leaves it open to conjecture that they were converts of more recent date. They are mentioned too as knowing Timothy, and this implies, as at least probable, that he had already been at Rome, and that this letter to him was consequently later than those to the Philippians and Colossians.

On the whole, it is believed that the evidence preponderates strongly in favour of the later date, and that the Epistle, if we admit its genuineness, is therefore a strong argument for believing that the imprisonment of Acts xviii. was followed by a period first of renewed activity and then of suffering.

Places.—In this respect as in regard to time, 1 Tim. leaves much to conjecture. The absence of any local reference but that in i. 3, suggests Macedonia or some neighbouring district. In A and other MSS. in the Peshito, Ethiopic, and other versions, Laodicea is named in the inscription as the place whence it was sent, but this appears to have grown out of a traditional belief resting on very insufficient grounds, and incompatible with the conclusion which has been above adopted, that this is the Epistle referred to in Col. iv. 16 as that from Laodicea (Theophyl. *in loc.*). The Coptic version with as little likelihood states that it was written from Athens (Huther, *Einleit.*).

The Second Epistle is free from this conflict of conjectures. With the solitary exception of Böttger, who suggests Caesarea, there is a *consensus* in favour of Rome, and everything in the circumstances and names of the Epistle leads to the same conclusion (*ibid.*).

Structure and Characteristics.—The peculiarities of language, so far as they affect the question of authorship, have been already noticed. Assuming the genuineness of the Epistles, some characteristic features remain to be noticed.

(1) The ever-deepening sense in St. Paul's heart of the Divine Mercy, of which he was the object, as shown in the insertion of *ἡμεῖς* in the salutations of both Epistles, and in the *ἡμεῖς* of 1 Tim. i. 13.

* The qualifying words might have been omitted, but for the fact that it has been suggested that Demas, having forsaken St. Paul, repented and returned (Lardner, vi. 366).

^b The conjecture that the "leaving" referred to took place during the voyage of Acts xxvii. is purely arbitrary and at variance with vers. 5 and 6 of that chapter.

(2) The greater abruptness of the Second Epistle. From first to last there is no plan, no treatment of subjects carefully thought out. All speaks of strong overflowing emotion, memories of the past, anxieties about the future.

(3) The absence, as compared with St. Paul's other Epistles, of Old Testament references. This may connect itself with the fact just noticed, that these Epistles are not argumentative, possibly also with the request for the "books and parchments" which had been left behind (2 Tim. iv. 13). He may have been separated for a time from the *ἑπαγγέματα*, which were commonly his companions.

(4) The conspicuous position of the "faithful sayings" as taking the place occupied in other Epistles by the O. T. Scriptures. The way in which these are cited as authoritative, the variety of subjects which they cover, suggest the thought that in them we have specimens of the prophecies of the Apostolic Church which had most impressed themselves on the mind of the Apostle, and of the disciples generally. 1 Cor. xiv. shows how deep a reverence he was likely to feel for such spiritual utterances. In 1 Tim. iv. 1, we have a distinct reference to them.

(5) The tendency of the Apostle's mind to dwell more on the universality of the redemptive work of Christ (1 Tim. ii. 3-6, iv. 10), his strong desire that all the teaching of his disciples should be "sound" (*ὑγιαινούσα*), commending itself to minds in a healthy state, his fear of the corruption of that teaching by morbid subtleties.

(6) The importance attached by him to the practical details of administration. The gathered experience of a long life had taught him that the life and well-being of the Church required these for its safeguards.

(7) The recurrence of doxologies (1 Tim. i. 17, vi. 15, 16; 2 Tim. iv. 18) as from one living perpetually in the presence of God, to whom the language of adoration was as his natural speech.

It has been thought desirable, in the above discussion of conflicting theories, to state them simply as they stand, with the evidence on which they rest, without encumbering the page with constant reference to authorities. The names of writers on the N. T. in such a case, where the grounds of reasoning are open to all, add little or nothing to the weight of the conclusions drawn from them. Full particulars will, however, be found in the introductions of Alford, Wordsworth, Huther, Davidson, Wiesinger, Hug. Conybeare and Howson (*App. i.*) give a good tabular summary both of the objections to the genuineness of the Epistles and of the answers to them, and a clear statement in favour of the later date. The most elaborate argument in favour of the earlier is to be found in N. Lardner, *History of Apost. and Evang.* (*Works*, vi. pp. 315-375). [E. H. P.]

TIN (תַּיִן: *κασσίτερος*: *stannum*). Among the various metals found among the spoils of the Midianites, tin is enumerated (Num. xxxi. 22). It was known to the Hebrew metal-workers as an alloy of other metals (Is. i. 25; Ex. xxii. 18, 20). The markets of Tyre were supplied with it by the ships of Tarshish (Ex. xxvii. 12). It was used for plummet (Zech. iv. 10), and was so plentiful as to furnish the writer of Ecclesiasticus (xlvii. 18) with a figure by which to express the wealth of Solomon, whom he apostrophises thus: "Thou didst gather gold as *tin*, and didst multiply silver as lead." In the Homeric times the Greeks were familiar with it.

Twenty layers of tin were in Agamemnon's cuirass given him by Kinyras (*Il. xi. 25*), and twenty beams of tin were upon his shield (*Il. xi. 34*). Copper, tin, and gold were used by Hephaestus in welding the famous shield of Achilles (*Il. xviii. 474*). The fence round the vineyard in the device upon it was of tin (*Il. xviii. 564*), and the oxen were wrought of tin and gold (*ibid. 574*). The graves of Achilles, made by Hephaestus, were of tin beaten fine, close fitting to the limb (*Il. xviii. 612* *and* 592). His shield had two folds or layers of tin between two outer layers of bronze and an inner layer of gold (*Il. xx. 271*). Tin was used in ornamenting chariots (*Il. xxiii. 503*), and a cuirass of bronze overlaid with tin is mentioned in *Il. xxiii. 561*. No allusion to it is found in the *Odyssey*. The melting of tin in a smelting-pot is mentioned by Hesiod (*Theog. 862*).

Tin is not found in Palestine. Whence, then, did the ancient Hebrews obtain their supply? "Only three countries are known to contain any considerable quantity of it: Spain and Portugal, Cornwall and the adjacent parts of Devonshire, and the islands of Junk, Ceylon, and Banca, in the Straits of Malacca" (Kenrick, *Phoenicia*, p. 212). According to Diodorus Siculus (v. 46) there were tin-mines in the island of Panchaia, off the east coast of Arabia, but the metal was not exported. There can be little doubt that the mines of Britain were the chief source of supply to the ancient world. Mr. Cooley, indeed, writes very positively (*Maritime and Inland Discovery*, i. 181): "There can be no difficulty in determining the country from which tin first arrived in Egypt. That metal has been in all ages a principal export of India: it is enumerated as such by Arrian, who found it abundant in the ports of Arabia, at a time when the supplies of Rome flowed chiefly through that channel. The tin-mines of Banca are probably the richest in the world; but tin was unquestionably brought from the West at a later period." But it has been shown conclusively by Dr. George Smith (*The Cassiterides*, Lond. 1863) that, so far from such a statement being justified by the authority of Arrian, the facts are all the other way. After examining the commerce of the ports of Abyssinia, Arabia, and India, it is abundantly evident that, "instead of tin coming from the East to Egypt, it has been invariably exported from Egypt to the East" (p. 23). With regard to the tin obtained from Spain, although the metal was found there, it does not appear to have been produced in sufficient quantities to supply the Phoenician markets. Posidonius (in Strab. iii. p. 147) relates that in the country of the Artabri, in the extreme N.W. of the peninsula, the ground was bright with silver, tin, and white gold (mixed with silver), which were brought down by the rivers; but the quantity thus obtained could not have been adequate to the demand. At the present day the whole surface bored for mining in Spain is little more than a square mile (Smith, *Cassiterides*, p. 46). We are therefore driven to conclude that it was from the Cassiterides, or tin districts of Britain, that the Phoenicians obtained the great bulk of this commodity (Sir G. C. Lewis, *Hist. Survey of the Astr. of the Anc.* p. 451), and that this was done by the direct voyage from Gades. It is true that at a later period (Strabo, iii. 147) tin was conveyed overland to Marseilles by a thirty days' journey (Diod. Sic. v. 2); but Strabo (iii. 175) tells us that the Phoenicians alone carried on this traffic in former times from Gades, concealing

the passage from every one; and that on one occasion, when the Romans followed one of their vessels in order to discover the source of supply, the master of the ship ran upon a shoal, leading those who followed him to destruction. In course of time, however, the Romans discovered the passage. In *Kaekiel*, "the trade in tin is attributed to Tarshish, as 'the merchant' for the commodity, without any mention of the place whence it was procured" (*Cassiterides*, p. 74); and it is after the time of Julius Caesar that we first hear of the overland traffic by Marseilles.

Pliny (vi. 36) identifies the *cassiteros* of the Greeks with the *plumbum album* or *candidum* of the Romans, which is our tin. *Stannum*, he says, is obtained from an ore containing lead and silver, and is the first to become melted in the furnace. It is the same which the Germans call *Werk*, and is apparently the meaning of the Hebr. *ḥēṭil* in Is. i. 25. The etymology of *cassiteros* is uncertain. From the fact that in Sanscrit *kaṣṭira* signifies "tin," an argument has been derived in favour of India being the source of the ancient supply of this metal, but too much stress must not be laid upon it. [LEAD.] [W. A. W.]

TIPSAH (תִּפְסָה): *Ṭēpād*: *Thaphsa*, *Thapea* is mentioned in 1 K. iv. 24 as the limit of Solomon's empire towards the Euphrates, and in 2 K. xv. 16 it is said to have been attacked by Menahem, king of Israel, who "smote Tiphseh and all that were therein, and all the coasts thereof." It is generally admitted that the town intended, at any rate in the former passage, is that which the Greeks and Romans knew under the name of *Thapaeus* (Θάψακος), situated in Northern Syria, at the point where it was usual to cross the Euphrates (Strab. xvi. 1, §21). The name is therefore, reasonably enough, connected with תִּפְסָה, "to pass over" (Winer, *Realwörterbuch*, ii. 613), and is believed to correspond in meaning to the Greek *ῥέπος*, the German *furt*, and our "ford."

Thapaeus was a town of considerable importance in the ancient world. Xenophon, who saw it in the time of Cyrus the younger, calls it "great and prosperous" (μεγάλη καὶ εὐδαίμων, *Anab.* i. 4, §11). It must have been a place of considerable trade, the land-traffic between East and West passing through it, first on account of its fordway (which was the lowest upon the Euphrates), and then on account of its bridge (Strab. xvi. 1, §23), while it was likewise the point where goods were both embarked for transport down the stream (Q. Curt. x. 1), and also disembarked from boats which had come up it, to be conveyed on to their final destination by land (Strab. xvi. 3, §4). It is a fair conjecture that Solomon's occupation of the place was connected with his efforts to establish a line of trade with Central Asia directly across the continent, and that Tadmor was intended as a resting-place on the journey to *Thapaeus*.

Thapaeus was the place at which armies marching east or west usually crossed the "Great River." It was there that the Ten Thousand first learnt the real intentions of Cyrus, and, consenting to aid him in his enterprise, passed the stream (Xen. *Anab.* i. 4, §11). There too Darius Codomannus crossed on

his flight from Issus (Arr. *Exp. Al.* ii. 13); and Alexander, following at his leisure, made his passage at the same point (ib. iii. 7). A bridge of boats was usually maintained at the place by the Persian kings, which was of course broken up when danger threatened. Even then, however, the stream could in general be forded, unless in the flood-season.*

It has been generally supposed that the site of *Thapaeus* was the modern *Deir* (D'Anville, Renell, Vaux, &c.). But the Enphrates expedition proved that there is no ford at *Deir*, and indeed showed that the only ford in this part of the course of the Euphrates is at *Suriyeh*, 45 miles below Balis, and 165 above *Deir* (Ainsworth, *Travels in the Track of the Ten Thousand*, p. 70). This then must have been the position of *Thapaeus*. Here the river is exactly of the width mentioned by Xenophon (4 stades or 800 yards), and here for four months in the winter of 1841-1842 the river had but 20 inches of water (ib. p. 72).

"The Euphrates is at this spot full of beauty and majesty. Its stream is wide and its waters generally clear and blue. Its banks are low and level to the left, but undulate gently to the right. Previous to arriving at this point the course of the river is southerly, but here it turns to the east, expanding more like an inland lake than a river, and quitting (as Pliny has described it) the Palmyrean solitudes for the fertile *Mygdonia*" (ib.). A paved causeway is visible on either side of the Euphrates at *Suriyeh*, and a long line of mounds may be traced, disposed, something like those of Nineveh, in the form of an irregular parallelogram. These mounds probably mark the site of the ancient city. [G. R.]

TIRAS (טִירָס): *Ṭē'as*: *Thiras*). The youngest son of Japheth (Gen. x. 2). As the name occurs only in the ethnological table, we have no clue, as far as the Bible is concerned, to guide us as to the identification of it with any particular people. Ancient authorities generally fixed on the Thracians, as presenting the closest verbal approximation to the name (Joseph. *Ant.* i. 6, §1; Jerome, in *Gen.* x. 2; Targums Pseudoj. and Jerus. on *Gen.* i. c.; Targ. on 1 Chr. i. 5): the occasional rendering *Persia* probably originated in a corruption of the original text. The correspondence between Thrace and Tiras is not so complete as to be convincing; the gentile form *Ῥῶς* brings them nearer together, but the total absence of the *i* in the Greek name is observable. Granted, however, the verbal identity, no objection would arise on ethnological grounds to placing the Thracians among the Japhetic races. Their precise ethnic position is indeed involved in great uncertainty; but all authorities agree in their general Indo-European character. The evidence of this is circumstantial rather than direct. The language has disappeared, with the exception of the ancient names and the single word *bria*, which forms the termination of *Mesembria*, *Selymbria*, &c., and is said to signify "town" (Strab. vii. p. 319). The Thracian stock was represented in later times by the Getae, and these again, still later, by the Daci, each of whom inherited the old Thracian tongue (Strab. vii. p. 303). But this circumstance throws little light

they calculated on his ignorance, or thought he would not examine too strictly into the groundwork of a compendium (See Xen. *Anab.* i. 4, §11.)

* This is clear from the very name of the place, and is confirmed by modern researches. When the natives told Cyrus that the stream had acknowledged him as its king, he thus never been forded until his army waded through it.

on the subject; for the Dacian language has also disappeared, though fragments of its vocabulary may possibly exist either in Wallachian dialects or perhaps in the Albanian language (Diefenbach, *Or. Etr.* p. 68). If Grimm's identification of the Getæ with the Goths were established, the Teutonic affinities of the Thracians would be placed beyond question (*Gesch. Deuts. Spr.* i. 178); but this view does not meet with general acceptance. The Thracians are associated in ancient history with the Pelasgians (Strab. ix. p. 401), and the Trojans, with whom they had many names in common (Strab. xiii. p. 590); in Asia Minor they were represented by the Bithynians (Herod. i. 28, vii. 75). These circumstances lead to the conclusion that they belonged to the Indo-European family, but do not warrant us in assigning them to any particular branch of it. Other explanations have been offered of the name Tiras, of which we may notice the Agathyræi, the first part of the name (*Agæ*) being treated as a prefix (Knobel, *Volkert.* p. 129); Taurus and the various tribes occupying that range (Kalisch, *Comm.* p. 246); the river Tyras, Dniester, with its cognominous inhabitants, the Tyrææ (Hävernick, *Eisleit.* ii. 231; Schulthess, *Parad.* p. 194); and, lastly, the maritime Tyrrheni (Tuch, in *Gen. l. c.*).

TIRATHITES, THE (תִּירָתִיטִי: *Tathiti*; Alex. *Απυθίται: Canentes*). One of the three families of Scribes residing at Jabez (1 Chr. ii. 55), the others being the Shimeathites and Suchathites. The passage is hopelessly obscure, and it is perhaps impossible to discover whence these three families derived their names. The Jewish commentators, playing with the names in true Shemitic fashion, interpret them thus:—"They called them Tirathim, because their voices when they sung resounded loud (תִּירָתִיטִי); and Shimeathites because they made themselves heard (שִׁמְעָתִיטִי) in reading the Law."

The SHIMEATHITES having been inadvertently omitted in their proper place, it may be as well to give here the equivalents of the name (שִׁמְעָתִיטִי: *Shimeathites: Resonantes*).

TIRE (תִּירָה). An ornamental headdress worn on festive occasions (Ex. xxiv. 17, 23). The term *peér* is elsewhere rendered "goodly" (Ex. xxxix. 28); "bouquet" (Is. iii. 20; Ex. xlv. 18); and "ornament" (Is. lxi. 10). For the character of the article, see HEADRESS.

TIR'HAKAH (תִּירְחָקָה: *Tharaka*). King of Ethiopia, Cush (*Βασιλεὺς Αἰθιοπῶν*, LXX.), the opponent of Sennacherib (2 K. xix. 9; Is. xxxvii. 9). While the king of Assyria was "warring against Libnah," in the south of Palestine, he heard of Tirhakah's advance to fight him, and sent a second time to demand the surrender of Jerusalem. This was B.C. cir. 713, unless we suppose that the expedition took place in the 24th instead of the 14th year of Hezekiah, which would bring it to B.C. cir. 703. If it were an expedition later than that of which the date is mentioned, it must have been before B.C. cir. 698, Hezekiah's last year. But if the reign of Manasseh is reduced to 35 years, these dates would be respectively B.C. cir. 693, 683, and 678, and these numbers might have to be slightly modified, the fixed date of the capture of Samaria, B.C. 721, being abandoned.

According to Manetho's epitomists, Tarkos or Tarakos was the third and last king of the xxvth

dynasty, which was of Ethiopians, and reigned 18 (Afr.) or 20 (Eua.) years. [So.] From one of the Apis-Tablets we learn that a bull Apis was born on his 26th year, and died at the end of the 20th of Psammetichus I. of the xxvth dynasty. His life exceeded 20 years, and no Apis is stated to have lived longer than 26. Taking that sum as the most probable, we should date Tirhakah's accession B.C. cir. 695, and assign him a reign of 26 years. In this case we should be obliged to take the late reckoning of the Biblical events, were it not for the possibility that Tirhakah ruled over Ethiopia before becoming king of Egypt. In connexion with this theory it must be observed, that an earlier Ethiopian of the same dynasty is called in the Bible "So, king of Egypt," while this ruler is called "Tirhakah, king of Ethiopia," and that a Pharaoh is spoken of in Scripture at the period of the latter, and also that Herodotus represents the Egyptian opponent of Sennacherib as Sethos, a native king, who may however have been a vassal under the Ethiopian.

The name of Tirhakah is written in hieroglyphics TEHARKA. Sculptures at Thebes commemorate his rule, and at Gebel-Berkel, or Nspata, he constructed one temple and part of another. Of the events of his reign little else is known, and the account of Megasthenes (ap. Strabo xv. p. 686), that he rivalled Sesostris as a warrior and reached the Pillars of Hercules, is not supported by other evidence. It is probable that at the close of his reign he found the Assyrians too powerful, and retired to his Ethiopian dominions.

[R. S. P.]

TIR'HANAH (תִּירְחָנָה: *Tharana*). Son of Caleb ben-Hezron by his concubine Maachah (1 Chr. ii. 48).

TIR'IA (תִּירְיָה: *Thiria*). Son of Jehaleleel of the tribe of Judah (1 Chr. iv. 16).

TIRSHA'THA (always written with the article, תִּירְשָׁאֲתָה: hence the LXX. give the word 'Αθροσασθδ (Ezr. ii. 63; Neh. vii. 65), and 'Αθροσασθδ (Neh. x. 1); Vulg. *Athersatha*). The title of the governor of Judaea under the Persians, derived by Gesenius from a Persian root signifying "stern," "severe." He compares the title *Gastrenger Herr* formerly given to the magistrates of the free and imperial cities of Germany. Compare also our expression, "most dread sovereign." It is added as a title after the name of Nehemiah (Neh. viii. 9, x. 1 [Heb. 2]); and occurs also in three other places, Ezr. ii. (ver. 63), and the repetition of that account in Neh. vii. (vers. 65-70), where probably it is intended to denote Zerubbabel, who had held the office before Nehemiah. In the margin of the A. V. (Ezr. ii. 63; Neh. vii. 65, x. 1) it is rendered "governor;" an explanation justified by Neh. xiii. 26, where "Nehemiah the governor," תִּירְשָׁאֲתָה (*Pacha*, possibly from the same root as the word we write Pacha, or Pasha), occurs instead of the more usual expression, "Nehemiah the Tirshatha." This word, תִּירְשָׁאֲתָה, is one of very common occurrence. It is twice applied by Nehemiah to himself (v. 14, 18), and by the prophet Haggai (i. 1, ii. 2, 21) to Zerubbabel. According to Gesenius, it denotes the prefect or governor of a province of less extent than a satrapy. The word is used of officers and governors under the Assyrian (2 K. xviii. 24, Is. xxxvi. 9, Babylonian (Jer. li. 57, Ez. xxiii. 6, 23; see also Ezr. v. 3, 14, vi. 7, Dan. iii. 2, 3, 27, vi. 7 [11th

B]], Median (Jer. li. 28), and Persian (Esth. viii. 9, ix. 3) monarchies. And under this last we find it applied to the rulers of the provinces bordered by the Euphrates (Ezr. viii. 36, Neh. ii. 7, 9, iii. 7), and to the governors of Judaea, Zerubbabel and Nehemiah (compare Mal. i. 8). It is found also at an earlier period in the times of Solomon (1 K. x. 15, 2 Chr. ix. 14) and Benhadad king of Syria (1 K. xx. 24): from which last place, compared with others (2 K. xviii. 24, Is. xxxvi. 9), we find that military commands were often held by these governors; the word indeed is often rendered by the A. V., either in the text or the margin, "captain."

By thus briefly examining the sense of *Pecha*, which (though of course a much more general and less distinctive word) is given as an equivalent to *Tirshatha*, we have no difficulty in forming an opinion as to the general notion implied in it. We have, however, no sufficient information to enable us to explain in detail in what consisted the special peculiarities in honour or functions which distinguished the *Tirshatha* from others of the same class, governors, captains, princes, rulers of provinces. [E. P. E.]

TIR'ZAH (תִּרְצָח, i. e. *Thirza*: *Θερσά*: *Thersa*). The youngest of the five daughters of Zelophehad, whose case originated the law that in the event of a man dying without male issue his property should pass to his daughters (Num. xxvi. 33, xxvii. 1, xxviii. 11; Josh. xvii. 3). [ZELOPHEHAD.] [G.]

TIR'ZAH (תִּרְצָח): *Θερσά*, *Θερσά*, *Θερσαία*; Alex. *Θερμα*, *Θερσα*, *Θερσαία*: *Thersa*). An ancient Canaanite city, whose king is enumerated amongst the twenty-one overthrown in the conquest of the country (Josh. xii. 24). From that time nothing is heard of it till after the disruption of Israel and Judah. It then reappears as a royal city—the residence of Jeroboam (1 K. xiv. 17), and of his successors, Baasha (xv. 21, 33), Elah (xvi. 8, 9), and Zimri (ib. 15). It contained the royal sepulchres of one (xvi. 8), and probably all the first four kings of the northern kingdom. Zimri was besieged there by Omri, and perished in the flames of his palace (ib. 18). The new king continued to reside there at first, but after six years he removed to a new city which he built and named Shomron (Samaria), and which continued to be the capital of the northern kingdom till its fall. Once, and once only, does Tirzah reappear, as the seat of the conspiracy of Menahem ben-Gaddi against the wretched Shallum (2 K. xv. 14, 18); but as soon as his revolt had proved successful, Menahem removed the seat of his government to Samaria, and Tirzah was again left in obscurity.

Its reputation for beauty throughout the country must have been wide-spread. It is in this sense that it is mentioned in the "Song of Solomon, where the juxtaposition of Jerusalem is sufficient proof of

the estimation in which it was held—"Beautiful as Tirzah, comely as Jerusalem" (Cant. vi. 4). The LXX. (*εὐδακία*) and Vulg. (*suavia*) do not, however, take *tirzah* as a proper name in this passage.

Eusebius (*Onomast.* *Θερσαία**) mentions it in connexion with Meoahem, and identifies it with a "village of Samaritans in Batanaea." There is, however, nothing in the Bible to lead to the inference that the Tirzah of the Israelite monarchs was on the east of Jordan. It does not appear to be mentioned by the Jewish topographers, or any of the Christian travellers of the middle ages, except Brocardus, who places "Thersa on a high mountain, three leagues (*leucæ*) from Samaria to the east" (*Descriptio*, cap. vii.). This is exactly the direction, and very nearly the distance, of *Tellâzah*, a place in the mountains north of *Nabulus*, which was visited by Dr. Robinson and Mr. Van de Velde in 1852 (*B. R.* iii. 302; *Syr. and Pal.* iii. 334). The town is on an eminence, which towards the east is exceedingly lofty, though, being at the edge of the central highlands, it is more approachable from the west. The place is large and thriving, but without any obvious marks of antiquity. The name may very probably be a corruption of Tirzah; but beyond that similarity, and the general agreement of the site with the requirements of the narrative, there is nothing at present to establish the identification with certainty. [G.]

TISH'BITE, THE (תִּשְׁבִּי: *δ Θεσβίτης*; Alex. *θεσβίτης*: *Thesbites*). The well-known designation of Elijah (1 K. xvii. 1, xxi. 17, 28; 2 K. i. 3, 8, ix. 36).

(1.) The name naturally points to a place called Tishbeh (Fürst), Tishbi, or rather perhaps Tesheh, as the residence of the prophet. And indeed the word תִּשְׁבִּי, which follows it in 1 K. xvii. 1, and which in the received Hebrew Text is so pointed as to mean "from the residents," may, without violence or grammatical impropriety, be pointed to read "from Tishbi." This latter reading appears to have been followed by the LXX. (*δ Θεσβίτης δ ἐκ Θεσβών*); Josephus (*Ant.* viii. 13, §2, *ἐκ Θεσβών*), and the Targum (תִּשְׁבִּי, "from out of Teshab"); and it has the support of Ewald (*Gesch.* iii. 468 *note*). It is also supported by the fact, which seems to have escaped notice, that the word does not in this passage contain the *י* which is present in each one of the places where תִּשְׁבִּי is used as a mere appellative noun. Had the *י* been present in 1 K. xvii. 1, the interpretation "from Tishbi" could never have been proposed.

Assuming, however, that a town is alluded to, as Elijah's native place, it is not necessary to infer that it was itself in Gilead, as Epiphanius, Adrichomius, & Castell, and others have imagined; for the

* In this passage the order of the names is altered in the Hebrew text from that preserved in the other passages—and still more so in the LXX.

† The LXX. version of the narrative of which this verse forms part, amongst other remarkable variations from the Hebrew text, substitutes *Serita*, that is, *Zeroda*, for *Tirzah*. In this they are supported by no other version.

‡ Its occurrence here on a level with Jerusalem has been held to indicate that the Song of Songs was the work of a writer belonging to the northern kingdom. But surely a poet, and so ardent a poet as the author of the Song of Songs, may have been sufficiently ac-

dependent of political considerations to go out of his own country—if Tirzah can be said to be out of the country of a native of Judah—for a metaphor.

§ It will be observed that the name stood in the LXX. of 2 K. xv. 14 in Eusebius' time virtually in the same strange un-hebrew form that it now does.

¶ Schwarz (160) seems merely to repeat this passage.

‡ The Alex. MS. omits the word in 1 K. xvii. 1, and both MSS. omit it in xxi. 28, which they cast, with the whole passage, in a different form from the Hebrew text.

§ This lexicographer pretends to have been in possession of some special information as to the situation of the place.

word **תִּישְׁבִּי**, which in the A. V. is rendered by the general term "inhabitant," has really the special force of "resident" or even "stranger." This, and the fact that a place with a similar name is not elsewhere mentioned, has induced the commentators¹ and lexicographers, with few exceptions, to adopt the name "Tishbite" as referring to the place **THISBE** in Naphtali, which is found in the LXX. text of Tobit i. 2. The difficulty in the way of this is the great uncertainty in which the text of that passage is involved, as has already been shown under the head of **THISBE**; an uncertainty quite sufficient to destroy any dependence on it as a topographical record, although it bears the traces of having originally been extremely minute. Bunsen (*Bibelschert*, note to 1 K. xvii. 1) suggests in support of the reading "the Tishbite from Tishbi of Gilead" (which however he does not adopt in his text), that the place may have been purposely so described, in order to distinguish it from the town of the same name in Galilee.

(2.) But **תִּישְׁבִּי** has not always been read as a proper name, referring to a place. Like **סִטְחִי**, though exactly in reverse, it has been pointed so as to make it mean "the stranger." This is done by Michaelis in the Text of his interesting *Bibel für Ungelernte*—"der Fremdling Elias, einer von den Fremden, die in Gilead wohnhaft waren;" and it throws a new and impressive air round the prophet, who was so emphatically the champion of the God of Israel. But this suggestion does not appear to have been adopted by any other interpreter, ancient or modern.

The numerical value of the letters **תִּישְׁבִּי** is 712, on which account, and also doubtless with a view to its correspondence with his own name, Elias Levita entitled his work, in which 712 words are explained, *Sepher Tishbi* (Bartolocci, i. 140 b). [G.]

TITANS (*Titānes*, of uncertain derivation). These children of Uranus (Heaven) and Gaia (Earth) were, according to the earliest Greek legends, the vanquished predecessors of the Olympian gods, condemned by Zeus to dwell in Tartarus, yet not without retaining many relics of their ancient dignity (Aesch. *Prom. Vincit. passim*). By later (Latin) poets they were confounded with the kindred *Gigantes* (Hor. *Od.* iii. 4, 42, &c.), as the traditions of the primitive Greek faith died away; and both terms were transferred by the Seventy to the Rephaim of ancient Palestine. [GIANT.] The usual Greek rendering of *Rephaim* is indeed *Γίγαντες* (Gen. xiv. 5; Josh. xii. 4, &c.), or, with a yet clearer reference to Greek mythology, *γίγαντες* (Prov. ii. 18, ix. 18), and *Θεομάχοι* (Symmach. Prov. ix. 18, xxi. 16; Job xxvi. 5). But in 2 Sam. v. 18, 22, "the valley of Rephaim" is represented by *ἡ κοιλὰς τῶν τιτάνων* instead of *ἡ κοιλὰς τῶν γιγάντων*, 1 Chr. xi. 15, xiv. 9, 13; and the same rendering occurs in a Hexapl. text in 2 Sam. xxiii. 13. Thus Ambrose defends his use of a classical allusion by a reference to the Old Latin version of 2 Sam. v., which preserved the LXX. rendering (*De fide*, iii. 1, 4, Nam et gigantes et vallem Tī-

He says (*Lex Hebr.* ed. Michaelis), "Urbs in tribu Gad, Jebaa inter et Baron." Jebaa should be Jecbaa (i. e. Jog-bebah) and this strange bit of confident topography is probably taken from the map of Adrichomita, made on the principle of inserting every name mentioned in the Bible, known or unknown.

¹ There is no doubt that this is the meaning of **תִּישְׁבִּי**. See Gen. xxiii. 4 ("sojourner"), Ex. xii. 48 ("foreigner"), Lev. xxv. 6 ("stranger"). Ps. xxxix. 12 ("sojourner").

tanum prophetici sermonis series non refugit. "Eneas Sirenas . . . dixit). It can therefore occasion no surprise that in the Greek version of the triumphal hymn of Judith, "the sons of the Titans" (*υἱοὶ Τῑτῶν*; Vulg. *filii Titān*; Old Latin. . . *Dathan*; f. *Tela*; f. *bellatorum*) stands parallel with "high giants," *ὕψιστοι Γίγαντες*, where the original text probably had *Τῑτῶν* and *Δῑτῶν*. The word has yet another interesting point of connexion with the Bible; for it may have been from some vague sense of the struggle of the infernal and celestial powers, dimly shadowed forth in the classical myth of the Titans, that several Christian fathers inclined to the belief that *Terrā* was the mystic name of "the beast" indicated in Rev. xii. 13 (Iren. v. 30, 3 . . . "divinum putatur apud multos esse hoc nomen . . . et ostentationem quendam continet ultionis . . . et alia autem et antiquum, et fide dignum, et regale, magis autem et tyrannicum nomen . . . ut ex multis colligamus ne forte *Titan* vocetur qui veniet"). [B. F. W.]

TITHE.^a Without inquiring into the reason for which the number ten^b has been so frequently preferred as a number of selection in the cases of tribute-offerings, both sacred and secular, voluntary and compulsory, we may remark that numerous instances of its use are found both in profane and also in Biblical history, prior to or independently of the appointment of the Levitical tithes under the Law. In Biblical history the two prominent instances are—1. Abram presenting the tenth of s. his property, according to the Syriac and Arabic versions of Heb. vii. and S. Jarchi in his Com., but as the passages themselves appear to show, of the spoils of his victory, to Melchizedek (Gen. xiv. 20; Heb. vii. 2, 8; Joseph. *Ant.* i. 10, §2; Seiden, *de Tithe*, c. 1). 2. Jacob, after his vision at Luz, devoting a tenth of all his property to God in case he should return home in safety (Gen. xxviii. 22). These instances bear witness to the antiquity of tithes, in some shape or other, previous to the Mosaic tithesystem. But numerous instances are to be found of the practice of heathen nations, Greeks, Romans, Carthaginians, Arabians, of applying tenths derived from property in general, from spoil, from confiscated goods, or from commercial profits, to sacred, and quasi-sacred, and also to fiscal purposes, viz. as consecrated to a deity, presented as a reward to a successful general, set apart as a tribute to a sovereign, or as a permanent source of revenue. Among other passages, the following may be cited: 1 Macc. xi. 35; Herod. i. 89, iv. 152, v. 77, vii. 132, ix. 81; Diod. Sic. v. 42, xi. 33, xx. 14; Paus. v. 10, §2, x. 10, §1; Dicaea. Hal. . 19, 23; Justin xviii. 7, xx. 3; Arist. *Oecon.* ii. 2; Liv. v. 21; Polyb. ix. 39; Cic. *Verr.* ii. 3, 6, and 7 (where tithes of wine, oil, and "minutae fruges" are mentioned), *Pro Leg. Manil.* 6; Plut. *Agri.* c. 19, p. 389; Pliny, *N. H.* xii. 14; Macrob. *Sat.* iii. 6; Xen. *Hell.* i. 7, 10, iv. 3, 21; Rose, *Inscr. Gr.* p. 215; Gibbon, vol. iii. p. 301, ed. Smith; and a remarkable instance of fruits tithed and offered to a deity, and a feast made, of which the

It often occurs in connexion with **לֵא**, "an alien," as in Lev. xxv. 23, 35, 40, 47 b. 1 Chr. xxix. 18. Besides the above passages, *לֵא* is found in Lev. xxii. 10, xxv. 45, 47 a.

^b **לֵא**; *decary*; *decimae*; and plur. **לֵאִים**; as *decary*; *decimae*; from **לֵא**, "ten."

^c Philo derives *decary* from *δέκα* (De J. Orig. & Use

people of the district partook, in Xen. *Exp. Cyr.* v. 3, 9, answering thus to the Hebrew poor man's tithe-feast to be mentioned below.

The first enactment of the Law in respect of tithe is the declaration that the tenth of all produce, as well as of flocks and cattle, belongs to Jehovah, and must be offered to Him. 2. That the tithe was to be paid in kind, or, if redeemed, with an addition of one-fifth to its value (Lev. xxvii. 30-33). This tenth, called *Terumoth*, is ordered to be assigned to the Levites, as the reward of their service, and it is ordered further, that they are themselves to dedicate to the Lord a tenth of these receipts, which is to be devoted to the maintenance of the high-priest (Num. xviii. 21-28).

This legislation is modified or extended in the Book of Deuteronomy, i. e. from thirty-eight to forty years later. Commands are given to the people, 1. to bring their tithes, together with their votive and other offerings and first-fruits, to the chosen centre of worship, the metropolis, there to be eaten in festive celebration in company with their children, their servants, and the Levites (Deut. xii. 5-18). 2. After warnings against idolatrous or virtually idolatrous practices, and the definition of clean as distinguished from unclean animals, among which latter class the swine is of obvious importance in reference to the subject of tithes, the legislator proceeds to direct that all the produce of the soil shall be tithed every year (ver. 17 seems to show that corn, wine, and oil, alone are intended), and that these tithes with the firstlings of the flock and herd are to be eaten in the metropolis. 3. But in case of distance, permission is given to convert the produce into money, which is to be taken to the appointed place, and there laid out in the purchase of food for a festive celebration, in which the Levite is, by special command, to be included (Deut. xiv. 22-27). 4. Then follows the direction, that at the end of three years, i. e. in the course of the third and sixth years of the Sabbatical period, all the tithe of that year is to be gathered and laid up "within the gates," i. e. probably in some central place in each district, not at the metropolis; and that a festival is to be held, in which the stranger, the fatherless, and the widow, together with the Levite, are to partake (ib. vers. 28, 29). 5. Lastly, it is ordered that after taking the tithe in each third year, "which is the year of tithing," an exculpatory declaration is to be made by every Israelite, that he has done his best to fulfil the divine command (Deut. xxvi. 12-14).¹

From all this we gather, 1. That one-tenth of the whole produce of the soil was to be assigned for the maintenance of the Levites. 2. That out of this the Levites were to dedicate a tenth to God, for the use of the high-priest. 3. That a tithe, in all probability a second tithe, was to be applied to festival purposes. 4. That in every third year, either this festival tithe or a third tenth was to be eaten in company with the poor and the Levites. The question arises, were there three tithes taken in this third year; or is the third tithe only the second under a different description? That there were two yearly tithes seems clear, both from the general tenor of the directions and from the LXX. rendering of Deut. xxvi. 12. But it must be allowed that the third tithe is not without support. 1. Jo-

sephus distinctly says that one-tenth was to be given to the priests and Levites, one-tenth was to be applied to feasts in the metropolis, and that a tenth besides these (*τολὴν πρὸς αὐτοῖς*) was every third year to be given to the poor (*Ant.* iv. 8, §8, and 22). 2. Tobit says, he gave one-tenth to the priests, one-tenth he sold and spent at Jerusalem, i. e. commuted according to Deut. xiv. 24, 25, and another tenth he gave away (Tob. i. 7, 8). 3. St. Jerome says one-tenth was given to the Levites, out of which they gave one-tenth to the priests (*δευτεροδεκάτη*); a second tithe was applied to festival purposes, and a third was given to the poor (*πρωτοδεκάτη*) (*Com. on Ezek.* xlv. vol. i. p. 565). Spencer thinks there were three tithes. Jennings, with Mede, thinks there were only two complete tithes, but that in the third year an addition of some sort was made (Spencer, *De Leg. Hebr.* p. 727; Jennings *Jew. Ant.* p. 183).

On the other hand, Maimonides says the third and sixth years' second tithe was shared between the poor and the Levites, i. e. that there was no third tithe (*De Jur. Paup.* vi. 4). Selden and Michaelis remark that the burden of three tithes, besides the first-fruits, would be excessive. Selden thinks that the third year's tithe denotes only a different application of the second or festival tithe, and Michaelis, that it meant a surplus after the consumption of the festival tithe (Selden, *On Tithes*, c. 2, p. 13; Michaelis, *Laus of Moses*, §192, vol. iii. p. 143, ed. Smith). Against a third tithe may be added Reland, *Ant. Hebr.* p. 359; Jahn, *Ant.* §389; Godwyn, *Moses and Aaron*, p. 158, and Carpsov, p. 821, 622; Keil, *Bibl. Arch.* §71, i. 337; Saalschütz, *Hebr. Arch.* i. 70; Winer, *Realob.* a. v. *Zehnte*. Knobel thinks the tithe was never taken in full, and that the third year's tithe only meant the portion contributed in that year (*Com. on Deut.* xiv. 29, in *Kurzgef. Exeg. Hdbuch.*). Ewald thinks that for two years the tithe was left in great measure to free-will, and that the third year's tithe only was compulsory (*Altenthum*, p. 346).

Of these opinions, that which maintains three separate and complete tithings seems improbable, as imposing an excessive burden on the land, and not easily reconcilable with the other directions; yet there seems no reason for rejecting the notion of two yearly tithes, when we recollect the especial promise of fertility to the soil, conditional on observance of the commands of the Law (Deut. xxviii.). There would thus be, 1. a yearly tithe for the Levites; 2. a second tithe for the festivals, which last would every third year be shared by the Levites with the poor. It is this poor man's tithe which Michaelis thinks is spoken of as likely to be converted to the king's use under the regal dynasty (1 Sam. viii. 15, 17; Mich. *Laus of Moses*, vol. i. p. 299). Ewald thinks that under the kings the ecclesiastical tithe system reverted to what he supposes to have been its original free-will character. It is plain that during that period the tithe-system partook of the general neglect into which the observance of the Law declined, and that Hezekiah, among his other reforms, took effectual means to revive its use (2 Chr. xxxi. 5, 12, 19). Similar measures were taken after the Captivity by Nehemiah (Neh. xii. 44), and in both these cases special officers were appointed to take charge of the stores

¹ *ἐν τῇ πόλει*.

² The LXX has here *ἐὰν συντελέσῃς ἀποθεσθῆναι*.

πάν τὸ ἐπιδικαστὸν τῶν γεννημάτων τῆς γῆς σου ἐν τῇ ἐτει τῇ τρίτῃ καὶ δευτέρῳ ἐπιτίθειτον ὡς καὶ τῇ Δευτέρῃ, κ. τ. λ.

and storehouses for the purpose. The practice of tithing especially for relief of the poor, appears to have subsisted even in Israel, for the prophet Amos speaks of it, though in an ironical tone, as existing in his day (Am. iv. 4). But as any degeneracy in the national faith would be likely to have an effect on the tithe-system, we find complaint of neglect in this respect made by the prophet Malachi (iii. 8, 10). Yet, notwithstanding partial evasion or omission, the system itself was continued to a late period in Jewish history, and was even carried to excess by those who, like the Pharisees, affected peculiar exactness in observance of the Law (Heb. vii. 5-8; Matth. xxiii. 23; Luke xviii. 12; Josephus, *Ant.* xi. 9, §2; *F&E*. c. 15).

Among details relating to the tithe payments mentioned by Rabbinical writers may be noticed: (1) That in reference to the permission given in case of distance (Deut. xiv. 24), Jews dwelling in Babylonia, Ammon, Moab, and Egypt, were considered as subject to the law of tithe in kind (Reland, iii. 9, 2, p. 355). (2) In tithing sheep the custom was to enclose them in a pen, and as the sheep went out at the opening, every tenth animal was marked with a rod dipped in vermilion. This was the "passing under the rod." The Law ordered that no inquiry should be made whether the animal were good or bad, and that if the owner changed it, both the original and the changeling were to be regarded as devoted (Lev. xxvii. 32, 33; Jer. xxxiii. 13; *Beccoroth*, ix. 7; Godwyn, *M. and A.* p. 136, vi. 7). (3) Cattle were tithed in and after August, corn in and after September, fruits of trees in and after January (Godwyn, p. 137, §9); Buxtorf, *Syn. Jud.* c. xii. p. 282, 283. (4) "Corners" were exempt from tithe (*Peah*, i. 6). (5) The general rule was that all edible articles not purchased, were titheable, but that products not specified in Deut. xiv. 23, were regarded as doubtful. Tithe of them was not forbidden, but was not required (*Maaseroth*, i. 1; *Demai*, i. 1; Carpsov, *App. Bibl.* p. 619, 620). [H. W. P.]

TITUS MANLIUS. [MANLIUS.]

TITUS (*Títos*: *Titus*). Our materials for the biography of this companion of St. Paul must be drawn entirely from the notices of him in the Second Epistle to the Corinthians, the Galatians, and to Titus himself, combined with the Second Epistle to Timothy. He is not mentioned in the Acts at all. The reading *Títou* *Isóthrou* in Acts xviii. 7 is too precarious for any inference to be drawn from it. Wieseler indeed lays some slight stress upon it (*Chronol. des Apost. Zeit.* Gött. 1848, p. 204), but this is in connexion with a theory which needs every help. As to a recent hypothesis, that Titus and Timothy were the same person (R. King, *Who was St. Titus?* Dublin, 1853), it is certainly ingenious, but quite untenable.

Taking the passages in the Epistles in the chronological order of the events referred to, we turn first to Gal. ii. 1, 3. We conceive the journey mentioned here to be identical with that (recorded in Acts xv.) in which Paul and Barnabas went from Antioch to Jerusalem to the conference which was to decide the question of the necessity of circumcision to the Gentiles. Here we see Titus in close association with Paul and Barnabas at Antioch.* He goes with them to Jerusalem. He is in fact one of

TITUS

the *τιμω* *ἐλάοι* of Acts xv. 2, who were deputed to accompany them from Antioch. His circumcision was either not insisted on at Jerusalem, or, if demanded, was firmly resisted (*ὅτι ἀπογορεύθη περιτεμῆναι*). He is very emphatically spoken of as a Gentile (*Ἕλλη*), by which is most probably meant that both his parents were Gentiles. Here is a double contrast from Timothy, who was circumcised by St. Paul's own directions, and one of whose parents was Jewish (Acts xvi. 1, 3; 2 Tim. i. 5 iii. 15). Titus would seem, on the occasion of the council, to have been specially a representative of the church of the uncircumcision.

It is to our purpose to remark that, in the passage cited above, Titus is so mentioned as apparently to imply that he had become personally known to the Galatian Christians. This, again, we combine with two other circumstances, viz. that the Epistle to the Galatians and the Second Epistle to the Corinthians were probably written within a few months of each other [GALATIANS, EPISTLE TO], and both during the same journey. From the latter of these two Epistles we obtain fuller notions of Titus in connexion with St. Paul.

After leaving Galatia (Acts xviii. 23), and spending a long time at Ephesus (Acts xix. 1-xx. 1), the Apostle proceeded to Macedonia by way of Thess. Here he expected to meet Titus (2 Cor. ii. 13), who had been sent on a mission to Corinth. In this hope he was disappointed [THESS], but in Macedonia Titus joined him (2 Cor. vii. 6, 7, 13-15). Here we begin to see not only the above-mentioned fact of the mission of this disciple to Corinth, and the strong personal affection which subsisted between him and St. Paul (*ἐν τῇ παρουσίᾳ αὐτοῦ*, vii. 7. but also some part of the purport of the mission itself. It had reference to the immoralities at Corinth rebuked in the First Epistle, and to the effect of that First Epistle on the offending church. We learn further that the mission was so far successful and satisfactory: *ἀνεγγύησαν τὴν ἑμὴν ἐπιστολὴν* (vii. 7), *ἐλυτρώθητε εἰς μετάνοιαν* (vii. 9), *τὴν πάντων ὑμῶν ὁμολογίαν* (vii. 15); and we are enabled also to draw from the chapter a strong conclusion regarding the warm zeal and sympathy of Titus, his grief for what was evil, his rejoicing over what was good: *τῇ παρακλήσει ἢ παρακλήσει ἐφ' ὑμῖν* (vii. 7); *ἀνατίθενται τὸ πνεῦμα αὐτοῦ ἀπὸ πάντων ὑμῶν* (vii. 13); *τὰ σπλάγχνα αὐτοῦ περισσotέρως εἰς ὑμᾶς ἔστιν* (vii. 15). But if we proceed further, we discern another part of the mission with which he was entrusted. This had reference to the collection, at that time in progress, for the poor Christians of Judaea (*καθὼς προσήρξατο*, viii. 6), a phrase which shows that he had been active and zealous in the matter, while the Corinthians themselves seem to have been rather remiss. This connexion of his mission with the gathering of these charitable funds is also proved by another passage, which contains moreover an implied assertion of his integrity in the business: *οὐ τι ἐπλεονέκτησεν ὑμᾶς Τίτος*; xii. 18, and a statement that St. Paul himself had sent him on the errand (*ἀπεστέλλειν Τίτον*, ib.). Thus we are prepared for what the Apostle now proceeds to do after his encouraging conversations with Titus regarding the Corinthian Church. He sends him back from Macedonia to Corinth, in company with two other trustworthy Christians [TROPHIMUS, TYCHICUS], bearing the Second Epistle, and with an earnest request (*παρακαλεῖσαι*, viii. 6. *παρακαλεῖν*, viii. 17) that he would see to the

* His birth-place may have been here; but this is quite uncertain. The name, which is Roman, proves nothing.

completion of the collection, which he had zealously promoted on his late visit (*ἵνα καθὺς προεβήκατε, εὐτως καὶ ἐπιτελέσητε*, viii. 6), Titus himself being in nowise backward in undertaking the commission. On a review of all these passages, elucidating as they do the characteristics of the man, the duties he discharged, and his close and faithful co-operation with St. Paul, we see how much meaning there is in the Apostle's short and forcible description of him (*εἶτε ὅτις Τίτου, κεινὸν ἐμὸς καὶ ἐς ὁμᾶς συνεργός*, viii. 23).

All that has preceded is drawn from direct statements in the Epistles; but by indirect though fair inference we can arrive at something further, which gives coherence to the rest, with additional elucidations of the close connexion of Titus with St. Paul and the Corinthian Church. It has generally been considered doubtful who the ἀδελφοί were (1 Cor. xvi. 11, 12) that took the First Epistle to Corinth. Timothy, who had been recently sent thither from Ephesus (Acts xix. 22), could not have been one of them (*ὁ δὲ Ἰλθὺ Τίμ.* 1 Cor. xvi. 10), and Apollos declined the commission (1 Cor. xvi. 12). There can be little doubt that the messengers who took that first letter were Titus and his companion, whoever that might be, who is mentioned with him in the second letter (*παρεστάμενος Τίτου, καὶ συναπείστανε τὸν ἀδελφόν*, 2 Cor. xii. 18). This view was held by Macknight, and very clearly set forth by him (*Transl. of the Apostolical Epistles, with Comm.* Edinb. 1829, vol. i. pp. 451, 674, vol. ii. pp. 2, 7, 124). It has been more recently given by Professor Stanley (*Corinthians*, 2nd ed. pp. 348, 492),^b but it has been worked out by no one so elaborately as by Professor Lightfoot (*Cambr. Journal of Classical and Sacred Philology*, ii. 201, 202). As to the connexion between the two contemporaneous missions of Titus and Timothy, this observation may be made here, that the difference of the two errands may have had some connexion with a difference in the characters of the two agents. If Titus was the firmer and more energetic of the two men, it was natural to give him the task of enforcing the Apostle's rebukes, and urging on the flagging business of the collection.

A considerable interval now elapses before we come upon the next notices of this disciple. St. Paul's first imprisonment is concluded, and his last trial is impending. In the interval between the two, he and Titus were together in Crete (*ἀπέμεινεν ὁ ἐν Κρήνῃ*, Tit. i. 5). We see Titus remaining in the island when St. Paul left it, and receiving there a letter written to him by the Apostle. From this letter we gather the following biographical details:—In the first place we learn that he was originally converted through St. Paul's instrumentality: this must be the meaning of the phrase *ἡρώησεν τέκνον*, which occurs so emphatically in the opening of the Epistle (i. 4). Next we learn the various particulars of the responsible duties which he had to discharge in Crete. He is to complete what St. Paul had been obliged to leave unfinished (*ἵνα τὰ λείποντα ἐπιδιορθώσῃ*, i. 5), and he is to organise the Church throughout the island by appointing presbyters in every city (GORTYNA; LASAEA). Instructions are given as to the suitable character of such presbyters (vers. 6-9); and we learn further that we have here the repeti-

tion of instructions previously furnished by word of mouth (*ὡς ἐγὼ σοὶ διεταξάμην*, ver. 5). Next he is to control and bridle (*ἐπιστεῦλαι*, ver. 11) the restless and mischievous Judaizers, and he is to be peremptory in so doing (*ἔλεγχε αὐτοὺς ἀποδόμους*, ver. 13). Injunctions in the same spirit are reiterated (ii. 1, 15, iii. 8). He is to urge the duties of a decorous and Christian life upon the women (ii. 3-5), some of whom (*προσβότιδας*, ii. 3) possibly had something of an official character (*καλοδιδασκάλους, ἵνα σωφρονίσωσι τὰς νέας*, vers. 3, 4). He is to be watchful over his own conduct (ver. 7); he is to impress upon the slaves the peculiar duties of their position (ii. 9, 10); he is to check all social and political turbulence (iii. 1), and also all wild theological speculations (iii. 9); and to exercise discipline on the heretical (iii. 10). When we consider all these particulars of his duties, we see not only the confidence reposed in him by the Apostle, but the need there was of determination and strength of purpose, and therefore the probability that this was his character; and all this is enhanced if we bear in mind his isolated and unsupported position in Crete, and the lawless and immoral character of the Cretans themselves, as testified by their own writers (i. 12, 13). [CRETE.]

The notices which remain are more strictly personal. Titus is to look for the arrival in Crete of Artemas and Tychicus (iii. 12), and then he is to hasten (*σπεύδων*) to join St. Paul at Nicopolis, where the Apostle is proposing to pass the winter (*ἰβ.*). Zenas and Apollos are in Crete, or expected there; for Titus is to send them on their journey, and supply them with whatever they need for it (iii. 13). It is observable that Titus and Apollos are brought into juxtaposition here, as they were before in the discussion of the mission from Ephesus to Corinth.

The movements of St. Paul, with which these later instructions to Titus are connected, are considered elsewhere. [PAUL; TIMOTHY.] We need only observe here that there would be great difficulty in inserting the visits to Crete and Nicopolis in any of the journeys recorded in the Acts, to say nothing of the other objections to giving the Epistle any date anterior to the voyage to Rome. [TITUS, EPISTLE TO.] On the other hand, there is no difficulty in arranging these circumstances, if we suppose St. Paul to have travelled and written after being liberated from Rome, while thus we gain the further advantage of an explanation of what Paley has well called the affinity of this Epistle and the first to Timothy. Whether Titus did join the Apostle at Nicopolis we cannot tell. But we naturally connect the mention of this place with what St. Paul wrote at no great interval of time afterwards, in the last of the Pastoral Epistles (*Τίτος ἐς Δαλματίαν*, 2 Tim. iv. 10); for Dalmatia lay to the north of Nicopolis, at no great distance from it. [NICOPOLIS.] From the turn of the whole sentence, it seems probable that this disciple had been with St. Paul in Rome during his final imprisonment: but this cannot be asserted confidently. The touching words of the Apostle in this passage might seem to imply some reproach, and we might draw from them the conclusion that Titus became a second Demas: but on the whole this seems a harsh and unnecessary judgment.

^b There is some danger of confusing Titus and the brother (2 Cor. xii. 18) i. e. the brethren of 1 Cor. xvi. 11, i. e. who (according to this view) took the first letter, with

Titus and the brethren (2 Cor. viii. 16-24) who took the second letter.

Whatever else remains is legendary, though it may contain elements of truth. Titus is connected by tradition with Dalmatia, and he is said to have been an object of much reverence in that region. This, however, may simply be a result of the passage quoted immediately above: and it is observable that of all the churches in modern Dalmatia (Neale's *Eccelesiological Notes on Dalm.* p. 175) not one is dedicated to him. The traditional connexion of Titus with Crete is much more specific and constant, though here again we cannot be certain of the facts. He is said to have been permanent bishop in the island, and to have died there at an advanced age. The modern capital, *Candia*, appears to claim the honour of being his burial-place (Cave's *Apostolici*, 1716, p. 42). In the fragment, *De Vita et Actis Titii*, by the lawyer Zenas (Fabric. *Cod. Apoc. N. T.* ii. 831, 832), Titus is called Bishop of Gortyna: and on the old site of Gortyna is a ruined church, of ancient and solid masonry, which bears the name of St. Titus, and where service is occasionally celebrated by priests from the neighbouring hamlet of *Metropolis* (E. Falkener, *Remains in Crete, from a MS. History of Candia by Onorio Belli*, p. 23). The cathedral of *Megakastro*, in the north of the island, is also dedicated to this saint. Lastly, the name of Titus was the watchword of the Cretans when they were invaded by the Venetians: and the Venetians themselves, after their conquest of the island, adopted him to some of the honours of a patron saint; for, as the response after the prayer for the Doge of Venice was "Sancte Marce, tu nos adjuva," so the response after that for the Duke of Candia was "Sancte Tite, tu nos adjuva" (Pashley's *Travels in Crete*, i. 6, 175).*

We must not leave unnoticed the striking, though extravagant, panegyric of Titus by his successor in the see of Crete, Andreas Cretensis (published, with Amphilochius and Methodius, by Combefis, Paris, 1644). This panegyric has many excellent points: e. g. it incorporates well the more important passages from the 2nd Ep. to the Corinthians. The following are stated as facts. Titus is related to the Proconsul of the island: among his ancestors are Minos and Rhadamanthus (*οἱ ἐκ Διός*). Early in life he obtains a copy of the Jewish Scriptures, and learns Hebrew in a short time. He goes to Judaea, and is present on the occasion mentioned in Acts i. 15. His conversion takes place before that of St. Paul himself, but afterwards he attaches himself closely to the Apostle. Whatever the value of these statements may be, the following description of Titus (p. 156) is worthy of quotation:—
ὁ πρῶτος τῆς Κρήτης ἐκκλησίας θεμέλιος τῆς ἀληθείας ὁ στυλοῦς τῆς πίστεως ἔρεισμα τῶν εὐαγγελικῶν κηρυγμάτων ἡ ἀσίγητος σάλπιγξ τῶ ἐψηλὸν τῆς Πιλάου γλώττης ἀπήχημα. [J. S. H.]

TITUS, EPISTLE TO. There are no specialities in this Epistle which require any very elaborate treatment distinct from the other Pastoral Letters of St. Paul. [TIMOTHY, EPISTLES TO.] If those two were not genuine, it would be difficult confidently to maintain the genuineness of this. On the other hand, if the Epistles to Timothy are received as St. Paul's, there is not the slightest reason for doubting the authorship of that to Titus. Amidst the various combinations which are found

among those who have been sceptical on the subject of the Pastoral Epistles, there is no instance of the rejection of that before us on the part of those who have accepted the other two. So far indeed as these doubts are worth considering at all, the argument is more in favour of this than of either of those. Tatian accepted the Epistle to Titus, and rejected the other two. Origen mentions some who excluded 2 Tim., but kept 1 Tim. with Titus. Schleiermacher and Neander invert this process of doubt in regard to the letters addressed to Timothy, but believe that St. Paul wrote the present letter to Titus. Credner too believes it to be genuine, though he pronounces 1 Tim. to be a forgery, and 2 Tim. a compound of two epistles.

To turn now from opinions to direct external evidence, this Epistle stands on quite as firm a ground as the others of the Pastoral group, if not a firmer ground. Nothing can well be more explicit than the quotations in Irenæus, *C. Hæres.* i. 16, 3 (see Tit. iii. 10), Clem. Alex. *Ström.* i. 350 (see i. 12), Tertull. *De Præscr. Hæc.* c. 6 (see iii. 10, 11), and the reference, also *Adv. Marc.* v. 21; to say nothing of earlier allusions in Justin Martyr, *Dial. c. Tryph.* 47 (see iii. 4), which can hardly be doubted, Theoph. *Ad Autol.* ii. p. 95 (see iii. 5, iii. p. 126 (see iii. 1)), which are probable, and Clem. Rom. i. Cor. 2 (see iii. 1), which is possible.

As to internal features, we may notice, in the first place, that the Epistle to Titus has all the characteristics of the other Pastoral Epistles. See, for instance, *πιστὸς ὁ λόγος* (iii. 8) *ἐγαυρότητα δεδουκυμένη* (i. 9, ii. 1, comparing i. 13, ii. 8), *σὺμφωνεῖν, σὺμφων, σὺμφώνος* (i. 8, ii. 5, 6, 12), *σωτήριος, σωτήρ, σῶσις* (i. 3, 4, ii. 10, 11, 13, iii. 4, 5, 7, 'Ιουδαῖοι μῦθοι (i. 14, comparing iii. 9), *ἐπιφάνεια* (ii. 13), *ἐσθλὴ βίαια* (i. 1), *ἡλικος* (iii. 5; in i. 4 the word is doubtful). All this tends to show that this letter was written about the same time and under similar circumstances with the other two. But, on the other hand, this Epistle has marks in its phraseology and style which assimilate it to the general body of the Epistles of St. Paul. Such may fairly be reckoned the following:—*κατέργασται ὁ πιστεύσας ἐν ᾧ* (i. 3); the quotation from a heathen poet (i. 12); the use of *ἀδελφίμος* (i. 10); the "going off at a word" (*συνήρως . . . ἐπεφάνη γὰρ . . . συνήρως . . .* ii. 10, 11); and the modes in which the doctrines of the Atonement (ii. 13) and of Free Justification (iii. 5-7) come to the surface. As to any difficulty arising from supposed indications of advanced hierarchical arrangements, it is to be observed that in this Epistle *πρεσβύτερος* and *ἐπίσκοπος* are used as synonymous (*ὅσα καταστήσῃς πρεσβυτέρους . . . διὰ γὰρ τὸν ἐπίσκοπον . . .* i. 5, 7), just as they are in the address at Miletus about the year 58 A.D. (Acts xx. 17, 28). At the same time this Epistle has features of its own, especially a certain tone of abruptness and severity, which probably arises partly out of the circumstances of the Cretan population [CRETE], partly out of the character of Titus himself. If all these things are put together, the phenomena are seen to be very unlike what would be presented by a forgery, to say nothing of the general overwhelming difficulty of imagining who could have been the writer of the Pastoral Epistles, if it were not St. Paul himself.

Concerning the contents of this Epistle, something has already been said in the article on TITUS. No very exact subdivision is either necessary or possible. After the introductory salutation

* The day on which Titus is commemorated is Jan. 15th in the Latin Calendar, and Aug. 27th in the Greek.

which has marked peculiarities (i. 1-4), Titus is enjoined to appoint suitable presbyters in the Cretan Church, and specially such as shall be sound in doctrine and able to refute error (5-9). The Apostle then passes to a description of the coarse character of the Cretans, as testified by their own writers, and the mischief caused by Judaizing error among the Christians of the island (10-16). In opposition to this, Titus is to urge sound and practical Christianity on all classes (ii. 1-10), on the older men (ii. 2), on the older women, and especially in regard to their influence over the younger women (3-5), on the younger men (6-8), on slaves (9, 10), taking heed meanwhile that he himself is a pattern of good works (ver. 7). The grounds of all this are given in the free grace which trains the Christian to self-denying and active piety (11, 12), in the glorious hope of Christ's second advent (ver. 13), and in the atonement by which He has purchased us to be His people (ver. 14). All which lessons Titus is to urge with fearless decision (ver. 15). Next, obedience to rulers is enjoined, with gentleness and forbearance towards all men (iii. 1, 2), these duties being again rested on our sense of past sin (ver. 3), and on the gift of new spiritual life and free justification (4-7). With these practical duties are contrasted those idle speculations which are to be carefully avoided (8, 9); and with regard to those men who are positively heretical, a peremptory charge is given (10, 11). Some personal allusions then follow: Artemas or Tychicus may be expected at Crete, and on the arrival of either of them Titus is to hasten to join the Apostle at Nicopolis, where he intends to winter; Zenas the lawyer also, and Apollas, are to be provided with all that is necessary for a journey in prospect (12, 13). Finally, before the concluding messages of salutation, an admonition is given to the Cretan Christians, that they give heed to the duties of practical useful piety (14, 15).

As to the time and place and other circumstances of the writing of this Epistle, the following scheme of filling up St. Paul's movements after his first imprisonment will satisfy all the conditions of the case:—We may suppose him (possibly after accomplishing his long-projected visit to Spain) to have gone to Ephesus, and taken voyages from thence, first to Macedonia and then to Crete, during the former to have written the First Epistle to Timothy, and after returning from the latter to have written the Epistle to Titus, being at the time of despatching it on the point of starting for Nicopolis, to which place he went, taking Miletus and Corinth on the way. At Nicopolis we may conceive him to have been finally apprehended and taken to Rome, whence he wrote the Second Epistle to Timothy. Other possible combinations may be seen in Birks (*Horae Apostolicæ*, at the end of his edition of the *Horae Paulinas*, pp. 299-301), and in Wordsworth (*Greek Testament*, Pt. iii. pp. 418, 421). It is an undoubted mistake to endeavour to insert this Epistle in any period of that part of St. Paul's life which is recorded in the Acts of the Apostles. There is in this writing that unmistakable difference of style (as compared with the earlier Epistles) which associates the Pastoral Letters with one another, and with the latest period of St. Paul's life; and it seems strange that this should have been so slightly observed by good scholars and exact chronologists, e. g. Archdn. Evans (*Script. Biog.* iii. 327-333), and Wieseler (*Chronol. des Apost. Zeitalt.* 329-355), who, speaking

proaching the subject in very different ways, agree in thinking that this letter was written at Ephesus (between 1 and 2 Cor.), when the Apostle was in the early part of his third missionary journey (Acts xix.).

The following list of Commentaries on the Pastoral Epistles may be useful for 1 and 2 Tim., as well as for Titus. Besides the general Patristic commentaries on all St. Paul's Epistles (Chrysostom, Theodoret, Theophylact, Jerome, Bede, Alcinus), the Mediaeval (Oecumenius, Euthymius, Aquinas), those of the Reformation period (Luther, Melancthon, Calvin), the earlier Roman Catholic (Justinian, Cornelius à Lapide, Estius), the Protestant commentaries of the 17th century (Cocceius, Grotius, &c.), and the recent annotations on the whole Greek Testament (Rosenmüller, De Wette, Alford, Wordsworth, &c.), the following on the Pastoral Epistles may be specified:—Daillé, *Exposition* (1 Tim. Genév. 1661, 2 Tim. Genév. 1659, Tit. Par. 1655); Heydenreich, *Die Pastoralbriefe Pauli erläutert* (Hadam. 1828, 1828); Flatt, *Vorlesungen über die Br. P. an Tim. u. Tit.* (Tüb. 1831); Mack (Roman Catholic), *Comm. über die Pastoralbriefe* (Tüb. 1836); Matthies, *Erklärung der Pastoralbr.* (Greifsw. 1840); Huther (part of Meyer's Commentary, Gött. 1850); Wiesinger (in continuation of Olshausen, Königsb. 1850), translated (with the exception of 2 Tim.) in Clark's *Foreign Theolog. Lib.* (Edinb. 1851), and especially Eliott (*Pastoral Epistles*, 2nd Ed. London, 1861), who mentions in his Preface a Danish commentary by Bp. Möller, and one in modern Greek, *Συνέκδημος ἑρμηνείας*, by Coray (Par. 1831). Besides these, there are commentaries on 1 Tim. and 2 Tim. by Mosheim (Hamb. 1755), and Leo (Lips. 1837, 1850), on 1 Tim. by Fleischmann (Tüb. 1791), and Wegecheider (Gött. 1810), on 2 Tim. by J. Barlow and T. Hall (Lond. 1632 and 1858), and by Brückner (Hafn. 1829), on Tit. by T. Taylor (London, 1868), Van Haven (Hal. 1742) and Kuinoel (*Comment. Theol. ed. Velthusen, Rupertil et Kuinoel*). To these must be added what is found in the *Critici Sacri*, *Suppl.* ii., v., vii., and a still fuller list is given in Darling's *Cyclopaedia Bibliographica*, Pt. ii. Subjects, pp. 1535, 1555, 1574. [J. S. H.]

TIZITE, THE (תִּזְיִת; Vat. and FA. *Ἰεζαί*; Alex. *Θεσσαί*: *Thosaites*). The designation of Joha, the brother of Jediel and son of Shimri, one of the heroes of David's army named in the supplementary list of 1 Chr. xi. 45. It occurs nowhere else, and nothing is known of the place or family which it denotes. [G.]

TO'AH (תּוֹאֵה; Alex. *Θουή*: *Thohu*). A Kohathite Levite, ancestor of Samuel and Heman (1 Chr. vi. 34 [19]). The name as it now stands may be a fragment of "Nahath" (comp. ver. 26, 34).

TOB-ADONIJAH (טוֹב אֲדוֹנִיָּה; *Twabado-nias*: *Thobadonias*). One of the Levites sent by Jehoshaphat through the cities of Judah to teach the Law to the people (2 Chr. xvii. 8).

TOB, THE LAND OF (אֶרֶץ טוֹב; *terra Tob*). The place in which Jephthah took refuge when expelled from home by his half brother (Judg. xi. 3); and where he remained at the head of a band of freebooters, till he was brought back by the sheikhs of Gilead (ver. 5).

* The word is תִּזְיִת, which exactly answers to sheikhs 5 F

The narrative implies that the land of Tob was not far distant from Gilead: at the same time, from the nature of the case, it must have lain out towards the eastern deserts. It is undoubtedly mentioned again in 2 Sam. x. 6, 8, as one of the petty Aramite kingdoms or states which supported the Ammonites in their great conflict with David. In the Authorized Version the name is presented *literatim* as *Ishboba*, i. e. Man of Tob, meaning, according to a common Hebrew idiom, the "men of Tob." After an immense interval it appears again in the Maccabean history (1 Macc. v. 13). Tob or Tobie was then the abode of a considerable colony of Jews, numbering at least a thousand males. In 2 Macc. xii. 17 its position is defined very exactly as at or near Charax, 750 stadia from the strong town Caspia, though, as the position of neither of these places is known, we are not thereby assisted in the recovery of Tob. [TOBIE; TUBIENI.]

Ptolemy (*Geogr.* v. 19) mentions a place called *Θαύβα* as lying to the S.W. of Zobah, and therefore possibly to the E. or N.E. of the country of Ammon proper. In Stephanus of Byzantium and in Eusebius (*Doctr. Numm.* iii. 352), the names Tubai and Tabeni occur.

No identification of this ancient district with any modern one has yet been attempted. The name *Tell Dobbe* (Burekhardt, *Syria*, April 25), or, as it is given by the latest explorer of those regions, *Tell Dibbe* (Wetzstein, *Map*), attached to a ruined site at the south end of the *Leja*, a few miles N.W. of *Kenducut*, and also that of *ed Dob*, some twelve hours east of the mountain *el Kuleib*, are both suggestive of Tob. But nothing can be said, at present, as to their connexion with it. [G.]

TOBIAH (תוביה: *Tobias*, *Tuβia*: *Tobia*).

1. "The children of Tobiah" were a family who returned with Zerubbabel, but were unable to prove their connexion with Israel (Ezr. ii. 60; Neh. vii. 62).

2. (*Tobias*.) "Tobiah the slave, the Ammonite," played a conspicuous part in the rancorous opposition made by Sanballat the Moabite and his adherents to the rebuilding of Jerusalem. The two races of Moab and Ammon found in these men fit representatives of that hereditary hatred to the Israelites which began before the entrance into Canaan, and was not extinct when the Hebrews had ceased to exist as a nation. The horrible story of the origin of the Moabites and Ammonites, as it was told by the Hebrews, is an index of the feeling of repulsion which must have existed between these hostile families of men. In the dignified rebuke of Nehemiah it received its highest expression: "ye have no portion, nor right, nor memorial in Jerusalem" (Neh. ii. 20). But Tobiah, though a slave (Neh. ii. 10, 19), unless this is a title of opprobrium, and an Ammonite, found means to ally himself with a priestly family, and his son Johanan married the daughter of Meshullam the son of Berecniah (Neh. vi. 18). He himself was the son-in-law of Shechaniah the son of Arah (Neh. vi. 17), and these family relations created for him a strong faction among the Jews, and may have had something to do with the stern measures which Ezra found it necessary to take to repress the intermarriages with foreigners. Even a grandson of the high-priest Eliashib had married a daughter of Sanballat (Neh. xiii. 28). In xiii. 4 Eliashib is said to have been allied to Tobiah, which would imply a relationship of some kind between Tobiah and San-

ballat, though its nature is not mentioned. The evil had spread so far that the leaders of the party were compelled to rouse their religious antipathies by reading from the law of Moses the strong prohibition that the Ammonite and the Moabite should not come into the congregation of God for ever (Neh. xiii. 1). Ewald (*Gesch.* iv. 173) conjectures that Tobiah had been a page ("slave") at the Persian court, and, being in favour there, had been promoted to be satrap of the Ammonites. But it almost seems that against Tobiah there was a stronger feeling of animosity than against Sanballat, and that this animosity found expression in the epithet "the slave," which is attached to his name. It was Tobiah who gave venom to the pitying sorrow of Sanballat (Neh. iv. 3), and provoked the bitter cry of Nehemiah (Neh. iv. 4, 5); it was Tobiah who kept up communications with the false Jews, and who sent letters to put their leaders to fear (Neh. vi. 17, 19); but his crowning act of insult was to take up his residence in the Temple in the chamber which Eliashib had prepared for him in defiance of the Mosaic statute. Nehemiah's patience could no longer contain itself, "therefore," he says, "I cast forth all the household stuff of Tobiah out of the chamber," and with this summary act Tobiah disappears from history (Neh. vi. 7, 8). [W. A. W.]

TOBIAS. The Greek form of the name TOBIAH or TOBIJAH. 1. (*Tuβias*: *Thobias*, *Tobias*.) The son of Tobit, and central character in the book of that name. [TOBIT, BOOK OF.]

2. The father of Hyrcanus, apparently a man of great wealth and reputation at Jerusalem in the time of Seleucus Philopator (cir. B.C. 187). In the high-priestly schism which happened afterwards [MENELAUS], "the sons of Tobias" took a conspicuous part (Joseph. *Ant.* xii. 5, §1). One of these, Joseph, who raised himself by intrigue to high favour with the Egyptian court, had a son named Hyrcanus (Joseph. *Ant.* xii. 4, §2). It has been supposed that this is the Hyrcanus referred to in 2 Macc. iii. 11; and it is not impossible that, for some unknown reason (as in the case of the Maccabees), the whole family were called after their grandfather, to the exclusion of the father's name. On the other hand, the natural recurrence of names in successive generations makes it more probable that the Hyrcanus mentioned in Josephus was a nephew of the Hyrcanus in 2 Macc. (Comp. Ewald, *Gesch. d. V. J.* iv. 309; Grimm, *ad Macc.* l. c.) [B. F. W.]

TOBIE, THE PLACES OF (*τοῦ τοῦ Τωβίου*: *in locis Tobin*: *Syr. Tobia*). A district which in the time of the Maccabees was the seat of an extensive colony of Jews (1 Macc. v. 13). It is in all probability identical with the Land of Tob mentioned in the history of Jephthah. [See also TUBIENI.]

TOBIEL (תוביאל: "the goodness of God": *Tuβiāla*: *Thobiel*, *Tobiel*), one father of Tobit and grandfather of Tobias (1), Tob. i. 1. The name may be compared with Tabeal (*Tuβeāla*). [TARAEAL. [B. F. W.]

TOBIJAH (תוביה: *Tuβias*: *Thobias*). 1. One of the Levites sent by Jehoshaphat to teach the Law in the cities of Judah (2 Chr. xvii. 8).

2. (*ὁ χρηματιστὴς τῶν Τωβιαν*: *Tobian*.) One of the Captivity in the time of Zechariah, in whose presence the prophet was commanded to take crowns of silver and gold and put them on the heads of

Jochua the high-priest (Zech. vi. 10). In ver. 14 his name appears in the shortened form תוביָּהּ.

Rosenmüller conjectures that he was one of a deputation who came up to Jerusalem, from the Jews who still remained in Babylon, with contributions of gold and silver for the Temple. But Maurer considers that the offerings were presented by Tobijah and his companions, because the crowns were commanded to be placed in the Temple as a memorial of their visit and generosity. [W. A. W.]

TOBIT (תוביָּהּ, תובֵּיָּהּ, תובִּיָּהּ: Vulg. *Tobias*; Vet. Lat. *Tobi*, *Thobi*, *Tobis*, the son of Tobiel; תוביָּהּ; *Thobiel*, *Tobiel*) and father of Tobias (Tob. i. 1, &c.). [TOBIT, BOOK OF.] The name appears to answer to תוביָּהּ, which occurs frequently in later times (Fritzsche, *ad Tob.* i. 1), and not (as Welte, *Eint.* 65) to תובִּיָּהּ; yet in that case תובֵּיָּהּ, according to the analogy of *Aeufs* (תֵּיָּהּ), would have been the more natural form. The etymology of the word is obscure. Ilgen translates it simply "my goodness;" Fritzsche, with greater probability, regards it as an abbreviation of תוביָּהּ, comparing Μαλχι (Luke iii. 24, 28), יִיִּי, &c. (*ad Tob.* i. c.). The form in the Vulgate is of no weight against the Old Latin, except so far as it shows the reading of the Chaldaic text which Jerome used, in which the identity of the names of the father and son is directly affirmed (i. 9, Vulg.). [B. F. W.]

TOBIT, BOOK OF. The book is called simply Tobit (תובֵּיָּהּ, תובֵּיָּהּ) in the old MSS. At a later time the opening words of the book, Βίβλος λόγων Τωβίτ, were taken as a title. In Latin MSS. it is styled *Tobis*, *Liber Tobis*, *Liber Tobiae* (Sabatier, 706), *Tobit et Tobias*, *Liber utriusque Tobiae* (Fritzsche, *Eint.* §1).

1. *Text.*—The book exists at present in Greek, Latin, Syriac, and Hebrew texts, which differ more or less from one another in detail, but yet on the whole are so far alike that it is reasonable to suppose that all were derived from one written original, which was modified in the course of translation or transcription. The Greek text is found in two distinct recensions. The one is followed by the mass of the MSS. of the LXX., and gives the oldest text which remains. The other is only fragmentary, and manifestly a revision of the former. Of this, one piece (i. 1–11, 2) is contained in the Cod. Sinaiticus (= Cod. Frid. Augustanus), and another in three later MSS. (44, 106, 107, Holmes and Parsons; vi. 9–xif.; Fritzsche, *Exeg. Handb.* 71–110). The Latin texts are also of two kinds. The common (Vulgate) text is due to Jerome, who formed it by a very hasty revision of the old Latin version with the help of a Chaldee copy, which was translated into Hebrew for him by an assistant who was master of both languages. The treatment of the text in this recension is very arbitrary, as might be expected from the description which Jerome gives of the mode in which it was made (comp. *Praef. in Tob.* §4); and it is of very little critical value, for it is impossible to distinguish accurately the different elements which are incorporated in it. The ante-Hieronymian (Vetus Latina) texts are far more valuable, though these present considerable variations among themselves, as generally happens, and represent the revised and not the original Greek text. Sabatier has given one text from these MSS. of the eighth century, and also added various readings from another MS., formerly in the possession

of Christina of Sweien, which contains a distinct version of a considerable part of the book, i.–vi. 12 (*Bibl. Lat.* ii. p. 706). A third text is found in the quotations of the *Speculum*, published by Mai, *Spicileg. Rom.* ix. 21–23. The Hebrew versions are of no great weight. One, which was published by P. Fagius (1542) after a Constantinopolitan edition of 1517, is closely moulded on the common Greek text without being a servile translation (Fritzsche, §4). Another, published by S. Munster (1542, &c.), is based upon the revised text, but is extremely free, and is rather an adaptation than a version. Both these versions, with the Syriac, are reprinted in Walton's Polyglott, and are late Jewish works of uncertain date (Fritzsche, *l. c.* Ilgen, ch. xvii. ff.) The Syriac version is of a composite character. As far as ch. vii. 9 it is a close rendering of the common Greek text of the LXX., but from this point to the end it follows the revised text, a fact which is noticed in the margin of one of the MSS.

2. *Contents.*—The outline of the book is as follows. Tobit, a Jew of the tribe of Naphtali, who strictly observed the law and remained faithful to the Temple-service at Jerusalem (i. 4–8), was carried captive to Assyria by Shalmaneser. While in captivity he exerted himself to relieve his countrymen, which his favourable position at court (ἡγορευτής, i. 13, "purveyor") enabled him to do, and at this time he was rich enough to lend ten talents of silver to a countryman, Gabael of Iteges in Media. But when Sennacherib succeeded his father Shalmaneser, the fortune of Tobit was changed. He was accused of burying the Jews whom the king had put to death, and was only able to save himself, his wife Anna, and his son Tobias, by flight. On the accession of Esarhaddon he was allowed to return to Nineveh, at the intercession of his nephew, Achior, who occupied a high place in the king's household (i. 22); but his zeal for his countrymen brought him into a strange misfortune. As he lay one night in the court of his house, being unclean from having buried a Jew whom his son had found strangled in the market-place, sparrows "muted warm dung into his eyes," and he became blind. Being thus disabled, he was for a time supported by Achior, and after his departure (read ἐπορεύθη, ii. 10) by the labour of his wife. On one occasion he falsely accused her of stealing a kid which had been added to her wages, and in return she reproached him with the miserable issue of all his righteous deeds. Grieved by her taunts he prayed to God for help; and it happened that on the same day Sara, his kinswoman (vi. 10, 11), the only daughter of Raguel, also sought help from God against the reproaches of her father's household. For seven young men wedded to her had perished on their marriage night by the power of the evil spirit Asmodeus [ΑΣΜΟΔΕΥΣ]; and she thought that she should "bring her father's old age with sorrow unto the grave" (iii. 10). So Raphael was sent to deliver both from their sorrow. In the mean time Tobit called to mind the money which he had lent to Gabael, and despatched Tobias, with many wise counsels, to reclaim it (iv.). On this Raphael (under the form of a kinsman, Azarias) offered himself as a guide to Tobias on his journey to Media, and they "went forth both, and the young man's dog with them," and Anna was comforted for the absence of her son (v.). When they reached the Tigris, Tobias was commanded by Raphael to take "the heart, and liver, and gall" of "a fish which leaped out of the river and would have

devoured him," and instructed how to use the first two against Asmodeus, for Sara, Raphael said, was appointed to be his wife (vi.). So when they reached Ecbatana they were entertained by Raguel, and in accordance with the words of the angel, Sara was given to Tobias in marriage that night; and Asmodeus was "driven to the utmost parts of Egypt," where "the angel bound him" (vii., viii.). After this Raphael recovered the loan from Gabriel (ix.), and Tobias then returned with Sara and half her father's goods to Nineve (x.). Tobit, informed by Anna of their son's approach, hastened to meet him. Tobias by the command of the angel applied the fish's gall to his father's eyes and restored his sight (xi.). After this Raphael addressing to both words of good counsel revealed himself, and "they saw him no more" (xii.). On this Tobit expressed his gratitude in a fine psalm (xiii.); and he lived to see the long prosperity of his son (xiv. 1, 2). After his death Tobias, according to his instruction, returned to Ecbatana, and "before he died he heard of the destruction of Nineve," of which "Jonas the prophet spake" (xiv. 15, 4).

3. *Historical character.*—The narrative which has been just sketched, seems to have been received without inquiry or dispute as historically true till the rise of free criticism at the Reformation. Luther, while warmly praising the general teaching of the book (comp. §6), yet expressed doubts as to its literal truth, and these doubts gradually gained a wide currency among Protestant writers. Bertholdt (*Eiml.* §579) has given a summary of alleged errors in detail (e.g. i. 1, 2, of *Naphtali*, compared with 2 K. xv. 29; vi. 9, Ragel, said to have been founded by Sel. Nicator), but the question turns rather upon the general complexion of the history than upon minute objections, which are often captious and rarely satisfactory (comp. Welte, *Eiml.* pp. 84-84). This, however, is fatal to the supposition that the book could have been completed shortly after the fall of Nineveh (B.C. 606; Tob. xiv. 15), and written in the main some time before (Tob. xii. 20). The whole tone of the narrative bespeaks a later age; and above all, the doctrine of good and evil spirits is elaborated in a form which belongs to a period considerably posterior to the Babylonian Captivity (Asmodeus, iii. 8, vi. 14, viii. 3; Raphael, xii. 15). The incidents again, are completely isolated, and there is no reference to them in any part of Scripture (the supposed parallels, Tob. iv. 15 (16) || Matt. vii. 12; Tob. xiii. 16-18 || Rev. xxi. 18, are mere general ideas), nor in Josephus or Philo. And though the extraordinary character of the details, as such, is no objection against the reality of the occurrences, yet it may be fairly urged that the character of the alleged miraculous events, when taken together, is alien from the general character of such events in the historical books of Scripture, while there is nothing exceptional in the circumstances of the persons, as in the case of Daniel [DANIEL, vol. i. p. 394], which might serve to explain this difference. On all these grounds it may certainly be concluded that the narrative is not simply history, and it is superfluous to inquire how far it is based upon facts. It is quite possible that some real occurrences, preserved by tradition, furnished the basis of the narrative, but it does not follow by any means that the elimination of the extraordinary details will leave behind pure history (so Ilgen). As the book stands it is a distinctly didactic narrative. Its point lies in the moral lesson which it conveys, and not in the incidents.

The incidents furnish lively pictures of the truths which the author wished to inculcate, but the lessons themselves are independent of them. Nor can any weight be laid on the minute exactness with which apparently unimportant details are described (e.g. the genealogy and dwelling-place of Tobit, i. 1, 2; the marriage festival, viii. 20, xi. 18, 19, quoted by Ilgen and Welte), as proving the reality of the events, for such particularity is characteristic of Eastern romance, and appears again in the Book of Judith. The writer in composing his story necessarily observed the ordinary form of a historical narrative.

4. *Original Language and Revisions.*—In the absence of all direct evidence, considerable doubt has been felt as to the original language of the book. The superior clearness, simplicity, and accuracy of the LXX. text prove conclusively that this is nearer the original than any other text which is known, if it be not, as some have supposed (Jahn and Fritzsche doubtfully), the original itself. Indeed, the arguments which have been brought forward to show that it is a translation are far from conclusive. The supposed contradictions between different parts of the book, especially the change from the first (i.-vii. 6) to the third person (viii. 7-xiv.), from which Ilgen endeavoured to prove that the narrative was made up of distinct Hebrew documents, carelessly put together, and afterwards rendered by one Greek translator, are easily explicable on other grounds; and the alleged mistranslations (iii. 6; iv. 19, &c.) depend rather on errors in interpreting the Greek text, than on errors in the text itself. The style, again, though harsh in parts, and far from the classical standard, is not more so than some books which were undoubtedly written in Greek (e.g. the Apocalypse); and there is little, if any thing, in it which points certainly to the immediate influence of an Aramaic text. (i. 4, *οἱ υἱοὶ τοῦ γενέας τοῦ ἀλφειοῦ*, comp. Eph. iii. 21; i. 22, *ἐκ δευτέρου*; iii. 15, *ὅσα τί μοι ἦν*; v. 15, *τίνα σοι ἔσονται μισθὸν διδοῦναι*; xiv. 3, *προσέθετο φοβέσθαι*, &c.) To this it may be added that Origen was not acquainted with any Hebrew original (*Ep. ad Afric.* 13); and the Chaldee copy which Jerome used, as far as its character can be ascertained, was evidently a later version of the story. On the other hand, there is no internal evidence against the supposition that the Greek text is a translation. Some difficulties appear to be removed by this supposition (e.g. ix. 6); and if the consideration of the date and place of the composition of the book favour this view, it may rightly be admitted. The Greek offers some peculiarities in vocabulary:—i. 6, *πρωτοκουρία*, i.e. *ἡ ἀρχὴ τῶν κερμάτων*, Deut. xviii. 4; i. 7, *ἀποπαρίσκειν*; i. 21, *ἐκλογιστὴς*; ii. 3, *στραγγαλῶν*, &c.; and in construction, xiii. 7, *ἀγαλλιάσθαι τὴν μεγαλοσύνην*; xiv. 4, *ἐκασθεσθαι τινι*; vi. 19, *προσάγειν τινι* (intrans.); vi. 6, *ἐγγίξεν ἐν*, &c. But these furnish no argument on either side.

The various texts which remain have already been enumerated. Of these, three varieties may be distinguished: (1) the LXX.; (2) the revised Greek text, followed by the Old Latin in the main, and by the Syriac in part; and (3) the Vulgate Latin. The Hebrew versions have no critical value. (1) The LXX. is followed by A. V., and has been already characterized as the standard to which the others are to be referred. (2) The revised text, first brought distinctly into notice by Fritzsche (*Eiml.* §5), is based on the LXX. Greek, which is

at one time extended, and then compressed, with a view to greater fulness and clearness. A few of the variations in the first chapter will indicate its character:—Ver. 2, *Θεσβης*, add. *δουλω θυσμῶν ἁλλου ἐξ ἀριστερῶν Φογάρ*; ver. 8, *οἷς καθήκει*, given at length *τοῖς ὀφθαλμοῖς καὶ ταῖς χεῖραϊς*, c. v. l.; ver. 18, *ἐκ τῆς Ἰουδαίας*, add. *ἐν ἡμέραις τῆς κρίσεως ἥς ἐποίησεν ἐξ αὐτοῦ ὁ βασιλεὺς τοῦ οὐρανοῦ περὶ τῶν βλασφημιῶν ὧν ἐβλάσφημουν*; ver. 23, *οἰνοχόος*, ἀρχιεπισκοπός. (3) The Vulgate text was derived in part from a Chaldaean copy which was translated by word of mouth into Hebrew for Jerome, who in turn dictated a Latin rendering to a secretary. (*Proef. in Tob.*: . . . Exigitis ut librum Chaldaeorum sermone conscriptum ad Latinam stylium traham . . . Fecimus desiderio vestro, non tamen meo studio . . . Et quia vicina est Chaldaeorum lingua sermoni Hebraico, utriusque linguae peritissimum loquacem reperimus unius diei laborem arripui, et quidquid ille mihi Hebraica verbis expressit, hoc ego, accito notario, sermonibus Latinis exposui.) It is evident that in this process Jerome made some use of the Old Latin version, which he follows almost verbally in a few places: iii. 3-6; iv. 8, 7, 11, 23, &c.; but the greater part of the version seems to be an independent work. On the whole, it is more concise than the Old Latin; but it contains interpolations and changes, many of which mark the asceticism of a late age: ii. 12-14 (parallel with Job); iii. 17-23 (expansion of iii. 14); vi. 17 ff. (expansion of vi. 18); ix. 11, 12; xii. 13 (et quia acceptus eras Deo, necesse fuit ut tentatio probaret te).

5. *Date and place of Composition.*—The data for determining the age of the book and the place where it was compiled are scanty, and consequently very different opinions have been entertained on these points. Eichhorn (*Eind.* pp. 408 ff.) places the author after the time of Darius Hystaspis without fixing any further limit of age or country. Bertholdt, insisting (wrongly) on the supposed date of the foundation of Hages (RAGES), brings the book considerably later than Seleucus Nicator (cir. B.C. 250-200), and supposes that it was written by a Galilaean or Babylonian Jew, from the prominence given to those districts in the narrative (*Eind.* pp. 2499, 2500). De Wette leaves the date undetermined, but argues that the author was a native of Palestine (*Eind.* §311). Ewald (*Geschichte*, iv. 233-238) fixes the composition in the far East, towards the close of the Persian period (cir. 350 B.C.). This last opinion is almost certainly correct. The superior and inferior limits of the date of the book seem to be defined with fair distinctness. On the one hand the detailed doctrine of evil spirits points clearly to some time after the Babylonian Captivity; and this date is definitely marked by the reference to a new Temple at Jerusalem, "not like the first" (Tob. xiv. 5; comp. Ex. iii. 12). On the other hand, there is nothing to show that the Jews were threatened with any special danger when the narrative was written (as in Judith), and the manner in which Media is mentioned (xiv. 4) implies that the Persian monarchy was still strong. Thus its date will fall somewhere within the period between the close of the work of Nehemiah and the invasion of Alexander (cir. B.C. 430-334). The contents of the book furnish also some clue to the place where it was written. Not only is there an accurate knowledge of the scenes described (Ewald, 233), but the incidents have a local colouring. The continual reference to an evening and the burial of the dead,

and the stress which is laid upon the right performance of worship at Jerusalem by those who are afar off (i. 4), can scarcely be due to an effort of imagination, but must rather have been occasioned by the immediate experience of the writer. This would suggest that he was living out of Palestine, in some Persian city, perhaps Babylon, where his countrymen were exposed to the capricious cruelty of heathen governors, and in danger of neglecting the Temple-service. Glimpses are also given of the presence of the Jews at court, not only in the history (Tob. i. 22), but also in direct counsel (xii. 7, *μυστήριον βασιλέως καλὸν κρίναι*), which better suit such a position than any other (comp. xiii. 3). If these conjectures as to the date and place of writing be correct, it follows that we must assume the existence of a Hebrew or Chaldaean original. And even if the date of the book be brought much lower, to the beginning of the second century B.C., which seems to be the latest possible limit, it is equally certain that it must have been written in some Aramaic dialect, as the Greek literature of Palestine belongs to a much later time; and the references to Jerusalem seem to show that the book could not have been composed in Egypt (i. 4, xiv. 5), an inference, indeed, which may be deduced from its general contents. As long as the book was held to be strict history it was supposed that it was written by the immediate actors, in accordance with the direction of the angel (xii. 20). The passages where Tobit speaks in the first person (i.-iii. 6, xiii.) were assigned to his authorship. The intervening chapters to Tobit or Tobias. The description of the close of the life of Tobit to Tobias (xiv. 1-11); and the concluding verses (xiv. 12-15) to one of his friends who survived him. If, however, the historical character of the narrative is set aside, there is no trace of the person of the author.

6. *History.*—The history of the book is in the main that of the LXX. version. While the contents of the LXX., as a whole, were received as canonical, the Book of Tobit was necessarily included without further inquiry among the books of Holy Scripture. [CANON.] The peculiar merits of the book contributed also in no small degree to gain for it a wide and hearty reception. There appears to be a clear reference to it in the Latin version of the Epistle of Polycarp (c. 10, *elemosyna de morte liberat*, Tob. iv. 10, xii. 8). In a scheme of the Ophites, if there be no corruption in the text, Tobias appears among the prophets (Iren. i. 30, 11). Clement of Alexandria (*Strom.* ii. 23, §139, *τοῦτο βραχέως ἢ γραφῇ δεδήλωκεν εὐαγγελία*, Tob. iv. 16) and Origen practically use the book as canonical; but Origen distinctly notices that neither Tobit nor Judith were received by the Jews, and rests the authority of Tobit on the usage of the Churches (*Ep. ad Afric.* 13, *Ἐβραῖοι τῇ Τωβίῳ οὐ χρῶνται . . . ἀλλ', ἐπεὶ χρῶνται τῇ Τωβίῳ αὐτοὶ ἐκκλησίαι . . . De Orat.* i. §14, *τῇ τοῦ Τωβίτ βίβλῳ ἀποκρίνουσιν οἱ ἐκ περιτομῆς ἐς μὴ ἐκ διαθήκης . . .*). Even Athanasius when writing without any critical regard to the Canon quotes Tobit as Scripture (*Apol. c. Arian.* §11, *ἐς γὰρ γράμματα*, Tob. xii. 7); but when he gives a formal list of the Sacred Books, he definitely excludes it from the Canon, and places it with other apocryphal books among the writings which were "to be read by those who were but just entering on Christian teaching, and desirous to be instructed in the rules of piety" (*Ep. Fest.* p. 1177, ed. Migne). In the Latin Church Tobit found a much more de-

sided acceptance. Cyprian, Hilary, and Lucifer, quote it as authoritative (Cyp. *De Urat. D. vi.* 32; Hil. Pict. *In Psalm. cxxix.* 7; yet comp. *Prolog. in Ps. xv.*; Lucif. *Pro Athan.* i. p. 871). Augustine includes it with the other apocrypha of the LXX. among "the books which the Christian Church received" (*De Doctr. Christ.* ii. 8),^a and in this he was followed by the mass of the later Latin fathers [comp. CANON, vol. i. p. 256, &c.]. Ambrose in especial wrote an essay on Tobias, treating of the evils of usury, in which he speaks of the book as "prophetic" in the strongest terms (*De Tobid.* 1, 1; comp. *Hexaem.* vi. 4). Jerome however, followed by Rufinus, maintained the purity of the Hebrew Canon of the O. T., and, as has been seen, treated it very summarily (for later authorities see CANON). In modern times the moral excellence of the book has been rated highly, except in the heat of controversy. Luther pronounced it, if only a fiction, yet "a truly beautiful, wholesome, and profitable fiction, the work of a gifted poet. . . . A book useful for Christian reading" (ap. Fritzsche, *Eintl.* §11). The same view is held also in the English Church. A passage from Tobit is quoted in the Second Book of Homilies as the teaching "of the Holy Ghost in Scripture" (*Of Almsdeeds.* ii. p. 391, ed. Corrie); and the Prayer-book offers several indications of the same feeling of respect for the book. Three verses are retained among the sentences used at the Offertory (Tob. iv. 7-9); and the Preface to the Marriage Service contains a plain adaptation of Jerome's version of Tob. vi. 17 (*Hic namque qui conjugium ita suscipiunt ut Deum a se et a sua mente excludant, et suae libidini ita vacent, sicut equus et mulus quibus non est intellectus, habet potestatem daemonum super eos*). In the First Book of Edward VI. a reference to the blessing of Tobias and Sara by Raphael was retained in the same service from the old office in place of the present reference to Abraham and Sarah; and one of the opening clauses of the Litany, introduced from the Sarum Breviary, is a reproduction of the Vulgate version of Tob. iii. 3 (*Ne viuidictam sumas de peccatis meis, neque reminiscaris delicta mea vel parentum meorum*).

7. *Religious character.*—Few probably can read the book in the LXX. text without assenting heartily to the favourable judgment of Luther on its merits. Nowhere else is there preserved so complete and beautiful a picture of the domestic life of the Jews after the Return. There may be symptoms of a tendency to formal righteousness of works, but as yet the works are painted as springing from a living faith. The devotion due to Jerusalem is united with definite acts of charity (i. 6-8) and with the prospect of wider blessings (xiii. 11). The giving of alms is not a mere scattering of wealth, but a real service of love (i. 16, 17, ii. 1-7, iv. 7-11, 16), though at times the emphasis which is laid upon the duty is exaggerated (as it seems) from the special circumstances in which the writer was placed (xii. 9, xiv. 10). Of the special precepts one (iv. 15, *ὁ μακρὸς ὑπὲρ πονηρίας*; contains the negative side of the golden rule of conduct (Matt. vii. 12), which in this partial form is found among

the maxims of Confucius. But it is chiefly in the exquisite tenderness of the portraiture of domestic life that the book excels. The parting of Tobias and his mother, the consolation of Tobit (v. 17-22), the affection of Raguel (vii. 4-3), the anxious waiting of the parents (x. 1-7), the son's return (ix. 4, xi.), and even the unjust suspiciousness of the sorrow of Tobit and Anna (ii. 11-14) are painted with a simplicity worthy of the best times of the patriarchs. Almost every family relation is touched upon with natural grace and affection: husband and wife, parent and child, kinsmen, near or distant, master and servant, are presented in the most varied action, and always with life-like power (ii. 13, 14, v. 17-22, vii. 16, viii. 4-8, x. 1-7, xi. 1-13, i. 22, ii. 10, vii. 3-8, v. 14, 15, xii. 1-5, &c.). Prayer hallows the whole conduct of life (iv. 19, vi. 17, viii. 5-8, &c.); and even in distress there is confidence that in the end all will be well (iv. 6, 14, 19), though there is no clear anticipation of a future personal existence (iii. 6). The most remarkable doctrinal feature in the book is the prominence given to the action of spirits, who, while they are conceived to be subject to the passions of men and material influences (*Asmodeus*), are yet not affected by bodily wants, and manifested only by their own will (*Raphael*, xii. 19). Powers of evil (*δαμόνιον, πνεῦμα πονηρὸν*, iii. 8, 17, vi. 7, 14, 17) are represented as gaining the means of injuring men by sin [*ASMODEUS*], while they are driven away and bound by the exercise of faith and prayer (viii. 2, 3). On the other hand *Raphael* comes among men as "the healer" (comp. Dillmann, *Das Buch Henoch*, c. 20), and by the mission of God (iii. 17, xii. 18), restores those whose good actions he has secretly watched (xii. 12, 13), and "the remembrance of whose prayers he has brought before the Holy One" (xii. 12). This ministry of intercession is elsewhere expressly recognized. Seven holy angels, of whom *Raphael* is one, are specially described as those "which present the prayers of the Saints, and which go in and out before the glory of God" (xii. 15). It is characteristic of the same sense of the need of some being to interpose between God and man that singular prominence is given to the idea of "the glory of God," before which these archangels appear as priests in the holiest place (viii. 15, xii. 15); and in one passage "the angel of God" (v. 16, 21) occupies a position closely resembling that of the *Wohi* in the Targums and *Philo* (*De mut. nom.* §13, &c.). Elsewhere blessing is rendered to "all the holy angels" (xi. 14, *ἐλόγημένοι* as contrasted with *ἐλόγηστές*; comp. Luke i. 42), who are themselves united with "the elect" in the duty of praising God for ever (viii. 15). This mention of "the elect" points to a second doctrinal feature of the book, which it shares with *Baruch* alone of the apocryphal writings, the firm belief in a glorious restoration of the Jewish people (xiv. 5, xiii. 9-18). But the restoration contemplated is national, and not the work of a universal Saviour. The Temple is described as "consecrated and built for all ages" (i. 4), the feasts are "an everlasting decree" (i. 6), and when it is restored "the streets of Jerusalem shall say . . . Blessed be God which hath

^a This is expressed still more distinctly in the *Speculum* (p. 1127, C., ed. Par. 1836): "Non sicut omittendi et hi [libri] quos quidem ante Salvatoris adventum constata esse conscriptos, sed eos non receptos a Judaeis recipi tamen a Christianis ecclesia." The preface from which these words are taken is followed by quotations from *Wisdom Ecclesiasticus* and *Tobit*.

^b In this connexion may be noticed the incident, which is without a parallel in Scripture, and seems more natural to the West than to the East, the companionship of the dog with Tobias (v. 16, xl. 4; comp. *Ambr. Hexaem.* vi. 4, 17: "Molae specie bestiae sanctae Raphael, angelus Tobiae juvenis . . . ad relationem gratiae eruditus affectum").

extolled it for ever" (xiii. 18). In all there is not the slightest trace of the belief in a personal Messiah.

8. Comparisons have often been made between the Book of Tobit and Job, but from the outline which has been given it is obvious that the resemblance is only superficial, though Tob. ii. 14 was probably suggested by Job ii. 9, 10, while the differences are such as to mark distinct periods. In Tobit the sorrows of those who are afflicted are laid at once in prayer before God, in perfect reliance on His final judgment, and then immediately relieved by Divine interposition. In Job the real conflict is in the soul of the sufferer, and his relief comes at length with humiliation and repentance (xiii. 6). The one book teaches by great thoughts; the other by clear maxims translated into touching incidents. The contrast of Tobit and Judith is still more instructive. These books present two pictures of Jewish life and feeling, broadly distinguished in all their details, and yet mutually illustrative. The one represents the exile prosperous and even powerful in a strange land, exposed to sudden dangers, cherishing his national ties, and looking with unshaken love to the Holy City, but still mainly occupied by the common duties of social life; the other portrays a time of reproach and peril, when national independence was threatened, and a righteous cause seemed to justify unscrupulous valour. The one gives the popular ideal of holiness of living, the other of courage in daring. The one reflects the current feeling at the close of the Persian rule, the other during the struggles for freedom.

9. The first complete edition of the book was by K. D. Igen (*Die Gesch. Tobit's . . . mit . . . einer Einleitung versehen*, Jen. 1800), which, in spite of serious defects due to the period at which it was published, contains the most full discussion of the contents. The edition of Fritzsche (*Exeget. Handb.* ii., Leipzig, 1853) is concise and scholarlike, but leaves some points without illustration. In England the book, like the rest of the Apocrypha, seems to have fallen into most undeserved neglect. [B. F. W.]

TO'CHEN (תֹּחֶן: *Ṭokhā*; Alex. *Θοχχαν*: *Thochen*). A place mentioned (1 Chr. iv. 32 only) amongst the towns of Simeon. In the parallel list of Josh. (xix. 7) there is nothing corresponding to Tochen. The LXX., however, adds the name Thacha between Remmon and Ether in the latter passage; and it is not impossible that this may be the remnant of a Tochen anciently existing in the Hebrew text, though it has been considered as an indication of Telem. [G.]

TOGARMAH (תֹּגַרְמָה: *Ṭogarmā*; *Thogor-mā*). A son of Gomer, and brother of Ashkenaz and Riphath (Gen. x. 3). It has been already shown that Togarmah, as a geographical term, is connected with Armenia,* and that the subsequent notices of the name (Ez. xxvii. 14, xxviii. 6) accord with this view. [ARMENIA.] It remains for us to examine into the ethnology of the Armenians with a view to the position assigned to them in the Moaic table. The most decisive statement respecting them in ancient literature is furnished by Herodotus, who says that they were Phrygian colonists, that they were armed in the Phrygian fashion, and were associated with the Phrygians under the same commander (Herod. vii. 73). The

remark of Eudæus (Steph. Byz. s. v. *Ἀρμενία*) that the Armenians resemble the Phrygians in many respects in language (τῆ φωνῆ παλὰ φρυγίων) tends in the same direction. It is hardly necessary to understand the statement of Herodotus as implying more than a common origin of the two peoples; for, looking at the general westward progress of the Japhetic races, and on the central position which Armenia held in regard to their movements, we should rather infer that Phrygia was colonized from Armenia, than *vice versa*. The Phrygians were indeed reputed to have had their first settlements in Europe, and thence to have crossed into Asia (Herod. vii. 73), but this must be regarded as simply a retrograde movement of a section of the great Phrygian race in the direction of their original home. The period of this movement is fixed subsequently to the Trojan war (Strab. xiv. p. 680), whereas the Phrygians appear as an important race in Asia Minor at a far earlier period (Strab. vii. p. 321; Herod. vii. 8, 11). There can be little doubt but that they were once the dominant race in the peninsula, and that they spread westward from the confines of Armenia to the shores of the Aegean. The Phrygian language is undoubtedly to be classed with the Indo-European family. The resemblance between words in the Phrygian and Greek tongues was noticed by the Greeks themselves (Plat. *Cratyl.* p. 410), and the inscriptions still existing in the former are decidedly Indo-European (Rawlinson's *Herod.* i. 686). The Armenian language presents many peculiarities which distinguish it from other branches of the Indo-European family; but these may be accounted for partly by the physical character of the country, and partly by the large amount of foreign admixture that it has experienced. In spite of this, however, no hesitation is felt by philologists in placing Armenian among the Indo-European languages (Pott, *Etym. Forsch.* Introd. p. 32; Dieffenbach, *Orig. Europ.* p. 43). With regard to the ancient inscriptions at Wan, some doubt exists; some of them, but apparently not the most ancient, are thought to bear a Turanian character (Layard's *Nin. and Bab.* p. 402; Rawlinson's *Herod.* i. 652); but, even were this fully established, it fails to prove the Turanian character of the population, inasmuch as they may have been set up by foreign conquerors. The Armenians themselves have associated the name of Togarmah with their early history in that they represent the founder of their race, Haik, as a son of Thorgom (Moses Choren. i. 4, §9-11). [W. L. B.]

TO'HU (תֹּהוּ: *Ṭohē*; Alex. *Θοού*: *Thohis*). An ancestor of Samuel the prophet, perhaps the same as TOAH (1 Sam. i. 1; comp. 1 Chr. vi. 34).

TO'Í (תּוֹי: *Ṭohū*; Alex. *Θοι*: *Thoi*). King of Hamath on the Orontes, who, after the defeat of his powerful enemy the Syrian king Hadadezer by the army of David, sent his son Joram, or Hadoram, to congratulate the victor and do him homage with presents of gold and silver and brass (2 Sam. viii. 9, 10). "For Hadadezer had wars with Toi," and Ewald (*Gesch.* iii. 199) conjectures that he may have even reduced him to a state of vassalage. There was probably some policy in the conduct of Toi, and his object may have been, as Josephus says

* The name itself may possibly have reference to Armenia, for, according to Grimm (*Gesch. Deutsch.* Spr. ii. 261, Togarmah comes from the Sanscrit *toka*, "tribe"

and *Arma* = Armenia, which he further connects with Heralino the son of Maunus.

it was (*Ant.* vi. 5, §4), to buy off the conqueror with the "vessels of ancient workmanship" (*σκευὴ τῆς ἀρχαίας κατασκευῆς*) which he presented.

TOLA (תּוֹלָא: *Θωλά*: *Thola*). 1. The first-born of Issachar, and ancestor of the Tolaites (*Gen.* xlv. 13; *Num.* xiv. 23; 1 *Chr.* vii. 1, 2), who in the time of David numbered 22,600 men of valour.

2. Judge of Israel after Abimelech (*Judg.* x. 1, 2). He is described as "the son of Puah, the son of Dodo, a man of Issachar." In the LXX. and Vulg. he is made the son of Abimelech's uncle, Dodo (דודו) being considered an appellative. But Gideon, Abimelech's father, was a Manassite. Tola judged Israel for twenty-three years at Shamir in Mount Ephraim, where he died and was buried.

TOLAD (תּוֹלָד: *Θουλάδμ*; Alex. *Θωλάδ*: *Tholad*). One of the towns of Simeon (1 *Chr.* iv. 29), which was in the possession of the tribe up to David's reign, probably to the time of the census taken by Joab. In the lists of Joshua the name is given in the fuller form of EL-TOLAD. [G.]

TOLAITES, THE (תּוֹלָיִת: *δ Θωλαί*: *Tholaitae*). The descendants of Tola the son of Issachar (*Num.* xvi. 23).

TOL'BANES (Τολβάνης: *Tolbanes*). **TELEM**, one of the porters in the days of Ezra (1 *Esd.* ix. 25).

TOMB. Although the sepulchral arrangements of the Jews have necessarily many points of contact with those of the surrounding nations, they are still on the whole—like everything else that people did—so essentially different, that it is most unsafe to attempt to elucidate them by appealing to the practices of other races.

It has been hitherto too much the fashion to look to Egypt for the prototype of every form of Jewish art; but if there is one thing in the Old Testament more clear than another, it is the absolute antagonism between the two peoples, and the abhorrence of everything Egyptian that prevailed from first to last among the Jewish people. From the burial of Sarah in the cave of Machpelah (*Gen.* xxiii. 19) to the funeral rites prepared for Dorcas (*Acts* ix. 37), there is no mention of any sarcophagus, or even coffin, in any Jewish burial. No pyramid was raised—no separate hypogeum of any individual king, and what is most to be regretted by modern investigators, no inscription or painting which either recorded the name of the deceased, or symbolized the religious feeling of the Jews towards the dead. It is true of course that Jacob dying in Egypt was embalmed (*Gen.* l. 2), but it was only in order that he might be brought to be entombed in the cave at Hebron, and Joseph as a naturalized Egyptian and a ruler in the land was embalmed; and it is also mentioned as something exceptional that he was put into a coffin, and was so brought by the Israelites out of the land and laid with his forefathers. But these, like the burning of the body of Saul [see **BURIAL**], were clearly exceptional cases.

Still less were the rites of the Jews like those of the Pelasgi or Etruscans. With that people the graves of the dead were, or were intended to be, in every respect similar to the homes of the living. The lucumo lay in his robes, the warrior in his armour, on the bed on which he had reposed in life, surrounded by the furniture, the vessels, and the

ornaments which had adorned his dwelling when alive, as if he were to live again in a new world with the same wants and feelings as before. Besides this, no tall stèle, and no sepulchral mound, have yet been found in the hills or plains of Judaea nor have we any hint either in the Bible or Josephus of any such having existed which could be traced to a strictly Jewish origin.

In very distinct contrast to all this, the sepulchral rites of the Jews were marked with the same simplicity that characterized all their religious observances. The body was washed and anointed (*Mark* xiv. 8, xvi. 1; *John* xix. 39, &c.), wrapped in a clean linen cloth, and borne without any funeral pomp to the grave, where it was laid without any ceremonial or form of prayer. In addition to this, with kings and great persons, there seems to have been a "great burning" (2 *Chr.* xvi. 14, xxi. 19 *Jer.* xxxiv. 5): all these being measures more suggested by sanitary exigencies than by any banking after ceremonial pomp.

This simplicity of rite led to what may be called the distinguishing characteristic of Jewish sepulchres—the *deep loculus*—which, so far as is now known, is universal in all purely Jewish rock-cut tombs, but hardly known elsewhere. Its form will be understood by referring to the annexed diagram, representing the forms of Jewish sepulture.

No. 1.—Diagram of Jewish Sepulchre.

In the apartment marked A, there are twelve such loculi, about 2 feet in width by 3 feet high. On the ground-floor these generally open on the level of the floor; when in the upper storey, as at C, on a ledge or platform, on which the body might be laid to be anointed, and on which the stones might rest which closed the outer end of each loculus.

The shallow loculus is shown in chamber B, but was apparently only used when sarcophagi were employed, and therefore, so far as we know, only during the Graeco-Roman period, when foreign customs came to be adopted. The shallow loculus would have been singularly inappropriate and inconvenient, where an unembalmed body was laid out to decay—as there would evidently be no means of shutting it off from the rest of the catacomb. The deep loculus on the other hand was as strictly conformable with Jewish customs, and could easily be closed by a stone fitted to the end and luted into the groove which usually exists there.

This fact is especially interesting as it affords a key to much that is otherwise hard to be understood in certain passages in the New Testament. Thus in *John* xi. 39, Jesus says, "Take away the stone," and (*ver.* 40) "they took away the stone" without difficulty, apparently which could hardly have

been the case had it been such a rock as would be required to close the entrance of a cave. And chap. xx. 1, the same expression is used, "the stone is taken away;" and though the Greek word in the other three Evangelists certainly implies that it was rolled away, this would equally apply to the stone at the mouth of the loculus, into which the Maries must have then stooped down to look in. In fact the whole narrative is infinitely more clear and intelligible if we assume that it was a stone closing the end of a rock-cut grave, than if we suppose it to have been a stone closing the entrance or door of a hypogeum. In the latter case the stone to close a door—say 6 feet by 3 feet, could hardly have weighed less than 3 or 4 tons, and could not have been moved without machinery.

There is one catacomb—that known as the "Tomb of the Kings"—which is closed by a stone rolling across its entrance; but it is the only one, and the immense amount of contrivance and fitting which it has required is sufficient proof that such an arrangement was not applied to any other of the numerous rock tombs around Jerusalem, nor could the traces of it have been obliterated had it anywhere existed. From the nature of the openings where they are natural caverns, and the ornamental form of their doorways where they are architecturally adorned, it is evident, except in this one instance, that they could not have been closed by stones rolled across their entrances; and consequently it seems only to be to the closing of the loculi that these expressions can refer. But until a more careful and more scientific exploration of these tombs is made than has hitherto been given to the public, it is difficult to feel quite certain on this point.

Although, therefore, the Jews were singularly free from the pomps and vanities of funeral magnificence, they were at all stages of their independent existence an eminently burying people.

From the time of their entrance into the Holy Land till their expulsion by the Romans, they seem to have attached the greatest importance to the possession of an undisturbed resting-place for the bodies of their dead, and in all ages seem to have shown the greatest respect, if not veneration, for the sepulchres of their ancestors. Few, however, could enjoy the luxury of a rock-cut tomb. Taking all that are known, and all that are likely to be discovered, there are not probably 500, certainly not 1000, rock-cut loculi in or about Jerusalem, and as that city must in the days of its prosperity have possessed a population of from 30,000 to 40,000 souls, it is evident that the bulk of the people must then, as now, have been content with graves dug in the earth; but situated as near the Holy Places as their means would allow their obtaining a place. The bodies of the kings were buried close to the Temple walls (Ezek. xliii. 7-9), and however little they may have done in their life, the place of their burial is carefully recorded in the Chronicles of the Kings, and the cause why that place was chosen is generally pointed out, as if that record was not only the most important event, but the final judgment on the life of the king.

Tombs of the Patriarchs.—Turning from these considerations to the more strictly historical part of the subject, we find that one of the most striking events in the life of Abraham is the purchase of the field of Ephron the Hittite at Hebron, in which was the cave of Machpelah, in order that he might therein bury Sarah his wife, and that it might be a sepulchre for himself and his children.

His refusing to accept the privilege of burying there as a gift when offered to him, shows the importance Abraham attached to the transaction, and his insisting on purchasing and paying for it (Gen. xxiii. 20), in order that it might be "made sure unto him for the possession of a burying-place." There he and his immediate descendants were laid 3700 years ago, and there they are believed to rest now; but no one in modern times has seen their remains, or been allowed to enter into the cave where they rest.

A few years ago, Signor Pierotti says, he was allowed, in company with the Pasha of Jerusalem, to descend the steps to the iron-grating that closes the entrance, and to look into the cave. What he seems to have seen was—that it was a natural cavern, untouched by the chisel and unaltered by art in any way. Those who accompanied the Prince of Wales in his visit to the Mosque were not permitted to see even this entrance. All they saw was the round hole in the floor of the Mosque which admits light and air to the cave below. The same round opening exists at *Nebi Samuel* in the roof of the reputed sepulchre of the Prophet Samuel, and at Jerusalem there is a similar opening into the tomb under the Dome of the rock. In the former it is used by the pious votaries to drop petitions and prayers into the tombs of patriarchs and prophets. The latter having lost the tradition of its having been a burying-place, the opening only now serves to admit light into the cave below.

Unfortunately none of those who have visited Hebron have had sufficient architectural knowledge to be able to say when the church or mosque which now stands above the cave was erected; but there seems no great reason for doubting that it is a Byzantine church erected there between the age of Constantine and that of Justinian. From such indications as can be gathered, it seems of the later period. On its floor are sarcophagi purporting to be those of the patriarchs; but, as is usual in Eastern tombs, they are only cenotaphs representing those that stand below, and which are esteemed too sacred for the vulgar to approach.

Though it is much more easy of access, it is almost as difficult to ascertain the age of the wall that encloses the sacred precincts of these tombs. From the account of Josephus (*B. J.* iv. 7), it does not seem to have existed in his day, or he surely would have mentioned it; and such a citadel could hardly fail to have been of warlike importance in those troublous times. Besides this, we do not know of any such enclosure encircling any tombs or sacred places in Jewish times, nor can we conceive any motive for so secluding these graves.

There are not any architectural mouldings about this wall which would enable an archaeologist to approximate its date; and if the beveling is assumed to be a Jewish arrangement (which is very far from being exclusively the case), on the other hand it may be contended that no buttressed wall of Jewish masonry exists anywhere. There is in fact nothing known with sufficient exactness to decide the question, but the probabilities certainly tend towards a Christian or Saracenic origin for the whole structure both internally and externally.

Aaron died on the summit of Mount Hor (*Num.* xx. 28, xxiii. 29), and we are led to infer he was buried there, though it is not so stated; and we have no details of his tomb which would lead us to suppose that anything existed there earlier than the Mahometan *Kubr* that now crowns the hill over-

making Petra, and it is at the same time extremely doubtful whether *that* is the Mount Hor where the High-Priest died.

Moses died in the plains of Moab (Deut. xxxiv. 6), and was buried there, "but no man knoweth his sepulchre to this day," which is a singular utterance, as being the only instance in the Old Testament of a sepulchre being concealed, or of one being admitted to be unknown.

Joshua was buried in his own inheritance in Timnath-Serah (Josh. xxiv. 30), and Samuel in his own house at Ramah (1 Sam. xxi. 1), an expression which we may probably interpret as meaning in the garden attached to his house, as it is scarcely probable it would be the dwelling itself. We know, however, so little of the feelings of the Jews of that age on the subject that it is by no means improbable but that it may have been in a chamber or loculus attached to the dwelling, and which, if closed by a stone carefully cemented into its place, would have prevented any annoyance from the circumstance. Joab (1 K. ii. 34) was also buried "in his own house in the wilderness." In fact it appears that from the time when Abraham established the burying-place of his family at Hebron till the time when David fixed that of his family in the city which bore his name, the Jewish rulers had no fixed or favourite place of sepulture. Each was buried on his own property, or where he died, without much caring either for the sanctity or convenience of the place chosen.

Tomb of the Kings.—Of the twenty-two kings of Judah who reigned at Jerusalem from 1048 to 590 B.C., eleven, or exactly one-half, were buried in one hypogeum in the "city of David." The names of the kings so lying together were David, Solomon, Rehoboam, Abijah, Asa, Jehoshaphat, Ahaziah, Amaziah, Jotham, Hezekiah, and Josiah, together with the good priest Jehoiada. Of all these it is merely said that they were buried in "the sepulchres of their fathers" or "of the kings" in the city of David, except of two—Asa and Hezekiah. Of the first it is said (2 Chr. xvi. 14), "they buried him in his own sepulchres which he had made for himself in the city of David, and laid him in the bed [loculus?], which was filled with sweet odours and divers spices prepared by the apothecaries' art, and they made a very great burning for him." It is not quite clear, however, from this, whether this applies to a new chamber attached to the older sepulchre, or to one entirely distinct, though in the same neighbourhood. Of Hezekiah it is said (2 Chr. xxxii. 33), they buried him in "the chiefest [or highest] of the sepulchres of the sons of David," as if there were several apartments in the hypogeum, though it may merely be that they excavated for him a chamber above the others, as we find frequently done in Jewish sepulchres.

Two more of these kings (Jehoram and Joash) were buried also in the city of David, "but not in the sepulchres of the kings." The first because of the sore diseases of which he died (2 Chr. xxi. 20); the second apparently in consequence of his disastrous end (2 Chr. xxiv. 25); and one king, Uzziah (2 Chr. xxvi. 23), was buried with his fathers in the "field of the burial of the kings," because he was a leper. All this evinces the extreme care the Jews took in the selection of the burying-places of their kings, and the importance they attached to the record. It should also be borne in mind that the highest honour which could be bestowed on the good priest Jehoiada (2 Chr. xxiv. 16)

was that "they buried him in the city of David among the kings, because he had done good in Israel, both toward God and toward His House."

The passage in Nehemiah iii. 16, and in Ezekiel xliv. 7, 9, together with the reiterated assertion of the Books of Kings and Chronicles that these sepulchres were situated in the city of David, leave no doubt but that they were on Zion [see JERUSALEM], or the Eastern Hill, and in the immediate proximity of the Temple. They were in fact certainly within that enclosure now known as the "Haram Area;" but if it is asked on what exact spot, we must pause for further information before a reply can be given.

This area has been so altered by Roman, Christian, and Moslem, during the last eighteen centuries, that, till we can explore freely below the surface, much that is interesting must be hidden from us. It is quite clear, however, that the spot was well known during the whole of the Jewish period, inasmuch as the sepulchres were again and again opened as each king died; and from the tradition that Hyrcanus and Herod opened these sepulchres (*Ant.* xiii. 8, §4; xvi. 7, §1). The accounts of these last openings are, it must be confessed, somewhat apocryphal, resting only on the authority of Josephus; but they prove at least that he considered there could be no difficulty in finding the place. It is very improbable, however, from what we know of the extreme simplicity of the Jewish sepulchral rites, that any large sum should have been buried in David's tomb, and have escaped not only the Persian invaders, but their own necessitous rulers in the time of their extremest need. It is much more probable that Hyrcanus borrowed the treasure of the Temple, and invented this excuse; whereas the story of Herod's descent is so like that told more than 1000 years afterwards, by Benjamin of Tudela, that both may be classed in the same category. It was a secret transaction, if it took place, regarding which rumour might fashion what wondrous tales it pleased, and no one could contradict them; but his having built a marble stele (*Ant.* xvi. 7, §1) in front of the tomb may have been a fact within the cognisance of Josephus, and would at all events serve to indicate that the sepulchre was rock-cut, and its site well known.

So far as we can judge from this and other indications, it seems probable there was originally a natural cavern in the rock in this locality, which may afterwards have been improved by art, and at the sides of which loculi were sunk, in which the bodies of the eleven kings and of the good High-Priest were laid, without sarcophagi or coffins, but "wound in linen clothes with the spices, as the manner of the Jews is to bury" (John xix. 40).

Besides the kings above enumerated, Manasseh was, according to the Book of Chronicles (2 Chr. xxxiii. 20) buried in his own house, which the Book of Kings (2 K. xxi. 18) explains as the "garden of his own house, the garden of Uzza," where his son Amon was buried, also. It is said, in his own sepulchre (ver. 26), but we have nothing that would enable us to indicate where this was; and Ahaz, the wicked king, was, according to the Book of Chronicles (2 Chr. xxviii. 27) "buried in the city, even in Jerusalem, and they brought him not into the sepulchres of the kings of Israel." The fact of these three last kings having been idolaters, though one reformed, and their having all three been buried apparently in the city, proves what importance the Jews attached to the locality of the sepulchre, but

No. 2.—Plan of the "Tomb of the Prophets." From De Saulcy.

also tends to show that burial within the city, or the enclosure of a dwelling, was not so repulsive to their feelings as is generally supposed. It is just possible that the rock-cut sepulchre under the western wall of the present Church of the Holy Sepulchre may be the remains of such a cemetery as that in which the wicked kings were hurried.

This, with many other cognate questions, must be relegated for further information; for up to the present time we have not been able to identify one single sepulchral excavation about Jerusalem which can be said with certainty to belong to a period anterior to that of the Maccabees, or, more correctly, to have been used for burial before the time of the Romans.

The only important hypogeum which is wholly Jewish in its arrangements, and may consequently belong to an earlier or to any epoch, is that known as the Tomb of the Prophets in the western flank of the Mount of Olives. It has every appearance of having originally been a natural cavern improved by art, and with an external gallery some 140 feet in extent, into which twenty-seven deep or Jewish loculi open. Other chambers and loculi have been commenced in other parts, and in the passages there are spaces where many other graves could have been located, all which would tend to show that it had been disused before completed, and consequently was very modern; but be this as it may, it has no architectural mouldings—no sarcophagi or shallow loculi, nothing to indicate a foreign origin, and may therefore be considered, if not an early, at least as the most essentially Jewish of the sepulchral excavations in this locality—every other important sepulchral excavation being adorned with architectural features and details betraying most unmistakably their Greek or Roman origin, and fixing their date consequently as subsequent to that

of the Maccabees; or in other words, like every other detail of pre-Christian architecture in Jerusalem, they belong to the 140 years that elapsed from the advent of Pompey till the destruction of the city by Titus.

Graeco-Roman Tombs.—Besides the tombs above enumerated, there are around Jerusalem, in the Valleys of Hinnom and Jehoshaphat, and on the plateau to the north, a number of remarkable rock-cut sepulchres, with more or less architectural decoration, sufficient to enable us to ascertain that they are all of nearly the same age, and to assert with very tolerable confidence that the epoch to which they belong must be between the introduction of Roman influence and the destruction of the city by Titus. The proof of this would be easy if it were not that, like everything Jewish, there is a remarkable absence of inscriptions which can be assumed to be integral. The excavations in the Valley of Hinnom with Greek inscriptions are comparatively modern, the inscriptions being all of Christian import and of such a nature as to render it extremely doubtful whether the chambers were sepulchral at all, and not rather the dwellings of ascetics, and originally intended to be used for this purpose. These, however, are neither the most important nor the most architectural—indeed none of those in that valley are so remarkable as those in the other localities just enumerated. The most important of those in the Valley of Hinnom is that known as the "Retreat-place of the Apostles." It is an unfinished excavation of extremely late date, and many of the others look much more like the dwellings for the living than the resting-places of the dead.

In the village of Siloam there is a monolithic cell of singularly Egyptian aspect, which De Saulcy (*Voyage autour de la Mer Morte*, ii. 306) assumes to be a chapel of Solomon's Egyptian wife. It is

probably of very much more modern date, and is more Assyrian than Egyptian in character; but as he is probably quite correct in stating that it is not sepulchral, it is only necessary to mention it here in order that it may not be confounded with those that are so. It is the more worthy of remark as one of the great difficulties of the subject arises from travelers too readily assuming that every cutting in the rock must be sepulchral. It may be so in Egypt, but it certainly was not so at Cyrene or Petra, where many of the excavations were either temples or monastic establishments, and it certainly was not universally the case at Jerusalem, though our information is frequently too scanty to enable us always to discriminate exactly to which class the cutting in the rock may belong.

The principal remaining architectural sepulchres may be divided into three groups.

First, those existing in the Valley of Jehoshaphat, and known popularly as the Tombs of Zechariah, of St. James, and of Absalom.

Second, those known as the Tombs of the Judges, and the so-called Jewish tomb about a mile north of the city.

Third, that known as the Tombs of the Kings, about half a mile north of the Damascus Gate.

Of the three first-named tombs the most southern

No. 3.—So called "Tomb of Zechariah."

is known as that of Zechariah, a popular name which there is not even a shadow of tradition

No. 4.—Section of Rylobase at Khorsabad.

to justify. It consists of a square solid basement, measuring 18 feet 6 inches each way, and 20 feet high to the top of the cornice. On each face are four engaged Ionic columns between antae, and these are surmounted, not by an Egyptian cornice, as is usually asserted, but by one of purely Assyrian type, such as is found at Khorsabad (Woodcut No. 4). As the Ionic or voluted order came also from Assyria, this example is in

fact a more pure specimen of the Ionic order than any found in Europe, where it was always used by the Greeks with a quasi-Doric cornice. Notwithstanding this, in the form of the volutes—the egg-and-dart moulding beneath, and every detail—it is so distinctly Roman that it is impossible to assume that it belongs to an earlier age than that of their influence.

Above the cornice is a pyramid rising at rather a sharp angle, and hewn like all the rest out of the solid rock. It may further be remarked that only the outward face, or that fronting Jerusalem, is completely finished, the other three being only blocked out (De Saulcy, ii. 303), a circumstance that would lead us to suspect that the works may have been interrupted by the fall of Jerusalem, or some such catastrophe, and this may possibly also account for there being no sepulchre on its rear, if such be really the case.

To call this building a tomb is evidently a misnomer, as it is absolutely solid—hewn out of the living rock by cutting a passage round it. It has no internal chambers, nor even the semblance of a doorway. From what is known of the explorations carried on by M. Renan about Byblus, we should expect that the tomb, properly so called, would be an excavation in the passage behind the monolith—but none such has been found, probably it was never looked for—and that this monolith is the stela or indicator of that fact. If it is so, it is very singular, though very Jewish, that any one should take the trouble to carve out such a monument without putting an inscription or symbol on it to mark its destination or to tell in whose honour it was erected.

The other, or so-called Tomb of Absalom, figured in vol. i. p. 14, is somewhat larger, the base being about 21 feet square in plan, and probably 23 or 24

No. 5.—Angle of Tomb of Absalom. From De Sauter.

to the top of the cornice. Like the other, it is of the Roman Ionic order, surmounted by a cornice of the

type; but between the pillars and the cornice a frieze, unmistakably of the Roman Doric order, is introduced, so Roman as to be in itself quite sufficient to fix its epoch. It is by no means clear whether it had originally a pyramidal top like its neighbour. The existence of a square blocking above the cornice would lead us to suspect it had not; at all events, either at the time of its excavation or subsequently, this was removed, and the present very peculiar termination erected, raising its height to over 60 feet. At the time this was done a chamber was excavated in the base, we must assume for sepulchral purposes, though how a body could be introduced through the narrow hole above the cornice is by no means clear, nor, if inserted, how disposed of in the two very narrow loculi that exist.

The great interest of this excavation is that immediately in rear of the monolith we do find just such a sepulchral cavern as we should expect. It is called the Tomb of Jehoshaphat, with about the same amount of discrimination as governed the nomenclature of the others, but is now closed by the rubbish and stones thrown by the pious at the Tomb of the Unfaithful Son, and consequently its internal arrangements are unknown; but externally it is crowned by a pediment of considerable beauty, and in the same identical style as that of the Tomb of the Judges, mentioned further on—showing that these two at least are of the same age, and this one at least must have been subsequent to the excavation of the monolith; so that we may feel perfectly certain that the two groups are of one age, even if it should not be thought quite clear what that age may be.

The third tomb of this group, called that of St. James, is situated between the other two, and is of

No. 6.—Plan of Tomb of St. James.

a very different character. It consists (see Plan) of a verandah with two Doric pillars in antis, which may be characterised as belonging to a very late Greek order rather than a Roman example. Behind this screen are several apartments, which in another locality we might be justified in calling a rock-cut monastery appropriated to sepulchral purposes, but in Jerusalem we know so little that it is necessary to pause before applying any such designation. In the rear of all is an apartment, apparently unfinished, with three shallow loculi meant

* Pierotti, in his published Plan of Jerusalem, adds a sarcophagus chamber with shallow loculi, but as both sources and De Senicy omit this, it is probable the Italian

for the reception of sarcophagi, and so indicating a post-Jewish date for the whole or at least for that part of the excavation.

The hypogeum known as the Tombs of the Judges is one of the most remarkable of the catacombs around Jerusalem, containing about sixty deep loculi, arranged in three storeys; the upper storeys with ledges in front to give convenient access, and to support the stones that closed them; the lower flush with the ground: the whole, consequently, so essentially Jewish that it might be of any age if it were not for its distance from the town, and its architectural character. The latter, as before stated, is identical with that of the Tomb of Jehoshaphat, and has nothing Jewish about it. It might of course be difficult to prove this, as we know so little of what Jewish architecture really is; but we do know that the pediment is more essentially a Greek invention than any other part of their architecture, and was introduced at least not previously to the age of the Cypselidae, and this peculiar form not till long afterwards, and this particular example not till after an age when the debased Roman of the Tomb of Absalom had become possible.

No. 7.—Facade of the Tombs of the Judges.

The same remarks apply to the tomb without a name, and merely called "a Jewish Tomb," in this neighbourhood, with bevelled facets over its facade, but with late Roman Doric details at its angles, sufficient to indicate its epoch; but there is nothing else about these tombs requiring special mention.

Tombs of Herod.—The last of the great groups enumerated above is that known as the Tombs of the Kings—*Kebâr es Sultan*—or the Royal Caverns, so called because of their magnificence, and also because that name is applied to them by Josephus, who in describing the third wall mentions them (*B. J. v. 4, §2*). He states that "the wall reached as far as the Tower Psephinus, and then extended till it came opposite the Monuments (*μνημείων*) of Helena. It then extended further to a great length till it passed by the Sepulchral Caverns of the Kings," &c. We have thus first the Tower Psephinus, the site of which is very tolerably ascertained on the ridge above the Pool *Birket Manilla*; then the Monument of Helena, and then at some distance eastward these Royal Caverns.

They are twice again mentioned under the title of *Ῥαββου μνημείων*. First, when Titus, approaching from the north, ordered the ground to

is mistaken. We cut No. 1 is taken from his plan, but used as a diagram rather than as representing the exact facts of the case.

be cleared from Scopus—which is tolerably well known—up to those Monuments of Herod (*B. J.* v. 3, §2); and lastly in the description of the circumvallation (*B. J.* v. 12, §2), where they are mentioned after passing the Monument of Ananias and Pompey's Camp, evidently on the ridge where Paphlagnus afterwards stood, and on the north of the city.

These three passages refer as evidently to one and the same place, that no one would probably ever have doubted—especially when taken in conjunction with the architecture—but that these caverns were the tombs of Herod and his family, were it not for a curious contradiction of himself in the works of Josephus, which has led to considerable confusion. Herod died at Jericho, and the most probable account (*Ant.* xvii. 8, §3) would lead us to suppose (it is not so stated) that his body was brought to Jerusalem, where the funeral procession was formed on a scale and with a magnificence which would have been impossible at such a place as Jericho without long previous preparation; and it then goes on to say, “and so they went eight stadia to [the] Herodium, for there, by his own command, he was to be buried”—eight stadia, or one mile, being the exact distance between the royal palace and these tombs.

The other account (*B. J.* i. 33, §9) repeats the details of the procession, and nearly in the same words, but substitutes 200 for 8, which has led to the belief that he was buried at *Jebel Fureidis*, where he had erected a palace 60 stadia south of Jerusalem, and 170 from Jericho. Even then the procession must have passed through Jerusalem, and this hardly would have been the case without its being mentioned; but the great difficulty is that there is no hint anywhere else of Herod's intention to be buried there, and the most extreme improbability that he should wish to be interred so far from the city where all his predecessors were laid. Though it would be unpardonable to alter the text in order to meet any particular view, still when an author makes two statements in direct contradiction the one to the other, it is allowable to choose the most conformable with probability; and this, added to his assertion that Herod's Tombs were in this neighbourhood, seems to settle the question.

The architecture (Woodcut No. 8) exhibits the same ill-understood Roman Doric arrangements as

Fig. 8.—Facade of Herod's Tomb, from a Photograph.

are found in all these tombs, mixed with bunches of grapes which first appear on Maccabean coins, and

foliage which is local and peculiar, and, so far as anything is known elsewhere, might be of any age. Its connexion, however, with that of the Tombs of Jehoshaphat and the Judges fixes it to the same epoch.

The entrance doorway of this tomb is below the level of the ground, and concealed, as far as anything can be said to be so which is so architecturally adorned; and it is remarkable as the only instance of this quasi-concealment at Jerusalem. It is closed by a very curious and elaborate contrivance of a rolling stone, often described, but very clumsily answering its purpose. This also is characteristic of its age, as we know from Pausanias that the structural marble monument of Queen Helena of Adiabene was remarkable for a similar piece of misplaced ingenuity. Within, the tomb consists of a vestibule or entrance-hall about 20 feet square, from which three other square apartments open, each surrounded by deep loculi. These again possess a peculiarity not known in any other tomb about Jerusalem, of having a square apartment either beyond the head of the loculus or on one side; as, for instance (Woodcut No. 8), A A have their inner chambers A' A' within, but B and D, at B' B', on one side. What the purpose of these was it is difficult to guess, but at all events it was not Jewish.

But perhaps the most remarkable peculiarity of the hypogeum is the sarcophagus chamber D, in which two sarcophagi were found, one of which was brought home by De Sauley, and is now in the Louvre. It is of course quite natural that a Roman king who was buried with such Roman pomp should have adopted the Roman mode of sepulture; and if this and that of St. James are the only sarcophagi chambers at Jerusalem, this alone should settle the controversy; and all certainly tends to make it more and more probable that this was really the sepulchre of Herod.

If the sarcophagus now in the Louvre, which came from this chamber, is that of Herod, it is the most practical illustration that has yet come to light of a theory which has recently been forcing itself on the attention of antiquarians. According to this new view, it is not necessary that furniture, or articles which can be considered as such, should always follow the style of the architecture of the day. They must have done so always in Egypt, in Greece, or in the Middle Ages; but might have deviated from it at Rome, and may probably have done so at Jerusalem, among a people who had no art of their own, as was the case with the Jews. The discord in fact may not have been more offensive to them than the Louis Quatorze furniture is to us, with which we adorn our Classical and Gothic buildings with such cosmopolite impartiality. If this is so, the sarcophagus may have been made for Herod. If this hypothesis is not tenable, it may belong to any age from the time of the Maccabees to that of Justinian, most probably the latter, for it certainly is not Roman, and has no connexion with the architecture of these tombs.

Be this as it may, there seems no reason for doubting but that all the architectural tombs of Jerusalem belong to the age of the Romans, like everything that has yet been found either at Petra, Baalbec, Palmyra, or Damascus, or even among the stone cities of the Hauran. Throughout Syria, in fact, there is no important architectural example which is anterior to their day; and all the specimens which can be called Classical are strongly

FIG. 2.—Plan of Tomb of Herod. From De Sanley.

marked with the impress of the peculiar forms of Roman art.

Tomb of Helena of Adiabene.—There was one other very famous tomb at Jerusalem, which cannot be passed over in silence, though not one vestige of it exists—for the simple reason, that though Queen Helena of Adiabene was converted to the Jewish faith, she had not so fully adopted Jewish feelings as to think it necessary she should be buried under ground. On the contrary, we are told that "she with her brother were buried in the pyramids which she had ordered to be constructed at a distance of three stadia from Jerusalem" (*Ant. xx. 4, §3*). This is confirmed by Pausanias (*viii. 16*), who, besides mentioning the marble door of very apocryphal mechanism which closed its entrance, speaks of it as a *Táφος* in the same sense in which he understands the mausoleum at Halicarnassus to have been a structured tomb, which he could not have done if this were a cave, as some have supposed.

The specification of the locality by Josephus is so minute that we have no difficulty in ascertaining whereabouts the monument stood. It was situated outside the third wall, near a gate between the Tower Psephinus and the Royal Caverns (*B. J. v. 22*, and *v. 4, §2*). These last are perfectly known, and the tower with very tolerable approximate certainty, for it was placed on the highest point of the ridge between the hollow in which the Birket Mamilla is situated and the upper valley of the Kedron; they were consequently either exactly where marked on the plan in vol. i. p. 1018, or it may be a little more to the eastward.

They remained sufficiently entire in the 4th century to form a conspicuous object in the landscape, to be mentioned by Eusebius, and to be remarked by those who accompanied Sts. Paula (*Euseb. ii. 12*; Hieron. *Epitaph. Paulae*) on her journey to Jerusalem.

There is no difficulty in forming a tolerably dis-

tinct idea of what the appearance of this remarkable monument must have been, if we compare the words descriptive of it in the various authors who have mentioned it with the contemporary monuments in the Valley of Jehoshaphat. If we place together in a row three such monuments as the Tomb of Zechariah, or rather two such, with the monument of Absalom between them, we have such an edifice as will answer to the Pyramid of Josephus, the Taphos of Pausanias, the Stelée of Eusebius, or the Mausoleum of Jerome. But it need hardly be added, that not one of these expressions applies to an underground excavation. According to this view of the matter, the entrance would be under the Central Cippus, which would thus form the ante-room to the two lateral pyramids, in one of which Helena herself reposed, and in the other the remains of her brother.

Since the destruction of the city by Titus, none of the native inhabitants of Jerusalem have been in a position to indulge in much sepulchral magnificence, or perhaps had any taste for this class of display; and we in consequence find no rock-cut hypogæa, and no structural monuments that arrest attention in modern times. The people, however, still cling to their ancient cemeteries in the Valley of Jehoshaphat with a tenacity singularly characteristic of the East. The only difference being, that the erection of the Wall of Agrippa, which now forms the eastern boundary of the Haram Area, has pushed the cemetery further towards the Kedron, or at least cut off the upper and nobler part of it. And the contraction of the city on the north has enabled the tombs to approach nearer the limits of the modern town than was the case in the days when Herod the Great and Helena of Adiabene were buried "on the sides of the north."

The only remarkable exception to this assertion is that splendid Mausoleum which Constantine erected over what he believed to be the Tomb of

Christ, and which still exists at Jerusalem, known to Moslems as the Dome of the Rock; to Christians as the Mosque of Omar.

The arguments for its authenticity have already been sufficiently insisted upon in the article JERUSALEM, in the first volume, and its general form and position shown in the woodcut, p. 1022. It will not, therefore, be necessary to go over this ground again. Externally its appearance was very much altered by the repairs of Suleiman the Magnificent, when the city had returned to the possession of the Moslems after the retreat of the Crusaders, and it has consequently lost much of its original Byzantine character; but internally it remains very much as it was left by its founder; and is now—with the exception of a few Indian tombs—the most magnificent sepulchral monument in Asia, and is, as it ought to be, the most splendid Christian sepulchre in the world. [J. F.]

TONGUES, CONFUSION OF. The unity of the human race is most clearly implied, if not positively asserted, in the Mosaic writings. The general declaration, "So God created man in His own image, . . . male and female created He them" (Gen. i. 27), is limited as to the mode in which the act was carried out, by the subsequent narrative of the creation of the protoplast Adam, who stood alone on the earth amidst the beasts of the field, until it pleased Jehovah to create "an help meet for him" (Gen. ii. 22), out of the very substance of his body (Gen. ii. 22). From this original pair sprang the whole antediluvian population of the world, and hence the author of the Book of Genesis conceived the unity of the human race to be of the most rigid nature—not simply a generic unity, nor again simply a specific unity (for unity of species may not be inconsistent with a plurality of original centres), but a specific based upon a numerical unity, the species being nothing else than the enlargement of the individual. Such appears to be the natural meaning of the first chapters of Genesis, when taken by themselves—much more so when read under the reflected light of the New Testament; for not only do we meet with references to the historical fact of such an origin of the human race—e. g. in St. Paul's declaration that God "hath made of one blood every nation of men to dwell on all the face of the earth" (Acts xvii. 26)—but the same is evidently implied in the numerous passages which represent Jesus Christ as the counterpart of Adam in regard to the universality of His connection with the human race. Attempts have indeed been made to show that the idea of a plurality of original pairs is not inconsistent with the Mosaic writings; but there is a wide distinction between a view not inconsistent with, and a view drawn from, the words of the author: the latter is founded upon the facts he relates, as well as his mode of relating them; the former takes advantage of the weaknesses arising out of a concise or unmethodical style of composition. Even if such a view could be sustained in reference to the narrative of the original creation of man, it must inevitably fail in reference to the history of the repopulation of the world in the post-diluvian age; for whatever objections may be made

to the historical accuracy of the history of the Flood it is at all events clear that the historian believed in the universal destruction of the human race with the exception of Noah and his family, and consequently that the unity of the human race was once more reduced to one of a numerical character. To Noah the historian traces up the whole post-diluvian population of the world:—"These are the three sons of Noah: and of them was the whole earth overspread" (Gen. ix. 19).

Unity of language is assumed by the sacred historian apparently as a corollary of the unity of race. No explanation is given of the origin of speech, but its exercise is evidently regarded as coeval with the creation of man. No support can be obtained in behalf of any theory on this subject from the first recorded instance of its exercise ("Adam gave names to all cattle"), for the simple reason that this notice is introductory to what follows: "but for Adam there was not found an help meet for him" (Gen. ii. 20). It was not so much the intention of the writer to state the fact of man's power of speech, as the fact of the inferiority of all other animals to him, and the consequent necessity for the creation of woman. The proof of that inferiority is indeed most appropriately made to consist in the authoritative assignment of names, implying an act of reflection on their several natures and capacities, and a recognition of the offices which they were designed to fill in the economy of the world. The exercise of speech is thus most happily connected with the exercise of reflection, and the relationship between the inner act of the mind (*λογος ἐνδιδέκτος*) and the outward expression (*λογος προφορικός*) is fully recognized. Speech being thus inherent in man as a reflecting being, was regarded as handed down from father to son by the same process of imitation, by which it is still perpetuated. Whatever divergences may have arisen in the antediluvian period, no notice is taken of them, inasmuch as their effects were obliterated by the universal catastrophe of the Flood. The original unity of speech was restored in Noah, and would naturally be retained by his descendants as long as they were held together by social and local bonds. Accordingly we are informed that for some time "the whole earth was of one lip and the same words" (Gen. xi. 1), i. e. both the vocal sounds and the vocables were identical—an exhaustive, but not, as in the A. V., a tautologous description of complete unity. Disturbing causes were, however, early at work to dissolve this twofold union of community and speech. The human family^b endeavoured to check the tendency to separation by the establishment of a great central edifice, and a city which should serve as the metropolis of the whole world. They attempted to carry out this project in the wide plain of Babylonia, a locality admirably suited to such an object from the physical and geographical peculiarities of the country. The project was defeated by the interposition of Jehovah, who determined to "confound their language, so that they might not understand one another a speech." Contemporaneously with, and perhaps as the result of, this confusion

^a The force of the Apostle's statement is inadequately given in the A. V., which gives "for to dwell" as the result, instead of the direct object of the principal verb.

^b The project has been restricted by certain critics to the Hamites, or, at all events, to a mere section of the human race. This and various other questions arising

out of the narrative are discussed by Vitrings in his *Observ. Sacr.* l. i. §2-8; c. §1-4. Although the restriction above noticed is not irreconcilable with the text, it interferes with the ulterior object for which the narrative was probably inserted, viz., to reconcile the manifest diversity of language with the idea of an original unity

TONGUES, CONFUSION OF

of tongues, the people were scattered abroad from thence upon the face of all the earth, and the memory of the great event was preserved in the name Babel (= confusion). The ruins of the tower are identified by M. Oppert, the highest authority on Babylonian antiquities, with the basement of the great mound of *Birs-Nimrod*, the ancient Borsippa.*

Two points demand our attention in reference to this narrative, viz. the degree to which the confusion of tongues may be supposed to have extended, and the connection between the confusion of tongues and the dispersion of nations. (1.) It is unnecessary to assume that the judgment inflicted on the builders of Babel amounted to a loss, or even a suspension, of articulate speech. The desired object would be equally attained by a miraculous forestalment of those dialectical differences of language which are constantly in process of production, but which, under ordinary circumstances, require time and variations of place and habits to reach such a point of maturity that people are unable to understand one another's speech. The elements of the one original language may have remained, but so disguised by variations of pronunciation, and by the introduction of new combinations, as to be practically obliterated. Each section of the human family may have spoken a tongue unintelligible to the remainder, and yet containing a substratum which was common to all. Our own experience suffices to show how completely even dialectical differences render strangers unintelligible to one another; and if we further take into consideration the differences of habits and associations, of which dialectical differences are the exponents, we shall have no difficulty in accounting for the result described by the sacred historian. (2.) The confusion of tongues and the dispersion of nations are spoken of in the Bible as contemporaneous events. "So the Lord scattered them abroad" is stated as the execution of the Divine counsel, "Let us confound their language." The divergence of the various families into distinct tribes and nations ran parallel with the divergence of speech into dialects and languages, and thus the 10th chapter of Genesis is posterior in historical sequence to the events recorded in the 11th chapter. Both passages must be taken into consideration in any disquisition on the early fortunes of the human race. We propose therefore to inquire, in the first place, how far modern researches into the phenomena of language favour the idea that there was once a time when "the whole earth was of one speech and language;" and, in the second place, whether the ethnological views exhibited in the Mosaic table accord with the evidence furnished by history and language, both in regard to the special facts recorded in it, and in the general Scriptural view of a historical or, more properly, a gentile unity of the human race. These questions, though independent, yet exercise a reflexive influence on each other's results. Unity of speech does not necessarily involve unity of race, nor yet vice versa; but each enhances the probability of the other, and therefore the arguments derived from language, physiology, and history, may ultimately furnish a cumulative amount of probability which will fall but little below demonstration.

(A.) The advocate of the historical unity of language has to encounter two classes of opposing arguments; one arising out of the differences, the

TONGUES, CONFUSION OF 1537

other out of the resemblances of existing languages. On the one hand, it is urged that the differences are of so decisive and specific character as to place the possibility of a common origin wholly out of the question; on the other hand that the resemblances do not necessitate the theory of a historical unity, but may be satisfactorily accounted for on psychological principles. It will be our object to discuss the amount, the value, and the probable origin of the varieties exhibited by languages, with a view to meet the first class of objections. But before proceeding to this, we will make a few remarks on the second class, inasmuch as these, if established, would nullify any conclusion that might be drawn from the other.

A psychological unity is not necessarily opposed to a gentile unity. It is perfectly open to any theorist to combine the two by assuming that the language of the one protoplast was founded on strictly psychological principles. But, on the other hand, a psychological unity does not necessitate a gentile unity. It permits of the theory of a plurality of protoplasts, who under the influence of the same psychological laws arrived at similar independent results. Whether the phenomena of language are consistent with such a theory, we think extremely doubtful; certainly they cannot furnish the basis of it. The whole question of the origin of language lies beyond the pale of historical proof, and any theory connected with it admits neither of being proved nor disproved. We know, as a matter of fact, that language is communicated from one generation to another solely by force of imitation, and that there is no play whatever for the inventive faculty in reference to it. But in what manner the substance of language was originally produced, we do not know. No argument can be derived against the common origin from analogies drawn from the animal world, and when Professor Agassiz compares similarities of language with those of the cries of animals (*v. Bollen's Introd. to Gen.* ii. 278), he leaves out of consideration the important fact that language is not identical with sound, and that the words of a rational being, however originally produced, are perpetuated in a manner wholly distinct from that whereby animals learn to utter their cries. Nor does the internal evidence of language itself reveal the mystery of its origin; for though a very large number of words may be referred either directly or mediately to the principle of onomatopoeia, there are others, as, for instance, the first and second personal pronouns, which do not admit of such an explanation. In short, this and other similar theories cannot be reconciled with the intimate connexion evidently existing between reason and speech, and which is so well expressed in the Greek language by the application of the term *λόγος* to each, reason being nothing else than inward speech, and speech nothing else than outward reason, neither of them possessing an independent existence without the other. As we conceive that the psychological, as opposed to the gentile, unity involves questions connected with the origin of language, we can only say that in this respect it falls outside the range of our inquiry.

Reverting to the other class of objections, we proceed to review the extent of the differences observable in the languages of the world, in order to ascertain whether they are such as to preclude the possibility of a common origin. Such a review must necessarily be imperfect, both from the mag-

* See the Appendix to this article.
VOL. III.

attitude of the subject, and also from the position of the linguistic science itself, which as yet has hardly advanced beyond the stage of infancy. On the latter point we would observe that the most important links between the various language families may yet be discovered in languages that are either unexplored, or, at all events, unplaced. Meanwhile, no one can doubt that the tendency of all linguistic research is in the direction of unity. Already it has brought within the bonds of a well established relationship languages so remote from each other in external guise, in age, and in geographical position as Sanscrit and English, Celtic and Greek. It has done the same for other groups of languages equally widely extended, but presenting less opportunities of investigation. It has recognised affinities between languages which the ancient Greek ethnologist would have classed under the head of "barbarian" in reference to each other, and even in many instances where the modern philologist has anticipated no relationship. The lines of discovery therefore point in one direction, and favour the expectation that the various families may be combined by the discovery of connecting links into a single family, comprehending in its capacious bosom all the languages of the world. But should such a result never be attained, the probability of a common origin would still remain unshaken; for the failure would probably be due to the absence, in many classes and families, of that chain of historical evidence, which in the case of the Indo-European and Semitic families enables us to trace their progress for above 3000 years. In many languages no literature at all, in many others no ancient literature exists, to supply the philologist with materials for comparative study: in these cases it can only be by laborious research into existing dialects, that the original forms of words can be detected amidst the incrustations and transmutations with which time has obscured them.

In dealing with the phenomena of language, we should duly consider the plastic nature of the material out of which it is formed, and the numerous influences to which it is subject. Variety in unity is a general law of nature, to which even the most stubborn physical substances yield a ready obedience. In the case of language it would be difficult to lay any bounds to the variety which we might *a priori* expect it to assume. For in the first place it is brought into close contact with the spirit of man, and reflects with amazing fidelity its endless variations, adapting itself to the expression of each feeling, the designation of each object, the working of each cast of thought or stage of reasoning power. Secondly, its sounds are subject to external influences, such as peculiarities of the organ of speech, the result either of natural conformation, of geographical position, or of habits of life and associations of an accidental character. In the third place, it is generally affected by the state of intellectual and social culture of a people, as manifested more especially in the presence or absence of a standard literary dialect, and in the processes of verbal and syntactical structure, which again react on the very core of the word, and produce a variety of sound-

^e 1. That prepositions are reducible to pronominal roots may be illustrated by the following instances. The Greek *ἐν*, with its cognates the German *an* and our *of*, is derived from the demonstrative base *α*, whence also the Sanscrit *aps* (Bopp, §1000); *επι* and *επι* are akin to the Sanscrit *pre* and *peri*, secondary formations of the above mentioned *aps* (Bopp, §1008). The only prepo-

sition which appears to spring from a predicable base is *inter*, with its cognates *durch* and *through*, which are referred to the verbal root *for* (Bopp, §1014).

2. That conjunctions are similarly reducible may be illustrated by the familiar instances of *et*, *quod*, and "that," indifferently used as pronouns or conjunctions. The Latin *et* is connected with the pronoun *ei*-*bi* and *ei*-*mentis*. Lastly, it is subjected to the wear and tear of time and use, obliterating, as in an old coin, the original impress of the word, reducing it in bulk, producing new combinations, and occasionally leading to singular interchanges of sound and idea. The varieties, resulting from the modifying influences above enumerated, may be reduced to two classes, according as they affect the formal or the radical elements of language. On each of these subjects we propose to make a few remarks.

1. Widely as languages now differ from each other in external form, the raw material (if we may use the expression) out of which they have sprung appears to have been in all cases the same. A substratum of significant monosyllabic roots underlies the whole structure, supplying the materials necessary not only for ordinary predication, but also for what is usually termed the "growth" of language out of its primary into its more complicated forms. It is necessary to point this out clearly in order that we may not be led to suppose that the elements of one language are in themselves endued with any greater vitality than those of another. Such a distinction, if it existed, would go far to prove a specific difference between languages, which could hardly be reconciled with the idea of their common origin. The appearance of vitality arises out of the manipulation of the roots by the human mind, and is not inherent in the roots themselves.

The proofs of this original equality are furnished by the languages themselves. Adopting for the present the threefold morphological classification into isolating, agglutinative, and inflecting languages, we shall find that no original element exists in the one which does not also exist in the other. With regard to the isolating class, the terms "monosyllabic" and "radical," by which it is otherwise described, are decisive as to its character. Languages of this class are wholly unsusceptible of grammatical mutations: there is no formal distinction between verb and noun, substantive and adjective, preposition and conjunction: there are no inflections, no case- or person-terminations of any kind: the bare root forms the sole and whole substance of the language. In regard to the other two classes, it is necessary to establish the two distinct points, (1) that the formal elements represent roots, and (2) that the roots both of the formal and the radical elements of the word are monosyllabic. Now, it may be satisfactorily proved by analysis that all the component parts of both inflecting and agglutinative languages are reducible to two kinds of roots, predicable and pronominal; the former supplying the material element of verbs, substantives, and adjectives, the latter that of conjunctions, prepositions, and particles; while each kind, but more particularly the pronominal, supply the formal element, or, in other words, the terminations of verbs, substantives, and adjectives. The full proofs of these assertions would involve nothing less than a treatise on comparative grammar: we can do no more than adduce in the accompanying notes a few illustrations of the various points to which we have adverted.⁴ Whether the two classes

sition which appears to spring from a predicable base is *trans*, with its cognates *durch* and *through*, which are referred to the verbal root *for* (Bopp, §1014).

2. That conjunctions are similarly reducible may be illustrated by the familiar instances of *et*, *quod*, and "that," indifferently used as pronouns or conjunctions. The Latin *et* is connected with the pronoun *ei*-*bi* and *ei*-*mentis*.

of roots, predicable and pronominal, are further reducible to one class, is a point that has been discussed, but has not as yet been established (Bopp's *Compar. Gram.* §105; Max Müller's *Lectures*, p. 268). We have further to show that the roots of agglutinative and inflecting languages are monosyllabic. This is an acknowledged characteristic of the Indo-European family; monosyllabism is indeed the only feature which its roots have in common; in other respects they exhibit every kind of variation from a uniliteral root, such as *é* (*ire*), up to combinations of five letters, such as *scand* (*scandere*), the total number of admissible forms of root amounting to no less than eight (Schleicher, §206). In the Semitic family monosyllabism is not a *prima facie* characteristic of the root: on the contrary, the verbal stems exhibit bisyllabism with such remarkable uniformity, that it would lead to the impression that the roots also must have been bisyllabic. The bisyllabism, however, of the Semitic stem is in reality triconsonantalism, the vowels not forming any part of the essence of the root, but being wholly subordinate to the consonants. It is at once apparent that a triconsonantal and even a quadriconsonantal root may be in certain combinations unsyllabic. But further, it is more than probable that the triconsonantal has been evolved out of a biconsonantal root, which must necessarily be monosyllabic if the consonants stand, as they invariably do in Semitic roots, at the beginning and end of the word. With regard to the agglutinative class, it may be assumed that the same law which we have seen to prevail in the isolating and inflecting classes, prevails also in this, holding as it does an intermediate place between those opposite poles in the world of language.

From the consideration of the crude materials of language, we pass on to the varieties exhibited in its structure, with a view to ascertain whether in these there exists any bar to the idea of an original unity. (1.) Reverting to the classification already noticed, we have to observe, in the first place, that the principle on which it is based is the nature of the connection existing between the predicable and the relational or inflectional elements of a word. In the isolating class these two are kept wholly dis-

together with the Sansc. *padā*, with the relative base *ya* (Bopp, §994).

3. That the suffixes forming the inflections of verbs and nouns are nothing else than the relics of either predicable or pronominal roots, will appear from the following instances, drawn (1) from the Indo-European languages, and (2) from the Ural-Altaian languages.

(1) The *-mi* in *διδέμι* is connected with the root whence spring the oblique cases of the personal pronoun *ἐγώ*; the *-σ* in *δίδωσ* is the remains of *σν*; and the *ν* in *δίδων* (for which an *σ* is substituted in *δίδων*) represents the Sanscrit *ta*, which reappears in *αὐτόν*; and in the oblique cases of the article (Bopp, §§434, 443, 486). So again, the *-σ* in the nominative *λόγος* represents the Sanscrit pronominal root *sa*, and the *-d* of the neuter *λόγῳ* the Sanscrit *ta* (Schleicher's *Compend.* §246); the genitive terminations *-ος*, *-ου* (originally *-οσος*), and hence *-ω* — the Sanscrit *ya*, another form of *sa* (Schleicher, §253); the dative (or more properly the locative) *-ν* or *-σι* is referable to the demonstrative root *i* (Schleicher, §264); and the accusative *-ν* (originally *-μ*) to a pronominal case, probably *om*, which no longer appears in its simple form (Schleicher, §249). (2) In the Ural-Altaian languages, we find that the terminations of the verbs *g-runda*, and participles are referable to significant roots; as in Turkish the active affix *t* or *d* to a root signifying "to do" (Lewald, *Sprache*. Abh. II. 97), and in Hungarian the fac-

tisist: relational ideas are expressed by juxtaposition or by syntactical arrangement, and not by any combination of the roots. In the agglutinative class the relational elements are attached to the principal or predicable theme by a mechanical kind of junction, the individuality of each being preserved even in the combined state. In the inflecting class the junction is of a more perfect character, and may be compared to a chemical combination, the predicable and relational elements being so fused together as to present the appearance of a single and indivisible word. It is clear that there exists no insuperable barrier to original unity in these differences, from the simple fact that every inflecting language must once have been agglutinative, and every agglutinative language once isolating. If the predicable and relational elements of an isolating language be linked together, either to the eye or the ear, it is rendered agglutinative; if the material and formal parts are pronounced as one word, eliminating, if necessary, the sounds that resist incorporation, the language becomes inflecting. (2.) In the second place, it should be noted that these three classes are not separated from each other by any sharp line of demarcation. Not only does each possess in a measure the quality predominant in each other, but moreover each graduates into its neighbour through its bordering members. The isolating languages are not wholly isolating: they avail themselves of certain words as relational particles, though these still retain elsewhere their independent character: they also use composite, though not strictly compound words. The agglutinative are not wholly agglutinative: the Finnish and Turkish classes of the Ural-Altaian family are in certain instances inflectional, the relational adjunct being fully incorporated with the predicable stem, and having undergone a large amount of attrition for that purpose. Nor again are the inflectional languages wholly inflectional: Hebrew, for instance, abounds with agglutinative forms, and also avails itself largely of separate particles for the expression of relational ideas: our own language, though classed as inflectional, retains nothing more than the vestiges of inflection, and is in many respects as isolating and juxtapositional as

utive affix *t* to *do*, "to do," the passive affix *t* to *be*, "to become;" the affix of possibility *has* to *has*, "to work" &c. (Pulsky, in *Philol. Trans.* 1859, p. 116).

* Monosyllabic substantives are not unusual in Hebrew, as instanced in *אֵל*, *אֱלֹהִים*, &c. It is unnecessary to regard these as truncated forms from bisyllabic roots.

† That the Semitic languages ever actually existed to a state of monosyllabism is questioned by Renan, partly because the surviving monosyllabic languages have never emerged from their primitive condition, and partly because he conceives synthesis and complexity to be anterior in the history of language to analysis and simplicity (*Hist. Gén.* I. 98-100). The first of these objections is based upon the assumption that languages are developed only in the direction of synthetism; but this, as we shall hereafter show, is not the only possible form of development, and it is just because the monosyllabic languages have adopted another method of perfecting themselves, that they have remained in their original stage. The second objection seems to involve a violation of the natural order of things, and to be inconsistent with the evidence afforded by language itself; for, though there is undoubtedly a tendency in language to pass from the synthetical to the analytical state, it is no less clear from the elements of synthetic forms that they must have originally existed in an analytical state.

any language of that class. While, therefore, the classification holds good with regard to the predominant characters of the classes, it does not imply differences of a specific nature. (3.) But further, the morphological varieties of language are not confined to the exhibition of the single principle hitherto described. A comparison between the westerly branches of the Ural-Altaian on the one hand, and the Indo-European on the other, belonging respectively to the agglutinative and inflectional classes, will show that the quantitative amount of synthesis is fully as prominent a point of contrast as the qualitative. The combination of primary and subordinate terms may be more perfect in the Indo-European, but it is more extensively employed in the Ural-Altaian family. The former, for instance, appends to its verbal stems the notions of time, number, person, and occasionally of interrogation; the latter further adds suffixes indicative of negation, hypothesis, causativeness, reflexiveness, and other similar ideas, whereby the word is built up tier on tier to a marvellous extent. The former appends to its substantival stems suffixes of case and number; the latter adds governing particles, rendering them post-positional instead of prepositional, and combining them synthetically with the predicable stem. If, again, we compare the Shemitic with the Indo-European languages, we shall find a morphological distinction of an equally diverse character. In the former the grammatical category is expressed by internal vowel-changes, in the latter by external suffixes. So marked a distinction has not unnaturally been constituted the basis of a classification, wherein the languages that adopt this system of internal flexion stand by themselves as a separate class, in contradistinction to those which either use terminational additions for the same purpose, or which dispense wholly with inflectional forms (Bopp's *Comp. Gr.* i. 102). The singular use of preformatives in the Coptic language is, again, a morphological peculiarity of a very decided character. And even within the same family, say the Indo-European, each language exhibits an idiosyncrasy in its morphological character, whereby it stands out apart from the other members with a decided impress of individuality. The inference to be drawn from the number and character of the differences we have noticed, is favourable, rather than otherwise, to the theory of an original unity. Starting from the same common ground of monosyllabic roots, each language-family has carried out its own special line of development, following an original impulse, the causes and nature of which must remain probably for ever a matter of conjecture. We can perceive, indeed, in a general way, the adaptation of certain forms of speech to certain states of society. The agglutinative languages, for instance, seem to be specially adapted to the nomadic state by the promptness and distinctness with which they enunciate the leading idea in each word, an arrangement whereby communication would be facilitated between tribes or families that associate only at intervals. We might almost imagine that these languages derived their impress of uniformity and solidity from the monotonous steppes of Central Asia, which have in all ages formed their proper habitat. So, again, the inflectional class reflects cultivated thought and social organisation, and its languages have hence been termed "state" or "political." Monosyllabism, on the other hand, is pronounced to be suited to the most primitive stage of thought and society, wherein the family or the individual is the standard by

which things are regulated (Max Müller, in *Philos. of Hist.* i. 285). We should hesitate, however, to press this theory as furnishing an adequate explanation of the differences observable in language-families. The Indo-European languages attained their high organisation amid the same scenes and in the same nomad state as those wherein the agglutinative languages were nurtured, and we should be rather disposed to regard both the language and the higher social status of the former as the concurrent results of a higher mental organisation.

If from words we pass on to the varieties of syntactical arrangement, the same degree of analogy will be found to exist between class and class, or between family and family in the same class; in other words, no peculiarity exists in one which does not admit of explanation by a comparison with others. The absence of all grammatical forms in an isolating language necessitates a rigid collocation of the words in a sentence according to logical principles. The same law prevails to a very great extent in our own language, wherein the subject, verb, and object, or the subject, copula, and predicate, generally hold their relative positions in the order exhibited, the exceptions to such an arrangement being easily brought into harmony with that general law. In the agglutinative languages the law of arrangement is that the principal word should come last in the sentence, every qualifying clause or word preceding it, and being as it were sustained by it. The syntactical is thus the reverse of the verbal structure, the principal notion taking the precedence in the latter (Ewald, *Sprache*, Abh. ii. 29). There is in this nothing peculiar to this class of languages, beyond the greater uniformity with which the arrangement is adhered to: it is the general rule in the classical, and the occasional rule in certain of the Teutonic languages. In the Shemitic family the reverse arrangement prevails: the qualifying adjectives follow the noun to which they belong, and the verb generally stands first; short sentences are necessitated by such a collocation, and hence more room is allowed for the influence of emphasis in deciding the order of the sentence. In illustration of grammatical peculiarities, we may notice that in the agglutinative class adjectives qualifying substantives, or substantives placed in apposition with substantives, remain undeclined: in this case the process may be compared with the formation of compound words in the Indo-European languages, where the final member alone is inflected. So again the omission of a plural termination in nouns following a numeral may be paralleled with a similar usage in our own language, where the terms "pound" or "head" are used collectively after a numeral. We may again cite the peculiar manner of expressing the genitive in Hebrew. This is effected by one of the two following methods—placing the governing noun in the status *constructus*, or using the relative pronoun *shen* with a preposition before the governed case. The first of these processes appears a strange inversion of the laws of language; but an examination into the origin of the adjuncts, whether prefixes or affixes, used in other languages for the indication of the genitive, will show that they have a more intimate connection with the governing than with the governed word, and that they are generally resolvable into either relative or personal pronouns.

which serve the simple purpose of connecting the two words together (Garrett's *Essays*, pp. 214-227). The same end may be gained by connecting the words in pronunciation, which would lead to a rapid utterance of the first, and consequently to the changes which are witnessed in the *status constructus*. The second or periphrastic process is in accordance with the general method of expressing the genitive; for the expression "the Song which is to Solomon" strictly answers to "Solomon's Song," the *s* representing (according to Bopp's explanation) a combination of the demonstrative *sa* and the relative *ya*. It is thus that the varieties of construction may be shown to be consistent with unity of law, and that they therefore furnish no argument against a common origin.

Lastly, it may be shown that the varieties of language do not arise from any constitutional inequality of vital energy. Nothing is more remarkable than the compensating power apparently inherent in all language, whereby it finds the means of reaching the level of the human spirit through a faithful adherence to its own guiding principle. The isolating languages, being shut out from the manifold advantages of verbal composition, attain their object by multiplied combinations of radical sounds, assisted by an elaborate system of accentuation and intonation. In this manner the Chinese language has framed a vocabulary fully equal to the demands made upon it; and though this mode of development may not commend itself to our notions as the most effective that can be devised, yet it plainly evinces a high susceptibility on the part of the linguistic faculty, and a keen perception of the correspondence between sound and sense. Nor does the absence of inflection interfere with the expression even of the most delicate shades of meaning in a sentence; a compensating resource is found partly in a multiplicity of subsidiary terms expressive of plurality, motion, action, &c., and partly in strict attention to syntactical arrangement. The agglutinative languages, again, are deficient in compound words, and in this respect lack the elasticity and expansiveness of the Indo-European family; but they are eminently synthetic, and no one can fail to admire the regularity and solidity with which its words are built up, suffix on suffix, and, when built up, are suffused with an uniformity of tint by the law of vowel-harmony.¹ The Shemitic languages have worked out a different principle of growth, evolved, not improbably, in the midst of a conflict between the systems of prefix and suffix, whereby the stem, being as it were enclosed at both extremities, was precluded from all external increment, and was forced back into such changes as could be effected by a modification of its vowel sounds. But whatever may be the origin of the system of internal inflection, it must be conceded that the results are very effective, as regards both economy of material, and simplicity and dignity of style.

The result of the foregoing observations is to

¹ The action of this law is as follows:—The vowels are divided into three classes, which we may term sharp, medial, and flat: the first and the last cannot be combined in any fully formed word, but all the vowels must be either of the two first, or of the two last classes. The suffixes must always accord with the root in regard to the quality of its vowel-sounds, and hence the necessity of having double forms for all the suffixes to meet the sharp or the flat character of the root. The practice is probably referable to the same principle which assigned so remarkable a prominence to the root. As the root sustains the

show that the formal varieties of language present no obstacle to the theory of a common origin. Amid these varieties there may be discerned manifest tokens of unity in the original material out of which language was formed, in the stages of formation through which it has passed, in the general principle of grammatical expression, and, lastly, in the spirit and power displayed in the development of these various formations. Such a result, though it does not prove the unity of language in respect to its radical elements, nevertheless tends to establish the *a priori* probability of this unity; for if all connected with the forms of language may be referred to certain general laws, if nothing in that department owes its origin to chance or arbitrary appointment, it surely favours the presumption that the same principle would extend to the formation of the roots, which are the very core and kernel of language. Here too we might expect to find the operation of fixed laws of some kind or other, producing results of an uniform character; here too actual variety may not be inconsistent with original unity.

II. Before entering on the subject of the radical identity of languages, we must express our conviction that the time has not yet arrived for a decisive opinion as to the possibility of establishing it by proof. Let us briefly review the difficulties that beset the question. Every word as it appears in an organic language, whether written or spoken, is resolvable into two distinct elements, which we have termed predicable and formal, the first being what is commonly called the root, the second the grammatical termination. In point of fact both of these elements consist of independent roots; and in order to prove the radical identity of two languages, it must be shown that they agree in both respects, that is, in regard both to the predicable and the formal roots. As a matter of experience it is found that the formal elements, consisting for the most part of pronominal bases, exhibit a greater tenacity of life than the others; and hence agreement of inflectional forms is justly regarded as furnishing a strong presumption of general radical identity. Even foreign elements are forced into the formal mould of the language into which they are adopted, and thus bear testimony to the original character of that language. But though such a formal agreement supplies the philologist with a most valuable instrument of investigation, it cannot be accepted as a substitute for complete radical agreement: this would still remain to be proved by an independent examination of the predicable elements. The difficulties connected with these latter are many and varied. Assuming that two languages or language-families are under comparison, the phonological laws of each must be investigated in order to arrive, in the first place, at the primary forms of words in the language in which they occur, and, in the second place, at the corresponding forms in the language which constitutes the other member of com-

series of suffixes, its vowel-sound becomes not unnaturally the key-note of the whole strain, facilitating the processes of utterance to the speaker, and of perception to the hearer, and communicating to the word the uniformity which is so characteristic of the whole structure of these languages.

¹ Grimm was the first to discover a regular system of displacement of sounds (*Lautesverschiebung*) pervading the Gothic and Low German languages as compared with Greek and Latin. According to this system, the Gothic substitutes aspirates for tenues (A for Gr k or Lat. c, ð

parison, as done by Grimm for the Teutonic as compared with the Sanscrit and the classical languages. The genealogy of sound, as we may term it, must be followed up by a genealogy of signification, a mere outward accordances of sound and sense in two terms being of no value whatever, unless a radical affinity be proved by an independent examination of the cognate words in each case. It still remains to be inquired how far the ultimate accordances of sense and sound may be the result of onomatopoeia,^k of mere borrowing, or of a possible mixture of languages on equal terms. The final stage in etymological inquiry is to decide the limit to which comparison may be carried in the primitive strata of language—in other words, how far roots, as ascertained from groups of words, may be compared with roots, and reduced to yet simpler elementary forms. Any flaw in the processes above described will of course invalidate the whole result. Even where the philologist is provided with ample materials for inquiry in stores of literature ranging over long periods of time, much difficulty is experienced in making good each link in the chain of agreement; and yet in such cases the dialectic varieties have been kept within some degree of restraint by the existence of a literary language, which, by impressing its authoritative stamp on certain terms, has secured both their general use and their external integrity. Where no literature exists, as is the case with the general mass of languages in the world, the difficulties are infinitely increased by the combined effects of a prolific growth of dialectic forms, and an absence of all means of tracing out their progress. Whether under these circumstances we may reasonably expect to establish a radical unity of language, is a question which each person must decide for himself. Much may yet be done by a larger induction and a scientific analysis of languages that are yet comparatively unknown. The tendency hitherto has been to enlarge the limits of a "family" according as the elements of affinity have been recognised in outlying members. These limits may perchance be still more enlarged by the discovery of connecting links between the language-families, whereby the criteria of relationship will be modified, and new elements of internal unity be discovered amid the manifold appearances of external diversity.

Meanwhile we must content ourselves with stating the present position of the linguistic science in reference to this important topic. In the first place the Indo-European languages have been reduced to

an acknowledged and well-defined relationship: they form one of the two families included under the head of "inflectional" in the morphological classification. The other family in this class is the (so-called) Shemitic, the limits of which are not equally well defined, inasmuch as it may be extended over what are termed the sub-Shemitic languages, including the Egyptian or Coptic. The criteria of the proper Shemitic family (*i. e.* the Aramaean, Hebrew, Arabic, and Ethiopic languages) are distinctive enough; but the connexion between the Shemitic and the Egyptian is not definitely established. Some philologists are inclined to claim for the latter an independent position, intermediate between the Indo-European and Shemitic families (Bunsen's *Phil. of Hist.* i. 185, ff.). The agglutinative languages of Europe and Asia are combined by Prof. M. Müller in one family named "Turanian." It is conceded that the family bond in this case is a loose one, and that the agreement in roots is very partial (*Lectures*, pp. 290-292). Many philologists of high standing, and more particularly Pott (*Ungleich. Mensch. Rassen*, p. 233), deny the family relationship altogether, and break up the agglutinative languages into a great number of families. Certain it is that within the Turanian circle there are languages, such, for instance, as the Ural-Altaian, which show so close an affinity to each other as to be entitled to form a separate division, either as a family or a subdivision of a family: and this being the case, we should hesitate to put them on a parity of footing with the remainder of the Turanian languages. The Caucasian group again differs so widely from the other members of the family as to make the relationship very dubious. The monosyllabic languages of south-eastern Asia are not included in the Turanian family by Prof. M. Müller (*Lect.* pp. 290, 326), apparently on the ground that they are not agglutinative; but as the Chinese appears to be connected radically with the Burmese (Humboldt's *Versuch*, p. 368, with the Tibetan (*Ph. of Hist.* i. 393-395), and with the Ural-Altaian languages (Schott in *Abh. Berl.* 1861, p. 172), it seems to have a good title to be placed in the Turanian family. With regard to the American and the bulk of the African languages, we are unable to say whether they can be brought under any of the heads already mentioned, or whether they stand by themselves as distinct families. The former are referred by writers of high eminence to an Asiatic or Turanian origin (Bunsen, *Phil. of Hist.* ii. 111; Latham's *Man*

for *t*, and *f* for *p*); tenses for medials (*t* for *d*, *p* for *b*, and *k* for *g*); and medials for aspirates (*g* for Gr. *ch* or Lat. *h*, *d* for Gr. *th*, and *b* for Lat. *f* or Gr. *ph*) (*Gesch. Deutsch. Spr.* i. 383). We may illustrate the changes by comparing heart with *cor* or *caplia*; then with *tu*; *fee* with *fére* (*vire*), or *father* with *pater*; two with *duo*; knee with *genu*; goose with *gē*; dew with *super*; bear with *fero* or *phero*. What has thus been done for the Teutonic languages, has been carried out by Schleicher in his *Compendium* for each class of the Indo-European family.

It is a delicate question to decide whether in any given language the onomatopoeic words that may occur are original or derived. Numerous coincidences of sound and sense occur in different languages to which little or no value is attached by etymologists on the ground that they are onomatopoeic. But evidently these may have been handed down from generation to generation, and from language to language, and may have as true a genealogy as any other terms not bearing that character.

For instance, the Hebrew *lā'a* (לָא) expresses in its very sound the notion of *swallowing* or *gulping*, the word consisting, as Renan has remarked (*H. G.* i. 460), of a lingual and a guttural, representing respectively the tongue and the throat, which are chiefly engaged in the operation of swallowing. In the Indo-European languages we meet with a large class of words containing the same elements and conveying, more or less, the same meaning, such as *laico*, *laqueo*, *ligaria*, *lingua*, *gula*, "belly," and others. These words may have had a common source, but, because they are onomatopoeic in their character, they are excluded as evidence of radical affinity. This exclusion may be carried too far, though it is difficult to point out where it should stop. But even onomatopoeic words bear a specific character, and the names given in imitation of the notes of birds differ materially in different languages, apparently from the perception of some *causa* analogy with previously existing sounds or ideas. The subject is one of great interest, and may yet play an important part in the history of language.

TONGUES, CONFUSION OF

and his *Migra*, p. 186; the letter to the Shemitic family (Latham, p. 148).

The problem that awaits solution is whether the several families above specified can be reduced to a single family by demonstrating their radical identity. It would be unreasonable to expect that this identity should be coextensive with the vocabularies of the various languages; it would naturally be confined to such ideas and objects as are common to mankind generally. Even within this circle the difficulty of proving the identity may be infinitely enhanced by the absence of materials. There are indeed but two families in which these materials are found in anything like sufficiency, viz. the Indo-European and the Shemitic, and even these furnish us with no historical evidence as to the earlier stages of their growth. We find each, at the most remote literary period, already exhibiting its distinctive character of stem- and word-formation, leaving us to infer, as we best may, from these phenomena the processes by which they had reached that point. Hence there arises abundance of room for difference of opinion, and the extent of the radical identity will depend very much on the view adopted as to these earlier processes. If we could accept in its entirety the system of etymology propounded by the analytical school of Hebrew scholars, it would not be difficult to establish a very large amount of radical identity; but we cannot regard as established the prepositional force of the initial letters, as stated by Delitzsch in his *Jesajurus* (pp. 166, 173, note), still less the correspondence between these and the initial letters of Greek and Latin words = (pp. 170-172). The striking uniformity of bisyllabism in the verbal stems is explicable only on the assumption that a single principle underlies the whole; and the existence of groups* of words differing slightly in form, and having the same radical sense, leads to the presumption that this principle was one not of composition, but of euphonism and practical convenience. This pre-

* Several of the terms compared by him are onomatopoeic, as *pirak* (fructure), *pidash* (variousness), and *hildap*, and in each of these cases the initial letter forms part of the onomatopoeia. In others the initial letter in the Greek is radical, as in *βασίλειον* (Pott's *Et. Forsch.* II. 212), *δούρειον* (l. 229), and *σταλάειον* (l. 197). In others again it is euphonic, as in *βλάλλειον*. Lastly, we are unable to see how *lérup* and *lérup* admit of close comparison with *drúphu* and *rpáphu*. It shows the uncertainty of such analogies that Greenius compares *lérup* with *drúrru*, and *hildap* (הילד) with *γλάφει*, which Delitzsch compares with *hildap* (הילד). An attempt to establish a large amount of radical identity by means of a resolution of the Hebrew word into its component and significant elements may be seen in the *Philo-log. Trans.* for 1858, where, for instance, the *da* in the Hebrew *bakdash*, is compared with the Teutonic prefix *be*; the *dar* in *dar-kush* with the Welsh *dar* in *dar-paru*; and the *chaph* in *chaphash* with the Welsh *cyf* in *cyffaroe*.

* These groups are sufficiently common in Hebrew. We will take as an instance the following one:—שָׁחַץ, שָׁחַץ, שָׁחַץ, שָׁחַץ, שָׁחַץ, all conveying the idea of "dash" or "strike." Or, again, the following group, with the radical sense of alpperiness:—לָבַח, לָבַח, לָבַח, לָבַח, לָבַח, &c. A classificatory lexicon of such groups would assist the etymological inquiry.

* Does a classification is attempted by Boetticher, in

TONGUES, CONFUSION OF 1543

sumption is still further favoured by an analysis of the letters forming the stems, showing that the third letter is in many instances a reduplication, and in others a liquid, a nasal, or a sibilant, introduced either as the initial, the medial, or the final letter. The Hebrew alphabet admits of a classification* based on the radical character of the letter according to its position in the stem. The effect of composition would have been to produce, in the first place, a greater inequality in the length of the words, and, in the second place, a greater equality in the use of the various organic sounds.

After deducting largely from the amount of etymological correspondence based on the analytical tenets, there still remains a considerable amount of radical identity which appears to be above suspicion. It is impossible to produce in this place a complete list of the terms in which that identity is manifested. In the subjoined note* we cite some instances of agreement, which cannot possibly be explained on the principle of direct onomatopoeia, and which would therefore seem to be the common inheritance of the Indo-European and Shemitic families. Whether this agreement is, as Renan suggests, the result of a keen susceptibility of the onomatopoeic faculty in the original framers of the words (*Hist. Gén.* i. 465), is a point that can neither be proved nor disproved. But even if it were so, it does not follow that the words were not framed before the separation of the families. Our list of comparative words might be much enlarged, if we were to include comparisons based on the reduction of Shemitic roots to a bisyllabic form. A list of such words may be found in Delitzsch's *Jesajurus*, pp. 177-180. In regard to pronouns and numerals, the identity is but partial. We may detect the *t* sound, which forms the distinctive sound of the second personal pronoun in the Indo-European languages, in the Hebrew *attá*, and in the personal terminations of the perfect tense; but the *m*, which is the prevailing sound of

Bunsen, *Philos. of Hist.* II. 367. After stating what letters may be inserted either at the beginning, middle, or end of the root, he enumerates those which are always radical in the several positions; א, for instance, in the beginning and middle, but not at the end; ל and מ in the beginning only; נ and ע in the middle and at the end, but not in the beginning. We are not prepared to accept this classification as wholly correct, but we adduce it in illustration of the point above noticed.

* אָרֶץ, cornus, horn.

אָרֶץ, מִסְגָּרָה, mīscāra, mix.

אָרֶץ, cīra, circle.

אָרֶץ, Germ. erde, earth.

אָרֶץ, glāber, glāco, Germ. glatt, glitz.

אָרֶץ, אָרֶץ, אָרֶץ, cum, cōn, cōnōte.

אָרֶץ, אָרֶץ, plenus, Germ. voll, full.

אָרֶץ, purus, pure.

אָרֶץ, אָרֶץ, cōrre, corā.

אָרֶץ, אָרֶץ, fāru, fāru, deer.

אָרֶץ, אָרֶץ, epula.

אָרֶץ, amarus.

אָרֶץ, curtus.

אָרֶץ, servus.

אָרֶץ, Sanec. mēth, mēth, mēth (Pist. Lat. S. V.),

whence by the introduction of r the Latin mors

the first personal pronoun in the former, is supplanted by an *u* in the latter. The numerals *shest* and *sheba*, for "six" and "seven," accord with the Indo-European forms: those representing the numbers from "one" to "five" are possibly, though not evidently, identical.⁴ With regard to the other language-families, it will not be expected, after the observations already made, that we should attempt the proof of their radical identity. The Ural-Altaian languages have been extensively studied, but are hardly ripe for comparison. Occasional resemblances have been detected in grammatical forms⁵ and in the vocabularies;⁶ but the value of these remains to be proved, and we must await the results of a more extended research into this and other regions of the world of language.

(B.) We pass on to the second point proposed for consideration, viz., the ethnological views expressed in the Bible, and more particularly in the 10th chapter of Genesis, which records the dispersion of nations consequent on the Confusion of Tongues.

1. The Mosaic table does not profess to describe the process of the dispersion; but assuming that dispersion as a *fait accompli*, it records the ethnic relations existing between the various nations affected by it. These relations are expressed under the guise of a genealogy; the ethnological character of the document is, however, clear both from the names, some of which are gentilio in form, as Luddim, Jebusite, &c., others geographical or local, as Misraim, Sidon, &c.; and again from the formula, which concludes each section of the subject "after their families, after their tongues, in their countries, and in their nations" (vers. 5, 20, 31). Incidentally, the table is geographical as well as ethnological; but this arises out of the practice of designating nations by the countries they occupy. It has indeed been frequently surmised that the arrangement of the table is purely geographical, and this idea is to a certain extent favoured by the possibility of explaining the names Shem, Ham, and Japheth on this principle; the first signifying the "high" lands, the second the "hot" or "low" lands, and the third the "broad," undefined regions of the north. The three families may have been so located, and such a circumstance could not have been unknown to the writer of the table. But neither internal nor external evidence satisfactorily prove such to have been the leading idea or principle embodied in it; for the Japhetites are mainly assigned to the "isles" or maritime districts of the west and north-west, while the Shemites press down into the plain of Mesopotamia, and the Hamites, on the other hand, occupy the high lands of Canaan and Lebanon. We hold, therefore, the geographical as subordinate to the ethnographical element, and avail ourselves of the former only as an instrument for the discovery of the latter.

The general arrangement of the table is as follows:—The whole human race is referred back to Noah's three sons, Shem, Ham, and Japheth. The Shemites are described last, apparently that the

continuity of the narrative may not be further disturbed; and the Hamites stand next to the Shemites, in order to show that these were more closely related to each other than to the Japhetites. The comparative degrees of affinity are expressed, partly by coupling the names together, as in the cases of Elishah and Tarshish, Kittim and Dodanim (ver. 4), and partly by representing a genealogical descent, as, when the nations just mentioned are said to be "sons of Javan." An inequality may be observed in the length of the genealogical lines, which in the case of Japheth extends only to one, in Ham to two, in Shem to three, and even four degrees. This inequality clearly arises out of the varying interest taken in the several lines by the author of the table, and by those for whose use it was designed. We may lastly observe, that the occurrence of the same name in two of the lists, as in the case of Lud (vers. 13, 22), and Sheba (vers. 7, 28), possibly indicates a fusion of the races.

The identification of the Biblical with the historical or classical names of nations, is by no means an easy task, particularly where the names are not subsequently noticed in the Bible. In these cases comparisons with ancient or modern designations are the only resource, and where the designation is one of a purely geographical character, as in the case of Riphath compared with *Ripari montes*, or Maah compared with *Maasius mons*, great doubt must exist as to the ethnic force of the title, inasmuch as several nations may have successively occupied the same district. Equal doubt arises where names admit of being treated as appellatives, and so of being transferred from one district to another. Recent research into Assyrian and Egyptian records has in many instances thrown light on the Biblical titles. In the former we find Meshech and Tubal noticed under the forms *Mushai* and *Tupiai*, while Javan appears as the appellation of Cyprus, where the Assyrians first met with Greek civilization. In the latter the name Phut appears under the form of *Pouot*, Hittite as *Añta*, Cush as *Asest*, Canaan as *Amama*, &c.

1. The Japhetite list contains fourteen names, of which seven represent independent, and the remainder affiliated nations, as follows:—(i.) Gomer, connected ethnically with the *Cimmerii*, *Cimbri*?, and *Cymry*; and geographically with *Crimea*. Associated with Gomer are the three following:—(a) Ashkenaz, generally compared with lake *Ascanius* in Bithynia, but by Knobel with the tribe *Asaei*, *As*, or *Ossetes* in the Caucasian district. On the whole we prefer Hase's suggestion of a connexion between this name and that of the *Araxes*, later the *Euxinus Pontus*. (b) Riphath, the *Ripari Montes*, which Knobel connects etymologically and geographically with *Carpates Mons*. (c) Togarmah, undoubtedly *Armenia*, or a portion of it. (ii.) Magog, the *Scythians*. (iii.) Madai, *Media*. (iv.) Javan, the *Tenians*, as a general appellation for the Hellenic race, with whom are associated the four following:—(a) Elishah, the *Aeolians*, less probably identified with the district *Elis*. (b) Tarshish, at a later period

⁴ See Rüdiger's note in Gesen. *Gramm.* p. 185. The identity even of *shest* and "six" has been questioned, on the ground that the original form of the Hebrew word was *shek* and of the Aryan *krakus* (*Philol. Trans.* 1860, p. 131).

⁵ Several such resemblances are pointed out by Ewald in his *Sprache. Abhandl.* II. p. 18, 34 note.

⁶ The following verbal resemblances in Hungarian and

Sanskrit have been noticed:—*egy* and *eka*, "one;" *hat* and *shash*, "six;" *het* and *saptan*, "seven;" *tes* and *dasan*, "ten;" *car* and *sahasra*, "thousand;" *beka* and *beka*, "frog;" *arany* and *airanya*, "gold" (*Philol. Trans.* for 1858, p. 25). Proofs of a more intimate relationship between the Finnish and Indo-European languages are adduced in a paper on the subject in the *Philol. Trans.* for 1860, p. 281 E.

of Biblical history certainly identical with *Tartessus* in Spain, in which, however, there are objections as regards the table, partly from the too extended area thus given to the Mosaic world, and partly because *Tartessus* was a Phœnician, and consequently not a Japhetic settlement. Knobel compares the *Tyræni*, *Tyrræni*, and *Tusci* of Italy; but this is precarious. (c) Kittim, the town *Citium* in Cyprus. (d) Dodanim, the *Dardani* of Illyria and Mysia: *Dodona* is sometimes compared. (v.) Tubal, the *Tivæni* in Pontus. (vi.) Meshech, the *Moschi* in the north-western part of Armenia. (vii.) Tiras, perhaps *Thracia*.

2. The Hamitic list contains thirty names, of which four represent independent, and the remainder affiliated nations, as follows:—(i.) Cush, in two branches, the western or African representing *Æthiopia*, the *Kesh* of the old Egyptian, and the eastern or Asiatic being connected with the names of the tribe *Cossæi*, the district *Cissia*, and the province *Susiana* or *Khuristan*. With Cush are associated:—(a) Seba, the *Sabæi* of *Yemen* in south Arabia. (b) Havilah, the district *Khâvildân* in the same part of the peninsula. (c) Sabtah, the town *Sabathia* in *Hadramaut*. (d) Raamah, the town *Rhagma* on the south-eastern coast of Arabia, with whom are associated:—(e) Sheba, a tribe probably connected ethnically or commercially with the one of the same name already mentioned, but located on the west coast of the Persian Gulf. (b²) Dedan, also on the west coast of the Persian Gulf, where the name perhaps still survives in the island *Dadan*. (e) Sabtechah, perhaps the town *Samydaos* on the coast of the Indian Ocean eastward of the Persian Gulf. (f) Nimrod, a personal and not a geographical name, the representative of the eastern Cushites. (ii.) Mizraim, the two *Misra*, i. e. Upper and Lower Egypt, with whom the following seven are connected:—(a) Ludim, according to Knobel a tribe allied to the Shemitic Lud, but settled in Egypt; others compare the river *Laud* (Plin. v. 2), and the *Leudatâh*, a Berber tribe on the Syrtes. (b) Ananim, according to Knobel the inhabitants of the *Delta*, which would be described in Egyptian by the term *sanemhit* or *tanemhit*, "northern district," converted by the Hebrews into Ananim. (c) Naphtuhim, variously explained as the people of *Nephthys*, i. e. the northern coast district (Bochart), and as the worshippers of Phthah, meaning the inhabitants of Memphis. (d) Pathrusim, Upper Egypt, the name being explained as meaning in the Egyptian "the south" (Knobel). (e) Casluhim, *Casius mons*, *Cassiotia*, and *Cassium*, eastward of the Delta (Knobel); the *Chelians*, according to Bochart, but this is unlikely. (f) Caphtorim, most probably the district about *Coptos* in Upper Egypt [CAPHTOR]; the island of Crete according to many modern critics, Cappadocia according to the older interpreters. (g) Phut, the *Péut* of the Egyptian inscriptions, meaning the Libyans. (iii.) Canaan, the geographical position of which calls for no remark in this place. The name has been variously explained as meaning the "low" land of the coast district, or the "subjection" threatened to Canaan personally (Gen. ix. 25). To Canaan belong the following eleven:—(a) Sidon, the well-known town of that name in Phœnicia. (b) Heth, or the Hittites of Biblical history. (c) The Jebusite, of *Jebus* or

Jerusalem. (d) The Amorite frequently mentioned in Biblical history. (e) The Girgashite, the same as the Girgashites. (f) The Hivite, variously explained to mean the occupants of the "interior" (Ewald), or the dwellers in "villages" (Gesen.). (g) The Arkite, of *Arca*, north of Tripolis, at the foot of Lebanon. (h) The Sinite, of *Sin* or *Sinna*, places in the Lebanon district. (i) The Arradite, of *Aradus* on the coast of Phœnicia. (j) The Zemarite, of *Simyra* on the Eleutherus. (k) The Hamathite, of *Hamath*, the classical *Epiphania*, on the Orontes.

3. The Shemitic list contains twenty-five names, of which five refer to independent, and the remainder to affiliated tribes, as follows:—(i.) Elam, the tribe *Elymasi* and the district *Elymas* in Susiana. (ii.) Asshur, *Assyria* between the Tigris and the range of *Zagrus*. (iii.) Arphaxad, *Arrapachitis* in northern Assyria, with whom are associated:—(a) Salah, a personal and not a geographical title, indicating a migration of this people represented by him; Salah's son (a²) Eber, representing geographically the district across (i. e. eastward of) the Euphrates; and Eber's two sons (a³) Peleg, a personal name indicating a "division" of this branch of the Shemitic family, and (b²) Joktan, representing generally the inhabitants of *Arabia*, with the following thirteen sons of Joktan, viz.:—(a⁴) Almodad, probably representing the tribe of *Jurham* near Mecca, whose leader was named *Mudad*. (b²) Sheleph, the *Salapeni* in *Yemen*. (c⁴) Hazarmaveth, *Hadramaut*, in southern Arabia. (d⁴) Jerah. (e⁴) Hadoram, the *Adramitas* on the southern coast, in a district of *Hadramaut*. (f⁴) Uzal, supposed to represent the town *Szanza* in south Arabia, as having been founded by *Asal*. (g⁴) Diklah. (h⁴) Obal, or, as in 1 Chr. i. 22, Ebal, which latter is identified by Knobel with the *Gebunites* in the south-west. (i⁴) Abimeael, doubtfully connected with the district *Makra*, eastward of *Hadramaut*, and with the towns *Mara* and *Mali*. (j⁴) Sheba, the *Sabæi* of south-western Arabia, about Mariaba. (k⁴) Ophir, probably *Adane* on the southern coast, but see article. (l⁴) Havilah, the district *Khâvildân* in the north-west of *Yemen*. (m⁴) Jobab, possibly the *Jobaritas* of Ptolemy (vi. 7, §24), for which Jobabites may originally have stood. (iv.) Lud, generally compared with *Lydia*, but explained by Knobel as referring to the various aboriginal tribes in and about Palestine, such as the Amalekites, Rephaites, Emim, &c. We cannot consider either of these views as well established. Lydia itself lay beyond the horizon of the Mosaic table: as to the Shemitic origin of its population, conflicting opinions are entertained, to which we shall have occasion to advert hereafter. Knobel's view has in its favour the probability that the tribes referred to would be represented in the table; it is, however, wholly devoid of historical confirmation, with the exception of an Arabian tradition that *Amlik* was one of the sons of *Laud* or *Lawad*, the son of Shem.* (v.) Aram, the general name for Syria and northern *Mesopotamia*, with whom the following are associated:—(a) Uz, probably the *Assitas* of Ptolemy. (b) Hul, doubtful, but best connected with the name *Huleh*, attaching to a district north of Lake Merom. (c) Gether, not identical. (d) Mash, *Masius Mons*, in the north of *Mesopotamia*.

* This tradition probably originated in the desire to form a connecting link between the Mosaic table and the various elements of the Arabian population. The only

conclusion to be drawn from it is that, in the opinion of its originator, there was an element which was neither Ishmaelite nor Joktanid (Ewald, *Genes.* i. 328, note).

1546 TONGUES, CONFUSION OF

There is yet one name noticed in the table viz.: Philistim, which occurs in the Hamitic division, but without any direct assertion of Hamitic descent. The terms used in the A. V. "out of whom (Casluhim) came Philistim" (ver. 14), would naturally imply descent; but the Hebrew text only warrants the conclusion that the Philistines sojourned in the land of the Casluhim. Notwithstanding this, we believe the intention of the author of the table to have been to affirm the Hamitic origin of the Philistines, leaving undecided the particular branch, whether Casluhim or Caphtorim, with which it was more immediately connected.

The total number of names noticed in the table, including Philistim, would thus amount to 70, which was raised by patristic writers to 72. These totals afforded scope for numerical comparisons, and also for an estimate of the number of nations and languages to be found on the earth's surface. It is needless to say that the Bible itself furnishes no ground for such calculations, inasmuch as it does not in any case specify the numbers.

Before proceeding further, it would be well to discuss a question materially affecting the historical value of the Mosaic table, viz.: the period to which it refers. On this point very various opinions are entertained. Knobel, conceiving it to represent the commercial geography of the Phœnicians, assigns it to about 1200 B.C. (*Völkert.* pp. 4-9), and Renan supports this view (*Hist. Gén.* i. 40), while others allow it no higher an antiquity than the period of the Babylonish Captivity (v. Bohlen's *Gen.* ii. 207; Winer, *Rwb.* ii. 685). Internal evidence leads us to refer it back to the age of Abraham on the following grounds:—(1) The Canaanites were as yet in undisputed possession of Palestine. (2) The Philistines had not concluded their migration. (3) Tyre is wholly unnoticed, an omission which cannot be satisfactorily accounted for on the ground that it is included under the name either of Beth (Knobel, p. 323), or of Sidon (v. Bohlen, ii. 241). (4) Various places such as Simyra, Sinna, and Arca, are noticed, which had fallen into insignificance in later times. (5) Kittim, which in the age of Solomon was under Phœnician dominion, is assigned to Japheth, and the same may be said of Tarshish, which in that age undoubtedly referred to the Phœnicianemporium of *Tartessus*, whatever may have been its earlier significance. The chief objection to so early a date as we have ventured to propose, is the notice of the Medes under the name Madai. The Aryan nation, which bears this name in history, appears not to have reached its final settlement until about 900 B.C. (Rawlinson's *Herod.* i. 404). But on the other hand, the name Media may well have belonged to the district before the arrival of the Aryan Medes, whether it were occupied by a tribe of kindred origin to them or by Turanians; and this probability is to a certain extent confirmed by the notice of a Median dynasty in Babylon, as reported by Berosus, as early as the 25th century B.C. (Rawlinson, i. 434). Little difficulty would be found in assigning so early a date to the Medes, if the Aryan origin of the allied kings mentioned in Gen. xiv. 1 were thoroughly established, in accordance with Renan's view (*H. G.* i. 61): on this point, however, we have our doubts.

The Mosaic table is supplemented by ethnological

TONGUES, CONFUSION OF

notices relating to the various divisions of the Terachite family. These belonged to the Shemite division, being descended from Arphaxad through Peleg, with whom the line terminates in the table. Ran, Seng, and Nabor form the intermediate links between Peleg and Terah (Gen. xi. 18-25), with whom began the movement that terminated in the occupation of Canaan and the adjacent districts by certain branches of the family. The original seat of Terah^a was Ur of the Chaldees (Gen. xi. 28): thence he migrated to Haran (Gen. xi. 31), where a section of his descendants, the representatives of Nabor, remained (Gen. xxiv. 10, xxvii. 43, xxix. 4 ff.), while the two branches, represented by Abraham and Lot, the son of Haran, crossed the Euphrates and settled in Canaan and the adjacent districts (Gen. xii. 5). From Lot sprang the Moabites and Ammonites (Gen. xix. 30-38); from Abraham the Ishmaelites through his son Ishmael (Gen. xxv. 12), the Israelites through Isaac and Jacob, the Edomites through Isaac and Esau (Gen. xxxvi.), and certain Arab tribes, of whom the Midianites are the most conspicuous, through the sons of his concubine Keturah (Gen. xxv. 1-4).

The most important geographical question in connexion with the Terachites concerns their original settlement. The presence of the Chaldees in Babylonia at a subsequent period of scriptural history has led to a supposition that they were a Hamitic people, originally belonging to Babylonia, and thence transplanted in the 7th and 8th centuries to northern Assyria (Rawlinson's *Herod.* i. 319). We do not think this view supported by Biblical notice. It is more consistent with the general direction of the Terachite movement to look for Ur in northern Mesopotamia, to the east of Haran. That the Chaldees, or, according to the Hebrew nomenclature, the Kasdim, were found in that neighbourhood, is indicated by the name Chesed as one of the sons of Nabor (Gen. xxii. 22), and possibly by the name Arphaxad itself, which, according to Ewald (*Gesch.* i. 378), means "fortress of the Chaldees." In classical times we find the Kasdim still occupying the mountains adjacent to *Arrapachitis*, the Biblical Arphaxad, under the names *Chaldæi* (Xen. *Anab.* iv. 3, §§1-4) and *Gordyæi* or *Corduchæi* (Strab. xvi. p. 747), and here the name still has a vital existence under the form of *Kurd*. The name Kasdim is explained by Oppert as meaning "two rivers," and thus as equivalent to the Hebrew *Naharaim* and the classical *Mesopotamia* (*Zeit. Morg. Ges.* xi. 137). We receive this explanation with reserve; but, as far as it goes, it favours the northern locality. The evidence for the antiquity of the southern settlement appears to be but small, if the term *Kaldai* does not occur in the Assyrian inscriptions until the 9th century B.C. (Rawlinson i. 448). We therefore conceive the original seat of the Chaldees to have been in the north, whence they moved southwards along the course of the Tigris until they reached Babylon, where we find them dominant in the 7th century B.C. Whether they first entered this country as mercenaries, and then conquered their employers, as suggested by Renan (*H. G.* i. 68), must remain uncertain; but we think the suggestion supported by the circumstance that the name was afterwards transferred to the whole Babylonian population. The sacerdotal character of the Chaldees is certainly

^a A connexion between the names Terah and Terachitis, Haran and Hawran, is suggested by Renan

(*Hist. Gén.* i. 28). This, however, is inconsistent with the position generally assigned to Haran.

difficult to reconcile with this or any other hypothesis on the subject.

Returning to the Terachites, we find it impossible to define the geographical limits of their settlements with precision. They intermingled with the previously existing inhabitants of the countries intervening between the Red Sea and the Euphrates, and hence we find an Aram, an Us, and a Cheshed among the descendants of Nahor (Gen. xxii. 21, 22), a Dedan and a Sheba among those of Abraham by Keturah (Gen. xiv. 3), and an Amalek among the descendants of Esau (Gen. xxxvi. 12). Few of the numerous tribes which sprang from this stock attained historical celebrity. The Israelites must of course be excepted from this description; so also the Nabateans, if they are to be regarded as represented by the Nebaioth of the Bible, as to which there is some doubt (Quatremère, *Mélanges*, p. 59). Of the rest, the Moabites, Ammonites, Midianites, and Edomites are chiefly known for their hostilities with the Israelites, to whom they were close neighbours. The memory of the westerly migration of the Israelites was perpetuated in the name Hebrew, as referring to their residence beyond the river Euphrates (Josh. xxiv. 3).

Besides the nations whose origin is accounted for in the Bible, we find other early populations mentioned in the course of the history without any notice of their ethnology. In this category we may place the Horims, who occupied Edom before the descendants of Esau (Deut. ii. 12, 22); the Amalekites of the Sinaitic peninsula; the Zuzims and Zamzummins of Perses (Gen. xiv. 5; Deut. ii. 20); the Rephaims of Bashan and of the valley near Jerusalem named after them (Gen. xiv. 5; 2 Sam. v. 18); the Emims eastward of the Dead Sea (Gen. xiv. 5); the Avims of the southern Philistine plain (Deut. ii. 23); and the Anakims of southern Palestine (Josh. xi. 21). The question arises whether these tribes were Hamites, or whether they represented an earlier population which preceded the entrance of the Hamites. The latter view is supported by Knobel, who regards the majority of these tribes as Shemites, who preceded the Canaanites, and communicated to them the Shemitic tongue (*Volkert*, pp. 204, 315). No evidence can be adduced in support of this theory, which was probably suggested by the double difficulty of accounting for the name of Lud, and of explaining the apparent anomaly of the Hamites and Terachites speaking the same language. Still less evidence is there in favour of the Turanian origin, which would, we presume, be assigned to these tribes in common with the Canaanites proper, in accordance with a current theory that the first wave of population which overspread western Asia belonged to that branch of the human race (Rawlinson's *Herod.* i. 645, note). To this theory we shall presently advert: meanwhile we can only observe, in reference to these fragmentary populations, that, as they intermingled with the Canaanites, they probably belonged to the same stock (comp. Num. xiii. 22; Judg. i. 10). They may perchance have belonged to an earlier migration than the Canaanitish, and may have been subdued by the later comers, but this would not necessitate a different origin. The names of these tribes and of their abodes, as instanced in Gen. xiv. 5; Deut. ii. 23; Num. xiii. 22, bear a Shemitic character (*Ewald, Gesch.* i. 311), and the only objection to their Canaanitish origin arising out of these names would be in connexion with Zamzummin, which, according

to Renan (*H. G.* p. 85, note), is formed on the same principle as the Greek *Βαβυλῶν*, and in this case implies at all events a dialectical difference.

Having thus surveyed the ethnological statements contained in the Bible, it remains for us to inquire how far they are based on, or accord with, physiological or linguistic principles. Knobel maintains that the threefold division of the Mosaic table is founded on the physiological principle of colour, Shem, Ham, and Japheth representing respectively the red, black, and white complexions prevalent in the different regions of the then known world (*Volkert*, pp. 11-13). He claims etymological support for this view in respect to Ham (= "dark") and Japheth (= "fair"), but not in respect to Shem, and he adduces testimony to the fact that such differences of colour were noted in ancient times. The etymological argument weakens rather than sustains his view; for it is difficult to conceive that the principle of classification would be embodied in two of the names and not also in the third: the force of such evidence is wholly dependent upon its uniformity. With regard to the actual prevalence of the hues, it is quite consistent with the physical character of the districts that the Hamites of the south should be dark, and the Japhetites of the north fair, and further that the Shemites should hold an intermediate place in colour as in geographical position. But we have no evidence that this distinction was strongly marked. The "redness" expressed in the name Edom probably referred to the soil (Stanley, *S. & P.* p. 87): the *Erythræan Mare* was so called from a peculiarity in its own tint, arising from the presence of some vegetable substance, and not because the red Shemites bordered on it, the black Cushites being equally numerous on its shores: the name *Adam*, as applied to the Shemitic man, is ambiguous, from its reference to soil as well as colour. On the other hand, the Phœnicians (assuming them to have reached the Mediterranean seaboard before the table was compiled) were so called from their red hue, and yet are placed in the table among the Hamites. The argument drawn from the red hue of the Egyptian deity Typhon is of little value until it can be decisively proved that the deity in question represented the Shemites. This is asserted by Renan (*H. G.* i. 38), who endorses Knobel's view as far as the Shemites are concerned, though he does not accept his general theory.

The linguistic difficulties connected with the Mosaic table are very considerable, and we cannot pretend to unravel the tangled skein of conflicting opinions on the subject. The primary difficulty arises out of the Biblical narrative itself, and is consequently of old standing—the difficulty, namely, of accounting for the evident identity of language spoken by the Shemitic Terachites and the Hamitic Canaanites. Modern linguistic research has rather enhanced than removed this difficulty. The alternatives hitherto offered as satisfactory solutions, namely, that the Terachites adopted the language of the Canaanites, or the Canaanites that of the Terachites, are both inconsistent with the enlarged area which the language is found to cover on each side. Setting aside the question of the high improbability that a wandering nomadic tribe, such as the Terachites, would be able to impose its language on a settled and powerful nation like the Canaanites, it would still remain to be explained how the Cushites and other Hamitic tribes, who did not come into contact with the Terachites,

acquired the same general type of language. And on the other hand, assuming that what are called Shemitic languages were really Hamitic, we have to explain the extension of the Hamitic area over Mesopotamia and Assyria, which, according to the table and the general opinion of ethnologists, belonged wholly to a non-Hamitic population. A further question, moreover, arises out of this explanation, viz.: what was the language of the Tachites before they assumed this Hamitic tongue? This question is answered by J. G. Müller, in Herzog's *R. E.* xiv. 238, to the effect that the Shemites originally spoke an Indo-European language—a view which we do not expect to see generally adopted.

Restricting ourselves, for the present, to the linguistic question, we must draw attention to the fact that there is a well-defined Hamitic as well as a Shemitic class of languages, and that any theory which obliterates this distinction must fall to the ground. The Hamitic type is most highly developed, as we might expect, in the country which was, *par excellence*, the land of Ham, viz. Egypt; and whatever elements of original unity with the Shemitic type may be detected by philologists, practically the two were as distinct from each other in historical times, as any two languages could possibly be. We are not therefore prepared at once to throw overboard the linguistic element of the Mosaic table. At the same time we recognize the extreme difficulty of explaining the anomaly of Hamitic tribes speaking a Shemitic tongue. It will not suffice to say, in answer to this, that these tribes were Shemites; for again the correctness of the Mosaic table is vindicated by the differences of social and artistic culture which distinguish the Shemites proper from the Phoenicians and Cushites using a Shemitic tongue. The former are characterized by habits of simplicity, isolation, and adherence to patriarchal ways of living and thinking; the Phoenicians, on the other hand, were eminently a commercial people; and the Cushites are identified with the massive architectural erections of Babylonia and South Arabia, and with equally extended ideas of empire and social progress.

The real question at issue concerns the language, not of the whole Hamitic family, but of the Canaanites and Cushites. With regard to the former, various explanations have been offered—such as Knobel's, that they acquired a Shemitic language from a prior population, represented by the Refaites, Zusim, Zamzumim, &c. (*Volkert.* p. 315); or Bunsen's, that they were a Shemitic race who had long sojourned in Egypt (*Phil. of Hist.* i. 191)—neither of which are satisfactory. With regard to the latter, the only explanation to be offered is that a Joktanid immigration supervened on the original Hamitic population, the result being a combination of Cushitic civilization with a Shemitic language (Renan, i. 322). Nor is it unimportant to mention that peculiarities have been discovered in the Cushite Shemitic of Southern Arabia which suggest a close affinity with the Phoenician forms (Renan, i. 318). We are not, however, without expectation that time and research will clear up much of this mystery that now enwraps the subject. There are two directions to which we may hopefully turn for light, namely Egypt and Babylonia, with regard to each of which we make a few remarks.

That the Egyptian language exhibits many striking points of resemblance to the Shemitic type is acknowledged on all sides. It is also allowed

that the resemblances are of a valuable character, being observable in the pronouns, numerals, as agglutinative forms, in the treatment of vowels, and other such points (Renan, i. 84-95). There is not, however, an equal degree of agreement among scholars as to the deductions to be drawn from these resemblances. While many recognize in them the proofs of a substantial identity, and hence regard Hamitism as an early stage of Shemitism, others deny, either on general or on special grounds, the probability of such a connexion. When we find such high authorities as Bunsen on the former side (*Phil. of Hist.* i. 186-189, ii. 3), and Renan (i. 87) on the other, not to mention a long array of scholars who have adopted each view, it would be presumption dogmatically to assert the correctness or incorrectness of either. We can only point to the possibility of the identity being established, and to the further possibility that connecting links may be discovered between the two extremes, which may serve to bridge over the gulf, and to render the use of a Shemitic language by a Hamitic race less of an anomaly than it at present appears to be.

Turning eastward to the banks of the Tigris and Euphrates, and the adjacent countries, we find ample materials for research in the inscriptions recently discovered, the examination of which has not yet yielded undisputed results. The Mosaic table places a Shemitic population in Assyria and Elam, and a Cushitic one in Babylon. The probability of this being ethnically (as opposed to geographically) true depends partly on the age assigned to the table. There can be no question that at a late period Assyria and Elam were held by non-Shemitic, probably Aryan conquerors. But if we carry the table back to the age of Abraham, the case may have been different; for though Elam is regarded as etymologically identical with Iran (Renan, i. 41), this is not conclusive as to the Iranian character of the language in early times. Sufficient evidence is afforded by language that the basis of the population in Assyria was Shemitic (Renan, i. 70; Knobel, pp. 154-156); and it is by no means improbable that the inscriptions belonging more especially to the neighbourhood of Susa may ultimately establish the fact of a Shemitic population in Elam. The presence of a Cushitic population in Babylon is an opinion very generally held on linguistic grounds; and a close identity is said to exist between the old Babylonian and the *Mahri* language, a Shemitic tongue of an ancient type still living in a district of *Hadramaut*, in Southern Arabia (Renan, *H. G.* i. 60). In addition to the Cushitic and Shemitic elements in the population of Babylonia and the adjacent districts, the presence of a Turanian element has been inferred from the linguistic character of the early inscriptions. We must here express our conviction that the ethnology of the countries in question is considerably clouded by the undefined use of the terms Turanian, Scythic, and the like. It is frequently difficult to decide whether these terms are used in a linguistic sense, as equivalent to *agglutinative*, or in an ethnic sense. The presence of a certain amount of Turanianism in the former does not involve its presence in the latter sense. The old Babylonian and Susian inscriptions may be more agglutinative than the later ones, but this is only a proof of their belonging to an earlier stage of the language, and does not of itself indicate a foreign population; and if these early Babylonian inscriptions gradually into the Shemitic, as is asserted even by the adve-

TONGUES, CONFUSION OF

dates of the Turanian theory (Rawlinson's *Herod.* i. 442, 445), the presence of an ethnic Turanianism cannot possibly be inferred. Added to this, it is inexplicable how the presence of a large Scythic population in the Achaemenian period, to which many of the Susianian inscriptions belong, could escape the notice of historians. The only Scythic tribes noticed by Herodotus in his review of the Persian empire are the Parthians and the Sacae, the former of whom are known to have lived in the north, while the latter probably lived in the extreme east, where a memorial of them is still supposed to exist in the name *Sakstan*, representing the ancient Sacastene. Even with regard to these, Scythic may not mean Turanian; for they may have belonged to the Scythians of history (the Skolots), for whom an Indo-European origin is claimed (Rawlinson's *Herod.* iii. 197). The impression conveyed by the supposed detection of so many heterogeneous elements in the old Babylonian tongue (Rawlinson, i. 442, 444, 846, notes) is not favourable to the general results of the researches.

With regard to Arabia, it may safely be asserted that the Mosiac table is confirmed by modern research. The Cushitic element has left memorials of its presence in the south in the vast ruins of *Mareh* and *Sana* (Renan, i. 318), as well as in the influence it has exercised on the *Hanyaritic* and *Mahri* languages, as compared with the Hebrew. The Joktanid element forms the basis of the Arabian population, the Shemitic character of whose language needs no proof. With regard to the Ishmaelite element in the north, we are not aware of any linguistic proof of its existence, but it is confirmed by the traditions of the Arabians themselves.

It remains to be inquired how far the Japhetic stock represents the linguistic characteristia of the Indo-European and Turanian families. Adopting the twofold division of the former, suggested by the name itself, into the eastern and western; and subdividing the eastern into the Indian and Iranian, and the western into the Celtic, Hellenic, Illyrian, Italian, Teutonic, Slavonian, and Lithuanian classes, we are able to assign Madai (*Media*) and Togarmah (*Armenia*) to the Iranian class; Javan (*Ionian*) and Elishah (*Aeolian*) to the Hellenic; Gomer conjecturally to the Celtic; and Dodanlm, also conjecturally, to the Illyrian. According to the old interpreters, Ashkenaz represents the Teutonic class, while, according to Knobel, the Italian would be represented by Tarshish, whom he identifies with the Etruscans; the Slavonian by Magog; and the Lithuanian, possibly by Thine (pp. 90, 68, 180). The same writer also identifies Riphath with the Gauls, as distinct from the Cymry or Gomer (p. 45); while Kittim is referred by him not improbably to the Carians, who at one period were predominant on the islands adjacent to Asia Minor (p. 98). The evidence for these identifications varies in strength, but in no instance approaches to demonstration. Beyond the general probability that the main branches of the human family would be represented in the Mosiac table, we regard much that has been advanced on this subject as highly precarious. At the same time it must be conceded that the subject is an open one, and that as there is no possibility of proving, so also none of disproving, the correctness of these conjectures. Whether the

TONGUES, CONFUSION OF 1541

Turanian family is fairly represented in the Mosiac table may be doubted. Those who advocate the Mongolian origin of the Scythians would naturally regard Magog as the representative of this family; and even those who dissent from the Mongolian theory may still not unreasonably conceive that the title Magog applied broadly to all the nomad tribes of Northern Asia, whether Indo-European or Turanian. Tubal and Meshech remain to be considered: Knobel identifies these respectively with the Iberians and the Ligurians (pp. 111, 119); and if the Finnish character of the Basque language were established, he would regard the Iberians as certainly, and the Ligurians as probably Turanians, the relics of the first wave of population which is supposed to have once overspread the whole of the European continent, and of which the Finns in the north, and the Basques in the south, are the sole surviving representatives. The Turanian character of the two Biblical races above mentioned has been otherwise maintained on the ground of the identity of the names Meshech and Muscovite (Rawlinson's *Herod.* i. 652).

II. Having thus reviewed the ethnic relations of the nations who fell within the circle of the Mosiac table, we propose to cast a glance beyond its limits, and inquire how far the present results of ethnological science support the general idea of the unity of the human race, which underlies the Mosiac system. The chief and in many instances the only instrument at our command for ascertaining the relationship of nations is language. In its general results this instrument is thoroughly trustworthy, and in each individual case to which it is applied it furnishes a strong *prima facie* evidence; but its evidence, if unsupported by collateral proofs, is not unimpeachable, in consequence of the numerous instances of adopted languages which have occurred within historical times. This drawback to the value of the evidence of language will not materially affect our present inquiry, inasmuch as we shall confine ourselves as much as possible to the general results.

The nomenclature of modern ethnology is not identical with that of the Bible, partly from the enlargement of the area, and partly from the general adoption of language as the basis of classification. The term Shemitic is indeed retained, not, however, to indicate a descent from Shem, but the use of languages allied to that which was current among the Israelites in historical times. Hamitic also finds a place in modern ethnology, but as subordinate to, or co-ordinate with, Shemitic. Japhetic is superseded mainly by Indo-European or Aryan. The various nations, or families of nations, which find no place under the Biblical titles are classed by certain ethnologists under the broad title of Turanian, while by others they are broken up into divisions more or less numerous.

The first branch of our subject will be to trace the extension of the Shemitic family beyond the limits assigned to it in the Bible. The most marked characteristic of this family, as compared with the Indo-European or Turanian, is its inelasticity. Hemmed in both by natural barriers and by the superior energy and expansiveness of the Aryan and Turanian races, it retains to the present day the *status quo* of early times.² The only

² The total amount of the Shemitic population at present is computed to be only 30 millions, while the Indo-European is computed at 400 millions (Renan, i. 43, note).

³ Eastward of the Tigris a Shemitic population has been supposed to exist in Afghanistan, where the *Pashtu* language has been regarded as leaving a Shemitic char-

1550 TONGUES, CONFUSION OF

direction in which it has exhibited any tendency to expand has been about the shores of the Mediterranean, and even here its activity was of a sporadic character, limited to a single branch of the family, viz. the Phœnicians, and to a single phase of expansion, viz. commercial colonies. In Asia Minor we find tokens of Shemitic presence in Cilicia, which was connected with Phœnicia both by tradition (Herod. vii. 91), and by language, as attested by existing coins (Gesen. *Mon. Phœn.* iii. 2): in Pamphylia, Pisidia, and Lycia, parts of which were occupied by the Solymi (Plin. v. 24; Herod. i. 173), whose name bears a Shemitic character, and who are reported to have spoken a Shemitic tongue (Euseb. *Præp. Ev.* ix. 9), a statement confirmed by the occurrence of other Shemitic names, such as Phoenix and Cabalia, though the subsequent predominance of an Aryan population in these same districts is attested by the existing Lycian inscriptions: again in Caria, though the evidence arising out of the supposed identity of the names of the gods Oeogo and Chrysaëros with the *Οἰεωρος* and *Χρυσάειρος* of Sanchuniathon is called in question (Renan, *H. G.* i. 49): and, lastly, in Lydia, where the descendants of Lud are located by many authorities, and where the prevalence of a Shemitic language is asserted by scholars of the highest standing, among whom we may specify Bunsen and Lassen, in spite of tokens of the contemporaneous presence of the Aryan element, as instanced in the name Sardis, and in spite also of the historical notices of an ethnical connexion with Mysia (Herod. i. 171). Whether the Shemites ever occupied any portion of the plateau of Asia Minor may be doubted. In the opinion of the ancients the later occupants of Cappadocia were Syrians, distinguished from the mass of their race by a lighter hue, and hence termed *Leucoeyri* (Strab. xii. p. 542); but this statement is traversed by the evidences of Aryanism afforded by the names of the kings and deities, as well as by the Persian character of the religion (Strab. xv. p. 733). If therefore the Shemites ever occupied this district, they must soon have been brought under the dominion of Aryan conquerors (Diefenbach, *Orig. Europ.* p. 44). The Phœnicians were ubiquitous on the islands and shores of the Mediterranean: in Cyprus, where they have left tokens of their presence at Citium and other places; in Crete; in Malta, where they were the original settlers (Diod. Sic. v. 12); on the mainland of Greece, where their presence is betokened by the name Cadmus; in Samos, Same, and Samothrace, which bear Shemitic names; in Ios and Teuedos, once known by the name of Phœnix; in Sicily, where Panormus, Motya, and Soloeis were Shemitic settlements; in Sardinia (Diod. Sic. v. 35); on the eastern and southern coasts of Spain; and on the north coast of Africa, which was lined with Phœnician colonies from the Syrtis Major to the Pillars of Hercules. They must also have penetrated deeply into the interior, to judge from Strabo's statement of the destruction of three hundred towns by the Pharu-

nians. A theory has consequently been started that the people speaking it represent the ten tribes of Israel (Forster's *Prim. Lang.* iii. 341). We believe the supposed Shemitic resemblances to be unfounded, and that the *Phœnic* language holds an intermediate place between the Iranian and Indian classes, with the latter of which it possesses in common the *l*-sound or cerebral sounds (Diefenbach, *Or. Eur.* p. 37).

* We use the qualifying expression "at present," partly because it is not improbable that new classes may be here-

TONGUES, CONFUSION OF

sians and Nigritians (Strab. xvii. p. 826). Such is none of the countries we have mentioned did they supplant the original population: they were conquerors and settlers, but no more than this.

The bulk of the North African languages, both in ancient and modern times, though not Shemitic in the proper sense of the term, so far resemble that type as to have obtained the title of sub-Shemitic. In the north the old Numidian language appears, from the prevalence of the syllable *Mes* in the name *Massyli*, &c., to be allied to the modern *Berber*; and the same conclusion has been drawn with regard to the Libyan tongue. The *Berber*, in turn, together with the *Tuareck* and the great body of the North African dialects, is closely allied to the Coptic of Egypt, and therefore falls under the title of Hamitic, or, according to the more usual nomenclature, sub-Shemitic (Renan, *H. G.* i. 201, 202). Southwards of Egypt the Shemitic type is reproduced in the majority of the Abyssinian languages, particularly in the *Geez*, and in a less marked degree in the *Anharic*, the *Saho*, and the *Galla*; and Shemitic influence may be traced along the whole east coast of Africa as far as *Mozambique* (Renan, i. 336-340). As to the languages of the interior and of the south there appears to be a conflict of opinions, the writer from whom we have just quoted denying any trace of resemblance to the Shemitic type, while Dr. Latham asserts very confidently that connecting links exist between the sub-Shemitic languages of the north, the Negro languages in the centre, and the Caffre languages of the south; and that even the Hottentot language is not so isolated as has been generally supposed (*Man and his Migrations*, pp. 134-148). Bunsen supports this view as far as the languages north of the equator are concerned, but regards the southern as rather approximating to the Turanian type (*Phil. of Hist.* i. 178, ii. 20). It is impossible as yet to form a decided opinion on this large subject.

A question of considerable interest remains yet to be noticed, namely, whether we can trace the Shemitic family back to its original cradle. In the case of the Indo-European family this can be done with a high degree of probability; and if an original unity existed between these stocks, the domicile of the one would necessarily be that of the other. A certain community of ideas and traditions favours this assumption, and possibly the frequent allusions to the east in the early chapters of Genesis may contain a reminiscence of the direction in which the primeval abode lay (Renan, *H. G.* i. 476). The position of this abode we shall describe presently.

The Indo-European family of languages, as at present constituted, consists of the following nine classes:—Indian,* Iranian, Celtic, Italian, Albanian, Greek, Teutonic, Lithuanian, and Slavonian. Geographically, these classes may be grouped together in two divisions—Eastern and Western—the former comprising the two first, the latter the seven remaining classes. Schleicher divides what we have termed the Western into two—the South-west Ea-

after added, as, for instance, an Anatolian, to describe the languages of Asia Minor, and partly because there may have been other classes once in existence, which have entirely disappeared from the face of the earth.

* Professor M. Müller adopts the termination *-it*, in order to shew that classes are intended. This appears unnecessary, when it is specified that the arrangement is one of classes, and not of single languages. Moreover, in common usage, the termination does not necessarily carry the idea of a class.

regions, and the North European—in the former of which he places the Greek, Albanian, Italian, and Celtic, in the latter the Slavonian, Lithuanian, and Teutonic (*Compend.* i. 5). Prof. M. Müller combines the Slavonian and Lithuanian classes in the Windic, thus reducing the number to eight. These classes exhibit various degrees of affinity to each other, which are described by Schleicher in the following manner:—The earliest deviation from the common language of the family was effected by the Slavono-Teutonic branch. After another interval a second bifurcation occurred, which separated what we may term the Graeco-Italo-Celtic branch from the Aryan. The former held together for a while, and then threw off the Greek (including probably the Albanian), leaving the Celtic and Italian still connected: the final division of the two latter took place after another considerable interval. The first-mentioned branch—the Slavono-Teutonic—remained intact for a period somewhat longer than that which witnessed the second bifurcation of the original stock, and then divided into the Teutonic and Slavono-Lithuanian, which latter finally broke up into its two component elements. The Aryan branch similarly held together for a lengthened period, and then bifurcated into the Indian and Iranian. The conclusion Schleicher draws from these linguistic affinities is that the more easterly of the European nations, the Slavonians and Teutons, were the first to leave the common home of the Indo-European race; that they were followed by the Celts, Italians, and Greeks; and that the Indian and Iranian branches were the last to commence their migrations. We feel unable to accept this conclusion, which appears to us to be based on the assumption that the antiquity of a language is to be measured by its approximation to Sanscrit. Looking at the geographical position of the representatives of the different language-classes, we should infer that the most westerly were the earliest immigrants into Europe, and therefore probably the earliest emigrants from the primeval seat of the race; and we believe this to be confirmed by linguistic proofs of the high antiquity of the Celtic as compared with the other branches of the Indo-European family (Bunsen, *Phil. of Hist.* i. 186).

The original seat of the Indo-European race was on the plateau of Central Asia, probably to the westward of the *Bolar* and *Mustagh* ranges. The Indian branch can be traced back to the slopes of Himalaya by the geographical allusions in the Vedic hymns (M. Müller's *Leof.* p. 201); in confirmation of which we may adduce the circumstance that the only tree for which the Indians have an appellation in common with the western nations, is one which in India is found only on the southern slope of that range (Pott, *Etym. Forsch.* i. 110). The westward progress of the Iranian tribes is a matter of history, and though we cannot trace this progress back to its fountain-head, the locality above mentioned best accords with the traditional belief of the Asiatic Aryans and with the physical and geographical requirements of the case (Renan, *H. G.* i. 481).

The routes by which the various western branches reached their respective localities, can only be conjectured. We may suppose them to have successively crossed the plateau of Iran until they reached Armenia, whence they might follow either a northerly course across Caucasus, and by the shore of the Black Sea, or a direct westerly one along the plateau of Asia Minor, which seems destined by nature to be the bridge between the two continents of Europe

and Asia. A third route has been surmised for a portion of the Celtic stock, viz., along the north coast of Africa, and across the Straits of Gibraltar into Spain (Bunsen, *PA. of H.* i. 148), but we see little confirmation of this opinion beyond the fact of the early presence of the Celts in that peninsula, which is certainly difficult to account for.

The eras of the several migrations are again very much a matter of conjecture. The original movements belong for the most part to the ante-historical age, and we can do no more than note the period at which we first encounter the several nations. That the Indian Aryans had reached the mouth of the Indus at all events before 1000 B.C., appears from the Sanscrit names of the articles which Solomon imported from that country [INDIA]. The presence of Aryans on the Shemitic frontier is as old as the composition of the Mosaic table; and, according to some authorities, is proved by the names of the confederate kings in the age of Abraham (Gen. xiv. 1; Renan, *H. G.* i. 61). The Aryan Medes are mentioned in the Assyrian annals about 900 B.C. The Greeks were settled on the peninsula named after them, as well as on the islands of the Aegean long before the dawn of history, and the Italians had reached their quarters at a yet earlier period. The Celts had reached the west of Europe at all events before, probably very long before, the age of Herodotus (500 B.C.); the latest branch of this stock arrived there about that period according to Bunsen's conjecture (*PA. of H.* i. 152). The Teutonic migration followed at a long interval after the Celtic: Pytheas found them already seated on the shores of the Baltic in the age of Alexander the Great (Plin. xxvii. 11), and the term *gleanus* itself, by which amber was described in that district, belongs to them (Diefenbach, *Or. Eur.* p. 359). The earliest historical notice of them depends on the view taken of the nationality of the Teutones, who accompanied the Cimbri on their southern expedition in 113-102 B.C. If these were Celtic, as is not uncommonly thought, then we must look to Caesar and Tacitus for the earliest definite notices of the Teutonic tribes. The Slavonian immigration was nearly contemporaneous with the Teutonic (Bunsen, *PA. of H.* i. 72): this stock can be traced back to the *Veneti* or *Venedae* of Northern Germany, first mentioned by Tacitus (*German.* 46), from whom the name *Wend* is probably descended. The designation of *Slavi* or *Slavi* is of comparatively late date, and applied specially to the western branch of the Slavonian stock. The Lithuanians are probably represented by the *Galindae* and *Sudeni* of Ptolemy (iii. 5, §21), the names of which tribes have been preserved in all ages in the Lithuanian district (Diefenbach, p. 202). They are frequently identified with the *Aestivi*, and it is not impossible that they may have adopted the title, which was a geographical one (=the east men): the *Aestivi* of Tacitus, however, were Germans. In the above statements we have omitted the problematical identifications of the northern stocks with the earlier nations of history: we may here mention that the Slavonians are not unfrequently regarded as the representatives of the Scythians (Skolots) and the Sarmatians (Knobel, *Völkerk.* p. 69). The writer whom we have just cited, also endeavours to connect the Lithuanians with the Agathyrsi (p. 130). So again Grimm traced the Teutonic stock to the Getae, whom he identified with the Goths (*Gesch. Dent. Spr.* i. 178).

It may be asked whether the Aryan race were the

first comes in the lands which they occupied in historical times, or whether they superseded an earlier population. With regard to the Indian branch this question can be answered decisively: the vestiges of an aboriginal population, which once covered the plains of Hindostan, still exist in the southern extremity of the peninsula, as well as in isolated localities elsewhere, as instanced in the case of the Brahms of the north. Not only this, but the Indian class of languages possesses a peculiarity of sound (the lingual or cerebral consonants, which is supposed to have been derived from this population and to betoken a fusion of the conquerors and the conquered (Schleicher, *Compend.* i. 141). The languages of this early population are classed as Turanian (M. Müller, *Lect.* p. 399). We are unable to find decided traces of Turanians on the plateau of Iran. The Scæe, of whom we have already spoken, were Scythians, and so were the Parthians, both by reputed descent (Justin, xli. 1) and by habits of life (Strab. xi. p. 515); but we cannot positively assert that they were Turanians, inasmuch as the term Scythian was also applied, as in the case of the Skolots, to Indo-Europeans. In the Caucasian district the Iberians and others may have been Turanian in early as in later times; but it is difficult to unravel the entanglement of races and languages in that district. In Europe there exists in the present day an undoubted Turanian population eastward of the Baltic, viz., the Finns, who have been located there certainly since the time of Tacitus (*Germ.* 46), and who probably at an earlier period had spread more to the southwards, but had been gradually thrust back by the advance of the Teutonic and Slavonian nations (Diefenbach, *O. E.* p. 209). There exists again in the south a population whose language (the *Basque*, or, as it is entitled in its own land, the *Euskara*) presents numerous points of affinity to the Finnish in grammar, though its vocabulary is wholly distinct. We cannot consider the Turanian character of this language as fully established, and we are therefore unable to divine the ethnic affinities of the early Iberians, who are generally regarded as the progenitors of the Basques. We have already adverted to the theory that the Finns in the north and the Basques in the south are the surviving monuments of a Turanian population which overspread the whole of Europe before the arrival of the Indo-Europeans. This is a mere theory which can neither be proved nor disproved.^b

It would be difficult, if not impossible, to assign to the various subdivisions of the Indo-European stock their respective areas, or, where admixture has taken place, their relative proportions. Language and race are, as already observed, by no means coextensive. The Celtic race, for instance, which occupied Gaul, Northern Italy, large portions of Spain and Germany, and even penetrated across the Hellespont into Asia Minor, where it gave name to the province of Galatia, is now represented linguistically by the insignificant populations, among whom the Welsh and the Gaelic or Erse languages retain a lingering existence. The Italian race, on the other hand, which must have been well nigh annihilated by or absorbed in the overwhelming masses of the northern hordes, has imposed its language outside the bounds of Italy over the peninsula of Spain, France, and Wallachia. But, while the races have so intermingled as in many instances to lose all

trace of their original individuality, the broad fact of their descent from one or other of the branches of the Indo-European family remains unaffected. It is, indeed, impossible to affiliate all the nations whose names appear on the roll of history, to the existing divisions of that family, in consequence of the absence or the obscurity of ethnological criteria. Where, for instance, shall we place the languages of Asia Minor and the adjacent districts? The Phrygian approximates perhaps to the Greek, and yet it differs from it materially both in form and vocabulary (Rawlinson's *Herod.* i. 666): still more is this the case with the Lycian, which appears to possess a vocabulary wholly distinct from its kindred languages (*Id.* i. 669, 677-679). The Armenian is ranged under the Iranian division: yet this, as well as the language of the Caucasian Ossætes, whose indigenous name of *Ir* or *Iran* seems to vindicate for them the same relationship, are so distinctive in their features as to render the connexion dubious. The languages prevalent in the mountainous district, answering to the ancient Pontus, are equally peculiar (Diefenbach, *O. E.* p. 51). Passing to the westward we encounter the Thracians, reputed by Herodotus (v. 3) the most powerful nation in the world, the Indians excepted, yet but one word of their language (*bris* = "crow") has survived, and all historical traces of the people have been obliterated. It is true that they are represented in later times by the Gætes, and these in turn by the Daci, but neither of these can be tracked either by history or language, unless we accept Grimm's more than doubtful identification which would connect them with the Teutonic branch. The remains of the Scythian language are sufficient to establish the Indo-European affinities of that nation (Rawlinson's *Herod.* iii. 196-203), but insufficient to assign to it a definite place in the family. The Scythians, as well as most of the nomad tribes associated with them, are lost to the eye of the ethnologist, having been either absorbed into other nationalities or swept away by the ravages of war. The Sarmatæ can be traced down to the laeyges of Hungary and Podlachia, in which latter district they survived until the 10th century of our era (*Dict. of Geog.* ii. 8), and then they also vanish. The Albanian language presents a problem of a different kind: materials for research are not wanting in this case, but no definite conclusions have as yet been drawn from them: the people who use this tongue, the *Shipetars* as they call themselves, are generally regarded as the representatives of the old Illyrians, who in turn appear to have been closely connected with the Thracians (Strab. vu. p. 315; Justin, xi. 1), the name *Dardani* being found both in Illyria and on the shores of the Hellespont: it is not, therefore, improbable that the Albanian may contain whatever vestiges of the old Thracian tongue still survive (Diefenbach, *O. E.* p. 68). In the Italic peninsula the Etruscan tongue remains as great an enigma as ever: its Indo-European character is supposed to be established, together with the probability of its being a mixed language (Bunsen's *Ph. of H.* i. 85-88). The result of researches into the Umbrian language, as represented in the Etruscan tablets, the earliest of which date from about 400 B.C.; into the Sabellian, as represented in the tablets of *Velletri* and *Astra*; and into the Oscan, of which the remains are so

^b We must be understood as speaking of linguistic and ethnological proofs furnished by populations existing

within historical times, without reference to the geological questions relating to the antiquity of man.

ærons, have decided their position as members of the Italic class (*id.* i. 90-94). The same cannot be asserted of the Messapian or Iapygian language, which stands apart from all neighbouring dialects. Its Indo-European character is affirmed, but no ethnological conclusion can as yet be drawn from the scanty information afforded us (*id.* i. 94). Lastly, within the Celtic area there are ethnological problems which we cannot pretend to solve. The Ligurians, for instance, present one of these problems: were they Celts, but belonging to an earlier migration than the Celts of history? Their name has been referred to a Welsh original, but on this no great reliance can be placed, as it would be in this case a local (= *coastmen*) and not an ethnical title, and might have been imposed on them by the Celts. They evidently hold a posterior place to the Iberians, inasmuch as they are said to have driven a section of this people across the Alps into Italy. That they were distinct from the Celts is asserted by Strabo (*li.* p. 128), but the distinction may have been no greater than exists between the British and the Gaelic branches of that race. The admixture of the Celts and Iberians in the Spanish peninsula is again a somewhat intricate question, which Dr. Latham attempts to explain on the ground that the term Celt (*Keltarai*) really meant Iberian (*Ethn. of Eur.* p. 35). That such questions as these should arise on a subject which carries us back to times of hoar antiquity, forms no ground for doubting the general conclusion that we can account ethnologically for the population of the European continent.

The Shemitic and Indo-European families cover after all but an insignificant portion of the earth's surface: the large areas of Northern and Eastern Asia, the numerous groups of islands that line its coast and stud the Pacific in the direction of South America, and again the immense continent of America itself, stretching well nigh from pole to pole, remain to be accounted for. Historical aid is almost wholly denied to the ethnologist in his researches in these quarters; physiology and language are his only guides. It can hardly, therefore, be matter of surprise, if we are unable to obtain certainty, or even a reasonable degree of probability, on this part of our subject. Much has been done; but far more remains to be done before the data for forming a conclusive opinion can be obtained. In Asia, the languages fall into two large classes—the monosyllabic, and the agglutinative. The former are represented ethnologically by the Chinese, the latter by the various nations classed together by Prof. M. Müller under the common head of Turanian. It is unnecessary for us to discuss the correctness of his view in regarding all these nations as members of one and the same family. Whether we accept or reject his theory, the fact of a gradation of linguistic types and of connecting links between the various branches remains unaffected, and for our present purpose the question is of comparatively little moment. The monosyllabic type apparently betokens the earliest movement from the common home of the human race, and we should therefore assign a chronological priority to this settlement of the Chinese in the east and south-east of the continent. The agglutinative languages fall geographically into two divisions, a northern and southern. The northern consists of a well-defined group, or family, designated by German ethnologists the Ural-Altaian. It consists of the following five

branches:—(1) The Tungusian, covering a large area, east of the river Yenisei, between lake Baikal and the Tunguska. (2) The Mongolian, which prevails over the Great Desert of Gobi, and among the Kalmucks, wherever their nomad habits lead them on the steppes either of Asia or Europe, in the latter of which they are found about the lower course of the Volga. (3) The Turkish, covering an immense area from the Mediterranean in the south-west to the river Lena in the north-east; in Europe spoken by the Osmanli, who form the governing class in Turkey; by the Nogai, between the Caspian and the Sea of Azov; and by various Caucasian tribes. (4) The Samoidic, on the coast of the Arctic Ocean, between the White Sea in the west and the river Anabara in the east. (5) The Finnish, which is spoken by the Finns and Lapps; by the inhabitants of Esthonia and Livonia to the south of the Gulf of Finland; by various tribes about the Volga (the Tcheremisians and Mordvians), and the Kama (the Votjaks and Permians); and, lastly, by the Magyars of Hungary. The southern branch is subdivided into the following four classes:—(1) The Tamulian, of the south of Hindostan. (2) The Bhotiya, of Tibet, the sub-Himalayan district (Nepaul and Bhotan), and the Lohitic languages east of the Brahmapootra. (3) The Tai, in Siam, Laos, Anam, and Pegu. (4) The Malay, of the Malay peninsula, and the adjacent islands; the latter being the original settlement of the Malay race, whence they spread in comparatively modern times to the mainland.

The early movements of the races representing these several divisions, can only be divined by linguistic tokens. Prof. M. Müller assigns to the northern tribes the following chronological order:—Tungusian, Mongolian, Turkish, and Finnish; and to the southern division the following:—Tai Malay, Bhotiya, and Tamulian (*Ph. of H.* i. 481). Geographically it appears more likely that the Malay preceded the Tai, inasmuch as they occupied a more southerly district. The later movements of the European branches of the northern division can be traced historically. The Turkish race commenced their westerly migration from the neighbourhood of the Altai range in the 1st century of our era; in the 6th they had reached the Caspian and the Volga; in the 11th and 12th the Turcomans took possession of their present quarters south of Caucasus; in the 13th the Osmanli made their first appearance in Western Asia; about the middle of the 14th they crossed from Asia Minor into Europe; and in the middle of the 15th they had established themselves at Constantinople. The Finnish race is supposed to have been originally settled about the Ural range, and thence to have migrated westward to the shores of the Baltic, which they had reached at a period anterior to the Christian era; in the 7th century a branch pressed southwards to the Danube, and founded the kingdom of Bulgaria, where, however, they have long ceased to have any national existence. The Ugrian tribes, who are the early representatives of the Hungarian Magyars, approached Europe from Asia in the 5th and settled in Hungary in the 9th century of our era. The central point from which the various branches of the Turanian family radiated would appear to be about lake Baikal. With regard to the ethnology of Oceania and America we can say but little. The languages of the former are generally supposed to be connected with the Malay class (Bunsen, *Ph. of H.* ii. 114), but the

relations, both linguistic and ethnological, existing between the Malay and the black, or Negrito population, which is found on many of the groups of islands, are not well defined. The approximation in language is far greater than in physiology (Latham's *Essays*, pp. 213, 218; Garnett's *Essays*, p. 310), and in certain cases amounts to identity (Kennedy's *Essays*, p. 85); but the whole subject is at present involved in obscurity. The polysynthetic languages of North America are regarded as emanating from the Mongolian stock (Bunsen, *Ph. of H.* ii. 111), and a close affinity is said to exist between the North American and the Kamakadale and Korean languages on the opposite coast of Asia (Latham, *Man and his Migr.* p. 185). The conclusion drawn from this would be that the population of America entered by way of Behring's Straits. Other theories have, however, been broached on this subject. It has been conjectured that the chain of islands which stretches across the Pacific may have conducted a Malay population to South America; and, again, an African origin has been claimed for the Caribs of Central America (Kennedy's *Essays*, pp. 100-123).

In conclusion, we may safely assert that the tendency of all ethnological and linguistic research is to discover the elements of unity amidst the most striking external varieties. Already the myriads of the human race are massed together into a few large groups. Whether it will ever be possible to go beyond this, and to show the historical unity of these groups, is more than we can undertake to say. But we entertain the firm persuasion that in their broad results these sciences will yield an increasing testimony to the truth of the Bible.

APPENDIX.—TOWER OF BABEL.

The Tower of Babel forms the subject of a previous article [BABEL, TOWER OF]; but in consequence of the discovery of a cuneiform inscription, in which the Tower is mentioned in connexion with the Confusion of Tongues, the eminent cuneiform scholar Dr. Oppert has kindly sent the following addition to the present article.

The history of the confusion of languages was preserved at Babylon, as we learn by the testimonies of classical and Babylonian authorities (Abydenus, *Fragm. Hist. Græc.* ed. Didot, vol. iv.). Only the Chaldeans themselves did not admit the Hebrew etymology of the name of their metropolis; they derived it from *Bab-el*, the door of *El* (Kronos or Saturnus), whom Diodorus Siculus states to have been the planet most adored by the Babylonians.

The Talmudists say that the true site of the Tower of Babel was at Borsif, the Greek Borsippa, the *Birs Nimrud*, seven miles and a half from *Hillah*, S.W., and nearly eleven miles from the northern

ruins of Babylon. Several passages state that the air of Borsippa makes forgetful (*וְהַיָּדִים שָׁכְחוּ*, *atr. makkah*); and one rabbi says that *Borsif* is *Bulsif*, the Confusion of Tongues (*Bereschit Rabba*, f. 42, 1). The Babylonian name of this locality is *Barisip* or *Barzippa*, which we explain by *Tower of Tongues*. The French expedition to Mesopotamia found at the *Birs Nimrud* a clay cake, dated from *Barisip* the 30th day of the 8th month of the 16th year of Nabonid, and the discovery confirmed the hypothesis of several travellers, who had supposed the *Birs Nimrud* to contain the remains of Borsippa.

Borsippa (the Tongue Tower) was formerly a suburb of Babylon, when the old Babel was merely restricted to the northern ruins, before the great extension of the city, which, according to ancient writers, was the greatest that the sun ever warmed with its beams. Nebuchadnezzar included it in the great circumvallation of 480 stades, but left it east of the second wall of 360 stades; and when the exterior wall was destroyed by Darius, Borsippa became independent of Babylon. The historical writers respecting Alexander state that Borsippa had a great sanctuary dedicated to Apollo and Artemis (Strab. xvi. p. 739; Stephanus Byz. s. v. *Βόρσιππα*), and the former is the building elevated in modern times on the very basement of the old Tower of Babel.

This building, erected by Nebuchadnezzar, is the same that Herodotus describes as the Tower of Jupiter Belus. In our *Expedition to Mesopotamia* we have given a description of this ruin, and proved our assertion of the identity. This tower of Herodotus has nothing to do with the pyramid described by Strabo, and which is certainly to be seen in the remains called now *Babil* (the *Muze'isibeh* of Rich). The temple of Borsippa is written with an ideogram,* composed of the signs for *house* and *spirit* (anima), the real pronunciation of which was probably *Sarakk*, tower.

The temple consisted of a large substructure, a stade (600 Babylonian feet) in breadth, and 75 feet in height, over which were built seven other stages of 25 feet each. Nebuchadnezzar gives notice of this building in the Borsippa inscription. He named it the temple of the *Seven Lights of the Earth*, i. e. the planets. The top was the temple of Nebo, and in the substructure (*igâr*) was a temple consecrated to the god Sin, god of the month. This building, mentioned in the East India House inscription (col. iv. l. 61), is spoken of by Herodotus (i. 181 &c.).

Here follows the Borsippa inscription:—"Nabuchodonosor, king of Babylon, shepherd of peoples, who attests the immutable affection of Merodach, the mighty ruler-exalting Nebo; the saviour, the wise man who lends his ears to the orders of the highest god; the lieutenant without reproach, the repairer of the Pyramid and the Tower, eldest son of Nabopallassar, king of Babylon.

"We say: Merodach, the great master, has created me: he has imposed on me to reconstruct his building. Nebo, the guardian over the legions of the heaven and the earth, has charged my hands with the sceptre of justice.

"The Pyramid is the temple of the heaven and the earth, the seat of Merodach, the chief of the gods, the place of the oracles, the spot of his rest, I have adorned in the form of a cupola, with shining gold.

* *Expedition to Mesopotamie*, t. 26. Compare also the trigonometrical survey of the river in the plates.

† BIT ZI DA in syllabic characters.

"The Tower, the eternal house, which I founded and built, I have completed its magnificence with silver, gold, other metals, stone, enamelled bricks, fir and pira.

"The first, which is the house of the earth's base, the most ancient monument of Borsippa, I built and finished it; I have highly exalted its head with bricks covered with copper."

"We say for the other, that is, this edifice, the house of the Seven Lights of the Earth, the most ancient monument of Borsippa: A former king built it (they reckon 42 ages), but he did not complete its head. Since a remote time people had abandoned it, without order expressing their words. Since that time, the earthquake and the thunder had dispersed its sun-dried clay; the bricks of the casing had been split, and the earth of the interior had been scattered in heaps. Merodach, the great lord, excited my mind to repair this building. I did not change the site, nor did I take away the foundation-stone. In a fortunate month, an auspicious day, I undertook to build porticoes around the crude brick masses, and the casing of burnt bricks. I adapted the circuits. I put the inscription of my name in the *Kittir* of the porticoes.

"I set my hand to finish it, and to exalt its head. As it had been in former times, so I founded, I made it; as it had been in ancient days, so I exalted its summit.

"Nebo, son of himself, ruler who exaltest Merodach, be propitious to my works to maintain my authority. Grant me a life until the remotest time, a sevenfold progeny, the stability of my throne, the victory of my sword, the pacification of foes, the triumph over the lands! In the columns of thy eternal table, that fixes the destinies of the heaven and of the earth, bless the course of my days, inscribe the fecundity of my race.

"Imitate, O Merodach, king of heaven and earth, the father who begot thee; bless my buildings, strengthen my authority. May Nebuchadnezzar, the king-repairer, remain before thy face!"

This allusion to the Tower of the Tongues is the only one that has as yet been discovered in the cuneiform inscriptions.¹ The story is a Shemitic and not only a Hebrew one, and we have no reason whatever to doubt of the existence of the same story at Babylon.

The ruins of the building elevated on the spot where the story placed the tower of the dispersion of tongues, have therefore a more modern origin, but interest nevertheless by their stupendous appearances [OPPERT.]

TONGUES, GIFT OF.—I. The history of a word which has been used to express some special, wonderful fact in the spiritual life of man is itself full of interest. It may be a necessary preparation for the study of the fact which that word represents.

Γλῶττα, or γλῶσσα, the word employed throughout the N. T. for the gift now under consideration, is used—(1.) for the bodily organ of speech; (2.) for a foreign word, imported and half-naturalised in Greek (Arist. *Rhet.* iii. 2, §14), a meaning which the words "gloss" and "glossary" preserve for us; (3.) in Hellenistic Greek, after the pattern of the corresponding Hebrew word (שֵׁנִי), for "speech" or "language" (Gen. x. 5; Dan. i. 4, &c. &c.).

¹ This manner of building is expressly mentioned by Philostratus (*Apoll. Tyar.* i. 25) as Babylonian.

² See *Excavation en Mesopotamie*, tom. i. 200.

Each of these meanings might be the starting-point for the application of the word to the gift of tongues, and each accordingly has found those who have maintained that it is so. (A). Eichhorn and Bardili (cited by Bleek, *Stud. u. Krit.* 1829, p. 8, et seq.), and to some extent Bunsen (*Hippolytus*, i. 9), starting from the first, see in the so-called gift an inarticulate utterance, the cry as of a brute creature, in which the tongue moves while the lips refuse their office in making the sounds definite and distinct. (B). Bleek himself (*ut sup.* p. 33) adopts the second meaning, and gives an interesting collection of passages to prove that it was, in the time of the N. T., the received sense. He infers from this that to speak in tongues was to use unusual, poetic language—that the speakers were in a high-wrought excitement which showed itself in mystic, figurative terms. In this view he had been preceded by Ernesti (*Opusc. Theolog.*; see *Morning Watch*, iv. 101) and Herier (*Die Gabe der Sprache*, pp. 47, 70), the latter of whom extends the meaning to special mystical interpretations of the O. T. (C). The received traditional view starts from the third meaning, and sees in the gift of tongues a distinctly linguistic power.

We have to see which of these views has most to commend it. (A), it is believed, does not meet the condition of answering any of the facts of the N. T., and errs in ignoring the more prominent meaning of the word in later Greek. (B), though true in some of its conclusions, and able, as far as they are concerned, to support itself by the authority of Augustine (comp. *De Gen. ad lit.* xii. 8, "linguam esse cum quis loquatur obscuras et mysticas significationes"), appears faulty, as failing (1) to recognise the fact that the sense of the word in the N. T. was more likely to be determined by that which it bore in the LXX. than by its meaning in Greek historians or rhetoricians, and (2) to meet the phenomena of Acts ii. (C) therefore commends itself, as in this respect starting at least from the right point, and likely to lead us to the truth (comp. Olshausen, *Stud. u. Krit.* 1828, p. 538).

II. The chief passages from which we have to draw our conclusion as to the nature and purpose of the gift in question, are—(1.) Mark xvi. 17; (2.) Acts ii. 1-13, x. 46, xix. 8; (3.) 1 Cor. xii. xiv. It deserves notice that the chronological sequence of these passages, as determined by the date of their composition, is probably just the opposite of that of the periods to which they severally refer. The first group is later than the second, the second than the third. It will be expedient, however, whatever modifications this fact may suggest afterwards, to deal with the passages in their commonly received order.

III. The promise of a new power coming from the Divine Spirit, giving not only comfort and insight into truth, but fresh powers of utterance of some kind, appears once and again in our Lord's teaching. The disciples are to take no thought what they shall speak, for the Spirit of their Father shall speak in them (Matt. x. 19, 20; Mark xiii. 11). The lips of Galilean peasants are to speak freely and boldly before kings. The only condition is that they are "not to premeditate"—to yield themselves altogether to the power that works on them. Thus they shall have given to them "a mouth and wisdom" which no adversary shall be able "to

³ Several scholars, we know, do not agree with us. We gave our reasons five years ago, and our antagonists have not yet refuted them.

gainsay or resist." In Mark xvi. 17 we have a more definite term employed: "They shall speak with new tongues (*καινὰς γλώσσας*)."^a Starting, as above, from (C), it can hardly be questioned that the obvious meaning of the promise is that the disciples should speak in new languages which they had not learnt as other men learn them. It must be remembered, however, that the critical questions connected with Mark xvi. 9-20 (comp. Meyer, Tischendorf, Alford, *in loc.*) make it doubtful whether we have here the language of the Evangelist—doubtful therefore whether we have the *ipsissima verba* of the Lord himself, or the nearest approximation of some early transcriber to the contents of the section, no longer extant, with which the Gospel had originally ended. In this case it becomes possible that the later phenomena, or later thoughts respecting them, may have determined the language in which the promise is recorded. On either hypothesis, the promise determines nothing as to the nature of the gift, or the purpose for which it was to be employed. It was to be a "sign." It was not to belong to a chosen few only—to Apostles and Evangelists. It was to "follow them that believed"—to be among the fruits of the living intense faith which raised men above the common level of their lives, and brought them within the kingdom of God.

IV. The wonder of the day of Pentecost is, in its broad features, familiar enough to us. The days since the Ascension had been spent as in a ceaseless ecstasy of worship (Luke xxiv. 53). The 120 disciples were gathered together, waiting with eager expectation for the coming of power from on high—the Spirit that was to give them new gifts of utterance. The day of Pentecost was come, which they, like all other Israelites, looked on as the witness of the revelation of the Divine Will given on Sinai. Suddenly there swept over them "the sound as of a rushing mighty wind," such as Ezekiel had heard in the visions of God by Chebar (Ez. i. 24, xliii. 2), at all times the recognised symbol of a spiritual creative power (comp. Ez. xxxvii. 1-14; Gen. i. 2; 1 K. xix. 11; 2 Chr. v. 14; Ps. civ. 3, 4). With this there was another sign associated even more closely with their thoughts of the day of Pentecost. There appeared unto them "tongues like as of fire." Of old the brightness had been seen gleaming through the "thick cloud" (Ex. xix. 18), or "enfolding" the Divine glory (Ex. i. 4). Now the tongues were distributed (*διανεμέρι-σθαι*), lighting upon each of them.^b The outward symbol was accompanied by an inward change. They were "filled with the Holy Spirit," as the Baptist and their Lord had been (Luke i.

^a The sign in this case had its starting-point in the traditional belief of Israelites. There had been, it was said, tongues of fire on the original Pentecost (Schneckenburger, *Beiträge*, p. 8, referring to Buxtorf, *De Synag.*, and Philo, *De Decal.*). The later Rabbis were not without their legends of a like "baptism of fire." Nicodemus ben Gorion and Jochanan ben Zaccar, men of great holiness and wisdom, went into an upper chamber to expound the Law, and the house began to be full of fire (Lightfoot, *Harm.* iii. 14; Schoettgen, *Hor. Heb.* in Acts ii.).

^b It deserves notice that here also there are analogies in Jewish belief. Every word that went forth from the mouth of God on Sinai was said to have been divided into the seventy languages of the sons of men (Wetstein, on Acts ii.); and the *bat-kol*, the echo of the voice of God, was heard by every man in his own tongue (Schneckenburger, *Beiträge*). So, as regards the power of speaking, there was a tradition that the great Rabbis of the Sanhe-

15, iv. 1), though they themselves had as yet no experience of a like kind. "They began to speak with other tongues as the Spirit gave them utterance." The narrative that follows leaves hardly any room for doubt that the writer meant to convey the impression that the disciples were heard to speak in languages of which they had no colloquial knowledge previously. The direct statement, "They heard them speaking, each man in his own dialect," the long list of nations, the words put into the lips of the hearers—these can scarcely be reconciled with the theories of Bleek, Herder, and Bunsen, without a wilful distortion of the evidence.^c What view are we to take of a phenomenon so marvellous and exceptional? What views have men actually taken? (1.) The prevalent belief of the Church has been, that in the Pentecostal gift the disciples received a supernatural knowledge of all such languages as they needed for their work as Evangelists. The knowledge was permanent, and could be used at their own will, as though it had been acquired in the common order of things. With this they went forth to preach to the nations. Differences of opinion are found as to special points. Augustine thought that each disciple spoke in all languages (*De Verb. Apost.* clix. 3); Chrysostom that each had a special language assigned to him, and that this was the indication of the country which he was called to evangelize (*Hom. in Act. ii.*). Some thought that the number of languages spoken was 70 or 75, after the number of the sons of Noah (Gen. x.) or the sons of Jacob (Gen. xlii.), or 120, after that of the disciples (comp. Baronius, *Annal.* l. 197). Most were agreed in seeing in the Pentecostal gift the antithesis to the confusion of tongues at Babel, the witness of a restored unity. "Poena linguarum dispersit homines, donum linguarum dispersos in unum populum collegit" (Grotius, *in loc.*).

Widely diffused as this belief has been, it must be remembered that it goes beyond the data with which the N. T. supplies us. Each instance of the gift recorded in the Acts connects it, not with the work of teaching, but with that of praise and adoration; not with the normal order of men's lives, but with exceptional epochs in them. It came and went as the Spirit gave men the power of utterance—in this respect analogous to the other gift of prophecy with which it was so often associated (Acts ii. 16, 17, xix. 6)—and was not possessed by them as a thing to be used this way or that, according as they chose.^d The speech of St. Peter which follows, like most other speeches addressed to a Jerusalem audience, was spoken apparently in Aramaic.^e When St. Paul, who "spoke

dram could speak all the seventy languages of the world.

^c The first discussion whether the gift of tongues was bestowed "per modum habitus" with which I am acquainted is found in Salmasius, *De Ling. Hebr.* (quoted by Thilo, *De Ling. Ignit.* in Menthen's *Theodorus*, ii. 497), whose conclusion is in the negative. Even Calmet admits that it was not permanent (*Comm. in loc.*). Compare also Wetstein, *in loc.*; and Olshausen, *Stud. u. Krit.* 1829 p. 546.

^d Dr. Stanley suggests Greek, as addressed in the Hellenistic Jews who were present in such large numbers (Excurs. on Gift of Tongues, *Corinthians*, p. 280, 2nd ed.). That St. Peter and the Apostles could speak a provincial Greek is probable enough; but in this instance the speech is addressed chiefly to the permanent dwellers at Jerusalem (Acts ii. 22, 36), and was likely, like that of St. Paul (Acts xxi. 40), to be spoken in their tongue. To most of the Hellenistic hearers this would be intelligible enough.

with tongues more than all," was at Lystra, there is no mention made of his using the language of Lycaonia. It is almost implied that he did not understand it (Acts xiv. 11). Not one word in the discussion of spiritual gifts in 1 Cor. xii.-xiv. implies that the gift was of this nature, or given for this purpose. If it had been, the Apostle would surely have told those who possessed it to go and preach to the outlying nations of the heathen world, instead of disturbing the Church by what, on this hypothesis, would have been a needless and offensive ostentation (comp. Stanley, *Corinthians*, p. 261, 2nd ed.). Without laying much stress on the tradition that St. Peter was followed in his work by Mark as an interpreter (*ἑρμηνεύτης*) (Papias, in Euseb. *H. E.* iii. 30), that even St. Paul was accompanied by Titus in the same character—"quia non potuit divinum sensum majestatem digno Graeci eloqui sermone applicare" (Hieron. quoted by Estius in 2 Cor. ii.)—they must at least be received as testimonies that the age which was nearest to the phenomena did not take the same view of them as those have done who lived at a greater distance. The testimony of Irenaeus (*Adv. Haer.* vi. 8), sometimes urged in support of the common view, in reality decides nothing, and, as far as it goes, tends against it (*infra*). Nor, it may be added, within the limits assigned by the providence of God to the working of the Apostolic Church, was such a gift necessary. Aramaic, Greek, Latin, the three languages of the inscription on the cross, were media of intercourse throughout the empire. Greek alone sufficed, as the N. T. shows us, for the Churches of the West, for Macedonia and Achaia, for Pontus, Asia, Phrygia. The conquests of Alexander and of Rome had made men *diglottic* to an extent which has no parallel in history. (2.) Some interpreters, influenced in part by these facts, have seen their way to another solution of the difficulty by changing the character of the miracle. It lay not in any new power bestowed on the speakers, but in the impression produced on the hearers. Words which the Galilean disciples uttered in their own tongue were heard by those who listened as in their native speech. This view we find adopted by Gregory of Nyssa (*De Spir. Sanct.*), discussed, but not accepted, by Gregory of Nazianzus (*Orat.* xlv.), and reproduced by Erasmus (*in loc.*). A modification of the same theory is presented by Schneckenburger (*Beiträge*), and in part adopted by Olshausen (*l. c.*) and Neander (*Pfands. u. Leit.* i. 15). The phenomena of somnambulism, of the so-called mesmeric state, are referred to as analogous. The speaker was *en rapport* with his hearers; the latter shared the thoughts of the former, and so heard them, or seemed to hear them, in their own tongues.

There are, it is believed, weighty reasons against both the earlier and later forms of this hypothesis. (1.) It is at variance with the distinct statement of Acts ii. 4, "They began to speak with other tongues." (2.) It at once multiplies the miracle, and degrades its character. Not the 120 disciples, but the whole multitude of many thousands, are in this case the subjects of it. The gift no longer connects itself with the work of the Divine Spirit, following on intense faith and earnest prayer, but is a mere physical prodigy wrought upon men who are altogether wanting in the conditions of capacity for such a supernatural power (Mark xvi. 17). (3.) It involves an element of falsehood. The miracle, on this view, was wrought to make men

believe what was not actually the fact. (4.) It is altogether inapplicable to the phenomena of 1 Cor. xiv.

(3.) Critics of a negative school have, as might be expected, adopted the easier course of rejecting the narrative either altogether or in part. The statements do not come from an eye-witness, and may be an exaggerated report of what actually took place—a legend with or without a historical foundation. Those who recognise such a groundwork see in "the rushing mighty wind," the hurricane of a thunderstorm, the fresh breeze of morning; in the "tongues like as of fire," the flashings of the electric fluid; in the "speaking with tongues," the loud screams of men, not all Galileans, but coming from many lands, overpowered by strong excitement, speaking in mystical, figurative, abrupt exclamations. They see in this "the cry of the newborn Christendom." (Bunsen, *Hippolytus* ii. 12; Ewald, *Gesch. Jer.* vi. 110; Bleek, *l. c.*; Herder, *l. c.*) From the position occupied by these writers, such a view was perhaps natural enough. It does not fall within the scope of this article to discuss in detail a theory which postulates the incredibility of any fact beyond the phenomenal laws of nature, and the falsehood of St. Luke as a narrator.

V. What, then, are the facts actually brought before us? What inferences may be legitimately drawn from them?

(1.) The utterance of words by the disciples, in other languages than their own Galilean Aramaic, is, as has been said, distinctly asserted.

(2.) The words spoken appear to have been determined, not by the will of the speakers, but by the Spirit which "gave them utterance." The outward tongue of flame was the symbol of the "burning fire" within, which, as in the case of the older prophets, could not be repressed (Jer. xx. 9).

(3.) The word used, *ἀποφθεγγέσθαι*, not merely *λαλεῖν*, has in the LXX. a special, though not an exclusive, association with the oracular speech of true or false prophets, and appears to imply some peculiar, perhaps musical, solemn intonation (comp. 1 Chr. xiv. 1; Ex. xiii. 9; Trommii *Concordant.* s. v.; Grotius and Wetstein, *in loc.*; Andrewes, *Whitsunday Sermons*, i.).

(4.) The "tongues" were used as an instrument, not of teaching but of praise. At first, indeed, there were none present to be taught. The disciples were by themselves, all sharing equally in the Spirit's gifts. When they were heard by others, it was as proclaiming the praise, the mighty and great works, of God (*μεγαλεῖα*). What they uttered was not a warning, or reproof, or exhortation, but a doxology (Stanley, *l. c.*; Baumgarten, *Apostelgesch.* §3). When the work of teaching began, it was in the language of the Jews, and the utterance of tongues ceased.

(5.) Those who spoke them seemed to others to be under the influence of some strong excitement, "full of new wine." They were not as other men, or as they themselves had been before. Some recognised, indeed, that they were in a higher state, but it was one which, in some of its outward features, had a counterfeit likeness in the lower. When St. Paul uses—in Eph. v. 18, 19 (*ᾠδοῦσθε ψαλμοὺς καὶ ὕμνοι*)—the all but selfsame word which St. Luke uses here to describe the state of the disciples (*ἐκλήθησαν πνεύματος ὁρίων*), it is to contrast it with "being drunk with wine," to associate it with "psalms and hymns, and spiritual songs."

(6.) Questions as to the mode of operation of

power above the common laws of bodily or mental life lead us to a region where our words should be "wary and few." There is the risk of seeming to reduce to the known order of nature that which is by confession above and beyond it. In this and in other cases, however, it may be possible, without irreverence or doubt—following the guidance which Scripture itself gives us—to trace in what way the new power did its work, and brought about such wonderful results. It must be remembered, then, that in all likelihood such words as they then uttered had been heard by the disciples before. At every feast which they had ever attended from their youth up, they must have been brought into contact with a crowd as varied as that which was present on the day of Pentecost, the pilgrims of each nation uttering their praises and doxologies. The difference was, that, before, the Galilean peasants had stood in that crowd, neither heeding, nor understanding, nor remembering what they heard, still less able to reproduce it; now they had the power of speaking it clearly and freely. The Divine work would in this case take the form of a supernatural exaltation of the memory, not of imparting a miraculous knowledge of words never heard before. We have the authority of John xiv. 26 for seeing in such an exaltation one of the special works of the Divine Comforter.

(7.) The gift of tongues, the ecstatic burst of praise, is definitely asserted to be a fulfilment of the prediction of Joel ii. 28. The twice-repeated burden of that prediction is, "I will pour out my Spirit," and the effect on those who receive it is that "they shall prophesy." We may see therefore in this special gift that which is analogous to one element at least of the *ῥωσφύρελα* of the O. T.; but the element of teaching is, as we have seen, excluded. In 1 Cor. xiv. the gift of tongues and *ῥωσφύρελα* (in this, the N. T. sense of the word) are placed in direct contrast. We are led, therefore, to look for that which answers to the Gift of Tongues in the other element of prophecy which is included in the O. T. use of the word; and this is found in the ecstatic praise, the burst of song, which appears under that name in the two histories of Saul (1 Sam. x. 5-13, xix. 20-24), and in the services of the Temple (1 Chr. xxv. 3).

(8.) The other instances in the Acts offer essentially the same phenomena. By implication in xiv. 15-19, by express statement in x. 47, xi. 15, 17, xix. 6, it belongs to special critical epochs, at which faith is at its highest, and the imposition of the Apostles' hands brought men into the same state, imparted to them the same gift, as they had themselves experienced. In this case, too, the exercise of the gift is at once connected with and distinguished from "prophecy" in its N. T. sense.

VI. The First Epistle to the Corinthians supplies fuller data. The spiritual gifts are classified and compared, arranged, apparently, according to their worth, placed under regulation. This fact is in itself significant. Though recognised as coming from the one Divine Spirit, they are not therefore exempted from the control of man's reason and conscience. The Spirit acts through the calm judgment of the Apostle or the Church, not less but more authoritatively than in the most rapturous and wonderful utterances. The facts which may be gathered are briefly these:

(1.) The phenomena of the gift of tongues were not confined to one Church or section of a Church. It we find them at Jerusalem, Ephesus, Corinth, by

TONGUES, GIFT OF

implication at Thessalonica also (1 Thess. v. 19), we may well believe that they were frequently recurring wherever the spirits of men were passing through the same stages of experience.

(2.) The comparison of gifts, in both the lists given by St. Paul (1 Cor. xii. 8-10, 28-30), places that of tongues, and the interpretation of tongues, lowest in the scale. They are not among the greater gifts which men are to "covet earnestly" (1 Cor. xii. 31, xiv. 5). As signs of a life quickened into expression where before it had been dead and dumb, the Apostle could wish that "they all spake with tongues" (1 Cor. xiv. 5), could rejoice that he himself "spake with tongues more than they all" (1 Cor. xiv. 18). It was good to have known the working of a power raising them above the common level of their consciousness. They belonged, however, to the childhood of the Christian life, not to its maturity (1 Cor. xiv. 20). They brought with them the risk of disturbance (ibid. 23). The only safe rule for the Church was not to "forbid them" (ibid. 39), not to "quench" them (1 Thess. v. 19), lest in so doing the spiritual life of which this was the first utterance should be crushed and extinguished too, but not in any way to covet or excite them. This language, as has been stated, leaves it hardly possible to look on the gift as that of a linguistic knowledge bestowed for the purpose of evangelising.

(3.) The main characteristic of the "tongue" (now used, as it were, technically, without the epithet "new" or "other")* is that it is unintelligible. The man "speaks mysteries," prays, blesses, gives thanks, in the tongue (*ἐν ᾧ ᾠοῦμαι* as equivalent to *ἐν γλώσσῃ*, 1 Cor. xiv. 15, 16), but no one understands him (*ἀκούει*). He can hardly be said, indeed, to understand himself. The *ᾠοῦμαι* in him is acting without the co-operation of the *νοῦς* (1 Cor. xiv. 14). He speaks not to men, but to himself and to God (comp. Chrysost. *Hom.* 35, in 1 Cor.). In spite of this, however, the gift might and did contribute to the building up of a man's own life (1 Cor. xiv. 4). This might be the only way in which some natures could be roused out of the apathy of a sensual life, or the dulness of a formal ritual. The ecstasy of adoration which seemed to men madoes, might be a refreshment unspeakable to one who was weary with the subtle questionings of the intellect, to whom all familiar and intelligible words were fraught with recollections of controversial bitterness or the wanderings of doubt (comp. a passage of wonderful power as to this use of the gift by Edw. Irving, *Morning Watch*, v. p. 78).

(4.) The peculiar nature of the gift leads the Apostle into what appears, at first, a contradiction. "Tongues are for a sign," not to believers, but to those who do not believe; yet the effect on unbelievers is not that of attracting but repelling. A meeting in which the gift of tongues was exercised without restraint, would seem to a heathen visitor, or even to the plain common-sense Christian (the *ἰδιώτης*, the man without a *χρόσιμα*), to be an assembly of madmen. The history of the day of Pentecost may help us to explain the paradox. The tongues are a sign. They witness that the daily experience of men is not the limit of their spiritual powers. They disturb, startle, awaken, are given *εἰς τὸ ἐκπληττεσθαι* (Chrysost. *Hom.* 36, in

* The reader will hardly need to be reminded that "unknown" is an interpolation of the A. V.

1 Cor.), but they are not, and cannot be, the grounds of conviction and belief (so *Const. Apost.* viii.). They involve of necessity a disturbance of the equilibrium between the understanding and the feelings. Therefore it is that, for those who believe already, prophecy is the greater gift. Five clear words spoken from the mind of one man to the mind and conscience of another, are better than ten thousand of these more startling and wonderful phenomena.

(5.) There remains the question whether these also were "tongues" in the sense of being languages, of which the speakers had little or no previous knowledge, or whether we are to admit here, though not in Acts ii., the theories which see in them only unusual forms of speech (Bleek), or inarticulate cries (Bunsen), or all but inaudible whisperings (Wieseler, in Olshausen, *in loc.*). The question is not one for a dogmatic assertion, but it is believed that there is a preponderance of evidence leading us to look on the phenomena of Pentecost as representative. It must have been from them that the word *tongue* derived its new and special meaning. The communion of St. Paul, and St. Paul himself, were likely to use the same word in the same sense. In the absence of a distinct notice to the contrary, it is probable that the gift would manifest itself in the same form at Corinth as at Jerusalem. The "divers kinds of tongues" (1 Cor. xii. 28), the "*tongues of men*" (1 Cor. xiii. 1), point to differences of some kind, and it is at least easier to conceive of these as differences of language than as belonging to utterances all equally wild and inarticulate. The position maintained by Lightfoot (*Harm. of Gosp. on Acts ii.*), that the gift of tongues consisted in the power of speaking and understanding the true Hebrew of the O. T., may seem somewhat extravagant, but there seems ground for believing that Hebrew and Aramaic words had over the minds of Greek converts at Corinth a power which they failed to exercise when translated, and that there the utterances of the tongues were probably in whole, or in part, in that language. Thus, the "*Maranatha*" of 1 Cor. xvi. 22, compared with xii. 3, leads to the inference that that word had been spoken under a real or counterfeited inspiration. It was the Spirit that led men to cry *Abba*, as their recognition of the fatherhood of God (Rom. viii. 15; Gal. iv. 6). If we are to attach any definite meaning to the "*tongues of angels*" in 1 Cor. xiii. 1, it must be by connecting it with the words surpassing human utterance, which St. Paul heard as in Paradise (2 Cor. xii. 4), and these again with the great Hallelujah hymns of which we read in the Apocalypse (Rev. xix. 1-6; Stanley, *l. c.*; Ewald, *Gesch. Isr.* vi. p. 117). The retention of other words like Hosanna and Sabaoth in the worship of the Church, of the Greek formula of the Kyrie Eleison in that of the nations of the West, is an exemplification of the same feeling operating in other ways after the special power had ceased.

(6.) Here also, as in Acts ii., we have to think of some peculiar intonation as frequently characterising the exercises of the "tongues." The analogies which suggest themselves to St. Paul's mind are those of the pipe, the harp, the trumpet (1 Cor. xiv. 7, 8). In the case of one "*singing in the spirit*" (1 Cor. xiv. 15), but not with the understanding also, the strain of ecstatic melody must

have been all that the listeners could perceive. To "*sing and make melody*," is specially characteristic of those who are filled with the Spirit (Eph. v. 19). Other forms of utterance less distinctly musical, yet not less mighty to stir the minds of men, we may trace in the "*cry*" (Rom. viii. 15; Gal. iv. 6) and the "*inexpressible groanings*" (Rom. viii. 26) which are distinctly ascribed to the work of the Divine Spirit. To those who know the wonderful power of man's voice, as the organ of his spirit, the strange, unearthly charm which belongs to some of its less normal states, the influence even of individual words thus uttered, especially of words belonging to a language which is not that of our common life (comp. Hilar. *Diac. Comm.* in 1 Cor. xiv.), it will not seem strange that, even in the absence of a distinct intellectual consciousness, the gift should take its place among the means by which a man "*built up*" his own life, and might contribute, if one were present to expound his utterances, to "*edify*" others also.¹

(7.) Connected with the "tongues," there was, as the words just used remind us, the corresponding power of interpretation. It might belong to any listener (1 Cor. xiv. 27). It might belong to the speaker himself when he returned to the ordinary level of conscious thought (1 Cor. xiv. 13). Its function, according to the view that has been here taken, must have been twofold. The interpreter had first to catch the foreign words, Aramaic or others, which had mingled more or less largely with what was uttered, and then to find a meaning and an order in what seemed at first to be without either, to follow the loftiest flights and most intricate windings of the enraptured spirit, to trace the subtle associations which linked together words and thoughts that seemed at first to have no point of contact. Under the action of one with this insight the wild utterances of the "tongues" might become a treasure-house of deep truths. Sometimes, it would appear, not even this was possible. The power might be simply that of sound. As the pipe or harp, played boldly, the hand struck at random over the strings, but with no *δυσκολία*, no musical interval, wanted the condition of distinguishable melody, so the "tongues," in their extreme form, passed beyond the limits of interpretation. There might be a strange awfulness, or a strange sweetness as of "*the tongues of angels*," but what it meant was known only to God (1 Cor. xiv. 7-11).

VII. (1.) Traces of the gift are found, as has been said, in the Epistles to the Romans, the Galatians, the Ephesians. From the Pastoral Epistles, from those of St. Peter and St. John, they are altogether absent, and this is in itself significant. The life of the Apostle and of the Church has passed into a calmer, more normal state. Wide truths, abiding graces, these are what he himself lives in and exhorts others to rest on, rather than exceptional *χαρισματα*, however marvellous. The "tongues" are already "*ceasing*" (1 Cor. xiii. 8), as a thing belonging to the past. Love, which even when "tongues" were mightiest, he had seen to be above all gifts, has become more and more, all in all, to him.

(2.) It is probable, however, that the disappearance of the "tongues" was gradual. As it would have been impossible to draw the precise line of de-

¹ Neander (*Pfauus. u. Lat.* i. 18) refers to the effect produced by the preaching of St. Bernard upon hearers who did not understand one word of the Latin in which he preached (*Opp.* ii. 119, ed. Mabillon) as an instance of

this. Like phenomena are related of St. Antony of Padua and St. Vincent Ferrer (*Acta Sanctorum*, June 24 and April 6), of which this is probably the explanation. (Comp. also Wolff, *Cursus Philolog.* in N. T. *Acta* 11.)

marcation when the *προφητεία* of the Apostolic age passed into the *διδασκαλία* that remained permanently in the Church, so there must have been a time when "tongues" were still heard, though less frequently, and with less striking results. The testimony of Irenaeus (*Adv. Haer.* v. 6) that there were brethren in his time "who had prophetic gifts, and spoke through the Spirit in all kinds of tongues," though it does not prove, what it has sometimes been alleged to prove, the permanence of the gift in the individual, or its use in the work of evangelising (Wordsworth on *Acts* ii.), must be admitted as evidence of the existence of phenomena like those which we have met with in the Church of Corinth. For the most part, however, the part which they had filled in the worship of the Church was supplied by the "hymns and spiritual songs" of the succeeding age. In the earliest of these, distinct in character from either the Hebrew psalms or the later hymns of the Church, marked by a strange mixture of mystic names, and half-coherent thoughts (such *e.g.* as the hymn with which Clement of Alexandria ends his *Παθγωγὴς*, and the earliest Sibylline verses) some have seen the influence of the ecstatic utterances in which the strong feelings of adoration had originally shown themselves (Nitzsch, *Christl. Lehre*, ii. p. 268).

After this, within the Church we lose nearly all traces of them. The mention of them by Eusebius (*Comm. in Ps.* xli.) is vague and uncertain. The tone in which Chrysostom speaks of them (*Comm. in 1 Cor.* xiv.) is that of one who feels the whole subject to be obscure, because there are no phenomena within his own experience at all answering to it. The whole tendency of the Church was to maintain reverence and order, and to repress all approaches to the ecstatic state. Those who yielded to it took refuge, as in the case of Tertullian (*infra*), in sects outside the Church. Symptoms of what was then looked on as an evil, showed themselves in the 4th century at Constantinople—wild, inarticulate cries, words passionate but of little meaning, almost convulsive gestures—and were met by Chrysostom with the sternest possible reproof (*Hom. in 1s.* vi. 2, ed. Migne, vi. p. 100).

VIII. (1.) A wider question of deep interest presents itself. Can we find in the religious history of mankind any facts analogous to the manifestation of the "tongues"? Recognising, as we do, the great gap which separates the work of the Spirit on the day of Pentecost from all others, both in its origin and its fruits, there is, it is believed, no reason for rejecting the thought that there might be like phenomena standing to it in the relation of foreshadowings, approximations, counterfeits. Other *χαρίσματα* of the Spirit, wisdom, prophecy, helps, governments, had or have analogies, in special states of men's spiritual life, at other times and under other conditions, and so may these. The three characteristic phenomena are, as has been seen, (1) an ecstatic state of partial or entire unconsciousness, the human will being, as it were, swayed by a power above itself; (2) the utterance of words in tones startling and impressive, but often conveying no distinct meaning; (3) the use of languages

which the speaker at other times was unable to converse in.

(2.) The history of the O. T. presents us with some instances in which the gift of prophecy has accompaniments of this nature. The word includes something more than the utterance of a distinct message of God. Saul and his messengers came under the power of the Spirit, and he lies on the ground, all night, stripped of his kingly armour, and joining in the wild chant of the company of prophets, or pouring out his own utterances to the sound of their music (1 Sam. xix. 24; comp. Stanley, *l. c.*).

(3.) We cannot exclude the false prophets and diviners of Israel from the range of our inquiry. As they, in their work, dress, pretensions, were counterfeits of those who truly bore the name, we may venture to trace in other things that which resembled, more or less closely, what had accompanied the exercise of the Divine gift. And here we have distinct records of strange, mysterious intonations. The ventriloquist wizards (*οἱ ἐγγυα-τρίμυθοι*, *οἱ ἐκ τῆς κοιλίας φωνοῦντες*) "peep" and mutter" (*1s.* viii. 19). The "voice of one who has a familiar spirit," comes low out of the ground (*1s.* xxix. 4). The false prophets simulate with their tongues (*ἐκβάλλοντες προφητείας γλώσσης*, LXX.) the low voice with which true prophets announced that the Lord had spoken (*Jer.* xxiii. 31; comp. Gesen. *Thes.* s. v. *DMJ*).

(4.) The quotation by St. Paul (1 Cor. xiv. 21 from *Is.* xxviii. 11 ("With men of other tongues (*ἐν ἑτερογλώσσοις*) and other lips will I speak unto this people"), has a significance of which we ought not to lose sight. The common interpretation sees in that passage only a declaration that those who had refused to listen to the Prophets should be taught a sharp lesson by the lips of alien conquerors. Ewald (*Prophet.* in loc.), dissatisfied with this, sees in the new teaching the voice of thunder striking terror into men's minds. St. Paul, with the phenomena of the "tongues" present to his mind, saw in them the fulfilment of the Prophet's words. Those who turned aside from the true prophetic message should be left to the dumber, "stammering," more mysterious utterances, which were in the older, what the "tongues" were in the later Ecclesia. A remarkable parallel to the text thus interpreted is found in *Hos.* ix. 7. There also the people are threatened with the withdrawal of the true prophetic insight, and in its stead there is to be the wild delirium, the ecstatic madness of the counterfeit (comp. especially the LXX., *δὲ προφῆται δὲ παρεστηκότες, ἀνθρώποι δὲ πνευματόφρονες*).

(5.) The history of heathen oracles presents, it need hardly be said, examples of the organic state, the condition of the *μάστις* as distinct from the *προφήτης*, in which the wisest of Greek thinkers recognised the lower type of inspiration (Plato, *Tiŋaeus*, 72 B; Bleek, *l. c.*). The Pythones and the Sibyl are as if possessed by a power which they cannot resist. They labour under the *afflictus* of the god. The wild, unearthly sounds ("nec mortale sonans"), often hardly coherent, burst from their lips. It remains for interpreters to collect the

^s Pxxr. The word, omitted in its place, deserves a separate notice. It is used in the A. V. of *1s.* viii. 19, x. 14, as the equivalent of *קָרָא*, "to chirp" or "cry." The Latin *pipio*, from which it comes, is, like the Hebrew,onomatopoeic, and is used to express the wailing cry of young chickens or infant children. In this sense it is

used in the first of these passages for the low cry of the false soothsayers, in the second for that of birds whom the hand of the spoiler snatches from their nests. In *Is.* xxxviii. 14, where the same word is used in the Hebrew, the A. V. gives, "Like a crane or a swallow, I did I chatter."

scattered utterances, and to give them shape and meaning (Virg. *Aen.* vi. 45, 98, *et seq.*).

(6.) More distinct parallels are found in the accounts of the wilder, more excited sects which have, from time to time, appeared in the history of Christendom. Tertullian (*de Anim.* c. 9), as a Montanist, claims the "revelationum charismata" as given to a sister of that sect. They came to her "inter dominica solemnitas;" she was, "per ecstasin, in spiritu," conversing with angels, and with the Lord himself, seeing and hearing mysteries ("sacramenta"), reading the hearts of men, prescribing remedies for those who needed them. The movement of the Mendicant orders in the 13th century, the prophesying of the 16th in England, the early history of the disciples of George Fox, that of the Jansenists in France, the Revivals under Wesley and Whitefield, those of a later date in Sweden, America, and Ireland have, in like manner, been fruitful in ecstatic phenomena more or less closely resembling those which we are now considering.

(7.) The history of the French prophets at the commencement of the 18th century presents some facts of special interest. The terrible sufferings caused by the Revocation of the Edict of Nantes were pressing with intolerable severity on the Huguenots of the Cevennes. The persecuted flocks met together with every feeling of faith and hope strung to its highest pitch. The accustomed order of worship was broken, and labouring men, children, and female servants, spoke with rapturous eloquence as the messengers of God. Beginning in 1686, then crushed for a time, bursting forth with fresh violence in 1700, it soon became a matter of almost European celebrity. Refugees arrived in London in 1706, claiming the character of prophets (Lacy, *Cry from the Desert*; N. Peyrat, *Pastors in the Wilderness*). An Englishman, John Lacy, became first a convert and then a leader. The convulsive ecstatic utterances of the sect drew down the ridicule of Shaftesbury (*On Enthusiasm*). Calamy thought it necessary to enter the lists against their pretensions (*caveat against the New Prophets*). They gained a distinguished proselyte in Sir R. Bulkley, a pupil of Bishop Fell's, with no inconsiderable learning, who occupied in their proceedings a position which reminds us of that of Henry Drummond among the followers of Irving (Bulkley's *Defence of the Prophets*). Here also there was a strong contagious excitement. Nicholson, the Baxter of the sect, published a confession that he had found himself unable to resist it (*Falsehood of the New Prophets*), though he afterwards came to look upon his companions as "enthusiastick impostors." What is specially noticeable is, that the gift of tongues was claimed by them. Sir R. Bulkley declares that he had heard Lacy repeat long sentences in Latin, and another speak Hebrew, though, when not in the Spirit, they were quite incapable of it (*Narrative*, p. 92). The characteristic thought of all the revelations was, that they were the true children of God. Almost every oracle began with "My child!" as its characteristic word (Peyrat, i. 235-313). It is remarkable that a strange Revivalist movement was spreading, nearly at the same time, through Silesia, the chief feature of which was that boys and girls of tender age were almost the only subjects of it, and that they too spoke and

prayed with a wonderful power (Lacy, *Relation, &c.*, p. 31; Bulkley, *Narrative*, p. 46).

(8.) The so-called Unknown Tongues, which manifested themselves first in the west of Scotland, and afterwards in the Caledonian Church in Regent Square, present a more striking phenomenon, and the data for judging of its nature are more copious. Here, more than in most other cases, there were the conditions of long, eager expectation, fixed brooding over one central thought, the mind strained to a preternatural tension. Suddenly, now from one, now from another, chiefly from women, devout but illiterate, mysterious sounds were heard. Voices, which at other times were harsh and unpleasant, became, when "singing in the Spirit," perfectly harmonious^b (Cardale, *Narrative*, in *Morning Watch*, ii. 871, 872). Those who spoke, men of known devotion and acuteness, bore witness to their inability to control themselves (Baxter, *Narrative*, pp. 5, 9, 12), to their being led, they knew not how, to speak in a "triumphant chant" (*ibid.* pp. 48, 81). The man over whom they exercised so strange a power, has left on record his testimony, that to him they seemed to embody a more than earthly music, leading to the belief that the "tongues" of the Apostolic age had been as the archetypal melody of which all the Church's chants and hymns were but faint, poor echoes (Oliphant's *Life of Irving*, ii. 208). To those who were without, on the other hand, they seemed but an unintelligible gibberish, the yells and groans of madmen (Newspapers of 1831, *passim*). Sometimes it was asserted that fragments of known languages, Spanish, Italian, Greek, Hebrew, were mingled together in the utterances of those who spoke in the power (Baxter, *Narrative*, pp. 133, 134). Sometimes it was but a jargon of mere sounds (*ibid.*). The speaker was commonly unable to interpret what he uttered. Sometimes the office was undertaken by another. A clear and interesting summary of the history of the whole movement is given in Mrs. Oliphant's *Life of Irving*, vol. ii. Those who wish to trace it through all its stages must be referred to the seven volumes of the *Morning Watch*, and especially to Irving's series of papers on the Gifts of the Spirit, in vols. iii., iv., and v. Whatever other explanation may be given of the facts, there exists no ground for imputing a deliberate imposture to any of the persons who were most conspicuous in the movement.

(9.) In certain exceptional states of mind and body the powers of memory are known to receive a wonderful and abnormal strength. In the delirium of fever, in the ecstasy of a trance, men speak in their old age languages which they have never heard or spoken since their earliest youth. The accent of their common speech is altered. Women, ignorant and untaught, repeat long sentences in Greek, Latin, Hebrew, which they had once heard, without, in any degree, understanding or intending to remember them. In all such cases the marvellous power is the accompaniment of disease, and passes away when the patient returns to his usual state, to the healthy equilibrium and interdependence of the life of sensation and of thought (Abercrombie, *Intellectual Powers*, pp. 140-143; Winslow, *Obscure Diseases of the Brain*, pp. 337, 360, 374; Watson, *Principles and Practice of Physic*, i. 128). The

^b Comp. the independent testimony of Archdeacon Stopford. He had listened to the "unknown tongue," and had found it "a sound such as I never heard before, unearthly

and unaccountable." He recognised precisely the same sounds in the Irish Revivals of 1859 (*Work and Counterwork*, p. 11).

Mediaeval belief that this power of speaking in tongues belonged to those who were possessed by evil spirits rests, obviously, upon like psychological phenomena (Peter Martyr, *Loci Communes*, i. c. 10; Bayle, *Dictionnaire*, s. v. "Grandier").

IX. These phenomena have been brought together in order that we may see how far they resemble, how far they differ from, those which we have seen reason to believe constituted the outward signs of the Gift of Tongues. It need not startle or "offend" us if we find the likeness between the true and the counterfeit greater, at first sight, than we expected. So it was at the Churches of Corinth and of Asia. There also the two existed in the closest approximation; and it was to no outward sign, to no speaking with languages, or prediction of the future, that St. Paul and St. John pointed as the crucial test by which men were to distinguish between them, but to the confession on the one side, the denial on the other, that Jesus was the Lord (1 Cor. xii. 3; 1 John iv. 2, 3). What may be legitimately inferred from such facts is the existence, in the mysterious constitution of man's nature, of powers which are, for the most part, latent, but which, under given conditions, may be roused into activity. Memory, imagination, speech, may all be intensified, transfigured, as it were, with a new glory, acting independently of any conscious or deliberate volition. The exciting causes may be disease, or the fixed concentration of the senses or of thought on one object, or the power of sympathy with those who have already passed into the abnormal state. The life thus produced is at the furthest pole from the common life of sensation, habit, forethought. It sees what others do not see, hears what they do not hear. If there be a spiritual power acting upon man, we might expect this phase of the life of the human soul to manifest its operations most clearly. Precisely because we believe in the reality of the Divine work on the day of Pentecost, we may conceive of it as using this state as its instrument, not as introducing phenomena, in all respects without parallel, but as carrying to its highest point, what, if good, had been a foreshadowing of it, presenting the reality of what, if evil, had been the mimicry and counterfeit of good. And whatever resemblances there may be, the points of difference are yet greater. The phenomena which have been described are, with hardly an exception, morbid; the precursors or the consequences of clearly recognisable disease. The Gift of Tongues was bestowed on men in full vigour and activity, preceded by no frenzy, followed by no exhaustion. The Apostles went on with their daily work of teaching and organising the Church. The form which the new power assumed was determined partly, it may be, by deep-lying conditions of man's mental and spiritual being, within which, as self-imposed limits, the Spirit poured from on high was pleased to work, partly by the character of the people for whom this special manifestation was given as a sign. New powers of knowledge, memory, utterance, for which education and habit could not at all account, served to waken men to the sense of a power which they could not measure, a Kingdom of God into which they were called to enter. Lastly, let us remember the old rule holds good, "By their fruits ye shall know them." Other phenomena, presenting approximate resemblances,

have ended in a sick man's dreams, in a fevered frenzy, in the narrowness of a sect. They grew out of a passionate brooding over a single thought, often over a single word; and the end has shown that it was not well to seek to turn back God's order and to revive the long-buried past. The gift of the day of Pentecost was the starting-point of the long history of the Church of Christ, the witness, in its very form, of a universal family gathered out of all nations.

But it was the starting-point only. The newness of the truth then presented to the world, the power of the first experience of a higher life, the longing expectation in men's minds of the Divine kingdom, may have made this special manifestation, at the time, at once inevitable and fitting. It belonged, however, to a critical epoch, not to the continuous life of the Church. It implied a disturbance of the equilibrium of man's normal state. The high-wrought ecstasy could not continue, must be glorious and blessed for him who had it, a *maya*, as has been said, for those who had it not; but it was not the instrument for building up the Church. That was the work of another gift, the prophesy which came from God, yet was addressed from the mind and heart of one man to the minds and hearts of his brethren. When the overflowing fulness of life had passed away, when "tongues" had "ceased," and prophesy itself, in its irresistible power, had "failed," they left behind them the lesson they were meant to teach. They had borne their witness, and had done their work. They had taught men to believe in one Divine Spirit, the giver of all good gifts, "dividing to every man severally as He will;" to recognise His inspiration, not only in the marvel of the "tongues," or in the burning words of prophets, but in all good thoughts, in the right judgment in all things, in the excellent gift of Charity. [E. H. P.]

TOPARCHY (*τοπαρχία*). A term applied in one passage of the Septuagint (1 Macc. xi. 28) to indicate three districts to which elsewhere (x. 30, xi. 34) the name *royads* is given. In all these passages the English Version employs the term "governments." The three "toparchies" in question were Apherima (*Ἀφαιρῖμα*), Lydda, and Ramath. They had been detached from Samaria, Peraea, and Galilee respectively, some time before the war between Demetrius Soter and Alexander Bala. Each of the two belligerents endeavoured to win over Jonathan, the Jewish High-Priest, to their side, by allowing him, among other privileges, the sovereign power over these districts without any payment of land-tax. The situation of Lydda is doubtful; for the toparchy Lydda, of which Ptolemy speaks (v. 14), is situated not in Peraea, but on the western side of the Jordan. Apherima is considered by Grotius to denote the region about Bethel, captured by Abijah from Jeroboam (2 Chr. xiii. 19). Ramath is probably the famous stronghold, the desire of obtaining which led to the unfortunate expedition of the allied sovereigns, Ahab and Jehoshaphat (1 K. xxii.).

The "toparchies" seem to have been of the nature of *ogaliks*, and the passages in which the word *τοπαρχίας* occurs, all harmonize with the view of that functionary as the *aga*, whose duty would be to collect the taxes and administer justice in all cases affecting the revenue, and who, for the

¹ It can hardly be doubted that the interpolated word "unknown," in the A. V. of 1 Cor. xiv., was the starting-

point of the peculiarly unintelligible character of most of the Irvingite utterances.

purpose of enforcing payment, would have the command of a small military force. He would thus be the lowest in the hierarchy of a despotic administration to whom troops would be entrusted; and hence the taunt in 2 K. xviii. 24, and Is. xxxvi. 9: *ἡν ἀποστρέψῃς τὸ πρόσωπον τοῦ ἀρχοῦ ἐνδὲς, τὴν δούλῳ τοῦ κυρίου μου τὴν ἐλαχίστην*; "How wilt thou resist a single toparch, one of the very least of my lord's slaves?" But the essential character of the toparch is that of a fiscal officer, and his military character is altogether subordinate to his civil. Hence the word is employed in Gen. xli. 34, for the "officers over the land," who were instructed to buy up the fifth part of the produce of the soil during the seven years of abundance. In Dan. iii. 3, Theodotion uses the word in a much more extensive sense, making it equivalent to "satraps," and the Eng. Version renders the original by "princes;" but the original word here is not the same as in Dan. iii. 2, 27, and vi. 7, in every one of which cases a subordinate functionary is contemplated. [J. W. B.]

TOPAZ (ἰσάδῃ, *pitdāh*: τὸν ἰσάδῃ: *topazius*). The topaz of the ancient Greeks and Romans is generally allowed to be our chrysolite, while their chrysolite is our topaz. [CHRYSLITE, App. A.] Bellermann, however (*Die Urim und Thummim*, p. 39), contends that the topaz and the chrysolite of the ancients are identical with the stones denoted by these terms at the present day. The account which Pliny (*N. H.* xxvii. 8) gives of the *topazos* evidently leads to the conclusion that that stone is our chrysolite; "the topazos," he says, "is still held in high estimation for its green tints." According to the authority of Juba, cited by Pliny, the topaz is derived from an island in the Red Sea called "Topazos;" it is said that this island, where these precious stones were procured, was surrounded by fogs, and was, in consequence, often sought for by navigators, and that hence it received its name, the term "topazin" signifying, in the Troglodyte tongue, "to seek" (?). The *pitdāh*, which, as has already been stated, probably denotes the modern chrysolite, was the second stone in the first row of the high-priest's breast-plate (Ex. xxviii. 17, xxxix. 10); it was one of the jewels that adorned the apparel of the king of Tyre (Ezek. xxviii. 13); it was the bright stone that garnished the ninth foundation of the heavenly Jerusalem (Rev. xxi. 20); in Job xxviii. 19, where wisdom is contrasted with precious articles, it is said that "the *pitdāh* of Ethiopia shall not equal it." Chrysolite, which is also known by the name of olivine and peridot, is a silicate of magnesia and iron; it is so soft as to lose its polish unless worn with care (*Mineralogy and Crystallography*, by Mitchell and Tennant, p. 512). The identity of the τὸν ἰσάδῃ with the ἰσάδῃ of the Heb. Bible is sufficiently established by the combined authorities of the LXX., the Vulg., and Josephus, while that of the τὸν ἰσάδῃ with our chrysolite is, it appears to us, proved beyond a doubt by those writers who have paid most attention to this question. See Braun, *De Vest. Sac. Heb.* p. 641, ed. 1660. [W. H.]

TOPHEL (ἰσάδῃ: *Tophēl*: *Tophet*). A place mentioned Deut. i. 1, which has been probably identified with *Tēfēl* on a wady of the same name running north of Bozra towards the N.W. into the Ghor and S.E. corner of the Dead Sea (Robinson, *ib.* 570). This latter is a most fertile region, having many springs and rivulets flowing into the Ghor,

and large plantations of fruit-trees, whence figs are exported. The bird *katta*, a kind of partridge, is found there in great numbers, and the steinbock pastures in herds of forty or fifty together (Burckhardt, *Holy Land*, 405-6). [H. H.]

TOPHETH, and once **TOPHET**, (ἰσάδῃ) Generally with the article (2 K. xxiii. 10; Jer. vii. 31, 32, xix. 6, 13, 14). Three times without it (Jer. vii. 32, xix. 11, 12). Once not only without it, but with an affix, ἰσάδῃ, *Tophēl* (Is. xxx. 33).

In Greek, *Τοφῆθ*, *Τοφῆθ*, and *Θεφθ* (Steph. *Lex. Voc. Peregrin.*; Biel, *Thes.*). In the Vulgate, *Topheth*. In Jerome, *Tophet*. It is not mentioned by Josephus.

It lay somewhere east or south-east of Jerusalem, for Jeremiah went out by the Sun-gate, or east gate, to go to it (Jer. xix. 2). It was in "the Valley of the Son of Hinnom" (vii. 31), which is "by the entry of the east gate" (xix. 2). Thus it was not identical with Hinnom, as some have written, except in the sense in which Paradise is identical with Eden, the one being part of the other. It was in Hinnom, and was perhaps one of its chief groves or gardens. It seems also to have been part of the king's gardens, and watered by Siloam, perhaps a little to the south of the present *Birket el-Hamra*. The name Tophet occurs only in the Old Testament (2 K. xxiii. 10; Is. xxx. 33; Jer. vii. 31, 32, xix. 6, 11, 12, 13, 14). The New does not refer to it, nor the Apocrypha. Jerome is the first who notices it; but we can see that by his time the name had disappeared, for he discusses it very much as a modern commentator would do, only mentioning a green and fruitful spot in Hinnom, watered by Siloam, where he assumes it was: "Delubrum Bael, nemus ac lucus, Siloe fontibus irrigatus" (In Jer. vii.). If this be the case, we must conclude that the valley or gorge south of Jerusalem, which usually goes by the name of Hinnom, is not the *Ge-Hen-Hinnom* of the Bible. Indeed, until comparatively modern times, that southern ravine was never so named. Hinnom by old writers, western and eastern, is always placed east of the city, and corresponds to what we call the "Mouth of the Tyropoeon," along the southern bed and banks of the Kedron (Jerome, *De Locis Hebr.* and *Comm.* in *Matt.* x. 28; Ibn Batutab, *Travels*; Jalal Addin's *History of the Temple*; Felix Fabri), and was reckoned to be somewhere between the Potter's Field and the Fuller's Pool.

Tophet has been variously translated. Jerome says *latitudo*; others *garden*; others *dram*; others *place of burning* or *burying*; others *abomination* (Jerome, Noldius, Gesenius, Bochart, Simoes, *Onom.*). The most natural seems that suggested by the occurrence of the word in two consecutive verses, in the one of which it is a *tofet*, and in the other *Tophet* (Is. xxx. 32, 33). The Hebrew words are nearly identical; and Tophet was probably the king's "music-grove" or garden, denoting originally nothing evil or hateful. Certainly there is no proof that it took its name from the drums beaten to drown the cries of the burning victims that passed through the fire to Moloch. As Chinnoroth is the *harp-sea*, so Tophet is the *tabret-grove* or valley. This might be at first part of the royal garden, a spot of special beauty, with a royal villa in the midst, like the Pasha's palace at Shabara, near Cairo. Afterwards it was defiled by idols, and polluted by the sacrifices of Bael and the free

of Moloch. Then it became the place of abomination, the very gate or pit of hell. The pious kings defiled it, and threw down its altars and high places, pouring into it all the filth of the city, till it became the "abhorrence" of Jerusalem; for to it primarily, though not exhaustively, the prophet refers:—

They shall go forth and gaze
On the carcasses of the transgressors against me;
For their worm shall not die,
And their fire shall not be quenched,
And they shall be an abhorrence to all flesh.

(Is. lvi. 24.)

In Kings and Jeremiah the name is "the Tophet," but in Isaiah (xxx. 33) it is *Topheth*; yet the places are probably the same so far, only in Isaiah's time the grove might be changing its name somewhat, and with that change taking on the symbolic meaning which it manifestly possesses in the prophet's prediction:—

Set in order in days past has been Topheth;
Surely for the king it has been made ready.
He hath deepened, he hath widened it:^a
The pile thereof, fire and wood, he hath multiplied.
The breath of Jehovah, like a stream of brimstone,
Doth set it on fire.

It is to be noticed that the LXX. translate the above passage in a peculiar way: *πρὸ ἡμερῶν παλαιότητος*, "thou shalt be required from of old," or perhaps "before thy time;" but Jerome translates the LXX. as if their word had been *ἐξωνυγίας* (or *ἀθερίας*, as Procopius reads it), and not *ἀπαρτίας*, "tu ante dies decipieris," adding this comment: "Dicitur ad illum quod ab initio seipse deciperit, regnum suum arbitrans sempiternum, cum preparata sint Gehenna et eterna supplicia." In that case the Alexandrian translators perhaps took *ΠΡΟΤΗ* for the second person singular masculine of the future *ΠΙΣΤ* of *ΠΙΝ*, to persuade or deceive. It may be noticed that Michaelis renders it thus: "Tophet ejus, q. d. rogus ejus." In Jer. xix. 6, 13, the Sept. translate Tophet by *διατρύχτης*, *διατρύχτων*, which is not easily explained, except on the supposition of a marginal gloss having crept into the text instead of the proper name (see Jerome; and also Spohn on the Greek version of Jer. *Pref.* p. 18, and *Notes* on chaps. xix. xiii.).

In Jer. (vii. 32, xix. 6) there is an intimation that both Tophet and Gehinnom were to lose their names, and to be called "the valley of slaughter" (*הַבְּרֵאשִׁית*, *Ge-ha-Ha-shgāh*^b). Without venturing on the conjecture that the modern *Deraf* can be a relic of *Hārēgāh*, we may yet say that this lower part of the Kedron is "the valley of slaughter," whether it ever actually bore this name or not. It was not here, as some have thought, that the Assyrian was slain by the sword of the destroying angel. That slaughter seems to have taken place to the west of the city, probably on the spot afterwards called from the event, "the valley of the dead bodies" (Jer. xxxi. 40). The slaughter from which Tophet was to get its new name was not till afterwards. In all succeeding ages, blood has flowed there in streams; corpses, buried and unburied, have filled up the hollows; and it may be that underneath the modern gardens and ter-

^a Of the literal Tophet it is said, "They shall bury in Tophet, *for there be no place*" (Jer. vii. 32). Of the symbolic Tophet it is said above "He hath deepened and

aces there lie not only the debris of the city, but the bones and dust of millions—Romans, Persians, Jews, Greeks, Crusaders, Moslems. What future days and events may bring is not for us to say. Perhaps the prophet's words are not yet exhausted.

Strange contrast between Tophet's first and last! Once the choice grove of Jerusalem's choicest valley; then the place of defilement and death and fire; then the "valley of slaughter"! Once the royal music-grove, where Solomon's singers, with voice and instrument, regaled the king, the court, and the city; then the temple of Baal, the high place of Moloch, resounding with the cries of burning infants; then (in symbol) the place where is the wailing and gnashing of teeth. Once prepared for Israel's king, as one of his choicest villas; then degraded and defiled, till it becomes the place prepared for "the King" at the sound of whose fall the nations are to shake (Ex. xxxi. 16); and as Paradise and Eden passed into Babylon, so Tophet and Ben Hinnom pass into Gehenna and the land of fire. These scenes seem to have taken hold of Milton's mind; for three times over, within fifty lines, he refers to "the opprobrious hill," the "hill of scandal," the "offensive mountain," and speaks of Solomon making his grove in

"The pleasant valley of Hinnom, Tophet thence
And black Gehenna called, the type of hell."

Many of the old travellers (see Felix Fabri, vol. i. p. 391) refer to *Tophet*, or *Toph* as they call it, but they give no information as to the locality. Every vestige of Tophet—name and grove—was gone, and we can only guess at the spot; yet the references of Scripture and the present features of the locality enable us to make the guess with some tolerable nearness as we do in the case of Gethsemane or Scopus. [H. B.]

TORMAH (תֹּרְמָה; *tor mah*; Alex. *tor mah*) occurs only in the margin of Judg. ix. 31, as the alternative rendering of the Hebrew word which in the text is given as "privily." By a few commentators it has been conjectured that the word was originally the same with *ARUMAH* in ver. 41—one or the other having been corrupted by the copyists. This appears to have been first started by Kimchi. It is adopted by Junius and Tremellius; but there is little to be said either for or against it, and it will probably always remain a mere conjecture. [G.]

TORTOISE (טָדָה; *tsdō*; *δ προκρίδιλος δ χερσαίος*; *crocodilius*). The *tsdō* occurs only in Lev. xi. 29, as the name of some unclean animal. Bochart (*Hieroz.* ii. 463) with much reason refers the Heb.

term to the kindred Arabic *ṭāḥ* (طَح), "a large kind of lizard," which, from the description of it as given by Damiir, appears to be the *Psammotrocas Scincus*, or *Monitor terrestris* of Cuvier (*R. A.* ii. 26). This lizard is the *scorion el-hard* of the Arabs i. e. the land-waran, in contradistinction to the *waran el-bahr*, i. e. the water-lizard (*Monitor Niloticus*). It is common enough in the deserts of Palestine and N. Africa. It is no doubt the *προκρίδιλος χερσαίος* of Herodotus (iv. 192). See also Dioscorides (ii. 71), who mentions it, or perhaps

widened it."

^b Can the *Derof* of Josephus (*Ant.* ix. 10, §4) have any connexion with the *Hārēgāh* of Jeremiah?

the *Scincus officinalis*, under the name of *σκίναρος*. Gesenius derives the Heb. word from *כָּנַס*, "to move slowly." [W. H.]

Scincus officinalis (Gesenius).

TO'U (צָוּ: *Ṡaw*; Alex. *Ṡawū*: *Thou*). Toi, king of Hamath (1 Chr. xviii. 9, 10).

TOWER.* For towers as parts of city-walls, or as strongholds or refuge for villages, see **FENCED CITIES**, JERUSALEM, i. 1021-1027, and HANANEEL. Watch-towers or fortified posts in frontier or exposed situations are mentioned in Scripture, as the tower of Eder, &c. (Gen. xxxv. 21; Mic. iv. 8; Is. xxi. 5, 8, 11; Hab. ii. 1; Jer. vi. 27; Cant. vii. 4); the tower of Lebanon, perhaps one of David's "garrisons," *nētšib* (2 Sam. viii. 6; Ratisser, *Pal.* p. 29). Such towers or outposts for the defence of wells, and the protection of flocks and of commerce, were built by Uzziah in the pasture-grounds (*Midbar*) [DESEIC], and by his son Jotham in the forests (*Choresim*) of Judah (2 Chr. xxvi. 10, xxvii. 4). Remains of such fortifications may still be seen, which, though not perhaps themselves of remote antiquity, yet very probably have succeeded to more ancient structures built in the same places for like purposes. Robinson, ii. 81, 85, 180; Roberts, *Sketches*, pl. 93). Besides these military structures, we read in Scripture of towers built in vineyards as an almost necessary appendage to them (Is. v. 2; Matt. xxi. 33; Mark xii. 1). Such towers are still in use in Palestine in vineyards, especially near Hebron, and are used as lodges for the keepers of the vineyards. During the vintage they are filled with the persons employed in the work of gathering the grapes (Robinson, i. 213, ii. 81; Martineau, *East. Life*, p. 434; De Sauley, *Iran*, i. 548). [H. W. P.]

TOWN-CLERK (*γραιμαρτὴς*: *scriba*). The title ascribed in our Version to the magistrate at Ephesus who appeased the mob in the theatre at the time of the tumult excited by Demetrius and

his fellow-craftsmen (Acts xix. 35). The other primary English versions translate in the same way, except those from the Vulgate (Wiclif, the Rheinish), which render "scribe." A digest of Boeckh's views, in his *Staatsverwaltung*, respecting the functions of this officer at Athens (there were three grades of the order there), will be found in *Dict. of Ant.* p. 459 sq. The *γραιμαρτὴς* or "town-clerk" at Ephesus was no doubt a more important person in that city than any of the public officers designated by that term in Greece (see Greswell's *Dissertations*, iv. 152). The title is preserved on various ancient coins (Wetstein, *Nov. Test.* ii. 586; Akermann's *Numismatic Illustrations*, p. 53), which illustrate fully the rank and dignity of the office. It would appear that what may have been the original service of this class of men, viz. to record the laws and decrees of the state, and to read them in public, embraced at length, especially under the ascendancy of the Romans in Asia Minor, a much wider sphere of duty, so as to make them, in some instances, in effect the heads or chiefs of the municipal government (Winer, *Realw.* i. 649). They were authorised to preside over the popular assemblies and submit votes to them, and are mentioned on marbles as acting in that capacity. In cases where they were associated with a superior magistrate, they succeeded to his place and discharged his functions when the latter was absent or had died. "On the subjugation of Asia by the Romans," says Baumstark (Pauly's *Encyclopaedie*, iii. 949), "*γραιμαρτὴς* were appointed there in the character of governors of single cities and districts, who even placed their names on the coins of their cities, caused the year to be named from them, and sometimes were allowed to assume the dignity, or at least the name, of *Ἀρχιερεὺς*." This writer refers as his authorities to Schwartz, *Dissertatio de γραιμαρτῇ*, *Magistratu Civitatum Asiae Proconsulibus* (Altorf, 1735); Van Dale, *Dissertat.* v. 425; Spanheim, *De Usu et Praest. Numm.* i. 704. A good note on this topic will be found in the *New Englander* (U. S. A.), x. 144.

It is evident, therefore, from Luke's account, as illustrated by ancient records, that the Ephesian town-clerk acted a part entirely appropriate to the character in which he appears. The speech delivered by him, it may be remarked, is the model of a popular harangue. He argues that such excitement as the Ephesians evinced was undignified, inasmuch as they stood above all suspicion in religious matters (Acts xix. 35, 36); that it was unjustifiable, since they could establish nothing against the men whom they accused (ver. 37); that it was unnecessary, since other means of redress were open to them (vers. 38, 39); and, finally, it neither pride nor a sense of justice availed anything, fear of the Roman power should restrain them from such illegal proceedings (ver. 40). [H. B. H.]

TRACHONITIS (*Τραχωνίτις*: *Trachonitis*). This place is mentioned only once in the Bible. In

* 1. צִנּוֹר, צִנּוֹר, and צִנּוֹר; *ṣināṣis*; from צִנּוֹר, "search," "explore," a searcher or watcher; and hence the notion of a watch-tower. In Is. xxxiii. 14, the tower of Ophel is probably meant (Neh. iii. 26; Gen. 198).

2. מִגְדָּל, and מִגְדָּל or מִגְדָּל; *ṣurys*; *turris*; from מִגְדָּל, "become great" (Gen. 286), used sometimes as a proper name. [MIGDOL.]

3. מִצְדָּה; *ṣēpa*; *munition*; only once "tower," Hab. ii. 1.

4. עֵמֶל; *oleos*; *domus*; only in 2 K. v. 24. [ORHEL.]

5. זִנְבָה, usually "corner," twice only "tower," Zeph. i. 16, iii. 6; *zania*; *angulus*.

6. מִצְפָּה; *scopula*; *specula*; "watch-tower." [MIZPAP.]

7. מִצְבָּה; *ḥaypuma*; *robur*; only in poetry. [MIZBAP.]

Luke iii. 1 we read that Philip "was tetrarch of Ituraea, and Τραχωνίδος χώρας;" and it appears that this "Trachonite region," in addition to the little province of Trachonitis, included parts of Auranitis, Gaulanitis, and Batanaea (Joseph. *Ant.* xvii. 8, §1, and 11, §4).

Trachonitis is, in all probability, the Greek equivalent for the Aramaic *Argob*. The Targumists render the word *ארגוב*, in Deut. iii. 14, by *מכרותא*. According to Gesenius, *מכרותא* signifies "a heap of stones," from the root *כרת*, "to pile up stones." So *Τραχωνίτις* or *Τραχόν* is a "rugged or stony tract." William of Tyre gives a curious etymology of the word Trachonitis:—"Videtur autem nobis a *trachonibus* dicta. Trachones enim dicuntur occultei subterranei meatus, quibus ista regio abundat" (*Gest. Dei per Francos*, p. 895). Be this as it may, there can be no doubt that the whole region abounds in caverns, some of which are of vast extent. Strabo refers to the caves in the mountains beyond Trachon (*Geog.* xvi.), and he affirms that one of them is so large that it would contain 4000 men. The writer has visited some spacious caves in Jebel Hauran, and in the interior of the Lejah.

The situation and boundaries of Trachonitis can be defined with tolerable accuracy from the notices in Josephus, Strabo, and other writers. From Josephus we gather that it lay south of Damascus, and east of Gaulanitis, and that it bordered on Auranitis and Batanaea (*B. J.* iv. 1, §1, i. 20, §4, iii. 10, §7). Strabo says there were *δὲ Τραχωνίτις* (*Geog.* xvi.). From Ptolemy we learn that it bordered on Batanaea, near the town of Saccaea (*Geog.* xv.). In the Jerusalem Gemara it is made to extend as far south as Bostra (Lightfoot, *Opp.* ii. 473). Eusebius and Jerome, though they err in confounding it with Ituraea, yet the latter rightly defines its position, as lying between Bostra and Damascus (*Onom.* s. v.). Jerome also states that Kenath was one of its chief towns (*Onom.* s. v. "Canath").

From these data we have no difficulty in fixing the position of Trachonitis. It included the whole of the modern province called *el-Lejah* (السلاج), with a section of the plain southward, and also a part of the western declivities of Jebel Hauran. This may explain Strabo's two trachons. The identity of the Lejah and Trachonitis does not rest merely on presumptive evidence. On the northern border of the province are the extensive ruins of *Muameh*, where, on the door of a beautiful temple, Burckhardt discovered an inscription, from which it appears that this is the old city of *Phocus*, and the capital of Trachonitis (*μνημονεύει Τραχωνίτις*, *Trove. in Syr.* 117). The Lejah is bounded on the east by the mountains of Batanaea (now Jebel Hauran), on whose slopes are the ruins of Saccaea and Kenath; on the south by Auranitis (now Hauran), in which are the extensive ruins of Bostra; on the west by Gaulanitis (now Jaulan); and on the north by Ituraea (now Jedâr) and Damascus. If all other proofs were wanting, a comparison of the features of the Lejah with the graphic description Josephus gives of Trachonitis would be sufficient to establish the identity. The inhabitants, he says, "had neither towns nor fields, but dwelt in caves that served as a refuge both for themselves and their flocks. They had, besides, cisterns of water and well-stored granaries, and were thus able

to remain long in obscurity and to defy their enemies. The doors of their caves are so narrow that but one man can enter at a time, while within they are incredibly large. The ground above is almost a plain, but it is covered with rugged rocks, and is difficult of access, except where a guide points out the paths. These paths do not run in a straight course, but have many windings and turns" (*Ant.* xv. 10, §1). A description of the Lejah has been given above [*ARGOB*], with which this may be compared.

The notices of Trachonitis in history are few and brief. Josephus affirms that it was colonised by Uz the son of Aram (*Ant.* i. 6, §4). His next reference to it is when it was held by Zenodorus, the bandit-chief. Then its inhabitants made frequent raids, as their successors do still, upon the territories of Damascus (*Ant.* xv. 10, §1). Augustus took it from Zenodorus, and gave it to Herod the Great, on condition that he should suppress the robbers (*Ant.* xvi. 9, §1). Herod bequeathed it to his son Philip, and his will was confirmed by Caesar (*B. J.* ii. 6, §3). This is the Philip referred to in Luke iii. 1. At a later period it passed into the hands of Herod Agrippa (*B. J.* iii. 3, §1). After the conquest of this part of Syria by Cornelius Palma, in the beginning of the second century, we hear no more of Trachonitis (Burckhardt, *Trove. in Syr.* 110 sq.; Porter, *Damascus*, ii. 240-255; *Journ. Geog. Soc.* xxviii. 250-252). [J. L. P.]

TRANCE (*ἔκστασις*: *excessus*). (1.) In the only passage (Num. xxiv. 4, 16) in which this word occurs in the English of the O. T. there is, as the italics shew, no corresponding word in Hebrew, simply *לִפְנֵי*, "falling," for which the LXX. gives *ἐν ὕπνῳ*, and the Vulg. more literally *qui cecidit*. The Greek *ἔκστασις* is, however, used as the equivalent for many Hebrew words, signifying dread, fear, astonishment (*Trommii Concordant.*). In the N. T. we meet with the word three times (Acts i. 10, xi. 5, xxi. 17), the Vulgate giving "*excessus*" in the two former, "stupor mentis" in the latter. Luther uses "*entzückt*" in all three cases. The meaning of the Greek and Latin words is obvious enough. The *ἔκστασις* is the state in which a man has passed out of the usual order of his life, beyond the usual limits of consciousness and relation. "*Excessus*," in like manner, though in classical Latin chiefly used as an euphemism for death, became, in ecclesiastical writers, a synonyme for the condition of seeming death to the outer world, which we speak of as a trance. "*Hanc vim ecstasin dicimus, excessum sensus, et amissionem*" (Tertull. *de An.* c. 45). The history of the English word presents an interesting parallel. The Latin "*transitus*" took its place also among the euphemisms for death. In early Italian "*essere in transito*," was to be as at the point of death, the passage to another world. Passing into French, it also, abbreviated into "*trance*," was applied, not to death itself, but to that which more or less resembled it (Diez, *Roman. Wörterbuch*, s. v. "*transito*").

(2.) Used as the word is by Luke,^a "the physician," and, in this special sense, by him only, in the N. T., it would be interesting to inquire what precise meaning it had in the medical terminology of the time. From the time of Hippocrates, we use it to describe the loss of conscious perception.^b

^a In Mark v. 42 and xvi. 8 it is used simply for astonishment with awe, not for the trance-state.

^b The distinction drawn by Hippocrates and Galen between *ἐκστάσις σπύνης* and *ἐκστ. παλαγγήσια*.

it had probably borne the connotation which it has had, with shades of meaning for good or evil, ever since. Thus, Hesychius gives as the account of a man in an ecstasy, that he is *δ εἰς θάυρον μὴ ἑν*. Apuleius (*Apologia*), speaks of it as "a change from the earthly mind (*ἀπὸ τοῦ γῆινου φρονήματος*) to a divine and spiritual condition both of character and life." Tertullian (*l. c.*) compares it to the dream-state in which the soul acts, but not through its usual instruments. Augustine (*Confess. ix. 11*) describes his mother in this state as "abstracta a presentibus," and gives a description of like phenomena in the case of a certain Restitutus (*de Civ. Dei, xiv. 24*).

(3.) We may compare with these statements the more precise definitions of modern medical science. There the ecstatic state appears as one form of catalepsy. In catalepsy pure and simple, there is "a sudden suspension of thought, of sensibility, of voluntary motion." "The body continues in any attitude in which it may be placed;" there are no signs of any process of thought; the patient continues silent. In the ecstatic form of catalepsy, on the other hand, "the patient is lost to all external impressions, but wrapt and absorbed in some object of the imagination." The man is "as if out of the body." "Nervous and susceptible persons are apt to be thrown into these trances under the influence of what is called mesmerism. There is, for the most part, a high degree of mental excitement. The patient utters the most enthusiastic and fervid expressions or the most earnest warnings. The character of the whole frame is that of intense contemplative excitement. He believes that he has seen wonderful visions and heard singular revelations" (Watson, *Principles and Practice*, Lect. xxix.; Copland, *Dict. of Medicine*, s. v. "Catalepsy"). The causes of this state are to be traced commonly to strong religious impressions; but some, though, for the most part, not the ecstatic, phenomena of catalepsy are producible by the concentration of thought on one object, or of the vision upon one fixed point (*Quart. Rev. xciii. pp. 510-522*, by Dr. W. B. Carpenter; comp. URIM and THUMMIM), and, in some more exceptional cases, like that mentioned by Augustine (there, however, under the influence of sound, "ad imitatas quasi lamentantis cujuslibet hominis voces"), and that of Jerome Cardan (*Var. Rer. viii. 43*), men have been able to throw themselves into a cataleptic state at will.

(4.) Whatever explanation may be given of it, it is true of many, if not of most, of those who have left the stamp of their own character on the religious history of mankind, that they have been liable to pass at times into this abnormal state. The union of intense feeling, strong volition, long-continued thought (the conditions of all wide and lasting influence), aided in many cases by the withdrawal from the lower life of the support which is needed to maintain a healthy equilibrium, appears to have been more than the "earthen vessel" will bear. The words which speak of "an ecstasy of adoration" are often literally true. The many visions, the journey through the heavens, the so-called epilepsy of Mahomet, were phenomena of

this nature. Of three great mediæval teachers, St. Francis of Assisi, St. Thomas Aquinas, and Joannes Scotus, it is recorded that they would fall into the ecstatic state, remain motionless, seem as if dead, sometimes for a whole day, and then, returning to consciousness, speak as if they had drunk deep of divine mysteries (Gualtferius, *Crit. Sac. on Acts x. 10*). The old traditions of Aristæus and Epimenides, the conflicts of Dunstan and Luther with the powers of darkness, the visions of Savonarola, and George Fox, and Swedenborg, and Böhmen, are generically analogous. Where there has been no extraordinary power to influence others, other conditions remaining the same, the phenomena have appeared among whole classes of men and women in proportion as the circumstances of their lives tended to produce an excessive susceptibility to religious or imaginative emotion. The history of monastic orders, of American and Irish revivals, gives countless examples. Still more noticeable is the fact that many of the *improvisatori* of Italy are "only able to exercise their gift when they are in a state of ecstatic trance, and speak of the gift itself as something morbid" (Copland, *l. c.*); while in strange contrast with their earlier history, and pointing perhaps to a national character that has become harder and less emotional, there is the testimony of a German physician (Frank), who had made catalepsy a special study, that he had never met with a single case of it among the Jews (Copland, *l. c.*).⁴

(5.) We are now able to take a true estimate of the trances of Biblical history. As in other things, so also here, the phenomena are common to higher and lower, to true and false systems. The nature of man continuing the same, it could hardly be that the awfulness of the Divine presence, the terrors of Divine judgment, should leave it in the calm equilibrium of its normal state. Whatever made the impress of a truth more indelible, whatever gave him to whom it was revealed more power over the hearts of others, might well take its place in the Divine education of nations and individual men. We may not point to trances and ecstasies as proofs of a true Revelation, but still less may we think of them as at all inconsistent with it. Thus, though we have not the word, we have the thing in the "deep sleep" (*ἐκστασις*, LXX.), the "horror of great darkness," that fell on Abraham (*Gen. xv. 12*). Balsam, as if overcome by the constraining power of a Spirit mightier than his own, "sees the vision of God, falling, but with opened eyes" (*Num. xxiv. 4*). Saul, in like manner, when the wild chant of the prophets stirred the old depths of feeling, himself also "prophesied" and "fell down" (most, if not all, of his kingly clothing being thrown off in the ecstasy of the moment), "all that day and all that night" (*1 Sam. xix. 24*). Something there was in Jeremiah that made men say of him that he was as one that "is mad and maketh himself a prophet" (*Jer. xxix. 26*). In Ezekiel the phenomena appear in more wonderful and awful forms. He sits motionless for seven days in the stupor of astonishment, till the word of the Lord comes to him (*Ez. iiii. 15*). The "hand of the Lord" falls on him, and he too sees the "visions of

answers obviously to that of later writers between pure and ecstatic catalepsy (comp. Foestus, *Oeconom. Hippocrat. s. v. ἑκστασις*).

⁴ Analogous to this is the statement of Aristotle (*Protr. c. 36*) that the *αεσυχόμενοι* speak often in wild bursts of

poetry, and as the Sibyls and others who are inspired (*ἰσθῆται*).

⁵ A fuller treatment of the whole subject than can be entered on here may be found in the chapters on *Les Mystiques* in Maury, *La Magie et l'Astrologie*.

God," and hears the voice of the Almighty, is "lifted up between the earth and heaven," and passes from the river of Chebar to the Lord's house in Jerusalem (Ex. viii. 3).

(6.) As other elements and forms of the prophetic work were revived in "the Apostles and Prophets" of the N. T., so also was this. More distinctly even than in the O. T. it becomes the medium through which men rise to see clearly what before was dim and doubtful, in which the mingled hopes and fears and perplexities of the waking state are dissipated at once. Though different in form, it belongs to the same class of phenomena as the GIFT OF TONGUES, and is connected with "visions and revelations of the Lord." In some cases, indeed, it is the chosen channel for such revelations. To the "trance" of Peter in the city, where all outward circumstances tended to bring the thought of an expansion of the Divine kingdom more distinctly before him than it had ever been brought before, we owe the indelible truth stamped upon the heart of Christendom, that God is "no respecter of persons," that we may not call any man "common or unclean" (Acts x. xi.). To the "trance" of Paul, when his work for his own people seemed utterly fruitless, we owe the mission which was the starting-point of the history of the Universal Church, the command which bade him "depart . . . far hence unto the Gentiles" (Acts xxiii. 17-21). Wisely for the most part did that Apostle draw a veil over these more mysterious experiences. He would not sacrifice to them, as others have often sacrificed, the higher life of activity, love, prudence. He could not explain them to himself. "In the body or out of the body" he could not tell, but the outer world of perception had passed away, and he had passed in spirit into "paradise," into "the third heaven," and had heard "unspeakable words" (2 Cor. xii. 1-4). Those trances too, we may believe, were not without their share in fashioning his character and life, though no special truth came distinctly out of them. United as they then were, but as they have seldom been since, with clear perceptions of the truth of God, with love wonderful in its depth and tenderness, with energy unrelaxing, and subtle tact almost passing into "guile," they made him what he was, the leader of the Apostolic band, emphatically the "master builder" of the Church of God (comp. Jowett, *Fragment on the Character of St. Paul*). [E. H. P.]

TRESPASS-OFFERING. [SIN-OFFERING.]

TRIAL. Information on the subject of trials under the Jewish law will be found in the articles on JUDGES and SANHEDRIM, and also in JESUS CHRIST. A few remarks, however, may here be added on judicial proceedings mentioned in Scripture, especially such as were conducted before foreigners.

(1.) The trial of our Lord before Pilate was, in a legal sense, a trial for the offence *laesae majestatis*; one which, under the Julian Law, following out that of the Twelve Tables, would be punishable with death (Luke xxiii. 2, 38; John xix. 12, 15; Dig. iv. 1, 3).

(2.) The trials of the Apostles, of St. Stephen, and of St. Paul before the high-priest, were conducted according to Jewish rules (Acts iv., v. 27, vi. 12, xxii. 30, xxiii. 1).

(3.) The trial, if it may be so called, of St. Paul and Silas at Philippi, was held before the *duumviri*, or, as they are called, *στρατηγός*, praetors, on the

TRIBUTE

charge of innovation in religion—a crime punishable with banishment or death (Acts xvi. 19, 22, *Dict. of Antiq.* "Colonia," p. 318; Conybeare and Howson, i. 345, 355, 356).

(4.) The interrupted trial of St. Paul before the pro-consul Gallio, was an attempt made by the Jews to establish a charge of the same kind (Acts xviii. 12-17; Conybeare and Howson, i. 492-496).

(5.) The trials of St. Paul at Caesarea (Acts xxiv., xxv., xxvi.) were conducted according to Roman rules of judicature, of which the praetors Felix and Festus were the recognised administrators. (a.) In the first of these, before Felix, we observe the employment, by the plaintiffs, of a Roman advocate to plead in Latin. [ORATOR.] (b.) The postponement (ampliation) of the trial after St. Paul's reply (*Dict. of Antiq.* "Judea," p. 647). (c.) The free custody in which the accused was kept, pending the decision of the judge (Acts xxiv. 23-26). The second formal trial, before Festus, was, probably, conducted in the same manner as the former one before Felix (Acts xxv. 7, 8), but it presents two new features: (a.) the appeal, *appellatio* or *provocatio*, to Caesar, by St. Paul as a Roman citizen. The right of appeal ad populum, or to the tribunes, became, under the Empire, transferred to the emperor, and, as a citizen, St. Paul availed himself of the right to which he was entitled, even in the case of a provincial governor. The effect of the appeal was to remove the case at once to the jurisdiction of the emperor (Conybeare and Howson, ii. 360; *Dict. of Antiq.* "Appellatio," p. 107; Dig. xlix. 1, 4). (b.) The conference of the praetor with "the council" (Acts xxv. 12). This council is usually explained to have consisted of the assessors, who sat on the bench with the praetor as *consilarii* (Suet. *Tib.* 33; *Dict. of Antiq.* "Assessor," p. 143; Grotius, *On Acts* xxv.; Conybeare and Howson, ii. 358, 361). But besides the absence of any previous mention of any assessors (see below), the mode of expression *συμβουλίου* *μετὰ τοῦ συμβουλίου* seems to admit the explanation of conference with the deputies from the Sanhedrim (*τὸ συμβούλιον*). St. Paul's appeal would probably be in the Latin language, and would require explanation on the part of the judge to the deputations of accusers, before he carried into effect the inevitable result of the appeal, viz. the dismissal of the case so far as they were concerned.

(6.) We have, lastly, the mention (Acts xix. 38) of a judicial assembly which held its session at Ephesus, in which occur the terms *ἀγοραῖα* (i. e. *ἡμέραι ἀγοραῖα*, and *ἀθρόωτοι*). The former denotes the assembly, then sitting, of provincial citizens forming the conventus, out of which the proconsul, *ἀθρόωτος*, selected "judices" to sit as his assessors. The *ἀθρόωτοι* would thus be the judicial tribunal composed of the proconsul and his assessors. In the former case, at Caesarea, it is difficult to imagine that there could be any conventus and any provincial assessors. There the only class of men qualified for such a function would be the Roman officials attached to the praetor; but in Proconsular Asia such assemblies are well known to have existed (*Dict. of Antiq.* "Provincia," pp. 965, 966, 967).

Early Christian practice discouraged resort to heathen tribunals in civil matters (1 Cor. vi. 1-6). [H. W. P.]

TRIBUTE (*τὰ δίδραχμα, didrachma*, Matt. xvii. 24; *κῆνσος, census*, ib. 25).

(1.) The chief Biblical facts connected with the

payment of tribute have been already given under TAXES. A few remain to be added in connexion with the word which in the above passage is thus rendered, inaccurately enough, in the A. V. The payment of the half-shekel (= half stater = two drachmae) was (as has been said) [TAXES], though resting on an ancient precedent (Ex. xxx. 13), yet, in its character as a fixed annual rate, of late origin. It was proclaimed according to Rabbinic rules, on the first of Adar, began to be collected on the 15th. and was due, at latest, on the first of Nisan (Mishna, *Shekalim*, i. f. 7; Surenhusius, pp. 260, 261). It was applied to defray the general expenses of the Temple, the morning and evening sacrifice, the incense, wood, shew-bread, the red heifers, the scape-goat, &c. (*Shekal. l. c.* in Lightfoot, *Hor. Heb.* on Matt. xvii. 24). After the destruction of the Temple it was sequestered by Vespasian and his successors, and transferred to the Temple of the Capitoline Jupiter (Joseph. *B. J.* vii. 8, §8).

(2.) The explanation thus given of the "tribute" of Matt. xvii. 24, is beyond all doubt, the true one. To suppose with Chrysostom, Augustine, Maldonatus, and others, that it was the same as the tribute (ἀγῖρος) paid to the Roman emperor (Matt. xxii. 17), is at variance with the distinct statements of Josephus and the Mishna, and takes away the whole significance of our Lord's words. It may be questioned, however, whether the full significance of those words is adequately brought out in the popular interpretation of them. As explained by most commentators, they are simply an assertion by our Lord of His divine Sonship, an implied rebuke of Peter for forgetting the truth which he had so recently confessed (comp. Wordsworth, Alford, and others): "Thou art the children (υἱοὶ) free;" Thou hast owned me as the Son of the Living God, the Son of the Great King, of the Lord of the Temple, in whose honour men pay the Temple-tribute; why, forgetting this, dost thou so hastily make answer as if I were an alien and a stranger? True as this exegesis is in part, it fails to account for some striking facts. (1.) The plural, not the singular is used—"then are the children free." The words imply a class of "sons" as contrasted with a class of aliens. (2.) The words of our Lord here must be interpreted by his language elsewhere. The "sons of the kingdom" are, as in the Hebrew speech of the O. T., those who belong to it, in the Apostolic language "heirs of the kingdom" (Matt. viii. 12, xiii. 38; Jn. ii. 5; Rom. viii. 17), "sons of God," "children of their Father in Heaven." (3.) The words that follow, "Give unto them for me and thee," place the disciple as standing, at least in some degree, on the same ground as his Master. The principle involved in the words "then are the children free" extends to him also. Payment is made for both, not on different, but on the same grounds.

(3.) A fuller knowledge of the facts of the case may help us to escape out of the trite routine of commentators, and to rise to the higher and broader truth implied in our Lord's teaching. The Temple-rate, as above stated, was of comparatively late origin. The question whether the costs of the morning and evening sacrifice ought to be defrayed by such a fixed compulsory payment, or left to the free-will offerings of the people, had been a contested point between the Pharisees and Sadducees, and the former had carried the day after a long struggle and debate, lasting from the 1st to the

8th day of Nisan. So great was the triumph in the eyes of the whole party, that they kept the anniversary as a kind of half festival. The Temple-rate question was to them what the Church-rate question has been to later Conservatives (Jost, *Geschichte des Judenthums*, i. 218). We have to remember this when we come to the narrative of St. Matthew. In a hundred different ways, on the questions of the Sabbath, of fasting, of unwashed hands and the like, the teaching of our Lord had been in direct antagonism to that of the Pharisees. The collectors of the rate, probably, from the nature of their functions, adherents of the Pharisee party, now come, half-expecting opposition on this point also. Their words imply that he had not as yet paid the rate for the current year. His life of constant wandering, without a home, might seem like an evasion of it. They ask tauntingly, "Will he side, on this point, with their Sadducee opponents and refuse to pay it altogether?" The answer of Peter is that of a man who looks on the payment as most other Jews looked on it. With no thought of any higher principle; of any deeper truth, he answers at once, "His Master will of course pay what no other religious Israelite would refuse." The words of his Lord led him to the truth of which the Pharisees were losing sight. The offerings of the children of the kingdom should be free, and not compulsory. The Sanhedrin, by ranking the Temple-offering a fixed annual tax, collecting it as men collected tribute to Caesar, were lowering, not raising the religious condition and character of the people. They were placing every Israelite on the footing of a "stranger," not on that of a "son." The true principle for all such offerings was that which St. Paul afterwards asserted, following in his Master's footsteps, "not grudgingly, or of necessity, for God loveth a cheerful giver." In proportion to the degree in which any man could claim the title of a Son of God, in that proportion was he "free" from this forced exaction. Peter, therefore, ought to have remembered that here at least, was one who, by his own confession as the Son of the Living God, was *ipso facto* exempted.

(4.) The interpretation which has now been given leads us to see, in these words, a precept as wide and far-reaching as the yet more memorable one, "Render unto Caesar the things that be Caesar's, and unto God the things that be God's." They condemn, instead of sanctioning, the compulsory payments which human policy has so often substituted for the "cheerful gifts" which alone God loves. But the words which follow condemn also the perversity which leads men to a spurious martyrdom in resisting such payments. "Lest we should offend them . . . give unto them for me and thee." It is better to comply with the payment than to startle the weak brethren, or run counter to feelings that deserve respect, or lay an undue stress on a matter of little moment. In such quarrels, paradoxical as it may seem, both parties are equally in the wrong. If the quarrel is to find a solution, it must be by a mutual acknowledgment that both have been mistaken.

(5.) It is satisfactory to find that some interpreters at least, have drawn near to the true meaning of one of the most characteristic and pregnant sayings in the whole cycle of our Lord's teaching. Augustine (*Questiones Evangel. lxxv.*), though missing the main point, saw that what was true of the Lord and of Peter was true of all ("Salvator autem, cum pro se et Petro daret inquit, pro omnibus

exco:viase videtur"). Jerome (*ad loc.*) sees in the words, a principle extending in some form or other, to all believers ("Noe pro illius honore tributa non reddimus, et quasi filii Regis a vectigalibus immunes sumus"), though his words claim an exemption which if true at times of the Christian clergy, has never been extended to the body of Christian laity. Calvin, though adhering to the common explanation, is apparently determined chiefly by his dislike of the inferences drawn from the other explanation by Papists on the one side, and Anabaptists on the other, as claiming an exemption from obedience in matters of taxation to the civil magistrate. Luther (*Annot. in Matt. xvii.*) more boldly, while dwelling chiefly on the friendly plesantry which the story represents as passing between the master and the disciple,* seizes, with his usual acuteness, the true point. "Qui fit (this is his paraphrase of the words of Christ) mi Petre, ut a te petant, cum sis Regis filius. . . . Vade et scito nos esse in alio regno reges et filios regis. Sinito illis suum regnum, in quo sumus hospites. . . . *Fili regni sumus, sed non huius regni mundi.*" Tindal (*Marg. Note on Matt. xvii. 26*) in like manner, extends the principle, "So is a Christian man free in all things. . . yet payeth he tribute, and submitteth himself to all men for his brother's sake." [E. H. P.]

TRIBUTE-MONEY. [TAXES; TRIBUTE.]

TRIPOLIS (ἡ Τρίπολις). The Greek name of a city of great commercial importance, which served at one time as a point of federal union for Aradus, Sidon, and Tyre. What its Phoenician name was is unknown; but it seems not impossible that it was Kadytis, and that this was really the place captured by Neco of which Herodotus speaks (ii. 159, iii. 5). Kadytis is the Greek form of the Syrian *Kedutha*, "the holy," a name of which a relic still seems to survive in the *Nahr-Kadish*, a river which runs through *Tarablous*, the modern representative of Tripolis. All ancient federations had for their place of meeting some spot consecrated to a common deity, and just to the south of Tripolis was a promontory which went by the name of Θεοῦ ὑπέρθερον. [PENIEL, p. 768, a.]

It was at Tripolis that, in the year 351 B.C., the plan was concocted for the simultaneous revolt of the Phoenician cities and the Persian dependencies in Cyprus against the Persian king Ochus. Although aided by a league with Nectanebus king of Egypt, this attempt failed, and in the sequel great part of Sidon was burnt and the chief citizens destroyed. Perhaps the importance of Tripolis was increased by this misfortune of its neighbour, for soon after, when Alexander invaded Asia, it appears as a port of the first order. After the battle of Issus some of the Greek officers in Darius's service retreated thither, and not only found ships enough to carry themselves and 8000 soldiers away, but a number over and above, which they burnt in order to preclude the victor from an immediate pursuit of them (Arrian, ii. 13). The destruction of Tyre by Alexander, like that of Sidon by Ochus, would naturally tend rather to increase than diminish the importance of Tripolis as a commercial port. When Demetrius Soter, the son of Seleucus, succeeded in wresting Syria from the young son of Antiochus (B.C. 161), he landed there and made the place the base of his operations. It is this circumstance to

which allusion is made in the only passage in which Tripolis is mentioned in the Bible (2 Macc. xiv. 1). The prosperity of the city, so far as appears, continued down to the middle of the 6th century of the Christian era. Dionysius Periegetes applies to it the epithet *Αρωαχή* in the 3rd century. In the Peutinger Table (which probably was compiled in the reign of the Emperor Theodosius) it appears as the great road along the coast of Phœnicia; and at Orthosia (the next station to it northwards) the roads which led respectively into Mesopotamia and Cilicia branched off from one another. The possession of a good harbour is so important a point for land-traffic, doubtless combined with the richness of the neighbouring mountains in determining the original choice of the site, which seems to have been a factory for the purposes of trade established by the three great Phœnician cities. Each of these held a portion of Tripolis surrounded by a fortified wall, like the Western nations at the Chinese ports. But in A.D. 543 it was laid in ruins by the terrible earthquake which happened in the month of July of that year, and overthrew Tyre, Sidon, Berytus, and Byblus as well. On this occasion the appearance of the coast was much altered. A large portion of the promontory Theoprosopon (which in the Christian times had its name, from motives of piety, changed to Lithoprosopon) fell into the sea, and, by the natural breakwater it constituted, created a new port, able to contain a considerable number of large vessels. The ancient Tripolis was finally destroyed by the Sultan El Mansour in the year 1289 A.D.; and the modern *Tarablous* is situated a couple of miles distant to the east, and is no longer a port. *El Mywa*, which is perhaps on the site of the ancient Tripolis, is a small fishing village. Tarablous contains a population of 15 or 16,000 inhabitants, and is the centre of one of the four pashalics of Syria. It exports silk, tobacco, galls, and oil, grown in the lower parts of the mountains at the foot of which it stands; and performs, on a smaller scale, the part which was formerly taken by Tripolis as the entrepôt for the productions of a most fertile region (Diod. Sic. xvi. 41; Strabo, xvi. c. 2; Vossius ad Melam, i. 12; Theophrastus, *Chrysographia*, sub anno 6043). [J. W. B.]

TROAS (Τροάς). The city from which St. Paul first sailed, in consequence of a divine intimation, to carry the Gospel from Asia to Europe (Acts xvi. 8, 11)—where he rested for a short time on the northward road from Ephesus (during the next missionary journey) in the expectation of meeting Titus (2 Cor. ii. 12, 13)—where on the return southwards (during the same missionary journey) he met those who had preceded him from Philippi (Acts xx. 5, 6), and remained a week, the close of which (before the journey to Assos) was marked by the raising of Eutychus from the dead during the protracted midnight discourse—and where, after an interval of many years, the Apostle left (during a journey the details of which are unknown) a cloak and some books and parchments in the house of Carpus (2 Tim. iv. 13)—deserves the careful attention of the student of the New Testament.

The full name of the city was *Alexandria Troas* (Liv. xxiv. 42), and sometimes it was called *Ῥιτοῦς* *Alexandria*, as by Pliny (*H. N.* v. 33) and Strabo (xiii. p. 593), sometimes simply Troas (as in the N. T. and the *Ant. itin.* See Wesseling, p. 334). The former part of the name indicates the period at which it was founded. It was first built by Antigonus, under the name of *Antigoniana*—"Ῥοῖα

* "Es muss ja ein feine, freundlich, lieblich Gesellschaft sein gewesen unter Christen et discipulos suis."

and peopled with the inhabitants of some neighbouring cities. Afterwards it was embellished by Lysimachus, and named Alexandria Troas. Its situation was on the coast of MYRIA, opposite the S.E. extremity of the island of Tenedos.

Under the Romans it was one of the most important towns of the province of ASIA. It was the chief point of arrival and departure for those who went by sea between Macedonia and the western Asiatic districts; and it was connected by good roads with other places on the coast and in the interior. For the latter see the map in Lenke's *Asia Minor*. The former cannot be better illustrated than by St. Paul's two voyages between Troas and Philippi (Acts xvi. 11, 12, xx. 6), one of which was accomplished in two days, the other in five. At this time Alexandria Troas was a *colonia* with the *Jus Italicum*. This strong Roman connexion can be read on its coins. The Romans had a peculiar feeling connected with the place, in consequence of the legend of their origin from Troy. Suetonius tells us that Julius Caesar had a plan of making Troas the seat of empire (*Caes.* 79). It may perhaps be inferred from the words of Horace (*Carm.* iii. 3, 57) that Augustus had some such dreams. And even the modern name *Eski-Stamboul* (or "Old Constantinople") seems to commemorate the thought which was once in Constantine's mind (*Zoëim.* ii. 30; *Zonar.* xiii. 3), who, to use Gibbon's words, "before he gave a just preference to the situation of Byzantium, had conceived the design of erecting the seat of empire on this celebrated spot, from which the Romans derived their fabulous origin."

The ruins at *Eski-Stamboul* are considerable. The most conspicuous, however, especially the remains of the aqueduct of Herodes Atticus, did not exist when St. Paul was there. The walls, which may represent the extent of the city in the Apostle's time, enclose a rectangular space, extending above a mile from east to west, and nearly a mile from north to south. That which possesses most interest for us is the harbour, which is still distinctly traceable in a basin about 400 feet long and 200 broad. Descriptions in greater or less detail are given by Pococke, Chandler, Hunt (in Walpole's *Memoirs*), Clarke, Prokech, and Fellows. [J. S. H.]

TROGYLLIUM [see SAMOS]. Samos is exactly opposite the rocky extremity of the ridge of Mycale, which is called *Τρογύλλιον* in the N. T. (Acts xx. 15) and by Ptolemy (v. 2), and *Τρογύλιον* by Strabo (xiv. p. 636). The channel is extremely narrow. Strabo (*l. c.*) makes it about a mile broad, and this is confirmed by our Admiralty Charts (1530 and 1555). St. Paul sailed through this channel on his way to Jerusalem at the close of his third missionary journey (Acts, *l. c.*). The navigation of this coast is intricate; and it can be gathered from Acts xx. 6, with subsequent notices of the days spent on the voyage, that it was the time of dark moon. Thus the night was spent at Trogyllium. It is interesting to observe that a little to the east of the extreme point there is an anchorage, which is still called *St. Paul's Port*. [J. S. H.]

TROOP, BAND. These words have a peculiar

* Trophimus was no doubt at Miletus on the occasion recorded in Acts xx. 15-36, but it is most certain that he was not left there. The theory also that he was left there on the voyage to Rome is preposterous; for the wind forced St. Paul's vessel to run direct from the S.W. corner

signification in many passages of the O. T., which is apt to be overlooked, and the knowledge of which throws a brighter light upon them. They are employed to represent the Hebrew word *גִּבְעָה*, *gib'ah*, which has invariably the force of an irregular body of people, large or small, united not for the purpose of defence or regular aggression, like an army, but with the object of marauding and plunder. [See MOAB, vol. ii. 395, note, where the term *gib'ah* is examined.] In addition to the instances of its use there named, it may be observed that our translators have in a few cases tried to bring out its meaning more strongly; as in 1 Chr. xii. 21, "band-of-the-rovers;" Hos. vi. 9, and vii. 1, "troop-of-robbers." [G.]

TROPHIMUS (*Τρόφιμος*). Of the three passages where this companion of St. Paul is mentioned, the first associates him very closely with TYCHICUS (Acts xx. 4), and the last seems in some degree to renew the association, and in reference to the same geographical district (2 Tim. iv. 20; see ver. 12), while the intermediate one separates him entirely from this connexion (Acts xxi. 29).

From the first of these passages we learn that Tychicus, like Trophimus, was a native of ASIA (*Ἀσιαρῶν*), and that the two were among those companions who travelled with the Apostle in the course of the third missionary journey, and during part of the route which he took in returning from Macedonia towards Syria. From what we know concerning the collection which was going on at this time for the poor Christians in Judaea, we are disposed to connect these two men with the business of that contribution. This, as we shall see, suggests a probable connexion of Trophimus with another circumstance.

Both he and Tychicus accompanied St. Paul from Macedonia as far as Asia (*ἔχρι τῆς Ἀσίας l. c.*), but Tychicus seems to have remained there while Trophimus proceeded with the Apostle to Jerusalem. There he was the innocent cause of the tumult in which St. Paul was apprehended, and from which the voyage to Rome ultimately resulted. Certain Jews from the district of Asia saw the two Christian missionaries together, and supposed that Paul had taken Trophimus into the Temple (Acts xxi. 27-29). From this passage we learn two new facts, viz. that Trophimus was a Gentile, and that he was a native, not simply of Asia, but of EPHESUS.

A considerable interval now elapses, during which we have no trace of either Tychicus or Trophimus; but in the last letter written by St. Paul, shortly before his martyrdom, from Rome, he mentions them both (*Τυχικὸν ἀπέστειλα εἰς Ἐφεσον*, 2 Tim. iv. 12; *Τρόφιμον ἀπέλαυον ἐν Μιλήτῳ ἀσθενεῖντα*, ib. 20). From the last of the phrases we gather simply that the Apostle had no long time before been in the Levant, that Trophimus had been with him, and that he had been left in infirm health at Miletus. Of the further details we are ignorant; but this we may say here, that while there would be considerable difficulty in accommodating this passage to any part of the recorded narrative previous to the voyage to Rome,* all difficulty vanishes on the supposition of two im-

of Asia Minor to the E. end of Crete (Acts xxvii. 7). We may add, that when Trophimus was left in sickness at Miletus, whenever that might be, he was within easy reach of his home-friends at Ephesus, as we see from Acts xx. 17

prisonments, and a journey in the Levant between them.

What was alluded to above as probable, is that Trophimus was one of the two brethren who, with Titus, conveyed the 2nd Epistle to the Corinthians (2 Cor. viii. 18-24). The argument is so well stated by Professor Stanley, that we give it in his words:—"Trophimus was, like Titus, one of the few Gentiles who accompanied the Apostle; an Ephesian, and therefore likely to have been sent by the Apostle from Ephesus with the First Epistle, or to have accompanied him from Ephesus now; he was, as is implied of 'this brother,' whose praise was in all the Churches, well known; so well known that the Jews of Asia [Minor?] at Jerusalem immediately recognised him; he was also especially connected with the Apostle on this very mission of the collection for the poor in Judaea. Thus far would appear from the description of him in Acts xxi. 29. From Acts xx. 4 it also appears that he was with St. Paul on his return from this very visit to Corinth" (Stanley's *Corinthians*, 2nd edit. p. 492).

The story in the Greek Menology that Trophimus was one of the seventy disciples is evidently wrong; the legend that he was beheaded by Nero's orders is possibly true. [J. S. H.]

TRUMPET. [CORNET.]

TRUMPETS, FEAST OF (יום תרועה).

Num. xix. 1; *ἡμέρα σιγασίας*; *dies clangoris et tubarum*; תְּרֻעָה, Lev. xxiii. 24; *μνημόσυνον σαλπικγγων*; *sabbatum memorialis clangentibus tubis*: in the Mishna, ראש השנה "the beginning of the year"), the feast of the new moon, which fell on the first of Tisri. It differed from the ordinary festivals of the new moon in several important particulars. It was one of the seven days of Holy Convocation. [FEASTS.] Instead of the mere blowing of the trumpets of the Temple at the time of the offering of the sacrifices, it was "a day of blowing of trumpets." In addition to the daily sacrifices and the eleven victims offered on the first of every month [NEW MOON], there were offered a young bullock, a ram, and seven lambs of the first year, with the accustomed meat offerings, and a kid for a sin offering (Num. xix. 1-6). The regular monthly offering was thus repeated, with the exception of one young bullock.

It is said that both kinds of trumpet were blown in the temple on this day, the straight trumpet (חֲצֹצְרֶתָה) and the cornet (שֹׁפָר and כֶּנֶף), and that elsewhere any one, even a child, might blow a cornet (Reland, iv. 7, 2; Carpzov, p. 425; *Rosh Hash. i. 2*; JUBILEE, p. 1149, note 2; CORNET). When the festival fell upon a Sabbath, the trumpets were blown in the Temple, but not out of it (*Rosh Hash. iv. 1*).

It has been conjectured that Ps. lxxxi., one of the songs of Asaph, was composed expressly for the Feast of Trumpets. The Psalm is used in the service for the day by the modern Jews. As the third verse is rendered in the LXX., the Vulgate, and the A.V., this would seem highly probable—"Blow up the trumpet in the new moon, the time appointed, on our solemn feast day." But the best authorities understand the word translated *new moon* (יָדָבָר) to mean *full moon*. Hence the Psalm would more properly belong to the service for one of the festivals which take place at the full moon,

the *Passover*, or the Feast of Tabernacles (Guz. *Theo. v. v.*; Rosenmüller and Biegtensberg on Ps. lxxxi.).

Various meanings have been assigned to the Feast of Trumpets. Maimonides considered that its purpose was to awaken the people from their spiritual slumber to prepare for the solemn humiliation of the Day of Atonement, which followed it within ten days. This may receive some countenance from Joel ii. 15, "Blow the trumpet (תְּרֻעָה) in Zion, sanctify a fast, call a solemn assembly." Some have supposed that it was intended to introduce the seventh or Sabbatical month of the year, which was especially holy because it was the seventh, and because it contained the Day of Atonement and the Feast of Tabernacles (Fagius in *Lev. xxiii. 24*; Buxt. *Syn. Jud. c. xxiv.*). Philo and some early Christian writers regarded it as a memorial of the giving of the Law on Sinai (Philo, vol. v. p. 44, ed. Tauch.; Basil, in *Ps. lxxxi.*; Theod. *Quæst. xxxii. in Lev.*). But there seems to be no sufficient reason to call in question the common opinion of Jews and Christians, that it was the festival of the New Year's Day of the civil year, the first of Tisri, the month which commenced the Sabbatical year and the year of Jubilee. [JUBILEE, p. 1152.] If the New Moon Festival was taken as the consecration of a natural division of time, the month in which the earth yielded the last ripe produce of the season, and began again to foster seed for the spring of the future, might well be regarded as the new month of the year. The fact that Tisri was the great month for sowing might thus easily have suggested the thought of commemorating on this day the finished work of Creation, when the voice of God shouted for joy (Job xxviii. 7). The Feast of Trumpets thus came to be regarded as the anniversary of the birthday of the world (Mishna, *Berach Hash. i. 1*; Hupfeld, *De Fest. Heb. ii. p. 13*; Buxt. *Syn. Jud. c. xxiv.*).

It was an odd fancy of the Rabbis that on this day, every year, God judges all men, and that they pass before Him as a flock of sheep pass before a shepherd (*Rosh Hash. i. 2*). [S. C.]

TRYPHENA and TRYPHOSA (Τρυφήνα and Τρυφώσα). Two Christian women at Rome, who, among those that are enumerated in the conclusion of St. Paul's letter to that city, receive a special salutation, and on the special ground that they are engaged there in "labouring in the Lord" (Rom. xvi. 12). They may have been sisters, but it is more likely that they were fellow-disciples, and among the predecessors of that large number of official women who ministered in the Church of Rome at a later period (Euseb. *Hist. Eccl. vi. 43*; for it is to be observed that they are spoken of as at that time occupied in Christian service *καὶ κοινώσας*), while the salutation to Peria, in the same verse, is connected with past service (*καὶ ἐκοινώσατο*).

We know nothing more of these two co-workers of the Apostolic time; but the name of one of them occurs curiously, with other names familiar to us in St. Paul's Epistles, in the Apocryphal *Acts of Paul and Thecla*. There Tryphena appears as a rich Christian widow of Antioch, who gives Thecla a refuge in her home, and sends money to Paul for the relief of the poor. (See Jones, *On the Canon*, ii. 371, 380.) It is impossible to discern any trace of probability in the part of the legend.

It is an interesting fact that the columbaria of "Caesar's household" in the *Vigna Codini*, near *Porta S. Sebastiano*, contain the name Tryphena, as well as other names mentioned in this chapter, Philologus and Julia (ver. 15), and also Amplias (ver. 8).—Wordworth's *Tour in Italy* (1862), ii. 173. [J. S. H.]

TRYPHON (Τρύφων). A usurper of the Syrian throne. His proper name was Diodotus (Strab. xvi. 2, 10; App. *Syr.* 68), and the surname Tryphon was given to him, or, according to Appian, adopted by him, after his accession to power. He was a native of Cariana, a fortified place in the district of Apamea, where he was brought up (Strab. l. c.). In the time of Alexander Belas he was attached to the court (App. l. c. *ἑὸν βασιλέων*; Diod. fr. xxi. sp. Müll. *Hist. Gr. fragm.* ii. 17, *σπαρτυρός*; 1 Macc. xi. 39, *τὸν παρὰ Ἀλεξ.*); but towards the close of his reign he seems to have joined in the conspiracy which was set on foot to transfer the crown of Syria to Ptol. Philometor (1 Macc. xi. 13; Diod. l. c.). After the death of Alexander Belas he took advantage of the unpopularity of Demetrius II. to put forward the claims of Antiochus VI., the young son of Alexander (1 Macc. x. 39; B.C. 145). After a time he obtained the support of Jonathan, who had been alienated from Demetrius by his ingratitude, and the young king was crowned (B.C. 144). Tryphon, however, soon revealed his real designs on the kingdom, and, fearing the opposition of Jonathan, he gained possession of his person by treachery (1 Macc. xii. 39-50), and after a short time put him to death (1 Macc. xiii. 23). As the way seemed now clear, he murdered Antiochus and seized the supreme power (1 Macc. xiii. 31, 32), which he exercised, as far as he was able, with violence and rapacity (1 Macc. xiii. 34). His tyranny again encouraged the hopes of Demetrius, who was engaged in preparing an expedition against him (B.C. 141), when he was taken prisoner (1 Macc. xiv. 1-3), and Tryphon retained the throne (Just. xxxvi. 1; Diod. *Lag.* xxxi.) till Antiochus VII., the brother of Demetrius, drove him to Dora, from which he escaped to Orthosia in Phoenicia (1 Macc. xv. 10-14, 37-39; B.C. 139). Not long afterwards, being hard pressed by Antiochus, he committed suicide, or, according to other accounts, was put to death by Antiochus (Strab. xiv. 5, 2; App. *Syr.* 68, *Ἀντίχου—κτείνει . . . ἐν τῷ πύργῳ τοῦ λαοῦ*). Josephus (*Ant.* xiii. 7, §2) adds that he was killed at Apamea, the place which he made his head-quarters (Strab. xvi. 2, 10). The authority of Tryphon was evidently very partial, as appears from the growth of Jewish independence under Simon Maccabaeus; and Strabo describes him as one of the chief authors of Cilician piracy (xiv. 3, 2). His name occurs on the coins of ANTIOCHUS VI. [vol. i. p. 77], and he also struck coins in his own name. [ANTIOCHUS; DEMETRIUS.] [B. F. W.]

Coin of Tryphon.

* Klobet connects these Iberians of the East and West, and considers the Tibareni to have been a branch of this

TRYPHOSA. [TRYPHENA AND TRYPHOSA.]

TU'BAL (תּוּבַל; תּוּבַל in Gen. x. 2, Es. xxxii. 26, xxxix. 1: *Θουβάλ*, except in Es. xxxix. 1, where Alex. *Θουβέρ*: *Thubal*, but in Is. lvi. 19, *Itala*). In the ancient ethnological tables of Genesis and 1 Chr., Tubal is reckoned with Javan and Meshech among the sons of Japheth (Gen. x. 2; 1 Chr. i. 5). The three are again associated in the enumeration of the sources of the wealth of Tyre; Javan, Tubal, and Meshech, brought slaves and copper vessels to the Phoenician markets (Es. xxvii. 13). Tubal and Javan (Is. lvi. 19), Meshech and Tubal (Es. xxxii. 26, xxviii. 2, 3, xxxix. 1), are nations of the north (Es. xxxviii. 15, xxxix. 2). Josephus (*Ant.* i. 6, §1) identifies the descendants of Tubal with the Iberians, that is—not, as Jerome would understand it, Spaniards, but—the inhabitants of a tract of country, between the Caspian and Euxine Seas, which nearly corresponded to the modern Georgia.* This approximates to the view of Bochart (*Phaleg*, iii. 12), who makes the Moschi and Tibareni represent Meshech and Tubal. These two Colchian tribes are mentioned together in Herodotus on two occasions; first, as forming part of the 19th satrapy of the Persian empire (iii. 94), and again as being in the army of Xerxes under the command of Arimardus the son of Darius (vii. 78). The Moschi and Tibareni, moreover, are "constantly associated, under the names of *Mascha* and *Tupia*, in the Assyrian inscriptions" (Sir H. Rawlinson in Rawlinson's *Her.* i. p. 535). The Tibareni are said by the Scholiast on Apollonius Rhodius (ii. 1010) to have been a Scythian tribe, and they as well as the Moschi are probably to be referred to that Turanian people, who in very early times spread themselves over the entire region between the Mediterranean and India, the Persian Gulf and the Caucasus (Rawlinson, *Her.* i. p. 535). In the time of Sargon, according to the inscriptions, Ambris, the son of Khuliyas, was hereditary chief of Tubal (the southern slopes of Taurus). He "had cultivated relations with the kings of Musak and Vararat (Meshech and Ararat, or the Moschi and Armenia) who were in revolt against Assyria, and thus drew upon himself the hostility of the great king" (*ibid.* i. p. 169, note²). In former times the Tibareni were probably more important, and the Moschi and Tibareni, Meshech and Tubal, may have been names by which powerful hordes of Scythians were known to the Hebrews. But in history we only hear of them as pushed to the furthest limits of their ancient settlements, and occupying merely a strip of coast along the Euxine. Their neighbours the Chaldeans were in the same condition. In the time of Herodotus the Moschi and Tibareni were even more closely connected than at a later period, for in Xenophon we find them separated by the Macrones and Mosynoeci (*Anab.* v. 5, §1; Plin. vi. 4, &c.). The limits of the territory of the Tibareni are extremely difficult to determine with any degree of accuracy. After a part of the 10,000 Greeks on their retreat with Xenophon had embarked at Cerasus (perhaps near the modern *Kerasous Dere Sü*), the rest marched along the coast, and soon came to the boundaries of the Mosynoeci (*Anab.* v. 4, §2). They traversed the country occupied by this people in eight days and then came to the Chalybes, and after them to

widely-spread Turanian family, known to the Hebrews as Tubal (*Ideler's d. Gen.* §13).

the Tibareni. The eastern limit of the Tibareni was therefore about 80 or 90 miles along the coast W. of Cerasus. Two days' march through Tibarene brought the Greeks to Cotyora (*Anab.* v. 5, §3), and they were altogether three days in passing through the country (*Diod. Sic.* xiv. 30). Now from C. Jasonium to Boon, according to Arrian (*Periplus* 16), the distance was 90 stadia, 90 more to Cotyora, and 60 from Cotyora to the river Melanthius, making in all a coast line of 240 stadia, or three days' march. Professor Rawlinson (*Her.* iv. 161) conjectures that the Tibareni occupied the coast between Cape Yasoun (Jasonium) and the River Melanthius (*Melet Irmak*), but if we follow Xenophon, we must place Boon as their western boundary, one day's march from Cotyora, and their eastern limit must be sought some 10 miles east of the *Melet Irmak*, perhaps not far from the modern *Aptar*, which is 3½ hours from that river. The anonymous author of the *Periplus* of the Euxine says (33) that the Tibareni formerly dwelt west of Cotyora as far as Polemonium, at the mouth of the *Poulemas chui*, 1½ mile east of *Fitsah*.

In the time of Xenophon the Tibareni were an independent tribe (*Anab.* vii. 8, §25). Long before this they were subject to a number of petty chiefs, which was a principal element of their weakness, and rendered their subjugation by Assyria more easy. Dr. Hiecks (quoted by Rawlinson, *Herod.* i. 380, note 1) has found as many as twenty-four kings of the *Tuplai* mentioned in the inscriptions. They are said by Apollonius Rhodius to have been rich in flocks (*Arg.* ii. 377). The traffic in slaves and vessels of copper with which the people of Tubal supplied the markets of Tyre (*Ex.* xxvii. 13) still further connects them with the Tibareni. It is well known that the regions bordering on the Pontus Euxinus furnished the most beautiful slaves, and that the slave traffic was an extensive branch of trade among the Cappadocians (*Polyb.* iv. 38, §4; *Hor. Ep.* i. 6, 39; *Pers. Sat.* vi. 77; *Mart. Ep.* vi. 77, x. 78, &c.). The copper of the Mosynoeci, the neighbours of the Tibareni, was celebrated as being extremely bright, and without any admixture of tin (*Arist. De Mir. Auscult.* 62); and the Chalybes, who lived between these tribes, were long famous for their craft as metal-smiths. We must not forget, too, the copper-mines of Chalvar in Armenia (*Hamilton, As. Min.* i. 173).

The Arabic Version of *Gen.* x. 2 gives Chorasan and China for Meshech and Tubal; in Eusebius (see Bochart) they are Illyria and Thessaly. The Talmudists (*Yoma*, fol. 10, 2), according to Bochart, define Tubal as "the home of the *Uniaci* (*יִנְיָאִי*)," whom he is inclined to identify with the Huns (*Phalog*, iii. 12). They may perhaps take their name from Oenoe, the modern *Unish*, a town on the south coast of the Black Sea, not far from Cape Yasoun (Jasonium), and so in the immediate neighbourhood of the Tibareni. In the Targum of R. Joseph on 1 Chr. (ed. Wilkins) *יִנְיָאִי* is given as the equivalent of Tubal, and Wilkins renders it by Bithynia. But the reading in this passage, as well as in the Targums of Jerusalem and of Jonathan on *Gen.* x. is too doubtful to be followed as even a traditional authority.

[W. A. W.]

TUBAL-CAIN (יִבְלִי קַיִן: *ῥοδάβελ*: *Tubal-ai*). The son of Lamech the Caldean by his wife Zillah (*Gen.* iv. 22). He is called "a furber of

every cutting instrument of copper and iron." The Jewish legend of later times associates him with his father's song. "Lamech was blind," says the story as told by Rashi, "and Tubal-Cain was leading him; and he saw Cain, and he appeared to him like a wild beast, so he told his father to draw his bow, and he slew him. And when he knew that it was Cain his ancestor he smote his hands together and struck his son between them. So he slew him, and his wives withdrew from him, and he conciliates them." In this story Tubal-Cain is the "young man" of the song. Rashi apparently considers the name of Tubal-Cain as an appellative, for he makes him director of the works of Cain for making weapons of war, and connects "Tubal" with *טָבַל*, *tabbel*, to season, and so to prepare skillfully. He appears moreover to have pointed it *טָבַל*, *tabal*, which seems to have been the reading of the LXX. and Josephus. According to the writer last mentioned (*Ant.* i. 2, §2), Tubal-Cain was distinguished for his prodigious strength and his success in war.

The derivation of the name is extremely obscure. Hasse (*Entdeckungen*, ii. 37, quoted by Knobel on *Gen.* iv. 22) identifies Tubal-Cain with Vulcan; and Buttmann (*Mythol.* i. 164) not only compares these names, but adds to the comparison the *Talchires* of Rhodes, the first workers in copper and iron (Strabo, xiv. 654), and Dwalinn, the demon smith of the Scandinavian mythology. Goenius proposed to consider it a hybrid word, compounded of the Pers. *توپال*, *tāpal*, iron slag, or scoria, and the Arab. *قَيْن*, *qayn*, a smith; but this etymology is more than doubtful. The Scythian race TUBAL, who were copper-smiths (*Ex.* xxvii. 13), naturally suggest themselves in connexion with Tubal-Cain.

[W. A. W.]

TUBI'ENI (Τουβιῆνοι; Alex. Τουβιῆνοι: *Tubianaei*). The "Jews called Tubieni" lived about Charax, 750 stadia from a strongly-fortified city called Caspis (2 Macc. xii. 17). They were doubtless the same who are elsewhere mentioned as living in the towns of Toubion (A. V. TORIK), which again is probably the same with the TOB of the Old Testament. [G.]

TURPENTINE-TREE (τερεβινθος, *terebinthos*: *terebinthus*) occurs only once, viz. in the Apocrypha (*Eccles.* xxiv. 16), where wisdom is compared with the "turpentine-tree that stretcheth forth her branches." The *τερεβινθος* or *τέρεβινθος* of the Greeks is the *Pistacia terebinthus*, terebinth tree, common in Palestine and the East, supposed by some writers to represent the *אֵילֵי תִרְזָו* (*aili tirzau*) of the Hebrew Bible. [OAK.] The terebinth, though not generally so conspicuous a tree in Palestine as some of the oaks, occasionally grows to a large size. See Robinson (*B. B.* ii. 222, 3), who thus speaks of it. "The Butm" (the Arabic name of the terebinth) "is not an evergreen, as often represented, but its small lanceolate leaves fall in the autumn, and are renewed in the spring. The flowers are small, and followed by small oval berries, hanging in clusters from two to five inches long, resembling much those of the vine when the grapes are just set. From incisions in the trunk there is said to flow a sort of transparent balsam, constituting a very pure and fine species of turpentine, with an agreeable odour like citron or yessamine, and a cold

taste, and hardening gradually into a transparent gum. In Palestine nothing seems to be known of this product of the butm! The terebinth belongs to the Nat. Order *Anacardiaceae*, the plants of which order generally contain resinous secretions.

[W. H.]

Pistacia terebinthus.

TURTLE, TURTLE-DOVE (תור, *tôr*: תורית, *tôrîr*: generally in connexion with תורית, *tôrîr*, "dove"). [DOVE.] The name is phonetic, evidently derived from the plaintive cooing of the bird. The turtle-dove occurs first in Scripture in Gen. xv. 9, where Abram is commanded to offer it along with other sacrifices, and with a young pigeon (תורית, *tôrîr*). In the Levitical law a pair of turtle-doves, or of young pigeons, are constantly prescribed as a substitute for those who were too poor to provide a lamb or a kid, and these birds were admissible either as trespass, sin, or burnt-offering. In one instance, the case of a Nazirite having been accidentally defiled by a dead body, a pair of turtle-doves or young pigeons were specially enjoined (Num. vi. 10). It was in accordance with the provision in Lev. xii. 6 that the mother of our Lord made the offering for her purification (Luke ii. 24). During the early period of Jewish history, there is no evidence of any other bird except the pigeon having been domesticated, and up to the time of Solomon, who may, with the peacock, have introduced other gallinaceous birds from India, it was probably the only poultry known to the Israelites. To this day enormous quantities of pigeons are kept in dove-cots in all the towns and villages of Palestine, and several of the fancy races so familiar in this country have been traced to be of Syrian origin. The offering of two young pigeons must have been one easily within the reach of the poorest, and the offerer was accepted according to that he had, and not according to that he had not. The admission of a pair of turtle-doves was perhaps a yet further concession to extreme poverty; for, unlike the pigeon, the turtle from its migratory nature and timid disposition, has never yet been kept in a state of free domestication; but being ex-

remely numerous, and resorting especially to gardens for edification, its young might easily be found and captured by those who did not even possess pigeons.

It is not improbable that the palm-dove (*Turtur aegyptiacus*, Temm.) may in some measure have supplied the sacrifices in the wilderness, for it is found in amazing numbers wherever the palm-tree occurs, whether wild or cultivated. In most of the oases of North Africa and Arabia every tree is the home of two or three pairs of these tame and elegant birds. In the crown of many of the date-trees five or six nests are placed together; and the writer has frequently, in a palm-grove, brought down ten brace or more without moving from his post. In such camps as Elim a considerable supply of these doves may have been obtained.

From its habit of pairing for life, and its fidelity for its mate, it was a symbol of purity and an appropriate offering (comp. Plin. *Nat. Hist.* x. 52). The regular migration of the turtle-dove and its return in spring are alluded to in Jer. viii. 7, "The turtle and the crane and the swallow observe the time of their coming;" and Cant. ii. 11, 12, "The winter is past . . . and the voice of the turtle is heard in our land." So Pliny, "Hymen mutia, a vere vocalibus;" and Arist. *Hist. An.* ix. 8, "Turtle-doves spend the summer in cold countries, the winter in warm ones." Although elsewhere (viii. 5) he makes it hybernate (φαιεῖ). There is, indeed, no more grateful proof of the return of spring in Mediterranean countries than the voice of the turtle. One of the first birds to migrate northwards, the turtle, while other songsters are heard chiefly in the morning, or only at intervals, immediately on its arrival pours forth from every garden, grove, and wooded hill its melancholy yet soothing ditty, unceasingly from early dawn till sunset. It is from its plaintive note doubtless that David in Ps. lxxiv. 19, pouring forth his lament to God, compares himself to a turtle-dove.

From the abundance of the dove tribe and their importance as an article of food the ancients discriminated the species of *Columbidae*, more accurately than of many others. Aristotle enumerates five species, which are not all easy of identification, as but four species are now known commonly to inhabit Greece. In Palestine the number of species is probably greater. Besides the rock-dove (*Columba livia*, L.), very common on all the rocky parts of the coast and in the inland ravines, where it remains throughout the year, and from which all the varieties of the domestic pigeon are derived, the ringdove (*Columba palumbus*, L.) frequents all the wooded districts of the country. The stock-dove (*Columba aenas*, L.) is as generally, but more sparingly distributed. Another species, allied either to this or to *Columba livia*, has been observed in the valley of the Jordan, perhaps *Col. leucomata*, Vig. See *Ibis*, vol. i. p. 85. The turtle-dove (*Turtur auritus*, L.) is, as has been stated, most abundant, and in the valley of the Jordan, an allied species, the palm-dove, or Egyptian turtle (*Turtur aegyptiacus*, Temm.), is by no means uncommon. This bird, most abundant among the palm-trees in Egypt and North Africa, is distinguished from the common turtle-dove by its ruddy chestnut colour, its long tail, smaller size, and the absence of the collar on the neck. It does not migrate, but from the similarity of its note and habits, it is not probable that it was distinguished by the ancients.

The large Indian turtle (*Turtur helios*, Temm.) has also been stated, though without authority, to occur in Palestine. Other species, as the well-known collared dove (*Turtur risoria*, L.) have been incorrectly included as natives of Syria. [H. B. T.]

Turtur agropyren.

TYCHICUS (Τύχιος). A companion of St. Paul on some of his journeys, and one of his fellow-labourers in the work of the Gospel. He is mentioned in five separate books of the New Testament, and in four cases explicitly, in the fifth very probably, he is connected with the district of Asia. (1) In Acts xx. 4, he appears as one of those who accompanied the Apostle through a longer or shorter portion of his return-journey from the third missionary circuit. Here he is expressly called (with Trophimus) Ἀσιαῖος: but while Trophimus went with St. Paul to Jerusalem (Acts xxi. 29), Tychicus was left behind in Asia, probably at Miletus (Acts xx. 15, 38). (2) How Tychicus was employed in the interval before St. Paul's first imprisonment we cannot tell: but in that imprisonment he was with the Apostle again, as we see from Col. iv. 7, 8. Here he is spoken of, not only as "a beloved brother," but as "a faithful minister and fellow-servant in the Lord;" and he is to make known to the Colossians the present circumstances of the Apostle (τὰ κατ' ἐμὴν πόσιν ὑμῶν), and to bring comfort to the Colossians themselves (ὅτι παρακαλεῖται τὰς καρδίας ὑμῶν). From this we gather that diligent service and warm Christian sympathy were two features of the life and character of Tychicus. Colossae was in Asia; but from the fact that of Onesimus, who is mentioned immediately afterwards, it is said, ὅς ἐστιν ἐξ ὁμῶν, whereas Tychicus is not so styled, we naturally infer that the latter was not a native of that city. These two men were doubtless the bearers both of this letter and the following, as well as that to Philemon. (3) The language concerning Tychicus in Eph. vi. 21, 22, is very similar, though not exactly in the same words. And it is the more important to notice this passage carefully, because it is the only personal allusion in the epistle, and

is of some considerable value as a subsidiary argument for its authenticity. If this was a circular letter, Tychicus, who bore a commission to Colossae, and who was probably well known in various parts of the province of Asia, would be a very proper person to see the letter duly delivered and read. (4) The next references are in the Pastoral Epistles, the first in chronological order being Tit. iii. 12. Here St. Paul (writing possibly from Ephesus) says that it is probable he may send Tychicus to Crete, about the time when he himself goes to Nicopolis. (5) In 2 Tim. iv. 12 (written at Rome during the second imprisonment) he says, "I am herewith sending Tychicus to Ephesus." At least it seems natural, with Dr. Wordsworth, so to render ἀποστέλλω, though Bp. Ellicott's suggestion is also worth considering, that this mission may have been connected with the carrying of the first Epistle. (See their notes on the passage.) However this may be, we see this disciple at the end, as we saw him at the beginning, connected locally with Asia, while also co-operating with St. Paul. We have no authentic information concerning Tychicus in any period previous to or subsequent to these five Scriptural notices. The tradition which places him afterwards as bishop of Chalcedon in Bithynia is apparently of no value. But there is much probability in the conjecture (Stanley's *Corinthians*, 2nd ed. p. 493) that Tychicus was one of the two "brethren" (Trophimus being the other) who were associated with Titus (2 Cor. viii. 16-24) in conducting the business of the collection for the poor Christians in Judaea. As arguments for this view we may mention the association with Trophimus, the probability that both were Ephesians, the occurrence of both names in the second Epistle to Timothy (see 2 Tim. iv. 20), the chronological and geographical agreement with the circumstances of the third missionary journey, and the general language used concerning Tychicus in Colossians and Ephesians. [ASIA; EPHESUS; TROPHIMUS.] [J. S. H.]

TYRANNUS (Τύραννος). The name of a man in whose school or place of audience Paul taught the Gospel for two years, during his sojourn at Ephesus (see Acts xix. 9). The halls or rooms of the philosophers were called *σχοলাί* among the later Greeks (Liddell and Scott, s. v.); and as Luke applies that term to the *auditorium* in this instance, the presumption is that Tyrannus himself was a Greek, and a public teacher of philosophy or rhetoric. He and Paul must have occupied the room at different hours; whether he hired it out to the Christians or gave to them the use of it in either case he must have been friendly to them; is left uncertain. Meyer is disposed to consider that Tyrannus was a Jewish rabbi, and the owner of a private synagogue or house for teaching (Τῆς Ὀρθῆς). But, in the first place, his Greek name, and the fact that he is not mentioned as a Jew or proselyte, disagree with that supposition; and in the second place, as Paul repaired to this man's school after having been compelled to leave the Jewish synagogue (Acts xix. 9), it is evident that he took this course as a means of gaining access to the heathen; an object which he would naturally seek through the co-operation of one of their own number, and not by associating himself with a Jew or a Gentile adherent of the Jewish faith. In speaking of him merely as a certain Tyrannus (Τυράννου τινός), Luke indicates certainly that he was not a believer at first; though it is natural

enough to think that he may have become such as the result of his acquaintance with the Apostle. *Heracles* (*Der Apostel Paulus*, p. 218) throws out the idea that the hall may have belonged to the authorities of the city, and have derived its name from the original proprietor. [H. B. H.]

TYRE (תַּיֵר, תַּיֵר, i.e. תַּיֵר: *Tépos*: *Tyrus*: Josh. xix. 29; 2 Sam. xxi. 7; Is. xlii. 1; Ez. xvi. 15, xvii. 2, &c.). A celebrated commercial city of antiquity, situated in Phœnicia, on the eastern coast of the Mediterranean Sea, in latitude 33° 17' N. (Admiral Smythe's *Mediterranean*, p. 469). Its Hebrew name "Tayr" signifies a rock; which well agrees with the site of Sêr, the modern town, on a rocky peninsula, formerly an island. From the word "Tayr" were derived two names of the city, in which the first letters differed from each other, though both had a feature of their common parent: 1st, the Aramaic word *Turs*, whence the Greek word *Tyros*, probably pronounced *Tyros*, which finally prevailed in Latin, and, with slight changes, in the modern languages of the West; and, 2dly, *Sara*, or *Sarra*, which occurs in *Plautus* (*Truc.* ii. 6, 58, "purpurum ex Sarâ tibi attuli"), and which is familiar to scholars through the well-known line of *Virgil*, "Ut gemmâ bibat, et Sarrauo dormiat ostro" (*Georg.* ii. 506; comp. *Aul. Gell.* xiv. 6; *Silius Italicus*, xv. 203; *Juvenal*, x. 30). According to a passage of *Probus* (ed. *Virg. Georg.* ii. 115), as quoted by *Mr. Grote* (*History of Greece*, iii. 353), the form "Sara" would seem to have occurred in one of the Greek epics now lost, which passed under the name of *Homer*. Certainly, this form accords best with the modern Arabic name of *Sêr*.

PALAETRYRUS, or Old Tyre. There is no doubt that, previous to the siege of the city by Alexander the Great, Tyre was situated on an island; but, according to the tradition of the inhabitants, if we may believe *Justin* (xl. 10), there was a city on the mainland before there was a city on the island; and the tradition receives some colour from the name of *Palaetyrus*, or Old Tyre, which was borne in Greek times by a city on the continent, 30 stadia to the south (*Strabo*, xii. 11, 24). But a difficulty arises in supposing that *Palaetyrus* was built before Tyre, as the word Tyre evidently means "a rock," and few persons who have visited the site of *Palaetyrus* can seriously suppose that any rock on the surface there can have given rise to the name. To escape this difficulty, *Hengstenberg* makes the suggestion that *Palaetyrus* meant Tyre that formerly existed; "quæ quondam fuit;" and that the name was introduced after the destruction of the greater part of it by *Nebuchadnezzar*, to distinguish it from that part of Tyre which continued to be in existence (*De rebus Tyrionum*, p. 26). *Movers*, justly deeming this explanation unlikely, suggests that the original inhabitants of the city on the mainland possessed the island as part of their territory, and named their city from the characteristic features of the island, though the island itself was not then inhabited (*Das Phœnizische Alterthum*, vol. ii. pt. i. p. 173). This explanation is possible; but other explanations are equally possible. For ex-

ample, the Phœnician name of it may have been the Old City; and this may have been translated "Palaetyrus" in Greek. Or, if the inhabitants of the mainland migrated to the island, they may afterwards, at some time or other, have given to the city which they left the name of Old Tyre, without its being necessarily implied that the city had ever borne simply the name of Tyre. Or some accidental circumstance, now beyond the reach of conjecture, may have led to the name; just as for some unaccountable reason *Roma Vecchia*, or Old Rome, is the name given in the Roman Campagna (as is stated on the high authority of *Mr. H. E. Bunbury*) to ruins of the age of *Caracalla* situated between the roads leading to *Frascati* and *Albano*, although there are no traces there of any Old Town, and there is not the slightest reason to suppose that there is any historical foundation whatever for the name. And this again would tally with *Mr. Grote's* remark, who observes (*l. c.*) that perhaps the Phœnician name which the city on the mainland bore may have been something resembling *Palaetyrus* in sound but not coincident in meaning. It is important, however, to bear in mind that this question regarding *Palaetyrus* is merely archaeological, and that nothing in Biblical history is affected by it. *Nebuchadnezzar* necessarily besieged the portion of the city on the mainland, as he had no vessels with which to attack the island; but it is reasonably certain that, in the time of *Isaiah* and *Ezekiel*, the heart or core of the city was on the island. The city of Tyre was consecrated to *Hercules* (*Melkarth*) who was the principal object of worship to the inhabitants (*Quintus Curtius*, iv. 2; *Strabo*, xvi. p. 757); and *Arrian* in his *History* says that the temple on the island was the most ancient of all temples within the memory of mankind (ii. 18). It cannot be doubted, therefore, that the island had long been inhabited. And with this agree the expressions as to Tyre being "in the midst of the seas" (*Ezek.* xxvii. 25, 26); and even the threat against it that it should be made like the top of a rock to spread nets upon (see *Des Vignoles' Chronologie de l'Histoire Sainte*, Berlin, 1738, vol. ii. p. 25). As, however, the space on the island was limited, it is very possible that the population on the mainland may have exceeded the population on the island (see *Movers, l. c.* p. 81).

Whether built before or later than *Palaetyrus*, the renowned city of Tyre, though it laid claims to a very high antiquity* (*Is.* xlii. 7; *Herodot.* ii. 14; *Quintus Curtius*, iv. 4), is not mentioned either in the *Iliad* or in the *Odyssey*; but no inference can be legitimately drawn from this fact as to the existence or non-existence of the city at the time when those poems were composed. The tribe of *Canaanites* which inhabited the small tract of country which may be called *Phœnicia Proper* [*PHOENICIA*] was known by the generic name of *Sidonians* (*Judg.* xviii. 7; *Is.* xlii. 2, 4, 12; *Josh.* xiii. 6; *Ez.* xxxii. 30); and this name undoubtedly included *Tyrians*, the inhabitants being of the same race, and the two cities being less than 20 English miles distant from each other. Hence when *Solomon* sent to *Hiram* king of Tyre for cedar-trees out

* According to *Herodotus*, the priests at Tyre told him that their city had been founded 2300 years before his visit. Supposing he was at Tyre in 450 B.C., this would make the date of its foundation 2750 B.C. *Josephus* makes the more sober statement, probably founded on *Masani's* history, that it was founded 230 years before

the commencement of the building of *Solomon's* temple. Under any circumstances, *Josephus* could not, with his ideas and chronology, have accepted the date of the *Tyrian* priests; for then Tyre would have been founded before the era of the Deluge. See an instructive passage as to the chronology of *Josephus* in *Ant.* viii. 3, §1.

of Lebanon, to be hewn by Hiram's subjects, he reminds Hiram that "there is not among us any that can skill to hew timber like the Sidonians" (1 K. v. 6). Hence Virgil, who, in his very first mention of Carthage, expressly states that it was founded by colonists from Tyre (*Aen.* i. 12), afterwards, with perfect propriety and consistency, calls it the Sidonian city (*Aen.* i. 677, 678, iv. 545. See Des Vignoles, *l. c.* p. 25.) And in like manner, when Sidonians are spoken of in the Homeric Poems (*Il.* vi. 290, xxiii. 743; *Od.* iv. 84, xvii. 424), this might comprehend Tyrians; and the mention of the city Sidon, while there is no similar mention of Tyre, would be fully accounted for—if it were necessary to account for such a circumstance at all in a poem—by Sidon's having been in early times more flourishing than Tyre. It is worthy, likewise, of being noted, that Tyre is not mentioned in the Pentateuch; but here, again, though an inference may be drawn against the importance, no inference can be legitimately drawn against the existence, of Tyre in the times to which the Pentateuch refers.

In the Bible, Tyre is named for the first time in the Book of Joshua (xix. 29), where it is adverted to as a fortified city (in the A. V. "the strong city"), in reference to the boundaries of the tribe of Asher. Nothing historical, however, turns upon this mention of Tyre; for it is indisputable that the tribe of Asher never possessed the Tyrian territory. According to the injunctions of the Pentateuch, indeed, all the Canaanitish nations ought to have been exterminated; but, instead of this, the Israelites dwelt among the Sidonians or Phœnicians, who were inhabitants of the land (*Judg.* i. 31, 32), and never seem to have had any war with that intelligent race. Subsequently, in a passage of Samuel (2 Sam. xxiv. 7), it is stated that the enumerators of the census in the reign of David went in pursuance of their mission to Tyre, amongst other cities, which must be understood as implying, not that Tyre was subject to David's authority, but merely that a census was thus taken of the Jews resident there. But the first passages in the Hebrew historical writings, or in ancient history generally, which afford glimpses of the actual condition of Tyre, are in the Book of Samuel (2 Sam. v. 11), in connection with Hiram king of Tyre sending cedar-wood and workmen to David, for building him a palace; and subsequently in the Book of Kings, in connection with the building of Solomon's temple. One point at this period is particularly worthy of attention. In contradistinction from all the other most celebrated independent commercial cities out of Phœnicia in the ancient and modern world, Tyre was a monarchy and not a republic; and, notwithstanding its merchant princes, who might have been deemed likely to favour the establishment of an aristocratical commonwealth, it continued to preserve the monarchical form of government until its final loss of independence. Another point is the skill in the mechanical arts which seems to have been already attained by the Tyrians. Under this head, allusion is not specially made to the excellence of the Tyrians in felling trees; for, through vicinity to the forests of Lebanon, they would as naturally have become skilled in that art as the back-

woodsmen of America. But what is peculiarly noteworthy is that Tyrians had become workers in brass or copper to an extent which implies considerable advancement in art. In the enumeration of the various works in brass executed by the Tyrian artists whom Solomon sent for, there are kims, palm-trees, oxen, lions, and cherubim (1 K. vii. 13-45). The manner in which the cedar-wood and fir-wood was conveyed to Jerusalem is likewise interesting, partly from the similarity of the sea voyage to what may commonly be seen on the Rhine at the present day, and partly as giving a vivid idea of the really short distance between Tyre and Jerusalem. The wood was taken in floats to Joppa (2 Chr. ii. 16; 1 K. v. 9), a distance of less than 74 geographical miles. In the Mediterranean during summer there are times when this voyage along the coast would have been perfectly safe, and when the Tyrians might have reckoned confidently, especially at night, on light winds to fill the sails which were probably used on such occasions. From Joppa to Jerusalem the distance was about 32 miles; and it is certain that by this route the whole distance between the two celebrated cities of Jerusalem and Tyre was not more than 106^b geographical, or about 122 English, miles. Within such a comparatively short distance (which by land, in a straight line, was about 20 miles shorter) it would be easy for two sovereigns to establish personal relations with each other; more especially as the northern boundary of Solomon's kingdom, in one direction, was the southern boundary of Phœnicia. Solomon and Hiram may frequently have met, and thus laid the foundations of a political alliance in personal friendship. If by messengers they sent riddles and problems for each other to solve (*Joseph. Ant.* viii. 5, §3; *c. Apion.* i. 17), they may previously have had, on several occasions, a keen encounter of wits in convivial intercourse. In this way, likewise, Solomon may have become acquainted with the Sidonian women who, with those of other nations, seduced him to Polytheism and the worship of Astarte in his old age. Similar remarks apply to the circumstances which may have occasioned previously the strong affection of Hiram for David (1 K. v. 1).

However this may be, it is evident that under Solomon there was a close alliance between the Hebrews and the Tyrians. Hiram supplied Solomon with cedar wood, precious metals, and workmen, and gave him sailors for the voyage to Ophir and India, while on the other hand Solomon gave Hiram supplies of corn and oil, ceded to him some cities, and permitted him to make use of some havens on the Red Sea (1 K. ix. 11-14, 26-28, x. 22). These friendly relations survived for a time the disastrous secession of the Ten Tribes, and a century later Ahab married a daughter of Ethbaal, king of the Sidonians (1 K. xvi. 31), who, according to Menander (*Josephus, Ant.* viii. 13, §2), was daughter of Ithobaal, king of Tyre. As she was zealous for her national religion, she seems to have been regarded as an abomination by the pious worshippers of Jehovah; but this led to no special prophetic denunciations against Tyre. The case became different, however, when mercan-

^b It may be interesting to compare the distance from which the limestone was brought with which St. Paul's Cathedral was built. It was hewn from quarries in the side of Portland, and was sent to London round the North Foreland up the river Thames. The distance to London in

a straight line from the North Foreland alone is of itself about twelve miles greater than from Tyre to Joppa; while the distance from the Isle of Portland to the North Foreland is actually three times as great.

the cupidity induce the Tyrians and the neighbouring Phoenicians to buy Hebrew captives from their enemies and to sell them as slaves to the Greeks [PHOENICIA, p. 1001] and Edomites. From this time commenced denunciations, and, at first, threats of retaliation (Joel iii. 4-8; Amos i. 9, 10): and indeed, though there might be peace, there could not be sincere friendship between the two nations. But the likelihood of the denunciations being fulfilled first arose from the progressive conquests of the Assyrian monarchs. It was not probable that a powerful, victorious, and ambitious neighbour could resist the temptation of endeavouring to subjugate the small strip of land between the Lebanon and the sea, so insignificant in extent, but overflowing with so much wealth, which by the Greeks was called Phoenicia. [PHOENICIA.] Accordingly, when Shalmaneser, king of Assyria, had taken the city of Samaria, had conquered the kingdom of Israel and carried its inhabitants into captivity, he turned his arms against the Phoenician cities. At this time, Tyre had reached a high point of prosperity. Since the reign of Hiram, it had planted the splendid colony of Carthage (143 years and eight months, Josephus says, after the building of Solomon's temple, *c. Apion.* i. 18); it possessed the island of Cyprus, with the valuable mines of the metal "copper" (so named from the island); and, apparently, the city of Sidon was subject to its sway. But Shalmaneser seems to have taken advantage of a revolt of the Cyprians; and what ensued is thus related by Menander, who translated the archives of Tyre into the Greek language (see Josephus, *Ant.* ix. 14, §2): "Elulæus reigned 38 years (over Tyre). This king, upon the revolt of the Kittæans (Cyprians), sailed with a fleet against them, and reduced them to submission. On the other hand, the king of the Assyrians attacked in war the whole of Phoenicia, but soon made peace with all, and turned back. On this, Sidon and Ace (i.e. Akko or Acre) and Palaetyrus revolted from the Tyrians, with many other cities which delivered themselves up to the king of Assyria. Accordingly, when the Tyrians would not submit to him, the king returned and fell upon them again, the Phoenicians having furnished him with 60 ships and 800 rowers. Against these the Tyrians sailed with 13 ships, and, dispersing the fleet opposed to them, they took five hundred men prisoners. The reputation of all the citizens in Tyre was hence increased. Upon this the king of the Assyrians, moving off his army, placed guards at their river and aqueducts to prevent the Tyrians from drawing water. This continued for five years, and still the Tyrians held out, supplying themselves with water from wells." It is in reference to this siege that the prophecy against Tyre in the writings entitled *Isaiah*, chap. xlii., was uttered, if it proceeded from the Prophet *Isaiah* himself: but this point will be again noticed.

After the siege of Tyre by Shalmaneser (which must have taken place not long after 721 B.C.), Tyre remained a powerful state with its own kings (*Jer.* xxv. 22, xxvii. 3; *Ex.* xxviii. 2-12), remarkable for its wealth, with territory on the mainland, and protected by strong fortifications (*Ex.* xxviii. 5, xxi. 4, 6, 8, 10, 12, xxvii. 11; *Zech.* ix. 3). Our knowledge of its condition thenceforward until the siege by Nebuchadnezzar depends entirely on various notices of it by the Hebrew prophets; but some of these notices are singularly full, and especially, the twenty-seventh chapter of *Ezekiel*

furnishes us, on some points, with details such as have scarcely come down to us respecting any one city of antiquity, excepting Rome and Athens. One point especially arrests the attention, that Tyre, like its splendid daughter Carthage, employed mercenary soldiers (*Ex.* xvii. 10, 11). This has been the general tendency in commercial cities on account of the high wages which may be obtained by artisans in a thriving community, compared with the ordinary pay of a soldier; and Tyre had been unable to resist the demoralising temptation. In its service there were Phoenicians from Arrad, Aethiopians obtained through the commerce of Egypt, and hardy mountaineers from Persia. This is the first time that the name of Persia occurs in the remains of ancient literature, before its sons founded a great monarchy on the ruins of the Chaldean empire. We may conceive them like the Swiss, who, poor, faithful, and brave, have during many centuries, until the last few years, deemed enlistment in foreign service a legitimate source of gain. Independently, however, of this fact respecting Tyrian mercenary soldiers, *Ezekiel* gives interesting details respecting the trade of Tyre. On this head, without attempting to exhaust the subject, a few leading points may be noticed. The first question is as to the countries from which Tyre obtained the precious metals; and it appears that its gold came from Arabia by the Persian Gulf (*v.* 22), just as in the time of Solomon it came from Arabia by the Red Sea [OPHIR]. Whether the Arabian merchants, whose wealth was proverbial in Roman classical times (*Horace*, *Od.* i. 29, 1), obtained their gold by traffic with Africa or India, or whether it was the product of their own country, is uncertain; but as far as the latter alternative is concerned, the point will probably be cleared up in the progress of geological knowledge. On the other hand, the silver, iron, lead, and tin of Tyre came from a very different quarter of the world, viz. from the South of Spain, where the Phoenicians had established their settlement of Tarshish, or Tartessus. As to copper, we should have presumed that it was obtained from the valuable mines in Cyprus; but it is mentioned here in conjunction with Javan, Tubal, and Meshech, which points to the districts on the south of the Black Sea, in the neighbourhood of Armenia, in the southern line of the Caucasus, between the Black Sea and the Caspian. The country whence Tyre was supplied with wheat was Palestine. This point has been already noticed elsewhere [PHOENICIANS, p. 1002] as helping to explain why there is no instance on record of war between Tyre and the Israelites. It may be added that the value of Palestine as a wheat-country to Tyre was greatly enhanced by its proximity, as there was scarcely a part of the kingdom of Israel on the west of the River Jordan which was distant more than a hundred miles from that great commercial city. The extreme points in the kingdom of Judah would be somewhat more distant; but the wheat probably came from the northern part of Palestine. Tyre likewise obtained from Palestine oil, honey, and balm, but not wine apparently, notwithstanding the abundance of grapes and wine in Judah (*Gen.* xlix. 11). The wine was imported from Damascus, and was called wine of Helbon, which was probably not the product of the country adjoining the celebrated city of that name, but came from the neighbourhood of Damascus itself (see *Porter's Handbook for Syria*, vol. ii. p. 495; compare *Athenæus*, i. 51). The Bedawin Arabs

supplied Tyre with lambs and rams and goats, for the rearing of which their mode of life was so well adapted. Egypt furnished linen for sails, and doubtless for other purposes, and the dyes from shell-fish, which afterwards became such a source of profit to the Tyrians, were imported from the Peloponnese (compare the "Laconicæ purpura" of Horace, *Od.* ii. 18, 7, and Pliny *ix.* 40). Lastly, from Dedan in the Persian Gulf, an island occupied possibly by a Phœnician colony, horns of ivory and ebony were imported, which must originally have been obtained from India (*Ex.* xvii. 10, 11, 22, 12, 13, 17, 18, 21, 7, 15).

In the midst of great prosperity and wealth, which was the natural result of such an extensive trade (*Ex.* xxviii. 4), Nebuchadnezzar, at the head of an army of the Chaldeans, invaded Judæa, and captured Jerusalem. As Tyre was so near to Jerusalem, and as the conquerors were a fierce and formidable race (*Hab.* i. 8), led by a general of undoubted capacity, who had not long before humbled the power of the Egyptians, it would naturally be supposed that this event would have excited alarm and terror amongst the Tyrians. Instead of this, we may infer from Ezekiel's statement (*xvii.* 2) that their predominant feeling was one of exultation. At first sight this appears strange and almost inconceivable; but it is rendered intelligible by some previous events in Jewish history. Only 34 years before the destruction of Jerusalem, commenced the celebrated Reformation of Josiah, B.C. 622. This momentous religious revolution, of which a detailed account is given in two chapters of the Book of Kings (2 K. xlii. xliii.), and which cannot be too closely studied by any one who wishes to understand the Jewish Annals, fully explains the exultation and malevolence of the Tyrians. In that Reformation, Josiah had hanged insults on the gods who were the objects of Tyrian veneration and lore, he had consumed with fire the sacred vessels used in their worship, he had burnt their images and defiled their high places—not excepting even the high place near Jerusalem, which Solomon the friend of Hiram had built to Ashtoreth the Queen of Heaven, and which for more than 350 years had been a striking memorial of the reciprocal good-will which once united the two monarchs and the two nations. Indeed, he seemed to have endeavoured to exterminate their religion, for in Samaria (2 K. xliii. 20) he had slain upon the altars of the high places all their priests. These acts, although in their ultimate results they may have contributed powerfully to the diffusion of the Jewish religion, must have been regarded by the Tyrians as a series of sacrilegious and abominable outrages; and we can scarcely doubt that the death in battle of Josiah at Megiddo, and the subsequent destruction of the city and Temple of Jerusalem were hailed by them with triumphant joy as instances of divine retribution in human affairs.

This joy, however, must soon have given way to other feelings, when Nebuchadnezzar invaded Phœnicia, and laid siege to Tyre. That siege lasted thirteen years (*Joseph. c. Apion.* i. 21), and it is still a disputed point, which will be noticed separately in this article, whether Tyre was actually taken by Nebuchadnezzar on this occasion. How-

ever this may be, it is probable that, on some terms or other, Tyre submitted to the Chaldeans. This would explain, amongst other points, an expedition of Apries, the Pharaoh-Hophra of Scripture, against Tyre, which probably happened not long after, and which may have been dictated by obvious motives of self-defence in order to prevent the naval power of Tyre becoming a powerful instrument of attacking Egypt in the hands of the Chaldeans. In this expedition Apries besieged Sidon, fought a naval battle with Tyre, and reduced the whole of the coast of Phœnicia, though this could not have had lasting effects (*Herod.* ii. 161; *Diod.* i. 68; *Movers, Das Phœnizische Alterthum*, vol. ii. p. 451). The rule of Nebuchadnezzar over Tyre, though real, may have been light, and in the nature of an alliance; and it may have been in this sense that Merbal, a subsequent Tyrian king, was sent for to Babylon (*Joseph. c. Apion.* i. 21). During the Persian domination the Tyrians were subject in name to the Persian king, and may have given him tribute. With the rest of Phœnicia, they had submitted to the Persians, without striking a blow; perhaps, through hatred of the Chaldeans; perhaps, solely from prudential motives. But their connexion with the Persian king was not slavish. Thus, when Cambyzes ordered them to join in an expedition against Carthage, they refused compliance, on account of their solemn engagements and parental relation to that colony; and Cambyzes did not deem it right to use force towards them (*Herod.* iii. 19). Afterwards they fought with Persia against Greece, and furnished vessels of war in the expedition of Xerxes against Greece (*Herod.* vii. 98); and Mædas, the son of Sirom the Tyrian, is mentioned amongst those who, next to the commanders, were the most renowned in the fleet. It is worthy of notice that at this time Tyre seems to have been inferior in power to Sidon. These two cities were less than twenty English miles distant from each other; and it is easy to conceive that in the course of centuries their relative importance might fluctuate, as would be very possible in our own country with two neighbouring cities, such, for example, as Liverpool and Manchester. It is possible also that Tyre may have been seriously weakened by its long struggle against Nebuchadnezzar. Under the Persian dominion, Tyre and Sidon supplied cedar wood again to the Jews for the building of the second Temple; and this wood was sent by sea to Joppa, and thence to Jerusalem, as had been the case with the materials for the first Temple in the time of Solomon (*Ezra.* iii. 7). Under the Persians likewise Tyre was visited by an historian, from whom we might have derived valuable information respecting its condition (*Herod.* ii. 44). But the information actually supplied by him is scanty, as the motive of his voyage seems to have been solely to visit the celebrated temple of Melkarth (the Phœnician Hercules), which was situated in the island, and was highly venerated. He gives no details as to the city, and merely specifies two columns which he observed in the temple, one of gold, and the other of emerald; or rather, as is reasonably conjectured by Sir Gardner Wilkinson, of green glass (*Rawlinson's Herodotus*, ii. 81, 82). Towards the close of the following century, B.C. 332, Tyre was assailed for the third time by a great

* It was owing to this Reformation of Josiah that when the Jews were carried into captivity by Nebuchadnezzar a generation had arisen untaught by idolatry, and yet

many of them probably free from the intense superstitiousness in ceremonial observances which prevailed among the Jews.

conqueror; and if some uncertainty hangs over the siege by Nebuchadnezzar, the results of the siege by Alexander were clear and undeniable. It was essential to the success of his military plans that the Phœnician fleet should be at his command, and that he should not be liable through their hostility to have his communications by sea with Greece and Macedonia suddenly cut off; and he accordingly summoned all the Phœnician cities to submit to his rule. All the rest of them, including Aradus, Byblos and Sidon, complied with his demands, and the seamen of those cities in the Persian fleet brought away their ships to join him. Tyre alone, calculating probably at first on the support of those seamen, refused to admit him within its walls—and then ensued a memorable siege which lasted seven months, and the success of which was the greatest of all the achievements which Alexander up to that time had attempted. It is not necessary to give here the details of that siege, which may be found in Arrian and Quintus Curtius, and in all good Grecian histories, such as those of Bishop Thirlwall and Mr. Grote. It may be sufficient to say, that at that time Tyre was situated on an island nearly half a mile from the mainland—that "it was completely surrounded by prodigious walls, the loftiest portion of which on the side fronting the mainland reached a height not less than 150 feet;" and that notwithstanding his persevering efforts, he could not have succeeded in his attempt, if the harbour of Tyre to the north had not been blockaded by the Cyprians, and that to the south by the Phœnicians, thus affording an opportunity to Alexander for uniting the island to the mainland by an enormous artificial mole. Moreover, owing to internal disturbances, Carthage was unable to afford any assistance to its parent state.

The immediate results of the capture by Alexander were most disastrous to it, as its brave defenders were put to death; and, in accordance with the barbarous policy of ancient times, 30,000 of its inhabitants, including slaves, five females and five children were sold as slaves (Arrian, iv. 24, §9; Diodorus, xvii. 46). It gradually, however, recovered its prosperity through the immigration of fresh settlers, though its trade is said to have suffered by the vicinity and rivalry of Alexandria. Under the Macedonian successors of Alexander, it shared the fortunes of the Seleucidae, who bestowed on it many privileges; and there are still in existence coins of that epoch with a Phœnician and Greek inscription (Eckhel, *Doctr. Nummorum Vet.* vol. iii. p. 379, &c.; Gesenius, *Monumenta Phœniciae*, pp. 262-264, and Tab. 34). Under the Romans, at first it continued to enjoy a kind of freedom; for Josephus mentions that when Cleopatra pressed Antony to include Tyre and Sidon in a gift of Phœnician and Jewish territory which he made to her, he steadily refused, knowing them to have been "free cities from their ancestors" (*Ant.* sv. 4, §1). Subsequently, however, on the arrival

of Augustus in the East, he is said to have deprived the two cities of their liberties for seditious conduct (*ἰδοὺ δὲ τὰς πόλεις*, Dion Cassius, lxi. 7). Still the prosperity of Tyre in the time of Augustus was undeniably great. Strabo gives an account of it at that period (xvi. 2, 23), and speaks of the great wealth which it derived from the dye of the celebrated Tyrian purple, which, as is well known, were extracted from shell-fish found on the coast, belonging to a species of the genus *Murex*. In the days of Ezekiel, the Tyrians had imported purple from the Peloponnese; but they had since learned to extract the dye for themselves; and they had the advantage of having shell-fish on their coast better adapted for this purpose even than those on the Lacedæmonian coast (Pausanias, iii. 21, §8). Strabo adds, that the great number of dyeing works rendered the city unpleasant as a place of residence.^a He further speaks of the houses as consisting of many stories, even of more than in the houses at Rome—which is precisely what might be expected in a prosperous fortified city of limited area, in which ground-rent would be high. Pliny the Elder gives additional information respecting the city, for in describing it he says that the circumference of the city proper (*i. e.* the city on the peninsula) was 22 stadia, while that of the whole city, including Palaetyrus, was 19 Roman miles (*Nat. Hist.* v. 17). The accounts of Strabo and Pliny have a peculiar interest in this respect, that they tend to convey an idea of what the city must have been, when visited by Christ (Matt. xv. 21; Mark vii. 24). It was perhaps more populous than Jerusalem [JERUSALEM, p. 1025], and if so, it was undoubtedly the largest city which he is known to have visited. It was not much more than thirty miles distant from Nazareth, where Christ mainly lived as a carpenter's son during the greater part of his life (Matt. li. 23, iv. 12, 13, 18; Mark vi. 3). We may readily conceive that He may often have gone to Tyre, while yet unknown to the world; and whatever uncertainty there may be as to the extent to which the Greek language was likely to be spoken at Nazareth, at Tyre and in its neighbourhood there must have been excellent opportunities for conversation in that language, with which He seems to have been acquainted (Mark vii. 26). From the time of Christ to the beginning of the 5th century, there is no reason to doubt that, as far as was compatible with the irreparable loss of independence, Tyre continued in uninterrupted prosperity; and about that period Jerome has on record very striking testimony on the subject, which has been often quoted, and is a landmark in Tyrian history (see Gesenius's *Jesaja*, vol. i. p. 714). Jerome, in his Commentaries on Ezekiel, comes to the passage in which the prophet threatens Tyre with the approach of Nebuchadnezzar, king of Babylon (Ez. xxvi. 7); and he then, amongst other points, refers to the verse in which the prophet predicts of Tyre, "Thou shalt be built no more," saying that this raises a

^a That Tyre was on an island, previous to its siege by Alexander, is one of the most certain facts of history; but on examining the locality at the present day few persons would suspect from existing appearances that there was anything artificial in the formation of the present peninsula.

^b Pliny the elder gives an account of the Phœnician shell-fish (lx. 80, 81), and states that from the larger ones the dye was extracted, after taking off the shell: but that the small fish were crushed alive together with the shells. Mr. Wilde, an intelligent modern traveller, observed at

Tyre numerous round holes cut in the solid sandstone rock, in which shells seem to have been crushed. They were perfectly smooth on the inside; and many of them were shaped exactly like a modern iron pot, broad and flat at the bottom, and narrowing toward the top. Many of these were filled with a breccia of shells; in other places this breccia lay in heaps in the neighbourhood. All the shells were of one species, and were undoubtedly the *Murex Trunculus*. See *Narrative of a Voyage to Madeira, Teneriffe, and along the Shores of the Atlantic* (London, Dublin, 1844).

question as to how a city can be said not to be built any more, which we see at the present day the most noble and the most beautiful city of Phœnicia. "Quodque sequitur: nec edificaberis ultra, videtur facere questionem quomodo non sit edificata, quam hodie cernimus Phœnices nobilissimam et pulcherrimam civitatem." He afterwards, in his remarks on the 3rd verse of the 27th chapter, in which Tyre is called, "a merchant of the people for many isles," says that this continues down to his time, so that commercial dealings of almost all nations are carried on in that city—"quod quidem usque hodie perseverat, ut omnium propemodum gentium in illâ exerceantur commercia." Jerome's Commentaries on Ezekiel are supposed to have been written about the years 411-414 A.D. (see Smith's *Dictionary of Greek and Roman Biography*, vol. II. p. 465), so that his testimony respecting the prosperity of Tyre bears date almost precisely a thousand years after the capture of Jerusalem by Nebuchadnezzar, B.C. 588. As to the passage in which Ezekiel states that Tyre shall be built no more, Jerome says the meaning is, that "Tyre will be no more the Queen of Nations, having its own king, as was the case under Hiram and other kings, but that it was destined to be always subject, either to the Chaldeans, or to the Macedonians, or to the Ptolemies, or at last to the Romans." At the same time Jerome notices a meaning given to the passage by some interpreters, that Tyre would not be built in the last days; but he asks of such interpreters, "How they will be able to preserve the part attributed to Nebuchadnezzar, especially as we read in what follows, that Nebuchadnezzar besieged Tyre, but had no reward of his labour (xxix. 18), and that Egypt was given over to him because in besieging Tyre he had served the purpose of God."

When Jerome spoke of Tyre's subjection to the Romans, which had then lasted more than four hundred years, he could scarcely have anticipated that another subjugation of the country was reserved for it from a new conquering power, coming not from the North, but from the South. In the 7th century A.D. took place the extraordinary Arabian revolution under Mahomet, which has given a new religion to so many millions of mankind. In the years 633-638 A.D. all Syria and Palestine, from the Dead Sea to Antioch, was conquered by the Khalif Omar. This conquest was so complete, that in both those countries the language of Mahomet has almost totally supplanted the language of Christ. In Syria, there are only three villages where Syriac (or Aramaic) is the vernacular language. In Palestine, it is not the language of a single native: and in Jerusalem, to a stranger who understands what is involved in this momentous revolution, it is one of the most suggestive of all sounds to hear the Muezzin daily call Mahometans to prayers in the Arabic language of Mahomet, within the sacred precincts where once stood the Temple, in which Christ worshipped in Hebrew, or in Aramaic. (As to the Syriac language, see Porter's *Handbook for Syria and Palestine*, vol. II. p. 551.) But even this conquest did not cause the overthrow of Tyre. The most essential conditions on which peace was granted to Tyre, as to other Syrian cities, were the payment of a poll-tax, the obligation to give board and lodging for three days to every Muslim traveller, the wearing a peculiar dress, the admission of Muslims into the churches, the doing away with all crosses and all sounds of bells, the avoiding of all insulting expressions towards the Mahometan religion, and the

prohibition to ride on horseback or to build new churches. (see Weil's *Geschichte der Chalifen*, I. d. 81-82.) Some of these conditions were humiliating, and nearly heart-breaking; but if submitted to, the lives and private property of the inhabitants remained untouched. Accordingly, at the time of the Crusades Tyre was still a flourishing city, when it surrendered to the Christians on the 27th of June, 1124. It had early been the seat of a Christian bishopric, and Cassius, bishop of Tyre, is named as having been present at the Council of Caesarea towards the close of the 2nd century (Rehder, *Palestine*, 1054); and now, in the year after its capture by the Crusaders, William, a Frenchman, was made its archbishop. This archbishop has left on record an account of the city, which gives a high idea of its wealth and great military strength. (see *Wilhelmi Tyrensis Historia*, lib. xiii. cap. 5.) And his statements are confirmed by Benjamin of Tudela, who visited it in the same century. (See Purchas's *Pilgrims*, II. 1443.) The latter writer, who died in 1173, says: "Nor do I think any haven in the world to be like unto this. The city itself, as I have said, is goodly, and in it there are above four hundred Jews, among whom some are very skilful in disciplinary readings, and especially Ephraim the Egyptian judge, and Mair, and Carchemena, and Abraham, the head of the university. Some of the Jews there have ships at sea for the cause of war. There are artificial workmen in glass there, who make glass, called Tyrian glass, the most excellent, and of the greatest estimation in all countries. The best and most approved sugar is also found there." In fact, at this period, and down to the close of the 13th century, there was perhaps no city in the known world which had stronger claims than Tyre to the title of the "Eternal City," if experience had not shewn that cities as well as individuals were subject to decay and dissolution. Tyre had been the parent of colonies, which at a distant period had enjoyed a long life and had died; and it had survived more than fifteen hundred years its greatest colony, Carthage. It had outlived Egyptian Thebes, and Babylon, and ancient Jerusalem. It had seen Grecian cities rise and fall; and although older than them all, it was in a state of great prosperity when an illustrious Roman, who had been sailing from Aegina to Megara, told Cicero, in imperishable words, of the corpses or carcases of cities, the *oppidorum cadavera*, by which in that voyage he had been in every direction encompassed (*Ep. ad Familiarem*, iv. 5). Rome, it is true, was still in existence in the 13th century; but, in comparison with Tyre, Rome itself was of recent date, its new twice consecrated soil having been merely the haunt of shepherds or robbers for some hundred years after Tyre was wealthy and strong. At length, however, the evil day of Tyre undoubtedly arrived. It had been more than a century and a half in the hands of Christians, when in March, A.D. 1291, the Sultan of Egypt and Damascus invested Acre, then known to Europe by the name of Ptolemais, and took it by storm after a siege of two months. The result was told in the beginning of the next century by Marinus Sanutus, a Venetian, in the following words: "On the same day on which Ptolemais was taken, the Tyrians, at veapers, leaving the city empty, without the stroke of a sword, without the tumult of war, embarked on board their vessels and abandoned the city to be occupied freely by their conquerors. On the morrow the Saracens entered, no one attempting to prevent them, and

they did what they pleased." (*Liber Secretorum fidelium Crucis*, lib. iii. cap. 22.)¹

This was the turning-point in the history of Tyre, 1879 years after the capture of Jerusalem by Nebuchadnezzar; and Tyre has not yet recovered from the blow. In the first half of the 14th century it was visited by Sir John Maundeville, who says, speaking of "Tyre, which is now called Sûr, here was once a great and goodly city of the Christians; but the Saracens have destroyed it in great part; and they guard that haven carefully for fear of the Christians" (Wright's *Early Travels in Palestine*, p. 141). About A.D. 1610-11 it was visited by Sandys, who said of it: "But this once famous Tyre is now no other than a heap of ruins; yet have they a reverent aspect, and do instruct the pensive beholder with their exemplary frailty. It hath two harbours, that on the north side the fairest and best throughout all the Levant (which the couriers enter at their pleasure); the other shokod with the decayes of the city." (Purchas's *Pilgrimage*, ii. 1393.) Towards the close of the same century, in 1697 A.D., Maunirell says of it, "On the north side it has an old Turkish castle, besides which there is nothing here but a mere Babel of broken walls, pillars, vaults, &c., there being not so much as an entire house left. Its present inhabitants are only a few poor wretches that harbour in vaults and subside upon fishing." (See Harris, *Voyages and Travels*, ii. 846.) Lastly, without quoting at length Dr. Richard Pococke, who in 1737-40 A.D. stated (see vol. x. of Pinkerton's *Voyages and Travels*, p. 470) that, except some janizaries, there were few other inhabitants in the city than two or three Christian families, the words of Hasselquist, the Swedish naturalist, may be recorded, as they mark the lowest point of depression which Tyre seems to have reached. He was there in May 1751 A.D., and he thus speaks of his visit: "We followed the sea shore . . . and came to Tyre, now called Zur, where we lay all night. None of these cities, which formerly were famous, are so totally ruined as this except Troy. Zur now scarcely can be called a miserable village, though it was formerly Tyre, the queen of the sea. Here are about ten inhabitants, Turks and Christians, who live by fishing." (See Hasselquist, *Voyages and Travels in the Levant*, London, 1766.) A slight change for the better began anon after. Volney states that in 1766 A.D. the Metawileh took possession of the place, and built a wall round it twenty feet high, which existed when he visited Tyre nearly twenty years afterwards. At that time Volney estimated the population at fifty or sixty poor families. Since the beginning of the present century there has been a partial revival of prosperity. But it has been visited at different times during the last thirty years by biblical scholars, such as Professor Robinson (*Bib. Res.* ii. 463-471), Canon Stanley (*Sinai and Palestine*, 270), and M. Ernest Renan's (*Lettre in the Moniteur*, July 11,

1861), who all concur in the account of its general aspect of desolation. Mr. Porter, who resides several years at Damascus, and had means of obtaining correct information, states in 1858 that "the modern town, or rather village, contains from 3000 to 4000 inhabitants, about one-half being Metawileh, and the other Christians" (*Handbook for Travellers in Syria and Palestine*, p. 391). Its great inferiority to Beyrout for receiving vessels suited to the requirements of modern navigation will always prevent Tyre from becoming again the most important commercial city on the Syrian coast. It is reserved to the future to determine whether with a good government, and with peace in the Lebanon, it may not increase in population, and become again comparatively wealthy.

In conclusion, it is proper to consider two questions of much interest to the Biblical student, which have been already noticed in this article, but which could not then be conveniently discussed fully. 1st. The date and authorship of the prophecy against Tyre in Isaiah, chap. xxiii.; and 2ndly, the question of whether Nebuchadnezzar, after his long siege of Tyre, may be supposed to have actually taken it.

On the first point it is to be observed, that as there were two sieges of Tyre contemporaneous with events mentioned in the Old Testament, viz. that by Shalmaneser, king of Assyria, in the reign of Hezekiah, and the siege by Nebuchadnezzar, king of the Chaldees, after the capture of Jerusalem in 588 B.C., and as Isaiah was living during the former siege, but must have been dead considerably more than a hundred years at the time of the latter siege, it is probable, without denying predictive prophecy, that the prophecy relates to the first siege, if it was written by Isaiah. As the prophecy is in the collection of writings entitled "Isaiah," there would formerly not have been any doubt that it was written by that prophet. But it has been maintained by eminent Biblical critics that many of the writings under the title of his name were written at the time of the Babylonian Captivity. This seems to be the least open to dispute in reference to the prophecies commencing with "Comfort ye, comfort ye my people," in the 1st verse of the 40th chapter, concerning which the following facts seem to the writer of the present article to be well established.² 1st. These prophecies are different in style from the undisputed writings of Isaiah. 2ndly. They do not predict that the Jews will be carried away into captivity at Babylon, but they presuppose that the Jews are already in captivity there at the time when the prophecies are uttered; that Jerusalem is desolate, and that the Temple is burnt (Is. lxi. 10, 11, xlv. 26, 28, xlv. 13, xlvii. 5, 8, lii. 2, 9, li. 3, 11, 17-23). 3rdly. The name of Cyrus, who conquered Babylon probably at least a hundred and fifty years after the death of Isaiah is mentioned in them twice (xlv. 28, xlv. 1); and 4thly, there is

¹ A copy of this work is in *Gesta Dei per Francos*. Janovise, 1611.

² M. Ernest Renan says there has been no subsidence of the land, owing to earthquakes or other causes; and that the west of the island has the same level as in ancient times. Mr. Wilde had spoken with great caution on this point, pp. 383-385. It is still very desirable that the peninsula and the adjoining coast should be minutely examined by an experienced practical geologist. There seems to be no doubt that the city has suffered from earthquakes. See Porter, l.c.; and compare Seneca, *Nat. Quæst.* vi. 1-11, Strabo, *av.* p. 167, and *Journa.* xi. 2, 1.

³ Doubts as to the authorship of these chapters were first suggested by Döderlein in 1781, in a review of Kopp's translation of Lowth's *Isaiah*. Since 1781 their later date has been accepted by Eichhorn, Rosenmüller, De Wette, Gesenius, Winzer, Ewald, Hitzig, Knobel, Herzfeld, Bleek, Geiger, and Davidson, and by numerous other Hebrew scholars. The evidence has been nowhere stated more clearly than by Gesenius in his *Isaiah* (part II. pp. 18-35, Leipzig, 1821). [On the other hand, the writer of the article *Isaiah* in the present *Work* maintains the unity of the book.—Ed.]

is external contemporary evidence between the time of Isaiah and the time of Cyrus to prove that these prophecies were then in existence. But although in this way the evidence of a later date is peculiarly cogent in reference to the 40th and following chapters, there is also reasonable evidence of the later date of several other chapters, such, for example, as the 13th and 14th (on which observe particularly the four first verses of the 14th chapter) and chapters xxiv.-xxvii. Hence there is no *a priori* difficulty in admitting that the 23rd chapter, respecting Tyre, may likewise have been written at the time of the Chaldean invasion. Yet this is not to be assumed without something in the nature of probable proof, and the real point is whether any such proof can be adduced on this subject. Now although Hitzig (*Der Prophet Jesaja*, Heidelberg, 1833, p. 272), undertakes to show that there is a difference of language between Isaiah's genuine prophecies and the 23rd chapter, and although Ewald (*Die Propheten des Alten Bundes*, vol. i. p. 238), who refers it to the siege of Tyre by Shalmaneser, believes the 23rd chapter, on the grounds of style and language, to have been written by a younger contemporary and scholar of Isaiah, not by Isaiah himself, it is probable that the majority of scholars will be mainly influenced in their opinions as to the date of that chapter by their view of the meaning of the 13th verse. In the A. V. the beginning of the verse is translated thus: "Behold the land of the Chaldeans, this people was not till the Assyrian founded it for them that dwell in the wilderness"—and this has been supposed by some able commentators, such as Rosenmüller and Hitzig (*ad loc.*), to imply that the enemies with which the Tyrians were threatened were the Chaldees under Nebuchadnezzar, and not the Assyrians under Shalmaneser. If this is the meaning, very few critics would now doubt that the prophecy was composed in the time of Nebuchadnezzar; and there is certainly something remarkable in a supposed mention of the Chaldees by such an early writer as Isaiah, inasmuch as, with the possible exceptions in the mention of Abraham and Abraham's family as having belonged to "Ur of the Chaldees" (Gen. xi. 28, 31, xv. 7), the mention of the Chaldees by Isaiah would be the earliest in the Bible. The only other passage respecting which a doubt might be raised is in the Book of Job (i. 17)—a work, however, which seems to the author of this article to have been probably written later than Isaiah.¹ But the 13th verse of the chapter attributed to Isaiah by no means necessarily implies that the Chaldees under Nebuchadnezzar were attacking Tyre, or were about to attack it. Accepting the ordinary version, it would be amply sufficient that Chaldees should be formidable mercenaries in the Assyrian army. This is the interpretation of Gesenius (*Commentar über den Jesaja*, *ad loc.*), who goes still further. Founding his reasoning on the frequent mention by Xenophon of Chaldees, as a bold, warlike, and predatory tribe in the neighbourhood of Armenia, and collecting scattered notices round this fundamental fact, he conjectures that bands of them, having served either as mercenaries or as volunteers in the Assyrian army, had received lands for their permanent settle-

¹ In the total absence of external evidence nothing in favour of an earlier date can be adduced to outweigh one circumstance long since noticed among numerous others by Gesenius (*Geschichte der Hebräischen Sprache und Schrift*), that the Aramaic plural *ܡܕܢܝܐ* occurs twelve

ment on the banks of the Euphrates not long before the invasion of Shalmaneser (see Xenophon, *Anab.* iii. 2, §§7, 12; *Anab.* iv. 3, §4, v. 3, §7, vii. 8, §14). So great is our ignorance of the Chaldees previous to their mention in the Bible, that this conjecture of Gesenius cannot be disproved. There is not indeed sufficient positive evidence for it to justify its adoption by an historian of the Chaldees; but the possibility of its being true should make us hesitate to assume that the 13th verse is incompatible with the date ordinarily assigned to the prophecy in which it occurs. But, independently of these considerations, the beginning of the 13th verse is capable of a totally different translation from that in the Authorized Version. It may be translated thus: "Behold the land of the Chaldees, the people is no more, Assyria has given it [the land] to the dwellers in the wilderness." This is partly in accordance with Ewald's translation, not following him in the substitution of "Canaanites" (which he deems the correct reading for "Chaldees")—and then the passage might refer to an unsuccessful rebellion of the Chaldees against Assyria, and to a consequent desolation of the land of the Chaldees by their victorious rulers. (As point may be mentioned in favour of this view, that the Tyrians are not warned to look at the Chaldees in the way that Habakkuk threatens his contemporaries with the hostility of that "terrible and dreadful nation," but the Tyrians are warned to look at the land of the Chaldees. Here, again, we know so little of the history of the Chaldees, that this interpretation, likewise, cannot be disproved. And, on the whole, as the burden of proof rests with any one who denies Isaiah to have been the author of the 23rd chapter, as the 13th verse is a very obscure passage, and as it cannot be proved incompatible with Isaiah's authorship, it is permissible to acquiesce in the Jewish tradition on the subject.)

2ndly. The question of whether Tyre was actually taken by Nebuchadnezzar after his thirteen years' siege has been keenly discussed. Gesenius, Winer, and Hitzig decide it in the negative, while Hengstenberg has argued most fully on the other side. Without attempting to exhaust the subject, and assuming, in accordance with Movers, that Tyre, as well as the rest of Phœnicia, submitted at last to Nebuchadnezzar, the following points may be observed respecting the supposed capture:—1st. The evidence of Ezekiel, a contemporary, seems to be against it. He says (xxix. 18) that "Nebuchadnezzar king of Babylon caused his army to serve a great service against Tyre;" that "every head was made bald, and every shoulder was peeled, yet had he no wages, nor his army for Tyre, for the service that he served against it;" and the obvious inference is that, however great the exertions of the army may have been in digging entrenchments or in casting up earth-works, the siege was unsuccessful. This is confirmed by the following verses (19, 20), in which it is stated that the land of Egypt will be given to Nebuchadnezzar as a compensation, or wages, to him and his army for their having served against Tyre. Movers, indeed, asserts that the only men-

times in the book (iv. 3; xli. 11; xv. 12; xviii. 2; xxvi. 4; xxxii. 11, 14; xxxiii. 8, 32; xxxiv. 3; xxxv. 16; xxxviii. 2). [But there are strong reasons for assigning an earlier date to the book: see Jos. p. 1006-1007.]

ing of the expression that Nebuchadnezzar and his army had no wages for their service against Tyre is, that they did not plunder the city. But to a virtuous commander the best reward of besieging a city is to capture it; and it is a strange sentiment to attribute to the Supreme Being, or to a prophet, that a general and his army received no wages for capturing a city, because they did not plunder it. 2dly. Josephus, who had access to historical writings on this subject which have not reached our times, although he quotes Phœnician writers who show that Nebuchadnezzar besieged Tyre (*Ant. x. 11, §1; c. Apion. 23*), neither states on his own authority, nor quotes any one else as stating, that Nebuchadnezzar took it. 3dly. The capture of Tyre on this occasion is not mentioned by any Greek or Roman author whose writings are now in existence. 4thly. In the time of Jerome it was distinctly stated by some of his contemporaries that they had read, amongst other histories on this point, histories of Greeks and Phœnicians, and especially of Nicolaus Damascenus, in which nothing was said of the siege of Tyre by the Chaldees; and Jerome, in noticing this fact, does not quote any authority of any kind for a counter-statement, but contents himself with a general allegation that many facts are related in the Scriptures which are not found in Greek works, and that "we ought not to acquiesce in the authority of those whose perfidy and falsehood we detest" (see *Comment. ad Ezechielum*, xvi. 7). On this view of the question there would seem to be small reason for believing that the city was actually captured, were it not for another passage of Jerome in his *Commentaries* on the passage of Ezekiel already quoted (xxix. 18), in which he explains that the meaning of Nebuchadnezzar's having received no wages for his warfare against Tyre is, not that he failed to take the city, but that the Tyrians had previously removed everything precious from it in ships, so that when Nebuchadnezzar entered the city he found nothing there. This interpretation has been admitted by one of the most distinguished critics of our own day (Ewald, *Die Propheten des Alten Bundes*, ad loc.) who, deeming it probable that Jerome had obtained the information from some historian whose name is not given, accepts as historical this account of the termination of the siege. This account therefore, as far as inquirers of the present day are concerned, rests solely on the authority of Jerome; and it thus becomes important to ascertain the principles and method which Jerome adopted in writing his *Commentaries*. It is peculiarly fortunate that Jerome himself has left on record some valuable information on this point in a letter to Augustine, for the understanding of which the following brief preliminary explanation will be sufficient:—In Jerome's *Commentaries* on the second chapter of the Epistle to the Galatians, when adverting to the passage (vers. 11-14) in which St. Paul states that he had withstood Peter to the face, "because he was to be blamed" for requiring Christians to comply with the observances of the Jewish ritual law, Jerome denies that there was any real difference of opinion between the two Apostles, and asserts that they had merely made a preconcerted arrangement of apparent difference,

in order that those who approved of circumcision might plead the example of Peter, and that those who were unwilling to be circumcised might extol the religious liberty of Paul. Jerome then goes on to say that "the fact of simulation being useful, and occasionally permissible, is taught by the example of Jehu king of Israel, who never would have been able to put the priests of Baal to death unless he had feigned willingness to worship an idol, saying, 'Ahab served Baal a little, but Jehu shall serve him much.'" On this Augustine strongly remonstrated with Jerome in two letters which are marked 56 and 67 in Jerome's *Correspondence*. To these Jerome returned an answer in a letter marked 112, in which he repudiates the idea that he is to be held responsible for all that is contained in his *Commentaries*, and then frankly confesses how he composed them. Beginning with Origen, he enumerates several writers whose *Commentaries* he had read, specifying, amongst others, Laodiceus, who had lately left the Church, and Alexander, an old heretic. He then avows that having read them all he sent for an amanuensis, to whom he dictated sometimes his own remarks, sometimes those of others, without paying strict attention either to the order or the words, and sometimes not even to the meaning. "Itaque ut simpliciter fatear, legi hæc omnia, et in mente mea plurima conservans, accito notario, vel mea, vel aliena dictavi, nec ordinis, nec verborum, interdum nec sensuum memor" (see Migne's Edition of Jerome, vol. i. p. 918). Now if the bearing of the remarks concerning simulation for a pious purpose, and of the method which Jerome followed in the composition of his *Commentaries* is seriously considered, it cannot but throw doubt on his uncorroborated statements in any case wherein a religious or theological interest may have appeared to him to be at stake.

Jerome was a very learned man, perhaps the most learned of all the Fathers. He was also one of the very few among them who made themselves acquainted with the Hebrew language, and in this, as well as in other points, he deserves gratitude for the services which he has rendered to Biblical literature. He is, moreover, a valuable witness to facts, when he can be suspected of no bias concerning them, and especially when they seem contrary to his religious prepossessions. But it is evident, from the passages in his writings above quoted, that he had not a critical mind, and that he can scarcely be regarded as one of those noble spirits who prefer truth to supposed pious ends which may be attained by its violation. Hence, contrary to the most natural meaning of the prophet Ezekiel's words (xxix. 18), it would be unsafe to rely on Jerome's sole authority for the statement that Nebuchadnezzar and his army eventually captured Tyre.

Literature.—For information on this head, see PHOENICIANS, p. 1006. In addition to the works there mentioned, see Robinson's *Bibl. Res.* ii. 461-471; Stanley's *Sinai and Palestine*, 264-268; Porter's *Handbook for Syria and Palestine*, pp. 390-396; Hengstenberg, *De Rebus Tyriorum*, Berlin, 1832; and Lütter's *Erdbunde*, vol. xvii. 1st part, 3rd book, pp. 320-379. Professor Robinson, in addition to his instructive history of Tyre, has pub-

* Hengstenberg (*De Rebus Tyriorum*, p. 75) says that this silence of the Greek and Phœnician historians proves so much, as there is no doubt that the city was besieged by Nebuchadnezzar. To this Hitzig replies, that it is

historians could only have omitted to mention the story, because the siege had not been followed by the capture of the city (*Der Prophet Jesaja*, p. 378).

ished, in the Appendix to his third volume, a detailed list, which is useful for the knowledge of Tyre, of works by authors who had themselves travelled or resided in Palestine. See likewise an excellent account of Tyre by Gesenius in his *Jensia*, i. 707-719, and by Winer, s. o., in his *Bibl. Realwört.* [E. T.]

Coins of Tyre.

TYRUS. This form is employed in the A. V. of the Books of Jeremiah, Ezekiel, Hosea (Joel has "Tyre"), Amos, Zechariah, 2 Esdras, Judith, and the Maccabees, as follows: Jer. xxv. 22, xxvii. 3, xlvi. 4; Ezek. xvi. 2, 3, 4, 7, 15, xvii. 2, 3, 8, 32, xxviii. 2, 12, xxix. 18; Hos. ix. 13; Am. i. 9, 10; Zach. ix. 2, 3; 2 Esd. i. 11; Jud. ii. 28; 1 Macc. v. 15; 2 Macc. iv. 18, 32, 44, 49.

U

UCAL (עֲכָל, and in some copies עֲכָל). According to the received text of Prov. xxx. 1, Ithiel and Ucal must be regarded as proper names, and if so, they must be the names of disciples or sons of Agur the son of Jakeh, an unknown sage among the Hebrews. But there is great obscurity about the passage. The LXX. translate τοῖς υἱοῖς Βουθὶ καὶ Εὐκαλ: the Vulgate, cum quo est Deus, et qui Deo secum morante confortatus. The Arabic follows the LXX. to some extent; the Targum reproduces Ithiel and Ucal as proper names, and the Syriac is corrupt, Ucal being omitted altogether. Luther represents the names as *Leithiel* and *Uchal*. De Wette regards them as proper names, as do most translators and commentators. Junius explains both as referring to Christ. The LXX. probably read עֲכָל וְעֲכָל. The Veneto-Greek has καὶ Εὐκαλ = עֲכָל. Cocceius must have pointed the words thus, עֲכָל וְעֲכָל, "I have laboured for God and have obtained," and this, with regard to the first two words must have been the reading of J. D. Michaelis, who renders, "I have wearied myself for God, and have given up the investigation," applying the words to a man who had bewildered himself with philosophical speculations about the Deity, and had been compelled to give up the search. Bertheau also (*Die Sprüche Sal. Einl.* xvii.) sees in the words, "I have wearied myself for God, I have wearied myself for God, and have faintd" (עֲכָל), an appropriate commencement to the series of proverbs which follow. Hitzig's view is substantially the same, except that he points the last word עֲכָל and renders, "and I became dull," applying it to the dimness which the investigation produced upon the eye of the mind (*Die Spr. Sal.* p. 318). Bunson (*Bibelwerk*, i. p. clxxx.) follows

Bertheau a punctuation, but regards עֲכָל as its first occurrence as a symbolical name of the speaker. "The saying of the man 'I have wearied myself for God; I have wearied myself for God, and have fainted away.' There is, however, one fatal objection to this view, if there were no others, and that is, that the verb עֲכָל, "to be wearied," nowhere takes after it the accusative of the object of weariness. On this account alone, therefore, we must reject all the above explanations. If Bertheau's pointing be adopted, the only legitimate translation of the words is that given by Dr. Davidson (*Isaiah* ii. 338), "I am weary, O God, I am weary, O God, and am become weak." Ewald considers both Ithiel and Ucal as symbolical names, employed by the poet to designate two classes of thinkers to whom he addresses himself, or rather he combines both names in one, "God-with-me-and-I-am-strong," and bestows it upon an imaginary character, whom he introduces to take part in the dialogue. The name 'God-with-me,' says Keil (*Hävernick*, *Em.* iii. p. 412), "denotes such as gloried in a more intimate communion with God, and a higher insight and wisdom obtained thereby," while 'I-am-strong,' indicates "the so-called strong spirits who boast of their wisdom and might, and deny the holy God, so that both names most probably represent a class of freethinkers, who thought themselves superior to the revealed law, and in practical atheism indulged the lusts of the flesh." It is to be wished that in this case, as in many others, commentators had observed the precept of the Talmud, "Teach thy tongue to say, 'I do not know.'" [W. A. W.]

UEL (עֲוֵל: *Ovāl: Vel*). One of the family of Bani, who during the Captivity had married a foreign wife (Ezr. x. 34). Called **JUEL** in 1 Esd. ix. 34.

UKNAZ (עֲנָז: *Kenz: Cenez*). In the margin of 1 Chr. iv. 15 the words "even Kenaz" in the text are rendered "Uknaz," as a proper name. Apparently some name has been omitted before Kenaz, for the clause begins "and the sons of Elai," and then only Kenaz is given. Both the LXX. and Vulg. omit the conjunction. In the Peshito Syriac, which is evidently corrupt, Kenaz is the third son of Caleb the son of Jephunneh.

ULAI (עֲוֵל: *Ovāl: Ula*) is mentioned by Daniel (viii. 2, 16) as a river near to Susa, where he saw his vision of the ram and the he-goat. It has been generally identified with the Eulaeus of the Greek and Roman geographers (Marc. Heracl. p. 15 *Arr. Exp.* *Al.* vii. 7; Strab. xv. 3, §23; *Ps.* vi. 3; Pliny, *H. N.* vi. 31), a large stream in the immediate neighbourhood of that city. This identification may be safely allowed, resting as it does on the double ground of close verbal resemblance: the two names, and complete agreement as to the situation.

Can we, then, identify the Eulaeus with any existing stream? Not without opening a controversy, since there is no point more disputed among comparative geographers. The Eulaeus has been by many identified with the Choaspes, which is undoubtedly the modern *Kerkhah*, an affluent of the Tigris, flowing into it a little below *Arwan*. By others it has been regarded as the *Arwan*, a large river, considerably further to the eastward, which enters the *Khor Bamishir* near *Molammar*. Some have even suggested that it may have been

the *Shapur* or *Sha'ur*, a small stream which rises a few miles N. W. of Susa, and flows by the ruins into the *Dizful* stream, an affluent of the *Kuran*.

The general grounds on which the Eulaeus has been identified with the Choaspes, and so with the *Kerkhah* (Salmasius, Rosenmüller, Wahl, Kitto, &c.) are, the mention of each separately by ancient writers as "the river of Susa," and (more especially) the statements made by some (Strabo, Plin.) that the water of the Eulaeus, by others (Herod., Athen., Plut., Q. Curtius), that that of the Choaspes was the only water tasted by the Persian kings. Against the identification it must be noticed that Strabo, Pliny, Solinus, and Polyclitus (ap. Strab. xv. 3, §4) regard the rivers as distinct, and that the lower course of the Eulaeus, as described by Arrian (*Exp. Al.* vii. 7) and Pliny (*H. N.* vi. 26), is such as cannot possibly be reconciled with that of the *Kerkhah* river.

The grounds for regarding the Eulaeus as the *Kuran* are decidedly stronger than those for identifying it with the *Kerkhah* or Choaspes. No one can compare the voyage of Nearchus in Arrian's *Indica* with Arrian's own account of Alexander's descent of the Eulaeus (vii. 7) without seeing that the Eulaeus of the one narrative is the Pasitigris of the other; and that the Pasitigris is the *Kuran* is almost universally admitted. Indeed, it may be said that all accounts of the lower Eulaeus—those of Arrian, Pliny, Polyclitus, and Ptolemy—identify it, beyond the possibility of mistake, with the lower *Kuran*, and that so far there ought to be no controversy. The difficulty is with respect to the upper Eulaeus. The Eulaeus, according to Pliny, surrounded the citadel of Susa (vi. 27), whereas even the *Dizful* branch of the *Kuran* does not come within six miles of the ruins. It lay to the west, not only of the Pasitigris (*Kuran*), but also of the Coprates (river of *Dizful*), according to Diodorus (xix. 18, 19). So far, it might be the *Shapur*, but for two objections. The *Shapur* is too small a stream to have attracted the general notice of geographers, and its water is of so bad a character that it can never have been chosen for the royal table (*Geograph. Journ.* ix. p. 70). There is also an important notice in Pliny entirely incompatible with the notion that the short stream of the *Shapur*, which rises in the plain about five miles to the N. N. W. of Susa, can be the true Eulaeus. Pliny says (vi. 31) the Eulaeus rose in *Media*, and flowed through Mesopotene. Now this is exactly true of the upper *Kerkhah*, which rises near *Hamadan* (Ecbatana), and flows down the district of *Mahabadan* (Mesopotene).

The result is that the various notices of ancient writers appear to identify the upper Eulaeus with the upper *Kerkhah*, and the lower Eulaeus (quite unmistakably) with the lower *Kuran*. Does this apparent confusion and contradiction admit of explanation and reconciliation?

A recent survey of the ground has suggested a satisfactory explanation. It appears that the *Kerkhah* once bifurcated at *Pai Pul*, about 20 miles N. W. of Susa, sending out a branch which passed east of the ruins, absorbing into it the *Shapur*, and flowing on across the plain in a S. S. E. direction till it fell into the *Kuran* at *Ahuas* (Loftus, *Chaldaea and Susiana*, pp. 424, 425). Thus, the upper *Kerkhah* and the lower *Kuran* were in old

times united, and might be viewed as forming a single stream. The name *Kalaeus* (*Ula*) seems to have applied most properly to the eastern branch stream from *Pai Pul* to *Ahuas*; the stream above *Pai Pul* was sometimes called the Eulaeus, but was more properly the Choaspes, which was also the sole name of the western branch (or present course, of the *Kerkhah* from *Pai Pul* to the Tigris). The name Pasitigris was proper to the upper *Kuran* from its source to its junction with the Eulaeus, after which the two names were equally applied to the lower river. The *Dizful* stream, which was not very generally known, was called the Coprates. It is believed that this view of the river names will reconcile and make intelligible all the notices of them contained in the ancient writers.

It follows from this that the water which the Persian kings drank, both at the court, and when they travelled abroad, was that of the *Kerkhah*, taken probably from the eastern branch, or proper Eulaeus, which washed the walls of Susa, and (according to Pliny) was used to strengthen its defences. This water was, and still is, believed to possess peculiar lightness (Strab. xv. 3, §22; *Geograph. Journ.* ix. p. 70), and is thought to be at once more wholesome and more pleasant to the taste than almost any other. (On the controversy concerning this stream the reader may consult Kinnear, *Persian Empire*, pp. 100-106; Sir H. Rawlinson, in *Geograph. Journ.* ix. pp. 84-88; Layard, in the same, xvi. pp. 91-94; and Loftus, *Chaldaea and Susiana*, pp. 424-431.) [G. R.]

U'LAM (עֻלָּם; Οὐλάμ; *Ulam*). 1. A descendant of Gilead the grandson of Manasseh, and father of Bedan (1 Chr. vii. 17).

2. (Αἰλάμ; Alex. Οὐλάμ.) The first-born of Eshek, the brother of Azel, a descendant of the house of Saul. His sons were among the famous archers of Benjamin, and with their sons and grandsons made up the goodly family of 150 (1 Chr. viii. 39, 40).

ULLA (עֻלָּא; Alex. 'Ολλά; *Olla*). An Asherite, head of a family in his tribe, a mighty man of valour, but how descended does not appear (1 Chr. vii. 39). Perhaps, as Junius suggests, he may be a son of Ithran or Jether; and we may further conjecture that his name may be a corruption of Ara.

UMMAH (עֻמָּה; 'Αρχάβα; 'Αμμα; *Amma*). One of the cities of the allotment of Asher (Joah. xix. 30 only). It occurs in company with Aphek and Rehob; but as neither of these have been identified, no clue to the situation of Ummah is gained thereby. Dr. Thomson (*Bibl. Sacra*, 1855, p. 822, quoted by Van de Velde) was shown a place called *Alma* in the highlands on the coast, about five miles E.N.E. of *Ras en-Nakhara*, which is not dissimilar in name, and which he conjectures may be identical with Ummah. But it is quite uncertain. *Alma* is described in *The Land and the Book*, chap. xx. [G.]

UNCLEAN MEATS. These were things strangled, or dead of themselves, or through beasts or birds of prey; whatever beast did not both part the hoof and chew the cud; and certain other smaller animals rated as "creeping things" (לָרֶמֶשׂ); certain

* This looks at first sight like a misplacement of the name Rehob from its proper position further on in the verse. Rehob, however, is usually 'Pash.

† Lev. xi. 20-30 forbids eating the weasel, the marten, the tortoise, the ferret, the chameleon, the lizard, the snail, and the mole. The LXX. has in place of the tor-

classes of birds mentioned in Lev. xi. and Deut. xiv. twenty or twenty-one in all; whatever in the waters had not both fins and scales; whatever winged insect had not besides four legs the two hind-legs for leaping;⁴ besides things offered in sacrifice to idols; and all blood or whatever contained it (save perhaps the blood of fish, as would appear from that only of beast and bird being forbidden, Lev. vii. 26), and therefore flesh cut from the live animal; as also all fat, at any rate that disposed in masses among the intestines, and probably wherever discernible and separable among the flesh (Lev. iii. 14-17, vii. 23). The eating of blood was prohibited even to "the stranger that sojourneth among you" (Lev. xvii. 10, 12, 13, 14), an extension which we do not trace in other dietary precepts; e.g. the thing which died of itself was to be given "unto the stranger that is in thy gates," Deut. xiv. 21. As regards blood, the prohibition indeed dates from the declaration to Noah against "flesh with the life thereof which is the blood thereof;" in Gen. ix. 4, which was perhaps regarded by Moses as still binding upon all Noah's descendants. The grounds, however, on which the similar precept of the Apostolic Council, in Acts xv. 20, 21, appears based, relate not to any obligation resting still unbroken on the Gentile world, but to the risk of promiscuous offence to the Jews and Jewish Christians, "for Moses of old time hath in every city them that preach him." Hence this abstinence is reckoned amongst "necessary things" (τὰ ἐκτάκτως), and "things offered to idols," although not solely, it may be presumed, on the same grounds, are placed in the same class with "blood and things strangled" (ἐκτεθειμένα εἰδωλοθύτων καὶ αἱματός καὶ πυκνός, vv. 28, 29). Besides these, we find the prohibition twice recurring against "seething a kid in its mother's milk." It is added, as a final injunction to the code of dietary precepts in Deut. xiv., after the crowning declaration of ver. 21, "for thou art an holy people unto the Lord thy God;" but in Exod. xxiii. 19, xxxiv. 26, the context relates to the bringing firstfruits to the altar, and to the "Angel" who was to "go before" the people. To this precept we shall have occasion further to return.

The general distinction of clean and unclean is rightly observed by Michaelis (*Smith's Translation*,

Art. ccc. &c.) to have its parallel amongst all nations, there being universally certain creatures regarded as clean, i.e. fit for food, and the rest as the opposite (comp. Lev. xi. 47). With the greater number of nations, however, this is only a traditional usage based merely perhaps either on an instinct relating to health, or on a repugnance which is to be regarded as an ultimate fact in itself, and of which no further account is to be given. Thus Michaelis (as above) remarks that in a certain part of Germany rabbits are viewed as unclean, i.e. are advisedly excluded from diet. Our feelings as regards the frog and the snail, contrasted with those of continentalers, supply another close parallel. Now, it is not unlikely that nothing more than this is intended in the distinction between "clean" and "unclean" in the directions given to Noah. The intention seems to have been that creatures recognized, on whatever ground, as unfit for human food, should not be preserved in so large a proportion as those whose number might be diminished by that consumption. The dietary code of the Egyptians, and the traditions which have descended amongst the Arabs, unfortified, certainly down to the time of Mahomet, and in some cases later, by any legislation whatever, so far as we know, may illustrate the probable state of the Israelites. If the Law seized upon such habits as were current among the people, perhaps enlarging their scope and range, the whole scheme of tradition, instinct, and usage so enlarged might become a ceremonial barrier, having a relation at once to the theocratic idea, to the general health of the people, and to their separateness as a nation.

The same personal interest taken by Jehovah in his subjects, which is expressed by the demand for a ceremonially pure state on the part of every Israelite as in covenant with Him, regarded also this particular detail of that purity, viz. diet. Thus the prophet (Is. lxvi. 17), speaking in His name, denounces those that "sanctify themselves (consecrate themselves to idolatry), eating swine's flesh, and the abomination, and the mouse," and those "which remain among the graves and lodge in the monuments, which eat swine's flesh, and broth of abominable things is in their vessels" (lxv. 4.). It remained for a higher Lawgiver to announce that "there is nothing from without a man that enter-

tain, the ἀποκρίσεις οὐ χειραίοις, and instead of the snail (put before the lizard, σαύρα), the χυλαβόνη.

* In the LXX. of Lev. xi. 14, two birds only are mentioned, τὸν γύπα καὶ τὸν λευκόν, and in the parallel passage of Deut. xiv. 13 the same two; but in the Heb. of the latter passage only our present text has three birds' names. It is therefore probable that one of these, ἰνκ, rendered "glean" by the A.V., is a mere corruption of ἰνκ, found both in Deut. and in Lev., for which the LXX. gives γύψ, and the Vulgate *Milvius*. So Maimon. took it (Bochart, *Hierog.* ii. 33, 363). Thus we have twenty birds named as unclean, alike in the Heb. and in the LXX. of Lev. xi. 13-19, and of many of these the identification is very doubtful. Bochart says (p. 364), "nomina avium immundarum recenset Maimon. interpretari ne conatus quidem est." In the Heb. of Deut. xiv. we have, allowing for the probable corruption of one name, the same twenty, but in the LXX. only nineteen; "every raven after his kind" (ἐκάστη κόρακα καὶ τὰ ὅμοια αὐτῆς), of Lev. being omitted, and the other names, although the same as those of Lev., yet having a different order and grouping after the first eight. Thus Lev. xi. 17, consists of the three, καὶ πυκνόπαυα, καὶ κερκιδάκρυς, καὶ ἰνκ; whereas Deut. xiv. 16, which should corre-

pond, contains καὶ ἀποκρίδα, καὶ κέρκυρα, καὶ ἰνκ. Also the ἔρωψ, "hoopoe," and the νεφελεΐων, "cock," figure in both the LXX. lists.

⁴ In Lev. xi. 21 the *keri* has קרי against the קרי of the *ostia*. It is best to adopt the former, and view the last part of the verse as constituting a class that may be eaten from among a larger doubtful class of "flying creeping-things," the difference consisting in their having four feet, and a pair of hind-legs to spring with. The A.V. is here obscure. "All swine that creep," and "every flying creeping thing," standing in Lev. xi. 20, 21 for precisely the same Heb. phrase, rendered by the LXX. τὰ ἐπὶ τῆς γῆς κινεῖται; and "legs above their feet to leap," not showing that the distinct larger springing legs of the locust or cicada are meant; where the Heb. קוצץ , and LXX. ἀνιπταίον seem to express the upward projection of these legs above the creature's back. So Bochart takes it (p. 462), who also prefers קוצץ in the reading above given; "ita enim Hebraei omnes;" and so, he adds, the Samar. Pent. He states that locusts are called for food in Egypt (lv. 7, 481-2, comp. Hasselquist, 231-233). The edible class is enumerated in four species. No precept is found in Deut. relating to these.

ing into him can defile him" (Mark vii. 15). The fat was claimed as a burnt offering and the blood enjoyed the highest sacrificial esteem. In the two combined the entire victim was by representation offered, and to transfer either to human use was to deal presumptuously with the most holy things. But besides this, the blood was esteemed as "the life" of the creature, and a mysterious sanctity beyond the sacrificial relation thereby attached to it. Hence we read, "whatsoever soul it be that eateth any manner of blood, even that soul shall be cut off from his people" (Lev. vii. 27, comp. xvii. 10, 14). Whereas the offender in other dietary respects was merely "unclean until even" (xi. 40, xvii. 15).

Blood was certainly drunk in certain heathen rituals, especially those which related to the solemnization of a covenant, but also as a pledge of idolatrous worship (Ps. xvi. 4; Ezek. xxxiii. 25). Still there is no reason to think that blood has ever been a common article of food, and any lawgiver might probably reckon on a natural aversion effectually fortifying his prohibition in this respect, unless under some bewildering influence of superstition. Whether animal qualities, grosser appetites, and inhuman tendencies might be supposed by the Hebrews transmitted into the partaker of the blood of animals, we have nothing to show: see, however, Josephus, *Ant.* iii. 11, §2.

It is noteworthy that the practical effect of the rule laid down is to exclude all the *carnivora* among quadrupeds, and, so far as we can interpret the nomenclature, the *raptores* among birds. This suggests the question whether they were excluded as being not averse to human carcases, and in most Eastern countries acting as the servitors of the battle-field and the gibbet. Even swine have been known so to feed; and, further, by their constant runcation among whatever lies on the ground, suggest impurity, even if they were not generally foul feeders. Amongst fish those which were allowed contain unquestionably the most wholesome varieties, save that they exclude the oyster. Probably, however, sea-fishing was little practised by the Israelites; and the Levitical rules must be understood as referring backwards to their experience of the produce of the Nile, and forwards to their enjoyment of the Jordan and its upper lakes. The exclusion of the camel and the hare from allowable meats is less easy to account for, save that the former never was in common use, and is generally spoken of in reference to the semi-barbarous desert tribes on the eastern or southern border land, some of whom certainly had no insuperable repugnance to his flesh,* although it is so impossible to substitute any other creature for the camel as the "ship of the desert," that to eat him, especially where so many other creatures give meat so much preferable, would be the worst economy possible in an Eastern commissariat—that of destroying

the best, or rather the only conveyance, in order to obtain the most indifferent food. The hare† was long supposed, even by eminent naturalists,‡ to ruminant, and certainly was eaten by the Egyptians. The horse and ass would be generally spared from similar reasons to those which exempted the camel. As regards other cattle the young males would be those universally preferred for food, no more of that sex reaching maturity than were needful for breeding, whilst the supply of milk suggested the copious preservation of the female. The duties of draught would require another rule in rearing neat-cattle. The labouring steer, man's fellow in the field, had a life somewhat ennobled and sanctified by that comradeship. Thus it seems to have been quite unusual to slay for sacrifice or food, as in 1 K. xix. 21, the ox accustomed to the yoke. And perhaps in this case, as being tougher, the flesh was not roasted but boiled. The case of Araunah's oxen is not similar, as cattle of all ages were useful in the threshing floor (2 Sam. xxiv. 22). Many of these restrictions must be esteemed as merely based on usage, or arbitrary. Practically the law left among the allowed meats an ample variety, and no inconvenience was likely to arise from a prohibition to eat camels, horses, and asses. Swine, hares, &c. would probably as nearly as possible be exterminated in proportion as the law was observed, and their economic room filled by other creatures. Wunderbar (*Biblisch-Talm. Medicin.* part ii. p. 50) refers to a notion that "the animal element might only with great circumspection and discretion be taken up into the life of man, in order to avoid debasing that human life by assimilation to a brutal level, so that thereby the soul might become degraded, profaned, filled with animal affections, and disqualified for drawing near to God." He thinks also that we may notice a meaning in "the distinction between creatures of a higher, nobler, and less intensely animal organization as clean, and those of a lower and incomplete organization as unclean," and that the insects provided with four legs and two others for leaping are of a higher or more complete type than others, and relatively nearer to man. This seems fanciful, but may nevertheless have been a view current among Rabbinical authorities. As regards birds, the *raptores* have commonly tough and indigestible flesh, and some of them are in all warm countries the natural scavengers of all sorts of carrion and offal. This alone begets an instinctive repugnance towards them, and associates them with what was beforehand a defilement. Thus to kill them for food would tend to multiply various sources of uncleanness.‡ Porphyrus (*Abstin.* iv. 7, quoted by Winer) says that the Egyptian priests abstained from all fish, from all quadrupeds with solid hoofs, or having claws, or which were not horned, and from all carnivorous birds. Other curious parallels have been found amongst more distant nations.¹

* The camel, it may be observed, is the creature most near the line of separation, for the foot is partially cloven but incompletely so, and he is also a ruminant.

† The *ḥar*, "coney," A.V., Lev. xi. 5, Deut. xiv. 7, Ps. civ. 18, Prov. xxx. 26, is probably the jerboa.

‡ See a correspondence on the question in *The Standard* and most other London newspapers, April 2nd, 1863.

¹ Bochart (*Hiéroc.* ii. 33, 358, l. 43) mentions various symbolical meanings as conveyed by the precepts regarding birds: "Aves rapaces prohibuit ut a rapina averteret, nocturnas, ut abloquerent opera tenebrarum et se proderent lucis illis, lacustres et riparias, quarum victus est im-

purissimus, ut ab omni immundâ cor arceret. Struthionem denique, qui e terrâ non attollitur, ut terrenis relictis ad ea tenderent quae sursum sunt. Quae interpretatio non nostra est sed veterum." He refers to Barnabas, *Epist.* a.; Clemens Alex. *Strom.* v.; Origen, *Homil. in Levit.*; Novatian, *De Cibus Judaicis*, cap. iii.; Cyril, *contra Julian.* lib. ix.

¹ Winer refers to Von Bohlen (*Genesis*, 88) as finding the origin of the clean and unclean animals in the Zendavesta, in that the latter are the creation of Ahriman, whereas man is ascribed to that of Ormuzd. He rejects, however, and quite rightly, the notion that Persian institutions exercised any influence over Hebrew ones.

But as Orientals have minds sensitive to teaching by types, there can be little doubt that such ceremonial distinctions not only tended to keep Jew and Gentile apart, but were a perpetual reminder to the former that he and the latter were not on one level before God. Hence, when that economy was changed, we find that this was the very symbol selected to instruct St. Peter in the truth that God was not a "respector of persons." The vessel filled with "fourfooted beasts of the earth, and wild beasts, and creeping things, and fowls of the air," was expressive of the Gentile world, to be put now on a level with the Israelite, through God's "purifying their hearts by faith." A sense of this their prerogative, however dimly held, may have fortified the members of the privileged nation in their struggle with the persecutions of the Gentiles on this very point. It was no mere question of which among several means of supporting life a man chose to adopt, when the persecutor dictated the alternative of swine's flesh or the loss of life itself, but whether he should surrender the badge and type of that privilege by which Israel stood as the favoured nation before God (1 Macc. i. 63, 64; 2 Macc. vi. 18, vii. 1). The same feeling led to the exaggeration of the Mosaic regulations, until it was "unlawful for a man that was a Jew to keep company with or come unto one of another nation" (Acts x. 28); and with such intensity were badges of distinction cherished, that the wine, bread, oil, cheese, or anything cooked by a heathen,^a were declared unlawful for a Jew to eat. Nor was this strictness, however it might at times be pushed to an absurdity, without foundation in the nature of the case. The Jews, as, during and after the return from captivity, they found the avenues of the world opening around them, would find their intercourse with Gentiles unavoidably increased, and their only way to avoid an utter relaxation of their code would lie in somewhat overstraining the precepts of prohibition. Nor should we omit the tendency of those who have no scruples to "despise" those who have, and to parade their liberty at the expense of these latter, and give piquancy to the contrast by wanton tricks, designed to beguile the Jew from his strictness of observance, and make him unguardedly partake of what he abhorred, in order to heighten his confusion by derision. One or two instances of such amusement at the Jew's expense would drive the latter within the entrenchments of an universal repugnance and avoidance, and make him seek the safe side at the cost of being counted a churl and a bigot. Thus we may account for the refusal of the "king's meat" by the religious captives (Dan. i. 8), and for the similar conduct recorded of Judith (xii. 2) and Tobit (Tob. i. 11); and in a similar spirit Shakespeare makes Shylock say, "I will not eat with you, drink with you, nor pray with you" (*Merchant of Venice*, Act I. Sc. iii.). As regards things offered to idols, all who own one God meet on common ground; but the Jew viewed the precept as demanding a literal objective obedience, and had a holy horror of even an unconscious infraction of the law: hence, as he could never know what had received idolatrous consecration, his only safety lay in total abstinence; whereas St. Paul admonishes the Christian to abstain, "for his sake that showed it and for conscience

sake," from a thing said to have been consecrated to a false god, but not to parade his conscientious scruples by interrogating the butcher at his stall or the host in his guest-chamber (1 Cor. x. 25-29), and to give opposite injunctions would doubtless in his view have been "compelling the Gentiles to live as did the Jews" (*loosebaw*, Gal. ii. 14).

The prohibition to "suckle a kid in his mother's milk" has caused considerable difference of opinion amongst commentators. Michaelis (Art. ccc.) thought it was meant merely to encourage the use of olive oil instead of the milk or butter of an animal, which we commonly use in cookery, where the Orientals use the former. This will not satisfy any mind by which the clue of symbolism, so blindly held by the Eastern devotee, and so deeply interwoven in Jewish ritual, has been once duly seized. Mercy to the beasts is one of the under-currents which permeate that law. To soften the feelings and humanise the character was the higher and more general aim. When St. Paul, commenting on a somewhat similar precept, says, "Doth God care for oxen, or saith He it altogether for our sakes?" he does not mean to deny God's care for oxen, but to insist the rather on the more elevated and more human lesson. The milk was the destined support of the young creature: viewed in reference to it, the milk was its "lie," and had a relative sanctity resembling that of the forbidden blood (comp. Juv. xi. 88, "qui plus lactis habet quam sanguinis," speaking of a kid destined for the knife). No doubt the abstinence from the forbidden action, in the case of a young creature already dead, and a damn unconscious probably of its loss, or whose consciousness such an use of her milk could in no wise quicken, was based on a sentiment merely. But the practical consequence, that milk must be foregone or elsewhere obtained, would, revert the sympathy from being an empty one. It could not be the passive emotion which becomes weaker by repetition, for want of an active habit with which to ally itself. And thus no operation would lie in indirectly quickening sympathies for the brute creation at all other times. The Talmudists took an extreme view of the precept, as forbidding generally the cooking of flesh in milk (*Mishna, Chullin*, viii.; Hottinger, *Leg. Hebr.* 117, 141, quoted by Winer).

It remains to mention the sanitary aspect of the case. Swine are said to be peculiarly liable to disease in their own bodies. This probably means that they are more easily led than other creatures to the foul feeding which produces it; and where the average heat is great, decomposition rapid, and malarial easily excited, this tendency in the animal is more mischievous than elsewhere. A *mazzel* or *mazel*, from whence we have "measled pork," is the old English word for a "leper," and it is asserted that eating swine's flesh in Syria and Egypt tends to produce that disorder (Bartholini, *De Morbis Bœl.* viii.; Wunderbar, p. 51). But there is an indefiniteness about these assertions which prevents our dealing with them scientifically. *Mazzel* or *mazel* may well indeed represent "leper," but which of all the morbid symptoms claimed under that head it is to stand for, and whether it means the same, or at least a parallel disorder, in some animal in pig, are indeterminate questions. [LEPER.] The prohibition on eating fat was salubrious in a respect

at the earliest period of the latter, and connects it with the efforts of some "den Pentateuch richtig und die Ideen des Zendavesta recht alt zu machen." See UNCLEANNESS

for other resemblances between Persian and Hebrew ritual.
^a Winer also refers to *Abels Zera*, xl. 2-6, V. 2. Hottinger, *Leg. Hebr.* 117, 141.

where akin diseases are frequent and virulent, and that on blood had, no doubt, a similar tendency. The case of animals dying of themselves needs no remark: the mere wish to ensure avoiding disease, in case they had died in such a state, would dictate the rule. Yet the beneficial tendency is veiled under a ceremonial difference, for the "stranger" dwelling by the Israelite was allowed it, although the latter was forbidden. Thus is their distinctness before God, as a nation, ever put prominently forward, even where more common motives appear to have their turn. As regards the animals allowed for food, comparing them with those forbidden, there can be no doubt on which side the balance of wholesomeness lies. Nor would any dietetic economist fail to pronounce in favour of the Levitical dietary code as a whole, as ensuring the maximum of public health, and yet of national distinctness, procured, however, by a minimum of the inconvenience arising from restriction.

Bochart's *Hierozoicon*; Forskal's *Descriptiones Animalium, etc., quae in Itinere Orientali Observavit*, with his *Icones Rerum Naturalium*, and Rosenmüller's *Handbuch der Bibl. Alterthumskunde*, vol. iv., *Natural History*, may be consulted on some of the questions connected with this subject; also more generally, Moses Maimonides, *De Cibus Vetitis*; Reinhard, *De Cibus Hebraeorum Prohibitis*. [H. H.]

UNCLEANNESS. The distinctive idea attached to ceremonial uncleanness among the Hebrews was, that it cut a person off for the time from social privileges, and left his citizenship among God's people for the while in abeyance. It did not merely require by law a certain ritual of purification, in order to enhance the importance of the priesthood, but it placed him who had contracted an uncleanness in a position of disadvantage, from which certain ritualistic acts alone could free him. These ritualistic acts were primarily the means of recalling the people to a sense of the personality of God, and of the reality of the bond in which the Covenant had placed them with him. As regards the nature of the acts themselves, they were in part purely ceremonial, and in part had a sanitary tendency; as also had the personal isolation in which the unclean were placed, acting to some extent as a quarantine, under circumstances where infection was possible or supposable. It is remarkable that, although many acts having no connexion specially with cleansing entered into the ritual, the most frequently enjoined method of removing ceremonial pollution was that same washing which produces physical cleanliness. Nor can we adequately comprehend the purport and spirit of the Lawgiver, unless we recognize on either side of the merely ceremonial acts, often apparently enjoined for the sake of solemnity alone, the spiritual and moral benefits on the one side, of which they speak in shadow only, and the physical correctives or preventives on the other, which they often in substance conveyed. Maimonides and some other expositors, whilst they apparently forbid, in reality practise the rationalizing of many ceremonial precepts (*Wunderbar, Biblisch-Talmudische Medicin*, 2^{te} Heft, 4).

There is an intense reality in the fact of the Divine Law taking hold of a man by the ordinary infirmities of flesh, and setting its stamp, as it were, in the lowest clay of which he is moulded.

And indeed, things which would be unsuited to the spiritual dispensation of the New Testament, and which might even sink into the ridiculous by too close a contact with its sublimity, have their proper place in a law of temporal sanctions, directly affecting man's life in this world chiefly or solely. The sacredness attached to the human body is parallel to that which invested the Ark of the Covenant itself. It is as though Jehovah thereby would teach them that the "very hairs of their head were all numbered" before Him, and that "In His book were all their members written." Thus was inculcated, so to speak, a bodily holiness.* And it is remarkable indeed, that the solemn precept, "Ye shall be holy; for I am holy," is used not only where moral duties are enjoined, as in Lev. xix. 2, but equally so where purely ceremonial precepts are delivered, as in xi. 44, 45. So the emphatic and recurring period, "I am the Lord your God," is found added to the clauses of positive observances as well as to those relating to the grandest ethical barriers of duty. The same weight of veto or injunction seems laid on all alike; e.g. "Ye shall not make any cuttings in your flesh for the dead, nor print any marks upon you: I am the Lord," and "Thou shalt rise up before the hoary head, and honour the face of the old man, and fear thy God: I am the Lord" (xix. 28, 32). They had His mark set in their flesh, and all flesh on which that had passed had received, as it were, the broad arrow of the king, and was really owned by him. They were preoccupied by that mark of ownership in all the leading relations of life, so as to exclude the admission of any rival badge.

Nor were they to be only "separated from other people," but they were to be "holy unto God" (xx. 24, 26), "a kingdom of priests, and a holy nation." Hence a number of such ordinances regarding outward purity, which in Egypt they had seen used only by the priests, were made publicly obligatory on the Hebrew nation.

The importance to physical well-being of the injunctions which required frequent ablution, under whatever special pretext, can be but feebly appreciated in our cooler and damper climate, where there seems to be a less rapid action of the atmosphere, as well as a state of the frame less disposed towards the generation of contagion, and towards morbid action generally. Hence the obvious utility of reinforcing, by the sanction of religion, observances tending in the main to that healthy state which is the only solid basis of comfort, even though in certain points of detail they were burdensome. The custom of using the bath also on occasions of ceremonious introduction to persons of rank or importance (Ruth iii. 3; Judith x. 3), well explains the special use of it on occasions of religious ministrations, viewed as a personal appearing before God; whence we understand the office of the lavens among the arrangements of the Sanctuary (Ex. xxx. 18-21; 1 K. vii. 38, 39; comp. Ex. xix. 10, 14; 1 Sam. xvi. 5; Josh. iii. 5; 2 Chr. xxx. 17). The examples of parallel observances among the nations of antiquity, will suggest themselves easily to the classical student without special references. The closest approximation, however, to the Mosaic ritual in this respect, is said to be found in the code of Menu (Winer, "Reinigkeit," § 13, note).

* Compare the view of the modern Peruvians in this respect. Chardieu's *Voyages*, vol. II. 343, chap. iv. "Le corps se présente devant Dieu comme l'âme; il faut donc

qu'il soit pur, tant pour parler à Dieu que pour entrer dans le lieu consacré à son culte."

To the first was ordinarily referred the expiation of the law of uncleanness, as may be gathered from *Lev. ii. 11*. Uncleanness, as referred to man, may be arranged in three degrees; (1) that which defiled merely "until even," and was removed by bathing and washing the clothes at the end of it—such were all contacts with dead animals; (2) that graver sort which defiled for seven days, and was removed by the use of the "water of separation"—such were all defilements connected with the human corpse; (3) uncleanness from the morbid, puerperal, or menstrual state, lasting as long as that morbid state lasted—but see further below; and in the case of leprosy lasting often for life.

It suffices barely to notice the spiritual significance which the law of carnal ordinances veiled. This seems sometimes apparent, as in *Deut. xxi. 6-8* (comp. *Pa. xxvi. 6, lxiii. 13*), yet calling for a spiritual discernment in the student; and this is the point of relation between these "divers washings" and Christian Baptism (*1 Pet. iii. 21*). Those who lacked that gift were likely to confound the inward with the outward purification, or to fix their regards exclusively on the latter.

As the human person was itself the seat of a covenant-token, so male and female had each their ceremonial obligations in proportion to their sexual differences. Further than this the increase of the nation was a special point of the promise to Abraham and Jacob, and therefore their fecundity as parents was under the Divine tutelage, beyond the general notion of a curse, or at least of God's disfavour, as implied in barrenness. The "blessings of the breasts and of the womb" were His (*Gen. xlix. 25*), and the law takes accordingly grave and, as it were, paternal cognizance of the organic functions connected with propagation. Thus David could feel, "Thou hast possessed my reins: thou hast covered me in my mother's womb" (*Ps. cxxxix. 13*); and St. Paul found a spiritual analogy in the fact that "God had tempered the body together, having given more abundant honour to that part which lacked" (*1 Cor. xii. 24*). The changes of habit incident to the female, and certain abnormal states of either sex in regard to such functions, are touched on reverently, and with none of the Aesculapian coldness of science—for the point of view is throughout from the Sanctuary (*Lev. xv. 31*); and the purity of the individual, both moral and physical, as well as the preservation of the race, seems included in it. There is an emphatic reminder of human weakness in the fact of birth and death—man's passage alike into and out of his mortal state—being marked with a stated pollution. Thus the birth of the infant brought defilement on

the mother, which she, except so far as necessary, isolated by the nature of the circumstances, propagated around her. Nay, the conjugal act itself, or any act resembling it, though done involuntarily (*vv. 16-18*), entailed uncleanness for a day. The corpse, on the other hand, bequeathed a defilement of seven days to all who handled it, to the "tent" or chamber of death, and to sundry things within it. Nay, contact with one slain in the field of battle, or with even a human bone or grave, was no less effectual to pollute, than that with a corpse dead by the course of nature (*Num. xix. 11-18*). This shows that the source of pollution lay in the mere fact of death, and seems to mark an anxiety to fix a sense of the connexion of death, even as of birth, with sin, deep in the heart of the nation, by a wide pathology, if we may so call it, of defilement. It is as though the pool of human corruption was stirred anew by whatever passed into or out of it. For the special cases of male, female, and intersexual defilement, see *Lev. xii. xv. Wunderbar, Biblisch-Talmudische Medicin*, pt. iii. 19-20, refers to *Mishna, Zabim. ii. 2, Nasir, ix. 4*, as understanding by the symptoms mentioned in *Lev. xv. 2-8* the gonorrhoea benigna. The same authority thinks that the plague "for Peor's sake" (*Num. xvi. 1, 8, 9; Deut. iv. 3; Josh. xxii. 17*), was possibly a syphilitic affection derived from the Moabites. [LEUSE; MEDICINE.]

The duration of defilement caused by the birth of a female infant, being double that due to a male, extending respectively to eighty^a and forty days in all (*Lev. xii. 2-5*), may perhaps represent the woman's heavier share in the first sin and first curse (*Gen. iii. 16; 1 Tim. ii. 14*). For a man's "issue," besides the uncleanness while it lasted, a probation of seven days, including a washing on the third day, is prescribed. Similar was the period in the case of the woman, and in that of intercourse with a woman so affected (*Lev. xv. 13, 28, 24*). Such an act during her menstrual separation^d was regarded as incurring, beyond uncleanness, the penalty of both the persons being cut off from among their people (*xx. 18*). We may gather from *Gen. xxxix. 35*, that such injunctions were agreeable to established traditional notions. The propagation of uncleanness from the person to the bed, saddle, clothes, &c., and through them to other persons, is apt to impress the imagination with an idea of the heinousness of such a state or the heinousness of such acts, more forcibly by far than if the defilement clove to the first person merely (*Lev. xv. 5, 6, 9, 12, 17, 20, 22-24, 26, 27*). It threw a broad marga around them, and warned all off by simply denoting boundaries. One expression in *ver. 8* seems to

^a Comp. *Herod. ii. 64*, where it appears that after such intercourse an Egyptian could not enter a sanctuary without first bathing.

^c Ancient Greek physicians assert that, in southern countries, the symptoms of the puerperal state continue longer when a woman has borne a daughter than when a son. *Michaëlis (Smith's Translation)*, Art. 214.

^d Winer quotes a remarkable passage from *Pliny*, *vi. 11*, specifying the mysteriously mischievous properties ascribed in popular superstition to the menstrual flux; e.g., buds and fruits being blighted, steel blunted, dogs driven mad by it, and the like. But *Pliny* has evidently raked together all sorts of "old wives' fables," without any attempt at testing their truth, and is therefore utterly untrustworthy. More to the purpose is his quotation of *Haller, Elem. Physic. vi. 148*, to the effect that this opinion of the virulent and baneful effects of

this secretion proceeded from Asia, and was imported into Europe by the Arabians; which, however, lacks due foundation, and which *Pliny's* language so far contradicts. The laws of *Moses* are said to be more stringent on this head than the *Mosaic*. The menstrual affection began at an earlier age, and has periods of longer duration than oriental women than with those of our own climate. That Greek religion recognized some of the Levitical prohibitions is plain from *Eurip. Iphig. Taur. 380* foll., where we read of a goddess—*Ἥρα, Ἀρτέμις μὲν τοῦ τοῦ ἀφύου φόνου, ἡ καὶ λαχέας, ἡ νεαρὸν θύῃ χαρμῶν, ὅσους ἀνέργει, μυστέρον δὲ φρονέει*. A fragment of the same poet, adduced by *Mr. Paley ad loc. cit.*, is even more closely in point. It is, *ὁλόκληρον δ' ἔχει εὐφρανὴν φέρει γένεσιν τε Ἀρτέμιον καὶ νεαρὸν ἄνθρωπον, τὸν τὴν φύσιν βρώσιν ἐκείνην ἀνέργει*. *Comp. also Theophr. Char. 12.*

have misled Winer into supposing that an issue of rheum (*Schleimfluss*) was perhaps intended. That "spitting," in some cases where there was no disease in question, conveyed defilement, seems implied in Num. xii. 14, and much more might such an act so operate, from one whose malady made him a source of pollution even to the touch.

As regards the propagation of uncleanness the Law of Moses is not quite clear. We read (Num. xix. 22), "Whatsoever the unclean person toucheth shall be unclean;" but there uncleanness from contact with the corpse, grave, &c., is the subject of the chapter which the injunction closes; and this is confirmed by Hagg. ii. 13, where "one that is unclean by a dead body" is similarly expressly mentioned. Also from the command (Num. v. 2-4) to "put the unclean out of the camp;" where the "leper," the one "that hath an issue," and the one "defiled by the dead," are particularized, we may assume that the minor pollution for one day only was not communicable, and so needed not to be "put forth." It is observable also that the *major* pollution of the "issue" communicated by contact the *minor* pollution only (Lev. xv. 5-11). Hence may perhaps be deduced a tendency in the contagiousness to exhaust itself; the minor pollution, whether engendered by the major or arising directly, being non-communicable. Thus the major itself would expire after one remove from its original subject. To this pertains the distinction mentioned by Lightfoot (*Hor. Hebr. on Matt. xv. 2*), viz. that between *טמא* "unclean," and *פסול* "profane" or "polluted," in that the latter does not pollute another beside itself nor propagate pollution. In the ancient commentary on Num. known as "Siphri" (*op. Ugol. Thez. xv. 346*), a greater transmissibility of polluting power seems assumed, the defilement being there traced through *three* removes from the original subject of it; but this is no doubt a Rabbinical extension of the original Levitical view.

Michaelis notices a medical tendency in the restriction laid on coition, whereby both parties were unclean until even; he thinks, and with some reason, that the law would operate to discourage polygamy, and, in monogamy, would tend to preserve the health of the parents and to provide for the healthiness of the offspring. The uncleanness similarly imposed upon self-pollution (Lev. xv. 16; Deut. xxiii. 10), even if involuntary, would equally exercise a restraint both moral and salutary to health, and suggest to parents the duty of vigilance over their male children (Michaelis, *Art. ccxiv.-ccvii.*).

With regard to uncleanness arising from the lower animals, Lightfoot (*Hor. Hebr. on Lev. xi.-xv.*) remarks, that all which were unclean to touch when dead were unclean to eat, but not conversely; and that all which were unclean to eat were unclean to sacrifice, but not conversely; since "*multa edere licet quae non sacrificari, et multa tangere licet quae non edere.*" For uncleanness in matters of food see **UNCLEAN MEATS**. All animals, however, if dying of themselves, or eaten with the blood, were unclean to eat. [**BLOOD.**] The carcass also of any animal unclean as regards diet, however dying, defiled whatever person it, or any part of it, touched. By the same touch any garment, sack, skin, or vessel, together with its con-

tents, became unclean, and was to be purified by washing or scouring; or if an earthen vessel, was to be broken, just as the Brahmins break a vessel out of which a Christian has drunk. Further, the water in which such things had been purified communicated their uncleanness; and even seed for sowing, if wetted with water, became unclean by touch of any carrion, or unclean animal when dead. All these defilements were "until even" only, save the eating "with the blood;" the offender in which respect was to "be cut off" (Lev. xi. xvii. 14).

It should further be added, that the same sentence of "cutting off," was denounced against all who should "do presumptuously" in respect even of minor defilements; by which we may understand all contempt of the legal provisions regarding them. The comprehensive term "defilement," also includes the contraction of the unlawful marriages and the indulgence of unlawful lusts, as denounced in Lev. xviii. Even the sowing heterogeneous seeds in the same plot, the mixture of materials in one garment, the sexual admixture of cattle with a diverse kind, and the ploughing with diverse animals in one team, although not formally so classed, yet seem to fall under the same general notion, save in so far as no specified term of defilement or mode of purification is prescribed (Lev. xix. 19; Deut. xxii. 9-11; comp. Michaelis, as above, *ccxx.*). In the first of these cases the fruit is pronounced "defiled," which Michaelis interprets as a consecration, i. e. confiscation of the crop for the uses of the priests.

The fruit of trees was to be counted "as uncircumcised," i. e. unclean for the first three years, in the fourth it was to be set apart as "holy to praise the Lord withal," and eaten commonly not till the fifth. Michaelis traces an economic effect in this regulation, it being best to pluck off the blossom in the early years, and not allow the tree to bear fruit till it had attained to some maturity (*ibid.* *ccxxii.*).

The directions in Deut. xxiii. 10-13, relate to the avoidance of impurities in the case of a host encamped, as shown in ver. 9, and from the mention of "enemies" in ver. 14. The health of the army would of course suffer from the neglect of such rules; but they are based on no such ground of expediency, but on the scrupulous ceremonial purity demanded by the God whose presence was in the midst of them. We must suppose that the rule which expelled soldiers under certain circumstances of pollution from the camp for a whole day, was relaxed in the presence of an enemy, as otherwise it would have placed them beyond the protection of their comrades, and at the mercy of the hostile host. As regards the other regulation, it is part of the teaching of nature herself that an assembled community should reject whatever the human body itself expels. And on this ground the Levitical Law seems content to let such a matter rest, for it annexes no stated defilement, nor prescribes any purification.

Amongst causes of defilement should be noticed the fact that the ashes of the red heifer, burnt whole, which were mixed with water and became the standing resource for purifying uncleanness in the second degree, themselves became a source of defilement to all who were *clean*, even as of purification

* The passage in the Latin version is, "*Si vasa quae tangunt hominem, qui tangat vasa, quae tangant mortuum, sunt immunda.*" &c.

† Bishop Colenso appears to have misapprehended this, as

though it were required of the host of Israel &c. the whole body of the people, throughout the whole of their wandering in the wilderness. *The Pentateuch*, &c. ch. vi

to the unclean, and so the water. Thus the priest and Levite, who administered this purification in their respective degrees, were themselves made unclean thereby, but in the first or lightest degree only (Num. xix. 7, foll.). Somewhat similarly the scape-goat, who bore away the sins of the people, defiled him who led him into the wilderness, and the bringing forth and burning the sacrifice on the Great Day of Atonement had a similar power. This lightest form of uncleanness was expiated by bathing the body and washing the clothes. Besides the water of purification made as aforesaid, men and women in their "issues," were, after seven days, reckoned from the cessation of the disorder, to bring two turtle-doves or young pigeons to be killed by the priests. The purification after child-bed is well known from the N. T.; the law, however, primarily required a lamb and a bird, and allowed the poor to commute for a pair of birds as before. That for the leper declared clean consisted of two stages: the first, not properly sacrificial, though involving the shedding of blood, consisted in bringing two such birds, the one of which the priest killed over spring-water with which its blood was mingled, and the mixture sprinkled seven times on the late leper, with an instrument made of cedar-wood, scarlet wool, and hyssop; the living bird was then dipped in it, and let fly away, symbolizing probably the liberty to which the leper would be entitled when his probation and sacrifice were complete, even as the slaughtered bird signified the discharge of the impurities which his blood had contained during the diseased state. The leper might now bathe, shave himself, and wash his clothes, and come within the town or camp, nor was every place which he entered any longer polluted by him (Mishna, *Negaim*, xiii. 11; *Gitin*, i. 4), he was, however, relegated to his own house or tent for seven days. At the end of that time he was scrupulously to shave his whole body, even to his eyebrows, and wash and bathe as before. The final sacrifice consisted of two lambs, and an ewe asleep of the first year with flour and oil, the poor being allowed to bring one lamb and two birds as before, with smaller quantities of flour and oil. For the detail of the ceremonial, some of the features of which are rather singular, see Lev. xiv. Lepers were allowed to attend the synagogue worship, where separate seats were assigned them (*Negaim*, xiii. 12).

All these kinds of uncleanness disqualified for holy functions: as the layman so affected might not approach the congregation and the sanctuary, so any priest who incurred defilement must abstain from the holy things (Lev. xxi. 2-8). The High-Priest was forbidden the customary signs of mourning for father or mother, "for the crown of the anointing oil of his God is upon him" (Lev. xxi. 10-12), and beside his case the same prohibition seems to have been extended to the ordinary priests. At least we have an example of it in the charge given to Eleazar and Ithamar on their brethren's death (Lev. x. 6). From the specification of "father or mother," we may infer that he was permitted to mourn for his wife, and so Maimonides (*de Luctu*, cap. ii., iv.,

v.) explains the text. Further, from the special prohibition of Ezekiel, who was a priest, to mourn for his wife (Ez. xxiv. 15, foll.), we know that a mourn for a wife was generally permitted to the priests. Among ordinary Israelites, the man or woman who had an issue, or the latter while in the menstrual or puerperal state, might not, according to the Rabbins, enter even the mount or which the Temple stood; nor might the intra-mural space be entered by any Israelite in mourning. Is Jerusalem itself, according to the same authorities, a dead body might not be allowed to pass the night, nor even the bones of one be carried through its streets; neither was any cultivation allowed there, for fear of the dung, &c., to which it might give rise (Maimonides, *Consuet. de Temp.* cap. vii. xiv.-xvi.). No bodies were to be interred within towns, unless seven chief men, or the public voice, bade the interment there; and every tomb within a town was to be carefully walled in (*Sidd.* xiii.). If a man in a state of pollution presumed to enter the sanctuary, he was obliged to offer a sacrifice as well as suffer punishment. The sacrifice was due under the notion that the pollution of the sanctuary needed expiation, and the punishment was either whipping, the "rebel's beating," which meant leaving the offender to the mercies of the mob, "cutting off from the congregation," or death "by the hand of heaven" (Lightfoot, *Hor. Hebr.* on Levit. xv.; Ugolini, *Thes.* xvi. 126).

As regards the special case of the leper, as LEPROSY. To the remarks there made, it may be added that the priests, in their contact with the leper to be adjudged, were exempted from the law of defilement; that the garb and treatment of the leper seems to be that of one dead in the eye of the Law, or rather a perpetual mourner for his own estate of death with "clothes rent and head bare," the latter being a token of profound affliction and prostration of spirit among an Oriental people which no conventional token among ourselves can adequately parallel. The fatal cry, *KOD KOD* "unclean, unclean!" was uttered not only by the leper, but by all for whose uncleanness no remedy could be found (*Periclyta*, §2; *Ugol. Thes.* xv. 40). When we consider the aversion to leprosy contact which prevailed in Jewish society, and that whatever the leper touched was, as if touched by a corpse, defiled seven days, we see the happy significance of our Lord's selecting the touch as his means of healing the leper (Lightfoot, *Hor. Hebr.* on Matt. viii. 2); as we also appreciate better the bold faith of the woman, and how daringly she overstepped conventional usage based on the letter of the Law, who having the "issue of blood," hitherto incurable, "came behind him and touched the hem of his garment," confident that not pollution to him but cleansing to herself would be the result of that touch (Luke viii. 43, foll.).

As regards the analogies which the ceremonies of other Oriental nations offers, it may be mentioned that amongst the Arabs the touching a corpse still defiles (Burckhardt, 80). Beyond this, M. Chardin in his account of the religion of the Per-

* i. e. Conveying in symbol only a release from the state to which the leper, whilst such, was sentenced. It is probable, however, that the duality of the symbol arose from the natural impossibility of representing life and death in the same creature, and that both the birds involve a complete representation of the Death, Resurrection, and Ascension which procure the Christian

Atonement. This would of course, however, escape the notice of the worshipper. Christ, with His own blood "entered the holy places not made with hands," as the living bird soared up to the visible firmament with the blood of its fellow. We may compare the two acts completing apparently one similar joint-symbol on the day of Atonement.

nans (*Voyages en Perse*, vol. ii. 348, foll.), enters into particulars which show a singularly close correspondence with the Levitical code. This will be seen by quoting merely the headings of some of his chapters and sections. Thus we find under "chap. iv. 1^{re} partie, Des purifications qui se font avec d'eau. 2^{de} partie, De l'immondicité; 1^{re} section, De l'impureté qui se contracte *semine coitus*; 2^{de} section, De l'impureté qui arrive aux femmes par les pertes de sang, De l'impureté des pertes de sang ordinaires, De l'impureté des pertes de sang extraordinaires, De l'impureté des pertes de sang des couches. 3^{eme} partie, De la purification des corps morts." We may compare also with certain Levitical precepts the following: "Si un chien boit dans un vase ou lèche quelque plat, il faut écurer le vase avec de la terre nette, et puis le laver deux fois d'eau nette, et il sera net." It is remarkable also that these precepts apply to the people not *quâ* they are Mahomedans, but *quâ* they are Persians, as they are said to shun even Mahomedans who are not of the same ritual in regard to these observances.

For certain branches of this subject the reader may be referred to the treatises in the Mishna named *Niddah* (*menstruada*), *Parah* (*vacca rufa*), *Tehoroth* (*Puritates*), *Zabbin* (*fluxu laborantes*), *Celim* (*vasa*), *Mucath Arah* (*arborum præputia*); also to Maimon. lib. v. *Issure Biath* (*prohibitæ coitiones*), *Niddah* (*ut sup.*), *Maccaloth Assuroth* (*ovib. prohibiti*). [H. H.]

UNDERGIRDING, Acts xxvii. 17. [SHIP, p. 1283a.]

UNICORN (𐤒𐤍, *rédm*; 𐤒𐤍𐤕, *rédm*; or 𐤒𐤍, *rédm*; *μυνοκέρας*, *adpós*: *rhinoceros*, *unicornis*), the unhappy rendering by the A. V., following the LXX., of the Hebrew *Rédm*, a word which occurs seven times in the O. T. as the name of some large wild animal. More, perhaps, has been written on the subject of the unicorn of the ancients than on any other animal, and various are the opinions which have been given as to the creature intended. The *Rédm* of the Hebrew Bible, however, has nothing at all to do with the one-horned animal mentioned by Ctesias (*Indica*, iv. 25-27). Aelian (*Nat. Anim.* xvi. 20), Aristotle (*Hist. Anim.* ii. 2, §§), Pliny (*N. H.* viii. 21), and other Greek and Roman writers, as is evident from Deut. xxxiii. 17, where, in the blessing of Joseph, it is said, "His glory is like the firstling of his bullock, and his horns are like the horns of a unicorn" (𐤒𐤍𐤕 *rédm*), not, as the text of the A. V. renders it, "the horns of unicorns." The two horns of the *Rédm* are "the ten thousands of Ephraim and the thousands of Manasseh"—the two tribes which sprang from *one*, i. e. Joseph, as two horns from one head. This text, most appropriately referred to by Schultens (*Comment. in Job.* xxxix. 9), puts a one-horned animal entirely out of the question, and in consequence disposes of the opinion held by Bruce (*Trav.* v. 89) and others, that some species of rhinoceros is denoted, or that maintained by some writers that the *Rédm* is identical with some one-horned animal *said* to have been seen by travellers in South Africa and in Thibet (see Barrow's *Travels in S. Africa*, i. 312-318, and *Asiatic Journal*, xi. 154), and identical with the veritable unicorn of Greek and Latin writers! Bochart (*Hieroz.* ii. 335) contends that the Hebrew *Rédm* is identical with the Arabic *Būn* (بوم), which is usually referred to

the *Oryx leucoryx*, the white antelope of North Africa, and at one time perhaps an inhabitant of Palestine. Bochart has been followed by Rosenmüller, Winer, and others. Arnold Boot (*Animad. Sacr.* iii. 8, Lond. 1644), with much better reason, conjectures that some species of *Urus* or wild-ox is the *Rédm* of the Hebrew Scriptures. He has been followed by Schultens (*Comment. in Jobum* xxxix. 9, who translates the term by *Bos sylvestris*: this learned writer has a long and most valuable note on this question), by Parkhurst (*Hob. Lex.* s. v. 𐤒𐤍). Maurer (*Comment. in Job.* i. c.), Dr. Harris (*Nat. Hist. of the Bible*), and by Cary (*Notes on Job.* i. c.). Robinson (*Bib. Res.* ii. 412) and Gesenius (*Thes.* s. v.) have little doubt that the buffalo (*Bubalus bubalus*) is the *Rédm* of the Bible. Before we proceed to discuss these several claimants to represent the *Rédm*, it will be well to note the Scriptural allusions in the passages where the term occurs. The great strength of the *Rédm* is mentioned in Num. xxiii. 22, Job xxxix. 11; his having two horns in Deut. xxxiii. 17; his fierce nature in Ps. xxii. 21; his indomitable disposition in Job xxxix. 9-11; the active and playful habits of the young animal are alluded to in Ps. xxix. 6; while in Is. xxiv. 8, 7, where Jehovah is said to be preparing "a sacrifice in Bozrah," it is added, "the *Rédm* shall come down, and the bullocks with the bulls."

The claim of any animal possessed of a single horn to be the *Rédm* has already been settled, for it is manifestly too much to assume, as some writers have done, that the Hebrew term does not always denote the same animal. Little can be urged in favour of the rhinoceros, for even allowing that the two-horned species of Abyssinia (*R. bicornis*) may have been an inhabitant of the woody districts near the Jordan in Biblical times, this *pachyderm* must be out of the question, as one which would have been forbidden to be sacrificed by the Law of Moses, whereas the *Rédm* is mentioned by Isaiah as coming down with bullocks and rams to the Lord's sacrifice. "Omnia animalia," says Rosenmüller (*Schol. in Is.* i. c.), "ad sacrificia idonea in unum congregantur." Again, the skipping of the young *Rédm* (Ps. xxix. 6) is scarcely compatible with the habits of a rhinoceros. Moreover this animal when unmolested is not generally an object of much dread, nor can we believe that it ever existed so plentifully in the Bible lands, or even would have allowed itself to have been sufficiently often seen so as to be the subject of frequent attention, the rhinoceros being an animal of retired habits.

With regard to the claims of the *Oryx leucoryx*, it must be observed that this antelope, like the rest of the family, is harmless unless wounded or hard pressed by the hunter, nor is it remarkable for the possession of any extraordinary strength. Figures of the *Oryx* occur frequently on the Egyptian sculptures, "being among the animals tamed by the Egyptians and kept in great numbers in their preserves" (Wilkinson's *Anc. Egypt.* i. 227, ed. 1854). Certainly this antelope can never be the fierce indomitable *Rédm* mentioned in the Book of Job.

Considering therefore that the *Rédm* is spoken of as a two-horned animal of great strength and ferocity, that it was evidently well known and often seen by the Jews, that it is mentioned as an animal fit for sacrificial purposes, and that it is frequently associated with bulls and oxen, we think there can be no doubt that some species of wild-ox is intended. The allusion in Ps. xcii. 10, "Bui-

thou shalt lift up, as a *Ridym*, my horn," seems to point to the mode in which the *Bovidae* use their horns, lowering the head and then tossing it up. But it is impossible to determine what particular species of wild-ox is signified. At present there is no existing example of any wild bovine animal found in Palestine; but negative evidence in this respect must not be interpreted as affording testimony against the supposition that wild cattle formerly existed in the Bible lands. The lion, for instance, was once not unfrequently met with in Palestine, as is evident from Biblical allusions, but no traces of living specimens exist now. Dr. Roth found lions' bones in a gravel bed of the Jordan some few years ago, and it is not improbable that some future explorer may succeed in discovering bones and skulls of some huge extinct *Urus*, allied perhaps to that gigantic ox of the Hercynian forests which Caesar (*Bell. Gall.* vi. 20) describes as being of a stature scarcely below that of an elephant, and so fierce as to spare neither man nor beast should it meet with either. "Notwithstanding assertions to the contrary," says Col. Hamilton Smith (*Kitto's Cycl. art. "Reem"*), "the *Urus* and the *Bison* were spread anciently from the Rhine to China, and existed in Thrace and Asia Minor; while they, or allied species, are still found in Siberia and the forests both of Northern and Southern Persia. Finally, though the Buffalo was not found anciently farther west than Aircoria, the gigantic *Gaur* (*Bubos gaurus*) and several congeners are spread over all the mountain wildernesses of India and the Sheriff-al-Wady; and a further colossal species roams with other wild bulls in the valleys of Atlas."

Some have conjectured that the *Ridm* denotes the wild buffalo. Although the *Chamae*, or tame buffalo, was not introduced into Western Asia until the Arabian conquest of Persia, it is possible that some wild species, *Bubalus arnee*, or *B. brachycornis*, may have existed formerly in Palestine. We are, however, more in favour of some gigantic *Urus*.^a

Numerous references as to the *μνοκερως* of the ancients will be found in Bochart (*Hieroz.* iii. cap. 27), Winer (*Bib. Realw.* "Einhorn"); but no further notice of this point is taken here except to observe that the more we study it the more convinced we are that the animal is fabulous. The supposed unicorns of which some modern travellers speak have never been seen by trustworthy witnesses.^b

[W. H.]

UN'NI. 1. (נִנְי: 'עליוֹתָא, 'חלמֹות; FA Ani: Ani.) One of the Levite doorkeepers (A. V. "porters") appointed to play the psaltery "on alamoeth" in the service of the sacred Tent, as settled by David (1 Chr. xv. 18, 20).

2. (נִנְי, but in *Keri* נִנְי: Vat. and Alex. omit; FA *Iana*: *Anni*.) A second Levite (unless the family of the foregoing be intended) concerned in the sacred office after the Return from Babylon (Neh. xii. 9).

U'PHAZ (יִפְחָז: מִפְחָז, 'אֶפְחָז: *Ophar*, *obryzum*, Jer. x. 9; Dan. x. 5. [OPHIS, p. 637 b.]

^a There appears to be no doubt that the ancient lake-inhabitants of Switzerland towards the close of the stone period succeeded in taming the *urus*. "In a tame state," says Sir C. Lyell (*Antiquity of Man*, p. 24), "its bones were somewhat less massive and heavy, and its horns were somewhat smaller than in wild individuals."

^b The reader will find a full discussion of the "Unicorn

UR (נִר: נִרָא: *Ur*), occurs in Genesis only and is there mentioned as the land of Haran's nativity (Gen. xi. 28), the place from which Tine and Abraham started "to go into the land of Canaan" (xi. 31). It is called in Genesis "Ur of the Chaldeans" (נִרָא נִרָא), while in the Act. St. Stephen places it, by implication, in Mesopotamia (vii. 2, 4). These are all the mentions which Scripture furnishes as to its locality. As they are clearly insufficient to fix its site, the chief traditions and opinions on the subject will be first considered, and then an attempt will be made to decide, by the help of the Scriptural notices, between them.

One tradition identifies Ur with the modern *Orfa*. There is some ground for believing that this city, called by the Greeks *Edessa*, had also the name of *Orpha* as early as the time of Isidore (A.D. 150); and the tradition connecting it with Abraham is perhaps not later than St. Ephrem (A.D. 330-370), who makes Nimrod king of Edessa, among other places (*Comment. in Gen. Op. vol. i. p. 58, B.*). According to Pocock (*Description of the East*, vol. i. p. 159), that Ur is Edessa or Orfa is "the universal opinion of the Jews;" and it is also the local belief, as is indicated by the title, "Mosque of Abraham," borne by the chief religious edifices of the place, and the designation, "Lake of Abraham the Beloved," attached to the pond in which are kept the sacred fish (*Almsworth's Travels in the Tract, &c.* p. 64; comp. Pocock, i. 159, and Niebuhr, *Voyage en Arabie*, p. 330).

A second tradition, which appears in the Talmud, and in some of the early Arabian writers, finds Ur in *Warka*, the *Ὀρχή* of the Greeks, and probably the Erech of Holy Scripture (called *Ὀρέχ* by the LXX.). This place bears the name of *Hurat* in the native inscriptions, and was in the country known to the Jews as "the land of the Chaldeans."

A third tradition, less distinct than either of these, but entitled to at least equal attention, distinguishes Ur from *Warka*, while still placing it in the same region (see *Journal of Asiatic Society*, vol. xii. p. 481, note 2). There can be little doubt that the city whereto this tradition points is that which appears by its bricks to have been called *Hur* by the natives, and which is now represented by the ruins at *Mugheir*, or *Umgheir*, on the right bank of the Euphrates, nearly opposite to its junction with the *Shat-el-Hie*. The oldest Jewish tradition which we possess, that quoted by Eusebius from Eupolemus* (*Præp. Ev. ix. 17*), who lived about B.C. 150, may be fairly said to intend the place; for by identifying Ur (*Uria*) with the Babylonian city, known also as *Camarina* and *Thakiasopolis*, it points to a city of the Moon, which *Hur* was—*Kamar* being "the Moon" in Arabic, and *Khaldi* the same luminary in the Old Armenian.

An opinion, unsupported by any tradition, remains to be noticed. Bochart, Calmet, Bunsen, and others, identify "Ur of the Chaldees" with a place of the name, mentioned by a single late writer—Ammianus Marcellinus—as "a castle" existing in his day in Eastern Mesopotamia, between *Hatra* (*El Hadhr*) and *Nisibis* (*Amm. Marc.*

of the Ancients" in the writer's article in the *Ann. and Mag. of Nat. Hist.* November, 1862.

* The words of Eusebius are: *Ἰστορίαι γένεσ. φερεται [Ἐνδολιμωρ] ἐν πόλει τῆς Βαβυλωνίως Καρμαρίης, ἐν τούτῳ λέγουσιν πόλιν Ὀρέχην, ἣν καὶ διὰ μαθηματικῶν καὶ Χελδαιοῦ πόλιν, ἐν τούτῳ δεκάτῳ γενεῇ γένεσθαι Ἀβραάμ.*

xiv. 8). The chief arguments in favour of this site seem to be the identity of name and the position of the place between Arrapachitis, which is thought to have been the dwelling-place of Abraham's ancestors in the time of Arphaxad, and Haran (*Harran*), whither he went from Ur.

It will be seen, that of the four localities thought to have a claim to be regarded as Abraham's city, two are situated in Upper Mesopotamia, between the Mons Masius and the Sinjar range, while the other two are in the alluvial tract near the sea, at least 400 miles further south. Let us endeavour first to decide in which of these two regions Ur is more probably to be sought.

That Chaldaea was, properly speaking, the southern part of Babylonia, the region bordering upon the Gulf, will be admitted by all. Those who maintain the northern emplacement of Ur argue, that with the extension of Chaldaean power the name travelled northward, and became co-extensive with Mesopotamia; but, in the first place, there is no proof that the name Chaldaea was ever extended to the region above the Sinjar; and secondly, if it was, the Jews at any rate mean by Chaldaea exclusively the lower country, and call the upper Mesopotamia or Padan-Aram (see Job i. 17; Is. xiii. 19, xliii. 14, &c.). Again, there is no reason to believe that Babylonian power was established beyond the Sinjar in these early times. On the contrary, it seems to have been confined to Babylonia Proper, or the alluvial tract below Hit and Tekerit, until the expedition of Chedorlaomer, which was later than the migration of Abraham. The conjectures of Ephraem Syrus and Jerome, who identify the cities of Nimrod with places in the upper Mesopotamian country, deserve no credit. The names all really belong to Chaldaea Proper. Moreover, the best and earliest Jewish authorities place Ur in the low region. Eusebius has been already quoted to this effect. Josephus, though less distinct upon the point, seems to have held the same view (*Ant.* i. 6). The Talmudists also are on this side of the question; and local traditions, which may be traced back nearly to the Hégira, make the lower country the place of Abraham's birth and early life. If *Orfah* has a Mosque and a Lake of Abraham, Cutha near Babylon goes by Abraham's name, as the traditional scene of all his legendary miracles.

Again, it is really in the lower country only that a name closely corresponding to the Hebrew *אור* is found. The cuneiform *Hur* represents *אור* letter for letter, and only differs from it in the greater strength of the aspirate. Isidore's *Orrha* (*Orrha*) differs from 'Ur considerably, and the supposed Ur of Ammianus is probably not Ur, but Adur.⁴

The argument that Ur should be sought in the neighbourhood of Arrapachitis and Seruj, because the names Arphaxad and Serug occur in the genealogy of Abraham (Bunsen, *Egypt's Place* &c., iii. 366, 367), has no weight till it is shown that the human names in question are really connected with the places, which is at present assumed somewhat boldly. Arrapachitis comes probably from *Arapkha*, an old Assyrian town of no great consequence on the left bank of the Tigris, above Nineveh, which has only three letters in common with Arphaxad (*אֲרַפְחָא*); and Seruj is a name which

does not appear in Mesopotamia till 'Christian era. It is rarely, if ever, extract geographical information from an historical genealogy; and certainly in the present case nothing seems to have been gained by the attempt to do so.

On the whole, therefore, we may regard it as tolerably certain that "Ur of the Chaldees" was a place situated in the real Chaldaea—the low country near the Persian Gulf. The only question that remains in any degree doubtful is, whether Warka or Mugheir is the true locality. These places are not far apart; and either of them is sufficiently suitable. Both are ancient cities, probably long anterior to Abraham. Traditions attach to both, but perhaps more distinctly to Warka. On the other hand, it seems certain that Warka, the native name of which was *Huruk*, represents the Erech of Genesis, which cannot possibly be the Ur of the same Book. Mugheir, therefore, which bore the exact name of 'Ur or Hur, remains with the best claim, and is entitled to be (at least provisionally) regarded as the city of Abraham.

If it be objected to this theory that Abraham, having to go from Mugheir to Palestine, would not be likely to take Haran (*Harran*) on his way, more particularly as he must then have crossed the Euphrates twice, the answer would seem to be, that the movement was not that of an individual but of a tribe, travelling with large flocks and herds, whose line of migration would have to be determined by necessities of pasturage, and by the friendly or hostile disposition, the weakness or strength of the tribes already in possession of the regions which had to be traversed. Fear of Arab plunderers (Job i. 15) may very probably have caused the emigrants to cross the Euphrates before quitting Babylonia, and having done so, they might naturally follow the left bank of the stream to the Belik, up which they might then proceed, attracted by its excellent pastures, till they reached Harran. As a pastoral tribe proceeding from Lower Babylonia to Palestine must ascend the Euphrates as high as the latitude of Aleppo, and perhaps would find it best to ascend nearly to *Bir*, Harran was but a little out of the proper route. Besides, the whole tribe which accompanied Abraham was not going to Palestine. Half the tribe were bent on a less distant journey; and with them the question must have been, where could they, on or near the line of route, obtain an unoccupied territory.

If upon the grounds above indicated *Mugheir* may be regarded as the true "Ur of the Chaldees," from which Abraham and his family set out, some account of its situation and history would seem to be appropriate in this place. It remains have been very carefully examined, both by Mr. Loftus and Mr. Taylor, while its inscriptions have been deciphered and translated by Sir Henry Rawlinson.

'Ur or Hur, now *Mugheir*, or *Um-Mugheir*, "the bitumen," or "the mother of bitumen," is one of the most ancient, if not the most ancient, of the Chaldaean sites hitherto discovered. It lies on the right bank of the Euphrates, at the distance of about six miles from the present course of the stream, nearly opposite the point where the Euphrates receives the *Shut-el-Hia* from the Tigris. It is now not less than 125 miles from the sea; but there are grounds for believing that it was anciently a maritime town,

⁴ The MS. reading is "Adur venere;" "ad Ur" is an emendation of the commentators. The former is to

be preferred, since Ammianus does not use "ad" after "venio."

Ruins of Temple at Mugheir (Lofth).

and that its present inland position has been caused by the rapid growth of the alluvium. The remains of buildings are generally of the most archaic character. They cover an oval space, 1000 yards long by 800 broad, and consist principally of a number of low mounds enclosed within an *enceinte*, which on most sides is nearly perfect. The most remarkable building is near the northern end of the ruins. It is a temple of the true Chaldaean type, built in stages, of which two remain, and composed of brick, partly sun-baked and partly baked, laid chiefly in a cement of bitumen. The bricks of this building bear the name of a certain *Uruth*, who is regarded as the earliest of the Chaldaean monumental kings, and the name may possibly be the same as that of Orichamus of Ovid (*Metaph.* iv. 212). His supposed date is B.C. 2000, or a little earlier. 'Ur was the capital of this monarch, who had a dominion extending at least as far north as Niffer, and who, by the grandeur of his constructions, is proved to have been a wealthy and powerful prince. The great temple appears to have been founded by this king, who dedicated it to the Moon-god, *Hurki*, from whom the town itself seems to have derived its name. *Iliji*, son of *Uruth*, completed the temple, as well as certain other of his father's buildings, and the kings who followed upon these continued for several generations to adorn and beautify the city. 'Ur retained its metropolitan character for above two centuries, and even after it became second to Babylon, was a great city, with an especially sacred character. The notions entertained of its superior sanctity led to its being used as a cemetery city, not only during the time of the early Chaldaean supremacy, but throughout the Assyrian and even the later Babylonian period. It is in the main a city of tombs. By far the greater portion of the space within the *enceinte* is occupied by graves of one kind or another, while outside the enclosure, the whole space for a distance of several hundred yards is a thickly-occupied burial-ground. It is believed that 'Ur was for 1800 years

a site to which the dead were brought from vast distances, thus resembling such places as *Kerkir* and *Nedjif*, or *Mesheh Ali*, at the present day. The latest mention that we find of 'Ur as an existing place is in the passage of Eupolemus already quoted, where we learn that it had changed its name, and was called Camarina. It probably fell into decay under the Persians, and was a mere ruin at the time of Alexander's conquests. Perhaps it was the place to which Alexander's informants alluded when they told him that the tombs of the old Assyrian kings were chiefly in the great marshes of the lower country (Arrian, *Exp. Alex.* vii. 22). [G. R.]

URBA'NE (Ὀὐρβανός: *Urbanus*). It would have been better if the word had been written **URBAN** in the Authorised Version. For unlearned readers sometimes mistake the sex of this Christian disciple, who is in the long list of those whom St. Paul salutes in writing to Rome (Rom. xvi. 9). We have no means, however, of knowing more about *Urbanus*, except, indeed, that we may reasonably conjecture from the words that follow (ὅτι συνεργάσθη ἡμῶν ἐν Χριστῷ) that he had been at some time in active religious co-operation with the Apostle. Each of those who are saluted just before and just after is simply called ὁ ἀγαπητός μου. The name is Latin. [J. S. H.]

URĪ (יְרִי: *Ūrēlas*, Ex. xxxi. 2; *Ūrēlas*, Ex. xxxv. 30, 2 Chr. i. 5; *Ūrēl*, 1 Chr. ii. 20; Alex. *Ūrēl*, except in 2 Chr.: *Ūrī*). 1. The father of Bezaleel one of the architects of the tabernacle (Ex. xxxi. 2, xxxv. 30, xxxviii. 22; 1 Chr. ii. 20; 2 Chr. i. 5). He was of the tribe of Judah, and grandson of Caleb ben-Hezron, his father being Hur, who, according to tradition, was the husband of Miriam.

2. ('*Abat*.) The father of Geber, Solomon's commissariat officer in Gilead (1 K. iv. 19).

3. ('*Ūbōd*; Alex. '*Ūbōd*.) One of the gatekeepers of the temple, who had married a foreign wife in the time of Ezra (Ezr. s. 24).

URIAH (יִרְיָה, "light of Jehovah;" *Oblias*: *Tris*). 1. One of the thirty commanders of the thirty bands into which the Israelite army of David was divided (1 Chr. xi. 41; 2 Sam. xxiii. 39). Like others of David's officers (Ittai of Gath; Ishbosheth the Canaanite, 2 Sam. xxi. 8, LXX.; Zalek the Ammonite, 2 Sam. xxiii. 37) he was a foreigner—a Hittite. His name, however, and his manner of speech (2 Sam. xi. 11) indicate that he had adopted the Jewish religion. He married Bathsheba, a woman of extraordinary beauty, the daughter of Eliam—possibly the same as the son of Ahithophel, and one of his brother officers (2 Sam. xxiii. 34); and hence, perhaps, as Professor Blunt conjectures (*Coincidences*, II. x.), Uriah's first acquaintance with Bathsheba. It may be inferred from Nathan's parable (2 Sam. xii. 3) that he was passionately devoted to his wife, and that their union was celebrated in Jerusalem as one of peculiar tenderness. He had a house at Jerusalem underneath the palace (2 Sam. xi. 2). In the first war with Ammon he followed Joab to the siege, and with him remained encamped in the open field (*ib.* 11). He returned to Jerusalem, at an order from the king, on the pretext of asking news of the war,—really in the hope that his return to his wife might cover the shame of his own crime. The king met with an unexpected obstacle in the austere, soldier-like spirit which guided all Uriah's conduct, and which gives us a high notion of the character and discipline of David's officers. He steadily refused to go home, or partake of any of the indulgences of domestic life, whilst the ark and the host were in booths and his comrades lying in the open air. He partook of the royal hospitality, but slept always at the gate of the palace till the last night, when the king at a feast vainly endeavoured to entrap him by intoxication. The soldier was overcome by the debauch, but still retained his sense of duty sufficiently to insist on sleeping at the palace. On the morning of the third day, David sent him back to the camp with a letter (as in the story of Bellerophon), containing the command to Joab to cause his destruction in the battle. Josephus (*Ant.* vii. 7, §1) adds, that he gave as a reason an imaginary offence of Uriah. None such appears in the actual letter. Probably to an unscrupulous soldier like Joab the absolute will of the king was sufficient.

The device of Joab was, to observe the part of the wall of Rabbath-Ammon, where the greatest force of the besieged was congregated, and thither, as a kind of forlorn hope, to send Uriah. A rally took place. Uriah and the officers with him advanced as far as the gate of the city, and were there shot down by the archers on the wall. It seems as if it had been an established maxim of Israelitish warfare not to approach the wall of a besieged city; and one instance of the fatal result was always quoted, as if proverbially, against it—the sudden and ignominious death of Abimelech at Thebes, which cut short the hopes of the then rising monarchy. This appears from the fact (as given in the LXX.) that Joab exactly anticipates what the king will say when he hears of the disaster.

Just as Joab had forewarned the messenger, the king broke into a furious passion on hearing of the loss, and cited, almost in the very words which Joab had predicted, the case of Abimelech. (The only variation is the omission of the name of the grandfather of Abimelech, which, in the LXX., is *Ner* instead of *Joah*.) The messenger, as instructed by Joab, calmly continued, and ended the story with

the words: "Thy servant also, Uriah the Hittite, is dead." In a moment David's anger is appeased. He sends an encouraging message to Joab on the unavailing chances of war, and urges him to continue the siege. It is one of the touching parts of the story that Uriah falls unconscious of his wife's dishonour. She hears of her husband's death. The narrative gives no hint as to her shame or remorse. She "mourned" with the usual signs of grief as a widow; and then became the wife of David (2 Sam. xi. 27).

Uriah remains to us, preserved by this tragical incident, an example of the chivalrous and devoted characters that were to be found amongst the Canaanites serving in the Hebrew army. [A. P. S.]

2. High-priest in the reign of Ahas (Is. viii. 2; 2 K. xvi. 10-16). We first hear of him as a witness to Isaiah's prophecy concerning Maher-shalal-hash-baz, with Zechariah, the son of Jeberchiah. He is probably the same as Urijah the priest, who built the altar for Ahas (2 K. xvi. 10). If this be so, the prophet summoned him as a witness probably on account of his position as high-priest, not on account of his personal qualities; though, as the incident occurred at the beginning of the reign of Ahas, Uriah's irreligious subserviency may not yet have manifested itself. When Ahas, after his deliverance from Rezin and Pekah by Tiglath-Pileser, went to wait upon his new master at Damascus, he saw there an altar which pleased him, and sent the pattern of it to Uriah at Jerusalem, with orders to have one made like it against the king's return. Uriah zealously executed the idolatrous command, and when Ahas returned, not only allowed him to offer sacrifices upon it, but basely complied with all his impious directions. The new altar was accordingly set in the court of the temple, to the east of where the brazen altar used to stand; and the daily sacrifices, and the burnt-offerings of the king and people, were offered upon it; while the brazen altar, having been removed from its place, and set to the north of the Syrian altar, was reserved as a private altar for the king to inquire by. It is likely, too, that Uriah's compliances did not end here, but that he was a consenting party to the other idolatrous and sacrilegious acts of Ahas (2 K. xvi. 17, 18, xxiii. 5, 11, 12; 2 Chr. xxviii. 23-25).

Of the parentage of Uriah we know nothing. He probably succeeded Azariah, who was high-priest in the reign of Uzziah, and was succeeded by that Azariah who was high-priest in the reign of Hezekiah. Hence it is probable that he was son of the former and father of the latter, it being by no means uncommon among the Hebrews, as among the Greeks, for the grandchild to have the grandfather's name. Probably, too, he may have been descended from that Azariah who must have been high-priest in the reign of Aha. But he has no place in the sacerdotal genealogy (1 Chr. vi. 4-15), in which there is a great gap between Amariah in ver. 11, and Shallum the father of Hilkiah in ver. 13. [HIGH-PRIEST, p. 810.] It is perhaps a legitimate inference that Uriah's line terminated in his successor, Azariah, and that Hilkiah was descended through another branch from Amariah, who was priest in Jehoshaphat's reign.

3. A priest of the family of Hekkoz (in A. V. wrongly Koz), the head of the seventh course of priests. (See 1 Chr. xxiv. 10.) It does not appear when this Urijah lived, as he is only named as the father or ancestor of Meremoth in the days of Ezra and Nehemiah (Ezr. viii. 28; Neh. xii. 4, 21). In Neh. his name is URIJAH. [A. C. H.]

URIAS (Οὐρίας: *Urias*). 1. URIAH, the husband of Bathsheba (Matt. i. 6).

2. URIJAH, 3 (1 Esd. ix. 43; comp. Neh viii. 4).

URIEL, "the fire of God," an angel named only in 2 Esdr. iv. 1, 36, v. 20, x. 28. In the record of these passages he is called "the archangel."

URIEL (Οὐριήλ: *Uriel*). 1. A Kohathite Levite, son of Tahath (1 Chr. vi. 24 [9]). If the genealogies were reckoned in this chapter from father to son, Uriel would be the same as Zephaniah in ver. 36; but there is no reason to suppose that this is the case.

2. Chief of the Kohathites in the reign of David (1 Chr. xv. 5, 11). In this capacity he assisted, together with 120 of his brethren, in bringing up the ark from the house of Obed-edom.

3. Uriel of Gibeah was the father of Maachah, or Michaiah, the favourite wife of Rehoboam, and mother of Abijah (2 Chr. xiii. 2). In 2 Chr. xi. 20 she is called "Maachah the daughter of Absalom;" and Josephus (*Ant.* viii. 10, §1) explains this by saying that her mother was Tamar, Absalom's daughter. Rashi gives a long note to the effect that Michaiah was called Maachah after the name of her daughter-in-law the mother of Aza, who was a woman of renown, and that her father's name was Uriel Abshalom. There is no indication, however, that Absalom, like Solomon, had another name, although in the Targum of R. Joseph on Chronicles it is said that the father of Maachah was called Uriel that the name of Absalom might not be mentioned.

URIJAH (יוריח: *Urias*). 1. Urijah the priest in the reign of Ahas (2 K. xvi. 10), probably the same as URIAH, 2.

2. (Οὐρία.) A priest of the family of Koz, or hak-Koz, the same as URIAH, 3.

3. (Οὐρίας: *Urias*.) One of the priests who stood at Ezra's right-hand when he read the Law to the people (Neh. viii. 4).

4. (יוריח: *Urias*). The son of Shemaiah of Kirjath-jearim. He prophesied in the days of Jehoiakim concerning the land and the city, just as Jeremiah had done, and the king sought to put him to death; but he escaped, and fled into Egypt. His retreat was soon discovered: Elnathan and his men brought him up out of Egypt, and Jehoiakim slew him with the sword, and cast his body forth among the graves of the common people (Jer. xxvi. 20-23). The story of Shemaiah appears to be quoted by the enemies of Jeremiah as a reason for putting him to death; and, as a reply to the instance of Micah the Morasthite, which Jeremiah's friends gave as a reason why his words should be listened to and his life spared. Such, at least, is the view adopted by Rashi. [W. A. W.]

URIM AND THUMMIM (אֲבִיבִים וְדִבְרֵי: *doctrina et veritas*).

1. (1.) When the Jewish exiles were met on their return from Babylon by a question which they had no data for answering, they agreed to postpone the settlement of the difficulty till there should rise

^a The exceptions to the consensus are just worth noticing. (1) Beilarmine wishing to defend the Vulg. translation, suggested the derivation of Urim from אֲבִיבִים = "to teach;" and Thummim from דִּבְרֵי = "to be true." (Buxtorf, *Diss. de Ur. et Th.*) (2) Thummim has been

URIM AND THUMMIM

up "a Priest with Urim and Thummim" (Ezr. ii. 63; Neh. vii. 65). The inquiry, what these Urim and Thummim themselves were, seems likely to wait as long for a final and satisfying answer. On every side we meet with confessions of ignorance—"Nou constat" (Kimchi), "Nescimus" (Aben-Ezra), "Difficile est invenire" (Augustine), varied only by wild and conflicting conjectures. It would be comparatively an easy task to give a catalogue of these hypotheses, and transcribe to any extent the learning which has gathered round them. To attempt to follow a true historical method, and so to construct a theory which shall, at least, include all the phenomena, is a more arduous, but may be a more profitable task.

(2.) The starting-point of such an inquiry must be from the words which the A. V. has left untranslated. It will be well to deal with each separately.

(A.) In *Urim*, Hebrew scholars, with hardly an exception, have seen the plural of אֵשׁ (=light or fire). The LXX. translators, however, appear to have had reasons which led them to another rendering than that of φῶς, or its cognates. They give ἡ δόξα (Ezr. xviii. 30; Ecclus. xiv. 10), and θεῶται (Num. xxvii. 21; Deut. xxxiii. 8; 1 Sam. xxviii. 6), while in Ezr. ii. 63, and Neh. vii. 65, we have respectively plural and singular participles of φωτίζω. In Aquila and Theodotus we find the more literal φωτισμοί. The Vulg., following the lead of the LXX., but going further astray, gives *doctrina* in Ezr. xviii. 30 and Deut. xxxiii. 8, omits the word in Num. xxvii. 21, paraphrases it by "*per sacerdotes*" in 1 Sam. xxviii. 6, and gives "*judicium*" in Ecclus. xiv. 10, as the rendering of δόξα. Luther gives *Licht*. The literal English equivalent would of course be "lights;" but the renderings in the LXX. and Vulg. indicate, at least, a traditional belief among the Jews that the plural form, as in Elohim and other like words, did not involve numerical plurality.

(B.) *Thummim*. Here also there is almost a consensus as to the derivation from דָּבָר (=perfection, completeness); but the LXX., as before, uses the closer Greek equivalent τέλειος but once (Ezr. ii. 63), and adheres elsewhere to ἀλήθεια; and the Vulg., giving "*perfectus*" there, in like manner gives "*veritas*" in all other passages. Aquila more accurately chooses τελειώσεις. Luther, in his first edition, gave *Völligkeit*, but afterwards rested in *Recht*. What has been said as to the plural of Urim applies here also. "Light and Perfection" would probably be the best English equivalent. The assumption of a *hendyadys*, so that the two words = "perfect illumination" (Carpsov, *App. Crit.* i. 5; Bähr, *Symbolik*, ii. p. 135), is unnecessary and, it is believed, unsound. The mere phrase, as such, leaves it therefore uncertain whether each word by itself denoted many things of a given kind, or whether the two taken together might be referred to two distinct objects, or to one and the same object. The presence of the article הַ, and yet more of the demonstrative הָאֵלֶּים before each, is rather in favour of distinctness. In Deut. xxxiii. 8, we have separately, "Thy Thummim and thy Urim," the first order being inverted. Urim is found alone in Num. xxvii. 21; 1 Sam. xxviii. 6; Thummim

derived from דָּבָר contr. דָּבָר = "a twin," on the theory that the two groups of gems, six on each side the breast plate, were what constituted the Urim and Thummim (R. Azarias, in Buxtorf, l. c.)

never by itself, unless with Züllig we find it in Pa. xvi. 5.

II. (1.) *Scriptural Statements*.—The mysterious words meet us for the first time, as if they needed no explanation in the description of the High-Priest's apparel. Over the EPHOD there is to be a "breastplate of judgment" (חֹשֶׁן דָּמִים, *hoshen damim*, *breastplate of judgment*), of gold, scarlet, purple, and fine linen, folded square and doubled, a "span" in length and width. In it are to be set four rows of precious stones, each stone with the name of a tribe of Israel engraved on it, that Aaron may "bear them upon his heart." Then comes a further order. Inside the breastplate, as the Tables of the Covenant were placed inside the Ark (the preposition *בְּ* is used in both cases, Ex. xxv. 16, xxviii. 30), are to be placed "the Urim and the Thummin," the Light and the Perfection; and they, too, are to be on Aaron's heart, when he goes in before the Lord (Ex. xxviii. 15-30). Not a word describes them. They are mentioned as things already familiar both to Moses and the people, connected naturally with the functions of the High-Priest, as mediating between Jehovah and His people. The command is fulfilled (Lev. viii. 8). They pass from Aaron to Eleazar with the sacred Ephod, and other pontificalia (Num. xx. 28). When Joshua is solemnly appointed to succeed the great hero-lawgiver, he is bidden to stand before Eleazar, the priest, "who shall ask counsel for him after the judgment of Urim," and this counsel is to determine the movements of the host of Israel (Num. xxvii. 21). In the blessings of Moses, they appear as the crowning glory of the tribe of Levi ("Thy Thummin and thy Urim are with thy Holy One"), the reward of the zeal which led them to close their eyes to everything but "the Law and the Covenant" (Deut. xxxiii. 8, 9). Once, and once only, are they mentioned by name in the history of the Judges and the monarchy. Saul, left to his self-chosen darkness, is answered "neither by dreams, nor by Urim, nor by prophet" (1 Sam. xxviii. 6). There is no longer a priest with Urim and Thummin (τοῖς *pharis* καὶ τοῖς *talais*, Ex. ii. 63; *pharis*, Neh. vii. 65) to answer hard questions. When will one appear again? The Son of Sirach copies the Greek names (ὄρακις, *orakis*) in his description of Aaron's garments, but throws no light upon their meaning or their use (Ecclus. xlv. 10).^a

(2.) Besides these direct statements, there are others in which we may, without violence, trace a reference, if not to both, at least to the Urim. When questions precisely of the nature of those described in Num. xxvii. 21 are asked by the leader of the people, and answered by Jehovah (Judg. i. 1, xx. 16)—when like questions are asked by Saul of the High-Priest Ahiah, "wearing an ephod" (1 Sam. xiv. 3, 18)—by David, as soon as he has with him the presence of a High-Priest with

his ephod (1 Sam. xxiii. 2, 12, xxx. 7, 8)—we may legitimately infer that the treasures which the ephod contained were the conditions and media of his answer. The questions are in almost all cases strategical, "Who shall go up for us against the Canaanites first?" (Judg. i. 1, so xx. 18), "Will the men of Keilah deliver me and my men into the hand of Saul?" (1 Sam. xxiii. 12), or, at least, national (2 Sam. xxi. 1). The answer is, in all cases, very brief, but more in form than a simple Yes or No. One question only is answered at a time.

(3.) It deserves notice before we pass beyond the range of Scriptural data, that in some cases of defection from the established religious order, we find the ephod connected not with the Urim, but with the TERAPHIM, which, in the days of Laban, if not earlier, had been conspicuous in Aramaic worship. Micah, first consecrating one of his own sons, and then getting a Levite as his priest, makes for him "an ephod and teraphim" (Judg. xvii. 5, xviii. 14, 20). Throughout the history of the northern kingdom their presence at Dan made it a sacred place (Judg. xviii. 30), and apparently determined Jeroboam's choice of it as a sanctuary. When the prophet Hosea foretells the entire sweeping away of the system which the Ten Tribes had cherished, the point of extreme destitution is, that "they shall be many days . . . without an ephod, and without teraphim" (Hos. iii. 4), deprived of all counterfeit oracles, in order that they may in the end "return and seek the Lord." It seems natural to infer that the teraphim were, in these instances, the unauthorized substitutes for the Urim. The inference is strengthened by the fact that the LXX. uses here, instead of teraphim, the same word (τέφλας) which it usually gives for Urim. That the teraphim were thus used through the whole history of Israel may be inferred from their frequent occurrence in conjunction with other forms of divination. Thus we have in 1 Sam. xv. 23, "witchcraft" and "teraphim" (A. V. "idolatry", in 2 K. xxiii. 24, "familiar spirits," "wizards, and teraphim" (A. V. "images"). The king of Babylon, when he uses divination, consults them (Ez. xxi. 21). They speak vanity (Zech. x. 2).

III. *Theories*—(1.) For the most part we have to deal with independent conjectures rather than with inferences from these data. Among the latter, however, may be noticed the notion that, as Moses is not directed to make the Urim and Thummin, they must have had a supernatural origin, specially created, unlike anything upon earth (R. ben Nachman and Hottinger in Buxtorf, *Diss. de U. et T.* in Ugolini, xii.). It would be profitless to discuss so arbitrary an hypothesis.

(2.) A favourite view of Jewish and of some Christian writers has been, that the Urim and Thummin were identical with the twelve stones on which the names of the Tribes of Israel were engraved, and the mode in which an oracle was given was by the illumination, simultaneous or

^a The LXX. rendering, so different from the literal meaning, must have originated either (1) from a false etymology, as if the word was derived from *ἔφρα* = "to divine" (Gen. xlv. 16); or (2) from the nacular use made of the breast-plate; or (3) from other associations connected with both the former (*ἔφρα*). The Vulg. simply follows the LXX. Seb. Schmidt gives the more literal "pectorale." "Breast-plate" is, perhaps, somewhat misleading.

^b The A.V., singularly enough, retranslates the Greek words back into the Hebrew, and gives "Urim and Thummin" as if they were proper names.

^c On this account, probably, the High-Priest was to go out to battle (Num. xxxi. 6), as, in his absence, there was to be a *Sacerdos Castrensis*. [Peters.]

^d The writer cannot bring himself with Pusey (*Comm. in loc.*), to refer the things named by the Prophet, partly to the true, partly to the false ritual; still less with Spencer (*Diss. de Ur. et Th.*), to see in all of them things which the Prophet recognises as right and good. It is simpler to take them as describing the actual polity and ritual in which the Northern kingdom had gloried, and of which it was to be deprived.

successive, of the letters which were to make up the answer (Jalkut Sifre, Zohar in *Exod.* f. 105; Maimonides, R. ben Nachman, in Buxtorf, *l. c.*; Drusius, in *Crit. Sac.* on *Ex.* xxviii.; Chrysostom, Grotius, *et al.*). Josephus (*Ant.* iii. 7, §5) adopts another form of the same story, and, apparently identifying the Urim and Thummim with the sardonyx on the shoulders of the ephod, says that they were bright before a victory, or when the sacrifice was acceptable, dark when any disaster was impending. Epiphanius (*de xii. gemm.*), and the writer quoted by Suidas (s. v. *Ἐφεσός*), present the same thought in yet another form. A single diamond (*ἀδάμας*) placed in the centre of the breastplate prognosticated peace when it was bright, war when it was red, death when it was dusky. It is conclusive against such views (1) that, without any evidence, without even an analogy, they make unauthorized additions to the miracles of Scripture; (2) that the former identify two things which, in *Ex.* xxviii., are clearly distinguished; (3) that the latter makes no distinction between the Urim and the Thummim, such as the repeated article leads us to infer.

(3.) A theory, involving fewer gratuitous assumptions, is that in the middle of the ephod, or within its folds, there was a stone or plate of gold on which was engraved the sacred name of Jehovah, the *Shem-kammephorash* of Jewish cabalists,¹ and that by virtue of this, fixing his gaze on it, or reading an invocation which was also engraved with the name, or standing in his ephod before the mercy-seat, or at least before the veil of the sanctuary, he became capable of prophesying, hearing the Divine voice within, or listening to it as it proceeded, in articulate sounds, from the glory of the Shechinah (Buxtorf, *l. c.* 7: Lightfoot, vi. 278; Braunsius, *de Vestitu Hebr.* ii.; Saalschütz, *Archæolog.* ii. 363). Another form of the same thought is found in the statement of Jewish writers, that the Holy Spirit spake sometimes by Urim, sometimes by prophecy, sometimes by the Bath-Kol (Seder Olam, c. xiv. in Braunsius, *l. c.*), or that the whole purpose of the unknown symbols was "ad excitandum prophetiam" (R. Levi ben Gershon, in Buxtorf, *l. c.*; Kimchi, in Spencer, *l. c.*). A more eccentric form of the "writing" theory was propounded by the elder Carpsov, who maintained that the Urim and Thummim were two confessions of faith in the Messiah and the Holy Spirit (Carpsov, *App. Crit.* i. 5).

(4.) Spencer (*de U. et T.*) presents a singular union of acuteness and extravagance. He rightly recognises the distinctness of the two things which others had confounded. Whatever the Urim and Thummim were, they were not the twelve stones, and they were distinguishable one from the other. They were placed inside the folds of the doubled *Choshen*. Resting on the facts referred to, he inferred the identity of the Urim and the Teraaphim.² This was an instance in which the Divine wisdom accommodated itself to man's weakness, and allowed the debased superstitious Israelites to retain a fragment of the idolatrous system of their fathers, in order to wean them gradually from the system as a whole. The obnoxious name of Teraaphim was

dropped. The thing itself was retained. The very name Urim was, he argued, identical in meaning with Teraaphim.³ It was, therefore, a small image probably in human form. So far the hypothesis has, at least, the merit of being inductive and historical, but when he comes to the question how it was instrumental oracularly, he passes into the most extravagant of all assumptions. The image, when the High-Priest questioned it, spoke by the mediation of an angel, with an articulate human voice, just as the Teraaphim spoke, in like manner, by the intervention of a demon! In dealing with the Thummim, which he excludes altogether from the oracular functions of the Urim, Spencer adopts the notion of an Egyptian archetype, which will be noticed further on.

(5.) Michaelis (*Laws of Moses*, v. §52) gives his own opinion that the Urim and Thummim were three stones, on one of which was written Yes, on another No, while the third was left blank or neutral. The three were used as lots, and the High-Priest decided according as the one or the other was drawn out. He does not think it worth while to give one iota of evidence; and the notion does not appear to have been more than a passing caprice. It obviously fails to meet the phenomena. Lots were familiar enough among the Israelites (*Num.* xxvi. 55; *Josh.* xiii. 6, *et al.*; *1 Sam.* xiv. 41; *Prov.* xvi. 33), but the Urim was something solemn and peculiar. In the cases where the Urim was consulted, the answers were always more than a mere negative or affirmative.

(6.) The conjecture of Zöllig (*Obsequ. in Apoc. Exc.* ii.) though adopted by Winer (*Arab.*) can hardly be looked on as more satisfying. With him the Urim are bright, i. e. cut and polished, diamonds, in form like dice; the Thummim perfect, i. e. whole, rough, uncut ones, each class with inscriptions of some kind engraved on it. He supposes a handful of these to have been carried in the pouch of the High-Priest's *Choshen*, and when he wished for an oracle, to have been taken out by him and thrown on a table or, more probably, on the Ark of the Covenant. As they fell their position, according to traditional rules known only to the high-priestly families, indicated the answer. He compares it with fortune-telling by cards or coffee-grounds. The whole scheme, it need hardly be said, is one of pure invention, at once arbitrary and offensive. It is at least questionable whether the Egyptians had access to diamonds, or knew the art of polishing or engraving them. [DIAMONDS.] A handful of diamond cubes, large enough to have words or monograms engraved on them, is a thing which has no parallel in Egyptian archaeology, nor, indeed, any where else.

(7.) The latest Jewish interpreter of eminence (Kalisch, on *Ex.* xxviii. 31), combining parts of the views (2) and (3), identifies the Urim and Thummim with the twelve tribal gems, looks on the name as one to be explained by a hemistichy (Light and Perfection = Perfect illumination), and believes the High-Priest, by concentrating his thoughts on the attributes they represented, to have divested himself of all selfishness and prejudice, and so to have passed into a true prophetic state. In

¹ A wilder form of this belief is found in the cabalistic book Zohar. There the Urim is said to have had 72 Divine names in 42, the Thummim in 72 letters. The notion was probably derived from the Jewish invocations of books like the *Clavicula Salomonis*. [Sokolow.]

² He had been preceded in this view by Joseph Mede

(*Disc.* l. c. 88), who pointed out the strong resemblance if not the identity, of the two.

³ The process of proof is ingenious, but hardly convincing. Urim = "lights, fires;" Teraaphim = "the burning, or fiery ones;" and Teraaphim is but the same word, with an Aramaic substitution of ט for פ.

what he says on this point there is much that is both beautiful and true. Lightfoot, it may be added, had taken the same view (ii. 407, vi. 278), and that given above in (3) converges to the same result.

IV. *One more Theory.*—(1.) It may seem venturesome, after so many wild and conflicting conjectures, to add yet another. If it is believed that the risk of falling into one as wild and baseless need not deter us, it is because there are materials within our reach, drawn from our larger knowledge of antiquity, and not less from our fuller insight into the less common phenomena of consciousness, which were not, to the same extent, within the reach of our fathers.

(2.) The starting-point of our inquiry may be found in adhering to the conclusions to which the Scriptural statements lead us. The Urim were not identical with the Thummim, neither of them identical with the tribal gems. The notion of a *hendekads* (almost always the weak prop of a weak theory) may be discarded. And, seeing that they are mentioned with no description, we must infer that they and their meaning were already known, if not to the other Israelites, at least to Moses. If we are to look for their origin anywhere, it must be in the customs and the symbolism of Egypt.

(3.) We may start with the Thummim, as presenting the easier problem of the two. Here there is at once a patent and striking analogy. The priestly judges of Egypt, with whose presence and garb Moses must have been familiar, wore, each of them, hanging on his neck, suspended on a golden chain, a figure which Greek writers describe as an image of Truth (*Ἀλήθεια*, as in the LXX.) often with closed eyes, made sometimes of a sapphire or other precious stones, and, therefore necessarily small. They were to see in this a symbol of the purity of motive, without which they would be unworthy of their office. With it they touched the lips of the litigant as they bade him speak the truth, the whole, the perfect truth (Diod. Sic. i. 49, 75; Aelian, *Var. Hist.* xiv. 34). That this parallelism commended itself to the most learned of the Alexandrian Jews we may infer (1) from the deliberate but not obvious use by the LXX. of the word *Ἀλήθεια* as the translation of Thummim; (2) from a remarkable passage in Philo (*de Vit. Mos.* iii. 11), in which he says that the breastplate (*λαβύρα*) of the High-Priest was made strong that he might wear as an image (*ὡς ἀγαλματισμοῦ*) the two virtues which were so needful for his office. The connexion between the Hebrew and the Egyptian symbol was first noticed, it is believed, by Spencer (l. c.). It was met with cries of alarm. No single custom, rite, or symbol, could possibly have been transferred from an idolatrous system into that of Israel. There was no evidence of the antiquity of the Egyptian practice. It was probably copied from the Hebrew (Witsius, *Aegyptiaca*, ii. 10, 11, 12, in Ugolini, i.; Riboudensius, *de Urin et Th.* in Ugolini, xii.; Patrick, *Comm. in Ex.* xxviii.). The discussion of the principle involved need not be entered on here. Spencer's way of putting the case, assuming that a debased

form of religion was given in condescension to the superstitious of a debased people, made it, indeed, needlessly offensive, but it remains true, that a revelation of any kind must, to be intelligible, use pre-existent words, and that those words, whether spoken or symbolic, may therefore be taken from any language with which the recipients of the revelation are familiar.¹ In this instance the prejudice has worn away. The most orthodox of German theologians accept the once startling theory, and find in it a proof of the veracity of the Pentateuch (Hengstenberg, *Egypt and the five Books of Moses*, c. vi.). It is admitted, partially at least, by a devout Jew (Kalisch, on Ex. xviii. 31).² And the missing link of evidence has been found. The custom was not, as had been said, of late origin, but is found on the older monuments of Egypt. There, round the neck of the judge, are seen the two figures of Thmes, the representative of Themis, Truth, Justice (Wilkinson, *Ancient Egyptians*, v. 28). The coincidence of sound may, it is true, be accidental, but it is at least striking. In the words which tell of the tribe of Levi, in close connexion with the Thummim as its chief glory, that it did the stern task of duty, blind to all that could turn it aside to evil, "saying to his father and his mother, I have not seen him" (Deut. xxxiii. 9), we may perhaps trace a reference to the closed eyes of the Egyptian Thmes.

(4.) The way is now open for a further inquiry. We may legitimately ask whether there was any symbol of Light standing to the Urim in the same relation as the symbolic figure of Truth stood to the Thummim. And the answer to that question is as follows. On the breast of well-nigh every member of the priestly caste of Egypt there hung a pectoral plate, corresponding in position and in size to the *Choshen* of the High-Priest of Israel. And in many of these we find, in the centre of the *pectorale*, right over the heart of the priestly mummy, as the Urim was to be "on the heart" of Aaron, what was a known symbol of Light (see British Museum, *First Egyptian Room, Cases 67, 69, 70, 88, 89. Second ditto, Cases 68, 69, 74*). In that symbol were united and embodied the highest religious thoughts to which man had then risen. It represented the Sun and the Universe, Light and Life, Creation and Resurrection. The material of the symbol varied according to the rank of the wearer. It might be of blue porcelain, or jasper, or cornelian, or lapis lazuli, or amethyst. Prior to our knowing what the symbol was, we should probably think it natural and fitting that this, like the other, should have been transferred from the lower worship to the higher, from contact with falsehood to fellowship with truth. Position, size, material, meaning, everything answers the conditions of the problem.

(5.) But the symbol in this case was the mystic Scarabæus; and it may seem to some startling and incredible to suggest that such an emblem could have been borrowed for such a purpose. It is perhaps quite as difficult for us to understand how it could ever have come to be associated with such ideas. We have to throw ourselves back into a

¹ It may be reasonably urged indeed that in such cases the previous connexion with a false system is a reason for, and not against the use of a symbol in itself expressive. The Priests of Israel were taught that they were not to have lower thoughts of the light and perfection which they needed than the Priests of Ra.

² It is right to add that the Egyptian origin is rejected both by Bahr (*Symbolik*, II. p. 164) and Ewald (*Alter-*

thum, p. 307-8), but without sufficient grounds. Ewald's treatment of the whole subject is, indeed, at once superficial and inconsistent. In the *Alterthümer* (l. c.) he speaks of the Urin and Thummim as lost, adopting Michaux's view. In his *Propheten* (l. 18) he speaks of the High-Priest fixing his gaze on them to bring himself into the prophetic state.

stage of human progress, a phase of human thought, the most utterly unlike any that comes within our experience. Out of the mud which the Nile left in its flooding, men saw myriad forms of life issue. That of the Scarabæus was the most conspicuous. It seemed to them self-generated, called into being by the light, the child only of the sun. Its glossy wing-cases reflecting the bright rays made it seem like the sun in miniature. It became at once the emblem of Ra, the sun, and its creative power (Clem. Alex. *Strom.* v. 4, §21; Euseb. *Præp. Evang.* iii. 4; Brugsch, *Liber Metempsychoscos*, p. 33; Wilkinson, *Ancient Egyptians*, iv. 295, v. 26, 476). But it came also out of the dark earth, after the flood of waters, and was therefore the symbol of life rising out of death in new forms; of a resurrection and a metempsychosis (Brugsch, *l. c.* and *Agypt. Alterth.* p. 32). So it was that not in Egypt only, but in Etruria and Assyria and other countries, the same strange emblems reappeared (Dennis, *Cities and Sepulchres of Etruria*, introd. lxxiii.; Layard, *Nineveh*, ii. 214). So it was that men, forgetting the actual in the ideal, invested it with the title of *Moseyeris* (Horapollo, *Hierogl.* l. c. 10), that the more mystic, dreamy, Gnostic sects adopted it into their symbolic language, and that semi-Christian Scarabæi are found with the sacred words *Jao, Saaoth*, or the names of angels engraved on them (Bellermann, *Ueber die Scarabæen-Gemmen*, i. 10), just as the mystic *Tau*, or *Crux ansata*, appears, in spite of its original meaning, on the monuments of Christian Egypt (Wilkinson, *Anc. Egypt.* v. 283). In older Egypt it was, at any rate, connected with the thought of Divine illumination, found in frequent union with the symbolio eye, the emblem of the providence of God, and with the hieroglyphic invocation, "Tu radianis das vitam puris hominibus" (Brugsch's translation, *Liber Metemps.* p. 33). It is obvious that in such a case, as with the *Crux ansata*, the Scarabæus is neither an idol, nor identified with idolatry.² It is simply a word as much the mere exponent of a thought as if it were spoken with the lips, or written in phonetic characters. There is nothing in its Egyptian origin or its animal form which need startle us any more than the like origin of the Ark or the Thummim, or the like form in the BRAZEN SERPENT, or the fourfold symbolic figures of the Cherubim. It is to be added, that Joseph by his marriage with the daughter of the Priest of On, the priest of the sun-god Ra, and Moses, as having been trained in the learning of the Egyptians, and probably among the priests of the same ritual, and in the same city, were certain to be acquainted with the sculptured word, and with its meaning. For the latter, at any rate, it would need no description, no interpretation. Deep set in the *Choshen*, between the gems that represented Israel, it would set forth that Light and

Truth were the centre of the nation's life. Beholding to the breastplate of judgment, it would bear witness that the High-Priest, in his peculiar acts, needed above all things spotless integrity and Divine illumination. It fulfilled all the conditions and taught all the lessons which Jewish or Christian writers have connected with the Urim.

(6.) (A.) Have we any data for determining the material of the symbol? The following tend at least to a definite conclusion: (1) If the stone was to represent light, it would probably be one in which light was, as it were, embodied in its purest form, colourless and clear, diamond or rock-crystal. (2) The traditions quoted above from Suidas and Epiphanius confirm this inference.³ (3) It is accepted as part of Zöllig's theory, by Dean Trench (*Epistles to Seven Churches*, p. 123). The "white stone" of Rev. ii. 17, like the other rewards of him that overcometh, declared the truth of the Universal Priesthood. What had been the peculiar treasure of the house of Aaron should be bestowed freely on all believers.

(B.) Another fact connected with the symbol enables us to include one of the best supported of the Jewish conjectures. As seen on the bodies of Egyptian priests and others it almost always bore an inscription, the name of the god whom the priest served, or, more commonly, an invocation, from the Book of the Dead, or some other Egyptian literature (Brugsch, *Lb. Metemps.* l. c.). There would here also, be an analogy. Upon the old emblem, coming, it may be, to bear its old distinctive form,⁴ there might be the "new name written," the Tetragrammaton, the *Shem-hammephorash* of later Judaism, directing the thoughts of the priest to the true Lord of Life and Light, of whom, unlike the Lord of Life in the Temples of Egypt, there was no form or similitude, a Spirit, to be worshipped therefore in spirit and in truth.

(7.) We are now able to approach the question. "In what way was the Urim instrumental in enabling the High-Priest to give a true oracular response?" We may dismiss, with the more thoughtful writers already mentioned (Kimchi, on 2 Sam. xxv., may be added), the gratuitous prodigies which have no existence but in the fancies of Jewish or Christian dreamers, the articulate voice and the illumined letters. There remains the conclusion that, in some way, they helped him to rise out of all selfishness and hypocrisy, out of all ceremonial routine, and to pass into a state analogous to that of the later prophets, and so to become capable of a new spiritual illumination. The *modus operandi* in this case may, it is believed, be at least illustrated by some lower analogies in the less common phenomena of consciousness. Among the most remarkable of such phenomena is the change produced by concentrating the thoughts on a single idea, by gazing steadily on a

² The symbolic language of one nation or age will, of course, often be unintelligible, and even seem ludicrous to another. They will take for granted that men have worshipped what they manifestly respected. Would it be easy to make a Mahometan understand clearly the meaning of the symbols of the four Evangelists as used in the ornamentations of English Churches? Would an English congregation, not archaeologists, hear to be told that they were to engrave on their seals a pelican or a fish, as a type of Christ? (Clem. Alex. *Pædag.* iii. 11, §69.)

³ The words of Epiphanius are remarkable, ὁ ἐπίσκοπος, ὁ ἐπὶ τῷ ἀρχιεπίσκοπῳ.

⁴ For the reasons stated above, in discussing Zöllig's

theory, the writer finds himself unable to agree with Dean Trench as to the diamond being certainly the same in question. So far as he knows, no diamonds have as yet been found among the jewels of Egypt. Rock-crystal seems therefore the more probable of the two.

⁵ Changes in the form of an emblem till it ceases to bear any actual resemblance to its original prototype are familiar to all students of symbolism. The *Crux ansata*, the *Tau*, which was the sign of Ra, is, perhaps, the most striking instance (Wilkinson, *Anc. Egypt.* v. 283). Gesenius, in like manner, in his *Monumenti Ptolemæica* ii. 68, 69, 70, gives engravings of Scarabæi in which nothing but the oval form is left.

single fixed point. The brighter and more dazzling the point upon which the eyes are turned the more rapidly is the change produced. The life of perception is interrupted. Sight and hearing fail to fulfil their usual functions. The mind passes into a state of profound abstraction, and loses all distinct personal consciousness. Though not asleep it may see visions and dream dreams. Under the suggestions of a will for the time stronger than itself, it may be played on like "a thinking automaton."⁴ When not so played on, its mental state is determined by the "dominant ideas" which were impressed upon it at the moment when, by its own act, it brought about the abnormal change (Dr. W. B. Carpenter in *Quarterly Rev.* xciii. pp. 510, 522).

(8.) We are familiar with these phenomena chiefly as they connect themselves with the lower forms of mysticism, with the tricks of electrobiologists, and other charlatans. Even as such they present points of contact with many facts of interest in Scriptural or Ecclesiastical History. Independent of many facts in monastic legends of which this is the most natural explanation, we may see in the last great controversy of the Greek Church a startling proof how terrible may be the influence of these morbid states when there is no healthy moral or intellectual activity to counteract them. For three hundred years or more the rule of the Abbot Simeon of Xeroceras, prescribing a process precisely analogous to that described above, was adopted by myriads of monks in Mount Athos and elsewhere. The Christianity of the East seemed in danger of giving its sanction to a spiritual suicide like that of a Buddhist seeking, as his highest blessedness, the annihilation of the *Nirwana*. Plunged in profound abstraction, their eyes fixed on the centre of their own bodies, the Quietists of the 14th century (*ἡσυχασταί, ἀμφολοφύχιστοι*) enjoyed an unspeakable tranquillity, believed themselves to be radiant with a Divine glory, and saw visions of the uncreated light which had shone on Tabor. Degrading as the whole matter seems to us, it was a serious danger then. The mania spread like an epidemic, even among the laity. Husbands, fathers, men of letters, and artisans gave themselves up to it. It was important enough to be the occasion of repeated Synods, in which emperors, patriarchs, bishops were eager to take part, and mostly in favour of the practice, and the corollaries deduced from it (Fleury, *Hist. Eccles.* xcv. 9; Gieseler, *Ch. Hist.* §129; Maury, *La Magie et l' Astrologie*, pp. 429-30).

(9.) It is at least conceivable, however, that, within given limits, and in a given stage of human progress, the state which seems so abnormal, might have a use as well as an abuse. In the opinion of one of the foremost among modern physiologists, the processes of hypnotism would have their place in a perfect system of therapeutics (*Quart. Review*, l. c.). It is open to us to believe that they may, in the less perfect stages of the spiritual history of mankind, have helped instead of hindering. In this way only, it may be, the sense-bound spirit could abstract itself from the outer world, and take up the attitude of an expectant tranquillity. The

entire suppression of human consciousness, as in the analogous phenomena of an ecstatic state [comp. *TRANCE*], the surrender of the entire man to be played upon, as the hand plays upon the harp, may, at one time, have been an actual condition of the inspired state, just as even now it is the only conception which some minds are capable of forming of the fact of inspiration in any form or at any time. Bearing this in mind, we may represent to ourselves the process of seeking counsel "by Urim." The question brought was one affecting the well-being of the nation, or its army, or its king. The inquirer spoke in a low whisper, asking one question only at a time (Gem. Bab. *Joma*, in *Mede*, l. c.). The High-Priest, fixing his gaze on the "gems oracular" that lay "on his heart," fixed his thoughts on the Light and the Perfection which they symbolised, on the Holy Name inscribed on them. The act was itself a prayer, and, like other prayers, it might be answered.⁵ After a time, he passed into the new, mysterious, half-ecstatic state.⁶ All disturbing elements—selfishness, prejudice, the fear of man—were eliminated. He received the insight which he craved. Men trusted in his decisions as with us men trust the judgment which has been purified by prayer for the help of the Eternal Spirit, more than that which grows only out of debate, and policy, and calculation.

(10.) It is at least interesting to think that a like method of passing into this state of insight was practised unblamed in the country to which we have traced the Urim, and among the people for whose education this process was adapted. We need not think of Joseph, the pure, the heaven-taught, the blameless one, as adopting, still less as falsely pretending to adopt, the dark arts of a system of imposture (Gen. xlv. 5, 15). For one into whose character the dream-element of prevision entered so largely, there would be nothing strange in the use of *media* by which he might superinduce at will the dream-state which had come to him in his youth unbidden, with no outward stimulus; and the use of the cup by which Joseph "divined" was precisely analogous to that which has been now described. To fill the cup with water, to fix the eye on a gold or silver coin in it, or, more frequently, on the dazzling reflection of the sun's rays from it, was an essential part of the *κλυκομαρτεία*, the *λεκανομαρτεία* of ancient systems of divination (Maury, *La Magie et l' Astrologie*, pp. 426-28; Kalisch, *Genesis*, in *loc.*). In the most modern form of it, among the magicians of Cairo, the boy's fixed gaze upon the few drops of ink in the palm of his hand answers the same purpose and produces the same result (Lane, *Mod. Egypt*. l. c. xii). The difference between the true and the false in these cases is however far greater than the superficial resemblance. To enter upon that exceptional state with vague stupid curiosity, may lead to an imbecility which is the sport of every casual suggestion. To pass into it with feelings of hatred, passion, lust, may add to their power a fearful intensity for evil, till the state of the soul is demoniac rather than human. To enter upon it as the High-Priest entered, with the prayer of faith, might in like

⁴ The word is used, of course, in its popular sense, as a toy moving by machinery. Strictly speaking, automatic force is just the element which has, for the time, disappeared.

⁵ The prayer of Ps. xlii. 3. "Send out thy light and thy truth," though it does not contain the words Urim and Thummim, speaks obviously of that which they sym-

bolised, and may be looked upon as an echo of the High Priest's prayer in a form in which it might be used by any devout worshipper.

⁶ The striking exclamation of Saul, "Withdraw thy hand!" when it seemed to him that the Urim was no longer needed, was clearly an interruption of this process (1 Sam. xiv. 18).

manner intensify what was noblest and truest in him, and fit him to be for the time a vessel of the Truth.

(11.) It may startle us at first to think that any physical media should be used in a divine order to bring about a spiritual result, still more that these media should be the same as are found elsewhere in systems in which evil is at least preponderant; yet here too Scripture and History present us with very striking analogies. In other forms of worship, in the mysteries of Isis, in Orphic and Corybantic revels, music was used to work the worshippers into a state of orgiastic frenzy. In the mystic fraternity of Pythagoras it was employed before sleep, that their visions might be serene and pure (Plutarch, *De Is. et Osir.* ad fin.). Yet the same instrumentality bringing about a result analogous at least to the latter, probably embracing elements of both, was used from the first in the gatherings of the prophets (1 Sam. x. 5). It soothed the vexed spirit of Saul (1 Sam. xvi. 23); it wrought on him, when it came in its choral power, till he too burst into the ecstatic song (1 Sam. xix. 20-24). With one at least of the greatest of the prophets it was as much the preparation for his receiving light and guidance from above as the gaze at the Urim had been to the High-Priest. "Elisha said . . . 'Now bring me a minstrel.' And it came to pass, when the minstrel played, that the hand of the Lord came upon him" (2 K. iii. 15).^a

(12.) The facts just noticed point to the right answer to the question which yet remains, as to the duration of the Urim and the Thummim, and the reasons of their withdrawal. The statement of Josephus (*Ant.* iii. 7, §5-7) that they had continued to shine with supernatural lustre till within two hundred years of his own time is simply a Jewish fable, at variance with the direct confession of their absence on the return from the Captivity (*Esr.* ii. 63), and in the time of the Maccabees (1 Macc. iv. 48, xiv. 41). As little reliance is to be placed on the assertion of other Jewish writers, that they continued in activity till the time of the Babylonian Exile (Sota, p. 43; Midrash on *Song of Sol.* in Buxtorf, l. c.). It is quite inconceivable, had it been so, that there should have been no single instance of an oracle thus obtained during the whole history of the monarchy of Judah. The facts of the case are few, but they are decisive. Never, after the days of David, is the Ephod, with its appendages, connected with counsel from Jehovah (as Carpsov, *App. Crit.* i. 5). Abiathar is the last priest who habitually uses it for that purpose (1 Sam. xxiii. 6, 9, xxviii. 6; probably also 2 Sam. xxi. 1). His name is identified in a strange tradition embodied in the Talmud (*Sanhedr.* f. 19, 1, in Lightfoot, xi. 386) with the departed glory of the Urim and the Thummim. And the explanation of these facts is not far to seek. Men had been taught by this time another process by which the spiritual might at once assert its independence of the sensuous life, and yet retain its distinct personal consciousness—a process less liable to per-

version, leading to higher and more continuous illumination. Through the sense of hearing, now through that of sight, was to be wrought the subtle and mysterious change. Music—in its marvellous variety, its subtle sweetness, its spirit-stirring power—was to be, for all time to come, the lawful help to the ecstasy of praise and prayer, opening heart and soul to new and higher thoughts. The utterances of the prophets, speaking by the word of the Lord, were to supersede the oracles of the Urim. The change which about this period passed over the speech of Israel was a witness of the moral elevation which that other change involved. "He that is now called a prophet was beforetime called a seer" (1 Sam. ix. 9). To be the mouthpiece, the spokesman, of Jehovah was higher than to see visions of the future, however clear, whether of the annals of Israel or the lost ages of Kish.

(13.) The transition was probably not made without a struggle. It was accompanied by, even if it did not in part cause, the transfer of the Pontificate from one branch of the priestly family to another. The strange opposition of Abiathar to the will of David, at the close of his reign, is intelligible on the hypothesis that he, long accustomed, as holding the Ephod and the Urim, to guide the king's councils by his oracular answers, viewed, with some approach to jealousy, the growing influence of the prophets, and the accession of a prince who had grown up under their training. With him at any rate, so far as we have any knowledge, the Urim and the Thummim passed out of sight. It was well, we may believe, that they did so. To have the voices of the prophets in their stead was to gain and not to lose. So the old order changed, giving place to the new. If the fond yearning of the Israelites of the Captivity had been fulfilled, and a priest had once again arisen with Urim and with Thummim, they would but have taken their place among the "weak and beggarly elements" which were to pass away. All attempts, from the *Rule of Simeon to the Spiritual Exercises of Loyola*, to invert the Divine order, to purchase spiritual ecstasies by the sacrifice of intellect and of conscience, have been steps backward into darkness, not forward into light. So it was that God, in many different measures and many different fashions (ἐν ἑκατέρῃ καὶ ἐν ἑκατέρῃ), spake in time past unto the Fathers (Heb. i. 1). So it is, in words that embody the same thought, and draw from it a needful lesson, that

"God fulfils himself in many ways,

Least one good custom should corrupt the world."^b

[E. H. P.]

USURY. Information on the subject of lending and borrowing will be found under **LOAN**. It need only be remarked here that the practice of mortgaging land, sometimes at exorbitant interest, grew up among the Jews during the Captivity, in direct violation of the law (*Lev.* xxv. 36, 37; *Ez.* xviii. 8, 13, 17). We find the rate reaching 1 in 100 per month, corresponding to the Roman *centesimae usurae*, or 12 per cent. per annum—a rate which

^a That "the hand of the Lord" was the recognised expression for this awful consciousness of the Divine presence we find from the visions of Ezekiel (E. 3, iii. 14, et al.), and 1 K. xviii. 46. It helps us obviously to determine the sense of the corresponding phrase, "with the finger of God," in *Ez.* xxxi. 18. Comp. too, the equivalence, in our Lord's teaching, of the two forms. "If I with the finger of God (Luke xi. 20) = 'by the Spirit of God,' Matt. xii. 28) cast out devils."

^b In addition to the authorities cited in the text, one has to be named to which the writer has not been able to get access, and which he knows only through the *Theatrum of Gesenius*. Bollermann, whose treatise on the Scarabaei are quoted above, has also written, *Urim und Thummim, die ältesten Gesetze*. He apparently identifies the Urim and Thummim with the gem of the breastplate.

Weber considers to have been borrowed from abroad, and which is, or has been till quite lately, a very usual or even a minimum rate in the East (Nieb. *Hist. of Rome*, iii. 57, Engl. Tr.; Volney, *Trav.* ii. 254, note; Chardin, *Voy.* vi. 122). Yet the law of the Kurán, like the Jewish, forbids all usury (Lane, *M. E.* i. 132; Sale, *Kurán*, c. 30). The laws of Menu allow 18 and even 24 per cent. as an interest rate; but, as was the law in Egypt, accumulated interest was not to exceed twice the original sum lent (*Laws of Menu*, c. viii. 140, 141, 151; Sir W. Jones, *Works*, vol. iii. p. 295; Diod. i. 9, 79). This Jewish practice was annulled by Nehemiah, and an oath exacted to ensure its discontinuance (Neh. v. 3-13; Selden, *De Jur. Nat.* vi. 10; Hofmann, *Lexic.* "Usura"). [H. W. P.]

UTA (Oṭrā: Uthā) 1 Esdr. v. 30. It appears to be a corruption of AKKUB (Esdr. ii. 45).

UTHAI (Ṭḥai: Ṭḥai: Alex. Ṭḥai: Othai).

1. The son of Ammiud, of the children of Phares, the son of Judah (1 Chr. ix. 4). He appears to have been one of those who dwelt in Jerusalem after the Captivity. In Neh. xi. 4 he is called "ATHALAH the son of Uziah."

2. (Oṭṭai: Uthai.) One of the sons of Bigvai, who returned in the second caravan with Ezra (Esdr. viii. 14).

UTHII (Oṭṭi) 1 Esdr. viii. 40. [UTHAI 2].

UZ (ṬṬ; OṬ, Ṭs, Ṭs: Us, Hus). This name is applied to—1. A son of Aram (Gen. x. 23), and consequently a grandson of Shem, to whom he is immediately referred in the more concise genealogy of the Chronicles, the name of Aram being omitted (1 Chr. i. 17). 2. A son of Nahor by Milcah (Gen. xxii. 21; A. V. HUZ). 3. A son of Diahah, and grandson of Seir (Gen. xxxvi. 28). 4. The country in which Job lived (Job i. 1). As the genealogical statements of the Book of Genesis are undoubtedly ethnological, and in many instances also geographical, it may be fairly surmised that the coincidence of names in the above cases is not accidental, but points to a fusion of various branches of the Semitic race in a certain locality. This surmise is confirmed by the circumstance that other connecting links may be discovered between the same branches. For instance, Nos. 1 and 2 have in common the names Aram (comp. Gen. x. 23, xxii. 21) and Maachah as a geographical designation in connexion with the former (1 Chr. xix. 8), and a personal one in connexion with the latter (Gen. xxii. 24). Nos. 2 and 4 have in common the names Bus and Busite (Gen. xxii. 21; Job xxii. 2). Chesed and Chasdim (Gen. xxii. 22; Job i. 17, A. V. "Chaldeans"), Shuah, a nephew of Nahor, and Shuhite (Gen. xxv. 2; Job ii. 11), and Kedem, as the country whither Abraham sent Shuah, together with his other children by Keturah, and also as the country where Job lived (Gen. xxv. 6; Job i. 3). Nos. 3 and 4, again, have in common Eliphaz (Gen. xxxvi. 10; Job ii. 11), and Teman and Temanite (Gen. xxxvi. 11; Job ii. 11). The ethnological fact embodied in the above coincidences of names appears to be as follows:—Certain branches of the Aramaic family, being both more ancient and occupying a more

northerly position than the others, coalesced with branches of the later Abrahamids, holding a somewhat central position in Mesopotamia and Palestine, and again with branches of the still later Edomites of the south, after they had become a distinct race from the Abrahamids. This conclusion would receive confirmation if the geographical position of Uz, as described in the Book of Job, harmonised with the probability of such an amalgamation. As far as we can gather, it lay either east or south-east of Palestine (Job i. 3; see BENE-KEDEN); adjacent to the Sabaeans and the Chaldeans (Job i. 15, 17), consequently northward of the southern Arabians, and westward of the Euphrates; and, lastly, adjacent to the Edomites of Mount Seir, who at one period occupied Uz, probably as conquerors (Lam. iv. 21), and whose troglodyte habits are probably described in Job xxx. 6, 7. The position of the country may further be deduced from the native lands of Job's friends, Eliphaz the Temanite being an Idumean, Elihu the Busite being probably a neighbour of the Chaldeans, for Buz and Chesed were brothers (Gen. xxii. 21, 22), and Bildad the Shuhite being one of the Bene-Kedem. Whether Zophar the Naamathite is to be connected with Naamah in the tribe of Judah (Josh. xv. 41) may be regarded as problematical: if he were, the conclusion would be further established. From the above data we infer that the land of Uz corresponds to the *Arabia Deserta* of classical geography, at all events to so much of it as lies north of the 30th parallel of latitude. This district has in all ages been occupied by nomadic tribes, who roam from the borders of Palestine to the Euphrates, and northward to the confines of Syria. Whether the name of Uz survived to classical times is uncertain: a tribe named Aesitae (*Aisṭrai*) is mentioned by Ptolemy (v. 19, §2): this Bochart identifies with the Uz of Scripture by altering the reading into *Absṭrai* (*Phaleg*, ii. 8); but, with the exception of the rendering in the LXX. (*ἡ χώρα τῆς Ἀβστράϊδος*, Job i. 1; comp. xxxii. 2), there is nothing to justify such a change. Gesenius (*Thes.* p. 1003) is satisfied with the form Aesitae as sufficiently corresponding to Uz. [W. L. B.]

U'ZAI (ṬṬ: Eṭṭai; FA. Eṭai: Ozi). The father of Palai, who assisted Nehemiah in rebuilding the city wall (Neh. iii. 25).

U'ZAL (ṬṬ: Samar. ṬṬ: Aisṭal, Aisṭal. *Uzal*, *Huzal*). The sixth son of Joktan (Gen. x. 27; 1 Chr. i. 21), whose settlements are clearly traced in the ancient name of San'a, the capital city of the Yemen, which was originally Awzal, -UṬ.

اوزال (Ibn-Khaldoun, ap. Caussin, *Essai*, i. 40, foot-note; *Marsden*, s. v.; Gesen. *Lex.* s. v.; Bunsen's *Bibelswerk*, &c.). It has disputed the right to be the chief city of the kingdom of Sheba from the earliest ages of which any traditions have come down to us; the rival cities being SHEBA (the Arabic Sebā), and SEPHAR (or Zafār). Unlike one or both of these cities which passed occasionally into the hands of the people of HAZARMAVETH (Hadramāwt), it seems to have always belonged to the people of Sheba; and from its position in the

* The LXX. inserts the words *καὶ τῶν Ἀδύμ* before the notice of Uz and his brothers: but for this there is no authority in the Hebrew. For a parallel instance of concordance see ver. 4.

* The printed edition of the *Marsden* writes the name

Oozal, and says, "It is said that its name was Oozal; and when the Abyssinians arrived at it, and saw it to be beautiful, they said 'San'a,' which means beautiful; therefore it was called San'a."

centre of the best portion of that kingdom, it must always have been an important city, though probably of less importance than Seba itself. Niebuhr (*Descr.* 201, seq.) says that it is a walled town, situate in an elevated country, in lat. 15° 2', and with a stream (after heavy rains) running through it (from the mountain of Sawāfa, El-Idreesee, i. 50), and another larger stream a little to the west, with country-houses and villages on its banks. It has a citadel on the site of a famous temple, called Beyt-Ghumdān, said to have been founded by Shoorabeel; which was razed by order of Othman. The houses and palaces of San'a, Niebuhr says, are finer than those of any other town of Arabia; and it possesses many mosques, public baths, and caravanserais. El-Idreesee's account of its situation and flourishing state (i. 50, quoted also by Bochart, *Phaleg*, xii.) agrees with that of Niebuhr. Yākoot says, "San'a is the greatest city in the Yemen, and the most beautiful of them. It resembles Damascus, on account of the abundance of its trees (or gardens), and the rippling of its waters" (*Mushtarak*, s. v., comp. Ibn-El-Wardee MS.); and the author of the *Marāsīd* (said to be Yākoot) says, "It is the capital of the Yemen and the best of its cities; it resembles Damascus, on account of the abundance of its fruits" (s. v. San'a).

Uzal, or Awzāl, is most probably the same as the Anzara (Αἰζάρα), or Ausara (Αὐσάρα) of the classics, by the common permutation of *l* and *r*. Pliny (*N. H.* xii. 16) speaks of this as belonging to the Gebanitæ; and it is curious that the ancient division (or "mikhlaḥ") of the Yemen in which it is situate, and which is called Sinhān, belonged to a very old confederacy of tribes named Jenb, or Genb, whence the Gebanitæ of the classics; another division being also called Mikhlaḥ Jenb (*Marāsīd*, s. v. mikhlaḥ and jenb, and *Mushtarak*, s. v. jenb). Bochart accepts Ausara as the classical form of Uzal (*Phaleg*, l. c.), but his derivation of the name of the Gebanitæ is purely fanciful.

Uzal is perhaps referred to by Ezek. (xxvii. 19), translated in the A.V. "Javan," *going to and fro*, Heb. יָוָן. A city named Yāwan, or Yāwān, in the Yemen, is mentioned in the *Kāmoos* (see Gesenius, *Lex.* and Bochart, l. c.). Commentators are divided in opinion respecting the correct reading of this passage; but the most part are in favour of the reference to Uzal. See also JAVAN. [E. S. P.]

UZZA (נִזְזָא: 'Aḏd: Oza). 1. A Benjamite of the sons of Ehud (1 Chr. viii. 7). The Targum on Esther makes him one of the ancestors of Mordecai.

2. ('Oḏd.) Elsewhere called UZZAH (1 Chr. xiii. 7, 9, 10, 11).

3. ('Aḏd, 'Oḏd; 'Aḏd, 'Oḏd: Aza.) The children of Uzza were a family of Nethinim who returned with Zerubbabel (Ezr. ii. 49; Neh. vii. 51).

4. (נִזְזָא: 'Oḏd; Alex. 'Aḏd: Oza). Properly "Uzzah." As the text now stands, Uzzah is a descendant of Merari (1 Chr. vi. 29 [14]); but there appears to be a gap in the verse by which the sons of Gershon are omitted, for Libni and Shimei are elsewhere descendants of Gershon, and not of Merari. Perhaps he is the same as Zina (נִזְנָא), or Zinah (נִזְנָא), the son of Shimei (1 Chr. xxiii. 10, 11); for these names evidently denote the same person and, in Hebrew character, are not unlike Uzzah.

UZZA. THE GARDEN OF (נִזְזָא יָד: nîz-

was 'Oḏd: hortus Aza). The spot in which Manasse king of Judah, and his son Amon, were both buried (2 K. xxi. 18, 26). It was the garden attached to Manasse's palace (ver. 18, and 2 Chr. xxxiii. 20), and therefore presumably was in Jerusalem. The fact of its mention shows that it was not where the usual sepulchres of the kings were. No clue, however, is afforded to its position. Josephus (*Ant.* x. 3, §2) simply reiterates the statement of the Bible. It is ingeniously suggested by Cornelius a Lapide, that the garden was so called from being on the spot at which Uzza died during the removal of the Ark from Kirjath-jearim to Jerusalem, and which is known to have retained his name for long after the event (2 Sam. vi. 8). There are some grounds for placing this in Jerusalem, and possibly at or near the threshing-floor of Arannah. [NACHON, p. 455, and note.]

The scene of Uzza's death was itself a threshing-floor (2 Sam. vi. 6), and the change of the word from this, *goren*, [נָחַל], into *gan*, [גַּן], garden, would not be difficult or improbable. But nothing certain can be said on the point.

Bunsen (*Bibelwerk*, note on 2 K. xxi. 18) on the strength of the mention of "palaces" in the same paragraph with Ophel (A.V. "forts") in a denunciation of Isaiah (xxxii. 14), asserts that a palace was situated in the Tyropeon valley at the foot of the Temple mount, and that this was in all probability the palace of Manasse and the site of the Garden of Uzza. Surely a slender foundation for such a superstructure! [G.]

UZZAH (נִזְזָא in 2 Sam. vi. 3, elsewhere נִזְזָא: 'Oḏd; Alex. 'Aḏd, 'Aḏd: Oza). One of the sons of Ahinadab, in whose house at Kirjath-jearim the ark rested for 20 years. The eldest son of Ahinadab (1 Sam. vii. 1) seems to have been Eleazar, who was consecrated to look after the ark. Uzzah probably was the second, and Ahio the third. They both accompanied its removal, when David first undertook to carry it to Jerusalem. Ahio apparently went before the cart—the new cart (1 Chr. xiii. 7)—on which it was placed, and Uzzah walked by the side of the cart. The procession, with all manner of music, advanced as far as a spot variously called "the threshing-floor" (1 Chr. xiii. 9), "the threshing-floor of Chidon" (ib. Heb. LXX.; Jos. *Ant.* vii. 4, §2), "the threshing-floor of Nachor" (2 Sam. vi. 6, LXX.), "the threshing-floor of Nachon" (ib. Heb.). At this point—perhaps slipping over the smooth rock—the oxen (or, LXX., "the calf") stumbled (Heb.) or "overturned the ark" (LXX.). Uzzah caught it to prevent its falling.

He died immediately, by the side of the ark. His death, by whatever means it was accomplished, was so sudden and awful that, in the sacred language of the Old Testament, it is ascribed directly to the Divine anger. "The anger of the Lord was kindled against Uzzah, and God smote him there." "For his error," נִזְזָא, adds the present Hebrew text, not the LXX.; "because he put his hand to the ark" (1 Chr. xiii. 10). The error or sin is not explained. Josephus (*Ant.* vii. 4, §2) makes it to be because he touched the ark not being a priest. Some have supposed that it was because the ark was in a cart, and not (Ez. xxv. 14) carried on the shoulders of the Levites. But the narrative seems

The LXX. for "Ahio" read "his brethren."

to imply that it was simply the rough, hasty handling of the sacred coffer. The event produced a deep sensation. David, with a mixture of awe and resentment, was afraid to carry the ark further; and the place, apparently changing its ancient name,^b was henceforth called "Perez-Uzzah," the "breaking," or "disaster" of Uzzah (2 Sam. vi. 8; 1 Chr. xiii. 11; Jos. Ant. vii. 4, §2).

There is no proof for the assertion that Uzzah was a Levite. [A. P. S.]

UZZEN-SHERAH (וְזֶנְ שֶׁרָח; וְזֶנְ: and שֶׁרָח: 'Ozēn, Sherah: *Ozenesara*). A town founded or rebuilt by Sherah, an Ephraimite woman, the daughter either of Ephraim himself or of Beriah. It is named only in 1 Chr. vii. 24, in connexion with the two Beth-horons. These latter still remain probably in precisely their ancient position, and called by almost exactly their ancient names; but no trace of Uzzen-Sherah appears to have been yet discovered, unless it be in *Beit Sira*, which is shown in the maps of Van de Velde and Tobler as on the N. side of the *Wady Suleiman*, about three miles S.W. of *Beitūr et-tahta*. It is mentioned by Robinson (in the lists in Appendix to vol. iii. of *B. R.* 1st edit. p. 120); and also by Tobler (*3tte Wanderung*, 188).

The word *ozēn* in Hebrew signifies an "ear;" and assuming that *uzzēn* is not merely a modification of some unintelligible Canaanite word, it may point to an earlike projection or other natural feature of the ground. The same may be said of *Aznoth-Tabor*, in which *aznoth* is perhaps related to the same root.

It has been proposed to identify Uzzen-Sherah with Timnath-Serah; but the resemblance between the two names exists only in English (וְזֶנְ and שֶׁרָח), and the identification, tempting as it is from the fact of Sherah being an ancestress of Joshua, cannot be entertained.

It will be observed that the LXX. (in both MSS.) give a different turn to the passage, by the addition of the word וְזֶנְ before Uzzen. Sherah, in the former part of the verse, is altogether omitted in the Vat. MS. (Mal), and in the Alex. given as *Zeapa*. [G.]

UZZI (וְזִי: 'Ozi: *Ozi*: short for וְזִי, "Jehovah is my strength." Compare Uzziah, Uzziel). 1. Son of Bukki, and father of Zerabiah, in the line of the high-priests (1 Chr. vi. 5, 51; Ezr. vii. 4). Though Uzzi was the lineal ancestor of Zadok, it does not appear that he was ever high-priest. Indeed, he is included in those descendants of Phinehas between the high-priest Abishua (*Idem*) and Zadok, who, according to Josephus (*Ant.* viii. 1), were private persons. He must have been contemporary with, but rather earlier than, Eli. In Josephus's list Uzzi is unaccountably transformed into JONATHAN.

2. Son of Toia the son of Issachar, and father of five sons, who were all chief men (1 Chr. vii. 2, 3.)

3. Son of Bela, of the tribe of Benjamin (1 Chr. vii. 7).

4. Another, or the same, from whom descended some Benjaminite houses, which were settled at Jerusalem after the return from captivity (1 Chr. ix. 8).

5. A Levite, son of Banī, and overseer of the

^b For the conjecture that this was the GARDEN OF UZZAH mentioned in the later history, see the preceding article.

Levites dwelling at Jerusalem, in the time of Nehemiah (Neh. xi. 22).

6. A priest, chief of the father's-house of Jedaiiah, in the time of Joiakim the high-priest (Neh. xii. 19).

7. One of the priests who assisted Ezra in the dedication of the wall of Jerusalem (Neh. xii. 42). Perhaps the same as the preceding. [A. C. H.]

UZZIA (וְזִיָּא: 'Oziā; Alex. 'Oziā: *Ozia*). One of David's guard, and apparently, from his appellation "the Ashterathite," a native of Ashteroth beyond Jordan (1 Chr. xi. 44).

UZZIAH (וְזִיָּה: 'Azzāh in Kings, 'Oziā elsewhere; Alex. 'Oziā in 2 K. xv. 13: *Ozias*, but *Azarias* in 2 K. xv. 13).

1. Uzziah king of Judah. In some passages his name appears in the lengthened form וְזִיָּהּ (2 K. xv. 32, 34; 2 Chr. xxvi. xxvii. 2; Is. i. 1, vi. 1, vii. 1), which Gesenius attributes to an error of the copyists, וְזִיָּה and וְזִיָּהּ being nearly identical, or "to an exchange of the names as spoken by the common people, *sz* being pronounced for *sr*." This is possible, but there are other instances of the princes of Judah (not of Israel) changing their names on succeeding to the throne, undoubtedly in the later history, and perhaps in the earlier, as Jehoahaz to Ahaziah (2 Chr. xxi. 17), though this example is not quite certain. [AHAZIAH, No. 2.] After the murder of Amasiah, his son Uzziah was chosen by the people to occupy the vacant throne, at the age of 16; and for the greater part of his long reign of 52 years he lived in the fear of God, and showed himself a wise, active, and pious ruler. He began his reign by a successful expedition against his father's enemies the Edomites, who had revolted from Judah in Jehoram's time, 80 years before, and penetrated as far as the head of the Gulf of 'Akaba, where he took the important place of Elath, fortified it, and probably established it as a mart for foreign commerce, which Jehoshaphat had failed to do. This success is recorded in the 2nd Book of Kings (xiv. 22), but from the 2nd Book of Chronicles (xxvi. 1, &c.) we learn much more. Uzziah waged other victorious wars in the south, especially against the Mehunim, or people of Maḥan, and the Arabs of Gurbaal. A fortified town named *Maḥan* still exists in Arabia Petraea, south of the Dead Sea. The situation of Gurbaal is unknown. (For conjectures, more or less probable, see Ewald, *Gesch.* i. 321; MEHUNIM; GURBAAL.) Such enemies would hardly maintain a long resistance after the defeat of so formidable a tribe as the Edomites. Towards the west, Uzziah fought with equal success against the Philistines, levelled to the ground the walls of Gath, Jabneh, and Ashdod, and founded new fortified cities in the Philistine territory. Nor was he less vigorous in defensive than offensive operations. He strengthened the walls of Jerusalem at their weakest points, furnished them with formidable engines of war, and equipped an army of 307,500 men with the best inventions of military art. He was also a great patron of agriculture, dug wells, built towers in the wilderness for the protection of the flocks, and cultivated rich vineyards and arable land on his own account. He never deserted the worship of the true God, and was much influenced by Zachariah, a prophet who is only mentioned in connexion with him (2 Chr. xxvi. 5); for, as he must have died before Uzziah, he cannot be the same as the

Zechariah 4 Is viii. 2. So the southern kingdom was raised to a condition of prosperity which it had not known since the death of Solomon; and as the power of Israel was gradually falling away in the latter period of Jehu's dynasty, that of Judah extended itself over the Ammonites and Moabites, and other tribes beyond Jordan, from whom Uzziah exacted tribute. See 2 Chr. xxvi. 8, and Is. xvi. 1-5, from which it would appear that the annual tribute of sheep (2 K. iii. 4) was revived either during this reign or soon after. The end of Uzziah was less prosperous than his beginning. Elated with his splendid career, he determined to burn incense on the altar of God, but was opposed by the high-priest Azariah and eighty others. (See Ex. xxx. 7, 3; Num. xvi. 40, xviii. 7.) The king was enraged at their resistance, and, as he pressed forward with his censor, was suddenly smitten with leprosy, a disease which, according to Gerlach (*in loco*), is often brought out by violent excitement. In 2 K. xv. 5 we are merely told that "the Lord smote the king, so that he was a leper unto the day of his death, and dwelt in a several house;" but his invasion of the priestly office is not specified. This catastrophe compelled Uzziah to reside outside the city, so that the kingdom was administered till his death by his son Jotham as regent. Uzziah was buried "with his fathers," yet apparently not actually in the royal sepulchres (2 Chr. xxvi. 23). During his reign an earthquake occurred, which, though not mentioned in the historical books, was apparently very serious in its consequences, for it is alluded to as a chronological epoch by Amos (i. 1), and mentioned in Zech. xiv. 5, as a convulsion from which the people "fled." [EARTHQUAKE.] Josephus (*Ant.* ix. 10, §4) connects it with Uzziah's sacrilegious attempt to offer incense, but this is very unlikely, as it cannot have occurred later than the 17th year of his reign [AMOS]. The first six chapters of Isaiah's prophecies belong to this reign, and we are told (2 Chr. xxvi. 22) that a full account of it was written by that prophet. Some notices of the state of Judah at this time may also be obtained from the contemporary prophets Hosea and Amos, though both of these laboured more particularly in Israel. We gather from their writings (Hos. iv. 15, vi. 11; Am. vi. 1), as well as from the early chapters of Isaiah, that though the condition of the southern kingdom was far superior, morally and religiously, to that of the northern, yet that it was by no means free from the vices which are apt to accompany wealth and prosperity. At the same time Hosea conceives bright hopes of the blessings which were to arise from it; and though doubtless these hopes pointed to something far higher than the brilliancy of Uzziah's administration, and though the return of the Israelites to "David their king" can only be adequately explained of Christ's kingdom, yet the prophet, in contemplating the condition of Judah at this time, was plainly cheered by the thought that there God was really honoured, and His worship visibly maintained, and that therefore with it was bound up every hope that His promises to His people would be at last fulfilled (Hos. i. 7, iii. 3). It is to be observed, with reference to the general character of Uzziah's reign, that the writer of the Second Book of Chronicles distinctly states that his lawless attempt to burn incense was the only exception to the excellence of his administration (2 Chr. xxvii. 2). His reign lasted from B.C. 808-9 to 756-7.

[G. E. L. C.]

2. (Ozias: *Orias*.) A Kohathite Levite, and an ancestor of Samuel (1 Chr. vi. 24 [9]).

3. A priest of the sons of Harim, who had taken a foreign wife in the days of Ezra (Ezr. x. 21).

4. ('A'ia: *Aziam*.) Father of Athanah, or Uthai (Neh. xi. 4).

5. (Uzziah: *Ozias*.) Father of Jehonathan, one of David's overseers (1 Chr. xxvii. 25).

UZ'ZIEL (Uzziah: *Ozias*, Ex. vi. 18; elsewhere 'Oziah: *Oziel*: "God is my strength").

1. Fourth son of Kohath, father of Mishael, Elzaphan or Elzaphan, and Zithri, and uncle to Aaron (Ex. vi. 18, 22; Lev. x. 4). The family descended from him were called Uzzielites, and Elzaphan, the chief of this family, was also the chief father of the Kohathites, by Divine direction, in the time of Moses (Num. iii. 19, 27, 30), although he seems to have been the youngest of Kohath's sons (1 Chr. vi. 2, 16). The house of Uzziel numbered 112 adults, under Amminadab their chief, at the time of the bringing up of the ark to Jerusalem by King David (1 Chr. xv. 10).

2. A Simeonite captain, son of Ishi, who, after the successful expedition of his tribe to the valley of Gedor, went with his three brethren, at the head of five hundred men, in the days of Hezekiah, to Mount Seir, and smote the remnant of the Amalekites, who had survived the previous slaughter of Saul and David, and took possession of their country, and dwelt there "unto this day" (1 Chr. iv. 42; see Bertheau).

3. Head of a Benjaminite house, of the sons of Bela (1 Chr. vii. 7).

4. A musician, of the sons of Heman, in David's reign (1 Chr. xxv. 4), elsewhere called Azareel (ver. 18). Compare Uzziah and Azariah.

5. A Levite, of the sons of Jeduthun, who in the days of King Hezekiah took an active part in cleansing and sanctifying the Temple, after all the pollutions introduced by Ahas (2 Chr. xxix. 14, 19).

6. Son of Harbaiah, probably a priest in the days of Nehemiah, who took part in repairing the wall (Neh. iii. 8). He is described as "of the goldsmiths," i. e. of those priests whose hereditary office it was to repair or make the sacred vessels, as may be gathered from the analogy of the apothecaries, mentioned in the same verse, who are defined 1 Chr. ix. 30. The goldsmiths are also mentioned Neh. iii. 31, 32. That this Uzziel was a priest is also probable from his name (No. 1), and from the circumstance that Malchiah, the goldsmith's son, was so. [A. C. H.]

UZ'ZIELITES, THE (Uzziah: *Ozias*, 'Oziah: *Ozielites*, *Ozielites*). The descendants of Uzziel, and one of the four great families into which the Kohathites were divided (Num. iii. 27; 1 Chr. xxvi. 23).

V

VAJEZATHA (Vajezatha: *Zabouthea*; FA. *Zabouthea*: *Jezatha*). One of the ten sons of Haman whom the Jews slew in Shushan (Esth. ix. 9). Gesenius derives his name from the Pers. *zab*, "white," Germ. *weis*; but Fürst suggests as more probable that it is a compound of the

Zad saho, "better," an epithet of the *Isad haoma*, and *sata*, "born," and so "born of the *Isad haoma*." But such etymologies are little to be trusted.

VALE, VALLEY. It is hardly necessary to state that these words signify a hollow sweep of ground between two more or less parallel ridges of high land. Vale is the poetical or provincial form. It is in the nature of the case that the centre of a valley should usually be occupied by the stream which forms the drain of the high land on either side, and from this it commonly receives its name; as, the Valley of the Thames, of the Colne, of the Nile. It is also, though comparatively seldom, called after some town or remarkable object which it contains; as, the Vale of Evesham, the Vale of White-horse.

Valley is distinguished from other terms more or less closely related; on the one hand, from "glen," "ravine," "gorge," or "dell," which all express a depression at once more abrupt and smaller than a valley; on the other hand, from "plain," which, though it may be used of a wide valley, is not ordinarily or necessarily so.

It is to be regretted that with this quasi-precision of meaning the term should not have been employed with more restriction in the Authorised Version of the Bible.

The structure of the greater part of the Holy Land does not lend itself to the formation of valleys in our sense of the word. The abrupt transitions of its crowded rocky hills preclude the existence of any extended sweep of valley; and where one such does occur, as at Hebron, or on the south-east of Gerizim, the irregular and unsymmetrical positions of the enclosing hills rob it of the character of a valley. The nearest approach is found in the space between the mountains of Gerizim and Ebal, which contains the town of *Nabâs*, the ancient Shechem. This, however, by a singular chance, is not mentioned in the Bible. Another is the "Valley of Jezreel"—the undulating hollow which intervenes between Gilboa (*Jebel Fuku*), and the so-called Little Hermon (*Jebel Duhy*).

Valley is employed in the Authorised Version to render five distinct Hebrew words.

1. *Emek* (עֵמֶק: *émerék*, *emélek*, also very rarely *wešer*, *ablan*, and *Emek* or *Amea*). This appears to approach more nearly to the general sense of the English word than any other, and it is satisfactory to find that our translators have invariably, without a single exception, rendered it by "valley." Its root is said to have the force of deepness or seclusion, which Professor Stanley has ingeniously urged may be accepted in the sense of lateral rather than of vertical extension, as in the modern expression, — a deep house, a deep recess. It is connected with several places; but the only one which can be identified with any certainty is the *Emek* of Jezreel, already mentioned as one of the nearest approaches to an English valley. The other *Emeks* are:—Achor, Ajalon, Baca, Berschah, Beth-rehob, Elah, Gibeon, Hebron, Jehoshaphat, Kexiz, Rephaim, Shaveh, Siddim, Succoth, and of ha-Charuts or "the decision" (Joel iii. 14).

2. *Gul* or *Gd* (גֻּל: *gûl*; *gûl*: *gûl*). Of this natural feature there is fortunately one example remaining which can be identified with certainty—the deep hollow which encompasses the S.W. and S. of Jerusalem, and which is without doubt iden-

tical with the Ge-hinnom or Ge-ben-hinnom of the O. T. This identification appears to establish the *Ge* as a deep and abrupt ravine, with steep sides and narrow bottom. The term is derived by the lexicographers from a root signifying to flow together; but Professor Stanley, influenced probably by the aspect of the ravine of Hinnom, proposes to connect it with a somewhat similar root (גִּי), which has the force of rending or bursting, and which perhaps gave rise to the name Gihon, the famous spring at Jerusalem.

Other *Ges* mentioned in the Bible are those of Gedor, Jiphthah-el, Zebolm, Zephathah, that of salt, that of the craftsmen, that on the north side of Ai, and that opposite Beth Peor in Moab.

3. *Nachal* (נָחַל: *pharyx*, *χενδύρεος*). This is the word which exactly answers to the Arabic *wady*, and has been already alluded to in that connexion. [PALESTINE, p. 676 a; RIVER, p. 1045 b.] It expresses, as no single English word can, the bed of a stream (often wide and shelving, and like a "valley" in character, which in the rainy season may be nearly filled by a foaming torrent, though for the greater part of the year dry), and the stream itself, which after the subsidence of the rains has shrunk to insignificant dimensions. To autumn travellers in the south of France such appearances are familiar; the wide shallow bed strewn with water-worn stones of all sizes, amongst which shrubs are growing promiscuously, perhaps crossed by a bridge of four or five arches, under the centre one of which hawls along a tiny stream, the sole remnant of the broad and rapid river which a few months before might have carried away the structure of the bridge. Such is the nearest likeness to the wadis of Syria, excepting that—owing to the demolition of the wood which formerly shaded the country, and prevented too rapid evaporation after rain—many of the latter are now entirely and constantly dry. To these last it is obvious that the word "valley" is not inapplicable. It is employed in the A. V. to translate *nachal*, alternating with "brook," "river," and "stream." For a list of the occurrences of each, see *Sinai and Pal. App.* § 38.

4. *Bekah* (בְּקָעָה: *bedion*). This term appears to mean rather a plain than a valley, wider than the latter, though so far resembling it as to be enclosed by mountains, like the wide district between Lebanon and Anti-Lebanon, which is still called the *Bekah*, as it was in the days of Amos. [PLAIN, p. 889 b.] It is rendered by "valley" in Deut. xxxiv. 8; Josh. xi. 8, 17, xii. 7; 2 Chr. xxxv. 22; Zech. xii. 11.

5. *haa-Shephelah* (הַשְּׁפֵלָה: *te bedion*, *te bedion*). This is the only case in which the employment of the term "valley" is really unfortunate. The district to which alone the name *haa-Shephelah* is applied in the Bible has no resemblance whatever to a valley, but is a broad swelling tract of many hundred miles in area, which sweeps gently down from the mountains of Judah

— "To mingle with the bounding main"

of the Mediterranean. [See PALESTINE, p. 672; PLAINS, p. 890 b; SEPHELA, p. 1199, &c.] It is rendered "the vale" in Deut. i. 7; Josh. x. 40; 1 K. x. 27; 2 Chr. i. 15; Jer. xxxii. 13; and "the valley" or "valleys" in Josh. ix. 1, xi. 2, 16, xii. 8, xv. 33; Judg. i. 9; Jer. xxxii. 44. [G.]

VANTAH (וַנְתָּא): Οὐνανία; Alex. Οὐνανία; EA. Οὐνέπ: Vania). One of the sons of Bani, who put away his foreign wife at Ezra's command (Ezr. x. 36).

VASH'NI (וַשְׁנִי): Vashni; Alex. Vasseni). The first-born of Samuel as the text now stands (1 Chr. vi. 28 [13]). But in 1 Sam. viii. 2 the name of his firstborn is Joel. Most probably in the Chronicles the name of Joel has dropped out, and "Vashni" is a corruption of וַשְׁנִי, "and (the) second." The Peshito Syriac has amended the text, and rendered "The sons of Samuel, his firstborn Joel, and the name of his second son Abiah." In this it is followed by the Arabic of the London Polyglott.

VASH'TI (וַשְׁתִּי): Ἀστί; Oὐδαστή, Joseph.: Vasthi: "a beautiful woman," Pers.). The "queen" (מַלְכָּה) of Ahasuerus, who, for refusing to show herself to the king's guests at the royal banquet, when sent for by the king, incurred his wrath, and was repudiated and deposed (Esth. i.); when Esther was substituted in her place. Many attempts have been made to identify her with historical personages; as by Ussher with Atossa, the wife of Darius Hystaspis, and by J. Capellus with Parysatis, the mother of Ochus; but, as was said of Esther (like the "threescore queens" in Cant. vi. 8, 9^a), it is far more probable that she was only one of the inferior wives, dignified with the title of queen, whose name has utterly disappeared from history. [ESTHER.] This view of Vasthi's position seems further to tally exactly with the narrative of Ahasuerus's order, and Vasthi's refusal, considered with reference to the national manners of the Persians. For Plutarch (*Conj. præcept.* c. 16) tells us, in agreement with Herod. v. 18, that the kings of Persia have their legitimate wives to sit at table with them at their banquets, but that, when they choose to riot and drink, they send their wives away and call in the concubines and singing-girls. Hence, when the heart of Ahasuerus "was merry with wine," he sent for Vasthi, looking upon her only as a concubine; she, on the other hand, considering herself as one of the *κουρδίας γυναῖκες*, or legitimate wives, refused to come. See Winer, *Realw.* Josephus's statement (*Ant.* xi. 6, §1), that it is contrary to the customs of the Persians for their wives to be seen by any men but their own husbands, is evidently inaccurate, being equally contradicted by Herodotus, v. 18,^b and by the Book of Esther itself (v. 4, 8, 12, &c.). [A. C. H.]

VEIL. Under the head of DRESS we have already disposed of various terms improperly rendered "veil" in the A.V., such as *mitpachath* (Ruth iii. 15), *tsaph* (Gen. xxiv. 65, xxxviii. 14, 19), and *rdidid* (Cant. v. 7; Is. iii. 23). These have been explained to be rather shawls, or mantles, which might at pleasure be drawn over the face, but which were not designed for the special purpose of veils. It remains for us to notice the following terms which describe the veil proper:

VEIL

—(1.) *Masech*,^c used of the veil which Manasse assumed when he came down from the mount (Ex. xxxiv. 33-35). A cognate word, *sedá*,^d occurs in Gen. xlix. 11 as a general term for a man's garment, leading to the inference that the *masech* also was an ample outer robe which might be drawn over the face when required. The context, however, in Ex. xxxiv. is conclusive as to the object for which the robe was assumed, and, whatever may have been its size or form, it must have been used as a veil. (2.) *Mispacháth*,^e used of the veils which the false prophets placed upon their heads (Ezek. xiii. 18, 21; A. V. "kerchiefs"). The word is understood by Gesenius (*Thes.* p. 965) of cushions or mattresses, but the etymology (*mispacháth* to pour) is equally, if not more favourable, to the sense of a flowing veil, and this accords better with the notice that they were to be placed "upon the head of every stature," implying that the length of the veil was proportioned to the height of the wearer (Fürst, *Lex.* s. v.; Hitzig in *Ex.* l. c.). (3.) *Ré'áláth*,^f used of the light veils worn by females (Is. iii. 19; A. V. "mufflers"), which were so called from their rustling motion. The same term is applied in the Mishna (*Sob.* 6, §6. to the veils worn by Arabian women. (4.) *Tasmáth*,^g understood by the A.V. of "locks" of hair (Cant. iv. 1, 3, vi. 7; Is. xlvii. 2), and so by Winer (*Realw.* "Schleier"); but the contents of the passages in which it is used favour the sense of veil, the wearers of the article being in each case highly born and handsomely dressed. A cognate word is used in the Targum (Gen. xxiv. 65) of the robe in which Rebecca enveloped herself.

With regard to the use of the veil, it is important to observe that it was by no means so general in ancient as in modern times. At present, veils are rarely seen without it in Oriental countries, so much so that in Egypt it is deemed more requisite to conceal the face, including the top and back of the head, than other parts of the person (Lane, i. 72). Women are even delicate about exposing their heads to a physician for medical treatment (Russell's *Aleppo*, i. 248). In remote districts, and among the lower classes, the practice is not so rigidly enforced (Lane, i. 72). Much of the scrupulousness in respect to the use of the veil dates from the promulgation of the Koran, which forbade women appearing unveiled except in the presence of their nearest relatives (*Kor.* xxxiii. 55, 59). In ancient times, the veil was adopted only in exceptional cases, either as an article of ornamental dress (Cant. iv. 1, 3, vi. 7), or by betrothed maidens in the presence of their future husbands, especially at the time of the wedding (Gen. xxiv. 65, xxix. 23 [MARRIAGE]), or, lastly, by women of loose character for purposes of concealment (Gen. xxxiv. 14). But, generally speaking, women both married and unmarried appeared in public with their faces exposed, both among the Jews (Gen. xii. 14, xxiv. 16, xxix. 10; 1 Sam. i. 12), and among the Egyptians and Assyrians, as proved by the invariable absence of the veil in the sculptures and paintings of these peoples.

Among the Jews of the New Testament age it appears to have been customary for the women to

^a γυναικῶν ὁ ἕκαστος αὐτῶν πολλὰς μὲν κουρδίας γυναῖκες, πολλὰς δ' ἐν ἐλευθέρῳ παλλακὰς κτίζουσι (Herod. 126).

^b "It is the custom of us Persians, when we make a

great feast, to invite both our concubines and our wives to sit down with us."

^c מַסַּח.

^d סֵדָה.

^e מִשְׂפָּחָה.

^f רֵעָלָה.

^g תַּסְמָת.

cover their heads (not necessarily their faces) when engaged in public worship. For, St. Paul reproaches the diuine of the veil by the Corinthian women, as implying an assumption of equality with the other sex, and enforces the covering of the head as a sign^b of subordination to the authority of the men (1 Cor. xi. 5-15). The same passage leads to the conclusion that the use of the *talith*, with which the Jewish males cover their heads in prayer, is a comparatively modern practice; inasmuch as the apostle, putting a hypothetical case, states that every man having anything on his head dishonours his head, i.e. Christ, inasmuch as the use of the veil would imply subjection to his fellow-men rather than to the Lord (1 Cor. xi. 4). [W. L. B.]

VEIL OF THE TABERNACLE AND TEMPLE. [TABERNACLE; TEMPLE.]

VERSIONS, ANCIENT, OF THE OLD AND NEW TESTAMENTS. On the ancient versions in general, see Walton's *Prolegomena*; Simon, *Histoire Critique*; Marsh's *Michaelis*; Eichhorn's *Einleitung*; Hug's *Einleitung*; De Wette's *Einleitung*; Hävernick's *Einleitung*; Davidson's *Introduction*; Rensu, *Geschichte des Neuen Testaments*; Horne's *Introduction* by Ayre (vol. ii.) and Tregelles (vol. iv.); Scrivener's *Plain Introduction*; Bleek's *Einleitung*.

There were two things which, in the early centuries after the coming of our Lord Jesus Christ, were closely connected: the preaching of the Gospel, leading to the diffused profession of the Christian faith amongst nations of varied languages; and the formation of versions of the Holy Scriptures for the use of the Churches thus gathered in varied countries. In fact, for many ages the spread of Christianity and the appearance of vernacular translations seem to have gone almost continually hand in hand. The only exceptions, perhaps, were those regions in which the Christian profession did not extend beyond what might be called the civilized portion of the community, and in which also the Greek language, diffused through the conquests of Alexander, or the Latin, the concomitant of the dominion of Rome, had taken a deeply-rooted and widely-extended hold. Before the Christian era, the Greek version of the Old Testament, commonly termed the Septuagint, and the earlier Targums (if, indeed, any were written so early) supplied every want of the Jews, so far as we can at all discover. And it cannot be doubted that the Greek translation of the Old Testament had produced some considerable effect beyond the mere Jewish pale: for thus the comparatively large class of proselytes which we find existing in the time of our Lord and his Apostles must apparently have been led to embrace a religion, not then commended by the holiness of its professors or by external advantages, but only accredited by its doctrines, which professed to be given by the Revelation of God (as, indeed, they were); and which, in setting forth the unity of God, and in the condemnation of all idolatry, supplied a need, not furnished by anything which professed to be a system of positive religion as held by the Greek, Latin, or Egyptian priests.

In making inquiry as to the versions formed

after the spread of Christianity, we rarely find any indication as to the translators, or the particular circumstances under which they were executed. All we can say is, that those who had learned that the doctrines of the Apostles,—namely, that in the name of Jesus Christ the Son of God there is forgiveness of sins and eternal life through faith in his propitiatory sacrifice,—are indeed the truth of God; and who knew that the New Testament contains the records of this religion, and the Old the preparation of God for its introduction through promises, types, and prophecies, did not long remain without possessing these Scriptures in languages which they understood. The appearance of vernacular translations was a kind of natural consequence of the formation of Churches.

We have also some indications that parts of the New Testament were translated, not by those who received the doctrines, but by those who opposed them; this was probably done in order the more successfully to guard Jews and proselytes to Judaism against the doctrines of the Cross of Christ, "to the Jews a stumbling-block."

Translations of St. John's Gospel and of the Acts of the Apostles into the Hebrew dialect, are mentioned in the very curious narration given by Epiphanius (i. xxx. 3, 12) respecting Joseph of Tiberias; he speaks of their being secretly preserved by the Jewish teachers of that city. But these or any similar versions do not appear to have been examined, much less used, by any Christians. They deserve a mention here, however, as being translations of parts of the New Testament, the former existence of which is recorded.

In treating of the ancient versions that have come down to us, in whole or in part, they will be described in the alphabetical order of the languages. It may be premised that in most of them the Old Test. is not a version from the Hebrew, but merely a secondary translation from the Septuagint in some one of its early forms. The value of these secondary versions is but little, except as bearing on the criticism of the text of the LXX., a department or Biblical learning in which they will be found of much use, whenever a competent scholar shall earnestly engage in the revision of that Greek version of the Old Test., pointing out the corrections introduced through the labours of Origen. [S. P. T.]

ÆTHIOPIIC VERSION.—Christianity was introduced into Æthiopia in the 4th century, through the labours of Frumentius and Aedesius of Tyre, who had been made slaves and sent to the king (Theodoret, *Hist. Eccl.* i. 23; Sozomen, ii. 24). Hence arose the episcopal see of Axum, to which Frumentius was appointed by Athanasius. The Æthiopic version which we possess is in the ancient dialect of Axum; hence some have ascribed it to the age of the earliest missionaries; but from the general character of the version itself, this is improbable; and the Abyssinians themselves attribute it to a later period; though their testimony is of but little value by itself; for their accounts are very contradictory, and some of them even speak of its having been translated from the Arabic; which is certainly incorrect.

The Old Testament, as well as the New, was ascribed from the Greek.

In 1513 Potken published the Æthiopic Psalter at Rome: he received this portion of the Scriptures from some Abyssinians with whom he had met.

^a The term *ἡγεμονία* in 1 Cor. xi. 10 = sign of authority, just as *βασιλεία* in 1 Mod. Sic. i. 41 = sign of royalty.

whom, however, he called Chaldaean, and their language Chaldaic.

In 1548-9, the Ethiopic New Test. was also printed at Rome, edited by three Abyssinians: they sadly complained of the difficulties under which they laboured, from the printers having been occupied on what they were unable to read. They speak of having had to fill up a considerable portion of the Book of Acts by translating from the Latin and Greek: in this, however, there seems to be some overstatement. The Roman edition was reprinted in Walton's Polyglott; but (according to Ludolf) all the former errors were retained, and new ones introduced. When Bode in 1753 published a careful Latin translation of the Ethiopic text of Walton, he supplied Biblical scholars in general with the means of forming a judgment as to this version, which had been previously impossible, except to the few who were acquainted with the language.

In 1826-30, a new edition, formed by a collation of MSS., was published under the care of Mr. Thomas Pell Platt (formerly Fellow of Trinity College, Cambridge), whose object was not strictly critical, but rather to give to the Abyssinians their Scriptures for ecclesiastical use in as good a form as he conveniently could, consistently with MS. authority. From the notes made by Mr. Platt in the course of his collations, it is evident that the translation had been variously revised. The differences of MSS. had appeared so marked to Ludolf that he supposed that there must have been two ancient versions. But Mr. Platt found, in the course of his examination, that where certain MSS. differ widely in their readings, some other copy would introduce both readings either in a conflated form, or simply in the way of repetition. The probability appears to be that there was originally one version of the Gospels; but that this was afterwards revised with Greek MSS. of a different complexion of text; and that succeeding copyists either adopted one or the other form in passages; or else, by omitting nothing from text or margin, they formed a confused combination of readings. It appears probable that all the portion of the New Test. after the Gospels originated from some of the later revisers of the former part; its paraphrastic tone accords with this opinion. We can only form a judgment from the printed texts of this version, until a collation of the MSS. now known shall be so executed as to be available for critical use.

As it is, we find in the copies of the version, readings which show an affinity with the older class of Greek MSS., intermingled with others decidedly Byzantine. Some of the copies known show a stronger leaning to the one side or the other; and this gives a considerable degree of certainty to the conclusion on the subject of revision.

An examination of the version proves both that it was executed from the Greek, and also that the translator made such mistakes that he could hardly have been a person to whom Greek was the native tongue. The following instances (mostly taken from C. B. Michaelis) prove this: *δπια* is confounded with *δρεα* (or *δρη*); Matt. iv. 13, "in montes Zabulon;" xix. 1, "in montes Judaee trans Jordanem." Acts iii. 20, *προκεχειρισμένων* is rendered as "quem praeunxit" (*προκεχειρισμένων*); ii. 37, *καταβύθησαν* "oportet enim quod cor eorum" (*καταβύθησαν*); xvi. 25, *ἐξηκρούοντο αὐτῶν αἱ ὀστέαι*, "percussa sunt vincula eorum" (*ἐξηκρού-*

οντο αὐτῶν αἱ ὀστέαι). Matt. v. 25, *ὁδοῦν* is rendered as *intellegens* (*δενεῖν*); Luke viii. 29, *καὶ πάλαι φιλοσόφησεν*, "a philosopho confectus," as if *φιλόσοφος*. Rom. vii. 11, *ἐξηπάτησεν*, "conculcavit," as if *ἐξηπάτησεν*. Rev. iv. 3, *ἱερεῖς*, "sacerdotes," as if *ἱερεῖς*. The meaning of words alike in spelling is confounded; thus, I Cor. xii. 28, "Posuit Dominus ordines ecclesiae," from the differing meanings of *ΟΤΥ*. Also wrong renderings sometimes seem to have originated with false etymology: thus, Matt. v. 22, "Qui autem dixerit fratri suo *ραννα*," *ραννα* having been connected with *ρανος*.

Bode's Latin version, to which reference has already been made, enabled critical scholars to see the Roman text with much confidence. The late Mr. L. A. Prevost, of the British Museum, executed for Dr. Tregelles a comparison of the text of Mr. Platt with the Roman, as reprinted in Walton, together with a literal rendering of the variations: this gave him the critical use of both texts. The present Bishop of Gloucester, Dr. Ellicott, speaking with the personal advantage possessed by a scholar himself able to use both Ethiopic texts of the New Test., draws attention to the superiority of that edited by Mr. Platt: after speaking (*Aids to Faith*, p. 381) of the non-paraphrastic character of the ancient versions of the New Test. in general, Dr. Ellicott adds in a note: "It may be noticed that we have specified the Ethiopic version as that edited by Mr. Pell Platt. The Ethiopic version found in Walton's Polyglott often degenerates into a paraphrase, especially in difficult passages."

The Old Test. of this version, made from the LXX. (as has been already specified), has been subjected apparently (with the exception of the Psalms) to very little critical examination. A complete edition of the Ethiopic Old Test. has been commenced by Dillmann; the first portion of which appeared in 1853.

Notes made in the Collation of Ethiopic MSS., and Private Letters sent to Tregelles*; L. A. Prevost, *M.S. Collation of the Text of Platt with the Roman and Translation of Variations, executed for Tregelles*; A. Dillmann, *Äthiopische Bibelübersetzung in Herzog's Real-Encyclopädie*. [S. P. T.]

ARABIC VERSIONS.—To give a detailed account of the Arabic versions would be impossible, without devoting a much larger space to the subject than would be altogether in its place in a Dictionary of the Bible: for the versions themselves do not, owing to their comparatively late date, possess any primary importance, even for critical studies; and thus many points connected with these translations are rather of literary than strictly Biblical interest. The versions of the Old Test. must be considered separately from those of the New; and those from the Hebrew text must be treated apart from those formed from the LXX.

(I.) *Arabic versions of the Old Test.*

(A.) *Made from the Hebrew text.*

Rabbi Saadiah Haggaon, the Hebrew commentator of the 10th century, translated portions (some think the whole) of the O. T. into Arabic. His version of the Pentateuch was printed at Constantinople, in 1546. The Paris Polyglott contains the

same version from a MS. differing in many of its readings: this was reprinted by Walton. It seems as if copyists had in parts altered the version considerably. The version of Isaiah by Saadiah was printed by Paulus, at Jena, in 1791, from a Bodleian MS.; the same library contains a MS. of his version of Job and of the Psalms. Kimchi quotes his version of Hosea.

The Book of Joshua in the Paris and Walton's Polyglotts is also from the Hebrew; and this Rödiger states to be the fact in the case of the Polyglott text of 1 K. xii. 16; and of Neh. i.-ix. 27.

Other portions, translated from Hebrew in later times, do not require to be even specified here.

But it was not the Jews only who translated into Arabic from the original. There is also a version of the Pentateuch of the Samaritans, made by Abu Said. He is stated to have clearly had the translation of Saadiah before him, the phraseology of which he often follows, and at times he must have used the Samaritan version. It is considered that this work of Abu Said (of which a portion has been printed) is of considerable use in connection with the history of the text of the Samaritan Pentateuch. [See SAMARITAN PENTATEUCH, II. 3.]

(B.) Made from the Peshito Syriac.

This is the base of the Arabic text contained in the Polyglotts of the Books of Judges, Ruth, Samuel, Kings, and Nehemiah (with the exception mentioned above in these last-named books).

In some MSS. there is contained a translation from the *Hexaplar*-Syriac text, which (though a recent version) is of some importance for the criticism of that translation.

(C.) Made from the LXX.

The version in the Polyglotts of the books not specified above.^a

Another text of the Psalter in Justiniani Psalterium Octuplum, Genoa, 1516.

The Arabic versions existing in MS. exhibit very various forms: it appears as if alterations had been made in the different countries in which they had been used; hence it is almost an endless task to discriminate amongst them precisely.

(II.) Arabic versions of the New Test.

The printed editions of the Arabic New Test. must first be specified before their text can be described.

1. The Roman editio princeps of the four Gospels, 1590-91 (issued both with and without an inferior Latin version. Reissued, with a new title, p. 1619; and again, with a bibliographical preface, 1774).

2. The Erpenian Arabic. The whole New Test. edited by Erpenius, 1616, at Leyden, from a MS. of the 13th or 14th century.

3. The Arabic of the Paris Polyglott, 1645. In the Gospels this follows mostly the Roman text; in the Epistles a MS. from Aleppo was used. The Arabic in Walton's Polyglott appears to be simply taken from the Paris text.

4. The *Carshuni* Arabic text (i. e. in Syriac let-

ters), the Syriac and Arabic New Test., published at Rome, in 1703. For this a MS. brought from Cyprus was used.

Storr proved, that in all these editions the Gospels are really the same translation, however it may have been modified by copyists; especially when the Syriac, or Memphitic, stand by the side.

Juynboll, in his description of an Arabic Codex at Franeker (1838), threw new light on the origin of the Arabic Gospels. He proves that the Franeker Codex coincides in its general text with the Roman editio princeps, and that both follow the Latin Vulgate, so that Raymundi, the Roman editor, must not be accused of having Latinized the text. The greater agreement of the Polyglott text with the Greek he ascribes to the influence of an Aleppo MS., which the Paris editor used. Juynboll then identifies the text of the Franeker MS. (and of the Roman edition) with the version made in the 8th century by John, Bishop of Seville. The question to be considered thus becomes, Was the Latin the basis of the version of the Gospels? and did some afterwards revise it with the Greek? or, was it taken from the Greek? and was the alteration to suit the Latin a later work? If the former supposition be correct, then the version of John of Seville may have been the *first*; if the latter, then all that was done by the Spanish bishop must have been to adapt an existing Arabic version to the Latin.
